Chapter 1

Introduction
About this guide

This guide introduces you to the Application Programmer Interface (API) for the Collaboration Endpoint software, and serves as a reference guide for the command line commands for the following product:

- Cisco Spark Room 70

The guide describes the API for on-premise registered video systems (CUCM, VCS) as well as video systems registered to Cisco's cloud service (Cisco Spark). For Cisco Spark registered systems only a subset of the API is available, and the user role (integrator and roomcontrol) of the local user determines which commands are available.

Downloading the user documentation

You can download the user documentation from the Cisco web site, go to: [http://www.cisco.com/go/roomkit-docs](http://www.cisco.com/go/roomkit-docs)

For Spark registered systems, go to: [https://support.ciscospark.com](https://support.ciscospark.com)

Guidelines for how to find the documentation on the Cisco web site are included in the [User documentation on the Cisco web site appendix](#).
Chapter 2

About the API
API fundamentals

This chapter contains a top-level view of the mechanisms supported by the codec API.

Here you can read about how to access the API, how to use the command line and what the different parts of the API can be used for. This chapter also describes how to use the feedback functions that are available for the codec.

The API consists of four major groups:

- Commands
- Configurations
- Status
- Events

These four groups are hierarchically organized, which makes it easier to find related functionality. You can find the complete lists of all commands, configurations and statuses in the following chapters.

NOTE: The commands return values that may affect how the codec interacts with 3rd party systems. These may change from release to release and are not documented.

Connecting to the API

There are several ways to access the codec API. Regardless of which method you choose, the structure of the API stays the same. Choose the connection method that suits your application best. Before you start, please read this section about the different methods, as some of those may require additional configuration changes before being enabled.

The following configurations, apart from password, can be set from the System configuration menu on the web interface or from the command line interface. All of the examples are for the command line interface.

Password

The video system is delivered with a default user account with full credentials. The user name is admin, and initially, no password is set for the default user.

It is mandatory to set a password for the admin user in order to restrict access to system configuration. You should in addition set a password for any other user with similar credentials.

You can set the password on the codec's web interface. Open a web browser and enter the IP address of the video system in the address bar and log in. Click your user name in the upper right corner and choose Change password in the drop down menu.

SSH

SSH is a secure TCP/IP connection and it is enabled by default on the codec. It can be disabled. You need a SSH client, such as PuTTY, to access the API over SSH.

HTTP/HTTPS

As HTTP/HTTPS are connectionless protocols, there is no persistent connection. There are several ways of communicating with the API over HTTP.

In order to enable or disable the HTTP and HTTPS services, configure the following setting on the codec.

Connecting

You can inspect the API by entering the IP address or host name of the codec in your favorite web browser. In the web interface, you can find the API documents under the menu section Integration > Developer API. The HTTP POST and GET methods are used to execute commands and get feedback from the codec. This is described in "Using HTTP" on page 17 in this document.
User roles

A user account may hold one or a combination of user roles. A user account with full access rights, like the default admin user, should possess the ADMIN, USER and AUDIT roles.

These are the user roles:

ADMIN: A user with this role can create new users, change most settings, make calls, and search the contact lists. The user cannot upload audit certificates and change the security audit settings.

USER: A user with this role can make calls and search the contact lists. The user can modify a few settings, for example adjust the ringtone volume and set the time and date format.

AUDIT: A user with this role can change the security audit settings and upload audit certificates.

ROOMCONTROL: A user with this role can create in-room controls. The user has access to the In-room control editor and corresponding development tools.

INTEGRATOR: A user with this role has access to settings, commands and status that are required to set up advanced AV scenarios, and to integrate our video systems with 3rd party equipment. Such a user can also create in-room controls.

Cisco Spark registered systems

If a video system is registered to Cisco’s cloud service (Cisco Spark), only local users with the INTEGRATOR and ROOMCONTROL user roles are available.
API output

The xPreferences is used to set preferences for the RS-232, Telnet and SSH sessions.

The output modes

- **Terminal**: Line based output for use with line based control systems
- **XML**: XML output for use with control systems that understand XML.
- **JSON**: JSON format is convenient when integrating with web based systems.

The default output mode is terminal. To change this you have to define your preferences for each session individually. Examples in this guide are in terminal mode.

To set output mode to XML, issue the command:

```
xPreferences outputmode xml
```

To revert to terminal mode, issue the command:

```
xPreferences outputmode terminal
```

Example: Layout command in terminal mode

```
xCommand Audio Volume Set Level: 50
```

Example: Layout command in XML mode

```
<Command>
  <Audio>
    <Volume>
      <Set command="True">
        <Level>50</Level>
      </Set>
    </Volume>
  </Audio>
</Command>
```
Using the command line

Help
To get a list of all supported top level commands you can type `?` or `help` after connecting to the device using RS-232 or SSH (Example 1).

Bye
Typing the bye command closes the command line interface.

