

Instructions for Updating the CEPNM 1.2 Online Help System

Because the wireless/data center addendum was not part of the original product online help system (which is launched from the web GUI), use this procedure to install an updated version of the documentation into your Cisco EPN Manager server help system. All web GUI clients that connect to the Cisco EPN Manager server will have access to the updated online.

-
1. Verify whether your online help system already contains the wireless and data center addendum.
 - a. Click at the top right of the window and choose **Help > Online Help**.
 - b. If you do not see a table of contents on the left, click the Toggle Sidebar icon at the top left of the browser window. This opens the PDF sidebar window.
 - c. Click the Show Document Outline icon to list the table of contents.
 - d. Check the final topic. If it provides reference material for optical monitoring policies, your online help system does *not* include the addendum. Proceed to the next step.
 2. Download the *Cisco Evolved Programmable Network 1.2 User and Administrator Guide* from Cisco.com to your local computer.
 - a. Go to Cisco.com.
 - b. Save the PDF of the *Cisco Evolved Programmable Network 1.2 User and Administrator Guide* to a temporary directory on your computer (such as Desktop). For example, if you are using Mozilla Firefox, you could right-click the PDF file and choose **Save Link As** to copy the file.
 3. As root, copy the file from your computer to the following temporary location on the Cisco EPN Manager server. You will need to enter the root password. (The following command is one line.)

```
scp dir/CiscoEvolvedProgrammableNetworkManager_1_2_UserAndAdministratorGuide.pdf
root@serverIP:/opt/CSColumos/tmp
```

Where:

- *dir* is the local directory to which you downloaded the PDF file
- *serverIP* is the Cisco EPN Manager server IP address

4. Verify that the PDF filename matches the following filename. If it does not exactly match this filename, the online help will not work.

CiscoEvolvedProgrammableNetworkManager_1_2_UserAndAdministratorGuide.pdf

5. As root, log in to the Cisco EPN Manager server, then move to the directory that contains the PDF. You will need to enter the root password.

```
ssh root@serverIP
cd /opt/CSColumos/tmp
```

6. Move the PDF file from the server temporary directory to the server help folder. (The following command is one line.)

```
mv CiscoEvolvedProgrammableNetworkManager_1_2_UserAndAdministratorGuide.pdf
/opt/CSColumos/tomcat/webapps/webacs/help
```

Refresh your browser to view the updated help. You may also have to clear your browser cache.
