

Cisco Enterprise Networking Advise and Implement Service

Evolve to an open, programmable, software-driven network

Digital technologies create new possibilities for your business. However, these technology trends also create fresh challenges for your network, because you need the network to bring all these elements together.

To run a digital business, you need a network that can:

- Successfully support the increasing number of devices and connections
- Capture and analyze data so you can gain critical insights and take action quickly
- Integrate cloud-based solutions to support and augment your on-premises capabilities
- Protect your business and customers with security throughout your infrastructure

The Cisco® Enterprise Networking Advise and Implement Service helps you evolve your existing network to an open, programmable, software-driven platform that's ready to support digital business. With a digital-ready network, you can reduce time and effort by enabling automation. It allows you to get the right data to the right person at the right time, improving your customer and employee experiences. And it enables you to be more adaptive and predictive, while reducing costs and risk.

Benefits

- Increase agility with scalable solution designs
- Mitigate risk by validating and testing before implementation
- Speed deployment using our proven implementation processes
- Move forward confidently with a cost-effective strategy and measurable ROI

Why Cisco?

Cisco's networking services help you outline your strategy to achieve your desired business outcomes. We can help you navigate evolving technology and digital transformations, prepare your business for emerging trends, and address risks and compliance. With our expertise, state-of-the-art tools, and proven best-practice methodologies, we help you realize value and efficiencies while building an agile network that allows you to embrace the digital future.

Next steps

Transform your business with a digital network plan

Digital means something different to every industry and organization. Our experts are ready to work with you to design and implement the right network architecture—one that meets your unique business goals, no matter where you are in your digital journey.

Our senior architects assist in developing a plan to achieve maximum performance and functionality from your campus, WAN, access, and branch networks. And we help you understand how to use software-defined networking, virtualization, and applications to make sure your network supports your digital business. By aligning your business goals and technology requirements, our experts help you build a cost-effective network architecture strategy, with a scalable solution design that can increase agility and get you ready for growth and change down the road.

Our service reduces time to completion and minimizes any negative effects to your production environment by using a phased migration plan and providing implementation support. Count on our quality-assured processes, state-of-the-art tools, and proven methodologies to help your business reach its full digital potential with a digital-ready network that helps prepare your business for the future.
