

The New 40.9 In-Meeting Experience

for Webex Meetings

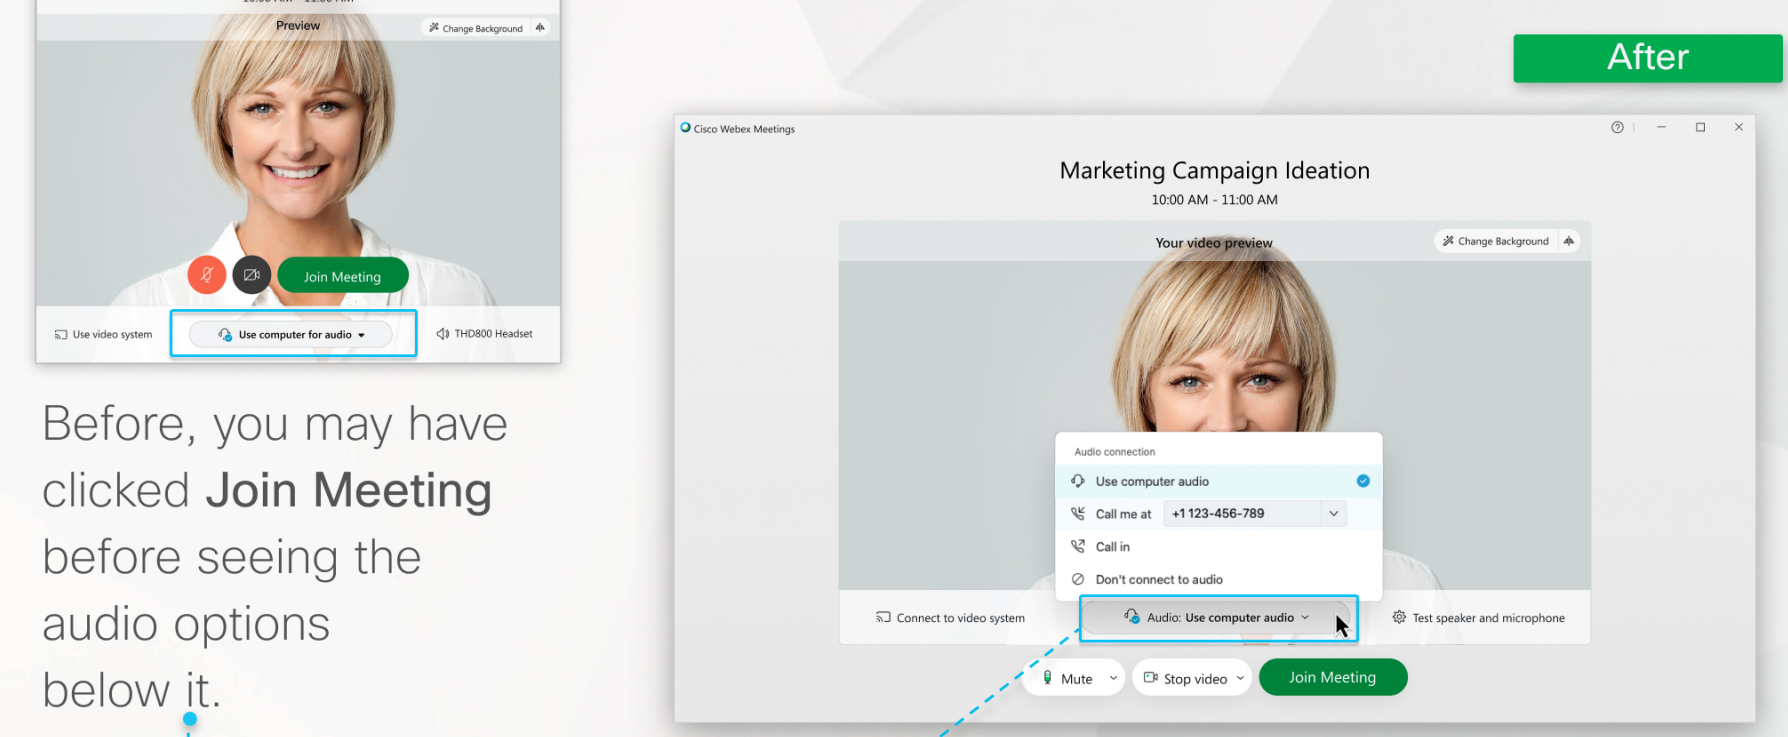

Meeting features are easier to find at a glance.