Example 1:
```
? - User Commands -
help  xcommand  xconfiguration  xdocument  xevent
  xfeedback  xgetxml  xpreferences  xstatus  xtransaction
  bye  echo  log  systemtools
OK
```

API commands

xConfiguration
Configurations are system settings, such as system name and network settings. These are persistent across boots. Refer to “Configurations” on page 11.

xCommand
Commands instruct the codec to execute actions, such as to dial a number or to search the phone book. Refer to “Commands” on page 11.

xStatus
A status contains the current state of the codec, such as connected calls, the status of the gatekeeper registration, connected inputs and output sources. Refer to “Status” on page 11.

xFeedback
The Feedback commands are used to specify what parts of the configuration and status hierarchies to monitor. Feedback is only issued on the RS-232 or SSH session for which it is specified. If you are connecting to the codec with multiple sessions, you have to define feedback individually for each session. Refer to “Feedback mechanism” on page 15.

xPreferences
The xPreferences command is used to set preferences for the RS-232 and SSH sessions. Refer to “API output” on page 8.

Echo <on/off>
If echo is set to On the key inputs are displayed when entering text in a command line interface.
If echo is set to Off user input is not displayed when entering text in a command line interface.

xEvent
The xEvent command returns information on which events are available for feedback. Refer to “Events” on page 14.

xGetxml
The xGetxml request returns an XML document based on the location parameter attached to the request. The elements (or a complete document) matching the expression will be returned. Refer to “Feedback mechanism” on page 15.

Other commands

Systemtools
The systemtools commands are a set of command line tools for administrative control and diagnostics. The commands can be used for advanced troubleshooting together with Cisco technical support. Systemtools are not a part of the programming API. Refer to “The SystemTools commands” on page 202.

Log
The log command is used to enable advanced logs. It is only used for debugging the system.
Command line shortcuts

If your client supports it, there are some timesaving shortcuts you can use:

- Tab-completion to complete the commands and arguments.
- Arrow up and arrow down keys to navigate your command history.
- <CTRL-a>: Jump to the beginning of the line.
- <CTRL-e>: Jump to the end of the line.
- <CTRL-r>: Incremental command history search.
- <CTRL-w>: Erase the current line.

Searching

You can use // to search for elements anywhere in the status or configuration hierarchy (Example 1).

You can also combine multiple //’s (Example 2).

**NOTE:** The search shortcuts work well for inspecting the API, but should not be used in applications. We recommend that you always use the complete paths to avoid command ambiguity when upgrading to newer firmware releases.

Example 1:

List all configurations that include words that starts with OUT and AUDIO:

```
xconfiguration //audio//out
```

```
*c xConfiguration Audio Output InternalSpeaker
Mode: On
```

```
*c xConfiguration Audio Output Line 1 Mode: On
```

```
*c xConfiguration Audio Output Line 1 OutputType: LineOut
```

**end

Example 2:

Get the resolution width of all connected sources for both inputs and outputs:

```
xStatus //vid//res//wid
```

```
*s Video Input Source 1 Resolution Width: 1920
```

```
*s Video Input Source 2 Resolution Width: 0
```

```
*s Video Output Connector 1 Resolution Width: 1920
```

```
*s Video Output Connector 2 Resolution Width: 1920
```

**end

Value types and formats

The system supports the following value types:

- **Integer values:** `<x..y>`
  Defines the valid range for an integer input. `x` = min value, `y` = max value.
- **Literal values:** `<X/Y/.../Z>`
  Defines the possible values for a given configuration.
- **String values:** `<S: x, y>`
  Defines that the valid input for this configuration is a string with minimum length of `x` and maximum length of `y` characters. Strings can have rules that further specify their format and length.

Input values that contain spaces need to be quoted

Any values for configurations and commands containing spaces must be enclosed in quotes. Quotes are not necessary for values without spaces.

Example:

```
Correct: xCommand dial number: "my number contains spaces"
```

```
Correct: xCommand dial number: 12345
```

```
Incorrect: xCommand dial number: my number contains spaces
```

Case sensitivity

All commands are case-insensitive. All of the following commands will work.

```
XCOMMAND DIAL NUMBER: foo@bar.org
```

```
xcommand dial number: foo@bar.org
```

```
xCommand Dial Number: foo@bar.org
```

Commands

Commands instruct the codec to execute actions, such as to dial a number or to search the phone book. All commands start with the prefix xCommand followed by a command path.

Writing xCommand ? on the command line will list all the top level commands.

To view the complete list of commands and their parameters, write xCommand ?? on the command line.

Command arguments are key-value pairs.

When issuing a xCommand, the command consists of one argument and one required parameter. In this document the command usage is described for all xCommands, with both required and optional parameters. The optional parameters are in brackets.

Example: xCommand Dial Number: 123
- xCommand is the command prefix. The command to be executed is Dial.
- The example contains one argument, Number: 123. Number is the key and 123 is its value. The key/value pair is separated with ‘:’.

Configurations

Configurations are system settings that are persistent across boots. Like commands, also configurations are structured in a hierarchy.

