### What's New In This Release

<table>
<thead>
<tr>
<th>Feature</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Managing Multiple Subset of Configuration Masters</strong></td>
<td>You can now configure subsets of a particular version of a Configuration Master to centrally manage the different policy configurations of your Web Security appliance. For more information, see the &quot;Managing Web Security Appliances&quot; chapter of the user guide or online help.</td>
</tr>
<tr>
<td><strong>Performing Threat Analysis using Casebooks</strong></td>
<td>The Cisco Content Security Management appliance now includes the casebook and pivot menu widgets.</td>
</tr>
<tr>
<td><strong>Note</strong></td>
<td>If you are using the Microsoft Internet Explorer browser to access your appliance, you will not be able to use the casebook widget.</td>
</tr>
<tr>
<td></td>
<td>You can perform the following actions in your appliance using the casebook and pivot menu widgets:</td>
</tr>
<tr>
<td></td>
<td>- Add an observable to a casebook to investigate for any threat analysis.</td>
</tr>
<tr>
<td></td>
<td>- Pivot an observable to a new case, an existing case, or other devices registered in the Cisco Threat Response portal (for example, AMP for Endpoints, Cisco Umbrella, Cisco Talos Intelligence, and so on) to investigate for threat analysis.</td>
</tr>
<tr>
<td></td>
<td>For more information, see the &quot;Integrating with Cisco Threat Response Server&quot; chapter of the user guide or online help.</td>
</tr>
<tr>
<td><strong>Ability to choose Cisco Threat Response server when registering appliance with Cisco Threat Response portal</strong></td>
<td>When registering your appliance with the Cisco Threat Response portal, you can now choose a Cisco Threat Response server to connect your appliance to the Cisco Threat Response portal. The following are the Cisco Threat Response servers that are supported for this release:</td>
</tr>
<tr>
<td></td>
<td>- AMERICAS (api-sse.cisco.com)</td>
</tr>
<tr>
<td></td>
<td>- EUROPE (api.eu.sse.itd.cisco.com)</td>
</tr>
<tr>
<td></td>
<td>For more information, see &quot;Integrating with Cisco Threat Response Server&quot; chapter of the user guide or online help.</td>
</tr>
<tr>
<td><strong>Managing favorite reports on the New Web Interface</strong></td>
<td>You can create a custom report page by assembling charts (graphs) and tables from all your existing email security reports on the new web interface of your appliance. For more information, see the &quot;Working with Reports on the New Web Interface&quot; chapter of the user guide or online help.</td>
</tr>
<tr>
<td><strong>Configuring Policy, Virus and Outbreak Quarantine on the New Web Interface</strong></td>
<td>You can now configure Policy, Virus or Outbreak Quarantine from the new web interface of your appliance. For more information, see &quot;Centralized Policy, Virus and Outbreak Quarantines&quot; chapter of the user guide or online help.</td>
</tr>
<tr>
<td><strong>Managing APIs using Swagger UI</strong></td>
<td>Swagger is a set of open-source tools built around the OpenAPI Specification. Swagger UI helps you to design and manage AsyncOS API resources on a web interface. For more information, see the &quot;Setup, Installation and Basic Configuration&quot; chapter of the user guide or online help.</td>
</tr>
</tbody>
</table>

---

Release Notes for AsyncOS 12.7 for Cisco Content Security Management Appliances
Changes in Behaviour

Improving User Experience by Collecting Feature Usage Statistics
The Cisco Content Security Management appliance now collects feature/interface usage statistics on the new web interface of the appliance that helps Cisco improve overall user experience. All data collected is anonymized. If you want to opt-out of this feature, navigate to Management Appliance > System Administration > General Settings > Usage Analytics page of the web interface to disable it.

For more information, see section "Monitoring Web Usage Analytics" section in the user guide or online help.

