Administrator guide

for Cisco Spark Codec Plus
Thank you for choosing Cisco!

Your Cisco product has been designed to give you many years of safe, reliable operation.

This part of the product documentation is aimed at administrators working with the setup and configuration of the video system.

Our main objective with this Administrator guide is to address your goals and needs. Please let us know how well we succeeded!

May we recommend that you visit the Cisco web site regularly for updated versions of this guide.

The user documentation can be found on

How to use this guide

The top menu bar and the entries in the Table of contents are all hyperlinks. You can click on them to go to the topic.

Cisco Spark Codec Plus

Chapter 1
Introduction
User documentation and software

Products covered in this guide

- Cisco Spark Codec Plus

User documentation

This guide provides you with the information required to administrate the video system.

The guide primarily addresses capabilities and configurations of on-premise registered video systems (CUCM, VCS), but a sub-set of the capabilities and configurations also applies to devices that are registered to our cloud service (Cisco Spark).

Refer to the User documentation on the Cisco web site appendix for more information about the guides for this product.

Documentation on the Cisco web site

Visit the Cisco web site regularly for updated versions of the guides:

► http://www.cisco.com/go/roomkit-docs

Documentation for cloud registered devices

For more information on Cisco Spark room devices, visit:

► https://help.webex.com/community/cisco-cloud-collab-mgmt

Cisco Project Workplace

Explore the Cisco Project Workplace to find inspiration and guidelines when preparing an office or meeting room for video conferencing:

► http://www.cisco.com/go/projectworkplace

Software

Download software for the endpoint from the Cisco web site:

► http://www.cisco.com/cisco/software/navigator.html

We recommend reading the Software release notes (CE9):

Codec Plus at a glance

Cisco Spark Codec Plus, is a powerful collaboration solution that integrates well with flat panel displays through HDMI CEC. The codec is rich in functionality and easily scalable to all of your conference rooms and spaces.

The Codec Plus is built for both cloud (Cisco Spark) and on-premise (CUCM and VCS) deployments.

Cisco offers Codec Plus in the following bundles, ideal for medium to large-sized meeting rooms:

- **Cisco Spark Room Kit Plus** with Codec Plus, Cisco Spark Quad Camera and Cisco TelePresence Touch 10 panel. External microphones are required. The Quad Camera has integrated loudspeakers and integrated microphones for speaker tracking; it detects meeting participants and shows the best overview; it detects and switches between active speakers (speaker tracking).

**Features and benefits**

- Automatic wake-up feature, detecting when someone walks into the room.
- Can recognize people through their mobile device when the Spark app is installed
- Controlled by the Cisco TelePresence Touch 10, or with a Cisco Spark app-enabled device
- Supports two displays for video and content
- Presentation of two content sources in local meetings
- 4K content sharing (30 fps in local meetings; 5 fps when sharing with far-end)
- Wired or wireless content sharing
- Counts people in the room, enabling analytics for better resource planning
- Ethernet and Wi-Fi support
- Controls peripherals such as lights and blinds through the Cisco TelePresence Touch 10 (in-room control)

See the datasheet for more information: [http://www.cisco.com/go/roomkit](http://www.cisco.com/go/roomkit)
Power On and Off

Power On/Off with the Power switch

1. The power switch on the codec’s rear side is its main On/Off switch.
2. It may take a few minutes for the codec to start up. The LED lights steadily when the system is ready for use.

Restart and standby using the user interface

Restart the system
1. Select the settings icon (cogwheel) in the status bar of the user interface.
2. Select System Information > Restart.
3. Select Restart again to confirm your choice.

Enter/exit standby mode
1. Select the settings icon (cogwheel) in the status bar of the user interface.
2. Select Standby.

Power Off or restart the system remotely

Sign in to the web interface and navigate to Maintenance > Restart.

Restart the system
Click Restart device... and confirm your choice.
It takes a few minutes before the system is ready for use.

Power Off the system
Click Shutdown device... and confirm your choice.

You cannot power the system on again remotely.
For the system to power up after a remote shutdown, turn the power switch Off and then On.
LED behavior

In idle mode (screens are awake):
Steady light.

In standby mode (screens are off):
Steady light.

In sleep mode (low power mode):
The LED pulsates slowly.

The system needs attention (e.g. no network connection):
The LED repeatedly flashes twice.

During startup (boot):
The LED flashes. It turns steady when the system is ready for use.
How to administer the video system (page 1 of 4)

In general, we recommend you to use the web interface to administer and maintain the video system, as described in this administrator guide.

Alternatively, you can access the API of the video system by other methods:
- HTTP or HTTPS (also used by the web interface)
- SSH
- Serial interface (RS-232)

If you want more information about the different access methods, and how to use the API, refer to the API guide for the video system.

Tip
If the configuration or status is available in the API, the web interface setting or status translates into an API configuration or status as follows:

- Set $X > Y > Z$ to Value (web)
  - is the same as
  - xConfiguration $X Y Z$: Value (API)
- Check $X > Y > Z$ status (web)
  - is the same as
  - xStatus $X Y Z$ (API)

For example:
- Set `SystemUnit > Name` to `MySystem`
  - is the same as
  - xConfiguration SystemUnit Name: MySystem
- Check `SystemUnit > Software > Version` status
  - is the same as
  - xStatus SystemUnit Software Version

More settings and statuses are available in the web interface than in the API.

<table>
<thead>
<tr>
<th>Access method</th>
<th>Notes</th>
<th>How to enable/disable the methods</th>
</tr>
</thead>
<tbody>
<tr>
<td>HTTP/HTTPS</td>
<td>• Used by the web interface of the video system</td>

<td>Restart the video system for changes to take effect</td>
</tr>
<tr>
<td></td>
<td>• For security reasons, you are asked to sign in by default (SerialPort &gt; LoginRequired)</td>
<td></td>
</tr>
</tbody>
</table>

⚠️ If all access methods are disabled (set to Off), you can no longer configure the video system. You are not able to re-enable (set to On) any of the access methods, and you must factory reset the video system to recover.
The web interface of the video system

The web interface is the administration portal for the video system. You can connect from a computer and administer the system remotely. It provides full configuration access and offers tools and mechanisms for maintenance.

**Note:** The web interface requires that HTTP or HTTPS is enabled (refer to `NetworkServices > HTTP > Mode` setting).

We recommend that you use the latest release of one of the major web browsers.

### Connect to the video system

Open a web browser and enter the IP address of the video system in the address bar.

#### How to find the IP address

1. Select the settings icon (cogwheel) in the status bar of the user interface.
2. Select `System Information`.

### Sign in

Enter user name and passphrase for the endpoint and click `Sign In`.

The system is delivered with a default user named `admin` with no passphrase. Leave the `Passphrase` field blank when signing in for the first time.

It is mandatory to set a password for the `admin` user.

### Sign out

Hover the mouse over the user name and choose `Signout` from the drop-down list.
How to administer the video system (page 3 of 4)

How the web interface is organized

The web interface is organized in sub-pages. All sub-pages shown below are available if the video system is registered to an on-premise service (CUCM, VCS); the pages shown in grey color are not available if the video system is registered to the Cisco cloud service (Cisco Spark).

In both cases, a user that is signed in, sees only the pages that he has access rights for.

Read more about user administration, user roles and access rights in the User administration chapter.
Settings available on the user interface

You have access to some basic configurations and system tests on the video system's user interface. Some of the configurations and tests may be unavailable due to the actual system setup.

- Change the language
- Change the time zone
- Change the network settings for the video system
- Change the network settings for the Touch controller
- Select and activate a service (Cisco's cloud service, or Cisco UCM, VCS or Expressway on-premise services)
- Check the microphone level
- Run a system volume check, and set the default volume
- Set the default camera position
- View system diagnostics for troubleshooting
- Unpair the Touch controller from the video system, and select another system to pair with
- Factory reset the video system
- Enable extended logging

Most of these settings and tests are also part of the Setup assistant that is launched when the video system is powered up for the first time. The Setup assistant is described in the Getting Started Guide for systems running CE software.

Access Settings

1. Select the settings icon (cogwheel) in the status bar of the user interface.
2. Select System information > Settings.
3. Select the button next to the setting you want to change or the test you want to run.
Chapter 2

Configuration
User administration

You have to sign in to get access to the web and command line interfaces. You can assign different roles to users, to determine what they should have access to.

The default user account
The video system comes with a default administrator user account with full access rights. The user name is admin and no passphrase is initially set.

It is mandatory to set a passphrase for the admin user.

Read how to set the passphrase in the Change the system passphrase chapter.

Create a new user account
1. Sign in to the web interface, and navigate to Security > Users.
2. Click Add new user...
3. Fill in the Username, Passphrase and Repeat passphrase input fields.
   As a default, the user has to change the passphrase when he signs in for the first time.
   Fill in the Client Certificate DN (Distinguished Name) field only if you use client certificates for authentication.
4. Check the appropriate Roles check boxes.
   If you assign the ADMIN role to a user, enter your own passphrase in the Your passphrase input field for verification.
5. Set the Status to Active to activate the user.
6. Click Create User.
   Use the Back button to leave without making any changes.

Edit an existing user account
If you make changes to a user that holds the Admin role, you must always enter your own passphrase in the Your passphrase input field for verification.

Change the user privileges
1. Sign in to the web interface, and navigate to Security > Users.
2. Click the appropriate user in the list.
3. Choose user roles, set the status to Active or Inactive, and decide if the user has to change the passphrase on the next sign in.
   Fill in the Client Certificate DN (Distinguished Name) field only if you use certificate login on HTTPS.
4. Click Edit User to save the changes.
   Use the Back button to leave without making any changes.

Change the passphrase
1. Sign in to the web interface, and navigate to Security > Users.
2. Click the appropriate user in the list.
3. Enter the new passphrase in the appropriate input fields.
4. Click Change passphrase to save the change.
   Use the Back button to leave without making any changes.

Delete the user account
1. Sign in to the web interface, and navigate to Security > Users.
2. Click the appropriate user in the list.
3. Click Delete user... and confirm when prompted.

User roles
A user account may hold one or a combination of user roles. A user account with full access rights, like the default admin user, should possess the ADMIN, USER and AUDIT roles.

These are the user roles:

ADMIN: A user with this role can create new users, change most settings, make calls, and search the contact lists. The user cannot upload audit certificates and change the security audit settings.

USER: A user with this role can make calls and search the contact lists. The user can modify a few settings, for example adjust the ringtone volume and set the time and date format.

AUDIT: A user with this role can change the security audit settings and upload audit certificates.

ROOMCONTROL: A user with this role can create in-room controls. The user has access to the In-room control editor and corresponding development tools.

INTEGRATOR: A user with this role has access to settings, commands and status that are required to set up advanced AV scenarios, and to integrate our video systems with 3rd party equipment. Such a user can also create in-room controls.

Cisco Spark registered systems
If a video system is registered to Cisco’s could service (Cisco Spark), only local users with the INTEGRATOR and ROOMCONTROL user roles are available.
Change the system passphrase

You need to know the system passphrase in order to:
- Sign in to the web interface
- Sign in and use the command line interfaces

The default user account

The video system is delivered with a default user account with full access rights. The user name is `admin`, and initially, no passphrase is set.

⚠️ It is mandatory to set a passphrase for the default `admin` user in order to restrict access to system configuration. It is also mandatory to set a passphrase for any other user with ADMIN rights.

A warning, saying that the system passphrase is not set, is shown on screen until a passphrase is set for the `admin` user.

Other user accounts

You can create many user accounts for the video system.

Read more about how to create and manage user accounts in the ▶️ User administration chapter.

Change your passphrase

1. Sign in to the web interface, hover the mouse over the user name, and choose Change Passphrase in the drop down list.

2. Enter the current passphrase and new passphrase in the input fields, and click Change passphrase.

   The passphrase format is a string with 0–64 characters.

   ⚠️ If the passphrase currently is not set, leave the Current passphrase field blank.

Change another user's passphrase

If you have administrator access rights, you can change the password of any user.

1. Sign in to the web interface, and navigate to Security > Users.

2. Click the appropriate user in the list.

3. Enter the new passphrase in the Passphrase and Repeat passphrase input fields.

   If the user holds the Admin role, you must enter your own passphrase in the Your passphrase input field for verification.

4. Click Change passphrase to save the change.

   Use the Back button to leave without making any changes.
System configuration

Sign in to the web interface, and navigate to Setup > Configuration.

Find a system setting

Search for settings

Enter as many letters as needed in the search field. All settings that contain these letters are shown in the right pane. Settings that have these letters in their value space are also shown.

Change a system setting

Check the value space

A setting's value space is specified either by text following the input field or in a drop-down list that opens when you click the arrow.

Change a value

1. Choose the preferred value from the drop-down list, or enter new text in the input field.
2. Click Save for the change to take effect.
   Use the Undo or Cancel buttons if you do not want to make any changes.

Categories with unsaved changes are marked with an edit symbol ().

About system settings

All system settings can be changed from the web interface.

Each system setting is described in the System settings chapter.

Different settings may require different user credentials. In order to be sure that an administrator is able to change all system settings, an administrator user must possess all user roles.

You can read more about user administration and user roles in the User administration chapter.
Add a sign in banner

Sign in to the web interface, and navigate to Security > Sign In Banner.

1. Enter the message that you want to present to the user when he signs in.
2. Click Save to activate the banner.

About sign in banner

If a system administrator wants to provide initial information to all users, he can create a sign in banner. The message is shown when the user signs in to the web interface or the command line interface.
Manage the service certificates of the video system

Sign in to the web interface and navigate to Security > Service Certificates.

You need the following files:
- Certificate (file format: .PEM)
- Private key, either as a separate file or included in the same file as the certificate (file format: .PEM format)
- Passphrase (required only if the private key is encrypted)

The certificate and the private key will be stored in the same file on the video system.

Enable or disable, view or delete a certificate

Use the On and Off buttons to enable or disable a certificate for the different services.

Use the corresponding button to view or delete a certificate.

Add a certificate

1. Browse to find the Certificate file and Private key file (optional) on your computer.
2. Fill in the Passphrase if required.
3. Click Add certificate... to store the certificate on the video system.

About the service certificates of the video system

Certificate validation may be required when using TLS (Transport Layer Security).

A server or client may require that the video system presents a valid certificate to them before communication can be set up.

The video system’s certificates are text files that verify the authenticity of the system. These certificates may be issued by a certificate authority (CA).

Certificates are used for the following services: HTTPS server, SIP, IEEE 802.1X and audit logging.

You can store many certificates on the video system, but only one certificate can be enabled for each service at a time.

If authentication fails, the connection will not be established.
Manage the list of trusted certificate authorities (CAs)

Sign in to the web interface, navigate to Security > Certificate Authorities, and open the Custom CAs tab.

You need the following file:
- CA certificate list (file format: .PEM).

About trusted CAs

Certificate validation may be required when using TLS (Transport Layer Security).

The video system may be set up to require that a server or client presents its certificate to the video system before communication can be set up.

The certificates are text files that verify the authenticity of a server or client. The certificates must be signed by a trusted CA.

In order to verify the signature of the certificates, a list of trusted CAs must reside on the video system.

The list must include all CAs needed in order to verify certificates for both audit logging and other connections.

If authentication fails, the connection will not be established.

View or delete a certificate
Use the corresponding button to view or delete a certificate.

Upload a list of certificate authorities

1. Browse to find the file containing a list of CA certificates on your computer (file format: .PEM).
2. Click Add certificate authority... to store the new CA certificates on the video system.

The certificates and certificate issuers in the illustration are examples. Your system has other certificates.

Previously stored certificates are not deleted automatically.

The entries in a new file with CA certificates are appended to the existing list.
Set up secure audit logging

Sign in to the web interface, navigate to Setup > Configuration.

1. Open the Security category.
2. Find the Audit > Server settings, and enter the Address of the audit server.
   If you set PortAssignment to Manual, you must also enter a Port number for the audit server.
   Click Save for the changes to take effect.
3. Set Audit > Logging > Mode to ExternalSecure.
   Click Save for the change to take effect.

The certificate authority (CA) that verifies the certificate of the audit server must be in the video system's list of trusted certificate authorities. Otherwise, logs will not be sent to the external server.

Refer to the Manage the list of trusted certificate authorities (CAs) chapter how to update the list.

About secure audit logging

When audit logging is enabled, all sign in activity and configuration changes on the video system are recorded.

Use the Security > Audit > Logging > Mode setting to enable audit logging. Audit logging is disabled by default.

In ExternalSecure audit logging mode the video system sends encrypted audit logs to an external audit server (syslog server), which identity must be verified by a signed certificate.

The signature of the audit server is verified using the same CA list as other servers/clients.

If the audit server authentication fails, no audit logs are sent to the external server.
Manage pre-installed certificates for CUCM via Expressway provisioning

Sign in to the web interface, navigate to Security > Certificate Authorities, and open the Preinstalled CAs tab.

About pre-installed certificates

The pre-installed certificates in this list are only used when the video system is provisioned by Cisco Unified Communications Manager (CUCM) via Expressway (Edge).

Only Cisco Expressway infrastructure certificates are checked against this list.

If the validation of the Cisco Expressway infrastructure certificate fails, the video system will not be provisioned and registered.

Factory resetting the video system does not delete the list of pre-installed certificates.

View or disable certificates

As an alternative to using the pre-installed certificates, you can append the certificates you need to the certificate list manually.

Refer to the Manage the list of trusted certificate authorities (CAs) chapter how to update the list of trusted certificates.
Delete CUCM trust lists

The information in this chapter is only relevant for video systems that are registered to a Cisco Unified Communications Manager (CUCM).

Sign in to the web interface, navigate to Security > CUCM Certificates.

Delete the CUCM trust lists

Click Delete CTL/ITL to remove the trust lists.

As a general rule, you should not delete old CTL (Certificate Trust List) and ITL (Initial Trust List) files. In these cases, you must still delete them:

- When you change the CUCM IP address.
- When you move the endpoint between CUCM clusters.
- When you need to re-generate or change the CUCM certificate.

Overview of trust list fingerprints and certificates

The trust lists’ fingerprints and an overview of the certificates in the lists are displayed on the web page.

This information may be useful for troubleshooting.

More information about trust lists

For more information about CUCM and trust lists, read the Deployment guide for TelePresence endpoints on CUCM that is available on the Cisco web site.
Change the persistency mode

Sign in to the web interface and navigate to Security > Non-persistent Mode.

Check the persistency status

The active radio buttons show the current persistency status of the video system.

Alternatively, you can navigate to Setup > Status, and then open the Security category to see the Persistency status.

Change the persistency settings

All persistency settings are set to Persistent by default. You only have to change these settings if you want to make them Non-persistent.

1. Click the radio buttons to set the persistency for configurations, call history, internal logging, local phonebook (local directory and favorites) and IP connectivity (DHCP) information.

2. Click Save and reboot....

   The video system restarts automatically. After the restart, the behavior changes according to the new persistency settings.

   Logs, configurations, and other data that was stored before you switched to Non-persistent mode, are NOT cleared or deleted.

Persistency mode

Configurations, call history, internal logs, local phonebook (local directory and favorites list), and IP connectivity information are stored by default. Because all persistency settings are set to Persistent, a system restart does not delete this information.

Generally, we recommend you NOT to change the persistency settings. Only change to Non-persistent mode if you have to prevent users from being able to see or traceback to any logged information from the previous session.

In Non-persistent mode, the following information is lost or cleared each time the system restarts:

- System configuration changes
- Information about placed and received calls (call history)
- Internal log files
- Changes to the local contacts or favorites list
- All IP related information (DHCP) from the last session

Information that was stored before changing to Non-persistent mode is not automatically cleared or deleted. You must factory reset the video system to delete such information.

There is more information about performing a factory reset in the ► Factory reset the video system chapter.
Set strong security mode

Sign in to the web interface, navigate to Security > Strong Security Mode.

Set strong security mode

Read carefully about the consequences of strong security mode before you continue.

1. If you want to use strong security mode, click Enable Strong Security Mode... and confirm your choice in the dialog box that appears.
   The video system restarts automatically.

2. Change the passphrase when you are prompted. The new passphrase must meet the strict criteria as described.
   How to change the system passphrase is described in the ► Change the system passphrase chapter.

Return to normal mode

Click Disable Strong Security Mode... in order to restore the video system to normal mode. Confirm your choice in the dialog box that appears.
   The video system restarts automatically.

About strong security mode

Use strong security mode only when compliance with DoD JITC regulations is required.

Strong security mode sets very strict passphrase requirements, and requires all users to change their passphrase on the next sign in.
Set up Intelligent Proximity for content sharing (page 1 of 5)

Cisco Proximity allows users to see, control, capture and share content directly on their own mobile devices (smartphone, tablet, or laptop), when the device is near a video system.

The mobile device can automatically pair with the video system when it comes within range of ultrasound transmitted by the video system.

The number of simultaneous Proximity connections depends on the type of video system. The client warns new users if the maximum number of connections has been reached.

Proximity services

Place calls and control the video system:
- Dial, mute, adjust volume, hang up
- Available on smartphones and tablets (iOS and Android)

View shared content on a mobile device:
- View shared content, review previous slides, save selected slides
- Available on smartphones and tablets (iOS and Android)
- For DX70 and DX80, this service is available only when in a call

Wireless share from a desktop client:
- Share content without connecting a presentation cable
- Available on laptops (OS X and Windows)
Set up Intelligent Proximity for content sharing (page 2 of 5)

Install a Cisco Proximity client

Where to find the clients

You can download the Cisco Proximity clients for smartphones and tablets (Android and iOS), and laptops (Windows and OS X) free of charge from http://proximity.cisco.com

Clients for smartphones and tablets are also available directly through Google Play (Android) and Apple App Store (iOS).

End-user license agreement

Supported operating systems

- iOS 7 and above
- Android 4.0 and above
- Mac OS X 10.9 and above
- Windows 7 and above

The tile based interface introduced with Windows 8 is not supported.
Set up Intelligent Proximity for content sharing (page 3 of 5)

Ultrasound emission
Cisco video systems emit ultrasound as part of the Proximity feature.

Use the Proximity > Mode setting to switch the Proximity feature - and thereby also ultrasound emission - On and Off.

Most people are exposed to ultrasound more or less daily in many environments, including industry, commercial applications and home appliances.

Even if airborne ultrasound may cause subjective effects for some individuals, it is very unlikely that any effects will occur for levels below 75 dB.

Spark Room Kit, Spark Room Kit Plus, SX10N and MX Series:
- The ultrasound sound pressure level is below 75 dB at a distance of 50 cm or more from the loudspeaker.

DX70 and DX80:
- The ultrasound sound pressure level is below 75 dB at a distance of 20 cm or more from the loudspeaker.

Codec Plus, SX10, SX20, and SX80:
- We cannot foresee the ultrasound sound pressure level on these video systems, because they emit ultrasound on third-party loudspeakers.

The volume control on the loudspeaker itself, and the Peripherals > Pairing > Ultrasound > Volume > MaxLevel setting affect the ultrasound sound pressure level; the volume control on the remote control or Touch controller does not have any effect.

Headsets
Spark Room Kit, and Spark Room Kit Plus:
- The systems are not designed for headset use, and do not have a dedicated headset output. We don't recommend to connect a headset to these system.

DX70, DX80, and SX10N:
- You can always use a headset with these systems because:
  - DX70 and DX80 have dedicated headset outputs, on which we never emit ultrasound.
  - SX10N plays ultrasound on the built-in loudspeakers. Ultrasound is never emitted on the HDMI or audio outputs.

Codec Plus, SX10, SX20, SX80, and MX Series:
- We strongly recommend you to switch off ultrasound emission if you use a headset with these video systems (set Proximity > Mode to Off). Then you cannot use the Proximity feature.

Since these systems don't have dedicated headset outputs, we are not able to control the sound pressure level from the connected headsets.
Enable Proximity services

1. Sign in to the web interface, and navigate to Setup > Configuration.

2. Go to Proximity > Mode, and switch Proximity On.
   The video system starts sending ultrasound pairing messages.

3. Enable the services you want to allow. Only Wireless share from a mobile device is enabled by default.
   In order to fully utilise the Proximity functionality, we recommend that you enable all services.

   Place calls and control the video system:
   • Go to Proximity > Services > CallControl and choose Enabled.

   View shared content on a mobile device:
   • Go to Proximity > Services > ContentShare > FromClients and choose Enabled.

   Wireless share from a desktop client:
   • Go to Proximity > Services > ContentShare > ToClients and choose Enabled.

Temporarily disable the Proximity services

In sessions or meetings where you want to prevent devices in the room from receiving content, you can use the video system's user interface to temporarily disable the Proximity services.

1. The video system will continue to transmit ultrasound pairing messages during such sessions. This ensures that clients will know about a nearby video system, and can give the user an explanation why he cannot connect.

   1. Select the settings icon (cogwheel) in the status bar of the user interface to open the dropdown panel.
   2. Switch Proximity on or off with the toggle button.