Writing xConfiguration ? on the command line lists all the top level configurations.

Writing xConfiguration ?? lists all configurations and their value spaces.

Writing xConfiguration lists all configurations and their current values. To list out only some of the configurations, write xConfiguration followed by one or more parts of the configuration paths.

Example: Set the H323 Authentication Password

Write in:
```
xConfiguration H323 Authentication Password:ThisIsThePassword1234
```

Example: Get the H323 Alias ID

Write in:
```
xConfiguration H323 Authentication Password
```

Result:
```
xConfiguration H323 Authentication Password
*:*xConfiguration H323 Authentication Password:
"*********************"
** end
```

Status

A status contains the current state of the codec, such as connected calls, the status of the gatekeeper registration, connected inputs and output sources.

Writing xStatus ? on the command line lists all top level statuses.

Writing xStatus lists all statuses and their current values.

To list out only some of the statuses, write xstatus followed by the relevant part of the status path (address expression):
```
xStatus <address expression>
```
Multiline commands

Multiline commands are commands that support larger amounts of data as input than the single line commands. Typical use for these commands is to allow for provisioning of in-room control definitions, branding images (base64 encoded), macros, welcome banners, and security certificates.

To issue a multiline command, you start issuing it like any other XAPI command. However, once you enter the command, you have set the API into an input mode where anything you issue on the API after this is treated as input to that command, including line breaks. You now enter the payload for this command in accordance to the input format expected by this command.

When done, finish with a line break ("\n") and a separate line containing just a period ending with a line break (".\n"). The command will now be executed, and you will get a command result with an OK or ERROR depending on the command being executed successfully or not.

The commands that require multiline input format are marked as such in the command descriptions in this guide.

The multiline commands are marked as multiline in xCommand overview section in this guide.

Example: Set up welcome banner text

```
xCommand SystemUnit SignInBanner Set
Hello!
This is the second line of text.
This is the third.
Thank you!
.
OK
*r SignInBannerSetResult (status=OK):
** end
```
Synchronous API calls

The API works asynchronously. This means that there is no guarantee that command responses arrive in the same order as the commands were issued. The codec may also respond with feedback between your request and the response, in form of status changes or events, due to changes on the system.

For some applications it might be crucial to match requests with responses. The API therefore supports a response-tagging mechanism.

This mechanism works with all command types: xcommand, xconfiguration, and xstatus. A typical use of this would be to create a command queue in your application and assign unique IDs to every command sent to the codec. A listener then listens to all feedback from the codec and matches the ID on the response with the corresponding ID in the command queue. This enables matching the original request with the specific response.

Example:

```
xcommand Video Layout Add | resultId="mytag _ 1"
OK
*r VideoLayoutAddResult (status=OK):
  ** LayoutId: 1
  ** resultId: "mytag _ 1"
  ** end
```

In XML mode the resultId is added as an attribute to the top-level XmlDocument:

```
xgetxml /Configuration/Video/Layout/Scaling | resultId="mytag _ 2"
<XmlDoc resultId="mytag _ 2">
  <Configuration item="1">
    <Video item="1">
      <Layout item="1">
        <Scaling item="1" valueSpaceRef="...">Off</Scaling>
      </Layout>
    </Video>
  </Configuration>
</XmlDoc>
```
Events

Event returns information about the events that are available for feedback. This overview presents examples of some the events that are available on the API.

To get an overview of the supported events type ?, ?? or help after xEvent:
- xEvent ? Lists the top level events
- xEvent ?? List all of the available events
- xEvent help Lists the top level events

The result for events depends on the state of the codec.

Example 1: Outgoing Call Indication

Outgoing Call Indication is an event reported when an outgoing call is about to be dialled. Returns the CallId the call has been assigned.

```
*e OutgoingCallIndication CallId: x
** end
```

Example 2: Call Disconnect

Call Disconnect is an event reported when a call is disconnected. Returns the CallId of the disconnected call and reason for the call’s disconnection.

```
*e CallDisconnect CallId: x CauseValue: 0
  CauseString: "" CauseType: LocalDisconnect
  OrigCallDirection: "outgoing"
** end
```

Example 3: Call Successful

Call Successful is an event reported when a call is connected successfully, that is when all channels are up and established.

```
*e CallSuccessful CallId: 132 Protocol: "h223"
  Direction: "outgoing" CallRate: 768 RemoteURI:
  "h223:integratorHQ@company.com" EncryptionIn:
  "Off" EncryptionOut: "Off"
** end
```

Example 4: FECC Action request

FECC Action request is an event reported when far end is sending FECC commands.

```
*e FeccActionInd Id: 132 Req: 1 Pan: 1 PanRight:
  1 Tilt: 0 TiltUp: 0 Zoom: 0 ZoomIn: 0 Focus: 0
  FocusIn: 0 Timeout: 300 VideoSrc: 0 m: 0
** end
```

Example 5: TString message received

TString message received is an event reported when far end has sent a TString message.

```
*e TString CallId: 132 Message: "ee"
** end
```

Example 6: SString message received

SString message received is an event reported when far end has sent a SString message.

```
*e SString String: "ee" Id: 132
** end
```
Feedback mechanism

To build solutions that can reliably keep the state between the application and the codec synchronized, you need to set up a notification system to report the changes in the state of the codec.