Comparison of Web Interfaces, New Web Interface vs. Legacy Web Interface

<table>
<thead>
<tr>
<th>Web Interface Page or Element</th>
<th>New Web Interface</th>
<th>Legacy Web Interface</th>
</tr>
</thead>
<tbody>
<tr>
<td>Landing Page</td>
<td>After you log in to the Security Management appliance, the Mail Flow Summary page is displayed.</td>
<td>After you log in to the appliance, the System Status page is displayed.</td>
</tr>
<tr>
<td>Product Drop-down</td>
<td>You can switch between the Email Security Appliance and the Web Security Appliance from the Product drop-down.</td>
<td>You can use the Email or Web tab to switch between the Email Security Appliance and the Web Security Appliance.</td>
</tr>
<tr>
<td>Reports Drop-down</td>
<td>You can view reports for your Email and Web Security Appliances from the Reports drop-down.</td>
<td>You can view reports for your Email and Web Security Appliances from the Reporting drop-down menu.</td>
</tr>
<tr>
<td>Web Interface Page or Element</td>
<td>New Web Interface</td>
<td>Legacy Web Interface</td>
</tr>
<tr>
<td>-------------------------------</td>
<td>-------------------</td>
<td>---------------------</td>
</tr>
<tr>
<td>Management Appliance Tab</td>
<td>Click on the Security Management appliance to access the Management Appliance tab.</td>
<td>You can enable and configure reporting, message tracking and quarantines, as well as configure network access, and monitor system status.</td>
</tr>
<tr>
<td>My Reports Page</td>
<td>Select Email from the Product drop-down and choose My Reports from the Reports drop-down.</td>
<td>You can view the My Reports page from Email &gt; Reporting &gt; My Reports.</td>
</tr>
<tr>
<td>Reporting Data Availability Page</td>
<td>Click on the Security Management appliance and choose Email &gt; Reporting &gt; Reporting Data Availability to access the Reporting Data Availability page.</td>
<td>You can view, update and sort data to provide real-time visibility into resource utilization and email traffic trouble spots.</td>
</tr>
<tr>
<td>Scheduling &amp; Archiving Reports</td>
<td>Click on the Security Management appliance and choose Email &gt; Reporting &gt; Scheduled Reports to schedule your reports. Click on the Security Management appliance and choose Email &gt; Reporting &gt; Archive Reports to archive your reports.</td>
<td>You can schedule reports using the Email &gt; Reporting &gt; Scheduled Reports page, and archive your reports using the Email &gt; Reporting &gt; Archived Report page of the Security Management appliance.</td>
</tr>
<tr>
<td>Reporting Overview Page</td>
<td>The Email Reporting Overview page on the Security Management appliance has been redesigned as Mail Flow Summary page in the new web interface. The Mail Flow Summary page includes trend graphs and summary tables for incoming and outgoing messages.</td>
<td>The Email Reporting Overview page on the Security Management appliance provides a synopsis of the email message activity from your Email Security appliances. The Overview page includes graphs and summary tables for the incoming and outgoing messages.</td>
</tr>
</tbody>
</table>
| Advanced Malware Protection Report Pages | The following sections are available on the Advanced Malware Protection report page of the Reports menu:  
- Summary  
- AMP File Reputation  
- File Analysis  
- File Retrospection  
- Mailbox Auto Remediation | The Email > Reporting drop-down menu of the Security Management appliance has the following Advanced Malware Protection report pages:  
- Advanced Malware Protection  
- AMP File Analysis  
- AMP Verdict Updates  
- Mailbox Auto Remediation |
<p>| Outbreak Filters Page        | The Past Year Virus Outbreaks and Past Year Virus Outbreak Summary are not available in the Outbreak Filtering report page of the new web interface. | The Email &gt; Reporting Outbreak Filters page displays the Past Year Virus Outbreaks and Past Year Virus Outbreak Summary. |</p>
<table>
<thead>
<tr>
<th>Web Interface Page or Element</th>
<th>New Web Interface</th>
<th>Legacy Web Interface</th>
</tr>
</thead>
<tbody>
<tr>
<td>Spam Quarantine (Admin and End-User)</td>
<td>Click <strong>Quarantine &gt; Spam Quarantine &gt; Search</strong> on the new web interface to access the Spam Quarantine page. For more information on the end-users access to the Spam Quarantine portal on the new web interface, see <strong>Accessing the New Web Interface, page 6</strong>.</td>
<td>-</td>
</tr>
<tr>
<td>Policy, Virus and Outbreak Quarantines</td>
<td>Click <strong>Quarantine &gt; Other Quarantine</strong> on the new web interface. You can only view Policy, Virus and Outbreak Quarantines on the Security Management appliance.</td>
<td>You can view, configure and modify the Policy, Virus and Outbreak Quarantines on the appliance.</td>
</tr>
<tr>
<td>Select All action for Messages in Quarantine</td>
<td>You can select multiple (or all) messages in a quarantine and perform a message action, such as, delete, delay, release, move, etc.</td>
<td>You cannot select multiple messages in a quarantine and perform a message action.</td>
</tr>
<tr>
<td>Maximum Download Limit for Attachments</td>
<td>The maximum limit for downloading attachments of a quarantined message is restricted to 25 MB.</td>
<td>-</td>
</tr>
<tr>
<td>Rejected Connections</td>
<td>To search for rejected connections, click <strong>Tracking &gt; Search &gt; Rejected Connection</strong> tab on the Security Management appliance.</td>
<td>-</td>
</tr>
<tr>
<td>Query Settings</td>
<td>The <strong>Query Settings</strong> field of the Message Tracking feature is not available on the Security Management appliance.</td>
<td>You can set the query timeout in the Query Settings field of the Message Tracking feature.</td>
</tr>
<tr>
<td>Message Tracking Data Availability</td>
<td>Click 🌟 on the on the Security Management appliance and choose <strong>Email &gt; Message Tracking &gt; Message Tracking Data Availability</strong> to access Message Tracking Data Availability page.</td>
<td>You can view the missing-data intervals for your appliance.</td>
</tr>
<tr>
<td>Verdict Charts and Last State Verdicts</td>
<td>Verdict Chart displays information of the various possible verdicts triggered by each engine in your appliance. Last State of the message determines the final verdict triggered after all the possible verdicts of the engine.</td>
<td>Verdict Charts and Last State Verdicts of the messages are not available.</td>
</tr>
</tbody>
</table>
Comparison of Web Interfaces, New Web Interface vs. Legacy Web Interface