The Proximity indicator

You will see a Proximity indicator on the display when Proximity is switched On, and at least one Proximity service is enabled.

The Proximity indicator has two states:

- Proximity services are available for use.
- Proximity services are temporarily disabled. Use the toggle button in the settings dropdown panel to make them available again.

About Proximity

The Proximity feature is switched Off by default, because the use of third-party speakers may need additional testing for Proximity to work as expected. In rare cases the ultrasound may cause audio artifacts. If so, consider to decrease the maximum ultrasound volume with the Peripherals > Pairing > Ultrasound Volume > MaxLevel setting.

When Proximity is switched On, the video system transmits ultrasound pairing messages.

The ultrasound pairing messages are received by nearby devices with Proximity clients, and triggers the authentication and authorization of the device.

Provided that you have verified that Proximity is suitable in your setup, Cisco recommends - for the best user experience - that Proximity always is switched On.

In order to get full access to Proximity, the Proximity services (Proximity > Services > ...) must be Enabled as well.
Set up Intelligent Proximity for content sharing (page 5 of 5)

Room considerations

Room acoustics

- Rooms with hard surfaces may cause challenges due to severe audio reflections. Acoustical treatment of meeting rooms is always highly recommended for the best meeting experience as well as Intelligent Proximity performance.
- Cisco recommends only one video system with Intelligent Proximity enabled in a room. Otherwise, interference is likely to occur, which may lead to problems with device discovery and session maintenance.

About privacy

In the Cisco Privacy statement and the Cisco Proximity Supplement you find information about data collection in the clients and privacy concerns that needs to be considered when deploying this feature in the organization. Refer to:

You can use the video system’s user interface to temporarily disable the Proximity services. This is useful in sessions or meetings where you want to prevent mobile devices in the room from receiving content.

Basic troubleshooting

Cannot detect devices with Proximity clients

- Check if the video system is in standby mode. Ultrasound is not transmitted if the speakers (for example a TV in standby mode) are turned off.
- Check the speaker volume. The volume control on a speaker itself (not the volume controlled with the remote control or Touch 10) affects the ultrasound volume. If the volume is too low, the listening devices cannot detect the ultrasound pairing messages.
- Some Windows laptops are not able to record sound in the ultrasound frequency range (20kHz-22kHz). This can be due to frequency limitations with the sound card, sound driver or the internal microphone of the particular device. Refer to the Support forum for more information.

Audio artifacts

- If you can hear audio artifacts, like humming or clipping noise, decrease the maximum ultrasound volume (Peripherals > Pairing > Ultrasound > Volume > MaxLevel).

Cannot share content from a laptop

- For content sharing to work, the video system and the laptop must be on the same network. For this reason Proximity sharing might fail if your video system is connected to your company network via Expressway, and your laptop is connected via VPN (VPN client dependent).

Video input quality settings

When encoding and transmitting video there is a trade-off between high resolution (sharpness) and high frame rate (motion).

The **Video Input Connector n Quality** setting must be set to **Motion** for the optimal definition settings to take any effect. With the video input quality set to **Sharpness**, the endpoint will transmit the highest resolution possible, regardless of frame rate.

Optimal definition profile

The optimal definition profile should reflect the lighting conditions in the video conferencing room and the quality of the camera (video input source). The better the lighting conditions and the better the quality of the camera, the higher the profile should be used.

Generally, the Medium profile is recommended. However, if the lighting conditions are very good, we recommend that you test the endpoint on the various Optimal Definition Profile settings before deciding on a profile. The High profile may be set in order to increase the resolution for a given call rate.

Some typical resolutions used for different optimal definition profiles, call rates and transmit frame rates are shown in the tables on the next page. The resolution and frame rate must be supported by both the calling and called systems.

---

Adjust the video quality to call rate ratio (page 1 of 2)

Sign in to the web interface and navigate to **Setup > Configuration**.

1. Go to **Video > Input > Connector n > Quality** and set the video quality parameter to **Motion**.

2. Go to **Video > Input > Connector n > OptimalDefinition > Profile** and choose the preferred optimal definition profile.
### Adjust the video quality to call rate ratio (page 2 of 2)

</table>
Packet loss resilience - ClearPath

ClearPath introduces several mechanisms for advanced packet loss resilience. These mechanisms increase the experienced quality when you use your video system in an error prone environment.

ClearPath is a Cisco proprietary protocol. All endpoints running CE software support ClearPath.

If the involved endpoints and infrastructure elements support ClearPath, all packet loss resilience mechanisms are used in point-to-point connections (including hosted conferences). Only some of the mechanisms are supported in MultiSite conferences.
Choose wallpaper

Sign in to the web interface, and navigate to Setup > Personalization.

Choose a wallpaper from the list. The active wallpaper is highlighted.

About a custom wallpaper

If you want the company logo or another custom picture as background on the main display, you may upload and use a custom wallpaper.

You can only store one custom wallpaper on the video system at a time; a new custom wallpaper overwrites the old one.

When you use a custom wallpaper, these items are removed from the main display:

- The large clock
- The list of upcoming meetings

Upload a custom wallpaper

Overwrites any old custom wallpaper.

1. Browse to find the custom wallpaper image file.
2. Click Upload to save the file on the video system.

Supported file formats: BMP, GIF, JPEG, PNG

Maximum file size: 16 megapixels

The custom wallpaper is automatically activated once uploaded.

Delete the custom wallpaper

Delete fully removes the custom wallpaper from the video system.

You have to upload it anew if you want use it again.
Choose a ringtone and set the ringtone volume

Sign in to the web interface, and navigate to **Setup > Personalization**.

### Change the ringtone

1. Choose a ringtone from the drop-down list.
2. Click **Save** to make it the active ringtone.

### Set the ringtone volume

Use the slide bar to adjust the ringtone volume.

### Play back the ringtone

Click the play button (▶) to play back the ringtone.

Use the stop button (■) to end the playback.

### About ringtones

A set of ringtones are installed on the video system. Use the web interface to choose a ringtone, and set the ringtone volume.

You can play back the choosen ringtone from the web interface. Note that the ringtone will be played back on the video system itself, and not on the computer running the web interface.
Manage the Favorites list

Sign in to the web interface and navigate to Setup > Favorites.

Import/Export contacts from file

Click Export to save the local contacts in a file; and click Import to bring in contacts from a file.

The current local contacts are discarded when you import new contacts from a file.

Add or edit a contact

1. Click Add contact to make a new local contact, or click a contact’s name followed by Edit contact.
2. Fill in or update the form that pops up.
   Choose a folder in the folder drop down list in order to store the contact in a sub-folder.
   Click Add contact method and fill in the new input fields if you want to store more than one contact method for the contact (for example video address, telephone and mobile number).
3. Click Save to store the local contact.

Delete a contact

1. Click a contacts name followed by Edit contact.
2. Click Delete to remove the local contact.

Manage Favorites using the video system’s user interface

Add a contact in the Favorites list

1. Select Call on the home screen.
2. Select the contact you want to add.
3. Select Add to favorites.

The contact you add will be placed in the top folder. You cannot select or create a sub-folder.

Remove a contact from the Favorites list

1. Select Call on the home screen.
2. Select the Favorites tab.
3. Select the contact you want to remove.
4. Select Remove favorite.

Delete a sub-folder

1. Click a folder’s name followed by Edit folder.
2. Click Delete to remove the folder and all its contacts and sub-folders. Confirm your choice in the dialog that pops up.
Chapter 3

Peripherals
Connect monitors

You can connect up to two monitors to the codec. The codec distributes the layout on all available monitors.

Always switch off power when you connect and disconnect monitors and other peripherals.

Automatic setup

There is no special configuration needed on the codec in order to support dual monitors scenarios. By default the number of monitors are auto-detected, and the role of each monitor - whether it is intended to be the first or second monitor - is automatically set according to the physical connections.

For example, if the total number of monitors are two, the following settings will be assumed when set to Auto:
- Video > monitors: Dual
- Video > Output > Connector 1 > MonitorRole: First
- Video > Output > Connector 2 > MonitorRole: Second

These settings can be changed if necessary, but for ease of use no configuration is required in order to use the default values.

When do you need manual setup

You can override the default behavior by setting one or more settings manually. You need manual setup when you want to:
- Dedicate a monitor to only show presentations
- Replicate the same layout on more than one monitor
- Show the on-screen messages and indicators (OSD) on another monitor than the video output with the lowest number
- Set the resolution manually, e.g. if the codec fails to detect the native resolution and refresh rate of a monitor

About video outputs

Codec Plus has two HDMI video outputs. Both outputs can be used simultaneously.

Typically, the outputs are used for monitors or other displays.

Both HDMI outputs have 4K resolution and audio.
Connect monitors (page 2 of 2)

Manual setup

The automatic setup works well for common single monitor, and dual monitors scenarios. For more complex scenarios, you may need manual configuration. Sign in to the web interface and navigate to Setup > Configuration, to find the settings referred below.

Set a role for each monitor

Define a role for each monitor with the Video > Output > Connector n > MonitorRole setting.

Choose monitor roles that match your monitor setup.

Set the number of monitors

Set the number of monitors with different layouts in your setup with the Video > Monitors setting.

When set to Auto, the video system automatically detects if a monitor is connected to a connector, and thereby also determines the number of monitors in the setup.

The other options allow you to fix a single, or dual monitor setup; and to dedicate one monitor for presentations.

Choose on which monitor to display messages and indicators

Define on which monitor to display the messages and indicators on-screen with the UserInterface > OSD > Output setting.

When set to Auto, the video system determines which monitor to use based on the number of the connector.

Set the monitor resolution and refresh rate

The video system reads the native resolution of a monitor and outputs this if possible. Typically, this gives the best possible picture for the monitor.

If auto-detection of resolution and refresh rate fails, you must set the resolution manually with the Video > Output > Connector n > Resolution setting.

Example:

Two monitors in total, and the second monitor is dedicated to only show presentations:

Video > Monitors: DualPresentationOnly
- Video > Output > Connector 1 > MonitorRole: Auto
- Video > Output > Connector 2 > MonitorRole: Auto
- UserInterface > OSD > Output: Auto

About the number of monitors and the role of each monitor

The Video > Output > Connector n > MonitorRole setting assigns a role to the monitor that is connected to the output. The monitor role decide which layout (call participants and presentation) will appear on the monitor.

Monitors with the same monitor role get the same layout; monitors with different monitor roles get different layouts.

The Video > Monitors setting must reflect the number of different layouts in your room setup.

Most often the number of different layouts are the same as the number of physical monitors, but not always. If exactly the same layout shall be repeated on two monitors, the number of different layouts is less.

Note that a monitor can be reserved for presentations.
Connect input sources (page 1 of 2)

You can connect up to three input sources to the codec simultaneously.
Sign in to the web interface and navigate to Setup > Configuration, to find the settings referred below.

Connect a camera
Always use Connector 1 (HDMI) for the main camera.
The codec supports maximum two cameras. Connect the second camera to Connector 2 (HDMI) or Connector 3 (HDMI).

Camera control
Codec Plus has its camera control through the Ethernet port. If you connect an extra camera you need an Ethernet switch to allow for camera control on both cameras.

About video inputs
Codec Plus has three HDMI inputs for cameras and computers. You can also connect other types of video and content sources.
HDMI video input 1 is reserved for the main camera, and the codec supports maximum two cameras.

Connect a computer
Connect a computer to a video input in order to share content locally or with conference participants. The codec supports two computers simultaneously.
Computers are connected to Connector 2 (HDMI) or Connector 3 (HDMI).
Connect input sources (page 2 of 2)

About video and content quality

Use the Video > Input > Connector n > Quality setting to optimize quality with respect to motion or sharpness.

Typically, you should choose Motion when a large number of participants are present or when there is a lot of motion in the picture. Choose Sharpness when you want the highest quality of detailed images and graphics.

The default value is Motion for Connector 1 and Sharpness for Connector 2 and 3.

Set type and name for the input sources

We recommend that you set type and name for the input sources:

- Video > Input > Connector n > InputSourceType
- Video > Input > Connector n > Name

These settings determine the names and icons that are shown on the user interfaces. Intuitive names and icons make source selection easier.
Extend the number of input sources

You can customize our touch user interfaces to include input sources that are connected to a third-party external video switch. The sources will appear and behave as any other video source that is connected directly to the video system.

Consult the In-Room Control guide for full details about how to extend the user interface, and how to use the video system’s API to set it up. Go to:

► http://www.cisco.com/go/in-room-control-docs

Architecture

You need a Cisco video system with a touch interface, a third-party control system, for example Crestron or AMX, and a third-party video switch. It is the control system, not the video system, that controls the video switch.

When you program the control system you must use the video system’s API (events and commands)\(^*\) in order to connect with the video switch and the controls on the touch interface. This way you can synchronize what is shown and done on the user interface with the actual state of the input sources.

\(^*\) You need a user that holds the ROOMCONTROL, INTEGRATOR, or ADMIN user roles in order to access the API commands that you need when programming the control system.
Information about displays

Real-time communication requirements

We have put in a lot of effort to minimize the camera to screen delay on our video systems, and also to detect and compensate for total delay between the audio and video components. We recommend that you use displays with low delay to increase the natural communication. We also recommend that you test a sample before ordering a large number of displays.

Delay through most displays is often very high (>100 ms) and is therefore detrimental to real-time communication quality.

The following display settings may reduce the delay:

- **Activate Game mode, PC mode or similar modes that are designed to reduce the response time and normally also the delay**
- **Deactivate motion smoothing, like Motion Flow, Natural Motion, or any other video processing that introduces additional delay**
- **Deactivate advanced audio processing, like Virtual Surround effects and Dynamic Compression, which will make any acoustic echo canceller malfunction**
- **Change to a different HDMI input**

Consumer Electronics Control (CEC) 2.0

The active video input on a display is sometimes changed by a user. The video input that is active is set from the manufacturer’s user interface.

When you make a call the video system detects if the active video input has been switched to another input on the display. The video system then switches the input back so the video system is the active video input source.

If the video system is not the active input source when it goes into standby the display will not be set to standby.

Cisco recommended displays

Cisco recommends using the following LG displays for the best experience and verified compatibility. The list of displays is subject to change, check the CE9 Software Release Notes for updates.

<table>
<thead>
<tr>
<th>Model</th>
<th>LG global website link</th>
</tr>
</thead>
<tbody>
<tr>

</tr>
<tr>
<td>86&quot; UHD (86UH5C)</td>
<td><a href="http://www.lg.com/global/business/information-display/digital-signage/lg-86UH5C">http://www.lg.com/global/business/information-display/digital-signage/lg-86UH5C</a></td>
</tr>
</tbody>
</table>
Information about 4K resolution

Connecting a display

When you start the system for the first time, the setup assistant starts automatically. This is where you test the display and adjust the settings. Follow the on-screen instructions.

If you need to adjust the settings at a later stage, sign in to the web interface, and navigate to Setup > Configuration > Video > Output > Connector n > Resolution and adjust the screen resolution. Set the resolution according to what your display supports.

If your screen is black or flickering, you can set the resolution to a lower setting. If there still are problems, check that the HDMI cable is connected to an HDMI port on your display that supports Ultra HD. Check also that the HDMI Ultra HD settings are set to On on your display.

Cisco provides a list of displays that we have tested. Refer to the Cisco recommended displays chapter.

Connecting a computer

If an error occurs when you connect a computer, a message will show on screen and on the Touch 10 controller.

The default preferred resolution on the video input connector is 1080p60 (1920_1080_60). If you want to use 4K resolution with the computer, sign in to the web interface, and navigate to Setup > Configuration > Video > Input > Connector n > PreferredResolution and adjust the value.

Alternatively, you can override the resolution from the display/monitor configuration offered by the operating system of the connected computer.

Checklist

For guaranteed operation, order HDMI cables from Cisco, or use certified HDMI cables. Refer to the HDMI cables chapter.

Check that the video systems input/output connector(s) are configured correctly.

Check that the device (TV/display, computer) has support for 4K and that it is configured correctly.

The manufacturer may advertise that a TV/display supports 4K, but you should test the TV/display to make sure it works.

The bandwidth requirement is higher:

- 4kp30 uses about twice the data rate of 1080p60
- 4kp60 uses about four times the data rate of 1080p60
Information about HDMI cables

HDMI cables are required for cameras, displays and presentation sources.

**NOTE:** For guaranteed operation we recommend that you order HDMI cables from Cisco, or use certified HDMI cables.

### HDMI cables for cameras and displays

The resolution formats larger than 1920×1200@60fps require use of high speed HDMI cables. For guaranteed operation, use HDMI cables that are pre-qualified from Cisco for use at 3840×2160@60fps, or use a cable that has passed the Premium HDMI Cable Certification Programme.

### HDMI cables for presentation sources

A presentation source can be a PC/laptop, document camera, media player, whiteboard, or other device.

The resolution formats larger than 1920×1080@60fps require use of high speed HDMI cables. For guaranteed operation, use a HDMI cable from Cisco, or use a cable that complies with the high speed HDMI 1.4b Category 2 specification.

We recommend that you order the HDMI presentation cable from Cisco (HDMI 1.4b Category 2).

You can find more information about HDMI cables at [http://www.hdmi.org](http://www.hdmi.org)
Set up the SpeakerTrack feature

Sign in to the web interface and navigate to Setup > Configuration, to find the settings referred.

The speaker track feature uses automatic camera framing to select the best view based on how many people are in the room.

When closeup is enabled and a person in the room speaks, the system will find the person and select the best camera framing. The closeup may not include all the persons in the room. If you want all the persons in the room to be in the picture at all times you can turn off the closeup functionality.

Best overview

The camera uses digital face detection to automatically create the best view of a single person or a group of people in the conference room. If people are moving around in the room or additional participants enters the conference room, the feature will adapt to the changes and automatically adjust the view to include all persons in the picture. This feature works together with speaker tracking to provide the best possible conferencing experience.

Configure speaker tracking

Use the Cameras > SpeakerTrack settings to configure speaker tracking.

**Cameras > SpeakerTrack > Mode**

- **Auto**: Speaker tracking is enabled in general. The system will detect people in the room and automatically select the best camera framing. Users can switch speaker track on or off instantly in the camera control panel on the Touch controller.
- **Off**: Speaker tracking is switched off. The speaker track on/off button will disappear from the Touch controller. The closeup function will be disabled.

**Cameras > SpeakerTrack > Closeup**

This setting only applies when the Cameras SpeakerTrack Mode is set to Auto

- **Auto**: The system will zoom in on the person speaking.
- **Off**: The system will keep all the persons in the room in the camera framing at all times.

Products that support speaker tracking

The following Cisco products support speaker tracking:

- MX700 and MX800 with dual camera
- SpeakerTrack 60 camera
- Spark Room Kit
- Spark Room Kit Plus *

* The kit includes Spark Quad Camera and Codec Plus
Connect the Touch 10 controller (page 1 of 3)

Touch 10 must either be directly connected to the video system as described on this page, or paired to the video system via the network (LAN) as described on the next page. The latter is referred to as remote pairing.

Connect Touch 10 directly to the video system

Connect Touch 10 to the video system’s PoE injector as illustrated.

Touch 10 set-up

Once Touch 10 is connected to power, the set-up procedure begins. Follow the instructions on screen.

If Touch 10 needs software upgrade, new software will be downloaded from the video system and installed on the unit automatically as part of the set-up procedure. Touch 10 restarts after the upgrade.
Connect the Touch 10 controller (page 2 of 3)

Connect Touch 10 to the video system via the network (LAN)

Connect Touch 10 and the video system to network wall sockets or to a network switch as illustrated.

Touch 10 set-up

Once Touch 10 is connected to power, the set-up procedure begins. Follow the instructions on screen.

When the Select a room system screen appears, note the following:

• A list of video systems signalling that they are available for paring will show up on the screen. Tap the name of the video system you want to pair with.

Note that the following must be fulfilled for a video system to show up in the list:

• The video system and Touch 10 must be on the same subnet.

• The video system must be restarted within the last 10 minutes. If the video system does not appear in the list, try restarting it.

• If the video system does not appear in the list of available systems, enter its IP address or hostname in the input field. Tap Connect.

• You have to log in with username and passphrase for the paring process to commence. Tap Login.

A user with the USER role is sufficient; you do not need the ADMIN role to perform this task.

Read more about how to create a user account and assign a role to it in the User administration chapter.

If Touch 10 needs software upgrade, new software will be downloaded from the video system and installed on the unit automatically as part of the set-up procedure. Touch 10 restarts after the upgrade.

1 If the network infrastructure provides Power over Ethernet (PoE), you do not need a PoE injector; Touch 10 should be connected directly to the wall socket (Ethernet switch) with a PoE rated Ethernet cable.

For safety, the PoE source must be in the same building as Touch 10. The PoE rated Ethernet cable can be up to 100m (330ft).
Connect the Touch 10 controller (page 3 of 3)

Touch 10 physical interface

- Touch screen
- Adjustable support to accommodate individual ergonomic needs
- Sound bar for audio adjustment
- Audio mute
- Mini-jack, 3.5 mm (not in use)
- Two USB connectors (not in use)
- Micro-USB: for maintenance only
- Ethernet with PoE: for power and Ethernet
- Not in use
Chapter 4

Maintenance
Upgrade the system software

Sign in to the web interface and navigate to Maintenance > Software Upgrade.

Download new software
For software download, go to the Cisco Download Software web page, and navigate to your product: http://www.cisco.com/cisco/software/navigator.html.

Each software version has a unique file name. The format of the file name is “s53200ce9_1_x.cop.sgn.”

Software release notes
For a complete overview of the news and changes, we recommend reading the Software Release Notes (CE9).

Install new software
Download the appropriate software package and store it on your computer. This is a .cop.sgn file. Don't change the file name.

1. Click Browse... and find the .cop.sgn file that contains the new software.
   The software version will be detected and shown.

2. Click Install software to start the installation process.

The complete installation normally takes no longer than 15 minutes. You can follow the progress on the web page. The video system restarts automatically after the installation.

You must sign in anew in order to continue working with the web interface after the restart.

About software versions
This video conference system is using CE software. The version described in this document is CE9.1.x.
Add option keys

Sign in to the web interface and navigate to Maintenance > Option Keys.

You see a list of all option keys, also the ones that are not installed on your video system.

Contact your Cisco representative for information about how to get option keys for the uninstalled options.

Add an option key

1. Enter an Option Key in the text input field.
2. Click Add option key.

If you want to add more than one option key, repeat these steps for all keys.

About option keys

Your video system may or may not have one or more software options installed. In order to activate the optional functionality the corresponding option key must be present on the video system.

Each video system has unique option keys.

Option keys are not deleted when performing a software upgrade or factory reset, so they need to be added only once.

The video system's serial number

You need the video system's serial number when ordering an option key.
System status

System information overview

Sign in to the web interface to see the System Information page. This page shows the product type, system name and basic information about the hardware, software, installed options and network address. Registration status for the video networks (SIP and H.323) is included, as well as the number/URI to use when making a call to the system.

Detailed system status

Sign in to the web interface, and navigate to Setup > Status in order to find more detailed status information.*

Search for a status entry

Enter as many letters as needed in the search field. All entries that contain these letters are shown in the right pane. Entries that have these letters in their value space are also shown.

Select a category and navigate to the correct status

The system status is grouped in categories. Choose a category in the left pane to show the related status to the right.

* The status shown in the illustration serve as an example. The status of your system may be different.
Run diagnostics

Sign in to the web interface and navigate to Maintenance > Diagnostics.

The diagnostics page lists the status for some common sources of errors*. Errors and critical issues are clearly marked in red color; warnings are yellow.

Run diagnostics

Click Re-run diagnostics to ensure that the list is up to date.

Leave standby mode

Click Deactivate standby to wake up a video system that is in standby mode.

---

* The messages shown in the illustration serve as examples. Your system may show other information.
Download log files

Sign in to the web interface and navigate to Maintenance > System Logs.

About log files

The log files are Cisco specific debug files which may be requested by the Cisco support organization if you need technical support.

The current log files are time stamped event log files.

All current log files are archived in a time stamped historical log file each time the video system restarts. If the maximum number of historical log files is reached, the oldest one will be overwritten.

Extended logging mode

Extended logging mode may be switched on to help diagnose network issues and problems during call setup. While in this mode more information is stored in the log files.

Extended logging uses more of the video system’s resources, and may cause the video system to under-perform. Only use extended logging mode when you are troubleshooting an issue.

Download all log files

Click Download logs archive... and follow the instructions.

An anonymized call history is included in the log files by default.

Use the drop down list if you want to exclude the call history from the log files, or if you want to include the full call history (non-anonymous caller/callee).

Open/save one log file

Click the file name to open the log file in the web browser; right click to save the file on the computer.

Start extended logging

Click Start extended logging...

Extended logging lasts for 3 or 10 minutes, depending on whether full capture of network traffic is included or not.

Click Stop extended logging if you want to stop the extended logging before it times out.

As default, the network traffic is not captured. Use the drop down menu if you want to include partial or full capture of network traffic.

