

Cisco Business Critical Services

for Data Center

Extract maximum value from your data center infrastructure and applications today and in future

Overview

Disparate IT environments spanning multiple applications and infrastructure, coupled with the onslaught of new users and devices is making the data center more complex and costly. Data centers of today need to support their legacy workloads while simultaneously scale to efficiently adapt to changing market dynamics. Added to that are the increased security threats and breaches that are putting customers and their mission-critical data at immense risk.

Cisco Business Critical Services for Data Center proactively responds to these challenges and can help you accelerate IT deployment; optimize performance and governance; and reduce risk across applications, data center switches, servers, Application Centric Infrastructure (ACI) and the SAN. Our next generation of optimization services, combines our unrivaled engineering expertise with integrated analytics, automation and compliance to enable you to predict opportunities, preempt risks, and navigate technology transitions, faster.

Our services portfolio also excels in providing best-in-industry people, processes, and tools, giving you the flexibility to optimize your data center by selecting customizable support services and deliverables. Cisco data center consultants act as your trusted experts to make recommendations, develop detailed design standards, and evaluate the capability of your applications to meet future requirements. We also provide recurring analyses of your infrastructure performance and configurations to give you an end-to-end, strategic view of your applications and infrastructure while providing ongoing knowledge to your IT staff.

How you can benefit

By turning your data center into an integrated system with a holistic operational view, our Business Critical Services for Data Center can help you:

- Align people, processes and IT to reduce cost, complexity, and accelerate IT deployment
- Create a more reliable environment that reduces downtime and increases productivity
- Improve performance and accelerate time-to-market
- Increase scalability across computing, networking, ACI and storage resources
- Enhance security and compliance across your digital transformation journey