<table>
<thead>
<tr>
<th>Web Interface Page or Element</th>
<th>New Web Interface</th>
<th>Legacy Web Interface</th>
</tr>
</thead>
<tbody>
<tr>
<td>Message Attachments and Host Names in Message Details</td>
<td>Message attachments and host names are not displayed in the Message Details section of the message on the Security Management appliance.</td>
<td>Message attachments and host names are displayed in the Message Details section of the message.</td>
</tr>
<tr>
<td>Sender Groups, Sender IP, SBRS Score and Policy Match in Message Details</td>
<td>Sender Groups, Sender IP, SBRS Score, and Policy Match details of the message is displayed in the Message Details section of the message on the Security Management appliance.</td>
<td>Sender Groups, Sender IP, SBRS Score, and Policy Match details of the message is not available in the Message Details section of the message.</td>
</tr>
<tr>
<td>Direction of the Message (Incoming or Outgoing)</td>
<td>Direction of the messages (incoming or outgoing) is displayed in the message tracking results page on the Security Management appliance.</td>
<td>Direction of the messages (incoming or outgoing) is not displayed in the message tracking results page.</td>
</tr>
</tbody>
</table>

Accessing the New Web Interface

The new web interface provides a new look for monitoring reports, quarantines and searching for messages.

Note

The new web interface of your appliance uses AsyncOS API HTTP/HTTPS ports (6080/6443) and trailblazer HTTPS port (4431). You can use the `trailblazerconfig` command in the CLI to configure the trailblazer HTTPS ports. Make sure that the trailblazer HTTPS port is opened on the firewall.

You can access the new web interface in any one of the following ways:

- **When `trailblazerconfig` CLI command is enabled**, use the following URL -
  
  https://example.com:<trailblazer-https-port>/ng-login
  
  where `example.com` is the appliance host name and `<trailblazer-https-port>` is the trailblazer HTTPS port configured on the appliance.
  
  By default, `trailblazerconfig` is enabled on the appliance.
  
  - Make sure that the configured HTTPS port is opened on the firewall. The default HTTPS port is 4431.
  
  - Also ensure that your DNS server can resolve the hostname that you specified for accessing the appliance.

- **When `trailblazerconfig` CLI command is disabled**, use the following URL -
  
  https://example.com:<https-port>/ng-login
  
  where `example.com` is the appliance host name and `<https-port>` is the HTTPS port configured on the appliance.
Note: If the trailblazerconfig CLI command is disabled, you may need to add multiple certificates for API ports for certain browsers.

- Log into the appliance and click **Security Management Appliance is getting a new look. Try it!** to navigate to the new web interface.