Refresh a log file list

Click the refresh button for Current logs or Historical logs to update the corresponding lists.
Create a remote support user

Sign in to the web interface, navigate to **Maintenance > System Recovery** and select the **Remote Support User** tab.

⚠️ The remote support user should only be enabled for troubleshooting reasons when instructed by Cisco TAC.

### Create remote support user

1. Click **Create user**.
2. Open a case with Cisco TAC.
3. Copy the text in the **Token** field and send it to Cisco TAC.
4. Cisco TAC will generate a **password**.

The remote support user is valid for seven days, or until it is deleted.

### Delete remote support user

Click **Delete user**.

---

### About the remote support user

In cases where you need to diagnose problems on the video system you can create a remote support user.

The remote support user is granted read access to the system and has access to a limited set of commands that can aid troubleshooting.

You will need assistance from Cisco Technical Assistance Center (TAC) to acquire the password for the remote support user.
Backup or restore a configuration

Sign in to the web interface and navigate to Maintenance > Backup and Restore.

Show the current configuration
Click Preview backup to display the current settings on-screen.

Back up the current configuration
Click Take backup to store the configuration as a text file.

Restore configuration from backup
1. Click Browse... and find the backup file with the configuration you want to restore.
2. Click Restore to reconfigure the system as defined in the file.
   Some settings require that you restart the video system before they take effect.

About configuration backup
All the system settings, which are available on the System configuration page, can be listed on-screen or stored as a backup text file.
The backup text file can be loaded back onto the system, thereby restoring the configuration.
Revert to the previously used software image

Sign in to the web interface and navigate to Maintenance > System Recovery.

We recommend you to back up the log files and configuration of the video system before you swap to the previously used software image.

Back up log files and system configuration

1. Select the Backup tab.
2. Click Download Logs and follow the instructions to save the log files on your computer.
3. Click Download Configuration Backup and follow the instructions to save the configuration file on your computer.

About the previously used software image

If there is a severe problem with the video system, switching to the previously used software image may help solving the problem.

If the system has not been factory reset since the last software upgrade, the previously used software image still resides on the system. You do not have to download the software again.

Revert to the previously used software image

Only administrators, or when in contact with Cisco technical support, should perform this procedure.

1. Select the Software Recovery Swap tab.
2. Click Switch to software: cex.y.z..., where x.y.z indicates the software version.
3. Click Yes to confirm your choice, or Cancel if you have changed your mind.

Wait while the system resets. The system restarts automatically when finished. This procedure may take a few minutes.
Factory reset the video system (page 1 of 3)

If there is a severe problem with the video system, the last resort may be to reset it to its default factory settings. It is not possible to undo a factory reset.

Always consider reverting to the previously used software image before performing a factory reset. In many situations this will recover the system. Read about software swapping in the Revert to the previously used software image chapter.

A factory reset implies:
- Call logs are deleted.
- Passphrases are reset to default.
- All system parameters are reset to default values.
- All files that have been uploaded to the system are deleted. This includes, but is not limited to, custom wallpaper, certificates, and favorites lists.
- The previous (inactive) software image is deleted.
- Option keys are not affected.

The video system restarts automatically after the factory reset. It is using the same software image as before.

We recommend that you back up the log files and configuration of the video system before you perform a factory reset; otherwise these data will be lost.

We recommend that you use the web interface or user interface to factory reset the video system. If these interfaces are not available, use the reset button.
Factory reset the video system  

Factory reset using the web interface

We recommend that you back up the log files and configuration of the video system before you continue with the factory reset.

Sign in to the web interface and navigate to Maintenance > System Recovery.

1. Select the Factory Reset tab, and read the provided information carefully.
2. Click Perform a factory reset...
3. Click Yes to confirm your choice, or Cancel if you have changed your mind.
4. Wait while the video system reverts to the default factory settings. When finished, the video system restarts automatically. This may take a few minutes.

When the system has been successfully reset to factory settings, the Setup assistant starts with the Welcome screen.

Factory reset from the user interface

We recommend that you back up the log files and configuration of the video system before you continue with the factory reset.

1. Select the settings icon (cogwheel) in the status bar of the user interface.
2. Select System information > Settings.
3. Select Reset system.
4. Click Reset to confirm your choice, or Back if you have changed your mind.
5. Wait while the video system reverts to the default factory settings. When finished, the video system restarts automatically. This may take a few minutes.

When the system has been successfully reset to factory settings, the Setup assistant starts with the Welcome screen.

Back up log files and system configuration

Sign in to the web interface and navigate to Maintenance > System Recovery.

1. Select the Backup tab.
2. Click Download Logs and follow the instructions to save the log files on your computer.
3. Click Download Configuration Backup and follow the instructions to save the configuration file on your computer.
Factory reset the video system (page 3 of 3)

Factory reset using the reset button

We recommend that you back up the log files and configuration of the video system before you continue with the factory reset.

1. Locate the reset button (pin hole) at the rear side of the codec.
2. Use a paper clip (or similar) to press and hold the recessed reset button until the screen turns black (approximately 10 seconds). Then release the button.
3. Wait while the video system reverts to the default factory settings. When finished, the video system restarts automatically. This may take a few minutes.

When the system has been successfully reset to factory settings, the Setup assistant starts with the Welcome screen.
Factory reset the Touch 10

In an error situation it may be required to factory reset the Touch controller to recover connectivity. This should be done only when in contact with the Cisco support organization.

When factory resetting the Touch controller the pairing information is lost, and the Touch itself (not the video system) is reverted to factory defaults.

It is not possible to undo a factory reset.

1. Locate the Mute and Volume down buttons.
2. Press and hold the Mute button until it starts blinking (red and green). It takes approximately 10 seconds.
3. Press the Volume down button twice.

Touch 10 automatically reverts to the default factory settings and restarts.

If Touch 10 is directly connected to the video system it receives a new configuration automatically from the video system.

If Touch 10 is connected via LAN the device must be paired to the video system anew. When successfully paired it receives a new configuration automatically from the video system.

About pairing and how to connect Touch 10 to the video system

In order to use the Touch 10 controller, Touch 10 must either be directly connected to the codec, or paired to the codec via LAN. The latter is referred to as remote pairing.

Read about pairing and how to connect Touch 10 to the video system in the Connect the Touch 10 controller chapter.
Capture user interface screenshots

Sign in to the web interface and navigate to Maintenance > User Interface Screenshots.

Capture a screenshot

Click Take screenshot of Touch Panel to capture a screenshot of the Touch controller, or click Take screenshot of OSD to capture a screenshot of the on-screen display.

The screenshot displays in the area below the buttons. It may take up to 30 seconds before the screenshot is ready.

All captured snapshots are included in the list above the buttons. Click the screenshot ID to display the image.

Delete screenshots

If you want to delete all screenshots, click Remove all.

To delete just one screenshot, click the × button for that screenshot.

About user interface screenshots

You can capture screenshots both of a Touch controller that is connected to the video system, and of the on-screen display (menus, indicators and messages on the main display).
Chapter 5

System settings
Overview of the system settings

In the following pages you will find a complete list of the system settings which are configured from the Setup > Configuration page on the web interface.

Open a web browser and enter the IP address of the video system then sign in.

How to find the IP address
1. Select the settings icon (cogwheel) in the status bar of the user interface.
2. Select System Information.

Audio settings

Audio DefaultVolume
Define the default volume for the speakers. The volume is set to this value when you switch on or restart the video system. Use the Touch controller or remote control to change the volume while the video system is running. You may also use API commands (xCommand Audio Volume) to change the volume while the video system is running, and to reset to default value.

Requires user role: ADMIN, INTEGRATOR, USER
Default value: 50

Value space: Integer (0..100)
Select a value between 1 and 100. This corresponds to the dB range from -34.5 dB to 15 dB, in steps of 0.5 dB. If set to 0 the audio is switched off.

Audio Microphones Mute Enabled
Define the microphone mute behaviour on the video system.

Requires user role: ADMIN, INTEGRATOR
Default value: True

Value space: True/InCallOnly
True: Muting of audio is always available.
InCallOnly: Muting of audio is only available when the device is in a call. When idle it is not possible to mute the microphone. This is useful when an external telephone service/audio system is connected via the codec and is to be available when the codec is not in a call. When set to InCallOnly this will prevent the audio-system from being muted by mistake.

Audio SoundsAndAlerts RingTone
Define which ringtone to use for incoming calls.

Requires user role: ADMIN, INTEGRATOR, USER
Default value: Sunrise

Value space: Sunrise/Mischief/Ripples/Reflections/Vibes/Delight/Evolve/Playful/Ascent/Calculation/Mellow/Ringer
Select a ringtone from the list.

Audio SoundsAndAlerts RingVolume
Define the ring volume for incoming calls.

Requires user role: ADMIN, INTEGRATOR, USER
Default value: 50

Value space: Integer (0..100)
The value goes in steps of 5 from 0 to 100 (from -34.5 dB to 15 dB). Volume 0 = Off.

Audio Input Microphone [1..3] EchoControl Mode
The echo canceller continuously adjusts itself to the audio characteristics of the room, and compensates for any changes it detects in the audio environment. If the changes in the audio conditions are significant, the echo canceller may take a second or two to re-adjust.

Requires user role: ADMIN, INTEGRATOR
Default value: On

Value space: Off/On
Off: Turn off the echo control. Recommended if external echo cancellation or playback equipment is used.
On: Turn on the echo control. Recommended, in general, to prevent the far end from hearing their own audio. Once selected, echo cancellation is active at all times.
Audio Input Microphone [1..3] EchoControl NoiseReduction

The system has built-in noise reduction, which reduces stationary background noise, for example noise from air-conditioning systems, cooling fans etc. In addition, a high pass filter (Humfilter) reduces very low frequency noise. Noise reduction requires that Audio Input Microphone [n] EchoControl Mode is enabled.

Requires user role: ADMIN, INTEGRATOR
Default value: On
Value space: Off/On
  Off: Turn off the noise reduction.
  On: Turn on the noise reduction. Recommended in the presence of low frequency noise.

Audio Input Microphone [1..3] EchoControl Dereverberation

The system has built-in signal processing to reduce the effect of room reverberation. Dereverberation requires that Audio Input Microphone [n] EchoControl Mode is enabled.

Requires user role: ADMIN, INTEGRATOR
Default value: Off
Value space: Off/On
  Off: Turn off the dereverberation.
  On: Turn on the dereverberation.

Audio Input Microphone [1..3] Level

Define the audio level of the Microphone input connector.

Requires user role: ADMIN, INTEGRATOR
Default value: 14
Value space: Integer (0..36)
  Select a value between 0 and 24, in steps of 1 dB.

Audio Input Microphone [1..3] Mode

Disable or enable audio on the microphone connector.

Requires user role: ADMIN, INTEGRATOR
Default value: On
Value space: Off/On
  Off: Disable the audio input microphone connector.
  On: Enable the audio input microphone connector.

Audio Output InternalSpeaker Mode

Define whether or not to use the video system's integrated speakers.

Requires user role: ADMIN
Default value: On
Value space: Off/On
  Off: Disable the video system's integrated speakers.
  On: Enable the video system's integrated speakers.
CallHistory settings

CallHistory Mode
Determine whether or not information about calls that are placed or received are stored, including missed calls and calls that are not answered (call history). This determines whether or not the calls appear in the Recents list in the user interfaces.

Requires user role: ADMIN, INTEGRATOR
Default value: On
Value space: Off/On
  - Off: New entries are not added to the call history.
  - On: New entries are stored in the call history list.
Cameras settings

Cameras Camera [1..2] Backlight DefaultMode
This configuration turns backlight compensation on or off. Backlight compensation is useful when there is much light behind the persons in the room. Without compensation the persons will easily appear very dark to the far end.

Requires user role: ADMIN, INTEGRATOR
Default value: Off
Value space: Off/On
  Off: Turn off the camera backlight compensation.
  On: Turn on the camera backlight compensation.

Cameras Camera [1..2] Brightness Mode
Define the camera brightness mode.

Requires user role: ADMIN, INTEGRATOR
Default value: Auto
Value space: Auto/Manual
  Auto: The camera brightness is automatically set by the system.

Cameras Camera [1..2] Focus Mode
Define the camera focus mode.

Requires user role: ADMIN, INTEGRATOR
Default value: Auto
Value space: Auto/Manual
  Auto: The camera will auto focus once a call is connected, as well as after moving the camera (pan, tilt, zoom). The system will use auto focus only for a few seconds to set the right focus; then auto focus is turned off to prevent continuous focus adjustments of the camera.
  Manual: Turn the autofocus off and adjust the camera focus manually.

Cameras Camera [1..2] Gamma Mode
This setting enables gamma corrections, and applies only to cameras which support gamma mode. Gamma describes the nonlinear relationship between image pixels and monitor brightness.

Requires user role: ADMIN, INTEGRATOR
Default value: Auto
Value space: Auto/Manual
  Auto: Auto is the default and the recommended setting.
  Manual: In manual mode the gamma value is changed with the gamma level setting, ref. Cameras Camera [n] Gamma Level.

Cameras Camera [1..2] Gamma Level
Define the brightness level. Requires the Cameras Camera [n] Brightness Mode to be set to Manual.

Requires user role: ADMIN, INTEGRATOR
Default value: 20
Value space: Integer (1..31)
  The brightness level.
Cameras Camera [1..2] Gamma Level

By setting the Gamma Level you can select which gamma correction table to use. This setting may be useful in difficult lighting conditions, where changes to the brightness setting does not provide satisfactory results. Requires the Cameras Camera [n] Gamma Mode to be set to Manual.

Requires user role: ADMIN, INTEGRATOR
Default value: 0
Value space: Integer (0..7)
Define the gamma level.

Cameras Camera [1..2] Mirror

With Mirror mode (horizontal flip) you can mirror the image on screen. Mirroring applies both to the self-view and the video that is transmitted to the far end.

Requires user role: ADMIN, INTEGRATOR
Default value: Auto
Value space: Auto/Off/On
- Auto: If the camera detects that it is mounted upside down, the image is automatically mirrored. If the camera cannot auto-detect whether it is mounted upside down or not, the image is not changed.
- Off: Display the image as other people see you.
- On: Display the image as you see yourself in a mirror.

Cameras Camera [1..2] Whitebalance Mode

Define the camera white balance mode.

Requires user role: ADMIN, INTEGRATOR
Default value: Auto
Value space: Auto/Manual
- Auto: The camera will continuously adjust the white balance depending on the camera view.

Cameras Camera [1..2] Whitebalance Level

Define the white balance level. Requires the Cameras Camera [n] Whitebalance Mode to be set to manual.

Requires user role: ADMIN, INTEGRATOR
Default value: 1
Value space: Integer (1..16)
The white balance level.

Cameras PowerLine Frequency

If your camera supports power line frequency anti-flickering, the camera is able to compensate for any flicker noise from the electrical power supply. You should set this camera configuration based on your power line frequency. If your camera supports auto detection of line frequency, you can select the Auto option in the configuration.

All Cisco Precision cameras support both anti-flickering and auto detection of line frequency. Auto is the default value, so you should change this setting if you have a camera that does not support auto detection.

Requires user role: ADMIN, INTEGRATOR
Default value: Auto
Value space: 50Hz/60Hz/Auto
- 50Hz: Use this value when the power line frequency is 50 Hz.
- 60Hz: Use this value when the power line frequency is 60 Hz.
- Auto: Allow the camera to detect the power frequency automatically.
Cameras SpeakerTrack Mode

The speaker track feature uses automatic camera framing to select the best camera framing based on how many people are in the room.

Requires user role: ADMIN, INTEGRATOR
Default value: Auto

Value space: Auto/Off

- Auto: Speaker tracking is enabled in general. The system will detect people in the room and automatically select the best camera framing. Users can switch speaker track on or off instantly in the camera control panel on the Touch controller.
- Off: Speaker tracking is switched off.

Cameras SpeakerTrack Closeup

This setting applies only when the Cameras SpeakerTrack Mode is set to Auto.

When a person in the room speaks the system will find the person and select the best camera framing. This is called a closeup and may not include all the persons in the room. If you want all the persons in the room to be in the picture at all times you can turn off the closeup functionality.

Requires user role: ADMIN, INTEGRATOR
Default value: Auto

Value space: Auto/Off

- Auto: The system will zoom in on the person speaking.
- Off: The system will keep all the persons in the room in the camera framing at all times.
Conference settings

Conference ActiveControl Mode
Active control is a feature that allows conference participants to administer a conference on Cisco TelePresence Server or Cisco Meeting Server using the video system's interfaces. Each user can see the participant list, change video layout, disconnect participants, etc. from the interface. The active control feature is enabled by default, provided that it is supported by the infrastructure (Cisco Unified Communications Manager (CUCM) version 9.1.2 or newer, Cisco TelePresence Video Communication Server (VCS) version X8.1 or newer, Cisco Media Server (CMS) version 2.1 or newer). Change this setting if you want to disable the active control features.

Requires user role: ADMIN
Default value: Auto
Value space: Auto/Off
  Auto: Active control is enabled when supported by the infrastructure.
  Off: Active control is disabled.

Conference AutoAnswer Mode
Define the auto answer mode. Use the Conference AutoAnswer Delay setting if you want the system to wait a number of seconds before answering the call, and use the Conference AutoAnswer Mute setting if you want your microphone to be muted when the call is answered.

Requires user role: ADMIN
Default value: Off
Value space: Off/On
  Off: You must answer incoming calls manually by pressing the OK key or the green Call key on the remote control, or by tapping Answer on the Touch controller.
  On: The system automatically answers incoming calls, except if you are already in a call. You must always answer or decline incoming calls manually when you are already engaged in a call.

Conference AutoAnswer Mute
Define if the microphone shall be muted when an incoming call is automatically answered. Requires that AutoAnswer Mode is switched on.

Requires user role: ADMIN
Default value: Off
Value space: Off/On
  Off: The incoming call will not be muted.
  On: The incoming call will be muted when automatically answered.

Conference AutoAnswer Delay
Define how long (in seconds) an incoming call has to wait before it is answered automatically by the system. Requires that AutoAnswer Mode is switched on.

Requires user role: ADMIN
Default value: 0
Value space: Integer (0..50)
  The auto answer delay (seconds).

Conference CallProtocolIPStack
Select if the system should enable IPv4, IPv6, or dual IP stack on the call protocol (SIP).

Requires user role: ADMIN
Default value: IPv4
Value space: Dual/IPv4/IPv6
  Dual: Enables both IPv4 and IPv6 for the call protocol.
  IPv4: When set to IPv4, the call protocol will use IPv4.
  IPv6: When set to IPv6, the call protocol will use IPv6.
Conference Default Call Rate
Define the Default Call Rate to be used when placing calls from the system.

Requires user role: ADMIN, INTEGRATOR
Default value: 6000
Value space: Integer (64..6000)
The default call rate (kbps).

Conference Do Not Disturb Default Timeout
This setting determines the default duration of a Do Not Disturb session, i.e. the period when incoming calls are rejected and registered as missed calls. The session can be terminated earlier by using the user interface. The default value is 60 minutes.

Requires user role: ADMIN, INTEGRATOR
Default value: 60
Value space: Integer (1..1440)
The number of minutes (maximum 1440 minutes = 24 hours) before the Do Not Disturb session times out automatically.

Conference Encryption Mode
Define the conference encryption mode. A padlock with the text "Encryption On" or "Encryption Off" displays on screen for a few seconds when the conference starts.

NOTE: If the Encryption Option Key is not installed on the video system, the encryption mode is always Off.

Requires user role: ADMIN
Default value: BestEffort
Value space: Off/On/BestEffort
Off: The system will not use encryption.
On: The system will only allow calls that are encrypted.
BestEffort: The system will use encryption whenever possible.
> In Point to point calls: If the far end system supports encryption (AES-128), the call will be encrypted. If not, the call will proceed without encryption.
> In MultiSite calls: In order to have encrypted MultiSite conferences, all sites must support encryption. If not, the conference will be unencrypted.

Conference Far End Control Mode
Lets you decide if the remote side (far end) should be allowed to select your video sources and control your local camera (pan, tilt, zoom).

Requires user role: ADMIN
Default value: On
Value space: Off/On
Off: The far end is not allowed to select your video sources or to control your local camera (pan, tilt, zoom).
On: Allows the far end to be able to select your video sources and control your local camera (pan, tilt, zoom). You will still be able to control your camera and select your video sources as normal.

Conference Far End Control Signal Capability
Define the far end control (H.224) signal capability mode.

Requires user role: ADMIN
Default value: On
Value space: Off/On
Off: Disable the far end control signal capability.
On: Enable the far end control signal capability.

Conference Max Receive Call Rate
Define the maximum receive bit rate to be used when placing or receiving calls.
Note that this is the maximum bit rate for each individual call; use the Conference Max Total Receive Call Rate setting to set the aggregated maximum for all simultaneous active calls.

Requires user role: ADMIN
Default value: 6000
Value space: Integer (64..6000)
The maximum receive call rate (kbps).
Conference MaxTransmitCallRate
Define the maximum transmit bit rate to be used when placing or receiving calls. Note that this is the maximum bit rate for each individual call; use the Conference MaxTotalTransmitCallRate setting to set the aggregated maximum for all simultaneous active calls.

Requires user role: ADMIN
Default value: 6000
Value space: Integer (64..6000)
  The maximum transmit call rate (kbps).

Conference MaxTotalTransmitCallRate
This configuration applies when using a video system's built-in MultiSite feature (optional) to host a multipoint video conference.
Define the maximum overall transmit bit rate allowed. The bit rate will be divided fairly among all active calls at any time. This means that the individual calls will be up-speeded or down-speeded as appropriate when someone leaves or enters a multipoint conference, or when a call is put on hold (suspended) or resumed.
The maximum transmit bit rate for each individual call is defined in the Conference MaxTransmitCallRate setting.

Requires user role: ADMIN
Default value: 6000
Value space: Integer (64..6000)
  The maximum transmit call rate (kbps).

Conference MaxTotalReceiveCallRate
This configuration applies when using a video system's built-in MultiSite feature (optional) to host a multipoint video conference.
Define the maximum overall receive bit rate allowed. The bit rate will be divided fairly among all active calls at any time. This means that the individual calls will be up-speeded or down-speeded as appropriate when someone leaves or enters a multipoint conference, or when a call is put on hold (suspended) or resumed.
The maximum receive bit rate for each individual call is defined in the Conference MaxReceiveCallRate setting.

Requires user role: ADMIN
Default value: 6000
Value space: Integer (64..6000)
  The maximum receive call rate (kbps).

Conference MicUnmuteOnDisconnect Mode
Define if the microphones shall be unmuted automatically when all calls are disconnected. In a meeting room or other shared resources this may be done to prepare the system for the next user.

Requires user role: ADMIN
Default value: On
Value space: Off/On
  Off: If muted during a call, let the microphones remain muted after the call is disconnected.
  On: Unmute the microphones after the call is disconnected.
Conference Multipoint Mode
Define how the video system handles multiparty video conferences (ad hoc conferences). If registered to a Cisco TelePresence Video Communication Server (VCS), the video system can use its own built-in MultiSite feature. If registered to a Cisco Unified Communications Manager (CUCM) version 8.6.2 or newer, the video system can use either the CUCM conference bridge, or the video system’s own built-in MultiSite feature. Which option to use, is set-up by CUCM. The CUCM conference bridge allows you to set up conferences with many participants. The built-in MultiSite allows up to four participants (yourself included). The built-in MultiSite is optional and may not be available on all video systems.

Requires user role: ADMIN
Default value: Auto
Value space: Auto/CUCMMediaResourceGroupList/MultiSite/Off
- Auto: The multipoint method is selected automatically; if no multipoint method is available, the Multipoint Mode will be set to Off.
- CUCMMediaResourceGroupList: Multiparty conferences are hosted by the CUCM configured conference bridge. This setting is provisioned by CUCM in a CUCM environment, and should never be set manually by the user.
- MultiSite: Multiparty conferences are set up using the built-in MultiSite feature. If MultiSite is selected when the MultiSite feature is not available, the Multipoint Mode will automatically be set to Off.
- Off: Multiparty conferences are not allowed.

Conference MultiStream Mode
The video system supports multistream video for conferences.

Requires user role: ADMIN
Default value: Auto
Value space: Auto/Off
- Auto: Multistream will be used when the conference infrastructure supports the feature.
- Off: Multistream is disabled.

Conference IncomingMultisiteCall Mode
Select whether or not to allow incoming multisite calls when already in a call/conference.

Requires user role: ADMIN
Default value: Allow
Value space: Allow/Deny
- Allow: You will be notified when someone calls you while you are already in a call. You can accept the incoming call or not. The ongoing call may be put on hold while answering the incoming call, or you may merge the calls (requires support for multiparty video conferences).
- Deny: An incoming call will be rejected if you are already in a call. You will not be notified about the incoming call. However, the call will appear as a missed call in the call history list.