The API supports notifications on the following:

- Configuration changes
- Status changes
- Event notifications

These notifications will not be sent unless the user has explicitly told the codec to do so. The user is required to subscribe to all the feedback the application needs. This is done by registering feedback expressions. The way of registering feedback expressions varies according to the connection method used.

When using HTTP, the method of handling feedback differs slightly from what is presented in this section. See the “Feedback from codec over HTTP” on page 19 for more information.

WARNING: A codec may give very much feedback, especially when calls are connected and disconnected. Therefore, you should only subscribe to the feedback that you need.

Never register for all status feedback by issuing xFeedback register /Status. This may give the control application too much data to handle, which may lead to sluggish or unpredictable behavior.

Feedback expressions

The expression used when registering for feedback is a variant of the XPath language. This language describes a way to select nodes from an XML document. CE software contains three main feedback documents:

<table>
<thead>
<tr>
<th>Document</th>
<th>API command</th>
<th>Path</th>
</tr>
</thead>
<tbody>
<tr>
<td>Status</td>
<td>xStatus</td>
<td>/Status</td>
</tr>
<tr>
<td>Configuration</td>
<td>xConfiguration</td>
<td>/Configuration</td>
</tr>
<tr>
<td>Event</td>
<td>xEvent</td>
<td>/Event</td>
</tr>
</tbody>
</table>

The syntax for feedback registering is:

xFeedback register <path>

Never register for all status feedback by issuing xFeedback register /Status.

It is safe to register for all configuration changes using xFeedback register /Configuration, as configuration changes will most likely not occur that often.

By going through some examples, we can see how this information can be used to build feedback expressions. A good way to verify the expressions is to point your browser to http://<ip-address>/getxml?location=path or to execute xgetxml <path> from the terminal, and check that the output matches the nodes you want feedback on.

Example 1: Microphones Mute status.

Terminal query

xStatus Audio Microphones Mute
* s Audio Microphones Mute: Off
** end

Equivalent feedback expression

xFeedback register /Status/Audio/Microphones/Mute

Example 2: Name of all video input connectors.

Terminal query

xConfiguration Video Input Connector Name
* c xConfiguration Video Input Connector 1 Name: "Camera"
* c xConfiguration Video Input Connector 2 Name: "PC"
** end

Equivalent feedback expression

xFeedback register /Configuration/Video/Input/Connector/Name

Example 3: Name of video input connector 2.

Terminal query

xConfiguration Video Input Connector 2 Name
* c xConfiguration Video Input Connector 2 Name: "PC"
** end

Equivalent feedback expression

xFeedback register /Configuration/Video/Input/Connector[@item='2']/Name
Terminal connections

Managing feedback subscriptions

To register, list and deregister feedback expressions you use the command xFeedback and its corresponding sub commands.

The registered expressions are only valid for the currently active connection. If you open two Telnet sessions and register to get feedback in one session, you do not receive feedback in the other session. This also means that if you disconnect from a session, you have to re-register all expressions after reconnecting.

You can register up to 38 expressions.

Feedback output

The feedback output is exactly the same as you get when querying the system using the xConfiguration and xStatus commands. E.g., if you issue the command xStatus Standby Active on the command line the result is:

*s Standby Active: On
** end

If you have registered for feedback on status changes the feedback you get when the system goes to standby-mode will be exactly the same:

*s Standby Active: On
** end

This means that when you are programming against the device you only need to handle one format.

Example: Managing feedback subscriptions

A: Register feedback expressions.
Write in: xFeedback register /Status/Audio
Result: ** end OK
Write in: xFeedback register /Event/CallDisconnect
Result: ** end OK
Write in: xFeedback register /Configuration/Video/MainVideoSource
Result: ** end OK

B: List out currently registered expressions.
Write in: xFeedback list
Result: /Configuration/Video/MainVideoSource
/Event/CallDisconnect
/Status/Audio
** end OK

C: Deregister feedback expressions.
Write in: xFeedback deregister /Event/CallDisconnect
Result: ** end OK
Write in: xFeedback deregister /Status/Audio
Result: ** end OK

D: List the new feedback expressions.
Write in: xFeedback list
Result: /Configuration/Video/MainVideoSource
** end OK
Using HTTP

The codec supports sending commands and configurations over HTTP and HTTPS. It is also possible to retrieve configurations and statuses this way. This interface exposes the same API as the command line, but in XML format.

HTTP XMLAPI Authentication

Access to the XMLAPI requires the user to authenticate using HTTP Basic Access Authentication as a user with ‘ADMIN’ role. Unauthenticated requests prompt a 401 HTTP response containing a Basic Access Authentication challenge. How to use HTTP Basic Access Authentication varies according to the HTTP library or tool that you are using.