The new web interface opens in a new browser window and you must log in again to access it. If you want to log out of the appliance completely, you need to log out of both the new and legacy web interfaces of your appliance.

For a seamless navigation and rendering of HTML pages, Cisco recommends using the following browsers to access the new web interface of the appliance (AsyncOS 12.0 and later):

- Google Chrome (Latest Stable Version)
- Mozilla Firefox (Latest Stable Version)
- Safari (Latest Stable Version)

You can access the legacy web interface of the appliance on any of the supported browsers.

The supported resolution for the new web interface of the appliance (AsyncOS 12.0 and later) is between 1280x800 and 1680x1050. The best viewed resolution is 1440x900, for all the browsers.

Note: Cisco does not recommend viewing the new web interface of the appliance on higher resolutions.

The end-users can now access the Spam Quarantine on the new web interface in any one of the following ways:

- When `trailblazerconfig` CLI command is enabled, use the following URL -
  

  where `example.com` is the appliance host name and `<trailblazer-https-port>` is the trailblazer HTTPS port configured on the appliance.

- When `trailblazerconfig` CLI command is disabled, use the following URL -
  
  https://example.com:<https-port>/euq-login.

  where `example.com` is the appliance host name and `<https-port>` is the HTTPS port configured on the appliance.

Note: Make sure that the HTTP/HTTPS and the AsyncOS API ports are opened on the firewall.

**Upgrade Paths**

You can upgrade to release 12.7.0-007 from the following versions:

- 12.5.0-636
- 12.5.0-658

Note: This release is compatible with AsyncOS 12.0.1 for Cisco Web Security Appliances.
Compatibility with Email and Web Security Releases

Installation and Upgrade Notes

- Important Additional Reading, page 8
- Virtual Appliance, page 8
- Pre-Upgrade Requirements, page 9
- IPMI Messages During Upgrade, page 9
- Upgrading to This Release, page 9

Important Additional Reading

You should also review the release notes for your associated Email and Web security releases. For links to this information, see Related Documentation, page 12.

Virtual Appliance

Upgrading a Virtual Appliance

If your current Virtual Appliance release does not support more than 2TB of disk space, and you want to use more than 2 TB of disk space with this release, you cannot simply upgrade your virtual appliance. Instead, you must deploy a new virtual machine instance for this release.

When you upgrade a virtual appliance, the existing licenses remain unchanged.

Migrating From a Hardware Appliance to a Virtual Appliance

| Step 1 | Set up your virtual appliance using the documentation described in Virtual Appliance, page 8. |
| Step 2 | Upgrade your physical appliance to this AsyncOS release. |
| Step 3 | Save the configuration file from your upgraded physical appliance |
Step 4  Load the configuration file from the hardware appliance onto the virtual appliance. Be sure to select appropriate options related to disk space and network settings.

What To Do Next
If you will use your hardware appliance as a backup appliance, see information about backups in the user guide or online help. For example, you should ensure that the backup appliance does not pull data directly from managed email and web security appliances, or publish configurations to web security appliances.

Pre-Upgrade Requirements

Perform the following important preupgrade tasks:

• Verify Associated Email and Web Security Appliance Versions, page 9
• Back Up Your Existing Configuration, page 9

Verify Associated Email and Web Security Appliance Versions

Before upgrading, verify that the Email Security appliances and Web Security appliances that you want to manage will run releases that are compatible. See the Compatibility with Email and Web Security Releases, page 8.

Back Up Your Existing Configuration

Before upgrading your Cisco Content Security Management appliance, save the XML configuration file from your existing Security Management appliance. Save this file to a location off the appliance. For important caveats and instructions, see the “Saving and Exporting the Current Configuration File” section in the user guide or online help.

IPMI Messages During Upgrade

If you are upgrading your appliance using the CLI, you may observe messages related to IPMI. You can ignore these messages. This is a known issue.

Defect ID: CSCuz33125

Upgrading to This Release

Step 1  Address all topics described in Pre-Upgrade Requirements, page 9.

Step 2  Follow all instructions in the “Before You Upgrade: Important Steps” section in the user guide PDF for THIS release.