Conference Presentation RelayQuality
This configuration applies to video systems that are using the built-in MultiSite feature (optional) to host a multipoint video conference. When a remote user shares a presentation, the video system will transcode the presentation and send it to the other participants in the multipoint conference. The RelayQuality setting specifies whether to give priority to high frame rate or to high resolution for the presentation source.

Requires user role: ADMIN
Default value: Sharpness
Value space: Motion/Sharpness
- Motion: Gives the highest possible frame rate. Used when there is a need for higher frame rates, typically when there is a lot of motion in the picture.
- Sharpness: Gives the highest possible resolution. Used when you want the highest quality of detailed images and graphics.
Conference Presentation OnPlacedOnHold
Define whether or not to continue sharing a presentation after the remote site has put you on hold.

Requires user role: ADMIN
Default value: NoAction

Value space: Stop/NoAction
   - Stop: The video system stops the presentation sharing when the remote site puts you on hold. The presentation will not continue when the call is resumed.
   - NoAction: The video system will not stop the presentation sharing when put on hold. The presentation will not be shared while you are on hold, but it will continue automatically when the call is resumed.

Conference VideoBandwidth Mode
Define the conference video bandwidth mode.

Requires user role: ADMIN
Default value: Dynamic

Value space: Dynamic/Static
   - Dynamic: The available transmit bandwidth for the video channels are distributed among the currently active channels. If there is no presentation, the main video channels will use the bandwidth of the presentation channel.
   - Static: The available transmit bandwidth is assigned to each video channel, even if it is not active.
FacilityService settings

FacilityService Service [1..5] Type
Up to five different facility services can be supported simultaneously. With this setting you can select what kind of services they are. A facility service is not available unless both the FacilityService Service [n] Name and the FacilityService Service [n] Number settings are properly set.

Requires user role: ADMIN, INTEGRATOR
Default value: Helpdesk

Value space: Catering/Concierge/Emergency/Helpdesk/Security/Transportation/Other
  Catering: Select this option for catering services.
  Concierge: Select this option for concierge services.
  Emergency: Select this option for emergency services.
  Helpdesk: Select this option for helpdesk services.
  Security: Select this option for security services.
  Transportation: Select this option for transportation services.
  Other: Select this option for services not covered by the other options.

FacilityService Service [1..5] Name
Define the name of the facility service. Up to five different facility services are supported. A facility service is not available unless both the FacilityService Service [n] Name and the FacilityService Service [n] Number settings are properly set. The name will show on the facility service call button, which appears when you tap the question mark icon in the top bar.

Requires user role: ADMIN, INTEGRATOR
Default value: Service 1: "Live Support" Other services: ""

Value space: String (0, 1024)
  The name of the facility service.

FacilityService Service [1..5] Number
Define the number (URI or phone number) of the facility service. Up to five different facility services are supported. A facility service is not available unless both the FacilityService Service [n] Name and the FacilityService Service [n] Number settings are properly set.

Requires user role: ADMIN, INTEGRATOR
Default value: ""

Value space: String (0, 1024)
  The number (URI or phone number) of the facility service.

FacilityService Service [1..5] CallType
Define the call type for each facility service. Up to five different facility services are supported. A facility service is not available unless both the FacilityService Service [n] Name and the FacilityService Service [n] Number settings are properly set.

Requires user role: ADMIN, INTEGRATOR
Default value: Video

Value space: Audio/Video
  Audio: Select this option for audio calls.
  Video: Select this option for video calls.
H323 settings

H323 Authentication Mode
Define the authentication mode for the H.323 profile.
Requires user role: ADMIN
Default value: Off
Value space: Off/On
- Off: The system will not try to authenticate itself to a H.323 Gatekeeper, but will still try a normal registration.
- On: If an H.323 Gatekeeper indicates that it requires authentication, the system will try to authenticate itself to the gatekeeper. Requires the H323 Authentication LoginName and H323 Authentication Password settings to be defined on both the codec and the Gatekeeper.

H323 Authentication LoginName
The system sends the H323 Authentication Login Name and the H323 Authentication Password to an H.323 Gatekeeper for authentication. The authentication is a one way authentication from the codec to the H.323 Gatekeeper, i.e. the system is authenticated to the gatekeeper. If the H.323 Gatekeeper indicates that no authentication is required, the system will still try to register. Requires the H.323 Authentication Mode to be enabled.
Requires user role: ADMIN
Default value: ""
Value space: String (0, 50)
- The authentication login name.

H323 Authentication Password
The system sends the H323 Authentication Login Name and the H323 Authentication Password to an H.323 Gatekeeper for authentication. The authentication is a one way authentication from the codec to the H.323 Gatekeeper, i.e. the system is authenticated to the gatekeeper. If the H.323 Gatekeeper indicates that no authentication is required, the system will still try to register. Requires the H.323 Authentication Mode to be enabled.
Requires user role: ADMIN
Default value: "**
Value space: String (0, 50)
- The authentication password.

H323 CallSetup Mode
Defines whether to use a Gatekeeper or Direct calling when establishing H.323 calls. Direct H.323 calls can be made also when H323 CallSetup Mode is set to Gatekeeper.
Requires user role: ADMIN
Default value: Gatekeeper
Value space: Direct/Gatekeeper
- Direct: You can only make an H.323 call by dialing an IP address directly.
- Gatekeeper: The system uses a Gatekeeper to make an H.323 call. When choosing this option, the H323 Gatekeeper Address must also be configured.
Cisco Spark Codec Plus

H323 Encryption KeySize
Define the minimum or maximum key size for the Diffie-Hellman key exchange method, which is used when establishing the Advanced Encryption Standard (AES) encryption key.

Requires user role: ADMIN
Default value: Min1024bit

Value space: Min1024bit/Max1024bit/Min2048bit
  Min1024bit: The minimum size is 1024 bit.
  Max1024bit: The maximum size is 1024 bit.
  Min2048bit: The minimum size is 2048 bit.

H323 Gatekeeper Address
Define the IP address of the Gatekeeper. Requires H323 CallSetup Mode to be set to Gatekeeper.

Requires user role: ADMIN
Default value: **

Value space: String (0, 255)
  A valid IPv4 address, IPv6 address or DNS name.

H323 H323Alias E164
The H.323 Alias E.164 defines the address of the system, according to the numbering plan implemented in the H.323 Gatekeeper. The E.164 alias is equivalent to a telephone number, sometimes combined with access codes.

Requires user role: ADMIN
Default value: **

Value space: String (0, 30)
  The H.323 Alias E.164 address. Valid characters are 0-9, *, and #.

H323 H323Alias ID
Define the H.323 Alias ID, which is used to address the system on a H.323 Gatekeeper and will be displayed in the call lists.

Requires user role: ADMIN
Default value: **

Value space: String (0, 49)
  The H.323 Alias ID. Example: "firstname.lastname@company.com", "My H.323 Alias ID"

H323 NAT Mode
The firewall traversal technology creates a secure path through the firewall barrier, and enables proper exchange of audio/video data when connected to an external video conferencing system (when the IP traffic goes through a NAT router). NOTE: NAT does not work in conjunction with gatekeepers.

Requires user role: ADMIN
Default value: Off

Value space: Auto/Off/On
  Auto: The system will determine if the H323 NAT Address or the real IP address should be used in signaling. This makes it possible to place calls to endpoints on the LAN as well as endpoints on the WAN. If the H323 NAT Address is wrong or not set, the real IP address will be used.
  Off: The system will signal the real IP address.
  On: The system will signal the configured H323 NAT Address instead of its real IP address in Q.931 and H.245. The NAT server address will be shown in the startup-menu as: "My IP Address: 10.0.2.1". If the H323 NAT Address is wrong or not set, H.323 calls cannot be set up.
H323 NAT Address

Define the external/global IP address to the router with NAT support. Packets sent to the router will then be routed to the system. Note that NAT cannot be used when registered to a gatekeeper.

In the router, the following ports must be routed to the system's IP address:

* Port 1720
* Port 5555–6555
* Port 2326–2487

Requires user role: ADMIN
Default value: ""

Value space: String (0, 64)
A valid IPv4 address or IPv6 address.

H323 PortAllocation

This setting affects the H.245 port numbers used for H.323 call signaling.

Requires user role: ADMIN
Default value: Dynamic

Value space: Dynamic/Static

Dynamic: The system will allocate which ports to use when opening a TCP connection. The reason for doing this is to avoid using the same ports for subsequent calls, as some firewalls consider this as a sign of attack. When Dynamic is selected, the H.323 ports used are from 11000 to 20999. Once 20999 is reached they restart again at 11000. The ports are automatically selected by the system within the given range. Firewall administrators should not try to deduce which ports are used when, as the allocation schema within the mentioned range may change without any further notice.

Static: When set to Static the ports are given within a static predefined range [5555–6555].
Logging settings

Logging External Mode
Determine whether or not to use a remote syslog server for logging.
Requires user role: ADMIN
Default value: Off
Value space: Off/On
  Off: Disable logging to a remote syslog server.
  On: Enable logging to a remote syslog server.

Logging External Protocol
Determine which protocol to use toward the remote logging server. You can use either the syslog protocol over TLS (Transport Layer Security), or the syslog protocol in plaintext. For details about the syslog protocol, see RFC 5424.
Requires user role: ADMIN
Default value: SyslogTLS
Value space: Syslog/SyslogTLS
  Syslog: Syslog protocol in plain text.
  SyslogTLS: Syslog protocol over TLS.

Logging External Server Address
The address of the remote syslog server.
Requires user role: ADMIN
Default value: ""
Value space: String (0..255)
  A valid IPv4 address, IPv6 address or DNS name.

Logging External Server Port
The port that the remote syslog server listens for messages on. If set to 0, the video system will use the standard syslog port. The standard syslog port is 514 for syslog, and 6514 for syslog over TLS.
Requires user role: ADMIN
Default value: 514
Value space: Integer (0..65535)
  The number of the port that the remote syslog server is using. 0 means that the video system uses the standard syslog port.

Logging Mode
Define the logging mode for the video system (syslog service). When disabled, the syslog service does not start, and most of the event logs are not generated. The Historical Logs and Call Logs are not affected.
Requires user role: ADMIN
Default value: On
Value space: Off/On
  Off: Disable the system logging service.
  On: Enable the system logging service.
Network settings

Network [1] DNS Domain Name
The DNS Domain Name is the default domain name suffix which is added to unqualified names.
Example: If the DNS Domain Name is "company.com" and the name to lookup is "MyVideoSystem", this will result in the DNS lookup "MyVideoSystem.company.com".
Requires user role: ADMIN, USER
Default value: **
Value space: String (0, 64)
   The DNS domain name.

Define the network addresses for DNS servers. Up to three addresses may be specified. If the network addresses are unknown, contact your administrator or Internet Service Provider.
Requires user role: ADMIN, USER
Default value: **
Value space: String (0, 64)
   A valid IPv4 address or IPv6 address.

Network [1] IEEE8021X Mode
The system can be connected to an IEEE 802.1X LAN network, with a port-based network access control that is used to provide authenticated network access for Ethernet networks.
Requires user role: ADMIN, USER
Default value: Off
Value space: Off/On
   Off: The 802.1X authentication is disabled (default).
   On: The 802.1X authentication is enabled.

Network [1] IEEE8021X TlsVerify
Verification of the server-side certificate of an IEEE802.1x connection against the certificates in the local CA-list when TLS is used. The CA-list must be uploaded to the video system. This can be done from the web interface.
This setting takes effect only when Network [1] IEEE8021X Eap Tls is enabled (On).
Requires user role: ADMIN, USER
Default value: Off
Value space: Off/On
   Off: When set to Off, TLS connections are allowed without verifying the server-side X.509 certificate against the local CA-list. This should typically be selected if no CA-list has been uploaded to the codec.
   On: When set to On, the server-side X.509 certificate will be validated against the local CA-list for all TLS connections. Only servers with a valid certificate will be allowed.

Authentication using a private key/certificate pair during an IEEE802.1x connection. The authentication X.509 certificate must be uploaded to the video system. This can be done from the web interface.
Requires user role: ADMIN, USER
Default value: Off
Value space: Off/On
   Off: When set to Off client-side authentication is not used (only server-side).
   On: When set to On the client (video system) will perform a mutual authentication TLS handshake with the server.
Network [1] IEEE8021X Identity
Define the user name for 802.1X authentication.
Requires user role: ADMIN, USER
Default value: ""
Value space: String (0, 64)
   The user name for 802.1X authentication.

Network [1] IEEE8021X Password
Define the password for 802.1X authentication.
Requires user role: ADMIN, USER
Default value: ""
Value space: String (0, 50)
   The password for 802.1X authentication.

The 802.1X Anonymous ID string is to be used as unencrypted identity with EAP (Extensible Authentication Protocol) types that support different tunnelled identity, like EAP-PEAP and EAP-TTLS. If set, the anonymous ID will be used for the initial (unencrypted) EAP Identity Request.
Requires user role: ADMIN, USER
Default value: ""
Value space: String (0, 64)
   The 802.1X Anonymous ID string.

Define the Md5 (Message-Digest Algorithm 5) mode. This is a Challenge Handshake Authentication Protocol that relies on a shared secret. Md5 is a Weak security.
Requires user role: ADMIN, USER
Default value: On
Value space: Off/On
   Off: The EAP-MD5 protocol is disabled.
   On: The EAP-MD5 protocol is enabled (default).

Network [1] IEEE8021X Eap Ttls
Define the TTLS (Tunneled Transport Layer Security) mode. Authenticates LAN clients without the need for client certificates. Developed by Funk Software and Certicom. Usually supported by Agere Systems, Proxim and Avaya.
Requires user role: ADMIN, USER
Default value: On
Value space: Off/On
   Off: The EAP-TTLS protocol is disabled.
   On: The EAP-TTLS protocol is enabled (default).

Network [1] IEEE8021X Eap Tls
Enable or disable the use of EAP-TLS (Transport Layer Security) for IEEE802.1x connections. The EAP-TLS protocol, defined in RFC 5216, is considered one of the most secure EAP standards. LAN clients are authenticated using client certificates.
Requires user role: ADMIN, USER
Default value: On
Value space: Off/On
   Off: The EAP-TLS protocol is disabled.
   On: The EAP-TLS protocol is enabled (default).
Network [1] IEEE8021X Eap Peap

Define the Peap (Protected Extensible Authentication Protocol) mode. Authenticates LAN clients without the need for client certificates. Developed by Microsoft, Cisco and RSA Security.

Requires user role: ADMIN, USER
Default value: On

Value space: Off/On
  Off: The EAP-PEAP protocol is disabled.
  On: The EAP-PEAP protocol is enabled (default).

Network [1] IPStack

Select if the system should use IPv4, IPv6, or dual IP stack, on the network interface. NOTE: After changing this setting you may have to wait up to 30 seconds before it takes effect.

Requires user role: ADMIN, USER
Default value: Dual

Value space: Dual/IPv4/IPv6
  Dual: When set to Dual, the network interface can operate on both IP versions at the same time, and can have both an IPv4 and an IPv6 address at the same time.
  IPv4: When set to IPv4, the system will use IPv4 on the network interface.
  IPv6: When set to IPv6, the system will use IPv6 on the network interface.

Network [1] IPv4 Assignment

Define how the system will obtain its IPv4 address, subnet mask and gateway address. This setting applies only to systems on IPv4 networks.

Requires user role: ADMIN, USER
Default value: DHCP

Value space: Static/DHCP
  Static: The addresses must be configured manually using the Network IPv4 Address, Network IPv4 Gateway and Network IPv4 SubnetMask settings (static addresses).
  DHCP: The system addresses are automatically assigned by the DHCP server.

Network [1] IPv4 Address

Define the static IPv4 network address for the system. Applicable only when Network IPv4 Assignment is set to Static.

Requires user role: ADMIN, USER
Default value: **

Value space: String (0, 64)
  A valid IPv4 address.

Network [1] IPv4 Gateway

Define the IPv4 network gateway address. Applicable only when the Network IPv4 Assignment is set to Static.

Requires user role: ADMIN, USER
Default value: **

Value space: String (0, 64)
  A valid IPv4 address.

Network [1] IPv4 SubnetMask

Define the IPv4 network subnet mask. Applicable only when the Network IPv4 Assignment is set to Static.

Requires user role: ADMIN, USER
Default value: **

Value space: String (0, 64)
  A valid IPv4 address.
Network [1] IPv6 Assignment
Define how the system will obtain its IPv6 address and the default gateway address. This setting applies only to systems on IPv6 networks.

Requires user role: ADMIN, USER
Default value: Autoconf

Value space: Static/DHCPv6/Autoconf
- Static: The codec and gateway IP addresses must be configured manually using the Network IPv6 Address and Network IPv6 Gateway settings. The options, for example NTP and DNS server addresses, must either be set manually or obtained from a DHCPv6 server. The Network IPv6 DHCPOptions setting determines which method to use.
- DHCPv6: All IPv6 addresses, including options, will be obtained from a DHCPv6 server. See RFC 3315 for a detailed description. The Network IPv6 DHCPOptions setting will be ignored.
- Autoconf: Enable IPv6 stateless autoconfiguration of the IPv6 network interface. See RFC 4862 for a detailed description. The options, for example NTP and DNS server addresses, must either be set manually or obtained from a DHCPv6 server. The Network IPv6 DHCPOptions setting determines which method to use.

Network [1] IPv6 Address
Define the static IPv6 network address for the system. Applicable only when the Network IPv6 Assignment is set to Static.

Requires user role: ADMIN, USER
Default value: ""

Value space: String (0, 64)
- A valid IPv6 address including a network mask. Example: 2001:DB8::/48

Define the IPv6 network gateway address. This setting is only applicable when the Network IPv6 Assignment is set to Static.

Requires user role: ADMIN, USER
Default value: ""

Value space: String (0, 64)
- A valid IPv6 address.

Network [1] IPv6 DHCPOptions
Retrieve a set of DHCP options, for example NTP and DNS server addresses, from a DHCPv6 server.

Requires user role: ADMIN, USER
Default value: On

Value space: Off/On
- Off: Disable the retrieval of DHCP options from a DHCPv6 server.
- On: Enable the retrieval of a selected set of DHCP options from a DHCPv6 server.

Network [1] MTU
Define the Ethernet MTU (Maximum Transmission Unit) size. The MTU size must be supported by your network infrastructure. The minimum size is 576 for IPv4 and 1280 for IPv6.

Requires user role: ADMIN, USER
Default value: 1500

Value space: Integer (576..1500)
- Set a value for the MTU (bytes).

Network [1] QoS Mode
The QoS (Quality of Service) is a method which handles the priority of audio, video and data in the network. The QoS settings must be supported by the infrastructure. Diffserv (Differentiated Services) is a computer networking architecture that specifies a simple, scalable and coarse-grained mechanism for classifying, managing network traffic and providing QoS priorities on modern IP networks.

Requires user role: ADMIN, USER
Default value: Diffserv

Value space: Off/Diffserv
- Off: No QoS method is used.
- Diffserv: When you set the QoS Mode to Diffserv, the Network QoS Diffserv Audio, Network QoS Diffserv Video, Network QoS Diffserv Data, Network QoS Diffserv Signalling, Network QoS Diffserv ICMPv6 and Network QoS Diffserv NTP settings are used to prioritize packets.
Cisco Spark Codec Plus Administrator Guide

Network [1] QoS Diffserv Audio
This setting will only take effect if Network QoS Mode is set to Diffserv.
Define which priority Audio packets should have in the IP network.
The priority for the packets ranges from 0 to 63 - the higher the number, the higher the priority. The recommended class for Audio is CS4, which equals the decimal value 32. If in doubt, contact your network administrator.
The priority set here might be overridden when packets are leaving the network controlled by the local network administrator.
Requires user role: ADMIN, USER
Default value: 0
Value space: Integer (0..63)
Set the priority of the audio packets in the IP network - the higher the number, the higher the priority. The default value is 0 (best effort).

Network [1] QoS Diffserv Video
This setting will only take effect if Network QoS Mode is set to Diffserv.
Define which priority Video packets should have in the IP network. The packets on the presentation channel (shared content) are also in the Video packet category. The priority for the packets ranges from 0 to 63 - the higher the number, the higher the priority. The recommended class for Video is CS4, which equals the decimal value 32. If in doubt, contact your network administrator.
The priority set here might be overridden when packets are leaving the network controlled by the local network administrator.
Requires user role: ADMIN, USER
Default value: 0
Value space: Integer (0..63)
Set the priority of the video packets in the IP network - the higher the number, the higher the priority. The default value is 0 (best effort).

Network [1] QoS Diffserv Data
This setting will only take effect if Network QoS Mode is set to Diffserv.
Define which priority Data packets should have in the IP network.
The priority for the packets ranges from 0 to 63 - the higher the number, the higher the priority. The recommended value for Data is 0, which means best effort. If in doubt, contact your network administrator.
The priority set here might be overridden when packets are leaving the network controlled by the local network administrator.
Requires user role: ADMIN, USER
Default value: 0
Value space: Integer (0..63)
Set the priority of the data packets in the IP network - the higher the number, the higher the priority. The default value is 0 (best effort).

Network [1] QoS Diffserv Signalling
This setting will only take effect if Network QoS Mode is set to Diffserv.
Define which priority Signalling packets that are deemed critical (time-sensitive) for the real-time operation should have in the IP network.
The priority for the packets ranges from 0 to 63 - the higher the number, the higher the priority. The recommended class for Signalling is CS3, which equals the decimal value 24. If in doubt, contact your network administrator.
The priority set here might be overridden when packets are leaving the network controlled by the local network administrator.
Requires user role: ADMIN, USER
Default value: 0
Value space: Integer (0..63)
Set the priority of the signalling packets in the IP network - the higher the number, the higher the priority. The default value is 0 (best effort).
Network [1] QoS Diffserv ICMPv6
This setting will only take effect if Network QoS Mode is set to Diffserv.
Define which priority ICMPv6 packets should have in the IP network.
The priority for the packets ranges from 0 to 63 - the higher the number, the higher the priority. The recommended value for ICMPv6 is 0, which means best effort. If in doubt, contact your network administrator.
The priority set here might be overridden when packets are leaving the network controlled by the local network administrator.
Requires user role: ADMIN, USER
Default value: 0
Value space: Integer (0..63)
   Set the priority of the ICMPv6 packets in the IP network - the higher the number, the higher the priority. The default value is 0 (best effort).

Network [1] QoS Diffserv NTP
This setting will only take effect if Network QoS Mode is set to Diffserv.
Define which priority NTP packets should have in the IP network.
The priority for the packets ranges from 0 to 63 - the higher the number, the higher the priority. The recommended value for NTP is 0, which means best effort. If in doubt, contact your network administrator.
The priority set here might be overridden when packets are leaving the network controlled by the local network administrator.
Requires user role: ADMIN, USER
Default value: 0
Value space: Integer (0..63)
   Set the priority of the NTP packets in the IP network - the higher the number, the higher the priority. The default value is 0 (best effort).

Define which IP addresses (IPv4/IPv6) are allowed for remote access to the codec from SSH/HTTP/HTTPS. Multiple IP addresses are separated by a white space.
A network mask (IP range) is specified by <ip address>/N, where N is 1-32 for IPv4, and N is 1-128 for IPv6. The /N is a common indication of a network mask where the first N bits are set. Thus 192.168.0.0/24 would match any address starting with 192.168.0, since these are the first 24 bits in the address.
Requires user role: ADMIN, USER
Default value: **
Value space: String (0, 255)
   A valid IPv4 address or IPv6 address.

Network [1] Speed
Define the Ethernet link speed. We recommend not to change from the default value, which negotiates with the network to set the speed automatically. If you do not use autonegotiation, make sure that the speed you choose is supported by the closest switch in your network infrastructure.
Requires user role: ADMIN, USER
Default value: Auto
Value space: Auto/10half/10full/100half/100full/1000full
   Auto: Autonegotiate link speed.
   10half: Force link to 10 Mbps half-duplex.
   10full: Force link to 10 Mbps full-duplex.
   100half: Force link to 100 Mbps half-duplex.
   100full: Force link to 100 Mbps full-duplex.
   1000full: Force link to 1 Gbps full-duplex.
Network [1] TrafficControl Mode

Define the network traffic control mode to decide how to control the video packets transmission speed.

Requires user role: ADMIN, USER
Default value: On
Value space: Off/On
  Off: Transmit video packets at link speed.
  On: Transmit video packets at maximum 20 Mbps. Can be used to smooth out bursts in the outgoing network traffic.

Network [1] VLAN Voice Mode

Define the VLAN voice mode. The VLAN Voice Mode will be set to Auto automatically if you have Cisco UCM (Cisco Unified Communications Manager) as provisioning infrastructure. Note that Auto mode will NOT work if the NetworkServices CDP Mode setting is Off.

Requires user role: ADMIN, USER
Default value: Auto
Value space: Auto/Manual/Off
  Auto: The Cisco Discovery Protocol (CDP), if available, assigns an id to the voice VLAN. If CDP is not available, VLAN is not enabled.
  Manual: The VLAN ID is set manually using the Network VLAN Voice VlanId setting. If CDP is available, the manually set value will be overruled by the value assigned by CDP.
  Off: VLAN is not enabled.

