

Incident Response and Breach Discovery Partner Program

Find an ecosystem of Cisco-partnered Incident Response and Breach Discovery Practices

Bad guys are breaching corporate cyber defenses of companies every day, frequently to disastrous and highly public consequences. Most companies don't have the people, processes or equipment in place to quickly and thoroughly identify and remediate these breaches, exposing themselves to even more damage and future breaches. Expert companies providing Incident Response and Breach Discovery services are there to help these companies to identify if they have been breached (Breach Discovery) or to triage, contain and clean up if they have been breached. These are the experts who are trained in the tools and approaches to provide these services at a moment's notice.

Cisco is providing an ever-growing ecosystem of expert partners that our customers can approach to engage in the event they need these services. The Incident Response partner program augments our Cisco Security Technology Partner program (CSTA) that provides a single place to search for products complementary to the Cisco Security portfolio. Customers can benefit from a more complete and integrated security solution. The Incident Response and Breach Discovery Partner program provides a resource where our customers can find Incident Response and Breach Discovery practices. Each of these companies employs experts in the use of Cisco Security Products.

Next Steps

To find a qualified Cisco Incident Response and Breach Discovery partner, visit <http://www.cisco.com/c/en/us/products/security/partner-ecosystem.html>.

Benefits