If your application will be issuing multiple commands through the API, we highly recommend that you use Session Authentication (see below). The standard basic authentication does a full re-authentication per request, which may affect the performance of your application.

HTTP XMLAPI Session Authentication

Authenticating with your username and password combination for each API request might introduce too much latency for some use-cases. To mitigate this, the API supports a session-based authentication mechanism.

To open a session, issue a POST to http://<ip-address>/xmlapi/session/begin with Basic Access Authentication. The response sets a SessionId-cookie that can be used with subsequent requests.

Note that when using API Session Authentication, it is important to explicitly close the session when you are done. Failing to do so may cause the device to run out of sessions, as there are a limited number of concurrent sessions available, and they do not time out automatically.

URL cheat sheet

The following table contains the main URLs used when accessing the API over HTTP.

<table>
<thead>
<tr>
<th>Method</th>
<th>URL</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>GET</td>
<td>http://&lt;ip-address&gt;/status.xml</td>
<td>Complete status document</td>
</tr>
<tr>
<td>GET</td>
<td>http://&lt;ip-address&gt;/configuration.xml</td>
<td>Complete configuration document</td>
</tr>
<tr>
<td>GET</td>
<td>http://&lt;ip-address&gt;/command.xml</td>
<td>Complete command document</td>
</tr>
<tr>
<td>GET</td>
<td>http://&lt;ip-address&gt;/valuespace.xml</td>
<td>Complete valuespace document</td>
</tr>
<tr>
<td>GET</td>
<td>http://&lt;ip-address&gt;/getxml?location=&lt;path&gt;</td>
<td>Retrieve document based on a path</td>
</tr>
<tr>
<td>POST</td>
<td>http://&lt;ip-address&gt;/putxml</td>
<td>Configurations and commands in HTTP body</td>
</tr>
</tbody>
</table>

Example: Starting a HTTP XMLAPI session

Request:
POST /xmlapi/session/begin HTTP/1.1
Authorization: Basic <Base64 encoded authentication string>

Response:
HTTP/1.1 204 No Content
Server: nginx/1.8.0
Connection: keep-alive
Set-Cookie: SessionId=f08102c8ce5aaf8fba23a7238cc2ef64b990e18bfbb7fb048820ce28955c54; Path=/; HttpOnly

To close a session after use, issue a POST to http://<ip-address>/xmlapi/session/end with the provided cookie.

Example: Closing a HTTP XMLAPI session

Request:
POST /xmlapi/session/end HTTP/1.1
Cookie: SessionId=f08102c8ce5aaf8fba23a7238cc2ef64b990e18bfbb7fb048820ce28955c54

Response:
HTTP/1.1 204 No Content
Server: nginx/1.8.0
Connection: keep-alive
Set-Cookie: SessionId=; Max-Age=0; Path=/; HttpOnly
Getting status and configurations

Example 1: Get all status entries on the codec.
http://<ip-address>/getxml?location=/Status

Example 2: Get just the audio statuses of the codec.
http://<ip-address>/getxml?location=/Status/Audio

Example 3: Get all configurations of the codec.
http://<ip-address>/getxml?location=/Configuration

Example 4: Get all video configurations of the codec.
http://<ip-address>/getxml?location=/Configuration/Video

Sending commands and configurations

Using HTTP POST

When sending configurations and commands to the codec, it is important that the HTTP header Content-Type is set to text/xml, i.e. Content-Type: text/xml. The body of the POST should contain the XML content.

Example 1: Changing the system name.
Response
HTTP/1.1 200 OK
Content-Type: text/xml
Content-Length: 91
<?xml version="1.0"?>
<Command>
  <CameraPositionSetResult item="1" status="OK"/>
</Command>

Request
POST /putxml HTTP/1.1
Content-Type: text/xml

<Configuration>
  <SystemUnit>
    <Name>newName</Name>
  </SystemUnit>
</Configuration>

Example 2: Setting the camera position.
Request
POST /putxml HTTP/1.1
Content-Type: text/xml

<Command>
  <Camera>
    <PositionSet command="True">
      <CameraId>1</CameraId>
      <Pan>200</Pan>
      <Tilt>200</Tilt>
    </PositionSet>
  </Camera>
</Command>

Response
HTTP/1.1 200 OK
Content-Type: text/xml
Content-Length: 91
<?xml version="1.0"?>
<Command>
  <CameraPositionSetResult item="1" status="OK"/>
</Command>
Feedback from codec over HTTP

You can get the device to post http feedback messages (also known as webhooks) on changes to the API state, e.g. statuses, events and configuration updates. The HTTP Post feedback messages will be sent to the specified ServerURL. You can choose between events being posted in either XML or JSON format. You can subscribe to changes on multiple parts of the API by register up to 15 different feedback expressions.

Registering for feedback

The command for registering is `xCommand HttpFeedback Register`. The syntax for this command and its arguments are described in this section.