Network [1] VLAN Voice VlanId

Define the VLAN voice ID. This setting will only take effect if Network VLAN Voice Mode is set to Manual.

Requires user role: ADMIN, USER
Default value: 1
Value space: Integer (1..4094)
  Set the VLAN voice ID.
NetworkServices settings

**NetworkServices CDP Mode**
Enable or disable the CDP (Cisco Discovery Protocol) daemon. Enabling CDP will make the endpoint report certain statistics and device identifiers to a CDP-enabled switch. If CDP is disabled, the Network VLAN Voice Mode: Auto setting will not work.

Requires user role: ADMIN
Default value: On
Value space: Off/On
  - Off: The CDP daemon is disabled.
  - On: The CDP daemon is enabled.

**NetworkServices H323 Mode**
Define whether the system should be able to place and receive H.323 calls or not.

Requires user role: ADMIN
Default value: Off
Value space: Off/On
  - Off: Disable the possibility to place and receive H.323 calls.
  - On: Enable the possibility to place and receive H.323 calls (default).

**NetworkServices HTTP Mode**
Define whether or not to allow access to the video system using the HTTP or HTTPS (HTTP Secure) protocols. Note that the video system’s web interface use HTTP or HTTPS. If this setting is switched Off, you cannot use the web interface.

If you need extra security (encryption and decryption of requests, and pages that are returned by the web server), allow only HTTPS.

Requires user role: ADMIN
Default value: HTTP+HTTPS
Value space: Off/HTTP+HTTPS/HTTPS
  - Off: Access to the video system not allowed via HTTP or HTTPS.
  - HTTP+HTTPS: Access to the video system allowed via both HTTP and HTTPS.
  - HTTPS: Access to the video system allowed via HTTPS, but not via HTTP.

**NetworkServices HTTPS Server MinimumTLSVersion**
Set the lowest version of the TLS (Transport Layer Security) protocol that is allowed.

Requires user role: ADMIN
Default value: TLSv1.1
Value space: TLSv1.1/TLSv1.2
  - TLSv1.1: Support of TLS version 1.1 or higher.
  - TLSv1.2: Support of TLS version 1.2 or higher.
NetworkServices HTTPS StrictTransportSecurity

The HTTP Strict Transport Security header lets a web site inform the browser that it should never load the site using HTTP and should automatically convert all attempts to access the site using HTTP to HTTPS requests instead.

Requires user role: ADMIN
Default value: Off

Value space: Off/On
- Off: The HTTP strict transport security feature is disabled.
- On: The HTTP strict transport security feature is enabled.

NetworkServices HTTPS VerifyServerCertificate

When the video system connects to an external HTTPS server (like a phone book server or an external manager), this server will present a certificate to the video system to identify itself.

Requires user role: ADMIN
Default value: Off

Value space: Off/On
- Off: Do not verify server certificates.
- On: Requires the system to verify that the server certificate is signed by a trusted Certificate Authority (CA). This requires that a list of trusted CAs are uploaded to the system in advance.

NetworkServices HTTPS VerifyClientCertificate

When the video system connects to a HTTPS client (like a web browser), the client can be asked to present a certificate to the video system to identify itself.

Requires user role: ADMIN
Default value: Off

Value space: Off/On
- Off: Do not verify client certificates.
- On: Requires the client to present a certificate that is signed by a trusted Certificate Authority (CA). This requires that a list of trusted CAs are uploaded to the system in advance.

NetworkServices HTTPS OCSP Mode

Define the support for OCSP (Online Certificate Status Protocol) responder services. The OCSP feature allows users to enable OCSP instead of certificate revocation lists (CRLs) to check the certificate status.

For any outgoing HTTPS connection, the OCSP responder is queried of the status. If the corresponding certificate has been revoked, then the HTTPS connection will not be used.

Requires user role: ADMIN
Default value: Off

Value space: Off/On
- Off: Disable OCSP support.
- On: Enable OCSP support.

NetworkServices HTTPS OCSP URL

Define the URL of the OCSP responder (server) that will be used to check the certificate status.

Requires user role: ADMIN
Default value: **

Value space: String (0, 255)
- A valid URL.
NetworkServices NTP Mode

The Network Time Protocol (NTP) is used to synchronize the system’s time and date to a reference time server. The time server will be queried regularly for time updates.

Requires user role: ADMIN
Default value: Auto

Value space: Auto/Manual/Off
- Auto: The system will use an NTP server for time reference. As default, the server address will be obtained from the network's DHCP server. If a DHCP server is not used, or if the DHCP server does not provide an NTP server address, the NTP server address that is specified in the NetworkServices NTP Server [n] Address setting will be used.
- Manual: The system will use the NTP server that is specified in the NetworkServices NTP Server [n] Address setting for time reference.
- Off: The system will not use an NTP server. The NetworkServices NTP Server [n] Address setting will be ignored.

NetworkServices NTP Server [1..3] Address

The address of the NTP server that will be used when NetworkServices NTP Mode is set to Manual, and when NetworkServices NTP Mode is set to Auto and no address is supplied by a DHCP server.

Requires user role: ADMIN
Default value: 0.tandberg.pool.ntp.org

Value space: String (0, 255)
- A valid IPv4 address, IPv6 address or DNS name.

NetworkServices SIP Mode

Define whether the system should be able to place and receive SIP calls or not.

Requires user role: ADMIN
Default value: On

Value space: Off/On
- Off: Disable the possibility to place and receive SIP calls.
- On: Enable the possibility to place and receive SIP calls (default).

NetworkServices SNMP Mode

SNMP (Simple Network Management Protocol) is used in network management systems to monitor network-attached devices (routers, servers, switches, projectors, etc) for conditions that warrant administrative attention. SNMP exposes management data in the form of variables on the managed systems, which describe the system configuration. These variables can then be queried (set to ReadOnly) and sometimes set (set to ReadWrite) by managing applications.

Requires user role: ADMIN
Default value: ReadOnly

Value space: Off/ReadOnly/ReadWrite
- Off: Disable the SNMP network service.
- ReadOnly: Enable the SNMP network service for queries only.
- ReadWrite: Enable the SNMP network service for both queries and commands.

NetworkServices SNMP Host [1..3] Address

Define the address of up to three SNMP Managers.
The system’s SNMP Agent (in the codec) responds to requests from SNMP Managers (a PC program etc.), for example about system location and system contact. SNMP traps are not supported.

Requires user role: ADMIN
Default value: *

Value space: String (0, 255)
- A valid IPv4 address, IPv6 address or DNS name.
NetworkServices SNMP CommunityName
Define the name of the Network Services SNMP Community. SNMP Community names are used to authenticate SNMP requests. SNMP requests must have a password (case sensitive) in order to receive a response from the SNMP Agent in the codec. The default password is "public". If you have the Cisco TelePresence Management Suite (TMS) you must make sure the same SNMP Community is configured there too. NOTE: The SNMP Community password is case sensitive.

Requires user role: ADMIN
Default value: ""
Value space: String (0, 50)
The SNMP community name.

NetworkServices SNMP SystemContact
Define the name of the Network Services SNMP System Contact.

Requires user role: ADMIN
Default value: ""
Value space: String (0, 50)
The name of the SNMP system contact.

NetworkServices SNMP SystemLocation
Define the name of the Network Services SNMP System Location.

Requires user role: ADMIN
Default value: ""
Value space: String (0, 50)
The name of the SNMP system location.

NetworkServices SSH Mode
SSH (or Secure Shell) protocol can provide secure encrypted communication between the codec and your local computer.

Requires user role: ADMIN
Default value: On
Value space: Off/On
- Off: The SSH protocol is disabled.
- On: The SSH protocol is enabled.

NetworkServices SSH AllowPublicKey
Secure Shell (SSH) public key authentication can be used to access the codec.

Requires user role: ADMIN
Default value: On
Value space: Off/On
- Off: The SSH public key is not allowed.
- On: The SSH public key is allowed.
NetworkServices UPnP Mode

Fully disable UPnP (Universal Plug and Play), or enable UPnP for a short time period after the video system has been switched on or restarted.

The default operation is that UPnP is enabled when you switch on or restart the video system. Then UPnP is automatically disabled after the timeout period that is defined in the NetworkServices UPnP Timeout setting. Use the video system’s web interface to set the timeout.

When UPnP is enabled, the video system advertises its presence on the network. The advertisement permits a Touch controller to discover video systems automatically, and you do not need to manually enter the video system’s IP address in order to pair the Touch controller.

Requires user role: ADMIN
Default value: On
Value space: <Off/On>

Off: UPnP is disabled. The video system does not advertise its presence, and you have to enter the video system’s IP address manually in order to pair a Touch controller to the video system.

On: UPnP is enabled. The video system advertises its presence until the timeout period expires.

NetworkServices UPnP Timeout

Define for how many seconds UPnP shall stay enabled after the video system is switched on or restarted. The NetworkServices UPnP Mode setting must be On for this setting to take any effect.

Requires user role: ADMIN
Default value: 600
Value space: <0..3600>

Range: Select a value between 0 and 3600 seconds.

NetworkServices WelcomeText

Choose which information the user should see when logging on to the codec through SSH.

Requires user role: ADMIN
Default value: On
Value space: Off/On

Off: The welcome text is: Login successful
On: The welcome text is: Welcome to <system name>; Software version; Software release date; Login successful.

NetworkServices Wifi Allowed

Video systems that have a built-in Wi-Fi adapter, can connect to the network either via Ethernet or Wi-Fi. Both Ethernet and Wi-Fi are allowed by default, and the user can choose which one to use from the user interface. With this setting, the administrator can disable Wi-Fi configuration, so that it cannot be set up from the user interface.

The systems support the following standards: IEEE 802.11a, IEEE 802.11b, IEEE 802.11g, IEEE 802.11n, and IEEE 802.11ac. The system supports the following security protocols: WPA-PSK (AES), WPA2-PSK (AES), EAP-TLS, EAP-TTLS, EAP-FAST, PEAP, EAP-MSCHAPv2, EAP-GTC, and open networks (not secured).

If the PID (Product ID), found on the rating label at the rear of the video system, contains the letters NR (No Radio) the system does not support Wi-Fi.

Requires user role: ADMIN, USER
Default value: True
Value space: False/True

False: Wi-Fi cannot be used. You must connect to the network via Ethernet.
True: Both Ethernet and Wi-Fi are allowed.
NetworkServices Wifi Enabled

Provided that the video system is allowed to connect to the network via Wi-Fi (see the NetworkServices WIFI Allowed setting), you can use this setting to enable and disable Wi-Fi.

You cannot use Ethernet and Wi-Fi at the same time. If you try to configure Wi-Fi while an Ethernet cable is connected, you must unplug the Ethernet cable to proceed. If you connect an Ethernet cable while connected to Wi-Fi, Ethernet will take precedence. If you unplug the Ethernet cable, the video system will automatically connect to the last connected Wi-Fi network, if available.

Requires user role: ADMIN, USER
Default value: True

Value space: False/True
  False: Wi-Fi is disabled.
  True: Wi-Fi is enabled.

NetworkServices XMLAPI Mode

Enable or disable the video system’s XML API. For security reasons this may be disabled. Disabling the XML API will limit the remote manageability with for example TMS, which no longer will be able to connect to the video system.

Requires user role: ADMIN
Default value: On

Value space: Off/On
  Off: The XML API is disabled.
  On: The XML API is enabled (default).
Peripherals settings

Peripherals Pairing CiscoTouchPanels EmcResilience
If the Touch controller is used in environments with considerable amounts of electromagnetic noise present, you may experience an appearance of false signals—for example as if someone tapped the Touch controller when obviously nobody did so. To cope with this you may enable the EMC Resilience Mode.

Requires user role: ADMIN
Default value: Off
Value space: Off/On
- Off: The EMC resilience is disabled.
- On: The EMC resilience is enabled.

Peripherals Pairing Ultrasound Volume Mode
This setting applies to the Intelligent Proximity feature. Keep the setting at its default value.

Requires user role: ADMIN, INTEGRATOR
Default value: Dynamic
Value space: Dynamic/Static
- Dynamic: The video system adjusts the ultrasound volume dynamically. The volume may vary up to the maximum level as defined in the Peripherals Pairing Ultrasound Volume MaxLevel setting.
- Static: Use only if advised by Cisco.

Peripherals Pairing Ultrasound Volume MaxLevel
This setting applies to the Intelligent Proximity feature. Set the maximum volume of the ultrasound pairing message. Refer to the Peripherals Pairing Ultrasound Volume Mode setting.

Requires user role: ADMIN, INTEGRATOR
Default value: 70
Value space: Integer (0..90)
- Select a value in the specified range. If set to 0, the ultrasound is switched off.

Peripherals Profile Cameras
Define the number of cameras that are expected to be connected to the video system. This information is used by the video system’s diagnostics service. If the number of connected cameras does not match this setting, the diagnostics service will report it as an inconsistency.

Requires user role: ADMIN, INTEGRATOR
Default value: Minimum1
Value space: NotSet/Minimum1/0/1/2/3/4/5/6/7
- NotSet: No camera check is performed.
- Minimum1: At least one camera should be connected to the video system.
- 0-7: Select the number of cameras that are expected to be connected to the video system.

Peripherals Profile ControlSystems
Define if a third-party control system, for example Crestron or AMX, is expected to be connected to the video system. This information is used by the video system’s diagnostics service. If the number of connected control systems does not match this setting, the diagnostics service will report it as an inconsistency. Note that only one third-party control system is supported.

If set to 1, the control system must send heart beats to the video system using xCommand Peripherals Pair and HeartBeat commands. Failing to do so will cause the in-room control extensions to show a warning that the video system has lost connectivity to the control system.

Requires user role: ADMIN, INTEGRATOR
Default value: NotSet
Value space: 1/NotSet
- 1: One third-party control system should be connected to the video system.
- NotSet: No check for a third-party control system is performed.
Peripherals Profile TouchPanels

Define the number of Cisco Touch controllers that are expected to be connected to the video system. This information is used by the video system’s diagnostics service. If the number of connected Touch controllers does not match this setting, the diagnostics service will report it as an inconsistency.

Requires user role: ADMIN, INTEGRATOR
Default value: Minimum1

Value space: NotSet/Minimum1/0/1/2/3/4/5
   NotSet: No touch panel check is performed.
   Minimum1: At least one Cisco Touch controller should be connected to the video system.
   0-5: Select the number of Touch controllers that are expected to be connected to the video system. Note that only one Cisco Touch controller is officially supported.
Phonebook settings

Phonebook Server [1] ID
Define a name for the external phone book.
Requires user role: ADMIN
Default value: ""
Value space: String (0, 64)
The name for the external phone book.

Phonebook Server [1] Type
Select the phonebook server type.
Requires user role: ADMIN
Default value: Off
Value space: Off/CUCM/Spark/TMS/VCS
   Off: Do not use a phonebook.
   CUCM: The phonebook is located on the Cisco Unified Communications Manager.
   Spark: The phonebook is located on Spark.
   TMS: The phonebook is located on the Cisco TelePresence Management Suite server.
   VCS: The phonebook is located on the Cisco TelePresence Video Communication Server.

Phonebook Server [1] URL
Define the address (URL) to the external phone book server.
Requires user role: ADMIN
Default value: ""
Value space: String (0, 255)
   A valid address (URL) to the phone book server.
Provisioning settings

Provisioning Connectivity
This setting controls how the device discovers whether it should request an internal or external configuration from the provisioning server.

Requires user role: ADMIN, USER
Default value: Auto

Value space: Internal/External/Auto
  Internal: Request internal configuration.
  External: Request external configuration.
  Auto: Automatically discover using NAPTR queries whether internal or external configurations should be requested. If the NAPTR responses have the “e” flag, external configurations will be requested. Otherwise internal configurations will be requested.

Provisioning Mode
It is possible to configure a video system using a provisioning system (external manager). This allows video conferencing network administrators to manage many video systems simultaneously. With this setting you choose which type of provisioning system to use. Provisioning can also be switched off. Contact your provisioning system provider/representative for more information.

Requires user role: ADMIN, USER
Default value: Auto

Value space: Off/Auto/CUCM/Edge/Spark/TMS/VCS
  Off: The video system is not configured by a provisioning system.
  Auto: Automatically select the provisioning server.
  CUCM: Push configurations to the video system from CUCM (Cisco Unified Communications Manager).
  Edge: Push configurations to the video system from CUCM (Cisco Unified Communications Manager). The system connects to CUCM via the Collaboration Edge infrastructure.
  Spark: Push configurations to the video system from Spark.
  TMS: Push configurations to the video system from TMS (Cisco TelePresence Management System).
  VCS: Push configurations to the video system from VCS (Cisco TelePresence Video Communication Server).

Provisioning LoginName
This is the username part of the credentials used to authenticate the video system with the provisioning server. This setting must be used when required by the provisioning server.

Requires user role: ADMIN, USER
Default value: *

Value space: String (0, 80)
  A valid username.
Provisioning Password

This is the password part of the credentials used to authenticate the video system with the provisioning server. This setting must be used when required by the provisioning server.

Requires user role: ADMIN, USER
Default value: **
Value space: String (0, 64)
   A valid password.

Provisioning HttpMethod

Select the HTTP method to be used for the provisioning.

Requires user role: ADMIN, USER
Default value: POST
Value space: GET/POST
   GET: Select GET when the provisioning server supports GET.
   POST: Select POST when the provisioning server supports POST.

Provisioning ExternalManager Address

Define the IP Address or DNS name of the external manager / provisioning system.
If an External Manager Address (and Path) is configured, the system will send a message to this address when starting up. When receiving this message the external manager / provisioning system can return configurations/commands to the unit as a result.

When using CUCM or TMS provisioning, the DHCP server can be set up to provide the external manager address automatically (DHCP Option 242 for TMS, and DHCP Option 150 for CUCM). An address set in the Provisioning ExternalManager Address setting will override the address provided by DHCP.

Requires user role: ADMIN, USER
Default value: **
Value space: String (0, 64)
   A valid IPv4 address, IPv6 address or DNS name.

Provisioning ExternalManager AlternateAddress

Only applicable when the endpoint is provisioned by Cisco Unified Communication Manager (CUCM) and an alternate CUCM is available for redundancy. Define the address of the alternate CUCM. If the main CUCM is not available, the endpoint will be provisioned by the alternate CUCM. When the main CUCM is available again, the endpoint will be provisioned by this CUCM.

Requires user role: ADMIN, USER
Default value: **
Value space: String (0, 64)
   A valid IPv4 address, IPv6 address or DNS name.

Provisioning ExternalManager Protocol

Define whether to use the HTTP (unsecure communication) or HTTPS (secure communication) protocol when sending requests to the external manager / provisioning system.

The selected protocol must be enabled in the NetworkServices HTTP Mode setting.

Requires user role: ADMIN, USER
Default value: HTTP
Value space: HTTPS/HTTP
   HTTPS: Send requests via HTTPS.
   HTTP: Send requests via HTTP.

Provisioning ExternalManager Path

Define the Path to the external manager / provisioning system. This setting is required when several management services reside on the same server, i.e. share the same External Manager address.

Requires user role: ADMIN, USER
Default value: **
Value space: String (0, 255)
   A valid path to the external manager or provisioning system.
Provisioning ExternalManager Domain

Define the SIP domain for the VCS provisioning server.

Requires user role: ADMIN, USER
Default value: ""

Value space: String (0, 64)
   A valid domain name.
Proximity settings

Proximity Mode
Determine whether the video system will emit ultrasound pairing messages or not.
When the video system emits ultrasound, Proximity clients can detect that they are close
to the video system. In order to use a client, at least one of the Proximity services must be
enabled (refer to the Proximity Services settings). In general, Cisco recommends enabling
all the Proximity services.
Requires user role: ADMIN, USER
Default value: Off
Value space: Off/On
  Off: The video system does not emit ultrasound, and Proximity services cannot be used.
  On: The video system emits ultrasound, and Proximity clients can detect that they are
close to the video system. Enabled Proximity services can be used.

Proximity Services CallControl
Enable or disable basic call control features on Proximity clients. When this setting is
enabled, you are able to control a call using a Proximity client (for example dial, mute,
adjust volume and hang up). This service is supported by mobile devices (iOS and Android).
Proximity Mode must be On for this setting to take any effect.
Requires user role: ADMIN, USER
Default value: Disabled
Value space: Enabled/Disabled
  Enabled: Call control from a Proximity client is enabled.
  Disabled: Call control from a Proximity client is disabled.

Proximity Services ContentShare FromClients
Enable or disable content sharing from Proximity clients. When this setting is enabled, you
can share content from a Proximity client wirelessly on the video system, e.g. share your
laptop screen. This service is supported by laptops (OS X and Windows). Proximity Mode
must be On for this setting to take any effect.
Requires user role: ADMIN, USER
Default value: Enabled
Value space: Enabled/Disabled
  Enabled: Content sharing from a Proximity client is enabled.
  Disabled: Content sharing from a Proximity client is disabled.

Proximity Services ContentShare ToClients
Enable or disable content sharing to Proximity clients. When enabled, Proximity clients will
receive the presentation from the video system. You can zoom in on details, view previous
content and take snapshots. This service is supported by mobile devices (iOS and Android).
Proximity Mode must be On for this setting to take any effect.
Requires user role: ADMIN, USER
Default value: Disabled
Value space: Enabled/Disabled
  Enabled: Content sharing to a Proximity client is enabled.
  Disabled: Content sharing to a Proximity client is disabled.
RoomAnalytics settings

RoomAnalytics PeopleCountOutOfCall
By using face detection, the video system – when a Cisco Spark Quad Camera is connected – has the capability to find how many persons are in the room. By default, the system only counts people when in a call, or when displaying the self-view picture.

Requires user role: ADMIN, INTEGRATOR, USER
Default value: Off
Value space: Off/On
  Off: The video system counts people only when the system is in a call, or when self-view is on.
  On: The video system counts people as long as the video system is not in standby mode. This includes outside of call, even if self-view is off.

RoomAnalytics PeoplePresenceDetector
The video system has the capability to find whether or not people are present in the room, and report the result in the RoomAnalytics PeoplePresence status. This feature is based on ultrasound. It takes a minimum of 2 minutes to detect whether people are present or not in the room, and it may take up to 2 minutes for the status to change after the room becomes vacant.

Requires user role: ADMIN, INTEGRATOR, USER
Default value: Off
Value space: Off/On
  Off: The video system's status does not show whether or not there are people present in the room.
  On: The video system's status shows whether or not there are people present in the room.
RTP settings

RTP Ports Range Start
Define the first port in the range of RTP ports.
As default, the system is using the UDP ports in the range 2326 to 2487 for RTP and RTCP media data. Each media channel is using two adjacent ports for RTP and RTCP. The default number of ports required in the UDP port range is based on the number of simultaneous calls that the endpoint is capable of.
NOTE: Restart the system for any change to this setting to take effect.
Requirements: user role: ADMIN
Default value: 2326
Value space: Integer (1024..65438)
Set the first port in the range of RTP ports.

RTP Ports Range Stop
Define the last port in the range of RTP ports.
As default, the system is using the UDP ports in the range 2326 to 2487 for RTP and RTCP media data. Each media channel is using two adjacent ports for RTP and RTCP. The default number of ports required in the UDP port range is based on the number of simultaneous calls that the endpoint is capable of.
NOTE: Restart the system for any change to this setting to take effect.
Requirements: user role: ADMIN
Default value: 2486
Value space: Integer (1120..65535)
Set the last port in the range of RTP ports.
Security settings

Security Audit Logging Mode
Define where to record or transmit the audit logs. The audit logs are sent to a syslog server. When using the External/ExternalSecure modes and setting the port assignment to manual in the Security Audit Server PortAssignment setting, you must also enter the address and port number for the audit server in the Security Audit Server Address and Security Audit Server Port settings.

Requires user role: AUDIT
Default value: Off

Value space: Off/Internal/External/ExternalSecure
- Off: No audit logging is performed.
- Internal: The system records the audit logs to internal logs, and rotates logs when they are full.
- External: The system sends the audit logs to an external syslog server. The syslog server must support UDP.
- ExternalSecure: The system sends encrypted audit logs to an external syslog server that is verified by a certificate in the Audit CA list. The Audit CA list file must be uploaded to the codec using the web interface. The common_name parameter of a certificate in the CA list must match the IP address of the syslog server, and the secure TCP server must be set up to listen for secure (TLS) TCP Syslog messages.

Security Audit OnError Action
Define what happens when the connection to the syslog server is lost. This setting is only relevant when Security Audit Logging Mode is set to ExternalSecure.

