Keep Your Students, Staff, and Schools Safe from Cyberattacks

Lessons in K-12 Cybersecurity

As educators, you’re already teaching your students the knowledge they need to thrive. But has your school system learned from difficult lessons like these?

- **Texas K-12 district loses $2.3 million in email scam**
- **Ransomware shuts down classes, childcare centers in Flagstaff, AZ**
- **Yet another school district hit by ransomware, this time in Illinois**
- **Student hacker grabs personal data of thousands of Maryland students**
- **Ransomware forces New Mexico school district to scrub 30,000 devices**
- **Ransomware used HVAC to infect Michigan K-12 district**

This happens far too often:

Lesson 1: Delay critical cybersecurity investments
Lesson 2: Suffer a massive data breach—and panic!
Lesson 3: Sign a big contract for incident response services
Lesson 4: Spend more than you ever dreamed on new products
Lesson 5: Take the next several years to rebuild trust

Here’s where to begin.

Start with our advanced defenses that are simple to deploy and incredibly effective.

- **Cisco Umbrella**
- **Cisco Email Security**
- **Cisco AMP for Endpoints**

Make everyone part of the solution. We can help you educate your students and staff.

Be ready for the unexpected.

Let our experts help you with your incident response plan and more.
- Readiness assessments
- IR Plans and playbooks
- Emergency response
- Compromise assessments

It’s easy to work with us.

Get great buying program benefits when you invest in three or more security products.
- Budgets go further
- Predictable billing

And there’s so much more.
