Cisco Enterprise NFV Advise and Implement Service

Realize the benefits of your NFV solution sooner

For enterprises today, change is the only constant. And when innovations come quickly, you need to be able to make rapid changes to your network to keep up.

Cisco® Digital Network Architecture (Cisco DNA™) Virtualization enables you to deploy network services in minutes, on any platform, such as branch and campus. And Cisco Enterprise Network Functions Virtualization (NFV) makes it easy to virtualize your branch and deploy and manage your various services from a single, central platform.

Cisco Enterprise NFV Advise and Implement Service helps accelerate your transition to NFV, while reducing risks during implementation. Our guidance helps you achieve your business and technical objectives, as well as assisting you to:

- Develop plans for adoption and migration from your existing branch environment to a virtual branch solution, protecting your capital and operational investments
- Identify and address your technical and operational readiness up front so you can implement and manage the new solution effectively
- Apply Cisco best practices throughout design and implementation for reduced risk

Benefits

- Speed adoption by identifying and addressing technical and operational readiness

- Improve results with a solution design customized for your goals

- Validate the new solution for your existing network and use cases

- Decrease risk with Cisco expertise, tools, and best practices on your side

DNA 8 Framework

The DNA 8 Framework identifies eight key areas to address during network transformation and highlights why each area matters to your organization's success. Learn more at:

Smoothly transition from physical to virtual

Cisco Enterprise NFV converts your critical network functions into software, making it possible to deploy services in minutes, so you stay ahead of the game, no matter how many branches you have. To make your transition smoother, our Enterprise NFV Advise and Implement Service helps you:

- **Speed adoption of your enterprise NFV solution:** We validate your virtual branch use case, routing, and network security functionality, and share critical knowledge with your in-house experts.
- **Reduce risk as you transition from a physical to virtual solution:** We design and implement a plan for migration to make your transition a success. This includes identifying the dependencies and effects of introducing new capabilities into your environment.
- **Integrate the enterprise NFV solution with your existing network:** We develop a comprehensive solution design and work with you during implementation to ensure a successful deployment.

Let us help you design and implement the right enterprise NFV solution to meet your unique needs.

Why Cisco?

Cisco's networking services help you outline a strategy to achieve your desired business outcomes. We can help you navigate evolving technology and digital transformations, prepare your business for emerging trends, and address risks and compliance.

Our expertise, state-of-the-art tools, and proven best-practice methodologies help you realize value and efficiencies while building an agile network that allows you to embrace the digital future. With more than 50 million network installations, 19.7 billion threats blocked daily, and 10 J.D. Power Certifications in a row, we have the experience and expertise to help you remain competitive in today's fast-paced, ever-changing world.
