Managed Enterprise Networks

Overview

Managed Enterprise Networks operates all segments of the customer’s network, including campus, branch, data center edge, and connectivity to the cloud. Industry-leading automation, orchestration, and assurance provide predictive network analysis and rapid resolution, while improving network and infrastructure management efficiency. Exceptional network visibility, stability, and end-user satisfaction help organizations boost productivity, make better, faster decisions, and enhance business agility.

Technologies

- LAN/WAN
- Meraki®
- Wireless
- SD-WAN
- Cisco® DNA Center
- Optical
- IoT
- Security
- Network Virtualization

Benefits

- Single point of contact for Cisco and third party technologies reduces complexity
- Carrier management with Letter of Agency simplifies vendor management, enabling faster resolution of incidents
- Expert managed operations increases security, service quality, availability, reliability, and compliance
- ITIL principles and Cisco best practices help ensure a consistent experience for employees and customers
- On-demand reporting enables better business decisions
- Smart Bonding makes it easier to report issues and open service requests

Customer success story

Large retail

Customer challenges
- Replace aging network system experiencing lengthy outages
- Partner with a single, industry-leading service provider to deliver an integrated solution to reduce complexity
- Enhance network insight to improve operational and financial efficiency

Cisco Services solution
- New network platform supporting 90,000 network, wireless and third-party devices, and 30,000 access points across 2200 stores
- Migrated legacy branch network to a virtualized SD-WAN solution

Business outcomes
- Stabilized network, significantly reduced outages, and improved network insight, uptime, and mean time to restore by 51%
- Single service provider reduced complexity

Why Cisco
- Cisco is the world leader in network security, virtualization, cloud computing, routers, switches, WLAN, and other advanced networking solutions and technologies
- Intellectual capital and automation capabilities developed based on over 30 years of experience in networking
- Faster incident resolution and RMA processing with direct access to Cisco Technical Assistance Center (TAC) and business units
- Industry-leading SLAs with up to 99.999% availability
- Over 90% of incidents are detected and resolved proactively
- 97% positive customer satisfaction rating