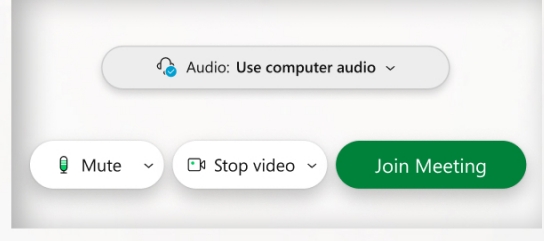

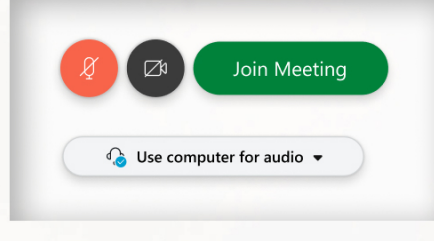

Optimized Audio and Video Preview

We've made previewing your audio and video settings before joining more intuitive.

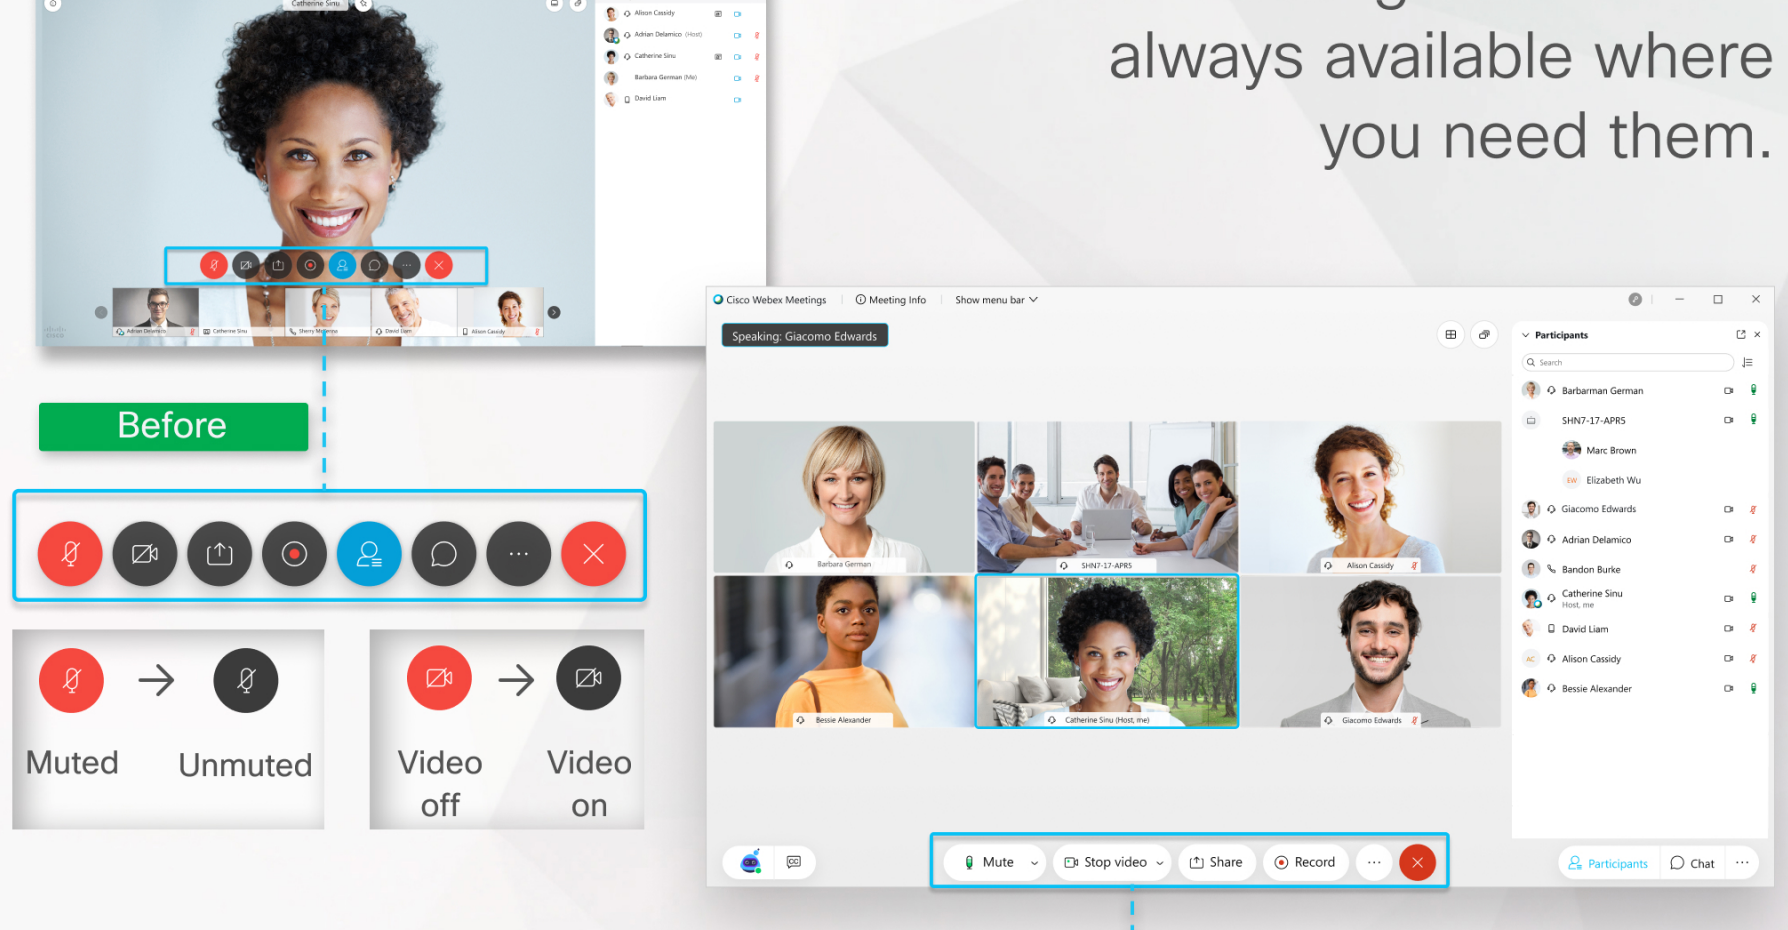

Before, you may have clicked **Join Meeting** before seeing the audio options below it.

