

Cisco Stealthwatch Cloud

Migration to Cisco Secure Sign-On Guide

Stealthwatch Cloud Migration to Cisco Secure Sign-On Overview

Stealthwatch Cloud now supports logins with a Cisco Secure Sign-On username and password. This guide discusses how to create Cisco Secure Sign-On credentials if you are new to Stealthwatch Cloud, and how to migrate your credentials to Cisco Secure Sign-On if you are an existing Stealthwatch Cloud customer.

- As a **current** Stealthwatch Cloud customer, you can create Cisco Secure Sign-On credentials using the link in your user settings. If you are a site manager, you can also resend invite emails to users, which contain instructions on creating Cisco Secure Sign-On credentials using the email address associated with your Stealthwatch Cloud user account. See [Current Stealthwatch Cloud User Migration to Cisco Secure Sign-On](#) for more information.
- As a **new** Stealthwatch Cloud customer, such as when you sign up for a free trial, you create Cisco Secure Sign-On credentials after receiving the email inviting you to join a Stealthwatch Cloud portal. See [Cisco Secure Sign-On and New Stealthwatch Cloud Users](#) for more information.

For more information on Cisco Secure Sign-On, see the [Cisco Secure Sign-On product page](#).

Current Stealthwatch Cloud User Migration to Cisco Secure Sign-On

Current Stealthwatch Cloud users log in using their Stealthwatch Cloud credentials. These users have a grace period, during which they can opt-in to using Cisco Secure Sign-On for logins. After the grace period expires, users must convert to Cisco Secure Sign-On for logins.

- Site Managers can send invite emails to users in the portal without an associated Cisco Secure Sign-On login. The portal UI lists those users separately from the users with Cisco Secure Sign-On credentials. Those without Cisco Secure Sign-On credentials will receive an invite email that has a link to create the Cisco Secure Sign-On login. Those with Cisco Secure Sign-On credentials will have their credentials tied to their Stealthwatch Cloud portal, and the invite email will allow them to login using Cisco Secure Sign-On.
- Users can convert themselves using the link provided in their account's user settings. If you already have Cisco Secure Sign-On credentials, you do this to associate your Stealthwatch Cloud portal account with your Cisco Secure Sign-On login.

Your Stealthwatch Cloud portal displays banner messages informing you when the grace period nears its end. Contact support@obsrvbl.com for more information.

If you have access to multiple Stealthwatch Cloud tenants, after you log in with your Cisco Secure Sign-On credentials, you can select a tenant portal to access.

After you associate your existing user account with Cisco Secure Sign-On credentials, you can no longer update your email address or password in the Stealthwatch Cloud user settings. If you want to change these, you must do so from your Cisco Secure Sign-On settings.

Re-inviting users to create Cisco Secure Sign-On user credentials:

Before You Begin

- Log into the Stealthwatch Cloud portal UI with site manager privileges.

Procedure

1. Select **Settings > Account Management > User Management**. The **Invited and <portal-name> Users** lists user accounts not yet associated with Cisco Secure Sign-On credentials.
2. Click the  (**Refresh**) icon to resend invite emails to a user not yet associated with Cisco Secure Sign-On credentials.
 - Users with Cisco Secure Sign-On credentials will have their accounts associated with their Cisco Secure Sign-On credentials, and receive an invite email with a link to log into the Stealthwatch Cloud portal using those credentials.
 - Users without Cisco Secure Sign-On credentials receive an invite email containing a link to create Cisco Secure Sign-On credentials.

Converting your Stealthwatch Cloud user credentials to Cisco Secure Sign-On:

Before You Begin

- Log into the Stealthwatch Cloud portal UI.

Procedure

1. Select **Settings > Account Management > Password**.
2. Click **Enable Now!** to create your Cisco Secure Sign-On credentials. The system redirects you to the Cisco Secure Sign-On page to create a username and password, and sends you an invite email containing a link to create your Cisco Secure Sign-On username and password.
3. In the Stealthwatch Cloud portal UI, select **Profile (👤) > Logout**.
4. At the login page, click **Login via Cisco Secure Sign-On** to log in with your Cisco Secure Sign-On credentials. The system confirms your login, displaying your Stealthwatch Cloud portal, or a list of tenants to which you have access.

