

# Threat defense for branch networks

Branch networks are difficult to defend, and the growing number of devices, cloud services, and applications is making the problem more complex.

30%

of advanced threats target branch offices; that's six times more than in 2015.

— Gartner

## It's time for effective security at the branch

### Better protection

- Turn routers into security devices
- Stop threats from moving laterally between branches

### Deeper visibility

- Get granular insights into branch traffic
- Create a baseline to detect anomalous behavior

### Faster threat detection and response

- Detect anomalies faster at the branch level
- Automate remediation with machine learning

Embed security into your infrastructure with the Cisco Stealthwatch™ Learning Network License. See what's happening at the branch level with Stealthwatch Learning Network License in your Cisco® 4000 Series Integrated Services Routers.
