

# Managed Secure SD-WAN

## Overview

Managed Secure SD-WAN combines the industry-leading software-defined WAN solution with Cisco® network security, making it easier and less expensive to securely connect your branch locations. A single-vendor, carrier-agnostic solution, single pane of glass visibility, and comprehensive cost-savings plan reduces complexity and provides predictable bandwidth at a much lower cost than traditional WAN connectivity. Uninterrupted service to mission-critical business operations improves user experience and increases productivity. Centralized orchestration provisions and deprovisions applications more quickly, while continuous traffic shaping, tuning and optimization optimizes performance. Industry-leading security and threat protection across the WAN is designed, delivered, and managed by Cisco experts, protecting and unlocking the full value of your technology investment.

## Technologies

- Viptela®
- Cisco® DNA Essentials
- Cisco® Umbrella *optional*

## Benefits

- Easier and less expensive to securely connect branch locations
- Reduce complexity and predictable bandwidth at lower costs
- Improve network and service availability
- Optimal performance of business applications and end-user experience
- Real-time performance and utilization enables better business decisions and reduces costs
- Cisco experts unlock the full potential of your technology investment

## Why Cisco

- Cisco is the global leader in network security, virtualization, cloud computing, routers, switches, WLAN, and other advanced networking solutions and technologies.
- Managed Secure SD-WAN combines Cisco's market-leading SD-WAN solution with our best-of-breed security, all delivered and managed by Cisco experts.
- Draw on Cisco intellectual capital and automation capabilities developed over 30 years of supporting the world's largest enterprises and networks.
