Change in URL Reputation Feature Servers

Important! The server pool used by the URL Reputation feature servers has changed. As a result, when you enable the URL Filtering feature, you may observe one of the following symptoms:

- Work queue on your appliance backs up
- A large number of 'Request already expired' entries in the web_client logs
- Alerts indicating that your appliance is unable to connect to the Cisco Web Security Service

To fix this issue, you must reduce the number of URLs sent for verification at the same time.

Procedure

- Step 1** Use SSH to access the command-line interface.
- Step 2** Enter `websecurityadvancedconfig`.
- Step 3** Change the value of **Enter the threshold value for outstanding requests** from default value to 5.

Note Make sure that you do not change any other settings.

Step 4 Commit your changes.

Upgrade Paths

You can upgrade to release 9.1.1-028 from the following version: 9.1.0-042.

Resolved Issues

Use the following bug search tool query to get a list of resolved issues in this release:

https://tools.cisco.com/bugsearch/search?kw=*&pf=prdNm&pfVal=282509130&rls=9.1.1-028&sb=fr&bt=custV.

Additional Information

For additional information about AsyncOS for Cisco Email Security Appliances, see the Release Notes for your release at http://www.cisco.com/en/US/products/ps10154/prod_release_notes_list.html.

Service and Support

For service and support information for Cisco Content Security appliances, see:

- http://www.cisco.com/en/US/support/tsd_cisco_worldwide_contacts.html
- http://www.cisco.com/en/US/products/ps11169/serv_group_home.html#~Support

If you purchased support through a reseller or another supplier, please contact that supplier directly with your product support issues.

For noncritical questions and issues, you can also submit a customer support request from the appliance. For instructions, see the User Guide or online help.
