The pre-meeting functionality of Productivity Tools is being merged into the desktop app.

This merges frustrated’s one single desktop app into one, which contains not only the pre-meeting and in-meeting functionality.

No more having to manage two separate apps.

Same functionality you know and love from Productivity Tools—now provided in a seamless package that everyone will be able to benefit from when downloading the desktop app.

Start a meeting in your personal room or join someone else’s.

Join and start meetings easily from the Home tab.

The pre-meeting functionality of Productivity Tools is being merged into the desktop app.

This means that there’s one single desktop app to install, which contains both the pre-meeting and in-meeting functionality.

No more having to manage two separate apps!

Your calendar in the desktop app is synced with your Microsoft Outlook or IBM Lotus Notes calendar to show all of your meetings and appointments, even those without added Webex meetings.

Click Schedule Meeting to open a calendar invite in Microsoft Outlook and schedule a Webex meeting.

With these integrations, you can start and schedule Webex meetings directly from selected applications.

Automatically discover nearby video devices so you can connect to them and share your screen.

Automatically discover nearby video devices so you can connect to them and share your screen.

With these integrations, you can start and schedule Webex meetings directly from selected applications.

The Webex Meetings desktop app includes integrations for Microsoft Outlook, IBM Lotus Notes, and other applications that were formerly a part of Webex Productivity Tools.
