App Compatibility Notice

Stealthwatch apps were introduced in v7.0.0 of Cisco Stealthwatch.

Stealthwatch apps are similar in concept to the apps you install on a smartphone. They are optional independently releasable features that enhance and extend the capabilities of Cisco Stealthwatch. You can install, update, and remove Stealthwatch apps using App Manager, which you can access in the SMC Web App under the Central Management menu option.

The release schedule for Stealthwatch apps is independent from the normal Stealthwatch upgrade process. Consequently, we can update Stealthwatch apps as needed without having to link them with a core Stealthwatch release. To simplify the Stealthwatch customer experience, only one version of a Stealthwatch app will be available to install at any point in time (similar to the app store model). Although we strive for maximum app compatibility, not all versions of an app will be compatible with all versions of Stealthwatch.

Some apps may require you to upgrade to the latest version of Cisco Stealthwatch. In addition, when you upgrade your Stealthwatch system, you may need to upgrade some or all of the apps.

Cisco reserves the right to discontinue a Stealthwatch app at any time. There may be many reasons for doing so, including but not limited to the following:

1. The equivalent capabilities provided by the app are now provided elsewhere, either via a new version of the app, a new app, or via a feature in Stealthwatch.
2. The capabilities provided by the app are no longer considered relevant or useful to our customer base.

If the decision is made to discontinue a Stealthwatch app, advance notice will be provided at least sixty days prior to the discontinuation date. Although Stealthwatch apps are currently included with your Cisco Stealthwatch license, Cisco reserves the right to charge license fees for certain Stealthwatch apps in the future.