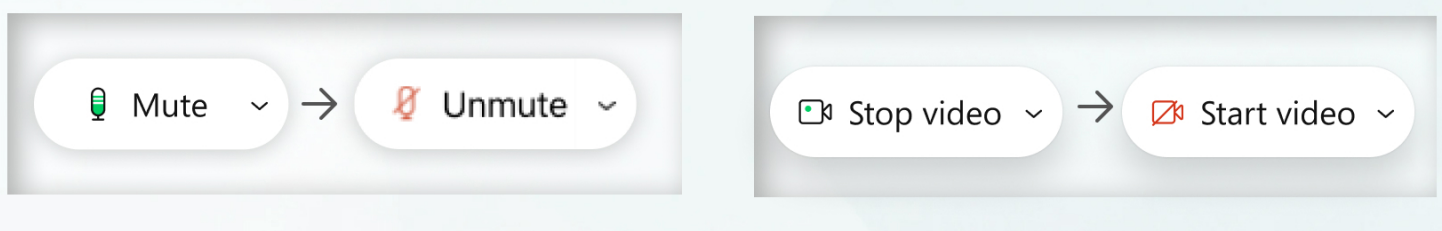

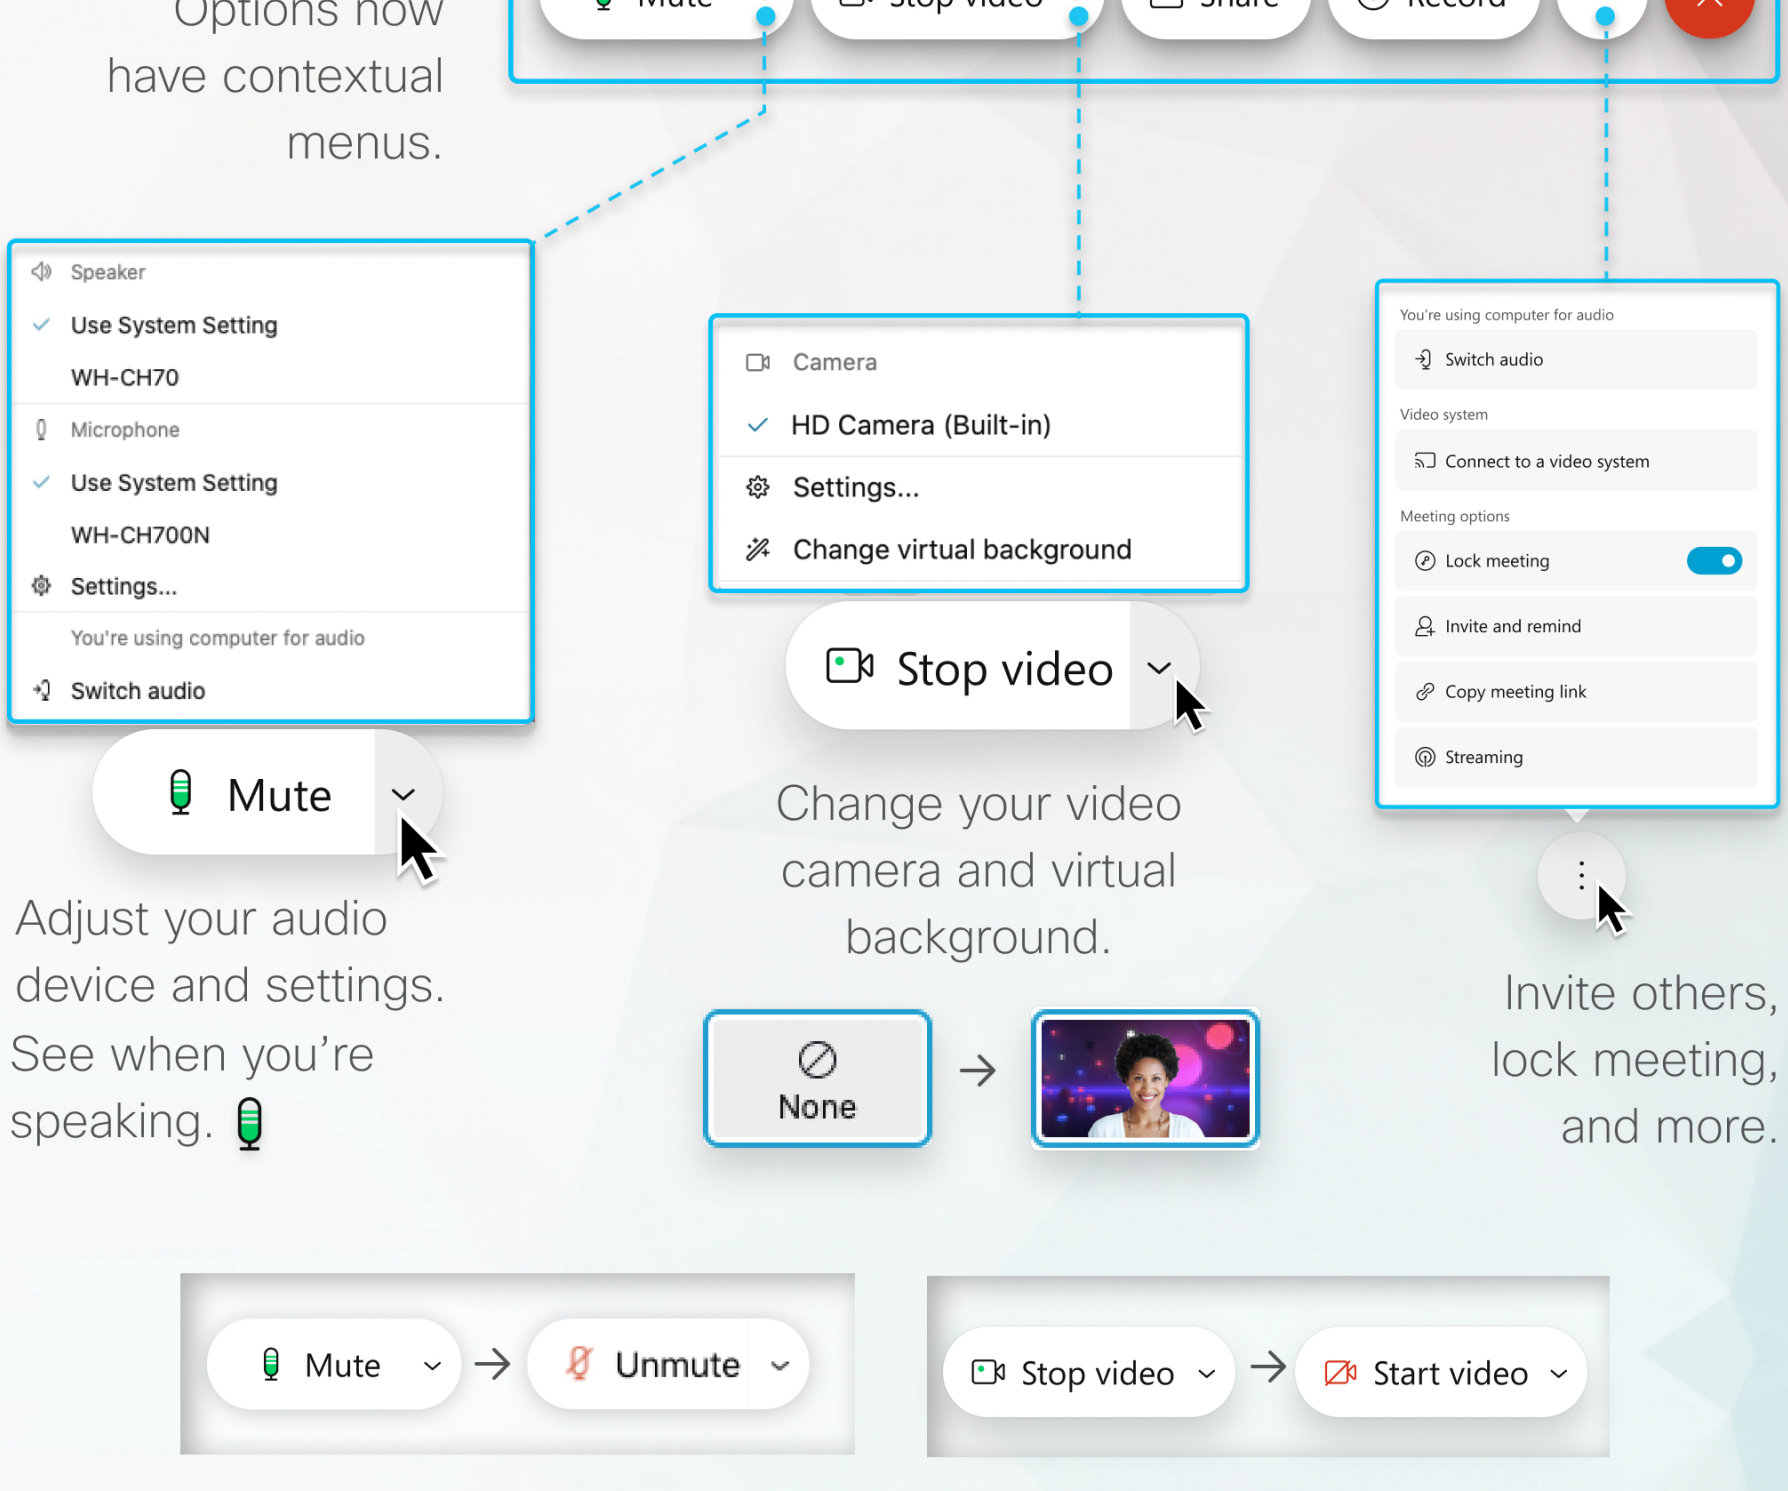

Now, the audio selection menu appears first. And with the larger preview window, you can make sure you look your best when joining a meeting.

Easy-to-find Meeting Controls

Essential meeting controls are always available where you need them.

