**Deployment Options**
- Web Proxy
- L4 Traffic Monitor

**Network Context**
- Is there another proxy on the network? NO
- Other Proxy in Forward Mode: IP address and Port:

**Network Settings**
- Default System Hostname:
- DNS Servers:
  - Use the Internet’s root DNS servers
  - Use these DNS servers (maximum 3):
  1. 
  2. 
  3. 
- Network Time Protocol (NTP) server: IP address and host name:

**Interface Settings**
- Management Interface M1 Ethernet port only:
  - IP address:
  - Host name:

**Data Interface**
- IP address:
- Network mask:
- Host name:

**Routes**
- Internal Routes for Management:
  - Default Gateway:
  - Static Route Destination/Network:
  - Static Route Gateway:
- Internal Routes for Data:
  - Default Gateway:
  - Static Route Destination/Network:
  - Static Route Gateway:

**Transparent Routing Device**
- Device type: Layer 4 switch
- WCCP router

**Administrative Settings**
- Administrative Password:
- Auto Support
- Send E-mail System Alerts to:

**Security Services**
- IP Spoofing:
- L4 Traffic Monitor:
- IronPort URL Filtering:
- Web Reputation Filters:
- Malware and Spyware Scanning:
- Enable Webroot
- Enable McAfee

---

*Note: The Web Proxy can share the Management interface. If configured separately, the Data interface IP address and the Management interface IP address cannot share the same subnet.*

Use this Quickstart Guide to get the Cisco IronPort S-Series appliance installed and running on your network, and refer to the Deployment chapter in the IronPort AsyncOS for Web User Guide for information about how to configure appliance settings.

Before you start, make sure you have the following equipment:

- Rack cabinet enclosure
- RapidRails™ and adapter kits
- 10/100/1Gigabit BaseT TCP/IP local area network (LAN)

Check to make sure the following items are present in the Cisco IronPort Web Security appliance system box:

- Cisco IronPort S-Series appliance
- Dual-head power cables (1)
- Straight power cables (2)
- Ethernet™ cable
- Null Modem cable
- Documentation CD
- IronPort AsyncOS for Web User Guide
- Safety and Compliance Guide
- Terms and Conditions of Use
- Release Notes

Note: You can download the AsyncOS Release Notes from the IronPort Customer Support Portal located at www.ironport.com/support

**1 UNPACK**

**2 INSTALL**

Plan the installation within your network

The S-Series appliance is typically installed as an additional layer in the network between clients and the Internet. Depending on how you deploy the appliance, you may or may not need a Layer 4 (L4) switch or a WCCP router to direct client traffic to the appliance. Deployment options include:

- Transparent Proxy — Web proxy with an L4 switch
- Transparent Proxy — Web proxy with a WCCP router
- Explicit Forward Proxy — Connected to a network switch
- L4 Traffic Monitor — Ethernet tap (simplex or duplex)
  - Simplex Mode: Port T1 receives all outgoing traffic and port T2 receives all incoming traffic.
  - Duplex Mode: Port T1 receives all incoming and outgoing traffic.

Install in Rack

Install the Cisco IronPort appliance into your rack cabinet. Ensure the ambient temperature around the system is within the specified limits, and ensure there is sufficient airflow around the unit.

**3 CONNECT**

Connect the appliance to a network switch.

Configuration:

Configure your laptop's network connection to use an IP address on the same subnet as the S-Series appliance (192.168.42.xx).

Note: The laptop can only connect to the S-Series appliance if the laptop IP address and the appliance IP address are on the same subnet.

Connect your laptop to the Management Port using the Ethernet cable included in the system box. The S-Series appliance uses the Management Port only.

Cable the S-Series appliance. Plug the Ethernet cables into the appropriate ports on the back panel of the appliance.

- The proxy ports are labeled P1 and P2.
  - P1, only enabled. When only P1 is enabled, connect it to the network for both incoming and outgoing traffic.
  - P1 and P2 enabled. When both P1 and P2 are enabled, you must connect P1 to the internal network and P2 to the Internet.
- The Traffic Monitor ports are labeled T1 and T2.
  - Simplex tap: Ports T1 and T2; one cable for all packets destined for the Internet (T1), and one cable for all packets coming from the Internet (T2).
  - Duplex tap: Port T1: one cable for all incoming and outgoing traffic.

Power

- Plug the female end of the straight power cable, or the female ends of the dual-head power cable into the redundant power supplies on the back panel of the appliance.
- Plug the male ends into an electrical outlet.

**4 POWER-UP**

Turn on the system power by pressing the On/Off switch on the front panel of the appliance. You must wait five minutes for the system to initialize each time you power up the system.

**5 RUN THE SYSTEM SETUP WIZARD**

Access the Cisco IronPort S-Series appliance and run the System Setup Wizard to configure basic settings and enable a set of system defaults.

- To access the S-Series appliance, open a web browser and connect to the Management interface:
  http://192.168.42.42/8080 where 192.168.42.42 is the default IP address and 8080 is the default Admin port setting.
  The host name parameter is assigned during system setup. Before you can connect to the Management interface, use a host name (http://hostname:8080), you must add the appliance host name and IP address to your DNS server database.
- Login using the default user name admin, and the default password ironport.
- Run the System Setup Wizard.

**6 CONFIGURE**

Use the web interface to set up policies, enable features, and modify settings as necessary to maintain your configuration.

Set Identities and Access Policies: Use the Web Security Manager > Identities page to identify groups of users on the network. Then use the Web Access Policies page to control user access to the Internet by configuring which objects and applications to allow or block, which URL categories to monitor or block, and web reputation and anti-malware settings.

Schedule Reports: Use the Monitor > Reports page to schedule interactive reports, and set up archival reporting to track trends and activity over time.

Enable Features: Use the System Administration > Feature Keys page to enter valid keys for features that you enabled during setup.

Create WCCP Services: If you connect the appliance to a WCCP router, use the Network > Transparent Redirection page to create at least one WCCP service.

Send Configuration File: Send a copy of the current configuration file to the system administrator. This file can be used to restore your initial System Setup Wizard defaults if necessary.

For information about managing the Cisco IronPort S-Series appliance, refer to the IronPort AsyncOS for Web User Guide.
