

## TIDAL ENTERPRISE SCHEDULER RELEASE NOTES V 6.0.1 SP

These release notes highlight new features, enhancements and changes within Tidal Enterprise Scheduler™ (TES) v6.0.1 SP. If you encounter any problems or have any questions, call either 650-475-4600 and select option "3" for support. You will be routed to the Cisco Customer Interaction Network, or CIN:

<http://www.in.cisco.com/CustAdv/ts/tso/globalops/gsde/CIN.shtml>

---

**Note** All installable components in the 6.0.1 service pack are complete and can be installed without first installing the 6.0.1 GA release.

---

### Fixed Bugs

#### Bug # CSCto56807

Unable to add Substitution parameters for BusinessObjects DataServices jobs. When adding or editing a Data Service job while using the BusinessObjects adapter, you are unable to enter any data in the grid.

#### Bug # CSCto46402

When inserting a BusinessObjects job with a Program type, the job will return an **Aborted** status with an output of "Job XXXX no longer exists."

#### Bug # CSCto53828

PowerCenter uses "native" and "LDAP" to authenticate users logging in to the PowerCenter domain. By default, the PC domain uses "native" authentication. You can

**Release Notes**

configure the PC domain to use "LDAP" authentication in addition to "native" and to run jobs given an LDAP user account with the appropriate permissions. Currently, the security domain (whether "native" or "LDAP" is specified at the Connection Definition on the **Repository** tab. If your connection definition is defined with "native" for the security domain, and you attempt to run a job on that connection using a user that is not part of the "native" domain, the job will fail during the attempt to login as that user for job submission.

**Bug # CSCto45949**

When the Debug level is set to NONE or SEVERE for Informatica, too much information is written to the log.

**Bug # CSCto46398**

Unable to read logs from mounted Windows shares while using the Informatica Adapter.

**Bug # CSCto15631**

When defining a Calculated date, an unexpected result is returned. The expected result should be same as UI .

**Bug # CSCto40371**

Restarting the Scheduler Master service fails with "Error 1067: The process terminated unexpectedly."

**Bug # CSCtq24663**

Scheduler Job Group cannot use equal sign in group variable value.