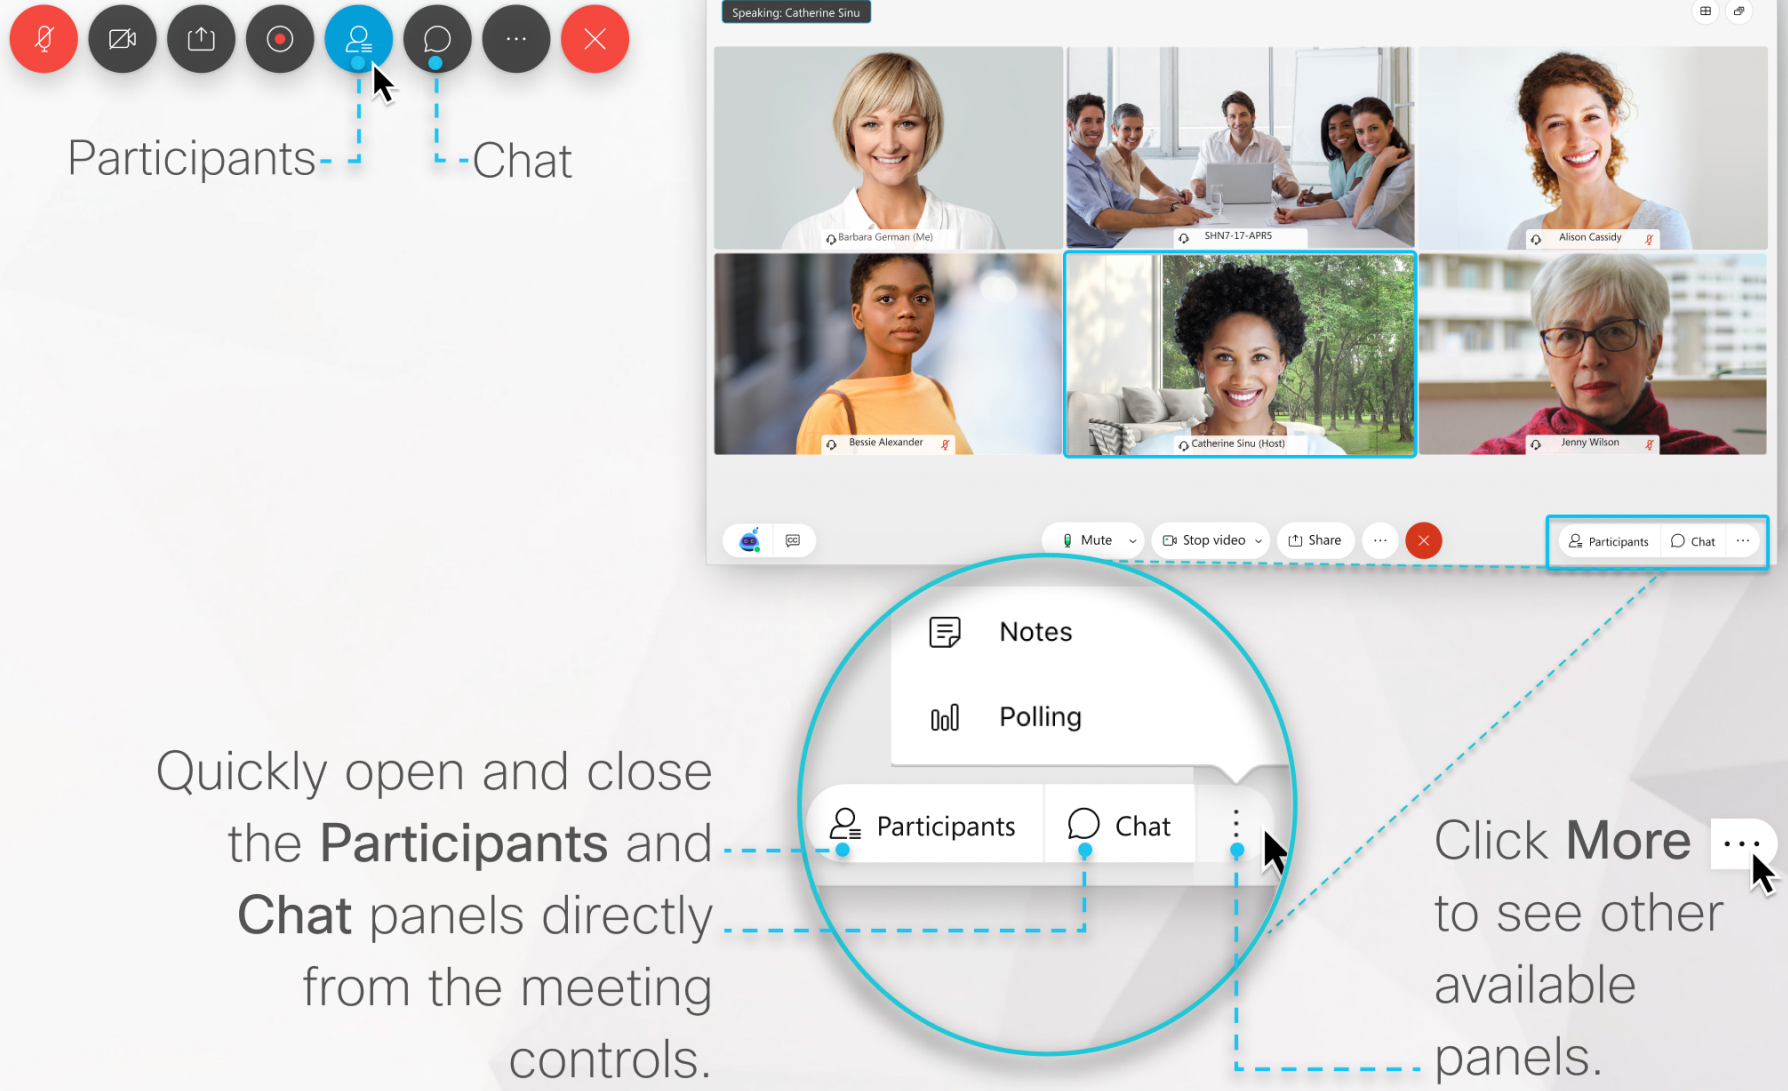

Now it's easier to see when your microphone and video camera are on.

Consolidated Panel Controls

We've consolidated the panel controls, making it easier to access panels like **Participants** and **Chat**.

