

The Forrester Wave™: Big Data Hadoop-Optimized Systems, Q2 2016

“Cisco Systems provides a viable mid-sized system at attractive price point. Cisco UCS Integrated Infrastructure for Big Data provides a secure and scalable infrastructure to support enterprise requirements. Cisco’s UCS solution comes pre-tested and pre-validated for Cloudera, Hortonworks, IBM, and MapR, providing a lower-cost and scalable storage platform to support Hadoop deployments. Management tools such as Cisco UCS Manager and Cisco UCS Director allow for simple configuration of big data Hadoop clusters that can adapt dynamically to changing workloads. Cisco’s key differentiators lie in its ability to offer a wide range of configurations, its strong focus on internet-of-things (IoT) use cases, and its broad partner ecosystem.”
