

Don't Just Own It, Maximize It: Unlock More Value from Your Umbrella License

Upgrade to Secure Access – DNS Defense for the Same Investment

With Cisco Umbrella DNS-layer security, you've built a strong foundation with our industry leading threat defense. Now it's time to take the next step. Cisco Secure Access is the modern evolution of that protection—delivering advanced capabilities and streamlined security. This migration keeps you ahead of emerging risks and provides greater value— without paying more.

Everything You Love About Umbrella DNS, and More, Awaits—

Without Paying More.

Cloud DLP (Data Loss Prevention)
Protect sensitive data in the cloud with integrated DLP.

Cloud Malware Protection
Stop malicious content before it reaches your users or network.

Unified ZTNA + VPNaaS*
Secure access to any application, anywhere, from any device – with a free trial.

*Access a long-term trial for up to 100 seats of the Cisco Secure Access – Secure Private Access (SPA) package, featuring the industry's first unified client for seamless application access.

Benefits You Can Expect

Stronger Protection for Business-Critical Cloud Apps

Achieve enhanced protection for the critical apps that keep your business running, including, Microsoft 365, Box, Dropbox, Google Drive, Azure, and more. Secure Access scans files and content in these apps to prevent data loss and malware while blocking risky downloads from cloud applications, helping you stay compliant and infection-free.

Respond to Threats, Faster and With More Confidence

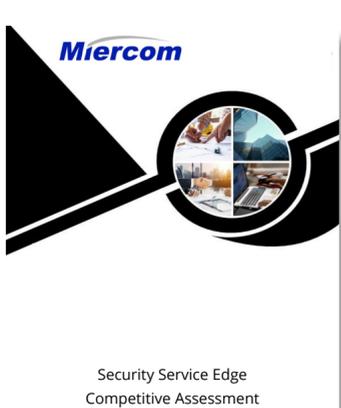

Harness AI-powered innovations such as DNS tunneling mitigation and Domain Generation Algorithm (DGA) detection to block advanced threats earlier and more accurately. This reduces false positives and alert fatigue for security teams.

Simplified Security Management

Enjoy an enhanced policy construct. Manage policies across networks, apps, devices, and categories with a simple, rule-based framework. Quickly create, update, and maintain policies over time—improving consistency and reducing administrative complexity.

"In Umbrella, exceptions require duplicating and maintaining separate policies, but in Secure Access you can simply add targeted rules on top of your base policy without duplication. The new policy model has created immediate management efficiency with the granular control we require."

David Noble, Cyber Engineer, Arup

Leading Secure Service Edge and ZTNA Solution

Miercom, a leading third-party security testing and certification facility, recently evaluated Cisco Secure Access across efficacy, manageability and performance metrics. The results? The Miercom SSE Benchmark Report called Cisco the leader in all three compared to other vendors.¹

Fast and Simple Migration

Using the automated Secure Access Upgrade Manager, customers can typically migrate in under an hour. Umbrella customers can leverage the Upgrade Manager for no added cost.

Cisco made upgrading to Secure Access incredibly simple. Whether

your timeline is now, next month, or a few months out, start the process to secure your Elevate offer.

Elevate gives you access to both Umbrella and Secure Access during migration, for as long as you need—ensuring continuous protection every step of the way. You also get

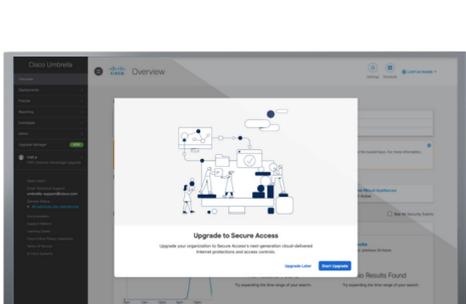

investment credit for your entire unused Umbrella balance that's applied to Secure Access.

By acting now, you can renew early to Secure Access and lock in your current pricing before any increases at your next renewal.

"Our migration from Umbrella DNS to Secure Access was completely seamless. It was a painless, smooth transition, due in part to the tremendous support from Cisco."

– David Noble, Cyber Engineer, Arup

✓ Migration wizard translates policies to Secure Access rules

✓ Full control of your migration

✓ Provides a dual view so you can access both Umbrella and Secure Access from a single interface

Ready to Up Your Defense?

With our exclusive Elevate offer, you get one extra year of Umbrella, free. Not only do you benefit from gaining more features for the same price, but if you upgrade now, you also get investment credit for the entire unused balance of your Umbrella subscription that's applied to Secure Access.

How to Achieve Modern Cloud Security with Cisco

- Tell your Cisco partner or account manager you want to move to Secure Access DNS.
- Entitlement gets activated. If you need more time to migrate, Cisco will extend your Umbrella subscription.
- Migrate in less than an hour using the automated upgrade manager.
- Implement your improved cloud security, and elevate your defense.
- Bonus: use your free trial of Cisco Secure Private Access to test out Cisco's ZTNA capabilities*

*Secure Access is flexible by design. Stay DNS-centric or opt-in-on your timeline—to upgrade to additional integrated security capability, up to full SSE.