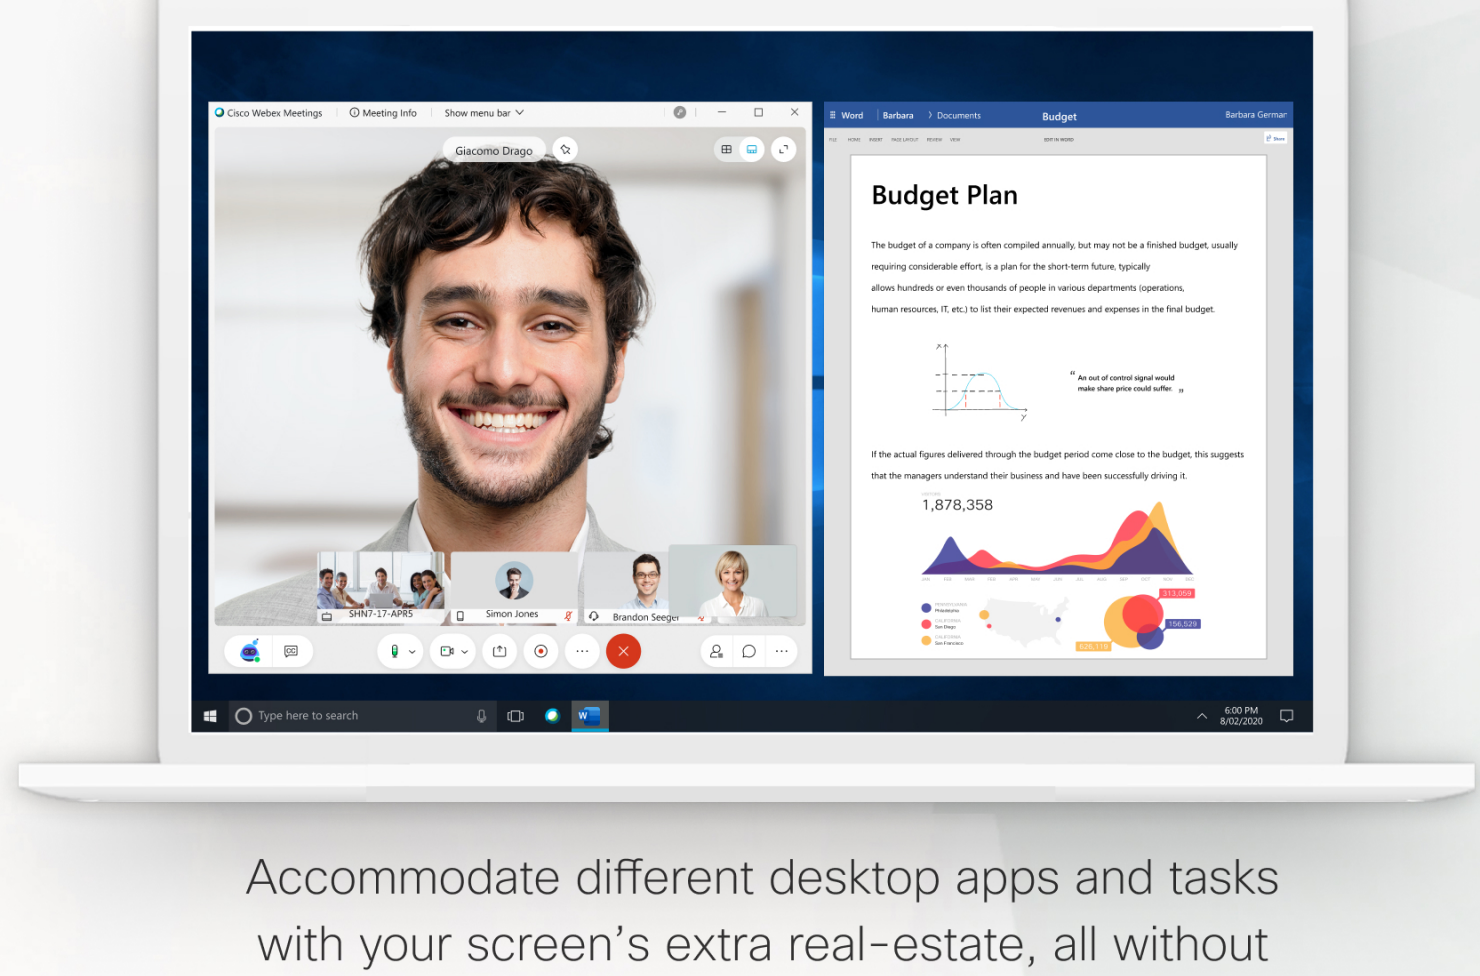

Quickly open and close the **Participants** and **Chat** panels directly from the meeting controls.

Click **More** to see other available panels.

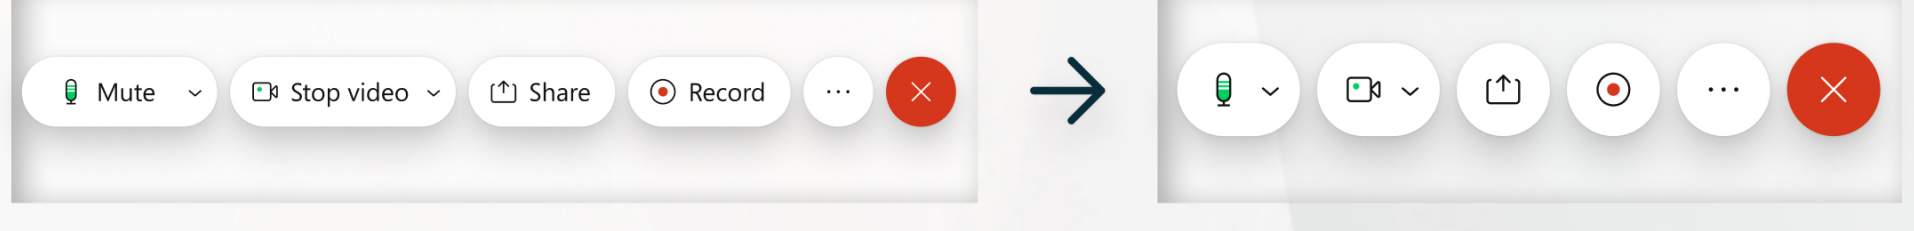

Controls that adjust with your window size

Now, when you resize your application window, your meeting controls will adopt an appropriate size.

Accommodate different desktop apps and tasks with your screen's extra real-estate, all without losing sight of your meeting controls.

Stay tuned to learn more about the new experience.