Requires user role: AUDIT
Default value: Ignore

Value space: Halt/Ignore
- Halt: If a halt condition is detected the system codec is rebooted and only the auditor is allowed to operate the unit until the halt condition has passed. When the halt condition has passed the audit logs are re-spooled to the syslog server. Halt conditions are: A network breach (no physical link), no syslog server running (or incorrect address or port to the syslog server), TLS authentication failed (if in use), local backup (re-spooling) log full.
- Ignore: The system will continue its normal operation, and rotate internal logs when full. When the connection is restored it will again send its audit logs to the syslog server.

Security Audit Server Address
The audit logs are sent to a syslog server. Define the IP address of the syslog server. Only valid IPv4 or IPv6 address formats are accepted. Host names are not supported. This setting is only relevant when Security Audit Logging Mode is set to Externa l or ExternalSecure.

Requires user role: AUDIT
Default value: *

Value space: String (0, 255)
- A valid IPv4 address or IPv6 address
Security Audit Server Port
The audit logs are sent to a syslog server. Define the port of the syslog server that the system shall send its audit logs to. This setting is only relevant when Security Audit Server PortAssignment is set to Manual.

Requires user role: AUDIT
Default value: 514
Value space: Integer (0..65535)
Set the audit server port.

Security Audit Server PortAssignment
The audit logs are sent to a syslog server. You can define how the port number of the external syslog server will be assigned. This setting is only relevant when Security Audit Logging Mode is set to External or ExternalSecure. To see which port number is used you can check the Security Audit Server Port status. Navigate to Configuration > System status on the web interface or; if on a command line interface, run the command xStatus Security Audit Server Port.

Requires user role: AUDIT
Default value: Auto
Value space: Auto/Manual
Auto: Will use UDP port number 514 when the Security Audit Logging Mode is set to External. Will use TCP port number 6514 when the Security Audit Logging Mode is set to ExternalSecure.
Manual: Will use the port value defined in the Security Audit Server Port setting.

Security Session InactivityTimeout
Define how long the system will accept inactivity from the user before he is automatically logged out from a web or SSH session.
Restart the system for any change to this setting to take effect.

Requires user role: ADMIN
Default value: 0
Value space: Integer (0..10000)
Set the inactivity timeout (minutes); or select 0 when inactivity should not enforce automatic logout.

Security Session MaxSessionsPerUser
The maximum number of simultaneous sessions per user. 0, which is the default value, means no hard limit. Sessions consume resources, so there will be some limitation, but this may vary based on different criteria.

Requires user role: ADMIN
Default value: 0
Value space: Integer (0..100)
The maximum number of sessions per user. 0 means no hard limit.

Security Session MaxTotalSessions
The maximum number of simultaneous sessions in total. 0, which is the default value, means no hard limit. Sessions consume resources, so there will be some limitation, but this may vary based on different criteria.

Requires user role: ADMIN
Default value: 0
Value space: Integer (0..100)
The maximum number of sessions in total. 0 means no hard limit.

Security Session ShowLastLogon
When logging in to the system using SSH you will see the UserId, time and date of the last session that did a successful login.

Requires user role: ADMIN
Default value: Off
Value space: Off/On
On: Show information about the last session.
Off: Do not show information about the last session.
SerialPort settings

SerialPort Mode
Enable/disable the serial port (connection via Micro USB to USB cable). The serial port uses 115200 bps, 8 data bits, no parity and 1 stop bit.

Requires user role: ADMIN, INTEGRATOR
Default value: On

Value space: Off/On
- Off: Disable the serial port.
- On: Enable the serial port.

SerialPort BaudRate
Define the baud rate (data transmission rate, bits per second) for the serial port.
Other connection parameters for the serial port are: Data bits: 8; Parity: None; Stop bits: 1; Flow control: None.

Requires user role: ADMIN, INTEGRATOR
Default value: 115200

Value space: 115200
- Set a baud rate from the baud rates listed (bps).

SerialPort LoginRequired
Define if login shall be required when connecting to the serial port.

Requires user role: ADMIN
Default value: On

Value space: Off/On
- Off: The user can access the codec via the serial port without any login.
- On: Login is required when connecting to the codec via the serial port.
SIP settings

SIP ANAT
ANAT (Alternative Network Address Types) enables media negotiation for multiple addresses and address types, as specified in RFC 4091.

Requires user role: ADMIN
Default value: Off
Value space: Off/On
  Off: Disable ANAT.
  On: Enable ANAT.

SIP Authentication UserName
This is the user name part of the credentials used to authenticate towards the SIP proxy.

Requires user role: ADMIN
Default value: **
Value space: String (0, 128)
  A valid username.

SIP Authentication Password
This is the password part of the credentials used to authenticate towards the SIP proxy.

Requires user role: ADMIN
Default value: **
Value space: String (0, 128)
  A valid password.

SIP DefaultTransport
Select the transport protocol to be used over the LAN.

Requires user role: ADMIN
Default value: Auto
Value space: TCP/UDP/Tls/Auto
  TCP: The system will always use TCP as the default transport method.
  UDP: The system will always use UDP as the default transport method.
  Tls: The system will always use TLS as the default transport method. For TLS connections a SIP CA-list can be uploaded to the video system. If no such CA-list is available on the system then anonymous Diffie Hellman will be used.
  Auto: The system will try to connect using transport protocols in the following order: TLS, TCP, UDP.

SIP DisplayName
When configured the incoming call will report the display name instead of the SIP URI.

Requires user role: ADMIN
Default value: **
Value space: String (0, 550)
  The name to be displayed instead of the SIP URI.
SIP Ice Mode

ICE (Interactive Connectivity Establishment, RFC 5245) is a NAT traversal solution that the video systems can use to discover the optimized media path. Thus the shortest route for audio and video is always secured between the video systems.

Requires user role: ADMIN
Default value: Auto

Value space: Auto/Off/On
  Auto: ICE is enabled if a TURN server is provided, otherwise ICE is disabled.
  Off: ICE is disabled.
  On: ICE is enabled.

SIP Ice DefaultCandidate

The ICE protocol needs some time to reach a conclusion about which media route to use (up to the first 5 seconds of a call). During this period media for the video system will be sent to the Default Candidate as defined in this setting.

Requires user role: ADMIN
Default value: Host

Value space: Host/Rflx/Relay
  Host: Send media to the video system’s private IP address.
  Rflx: Send media to the video system’s public IP address, as seen by the TURN server.
  Relay: Send media to the IP address and port allocated on the TURN server.

SIP Line

When registered to a Cisco Unified Communications Manager (CUCM) the endpoint may be part of a shared line. This means that several devices share the same directory number. The different devices sharing the same number receive status from the other appearances on the line as defined in RFC 4235.

Note that shared lines are set up by CUCM, not by the endpoint. Therefore do not change this setting manually; CUCM pushes this information to the endpoint when required.

Requires user role: ADMIN
Default value: Private

Value space: Private/Shared
  Shared: The system is part of a shared line and is therefore sharing its directory number with other devices.
  Private: This system is not part of a shared line (default).

SIP ListenPort

Turn on or off the listening for incoming connections on the SIP TCP/UDP ports. If turned off, the endpoint will only be reachable through the SIP registrar (CUCM or VCS).

Requires user role: ADMIN
Default value: On

Value space: Off/On
  Off: Listening for incoming connections on the SIP TCP/UDP ports is turned off.
  On: Listening for incoming connections on the SIP TCP/UDP ports is turned on.

SIP Mailbox

When registered to a Cisco Unified Communications Manager (CUCM) you may be offered the option of having a private voice mailbox.

Requires user role: ADMIN
Default value: **

Value space: String (0, 255>)
  A valid number or address. Leave the string empty if you do not have a voice mailbox.
SIP PreferredIPMedia

Define the preferred IP version for sending and receiving media (audio, video, data). Only applicable when both Network IPStack and Conference CallProtocolIPStack are set to Dual, and the network does not have a mechanism for choosing the preferred IP version.

Requires user role: ADMIN
Default value: IPv4

Value space: IPv4/IPv6
- IPv4: The preferred IP version for media is IPv4.
- IPv6: The preferred IP version for media is IPv6.

SIP PreferredIPSignaling

Define the preferred IP version for signaling (audio, video, data). Only applicable when both Network IPStack and Conference CallProtocolIPStack are set to Dual, and the network does not have a mechanism for choosing the preferred IP version. It also determines the priority of the A/AAAA lookups in DNS, so that the preferred IP version is used for registration.

Requires user role: ADMIN
Default value: IPv4

Value space: IPv4/IPv6
- IPv4: The preferred IP version for signaling is IPv4.

SIP Proxy [1..4] Address

The Proxy Address is the manually configured address for the outbound proxy. It is possible to use a fully qualified domain name, or an IP address. The default port is 5060 for TCP and UDP but another one can be provided.

Requires user role: ADMIN
Default value: ""

Value space: String (0, 255)
- A valid IPv4 address, IPv6 address or DNS name.

SIP TlsVerify

For TLS connections a SIP CA-list can be uploaded to the video system. This can be done from the web interface.

Requires user role: ADMIN
Default value: Off

Value space: Off/On
- Off: Set to Off to allow TLS connections without verifying them. The TLS connections are allowed to be set up without verifying the x.509 certificate received from the server against the local CA-list. This should typically be selected if no SIP CA-list has been uploaded.
- On: Set to On to verify TLS connections. Only TLS connections to servers, whose x.509 certificate is validated against the CA-list, will be allowed.

SIP Turn DiscoverMode

Define the discover mode to enable/disable the application to search for available Turn servers in DNS. Before making calls, the system will test if port allocation is possible.

Requires user role: ADMIN
Default value: On

Value space: Off/On
- Off: Set to Off to disable discovery mode.
- On: When set to On, the system will search for available Turn servers in DNS, and before making calls the system will test if port allocation is possible.

SIP Turn DropRflx

DropRflx will make the endpoint force media through the Turn relay, unless the remote endpoint is on the same network.

Requires user role: ADMIN
Default value: Off

Value space: Off/On
- Off: Disable DropRflx.
- On: The system will force media through the Turn relay when the remote endpoint is on another network.
SIP Turn Server
Define the address of the TURN (Traversal Using Relay NAT) server. It is used as a media relay fallback and it is also used to discover the endpoint's own public IP address.
Requires user role: ADMIN
Default value: ""
Value space: String (0, 255)
The preferred format is DNS SRV record (e.g. _turn._udp.<domain>), or it can be a valid IPv4 or IPv6 address.

SIP Turn UserName
Define the user name needed for accessing the TURN server.
Requires user role: ADMIN
Default value: ""
Value space: String (0, 128)
A valid user name.

SIP Turn Password
Define the password needed for accessing the TURN server.
Requires user role: ADMIN
Default value: ""
Value space: String (0, 128)
A valid password.

SIP Type
 Enables SIP extensions and special behavior for a vendor or provider.
Requires user role: ADMIN
Default value: Standard
Value space: Standard/Cisco
Standard: Use this when registering to standard SIP Proxy (tested with Cisco TelePresence VCS and Broadsoft)
Cisco: Use this when registering to Cisco Unified Communication Manager.

SIP URI
The SIP URI (Uniform Resource Identifier) is the address that is used to identify the video system. The URI is registered and used by the SIP services to route inbound calls to the system. The SIP URI syntax is defined in RFC 3261.
Requires user role: ADMIN
Default value: ""
Value space: String (0, 255)
An address (URI) that is compliant with the SIP URI syntax.
Standby settings

Standby Control
Define whether the system should go into standby mode or not.
Requires user role: ADMIN, INTEGRATOR
Default value: On
Value space: Off/On
  Off: The system will not enter standby mode.
  On: The system will enter standby mode when the Standby Delay has timed out.
  Requires the Standby Delay to be set to an appropriate value.

Standby Delay
Define how long (in minutes) the system shall be in idle mode before it goes into standby mode. Requires the Standby Control to be enabled.
Requires user role: ADMIN, INTEGRATOR
Default value: 10
Value space: Integer (1..480)
  Set the standby delay (minutes).

Standby BootAction
Define the camera position after a restart of the codec.
Requires user role: ADMIN, INTEGRATOR, USER
Default value: DefaultCameraPosition
Value space: None/DefaultCameraPosition/RestoreCameraPosition
  None: No action.
  DefaultCameraPosition: When the video system restarts, the camera moves to the factory default position.
  RestoreCameraPosition: When the video system restarts, the camera returns to the position that it had before the restart.

Standby StandbyAction
Define the camera position when going into standby mode.
Requires user role: ADMIN, INTEGRATOR
Default value: PrivacyPosition
Value space: None/PrivacyPosition
  None: No action.
  PrivacyPosition: When the video system enters standby, the camera turns to a sideways position for privacy.

Standby WakeupAction
Define the camera position when leaving standby mode.
Requires user role: ADMIN, INTEGRATOR, USER
Default value: RestoreCameraPosition
Value space: None/RestoreCameraPosition/DefaultCameraPosition
  None: No action.
  RestoreCameraPosition: When the video system leaves standby, the camera returns to the position that it had before entering standby.
  DefaultCameraPosition: When the video system leaves standby, the camera moves to the factory default position.

Standby WakeupOnMotionDetection
Automatic wake up on motion detection is a feature that will sense when a person walks into the room. The feature is based on ultrasound detection, and the Proximity Mode setting must be On to make the feature work.
Requires user role: ADMIN, INTEGRATOR
Default value: Off
Value space: Off/On
  Off: The wake up on motion detection is disabled.
  On: When people walk into the room the system will automatically wake up from standby.
SystemUnit settings

SystemUnit Name
Define the system name. The system name will be sent as the hostname in a DHCP request and when the codec is acting as an SNMP Agent.

Requires user role: ADMIN
Default value: ""
Value space: String (0, 50)
  Define the system name.
Time settings

Time TimeFormat
Define the time format.
Requires user role: ADMIN, USER
Default value: 24H
Value space: 24H/12H
   24H: Set the time format to 24 hours.
   12H: Set the time format to 12 hours (AM/PM).

Time DateFormat
Define the date format.
Requires user role: ADMIN, USER
Default value: DD_MM_YY
Value space: DD_MM_YY/MM_DD_YY/YY_MM_DD
   DD_MM_YY: The date January 30th 2010 will be displayed: 30.01.10
   MM_DD_YY: The date January 30th 2010 will be displayed: 01.30.10
   YY_MM_DD: The date January 30th 2010 will be displayed: 10.01.30
Time Zone

Define the time zone for the geographical location of the video system. The information in the value space is from the tz database, also called the IANA Time Zone Database.

Requires user role: ADMIN, INTEGRATOR, USER

Default value: Etc/UTC

Value space: Africa/Abidjan, Africa/Adis_Ababa, Africa/Algiers, Africa/Asmara, Africa/Asmera, Africa/Bamako, Africa/Bangui, Africa/Banjul, Africa/Bissau, Africa/Blantyre, Africa/Brazzaville, Africa/Bujumbura, Africa/Cairo, Africa/Casablanca, Africa/Ceuta, Africa/Conakry, Africa/Dakar, Africa/Dar_es_Salaam, Africa/Djibouti, Africa/Douala, Africa/Ecaterinburg, Africa/Freetown, Africa/Gaborone, Africa/Harare, Africa/Johannesburg, Africa/Juba, Africa/Kampala, Africa/Khartoum, Africa/Kigali, Africa/Kinshasa, Africa/Lagos, Africa/Libreville, Africa/Lome, Africa/Luanda, Africa/Lubumbashi, Africa/Lusaka, Africa/Malabo, Africa/Maputo, Africa/Maseru, Africa/Mogadishu, Africa/Monrovia, Africa/Nairobi, Africa/Ndjamena, Africa/Niamey, Africa/Nouakchott, Africa/Ouagadougou, Africa/Porto-Nov, Africa/Sao_Tome, Africa/Timbuktu, Africa/Tripoli, Africa/Tunis, Africa/Windhoek, America/Adak, America/Anchorage, America/Anchorage, America/Argentina, America/Argentina/Tucuman, America/Argentina/Ushuaia, America/Argentina/Buenos_Aires, America/Argentina/Catamarca, America/Argentina/Cordoba, America/Argentina/Jujuy, America/Argentina/La_Rioja, America/Argentina/Mendoza, America/Argentina/Rio_Gallegos, America/Argentina/Salta, America/Argentina/San_Juan, America/Argentina/San_Luis, America/Argentina/Tucuman, America/Argentina/Ushuaia, America/Aruba, America/Asuncion, America/Atikokan, America/Atka, America/Bahia, America/Bahia_Banderas, America/Barbados, America/Belem, America/Beijing, America/Blanc_Sablon, America/Boa_Vista, America/Bogota, America/Boise, Select a time zone from the list.
UserInterface settings

UserInterface ContactInfo Type
Choose which type of contact information to show in the status field in the upper left corner of the display and Touch controller.

Requires user role: ADMIN

- Auto: Show the address which another system should dial to reach this video system. The address depends on the default call protocol and system registration.
- None: Do not show any contact information.
- IPv4: Show the system’s IPv4 address.
- IPv6: Show the system’s IPv6 address.
- H323Id: Show the system’s H.323 ID (refer to the H323 H323Alias ID setting).
- H320Number: Not applicable in this software version.
- E164Alias: Show the system’s H.323 E164 Alias as contact information (refer to the H323 H323Alias E164 setting).
- SipUri: Show the system’s SIP URI (refer to the SIP URI setting).
- SystemName: Show the system’s name (refer to the SystemUnit Name setting).
- DisplayName: Show the system’s display name (refer to the SIP DisplayName setting).

UserInterface KeyTones Mode
You can configure the system to make a keyboard click sound effect (key tone) when pressing a key on the remote control, or when typing text or numbers on the Touch controller.

Requires user role: ADMIN, USER

Default value: On

Value space: Off/On

- Off: There is no key tone sound effect.
- On: The key tone sound effect is turned on.

UserInterface Language
Select the language to be used in menus and messages on the screen and Touch controller.

Requires user role: ADMIN, USER

Default value: English

Value space: Arabic/Catalan/ChineseSimplified/ChineseTraditional/Czech/Danish/Dutch/English/EnglishUK/Finnish/French/FrenchCanadian/German/Hebrew/Hungarian/Italian/Japanese/Korean/Norwegian/Polish/Portuguese/PortugueseBrazilian/Russian/Spanish/SpanishLatin/Swedish/Turkish

Select a language from the list. Arabic and Hebrew are not supported in this software version.

UserInterface OSD EncryptionIndicator
Define for how long the encryption indicator (a padlock) is shown on screen. The icon for encrypted calls is a locked padlock, and the icon for non-encrypted calls is a crossed out locked padlock.

Requires user role: ADMIN

Default value: Auto

Value space: Auto/AlwaysOn/AlwaysOff

- Auto: If the call is encrypted, a “Call is encrypted” notification is shown for 5 seconds, while the encryption indicator icon is shown for the duration of the call.
- If the call is not encrypted, a “Call is not encrypted” notification is shown for 5 seconds. Also the encryption indicator icon disappears from screen after 5 seconds.
- AlwaysOn: The encryption indicator is displayed on screen during the entire call.
- AlwaysOff: The encryption indicator is never displayed on screen.
UserInterface OSD Output

Define on which monitor the on-screen information and indicators (OSD) should be displayed.

Requires user role: ADMIN, INTEGRATOR
Default value: Auto
Value space: Auto/1/2
   Auto: The system detects when a monitor is connected to a video output, and sends the on-screen information and indicators to the first monitor you connect. If you have a multi-monitor setup, and all monitors are connected before switching on the system, the on-screen information and indicators are sent to the video output with the lowest number, starting with Output Connector 1 (HDMI 1).
   Range 1-2: The system sends the on-screen information and indicators to the specified output. Choose n to send the on-screen information and indicators to the system's Output Connector n.

UserInterface Wallpaper

Select a background image (wallpaper) for the video screen when idle.
You may upload a custom wallpaper to the video system using the web interface. The following file formats are supported: BMP, GIF, JPEG, PNG. The maximum file size is 4 MByte. When you use a custom wallpaper, the clock and the list of upcoming meetings are removed from the main display.

Requires user role: ADMIN, INTEGRATOR, USER
Default value: Auto
Value space: Auto/Custom/None
   Auto: Use the default wallpaper.
   None: There is no background image on the screen.
   Custom: Use the custom wallpaper as background image on the screen. If no custom wallpaper is uploaded to the system, the setting will revert to the default value.
UserManagement settings

UserManagement LDAP Mode
The video system supports the use of an LDAP (Lightweight Directory Access Protocol) server as a central place to store and validate user names and passwords. Use this setting to configure whether or not to use LDAP authentication. Our implementation is tested for the Microsoft Active Directory (AD) service.

Requires user role: ADMIN
Default value: Off
Value space: Off/On
  Off: LDAP authentication is not allowed.
  On: For client certificate verification to work when LDAP authentication is enabled, the codec requires a CA (Certificate Authority) certificate, and the user must have a Client Certificate that matches their user distinguishing name (DN) in the active directory (AD).

UserManagement LDAP Server Address
Set the IP address or hostname of the LDAP server.

Requirements user role: ADMIN
Default value: ""
Value space: String (0, 255)
  A valid IPv4 address, IPv6 address or hostname.

UserManagement LDAP Server Port
Set the port to connect to the LDAP server on. If set to 0, use the default for the selected protocol (see the UserManagement LDAP Encryption setting).

Requires user role: ADMIN
Default value: 0
Value space: Integer (0..65535)
  The LDAP server port number.

UserManagement LDAP Encryption
Define how to secure the communication between the video system and the LDAP server. You can override the port number by using the UserManagement LDAP Server Port setting.

Requires user role: ADMIN
Default value: LDAPS
Value space: LDAPS/None/STARTTLS
  LDAPS: Connect to the LDAP server on port 636 over TLS (Transport Layer Security).
  None: Connect to LDAP server on port 389 with no encryption.
  STARTTLS: Connect to LDAP server on port 389, then send STARTTLS to enable TLS encryption.

UserManagement LDAP MinimumTLSVersion
Set the lowest version of the TLS (Transport Layer Security) protocol that is allowed.

Requires user role: ADMIN
Default value: TLSv1.2
Value space: TLSv1.0/TLSv1.1/TLSv1.2
  TLSv1.0: Support TLS version 1.0 or higher.
  TLSv1.1: Support TLS version 1.1 or higher.
  TLSv1.2: Support TLS version 1.2 or higher.
UserManagement LDAP VerifyServerCertificate
When the video system connects to an LDAP server, the server will identify itself to the
video system by presenting its certificate. Use this setting to determine whether or not the
video system will verify the server certificate.
Requires user role: ADMIN
Default value: On
Value space: Off/On
  Off: The video system will not verify the LDAP server’s certificate.
  On: The video system must verify that the LDAP server’s certificate is signed by a
trusted Certificate Authority (CA). The CA must be on the list of trusted CAs that are
uploaded to the system in advance. Use the video system’s web interface to manage the
list of trusted CAs (see more details in the administrator guide).

UserManagement LDAP Admin Filter
The LDAP filter is used to determine which users should be granted administrator privileges.
If set, this setting takes precedence over the UserManagement LDAP Admin Group setting.
Requires user role: ADMIN
Default value: "*
Value space: String (0, 1024)
  Refer to the LDAP specification for the syntax of this string. Example: "(CN=adminuser)"

UserManagement LDAP Attribute
The attribute used to map to the provided username. If not set, sAMAccountName is used.
Requires user role: ADMIN
Default value: 
Value space: String (0, 255)
The attribute name.
Video settings

**Video ActiveSpeaker DefaultPIPPosition**

Define the position on screen of the active speaker picture-in-picture (PiP). The setting only takes effect when using a video layout where the active speaker is a PiP, i.e. the Overlay layout, or possibly a Custom layout (refer to the Video DefaultLayoutFamily Local setting).

The setting takes effect from the next call onwards; if changed during a call, it will have no effect on the current call.

Requires user role: ADMIN, INTEGRATOR

Default value: Current

Value space: Current/UpperLeft/UpperCenter/UpperRight/CenterLeft/CenterRight/LowerLeft/LowerRight

- **Current**: The position of the active speaker PiP will be kept unchanged when leaving a call.
- **UpperLeft**: The active speaker PiP will appear in the upper left corner of the screen.
- **UpperCenter**: The active speaker PiP will appear in the upper center position.
- **UpperRight**: The active speaker PiP will appear in the upper right corner of the screen.
- **CenterLeft**: The active speaker PiP will appear in the center left position.
- **CentreRight**: The active speaker PiP will appear in the center right position.
- **LowerLeft**: The active speaker PiP will appear in the lower left corner of the screen.
- **LowerRight**: The active speaker PiP will appear in the lower right corner of the screen.

**Video DefaultLayoutFamily Local**

Select which video layout family to use locally.

