It takes most organizations between 100 and 200 days to detect a threat. It takes Cisco 3.5 hours.*

Stealthwatch ISE
Takes in network telemetry to unlock network visibility and threat identification
Controls network access and provides user and device details to pinpoint anomalies
An end-to-end sensor and enforcer that can detect and stop sophisticated security issues

What if you’re paying more for less protection?
Sophisticated threats can hide in network blind spots, extracting sensitive information and causing millions in damage.

$15 million
$4 million
The average amount spent on network security by large companies
The average total cost of a single data breach

Identify and respond to threats faster.
The Cisco® Stealthwatch® system and Cisco Identity Services Engine (ISE) are next-generation security solutions that work within the Cisco Digital Network Architecture (DNA). They transform your network into its own security system. Cisco ISE collects the identity of every device and user trying to access your network.
Cisco Stealthwatch uncovers threats across the network, even if they bypass perimeter defenses.

Together, Cisco Stealthwatch and ISE transform your network into a security sensor.

Stealthwatch
ISE
Security sensor
Takes in network telemetry to unlock network visibility and threat identification
Controls network access and provides user and device details to pinpoint anomalies
An end-to-end sensor and enforcer that can detect and stop sophisticated security issues

Transform your network for the digital era and detect threats faster, even in encrypted traffic.
