Release Notes for Cisco RV130/RV130W Routers Firmware Version 1.0.1.3

June 2014

This document describes known issues in Cisco RV130/RV130W firmware version 1.0.1.3.

Contents

Enhancements, page 1
Issues Resolved, page 1
Known Issues, page 2
Related Information, page 3

Enhancements

• Support for Automatic Software Delivery or ASD, allowing you to automatically upgrade to new firmware.

• Support to download the Authorized AP CSV template and the Users CSV template.

Issues Resolved

• If users set outbound firewall access rules to Deny, then create an Internet access policy to permit a specific website, the access rule does not work and other websites are also permitted. (CSCun04513)
Release Notes

- If users enable Email settings, set **Authentication with SMTP Server** to Login and enter a secondary email address to which to send logs, email is not sent to the secondary address provided. (CSCum76056)

- STP does not work accurately with Link Aggregation Groups (LAG). For example, if ports 1 and 2 are included in a LAG, the STP root bridge is wrong after the link status changes for port 1. (CSCum50055)

- The WDS links is not up if the peer MAC address format is incorrect. For example, users enter 001122334455 instead of 00:11:22:33:44:55. (CSCum59546)

- When the syslogs reach 1000, the device does not email logs to users. (CSCum72888)

- VLAN ID 80 does not work. (CSCum31734)

- If the PPTP tunnel is established and users create a new VLAN, the PPTP clients are offline and cannot connect again. (CSCum72910)

Known Issues

**Caveats Acknowledged in Firmware Version 1.0.1.3**

**Problem:** After rebooting or upgrading the device, schedule-based firewall access rules do not work. (CSCuo66872)

**Solution:** Disable the access rules and enable them again.

**Problem:** If users enable QoS, configure the Ethernet upstream and downstream rate limit, and then create or delete a new VLAN, the downstream rate limit does not work. (CSCuo94504)

**Solution:** Disable QoS and enable it again, or change the configuration sequence.

**Problem:** Sometimes, after Ethernet WAN, or 3G interface failover, LAN hosts are unable to access the Internet. (CSCuo64951)

**Solution:** Reapply WAN settings, or unplug and plug the WAN cable or 3G dongle again.
Caveats Carried Over from Firmware Version 1.0.0.21

Problem: Wireless clients may not be able to access the Internet when roaming between the device and another access point on the LAN side. (CSCum42666)

Solution: Enable WAN QoS or STP on LAN ports.

Problem: If Dead Peer Detection is enabled, the IPsec VPN tunnel may reconnect in case of heavy traffic. (CSCum72973)

Solution: Limit heavy traffic over the VPN tunnel.