Requires user role: ADMIN

Default value: Auto

Value space: Auto/Equal/Prominent/Overlay/Single

- **Auto**: The default layout family, as given in the layout database provided by the system, will be used as the local layout.
- **Equal**: The Equal layout family will be used as the local layout. All videos have equal size, as long as there is space enough on the screen.
- **Prominent**: The Prominent layout family will be used as the local layout. The active speaker, or the presentation if present, will be a large picture, while the other participants will be small pictures. Transitions between active speakers are voice switched.
- **Overlay**: The Overlay layout family will be used as the local layout. The active speaker, or the presentation if present, will be shown in full screen, while the other participants will be small pictures-in-picture (PiP). Transitions between active speakers are voice switched.
- **Single**: The active speaker, or the presentation if present, will be shown in full screen. The other participants are not shown. Transitions between active speakers are voice switched.
Video DefaultLayoutFamily Remote

Select which video layout family to be used for the remote participants.

Requires user role: ADMIN

Default value: Auto

Value space: Auto/Equal/Prominent/Overlay/Single
  - Auto: The default layout family, as given by the local layout database, will be used as the remote layout.
  - Equal: The Equal layout family will be used as the remote layout. All videos have equal size, as long as there is space enough on the screen.
  - Prominent: The Prominent layout family will be used as the remote layout. The active speaker, or the presentation if present, will be a large picture, while the other participants will be small pictures. Transitions between active speakers are voice switched.
  - Overlay: The Overlay layout family will be used as the remote layout. The active speaker, or the presentation if present, will be shown in full screen, while the other participants will be small pictures-in-picture (PiP). Transitions between active speakers are voice switched.
  - Single: The active speaker, or the presentation if present, will be shown in full screen. The other participants are not shown. Transitions between active speakers are voice switched.

Video DefaultMainSource

Define which video input source shall be used as the main video source.

Requires user role: ADMIN, USER

Default value: 1

Value space: 1/2/3
  - Set the source to be used as the main video source.

Video Input Connector [1..3] CameraControl Mode

Define whether the camera that is connected to this video input connector can be controlled or not.

Requires user role: ADMIN, INTEGRATOR

Default value: On

Value space: Off/On
  - Off: Disable camera control.
  - On: Enable camera control.

Video Input Connector [1..3] CameraControl CameraId

The camera ID is a unique identifier of the cameras that are connected to the video input.

Requires user role: ADMIN, INTEGRATOR

Default value: Connector n: n

Value space: 1/2/3/4/5/6/7
  - Select the ID of the camera.

Video Input Connector [1..3] CEC Mode

The video input (HDMI) supports Consumer Electronics Control (CEC). When this setting is On, information about the connected device (for example device type and device name) is available in the video system status (Video Input Connector[n] ConnectedDevice CEC [n]), provided that the connected device also supports CEC.

Requires user role: ADMIN, INTEGRATOR

Default value: On

Value space: Off/On
  - Off: CEC is disabled.
  - On: CEC is enabled.
Video Input Connector [1..3] InputSourceType
Select which type of input source is connected to the video input.

Requires user role: ADMIN, INTEGRATOR
Default value: Connector 1: camera Other connectors: PC

Value space: PC/camera/document_camera/mediaplayer/whiteboard/other
- Camera: Use this when a camera is connected to the video input.
- Document_camera: Use this when a document camera is connected to the video input.
- Mediaplayer: Use this when a media player is connected to the video input.
- PC: Use this when a computer is connected to the video input.
- Whiteboard: Use this when a whiteboard camera is connected to the video input.
- Other: Use this when the other options do not match.

Video Input Connector [1..3] Name
Define a name for the video input connector.

Requires user role: ADMIN, INTEGRATOR
Default value: Connector 1: "Camera" Connector 2: "PC (HDMI1)" Connector 3: "PC (HDMI2)"

Value space: String (0, 50)
- Name for the video input connector.

Video Input Connector [1..3] PreferredResolution
Define the screen resolution and refresh rate that the video system advertises as its preferred resolution to the source devices that connect to the system via HDMI (for example a laptop). The logic for selection of the resolution on the source side will choose this resolution and refresh rate automatically, unless it is overridden manually by the source device (for example the laptop's display configuration software).

Note that the formats 2560_1440_60 and 3840_2160_30 use about twice the amount of data compared to the 1920_1080_60 format, and requires a presentation cable (or adapter) that is qualified for at least HDMI 1.4b data rates.

Requires user role: ADMIN, INTEGRATOR
Default value: 1920_1080_60

Value space: Connector 1: 1920_1080_60 Connector 2, 3: 1920_1080_60/2560_1440_60/3840_2160_30
- 1920_1080_60: The resolution is 1920 x 1080, and the refresh rate is 60 Hz.
- 2560_1440_60: The resolution is 2560 x 1440, and the refresh rate is 60 Hz.
- 3840_2160_30: The resolution is 3840 x 2160, and the refresh rate is 30 Hz.

Video Input Connector [1..3] Quality
When encoding and transmitting video there is a trade-off between high resolution and high frame rate. For some video sources it is more important to transmit high frame rate than high resolution and vice versa. This setting specifies whether to give priority to high frame rate or to high resolution.

Requires user role: ADMIN, INTEGRATOR
Default value: Connector 1: Motion Connector 2, 3: Sharpness

Value space: Motion/Sharpness
- Motion: Gives the highest possible frame rate. Used when there is a need for higher frame rates, typically when a large number of participants are present or when there is a lot of motion in the picture.
- Sharpness: Gives the highest possible resolution. Used when you want the highest quality of detailed images and graphics.
Video Input Connector [1..3] OptimalDefinition Profile

This setting will only take effect if the corresponding Video Input Connector [n] Quality setting is set to Motion.

The optimal definition profile reflects the lighting conditions in the video conferencing room and the quality of the camera. The better lighting conditions and the better quality of the camera, the higher the profile. Generally, the Normal or Medium profiles are recommended. However, when the lighting conditions are very good, the High profile can be set in order to increase the resolution for a given call rate. The resolution must be supported by both the calling and called systems.

Requires user role: ADMIN, INTEGRATOR

Default value: Medium

Value space: Normal/Medium/High

- Normal: Use this profile for a normally to poorly lit environment. Resolutions will be set rather conservative.
- Medium: Requires good and stable lighting conditions and a good quality video input. For some call rates this leads to higher resolution.
- High: Requires nearly optimal video conferencing lighting conditions and a good quality video input in order to achieve a good overall experience. Rather high resolutions will be used.

Video Input Connector [1..3] PresentationSelection

Define how the video system will behave when you connect a presentation source to the video input. In general, any input source can be used as a presentation source; normally, the main camera will not be used as a presentation source.

If the video system is in standby mode, it will wake up when you connect a presentation source. Sharing the presentation with the far end requires additional action (select Share on the user interface) except when this setting is set to AutoShare.

Requires user role: ADMIN, INTEGRATOR

Default value: Connector 1: Manual Other connectors: OnConnect

Value space: AutoShare/Desktop/Manual/OnConnect

- AutoShare: While in a call, the content on the video input will automatically be presented to the far end as well as on the local screen when you connect the cable, or when the source is activated otherwise (for example when a connected computer wakes up from sleep mode). You do not have to select Share on the user interface. If a presentation source is already connected when you make or answer a call, you have to manually select Share on the user interface.
- Desktop: The content on the video input will be presented on the screen when you connect the cable, or when the source is activated otherwise (for example when a connected computer wakes up from sleep mode). This applies both when idle and in a call. Also, the content on the video input will stay on the screen when you leave the call, provided that it was the active input at the time of leaving.
- Manual: The content on the video input will not be presented on the screen until you select Share from the user interface.
- OnConnect: The content on the video input will be presented on screen when you connect the cable, or when the source is activated otherwise (for example when a connected computer wakes up from sleep mode). Otherwise, the behavior is the same as in manual mode.
Video Input Connector [1..3] RGBQuantizationRange

The devices connected to the video input should follow the rules for RGB video quantization range defined in CEA-861. Unfortunately some devices do not follow the standard and this configuration may be used to override the settings to get a perfect image with any source.

Requires user role: ADMIN, INTEGRATOR
Default value: Auto

Value space: Auto/Full/Limited
  - Auto: RGB quantization range is automatically selected based on video format according to CEA-861-E. CE video formats will use limited quantization range levels. IT video formats will use full quantization range levels.
  - Full: Full quantization range. The R, G, B quantization range includes all code values (0 - 255). This is defined in CEA-861-E.
  - Limited: Limited Quantization Range. R, G, B quantization range that excludes some code values at the extremes (16 - 235). This is defined in CEA-861-E.

Video Input Connector [1..3] Visibility

Define the visibility of the video input connector in the menus on the user interface.

Requires user role: ADMIN, INTEGRATOR
Default value: Connector 1: Never Other connectors: Always

Value space: Always/IfSignal/Never
  - Always: The menu selection for the video input connector will always be visible on the user interface.
  - IfSignal: The menu selection for the video input connector will only be visible when something is connected to the video input.
  - Never: The input source is not expected to be used as a presentation source, and will not show up on the user interface.

Video Monitors

A role is assigned to each monitor using the Video Output Connector [n] MonitorRole setting. The monitor role decides which layout (call participants and presentation) will appear on the monitor that is connected to this output. Monitors with the same monitor role will get the same layout; monitors with different monitor roles will have different layouts.

The monitor layout mode that is set in the Video Monitors setting should reflect the number of different layouts you want in your room setup. Note that some monitors can be reserved for presentations.

Requires user role: ADMIN, INTEGRATOR
Default value: Auto

Value space: Auto/Single/Dual/DualPresentationOnly
  - Auto: The number of monitors connected to the codec is automatically detected, and the layout is distributed on the monitors according to the MonitorRole settings.
  - Single: The layout is shown on one monitor. If two monitors are connected to the codec, one of them will be disabled.
  - Dual: The layout is distributed on monitors with monitor role First and Second. If a presentation is part of the layout, all participants in the call are shown on the monitor with monitor role First, and the presentation is shown on the monitor with monitor role Second.
  - DualPresentationOnly: All participants in the call are shown on the monitor with monitor role First. If a presentation is part of the layout, the presentation is shown on the monitor with monitor role Second.
Video Output Connector [1..2] CEC Mode

This video output (HDMI) supports Consumer Electronics Control (CEC). When this setting is On, the system will use CEC to set the monitor in standby when the system itself enters standby. Likewise the system will wake up the monitor when the system itself wakes up from standby.

The active video input on a monitor is sometimes changed by a user. When a call is started the video system detects if the active video input has been switched to another input on the monitor. The video system then switches the input back so the video system is the active video input source. If the video system is not the active input source when it goes into standby the monitor will not be set to standby.

The monitor that is connected to the output must be CEC compatible and CEC must be configured on the monitor.

Note that the different manufacturers use different marketing names for CEC, for example Anynet+ (Samsung); Aquos Link (Sharp); BRAVIA Sync (Sony); HDMI-CEC (Hitachi); Kuro Link (Pioneer); CE-Link and Regza Link (Toshiba); RIHD (Onkyo); HDAVI Control, EZ-Sync, VIERA Link (Panasonic); EasyLink (Philips); and NetCommand for HDMI (Mitsubishi).

Requires user role: ADMIN, INTEGRATOR

Default value: On

Value space: Off/On
  Off: CEC is disabled.
  On: CEC is enabled.

Video Output Connector [1..2] Location HorizontalOffset

HorizontalOffset and VerticalOffset settings are associated with each video output. These settings are used to signal the relative position of the displays that are connected to these outputs.

HorizontalOffset = 0 and VerticalOffset = 0 indicates that the display is positioned in center, both horizontally and vertically. A negative horizontal offset indicates that the monitor is left of center, and a positive horizontal offset indicates that the monitor is right of center. A negative vertical offset indicates that the monitor is below center, and a positive vertical offset indicates that the monitor is above center. The magnitude of the offset indicates how far the display is from center (relative to other displays).

Example: You have two displays side by side, one in center and one to the left. Then the following settings will apply: HorizontalOffset = 0 for the center display, HorizontalOffset = -1 for the left display.

Example: You have two displays, one in center and one below. Then the following settings will apply: VerticalOffset = 0 for the center display, VerticalOffset = -1 for the lower display.

The default values for the different outputs are:

- Video Output Connector [1] Location: HorizontalOffset = 0, VerticalOffset = 0
- Video Output Connector [2] Location: HorizontalOffset = 1, VerticalOffset = 0

Requires user role: ADMIN, INTEGRATOR

Default value: Connector [1]: 0  Connector [2]: 1

Value space: Integer (-100..100)
  Range: The value must be between -100 and 100.
Video Output Connector [1..2] Location VerticalOffset

HorizontalOffset and VerticalOffset settings are associated with each video output. These settings are used to signal the relative position of the displays that are connected to these outputs.

HorizontalOffset = 0 and VerticalOffset = 0 indicates that the display is positioned in center, both horizontally and vertically. A negative horizontal offset indicates that the monitor is left of center, and a positive horizontal offset indicates that the monitor is right of center. A negative vertical offset indicates that the monitor is below center, and a positive vertical offset indicates that the monitor is above center. The magnitude of the offset indicates how far the display is from center (relative to other displays).

Example: You have two displays side by side, one in center and one to the left. Then the following settings will apply: HorizontalOffset = 0 for the center display, HorizontalOffset = -1 for the left display.

Example: You have two displays, one in center and one below. Then the following settings will apply: VerticalOffset = 0 for the center display, Vertical Offset = -1 for the lower display.

The default values for the different outputs are:

Video Output Connector [1] Location: HorizontalOffset = 0, VerticalOffset = 0
Video Output Connector [2] Location: HorizontalOffset = 1, VerticalOffset = 0

Requires user role: ADMIN, INTEGRATOR

Default value: 0

Value space: Integer (-100..100)

Range: The value must be between -100 and 100.

Video Output Connector [1..2] MonitorRole

The monitor role describes which video streams will be shown on the monitor connected to this video output connector. Together the Video Monitors setting and the MonitorRole settings for all outputs define which layout (video streams) will be shown on each monitor.

Requires user role: ADMIN, INTEGRATOR

Default value: Auto

Value space: Auto/First/Second/PresentationOnly

Auto: The system will detect when a monitor is connected, and a monitor role (First, Second) that corresponds with the Video Monitors setting will be assigned automatically.

First/Second: Define the role of the monitor in a multi-monitor setup. In a single-monitor setup, there is no difference between First and Second.

PresentationOnly: Show presentation video stream if active, and nothing else. Monitors/outputs with this monitor role are disregarded by the Video Monitors setting.
Video Output Connector [1..2] Resolution

Define the resolution and refresh rate for the connected screen.

The formats larger than 1920_1200_60 requires use of high quality display cables. For guaranteed operation, use display cables that are pre-qualified from Cisco for use at 3840_2160_60, or use a cable that has passed the “Premium HDMI certification” program. Some UHD TVs/displays only enable 3840_2160_30 (30 Hz) and not 3840_2160_60 (60 Hz) as their default configuration. In such cases the corresponding setting on the TV/display has to be located in the menus of the TV/display and be reconfigured to allow 3840_2160_60 for the HDMI input where the video system is connected.

Requires user role: ADMIN, INTEGRATOR, USER
Default value: Auto
Value space: Auto/1920_1080_50/1920_1080_60/1920_1200_50/1920_1200_60/2560_1440_60/3840_2160_30/3840_2160_60

Auto: The system will automatically try to set the optimal resolution based on negotiation with the connected monitor.
1920_1080_50: The resolution is 1920 x 1080, and the refresh rate is 50 Hz.
1920_1080_60: The resolution is 1920 x 1080, and the refresh rate is 60 Hz.
1920_1200_50: The resolution is 1920 x 1200, and the refresh rate is 50 Hz.
1920_1200_60: The resolution is 1920 x 1200, and the refresh rate is 60 Hz.
2560_1440_60: The resolution is 2560 x 1440, and the refresh rate is 60 Hz.
3840_2160_30: The resolution is 3840 x 2160, and the refresh rate is 30 Hz.
3840_2160_60: The resolution is 3840 x 2160, and the refresh rate is 60 Hz.

Video Output Connector [1..2] RGBQuantizationRange

Devices connected to an HDMI output should follow the rules for RGB video quantization range defined in CEA-861. Unfortunately some devices do not follow the standard and this configuration may be used to override the settings to get a perfect image with any display. Most HDMI displays expects full quantization range.

Requires user role: ADMIN, INTEGRATOR
Default value: Full
Value space: Auto/Full/Limited

Auto: RGB quantization range is automatically selected based on the RGB Quantization Range bits (Q0, Q1) in the AVI infoframe. If no AVI infoframe is available, RGB quantization range is selected based on video format according to CEA-861-E.
Full: Full quantization range. The R, G, B quantization range includes all code values (0 - 255). This is defined in CEA-861-E.
Limited: Limited Quantization Range. R, G, B quantization range that excludes some code values at the extremes (16 - 235). This is defined in CEA-861-E.

Video Presentation DefaultPIPPosition

Define the position on screen of the presentation picture-in-picture (PiP). The setting only takes effect when the presentation is explicitly minimized to a PiP, for example using the user interface. The setting takes effect from the next call onwards; if changed during a call, it will have no effect on the current call.

Requires user role: ADMIN, INTEGRATOR
Default value: Current
Value space: Current/UpperLeft/UpperCenter/UpperRight/CenterLeft/CenterRight/LowerLeft/LowerRight

Current: The position of the presentation PiP will be kept unchanged when leaving a call.
UpperLeft: The presentation PiP will appear in the upper left corner of the screen.
UpperCenter: The presentation PiP will appear in the upper center position.
UpperRight: The presentation PiP will appear in the upper right corner of the screen.
CenterLeft: The presentation PiP will appear in the center left position.
CenterRight: The presentation PiP will appear in the center right position.
LowerLeft: The presentation PiP will appear in the lower left corner of the screen.
LowerRight: The presentation PiP will appear in the lower right corner of the screen.
Video Presentation DefaultSource

Define which video input source to use as a default presentation source. This setting may be used by the API and 3rd party user interfaces. It is not relevant when using the user interfaces provided by Cisco.

Requires user role: ADMIN, USER
Default value: 2
Value space: 1/2/3

The video input source to use as default presentation source.

Video Selfview Default Mode

Define if the main video source (self-view) shall be displayed on screen after a call. The position and size of the self-view window is determined by the Video Selfview Default PIPPosition and the Video Selfview Default FullscreenMode settings respectively.

Requires user role: ADMIN, INTEGRATOR
Default value: Current
Value space: Off/Current/On

Off: self-view is switched off when leaving a call.
Current: self-view is left as is, i.e. if it was on during the call, it remains on after the call; if it was off during the call, it remains off after the call.
On: self-view is switched on when leaving a call.

Video Selfview Default FullscreenMode

Define if the main video source (self-view) shall be shown in full screen or as a small picture-in-picture (PiP) after a call. The setting only takes effect when self-view is switched on (see the Video Selfview Default Mode setting).

Requires user role: ADMIN, INTEGRATOR
Default value: Current
Value space: Off/Current/On

Off: self-view will be shown as a PiP.
Current: The size of the self-view picture will be kept unchanged when leaving a call, i.e. if it was a PiP during the call, it remains a PiP after the call; if it was fullscreen during the call, it remains fullscreen after the call.
On: The self-view picture will be shown in fullscreen.

Video Selfview Default OnMonitorRole

Define which monitor/output to display the main video source (self-view) on after a call. The value reflects the monitor roles set for the different outputs in the Video Output Connector [n] MonitorRole settings. The setting applies both when self-view is displayed in full screen, and when it is displayed as picture-in-picture (PiP), but only if the Video Monitors setting is set to Dual.

Requires user role: ADMIN, INTEGRATOR
Default value: Current
Value space: First/Second/Current

First: The self-view picture will be shown on outputs with the Video Output HDMI MonitorRole set to First.
Second: The self-view picture will be shown on outputs with the Video Output HDMI MonitorRole set to Second.
Current: When leaving a call, the self-view picture will be kept on the same output as it was during the call.
Video Selfview Default PiPPosition
Define the position on screen of the small self-view picture-in-picture (PiP) after a call. The setting only takes effect when self-view is switched on (see the Video Selfview Default Mode setting) and fullscreen view is switched off (see the Video Selfview Default FullscreenMode setting).

Requires user role: ADMIN, INTEGRATOR
Default value: Current
Value space: Current/UpperLeft/UpperCenter/UpperRight/CenterLeft/CenterRight/LowerLeft/LowerRight
  - Current: The position of the self-view PiP will be kept unchanged when leaving a call.
  - UpperLeft: The self-view PiP will appear in the upper left corner of the screen.
  - UpperCenter: The self-view PiP will appear in the upper center position.
  - UpperRight: The self-view PiP will appear in the upper right corner of the screen.
  - CenterLeft: The self-view PiP will appear in the center left position.
  - CentreRight: The self-view PiP will appear in the center right position.
  - LowerLeft: The self-view PiP will appear in the lower left corner of the screen.
  - LowerRight: The self-view PiP will appear in the lower right corner of the screen.

Video Selfview OnCall Mode
This setting is used to switch on self-view for a short while when setting up a call. The Video Selfview OnCall Duration setting determines for how long it remains on. This applies when self-view in general is switched off.

Requires user role: ADMIN, INTEGRATOR
Default value: On
Value space: Off/On
  - Off: Self-view is not shown automatically during call setup.
  - On: Self-view is shown automatically during call setup.

Video Selfview OnCall Duration
This setting only has an effect when the Video Selfview OnCall Mode setting is switched On. In this case, the number of seconds set here determines for how long self-view is shown before it is automatically switched off.

Requires user role: ADMIN, INTEGRATOR
Default value: 10
Value space: Integer (1..60)
  Range: Choose for how long self-view remains on. The valid range is between 1 and 60 seconds.
Experimental settings

The Experimental settings are for testing only and should not be used unless agreed with Cisco. These settings are not documented and will change in later releases.
Appendices
How to use Touch 10

The Touch 10 user interface and its use are described in full detail in the User guide for the video system.
Set up remote monitoring

Requirement:
- RemoteMonitoring option

Remote monitoring is useful when you want to control the video system from another location.
Snapshots from input sources appear in the web interface, so you can check the camera view and control the camera without being in the room.

If enabled, snapshots are refreshed automatically approximately every 5 seconds.

Check whether or not the video system has the RemoteMonitoring option

1. Sign in to the web interface.
2. Check the Home page to see if RemoteMonitoring is on the list of installed options.
   If not on the list, remote monitoring is not available.

Enable remote monitoring

Install the RemoteMonitoring option key. How to install option keys are described in the Add option keys chapter.

PLEASE BE AWARE THAT IF YOU ENABLE THE REMOTE MONITORING OPTION YOU MUST MAKE SURE THAT YOU COMPLY WITH LOCAL LAWS AND REGULATIONS WITH REGARD TO PRIVACY AND PROVIDE ADEQUATE NOTICE TO USERS OF THE SYSTEM THAT THE SYSTEM ADMINISTRATOR MAY MONITOR AND CONTROL THE CAMERA AND SCREEN. IT IS YOUR RESPONSIBILITY TO COMPLY WITH PRIVACY REGULATIONS WHEN USING THE SYSTEM AND CISCO DISCLAIMS ALL LIABILITY FOR ANY UNLAWFUL USE OF THIS FEATURE.

About snapshots

Local input sources

Snapshots of the local input sources of the video system appear on the Call Control page.
Snapshots appear both when the video system is idle, and when in a call.

Far end snapshots

When in call, you may also see snapshots from the far end camera. It does not matter whether or not the far end video system has the RemoteMonitoring option.
Far end snapshots are not displayed if the call is encrypted.
Access call information while using the web interface

Open the Call Information window
Click the Call state indicator to open the Call Information window manually.
As default, the Call Information window pops up automatically when the video system receives a call.

Switch incoming call notifications on or off
Click Ignore incoming call notices, to decide whether or not the Call Information window should pop up automatically when the video system receives a call.
When the check box is checked, the Call Information window will not open automatically.

Open the Call Control page
Click Open Call Control to go straight to the Call Control page.

About the call state indicator
The call state indicator shows whether the system is in a call or not, and how many calls it is engaged in. You may also be notified about incoming calls.
The call state indicator is available on all pages except the Call Control page.

Control the call(s)
Relevant control buttons appear in the Call Information window. Use the buttons to:
- Show call details
- Put the call on hold
- Answer the call
- Disconnect the call
Place a call using the web interface (page 1 of 2)

Sign in to the web interface and navigate to Call Control.

Place a call

Even if the web interface is used to initiate the call, it is the video system (display, microphones and loudspeakers) that is used for the call; it is not the PC running the web interface.

1. Navigate the Favorites, Directory or Recents lists to find the correct entry; or enter one or more characters in the Search or Dial field*. Click the correct contact name.

2. Click Call in the contact card.

Alternatively, enter the complete URI or number in the Search and Dial field. Then click the Call button that appears next to the URI or number.

Send DTMF tones

Click to open a key pad that you can use if your application requires DTMF (dual-tone multi-frequency) signaling.

Show/hide call details

Click the information button to show details about the call. Click the button again to hide the information.

Hold and resume a call

Use the button next to a participant’s name to put that participant on hold.

To resume the call, use the button that is present when a participant is on hold.

End a call

If you want to terminate a call or conference, click Disconnect all. Confirm your choice in the dialog that appears.