Step 3  Perform the upgrade:
Follow instructions in the “Upgrading AsyncOS” section of the “Common Administrative Tasks” chapter of the user guide PDF for your EXISTING release.
Note: Do not interrupt power to the appliance for any reason (even to troubleshoot an upgrade issue) until at least 20 minutes have passed since you rebooted. If you have a virtual appliance, do not use the hypervisor or host OS tools to reset, cycle, or power off the virtual machine.

Step 4: After about 10 minutes, access the appliance again and log in.
Step 5: Follow instructions in the “After Upgrading” section of the user guide PDF for THIS release.
Step 6: If applicable, see Migrating From a Hardware Appliance to a Virtual Appliance, page 8.

Important! After you upgrade to this release, you can try any one of the following steps to make the navigation in your browser seamless:

- Accept the certificate used by the web interface and use the following URL syntax: 
  https://hostname.com:<https_api_port> (for example, https://some.example.com:6443) in a new browser window and accept the certificate. Here <https_api_port> is the AsyncOS API HTTPS port configured in Network > IP Interfaces. Also, ensure that the API ports (HTTP/HTTPS) are opened on the firewall.

- By default, trailblazerconfig CLI command is enabled on your appliance. Make sure that the HTTPS port is opened on the firewall. Also ensure that your DNS server can resolve the hostname that you specified for accessing the appliance.

  If the trailblazerconfig CLI command is disabled, you can run the trailblazerconfig > enable command using the CLI to avoid the following issues:
  - Requiring to add multiple certificates for API ports in certain browsers.
  - Redirecting to the legacy web interface when you refresh the Spam quarantine, Safelist or Blocklist page.
  - Metrics bar on the Advanced Malware Protection report page does not contain any data.

  For more information, see section "The trailblazerconfig Command" of the user guide.

Note: Reboot your appliance or clear your browser cache if you are unable to access the web interface. If the problem persists, contact Cisco Customer Support.

Supported Hardware for this Release

All virtual appliance models.

- The following hardware models - M380 and M680.

To determine whether your appliance is supported, and to remedy the situation if it is not currently compatible, see https://www.cisco.com/c/en/us/support/security/content-security-management-appliance/products-field-notices-list.html.

The following hardware is NOT supported for this release:

- M160, M360, M660, and X1060
- M170, M370, M370D, M670 and X1070
- M190, M195, M390, M395, M690, and M695
Known and Fixed Issues

Use the Cisco Bug Search Tool to find information about known and fixed defects in this release.

- Bug Search Tool Requirements, page 11
- Lists of Known and Fixed Issues, page 11
- Finding Information about Known and Resolved Issues, page 11

Bug Search Tool Requirements

Register for a Cisco account if you do not have one. Go to https://identity.cisco.com/ui/tenants/global/v1.0/enrollment-ui.

Lists of Known and Fixed Issues

| Known Issues | https://bst.cloudapps.cisco.com/bugsearch/search?kw=*&pf=prdNm&pfVal=282509131&rls=12.7.0&sb=af&s=fd&svr=3nH&bt=customerV |

Finding Information about Known and Resolved Issues

Use the Cisco Bug Search Tool to find the most current information about known and resolved defects.

**Before You Begin**

Register for a Cisco account if you do not have one. Go to https://identity.cisco.com/ui/tenants/global/v1.0/enrollment-ui.

**Procedure**

**Step 1**
Go to https://bst.cloudapps.cisco.com/bugsearch/.

**Step 2**
Log in with your Cisco account credentials.

**Step 3**
Click Select from list > Security > Email Security > Cisco Email Security Appliance, and click OK.

**Step 4**
In Releases field, enter the version of the release, for example, 12.7

**Step 5**
Depending on your requirements, do one of the following:

- To view the list of resolved issues, select Fixed in these Releases from the Show Bugs drop down.
- To view the list of known issues, select Affecting these Releases from the Show Bugs drop down and select Open from the Status drop down.
Related Documentation

In addition to the main documentation in the following table, information about other resources, including the knowledge base and Cisco support community, is in the More Information chapter in the online help and User Guide PDF.

Service and Support

To get support for virtual appliances, call Cisco TAC and have your Virtual License Number (VLN) number ready.

For non-critical issues, you can also access customer support from the appliance. For instructions, see the User Guide or online help.

Note

If you have questions or problems, click the Help or Feedback links at the top right side of the tool. There is also an interactive tour; to view it, click the link in the orange bar above the search fields.