HttpFeedback Register syntax:

```
xCommand HttpFeedback Register
Expression: <S: 1, 255>
Expression: <S: 1, 255>
Expression: <S: 1, 255>
Expression: <S: 1, 255>
Expression: <S: 1, 255>
Expression: <S: 1, 255>
FeedbackSlot(r): <1..4>
Format: <XML, JSON>
ServerUrl(r): <S: 1, 2048>
```

HttpFeedback Register arguments:

**FeedbackSlot**: The codec can register up to 4 slots of servers requesting HTTP feedback. Set the registering to one of them.

**NOTE**: Avoid using FeedbackSlot 3 in an environment where Cisco TelePresence Management Suite (TMS) is used as TMS uses this feedback slot to register its expressions.

**ServerUrl**: The URL to the HTTP server where you want the codec to post the HTTP feedback messages to.

**Format**: Set the format for the feedback from the HTTP server to XML or JSON.

**Expression 1-15**: The XPath expression specifies which parts of the Status, Configuration or Event documents are monitored. You can have from 1 to 15 XPath expressions.

Register the expressions you want to receive feedback on. See the “Feedback mechanism” on page 15 section for more information about the expression formats.

**Example**: Registering feedback on configuration changes, disconnect events and call status changes.

```
POST /putxml HTTP/1.1
Content-Type: text/xml

<Command>
  <HttpFeedback>
    <Register command="True">
      <FeedbackSlot>1</FeedbackSlot>
      <ServerUrl>http://127.0.0.1/myhttppostscripturl</ServerUrl>
      <Format>XML</Format>
      <Expression item="1">/Configuration</Expression>
      <Expression item="2">/Event/CallDisconnect</Expression>
      <Expression item="3">/Status/Call</Expression>
    </Register>
  </HttpFeedback>
</Command>
```

Feedback output

When the codec notifies the registered HTTP server about changes, the body contains the same XML as when polling. There is however one small difference. The root-node contains an `Identification` node with children that specify the codec from which the notification originated. This means that you can handle multiple codecs with a single HTTP server URL.

**Example**: Audio volume changed.

```
<Configuration xmlns="http://www.company.com/XML/CUIL/2.0">
  <Identification>
    <SystemName>My System Name</SystemName>
    <MACAddress>00:00:de:ad:be:ef</MACAddress>
    <IPAddress>192.168.1.100</IPAddress>
    <ProductType>Cisco Codec</ProductType>
    <ProductID>Cisco Codec SX10</ProductID>
    <SWVersion>CE8.3.1.199465</SWVersion>
    <HWBoard>101401-5 [08]</HWBoard>
    <SerialNumber>PH0000000</SerialNumber>
  </Identification>
  <Audio item="1">
    <Volume item="1">60</Volume>
  </Audio>
</Configuration>
```
Translating from terminal mode to XML

Translating commands
The XML commands maintain the same structure as the terminal commands, but they use a parent-child relationship to describe the hierarchy. You can see this structure in the examples below.

Example 1: Setting up a call.

Terminal
xCommand Dial Number: “12345” Protocol: H323

XML
<Command>
  <Dial command="True">
    <Number>12345</Number>
    <Protocol>H323</Protocol>
  </Dial>
</Command>

Example 2: Assigning volume level

Terminal
xCommand Audio Volume Set Level: 50

XML
<Command>
  <Audio>
    <Volume>
      <Set command="True">
        <Level>50</Level>
      </Set>
    </Volume>
  </Audio>
</Command>

Translating configurations
Translating from xConfiguration to XML is similar to commands, but with the addition of a special attribute item="NN" for specifying the index in arrays.

Example: Configuring the input source type for video input connector 2.

Terminal
xConfiguration Video Input Connector 2
InputSourceType: camera

XML
<Configuration>
  <Video>
    <Input>
      <Connector item="2">
        <InputSourceType>camera</InputSourceType>
      </Connector>
    </Input>
  </Video>
</Configuration>
Dos and don’ts

Here are some best practices when programming the Cisco series API.

DO use complete commands
You should always use complete commands when programming, i.e. always use xConfiguration Video instead of xconf vid. The shortcuts can be used for searches in the API on the command line, but not for programming. The reason for this is that you might end up with ambiguous code when additional commands are added to the API.

DO NOT subscribe to unnecessary feedback
Subscribing to too much feedback may congest the control application. Although the amount of feedback may seem fine in the current version, the amount of feedback may grow in future releases.
Chapter 3

xConfiguration commands
### Description of the xConfiguration commands

In this chapter, you can find a complete list of the xConfiguration commands. The examples show either the default value or an example of a value.

We recommend you visit our web site regularly for updated versions of the manual.

