Thank you for choosing the Cisco 250 Series Switch. These switches are designed to be operational right out of the box as standard switches. In the default configuration, it forwards packets between the connected devices after powering up.

Product Features

1. System LED
2. Reset Button
3. Mini USB Console Port
4. USB Port
5. RJ45 Console Port
6. LINK/ACT LEDs
7. Gigabit Network Ports
8. SFP/SFP+ Uplink Ports

What’s in the Box

- Cisco Business 250 Series Smart Switch
- Power Cord or Adapter
- Rack-Mount/Wall-Mount Kit
- Quick Start Guide
- Pointer Card with China RoHS
- Technical Support Contacts

First, You’ll Need...

- RJ-45 Ethernet cables (Category 5e or higher) for connecting network devices
- Computer with ethernet port and a web browser (Firefox, Chrome, Safari or Edge)
- Tools for mounting the hardware
To connect the managed switch:

1. Open a web browser window.
2. Enter the switch IP address in the address bar and press Enter. For example, http://192.168.1.254.
3. Enter the default login information:
   - Username is cisco
   - Default password is cisco (passwords are case-sensitive)
4. Click Log In.

   If this is the first time that you have logged on with the default username and password, the Change Password page opens. The rules for constructing a new password are displayed on the page.

   a. If the switch is using the factory default IP address of 192.168.1.254, you must choose an IP address for the computer in the range of 192.168.1.2-192.168.1.253 that is not already in use.
   b. If the switch is assigned an IP address by a DHCP server, make sure the DHCP server is running and can be reached from the switch and the computer. It might be necessary to disconnect and reconnect the devices for them to discover their new IP addresses from the DHCP server.

   NOTE: Details on how to change the IP address on your computer depend upon the type of architecture and operating system you are using. Use the computer Help and Support functionality to search for "IP Addressing."

Access the managed switch:

5. Enter a new password and confirm the password. The password must comply with the default complexity rules.
6. Click Apply.

Make sure that any configuration changes made are saved before exiting from the web-based interface by clicking on the Save icon. Exiting, rebooting or losing power before you save your configuration will result in all changes being lost.

The Getting Started window displays. You are now ready to configure the switch. Refer to your Administration Guide for further information.

---

Prepare Your Product

Plug the power cord of the switch into an outlet. Connect your computer to the switch using an ethernet cable. Ensure that your computer is on and proceed to "Get Configured."

---

**LED Functions**

Get Configured

To connect the managed switch:

1. The switch will attempt to acquire an IP address if there is a DHCP server in the network. If the switch cannot acquire an IP address through DHCP, it uses the factory default IP address of 192.168.1.254, with a subnet of /24.
   a. If the switch is using the factory default IP address of 192.168.1.254/24, you must choose an IP address for the computer in the range of 192.168.1.2-192.168.1.253 that is not already in use.
   b. If the IP address is assigned by a DHCP server, make sure the DHCP server is running and can be reached from the switch and the computer. It might be necessary to disconnect and reconnect the devices for them to discover their new IP addresses from the DHCP server.

   NOTE: Details on how to change the IP address on your computer depend upon the type of architecture and operating system you are using. Use the computer Help and Support functionality to search for "IP Addressing."

Access the managed switch:

1. Open a web browser window.
2. Enter the switch IP address in the address bar and press Enter. For example, http://192.168.1.254.
   The Switch Login Page displays.
3. Enter the default login information:
   ● Username is cisco
   ● Default password is cisco (passwords are case-sensitive)
4. Click Log In.
   If this is the first time that you have logged on with the default username and password, the Change Password page opens. The rules for constructing a new password are displayed on the page.
5. Enter a new password and confirm the password.
   NOTE: Password complexity is enabled by default. The password must comply with the default complexity rules.
6. Click Apply.

   Make sure that any configuration changes made are saved before exiting from the web-based interface by clicking on the Save icon. Exiting, rebooting or losing power before you save your configuration will result in all changes being lost.

Command Line Interface (CLI)

You can also access the switch by using the switch’s command-line interface, refer to the Cisco Business 250 Series Administration Guide for more information.

Mounting

For mounting and stacking instructions, please see the Cisco Business 250 Series Administration Guide.