Cisco Secure Sign-On and New Stealthwatch Cloud Users

During a free trial, a Stealthwatch Cloud site manager invites new users to the portal via email. If you are a new user receiving an invite email, and:

- do not have Cisco Secure Sign-On credentials, the invite email contains a link to create your username and password before you log into your Stealthwatch Cloud portal. See the [Cisco Secure Sign-On quick start guide](#) for more information.
- have a Cisco Secure Sign-On username associated with your email address, the invite email allows you to log in to Stealthwatch Cloud using your Cisco Secure Sign-On username and password. See the [Cisco Secure Sign-On quick start guide](#) for more information.

See the Free Trial guide at the [Stealthwatch Cloud Installation Guides page](#) for more information on the Stealthwatch Cloud free trial.

Logging Into Stealthwatch Cloud with Cisco Secure Sign-On

After you establish your Cisco Secure Sign-On credentials, you can log into Stealthwatch Cloud from the Stealthwatch Cloud portal login, or from your Cisco Secure Sign-On dashboard. From the Cisco Secure Sign-On dashboard, you can also log into any other supported Cisco products.

After you log in, if you have access to multiple Stealthwatch Cloud tenants, you can select one and view that tenant's portal.

Log into your Stealthwatch Cloud portal:

Procedure

1. In a web browser, navigate to your Stealthwatch Cloud portal URL.
2. Click **Login via Cisco Secure Sign-On**. Your browser displays the Cisco Secure Sign-On login page.
3. Enter your **Username** and **Password**.
4. Click **Sign In**.
5. Receive another authentication factor using Duo Security, and confirm your login. The system confirms your login, displaying your Stealthwatch Cloud portal, or a list of tenants to which you have access.

Use your Cisco Secure Sign-On dashboard to log into Stealthwatch Cloud:

Procedure

1. In a web browser, navigate to <https://sign-on.security.cisco.com>.
2. Enter your **Username** and **Password**.
3. Click **Sign In**.
4. Receive another authentication factor using Duo Security, and confirm your login. The system confirms your login, displaying the Cisco Secure Sign-On dashboard.
5. Click the **Stealthwatch Cloud** app. The system displays your Stealthwatch Cloud portal in a new browser window, or a list of tenants to which you have access. .

Updating Cisco Secure Sign-On Credentials from Stealthwatch Cloud

After you configure your Cisco Secure Sign-On credentials, if you want to change the email address or password associated with your account, do so from your Cisco Secure Sign-On user settings.

Access Cisco Secure Sign-On settings from Stealthwatch Cloud:

Before You Begin

- Log into the Stealthwatch Cloud portal UI using Cisco Secure Sign-On.

Procedure

1. Select **Settings > Account Management > Password**.
2. In the Cisco Secure Sign-On pane, click **Manage your Identity**. Your Cisco Secure Sign-On settings appear in a new browser window.
3. Click **Edit Profile** to make changes.

Deleting Stealthwatch Cloud User Accounts

As a site manager, you can delete user accounts from your Stealthwatch Cloud tenant. Deleting a user's account prevents that user from logging into your Stealthwatch Cloud tenant. However, if a user logged in using Cisco Secure Sign-On, deleting their Stealthwatch Cloud user account does not delete that user's Cisco Secure Sign-On credentials. Those users can still log into all of their other Cisco products that support Cisco Secure Sign-On.

Deleting a user's account in Stealthwatch Cloud does not also delete the Stealthwatch Cloud app from that user's Cisco Secure Sign-On dashboard.

Delete a Stealthwatch Cloud user account:

Before You Begin

- Log into the Stealthwatch Cloud portal UI with site manager privileges.

Procedure

1. Select **Settings > Account Mangement > User Management**.
2. Click the **Delete** icon next to the user account you want to delete.

Additional Resources and Support