UserManagement configuration

- xConfiguration UserManagement LDAP Mode
- xConfiguration UserManagement LDAP Server Address
- xConfiguration UserManagement LDAP Server Port
- xConfiguration UserManagement LDAP Encryption
- xConfiguration UserManagement LDAP MinimumTLSVersion
- xConfiguration UserManagement LDAP VerifyServerCertificate
- xConfiguration UserManagement LDAP Admin Filter
- xConfiguration UserManagement LDAP Admin Group
- xConfiguration UserManagement LDAP Attribute

Video configuration

- xConfiguration Video DefaultMainSource
- xConfiguration Video Input Connector [1..3] CameraControl Mode
- xConfiguration Video Input Connector [1..3] CameraControl Camerald
- xConfiguration Video Input Connector [1..3] CEC Mode
Audio configuration

xConfiguration Audio DefaultVolume
Define the default volume for the speakers. The volume is set to this value when you switch on or restart the video system. Use the Touch controller to change the volume while the video system is running. You may also use API commands (xCommand Audio Volume) to change the volume while the video system is running, and to reset to default value.

Requires user role: ADMIN, INTEGRATOR, USER
Default value: 50

USAGE:
xConfiguration Audio DefaultVolume: DefaultVolume

where

DefaultVolume: Integer (0..100)
Select a value between 1 and 100. This corresponds to the dB range from -34.5 dB to 15 dB, in steps of 0.5 dB. If set to 0 the audio is switched off.

xConfiguration Audio Microphones Mute Enabled
Define the microphone mute behaviour on the video system.

Requires user role: ADMIN, INTEGRATOR
Default value: True

USAGE:
xConfiguration Audio Microphones Mute Enabled: Enabled

where

Enabled: True/InCallOnly
True: Muting of audio is always available.

InCallOnly: Muting of audio is only available when the device is in a call. When Idle it is not possible to mute the microphone. This is useful when an external telephone service/ audio system is connected via the codec and is to be available when the codec is not in a call. When set to InCallOnly this will prevent the audio-system from being muted by mistake.

xConfiguration Audio SoundsAndAlerts RingTone
Define which ringtone to use for incoming calls.

Requires user role: ADMIN, INTEGRATOR, USER
Default value: Sunrise

USAGE:
xConfiguration Audio SoundsAndAlerts RingTone: RingTone
where

RingTone: Sunrise/Mischief/Ripples/Reflections/Vibes/Delight/Evolve/Playful/Ascent/ Calculation/Mellow/Ringer
Select a ringtone from the list.

xConfiguration Audio SoundsAndAlerts RingVolume
Define the ring volume for incoming calls.

Requires user role: ADMIN, INTEGRATOR, USER
Default value: 50

USAGE:
xConfiguration Audio SoundsAndAlerts RingVolume: RingVolume
where

RingVolume: Integer (0..100)
The value goes in steps of 5 from 0 to 100 (from -34.5 dB to 15 dB). Volume 0 = Off.
xConfiguration Audio Input Microphone [1..3] EchoControl Mode

The echo canceller continuously adjusts itself to the audio characteristics of the room, and compensates for any changes it detects in the audio environment. If the changes in the audio conditions are significant, the echo canceller may take a second or two to re-adjust.

Requires user role: ADMIN, INTEGRATOR
Default value: On

Usage:
`xConfiguration Audio Input Microphone n EchoControl Mode: Mode` where

- `n`: Unique ID that identifies the microphone input. Range: 1..3
- `Mode`: Off/On
  - Off: Turn off the echo control. Recommended if external echo cancellation or playback equipment is used.
  - On: Turn on the echo control. Recommended, in general, to prevent the far end from hearing their own audio. Once selected, echo cancellation is active at all times.

xConfiguration Audio Input Microphone [1..3] EchoControl NoiseReduction

The system has built-in noise reduction, which reduces stationary background noise, for example noise from air-conditioning systems, cooling fans etc. In addition, a high pass filter (Humfilter) reduces very low frequency noise. Noise reduction requires that Audio Input Microphone [n] EchoControl Mode is enabled.

Requires user role: ADMIN, INTEGRATOR
Default value: On

Usage:
`xConfiguration Audio Input Microphone n EchoControl NoiseReduction:` where

- `n`: Unique ID that identifies the microphone input. Range: 1..3
- `NoiseReduction`: Off/On
  - Off: Turn off the noise reduction.
  - On: Turn on the noise reduction. Recommended in the presence of low frequency noise.

xConfiguration Audio Input Microphone [1..3] EchoControl Dereverberation

The system has built-in signal processing to reduce the effect of room reverberation. Dereverberation requires that Audio Input Microphone [n] EchoControl Mode is enabled.

Requires user role: ADMIN, INTEGRATOR
Default value: Off

Usage:
`xConfiguration Audio Input Microphone n EchoControl Dereverberation:` where

- `n`: Unique ID that identifies the microphone input. Range: 1..3
- `Dereverberation`: Off/On
  - Off: Turn off the dereverberation.
  - On: Turn on the dereverberation.

xConfiguration Audio Input Microphone [1..3] Level

Define the audio level of the Microphone input connector. Minimum: 0 (-18 dBu), Maximum: 26 (-44 dBu).

