LOGICALIS

Logicalis Secure OnMesh Managed Service with Cisco SecureX

Benefits

- Improve security posture to enable teams to focus on driving greater agility, innovation, and growth in the business
- Gain visibility to proactively identify security threats by preventing security disruptions through the holistic view of your security landscape provided through a single pane of glass
- Optimize digital performance and user experiences while mitigating security risks, optimizing costs, and reducing carbon impact

Delivering security as a business enabler

As your organization embraces digital transformation and the cloud, security should no longer inhibit the agility of your business. Security needs to be woven into your business's digital fabric so that you can confidently focus on driving greater agility, innovation, and growth.

Although 69 percent of organizations now recognize security as a business enabler rather than as a business blocker[1] and 71 percent of executives say cybersecurity concerns impede innovation at their organizations[2], only 40 percent of organizations are embedding security at the start of business initiatives.[3] One reason for this is that securing a business's digital estate creates challenges that require too many point security solutions. Consequently, teams are constantly challenged to understand various products, services, and methods. This situation creates security gaps resulting from the lack of a comprehensive view of the entire security landscape.

The Logicalis Secure OnMesh managed service offering addresses this challenge by combining the best of the Cisco SecureX™ and Microsoft Sentinel comprehensive integrated cybersecurity platforms. The Logicalis Secure OnMesh service offering integrates and orchestrates security across an organization's entire digital ecosystem, leveraging the centralized Cisco SecureX cloud-native platform to provide automated intelligent insights in real time.

LOGICALIS

Weave security into every element of your company's digital fabric

The Logicalis Secure OnMesh managed service offering turns cyber security into a business enabler across all pillars of your technology stack by combining four key elements:

· Cisco SecureX
· Microsoft Sentinel
· Logicalis security services
· Global Security Operations Center (SOC)

Deploying a tried, tested, and repeatable framework, the Logicalis Secure OnMesh service offering provides an assessment through to managed service that helps you continually optimize your security posture at scale to:

· **Align**: The Secure OnMesh assessment provides all the information required to proceed to implementation including sizing and cost estimates, data sources, threat intelligence feeds, log ingestion, and retention strategies.

· **Transform**: Secure OnMesh implementation and proof of value service deploys and demonstrates the environment, focusing on your critical business services.

· **Scale**: From day one production, the Logicalis Secure OnMesh managed service offering provides a holistic view of your security landscape. Providing a continuous 24-hour service, Secure OnMesh proactively identifies threats to prevent security disruptions and provide insights that allow you to proactively optimize digital performance and user experiences, all while mitigating risks, optimizing costs, and reducing carbon impact.

The Logicalis Secure OnMesh managed service offering is built on Cisco SecureX, a platform that unites all your security teams and products. Cisco SecureX unifies visibility, enables automation, and strengthens your security posture. Security Operations (SecOps), Network Operations (NetOps), and Information Technologies Operations (ITOps) each get a personalized view that spans your entire stack, including third-party security products along with responses, analytics, and management provided through a consistent single view experience.

"When speaking to customers, the key challenge they face is balancing risk with innovation. Our Secure OnMesh solution weaves security throughout the customers' digital ecosystem to ensure security is a business enabler, not a detractor. Working closely with Cisco, we use the latest technology to underpin our digital managed service and ensure the customer receives the very best in our combined solution."

Toby Alcock
Chief Technology Officer, Logicalis

Turn security into a business differentiator

Move from security that's an overwhelming burden to security that's a business differentiator, giving your team more time to focus on adding value to the business. Weave security into your company's DNA with the Logicalis Secure OnMesh managed service offering built on Cisco SecureX.