To disconnect just one participant in a conference, click the button for that participant.

* When searching, matching entries from the Favorites, Directory and Recents lists will be listed as you type.
Place a call using the web interface (page 2 of 2)

Sign in to the web interface and navigate to Call Control.

Calling more than one

If your system is using the optional built-in MultiSite feature, up to four participants, yourself included, can join the video call (conference).

Follow the same procedure to call the next conference participant as you did when calling the first participant.

Calling more than one using a conference bridge (CUCM ad hoc conferencing) is not supported from the web interface, even if it is supported by the video system itself.

Adjust the volume

Mute the microphone

Click Microphone: On to mute the microphone. Then the text changes to Microphone: Off.

Click Microphone: Off to unmute.

Volume down

Volume up
Share content using the web interface

Sign in to the web interface and navigate to Call Control.

Share content

1. Choose which content source to share in the Presentation source drop down list.
2. Click Start Presentation. Then the text changes to Stop Presentation.

Stop content sharing:
Click the Stop Presentation button that is present while sharing.

About content sharing

You can connect a presentation source to one of the video inputs of your video system. Most often a PC is used as presentation source, but other options may be available depending on your system setup.

While in a call you can share content with the other participant(s) in the call (far end).

If you are not in a call, the content is shared locally.
Local layout control

Sign in to the web interface and navigate to Call Control.

Change the layout

Click Layout, and choose your preferred layout in the window that opens.

The set of layouts to choose from depends on the system configuration.

You may change the layout both when idle and in a call.

About layouts

The term layout is used to describe the various ways presentations and videos can appear on the screen. Different types of meetings may require different layouts.

The number of call or conference participants are reflected in the available choices.
Control a local camera

Sign in to the web interface and navigate to Call Control.

Prerequisites

- The Video > Input > Connector n > CameraControl > Mode setting is switched On.
- The camera has pan, tilt or zoom functionality.
- Speaker tracking is switched Off.

Snapshot area

Shows snapshots of the main input source.

Only available on video systems that have the Remote Monitoring option.

Automatically refresh snapshots

Main source drop down list

Choose which camera to control from the drop down list.

Move the camera using the pan/tilt/zoom controls

1. Choose which camera to control in the Main source drop down list. Click the camera icon to open the camera control window.
   Video snapshots from the room are only displayed for video systems that have the Remote Monitoring option.
2. Use the left and right arrows to pan the camera; the up and down arrows to tilt it; and + and – to zoom in and out. Only relevant controls appear in the window.

Move the camera to a preset position

1. Choose which camera to control in the Main source drop down list.
2. Click Presets... to open a list of available presets.
   If no presets are defined, the button is disabled and named No presets.
3. Click a preset’s name to move the camera to the preset position.
4. Click OK to close the window.

You cannot use the web interface to define a preset; you should use the Touch controller. When you select a preset, speaker tracking will be switched off automatically.
Control a far end camera

Sign in to the web interface and navigate to Call Control.

Prerequisites

While in a call, you can control the remote participant’s camera (far end) provided that:

- The Conference > FarEndControl > Mode setting is switched On on the far end video system.
- The far end camera has pan, tilt or zoom functionality. Only the relevant controls will appear.
- Speaker tracking is not switched On on the far end camera.
- The local video system has the Remote Monitoring option.

Control the remote participant’s camera

1. Click the camera icon to open the remote camera control window.
2. Use the left and right arrows to pan the camera; the up and down arrows to tilt it; and + and - to zoom in and out.

If you are not allowed to control the far end camera, the controls will not appear in the image.

If the call is encrypted, the far end snapshot behind the controls are not displayed.
Room analytics

The room analytics feature use several variables from the conference room and re-uses them to analyze the room utilization over time or per call.

People presence detection

The video system has the capability to find whether or not people are present in the room. It takes a minimum of two minutes to detect whether people are present or not in the room. After the room becomes vacant, it may take up to two minutes for the status to change.

This feature is based on ultrasound. It will not keep record of who was in the room, only whether or not there are people present in the room.

You can turn on/off the people presence detection from the web interface. Sign in to the web interface, and navigate to Setup > Configuration > RoomAnalytics > PeoplePresenceDetector.

People count

Applies to Cisco Spark Codec Plus with Cisco Spark Quad Camera.

By using face detection, the video system can find how many persons are in the room. It will not keep record of who was in the room, only the average number of faces that were detected.

Persons that have not faced the camera will not be counted. If there are objects or pictures in the room that can be detected as faces these might be counted.

The call must have a duration of minimum two minutes in order to get a reliable average. Calls that last less than two minutes, and calls which are made with people count disabled, will display "N/A" when you retrieve call history.

By default, the video system only counts people when in a call, or when it displays the self-view picture.

You can choose to count people outside of call. When enabled, the video system counts people as long as the video system is not in standby mode. This includes outside of call, even if self-view is off. Sign in to the web interface, and navigate to Setup > Configuration > RoomAnalytics > PeopleCountOutOfCall.

Status

You may see the status at a given moment of people’s presence and people count. Sign in to the web interface, and navigate to Setup > Status > RoomAnalytics.

Diagnostics

You can see the live people counter on-screen by enabling the SpeakerTrack Diagnostics mode from the Touch 10 controller. Tap the settings icon (cogwheel) in the status bar of the Touch controller and open the Settings menu. Tap System information > Settings > System Diagnostics > Troubleshoot > SpeakerTrack Diagnostics.

Call history command

After a call the average people count value can be extracted from the Call History command.

xCommand CallHistory Get DetailLevel: Full

The Call History command is available from the API (Application Programming Interface). Refer to the API Reference Guide for your product for details.

Go to: http://www.cisco.com/go/roomkit-docs
Add in-room controls to Touch 10

You can customize our Touch 10 user interface to allow control of peripherals in a meeting room, for example lights and blinds. This allows for the powerful combination of a control system’s functionality and the user-friendly Touch 10 user interface.

Example in-room control panel on Touch 10

Consult the In-Room Control guide for full details about how to design an in-room control panel using the In–Room Control editor, and how to use the video system’s API to program the in-room controls. Go to:

► http://www.cisco.com/go/in-room-control-docs

Architecture

You need a Cisco video system with a Touch controller, and a third-party control system, for example Crestron or AMX, with hardware drivers for the peripherals. It is the control system, not the video system, that controls the peripherals.

When you program the control system you must use the video system’s API (events and commands) in order to connect with the controls on the Touch controller.

An easy to use drag-and-drop editor, which you should use to compose the custom in-room control panel, comes free of charge with the video system’s software.

The In-Room Control editor

You can use the In–Room Control editor to compose your custom in-room control panels for the Touch controller.

Sign in’ to the web interface, and navigate to Integration > In–Room Control.

• Click Launch Editor to launch the editor directly from the video system’s web interface.

You can push a new in-room control panel to the video system, and see the result immediately on the Touch controller.

• Click Download Editor to download a stand-alone version that you can use to work offline.

The room simulator

You can use the room simulator to visualise how the in-room controls on Touch 10 changes the state of the room.

• Click Launch Simulator to open a room simulator in your browser.

• The room simulator contains a predefined in-room control configuration that you can push to the video system. Then you can control the virtual meeting room from your real Touch 10 user interface.

* You need a user that holds the ROOMCONTROL, INTEGRATOR, or ADMIN user roles in order to access the In–Room Control editor and the API commands that you need when programming the control system.
Manage startup scripts

Sign in to the web interface, and navigate to **Integration > Startup Scripts**.

### List of startup scripts

You can create one or more startup scripts. A green dot appears next to an active startup script; a red ring appears next to an inactive startup script. If you have more than one startup script, they will run in the order from top to bottom of the list.

### Create a startup script

1. Click **Create new...**
2. Enter a name for the startup script in the title input field.
3. Enter the commands (xConfiguration or xCommand) in the command input area. Start each command on a new line.
4. Click **Save**.
5. Click **On** to activate the startup script.

If you want to use an existing script as a starting point for editing, select that script and click **Copy**.

### Run a startup script immediately

1. Select the startup script from the list.
2. Click **Run**.
   - Both active and inactive startup scripts can be run immediately.

### Activate or deactivate a startup script

1. Select the startup script from the list.
2. Click **On** to activate, or **Off** to deactivate a script.
   - Active startup scripts will run every time the video system starts up.

### Delete a startup script

1. Select the startup script from the list.
2. Click **Delete**.

---

**About startup scripts**

A startup script contains commands (xCommand) and configurations (xConfiguration) that will be executed as part of the startup procedure. A few commands and configurations cannot be placed in a startup script, for example `xCommand SystemUnit Boot`. It is not possible to save a script that contains illegal commands and configurations.

Syntax and semantics for xCommand and xConfiguration are explained in the API guide for the product.
Access the video system’s XML files

Sign in to the web interface and navigate to Integration > Developer API.

The XML files are part of the video system's API. They structure information about the system in a hierarchy.

- **Configuration.xml** contains the current system settings (configuration). These settings are controlled from the web interface or from the API (Application Programmer Interface).
- The information in **status.xml** is constantly updated by the video system to reflect system and process changes. The status information is monitored from the web interface or from the API.
- **Command.xml** contains an overview of the commands available to instruct the system to perform an action. The commands are issued from the API.
- **Valuespace.xml** contains an overview of all the value spaces of system settings, status information, and commands.

Open an XML file

Click the file name to open the XML file.

About the API

The application programming interface (API) is a tool for integration professionals and developers working with the video system. The API is described in detail in the API guide for the video system.
Execute API commands and configurations from the web interface

Sign in to the web interface and navigate to *Integration > Developer API.*

Commands (xCommand) and configurations (xConfiguration) can be executed from the web interface. Syntax and semantics are explained in the API guide for the video system.

**Execute API commands and configurations**

1. Enter a command (xCommand or xConfiguration), or a sequence of commands, in the text area.
2. Click *Execute* to issue the command(s).

**About the API**

The application programming interface (API) is a tool for integration professionals and developers working with the video system. The API is described in detail in the API guide for the video system.
**Power**
Always use the provided power supply:
- DC output: 5A, 12 V
- AC input: 100–240V, 50–60Hz, max 1.2A

The system powers up automatically, as long as the power switch is in its On position.

**Factory reset pinhole**
Use the pinhole as a last resort. We recommend to perform a factory reset from the Touch user interface or the web interface.

**Kensington lock**
The Kensington lock may be used to prevent the video system from being moved and to prevent theft.

**Touch 10 controller**
Touch 10 is powered over Ethernet (PoE), which is provided through this socket.

**Network**
Ethernet interface, 10Mb/100Mb/1Gb Ethernet LAN interface (RJ45).

**Camera control**
Camera control (pan, tilt, zoom) for the camera. If you connect an extra camera you need an Ethernet switch to allow for camera control on both cameras.

**HDMI input for the main camera**
Always use the HDMI 1 for the main camera.

**HDMI inputs**
HDMI version 1.4b, resolutions up to 3840 × 2160 at 30fps. Used for different types of input sources, like computers, extra camera or external playback devices (audio and video). You need a High Speed HDMI 1.4b cable to support the high resolutions and frame rates. We recommend a Cisco qualified presentation cable.

**HDMI outputs**
HDMI version 2.0, resolutions up to 3840 × 2160 at 60fps. Use output 1 for the main monitor (audio and video), and output 2 for the optional second monitor (only video). You need Premium HDMI cables to support the high resolutions and frame rates. We recommend Cisco qualified display cables.

**USB A/B**
USB 2.0, for future use.

**Maintenance**
Micro USB connector for serial communication with the video system.

**Microphones**
Three 3.5 mm mini-jack, 4-pin connectors for external microphones: Cisco Table Microphone 20 or Cisco TelePresence Ceiling Microphone.

**Audio line out**
3.5 mm mini-jack, 3-pin connector. To be used with active loudspeakers (built-in amplifier) or with a self-powered subwoofer (refer to the Audio Output Line Output Type setting).
Serial interface for maintenance

Use the micro USB connector for direct communication with the video system. You need a micro USB to USB cable. If the computer doesn’t auto-install a serial port driver, you need to install a serial port driver on the computer manually.

Use a terminal emulator (SSH client) to connect to the serial interface. For the most common computer types (PC, MAC) and operating systems, PuTTY or Tera Term will work.

The serial connection can be used without an IP-address, DNS, or a network.

Parameters:
- Baud rate: 115200 bps
- Data bits: 8
- Parity: None
- Stop bit: 1
- Hardware flow control: Off

Video system settings

Serial communication is enabled by default. Use the following configuration to change the behavior:

SerialPort > Mode

For security reasons, you are asked to sign in before using the serial interface. Use the following setting to change the behavior:

SerialPort > LoginRequired

Restart the video system when you have made changes to the serial port settings.

If your video system is provisioned by CUCM, the serial port settings should be configured from CUCM.

---

* You need a CP210x USB to UART Bridge Virtual COM Port (VCP) driver, see http://www.silabs.com/products/development-tools/software/usb-to-uart-bridge-vcp-drivers
Open TCP Ports

The web server within the codec prohibit or restrict the use of nonsecure or unnecessary ports, protocols, modules, and/or services. Some ports are open or closed by default.

TCP 22: SSH
You can close the port by setting SSH mode to Off.
NetworkServices SSH Mode: Off/On

TCP 80: HTTP
You can close the port by setting HTTP mode to Off or HTTPS.
NetworkServices HTTP Mode: HTTP+HTTPS/HTTPS/Off

TCP 443: HTTPS
You can close the port by setting HTTP mode to Off.
NetworkServices HTTP Mode: HTTP+HTTPS/HTTPS/Off

TCP 5060/5061: SIP listen ports
The SIP listen ports are open by default. The SIP listen ports are disabled by the Cisco UCM (Unified Communication Manager).
You can close the ports by setting the SIP listen ports to Off.
SIP ListenPort: Off/On
Technical specification (page 1 of 2)

SOFTWARE COMPATIBILITY
• Cisco Collaboration Endpoint Software Version 9.1 or later
• Cisco Spark Room OS

COMPONENTS
• Cisco Spark Room Kit Plus with Cisco Spark Codec Plus and Cisco Spark Quad Camera

BANDWIDTH
Up to 6Mbps point-to-point

MINIMUM BANDWIDTH FOR RESOLUTION / FRAME RATE
• H.264
  - 720p30 from 768 kbps
  - 720p60 from 1152 kbps
  - 1080p30 from 1472 kbps
  - 1080p60 from 2560 kbps

• H.265 (SIP)
  - 1080p60 from 1152 kbps
  - 20p60 from 1152 kbps

• H.460.18 and H.460.19 firewall traversal

VIDEO STANDARDS
• H.264
• H.265 (SIP)

VIDEO INPUTS
• One HDMI input supports formats up to maximum 1080p60
  - Two HDMI inputs*, which supports formats up to maximum 3840 × 2160 at 30 fps, including 1920 × 1080 at 60 fps
  - Consumer Electronics Control (CEC) 2.0 (Cisco VCS)

VIDEO OUTPUTS
• Two HDMI outputs*, which support formats up to 3840 × 2160 at 60 fps (4Kp60)
• Live video resolutions (encode and decode) up to 1920 × 1080 at 30 fps or 60 fps (HD1080p)
• Consumer Electronics Control (CEC) 2.0

AUDIO STANDARDS
• AAC-LD
• G.722
• G.722.1
• G.711
• G.729
• Opus

AUDIO FEATURES
• High quality 20kHz audio
• Prepared for subwoofer (line out)
• Prepared for inductive loop (line out)
• Automatic gain control (AGC)
• Automatic noise reduction
• Active lip synchronization

AUDIO INPUTS
• Three microphones, 4-pole mini-jack
• Two audio in from HDMI

AUDIO OUTPUTS (external)
• One line out mini-jack (stereo) (Codec Plus)
• One RCA output for subwoofer (Quad Camera)
• Two HDMI outputs
• One HDMI input supporting Audio Return Channel (ARC). Audio output to Quad Camera

LOUDSPEAKERS (internal)
• High-quality speakers
• Frequency response: 70 Hz to 20 kHz
• Max output level 90dB SPL

SPEAKER TRACKING
• 6-element microphone array for speaker tracking

DUAL STREAM
• H.239 (H.323) dual stream
• BFCP (SIP) dual stream
• Support for resolutions up to 3840 × 2160 at 5 fps (4Kp5) and 1080p30

WIRELESS SHARING
• Cisco Spark client (up to 3840 × 2160 at 5 fps)
• Cisco Intelligent Proximity client (up to 1920 × 1080 at 5 fps)

MULTIPOINT SUPPORT
• Four-way embedded SIP/H.323 conferencing capability with MultiSite option

MULTISITE FEATURES (EMBEDDED MULTIPOINT), optional upgrade
• Adaptive SIP/H.323 MultiSite:
  - Three-way resolution up to 1920 × 1080 at 30 fps, and content up to 3840 × 2160 at 5 fps
  - Four-way resolution up to 1280 × 720 at 30 fps, and content up to 3840 × 2160 at 5 fps
• Full individual audio and video transcoding
• H.323, SIP, and VoIP in the same conference

PROTOCOLS
• H.323
• SIP
• Cisco Spark

EMBEDDED ENCRYPTION
• H.323 and SIP point-to-point
• Standards-based: H.235 v3 and Advanced Encryption Standard (AES)
• Automatic key generation and exchange

IP NETWORK FEATURES
• DNS lookup for service configuration
• Differentiated services (QoS)
• IP adaptive bandwidth management (including flow control)
• Automatic gatekeeper discovery
• Dynamic playout and lip-sync buffering
• H.245 DTMF tones in H.323
• RFC 4733 DTMF tones in SIP
• Date and time support using NTP
• Packet loss based downspeeding
• URI dialing
• DHCP (Dynamic Host Configuration Protocol)
• IKEv2 (IKEv2, SSH, HTTP, HTTPS, DNS and DiffServ)
• Support for both static and automatic IP configuration (stateless address auto configuration)

CISCO UNIFIED COMMUNICATIONS MANAGER
• Native integration with Cisco Unified Communications Manager (CUOM)
• Requires CUOM version 9.1.2 or later with device pack for Room Kit

SUPPORTED INFRASTRUCTURE
• Cisco TelePresence Video Communication Server (Cisco VCS)

SECURITY FEATURES
• Management using HTTPS and SSH
• IP administration password
• Administration menu password
• Disable IP services
• Network settings protection

* HDMI version 1.4b for the input, HDMI version 2.0 for the outputs
Technical specification (page 2 of 2)

NETWORK INTERFACES
- One Ethernet (RJ-45) 10/100/1000 for LAN
- One Ethernet (RJ-45) 10/100/1000 for direct pairing with camera
- One Ethernet (RJ-45) 10/100/1000 with Power over Ethernet (PoE) for direct pairing with Touch 10
- Wi-Fi 802.11a/b/g/n/ac 2.4 GHz / 5 GHz for LAN. 2x2 MIMO
- Bluetooth 4.0 LE

OTHER INTERFACES
- USB 2.0 port
- Micro USB
- Factory reset pinhole

CISCO SPARK QUAD CAMERA
- 5K Ultra HD camera
- Support up to 60 fps
- 15.1 MP image sensor
- 1/1.7 CMOS
- 5x digital zoom (3 tele-lenses, each with 50° horizontal field of view)
- f/2.0 aperture
- 83° horizontal field of view
- 51.5° vertical field of view
- Auto-framing (audio + face detect)
- 5120 x 2880 pixel resolution
- Auto focus, brightness, and white balance
- Focus distance 1 m to infinity

POWER
- Two power supplies
  - 100-240VAC, 50/60Hz, 12 V DC input
  - Average 20W, peak 70W

OPERATING TEMPERATURE AND HUMIDITY
- Ambient temperature: 0°C to 40°C (32°F to 104°F)
- Relative humidity (RH): 10% to 90%

STORAGE AND TRANSPORT TEMPERATURE
- -20°C to 60°C (-4°F to 140°F) at RH 10% to 90%
  (non-condensing)

LOCKING MECHANISM
- Kensington security lock

DIMENSIONS
- Width: 35.9 mm / 1.41 in.
- Height: 4.3 mm / 0.17 in.
- Depth: 14.3 mm / 0.56 in.
- Weight: 1.77 kg / 3.9 lbs

APPROVALS AND COMPLIANCE
- Directive 2014/35/EU (Low-Voltage Directive)
- Directive 2014/30/EU (EMC Directive) – Class A
- Directive 2011/65/EU (RoHS)
- Directive 2002/96/EC (WEEE)
- NRTL approved (Product Safety)
- FCC CFR 47 Part 15B (EMC) – Class A
- FCC Listed (Radio Equipment)

Please check Product Approval Status Database http://www.ciscofax.com for approval documents per country.

JUNE 2017
Supported RFCs

The RFC (Request for Comments) series contains technical and organizational documents about the Internet, including the technical specifications and policy documents produced by the Internet Engineering Task Force (IETF).

CE software supports a range of RFCs, including the following:

- RFC 2782 DNS RR for specifying the location of services (DNS SRV)
- RFC 3261 SIP: Session Initiation Protocol
- RFC 3263 Locating SIP Servers
- RFC 3361 DHCP Option for SIP Servers
- RFC 3550 RTP: A Transport Protocol for Real-Time Applications
- RFC 3711 The Secure Real-time Transport Protocol (SRTP)
- RFC 4091 The Alternative Network Address Types (ANAT) Semantics for the Session Description Protocol (SDP) Grouping Framework
- RFC 4092 Usage of the Session Description Protocol (SDP) Alternative Network Address Types (ANAT) Semantics in the Session Initiation Protocol (SIP)
- RFC 4582 The Binary Floor Control Protocol draft-ietf-bfcpbis-rfc4582bis-00 Revision of the Binary Floor Control Protocol (BFCP) for use over an unreliable transport
- RFC 4733 RTP Payload for DTMF Digits, Telephony Tones and Telephony Signals
- RFC 5245 Interactive Connectivity Establishment (ICE): A Protocol for Network Address Translator (NAT) Traversal for Offer/Answer Protocols
- RFC 5589: SIP Call Control Transfer
- RFC 5766 Traversal Using Relays around NAT (TURN): Relay Extensions to Session Traversal Utilities for NAT (STUN)
User documentation on the Cisco web site

User documentation for the Cisco Collaboration products is available at http://www.cisco.com/go/telepresence/docs

Choose a product category in the right pane until you find the correct product. These are the paths you have to follow for the different product series:

- Collaboration Room Endpoints > Spark Room Series
  - Spark Room Series

- Collaboration Room Endpoints > TelePresence MX Series
  - TelePresence MX Series

- Collaboration Room Endpoints > TelePresence SX Series
  - TelePresence SX Series

- Collaboration Desk Endpoints > DX Series
  - DX Series

Alternatively, use the following short-links to find the documentation:

- http://www.cisco.com/go/roomkit-docs
- http://www.cisco.com/go/mx-docs
- http://www.cisco.com/go/sx-docs
- http://www.cisco.com/go/dx-docs

The documents are organized in the following categories - some documents are not available for all products:

Install and Upgrade > Install and Upgrade Guides
- Installation guides: How to install the product
- Getting started guide: Initial configurations required to get the system up and running
- RCSI guide: Regulatory compliance and safety information

Maintain and Operate > Maintain and Operate Guides
- Getting started guide: Initial configurations required to get the system up and running
- Administrator guide: Information required to administer your product
- Deployment guide for TelePresence endpoints on CUCM: Tasks to perform to start using the video system with the Cisco Unified Communications Manager (CUCM)
- Spare parts overview, Spare parts replacement guides, Cable schemas: Useful information when replacing spare parts

Maintain and Operate > End-User Guides
- User guides: How to use the product
- Quick reference guides: How to use the product
- Physical interface guide: Details about the codec’s physical interface, including the connector panel and LEDs

Reference Guides > Command references
- API reference guides: Reference guide for the Application Programmer Interface (API)

Reference Guides > Technical References
- CAD drawings: 2D CAD drawings with measurements

Configure > Configuration Guides
- In-room control guide: How to design an in-room control panel, and how to use the video system’s API to program the in-room controls
- CE Console user guide: How to use the CE Console application, which provides a graphical interface to advanced customizable features of the video system

Design > Design Guides
- Video conferencing room guidelines: General guidelines for room design and best practices
- Video conferencing room guidelines: Things to do to improve the perceived audio quality

Software Downloads, Release and General Information > Licensing Information
- Open source documentation: Licenses and notices for open source software used in this product

Software Downloads, Release and General Information > Release Notes
- Software release notes

Cisco product security overview

This product contains cryptographic features and is subject to United States and
local country laws governing import, export, transfer, and use. Delivery of Cisco
cryptographic products does not imply third-party authority to import, export,
distribute, or use encryption. Importers, exporters, distributors, and users are
responsible for compliance with U.S. and local country laws. By using this product
you agree to comply with applicable laws and regulations. If you are unable to
comply with U.S. and local laws, return this product immediately.

Further information regarding U.S. export regulations may be found at