Requires user role: ADMIN, INTEGRATOR
Default value: 14

Usage:
`xConfiguration Audio Input Microphone n Level: Level` where

- `n`: Unique ID that identifies the microphone input. Range: 1..3
- `Level`: Integer (0..26)
  - Select a value between 0 and 26, in steps of 1 dB.
xConfiguration Audio Input Microphone [1..3] Mode
Disable or enable audio on the microphone connector.
Requires user role: ADMIN, INTEGRATOR
Default value: On

**USAGE:**
xConfiguration Audio Input Microphone n Mode: Mode
where
  n: Unique ID that identifies the microphone input. Range: 1..3
  Mode: Off/On
    Off: Disable the audio input microphone connector.
    On: Enable the audio input microphone connector.

xConfiguration Audio Output Line [1] Level
Define the audio level on the line output connector.
Requires user role: ADMIN, INTEGRATOR
Default value: 0

**USAGE:**
xConfiguration Audio Output Line n Level: Level
where
  n: Unique ID that identifies the audio line output. Range: 1..6
  Level: Integer (-24..0)
    Select a value between -24 and 0, in steps of 1 dB.

xConfiguration Audio Output Line [1] Mode
Define the mode for the audio line output.
Requires user role: ADMIN, INTEGRATOR
Default value: On

**USAGE:**
xConfiguration Audio Output Line n Mode: Mode
where
  n: Unique ID that identifies the audio line output. Range: 1..1
  Mode: Off/On
    Off: Disable the audio line output.
    On: Enable the audio line output.

xConfiguration Audio Ultrasound MaxVolume
This setting applies to the Intelligent Proximity feature. Set the maximum volume of the ultrasound pairing message.
Requires user role: ADMIN, INTEGRATOR
Default value: 70

**USAGE:**
xConfiguration Audio Ultrasound MaxVolume: MaxVolume
where
  MaxVolume: Integer (0..90)
    Select a value in the specified range. If set to 0, the ultrasound is switched off.
Cameras configuration

xConfiguration Cameras Camera [1..2] Backlight DefaultMode
This configuration turns backlight compensation on or off. Backlight compensation is useful when there is much light behind the persons in the room. Without compensation the persons will easily appear very dark to the far end.

Requires user role: ADMIN, INTEGRATOR
Default value: Off

**USAGE:**
xConfiguration Cameras Camera \( n \) Backlight DefaultMode: DefaultMode
where
\( n \): Unique ID that identifies the camera. Range: 1..2
DefaultMode: Off/On
- Off: Turn off the camera backlight compensation.
- On: Turn on the camera backlight compensation.

xConfiguration Cameras Camera [1..2] Brightness Mode
Define the camera brightness mode.

Requires user role: ADMIN, INTEGRATOR
Default value: Auto

**USAGE:**
xConfiguration Cameras Camera \( n \) Brightness Mode: Mode
where
\( n \): Unique ID that identifies the camera. Range: 1..2
Mode: Auto/Manual
- Auto: The camera brightness is automatically set by the system.
- Manual: Enable manual control of the camera brightness. The brightness level is set using the Cameras Camera \( n \) Brightness DefaultLevel setting.

xConfiguration Cameras Camera [1..2] Brightness DefaultLevel
Define the brightness level. Requires the Cameras Camera \( n \) Brightness Mode to be set to Manual.

Requires user role: ADMIN, INTEGRATOR
Default value: 20

**USAGE:**
xConfiguration Cameras Camera \( n \) Brightness DefaultLevel: DefaultLevel
where
\( n \): Unique ID that identifies the camera. Range: 1..2
DefaultLevel: Integer (1..31)
- The brightness level.

xConfiguration Cameras Camera [1..2] Focus Mode
Define the camera focus mode.

Requires user role: ADMIN, INTEGRATOR
Default value: Auto

**USAGE:**
xConfiguration Cameras Camera \( n \) Focus Mode: Mode
where
\( n \): Unique ID that identifies the camera. Range: 1..2
Mode: Auto/Manual
- Auto: The camera will do single shot auto focusing once a call is connected and when the view has changed.
- AutoLimited: Not applicable.
- Manual: Turn the autofocus off and adjust the camera focus manually.
**xConfiguration Cameras Camera [1..2] Gamma Mode**

This setting enables gamma corrections, and applies only to cameras which support gamma mode. Gamma describes the nonlinear relationship between image pixels and monitor brightness.

Requires user role: ADMIN, INTEGRATOR

Default value: Auto

**USAGE:**

```cisco
xConfiguration Cameras Camera n Gamma Mode: Mode
```

where

- `n`: Unique ID that identifies the camera. Range: 1..2
- `Mode`: Auto/Manual
  - Auto: Auto is the default and the recommended setting.
  - Manual: In manual mode the gamma value is changed with the gamma level setting, ref. `Cameras Camera [n] Gamma Level`.

**xConfiguration Cameras Camera [1..2] Gamma Level**

By setting the Gamma Level you can select which gamma correction table to use. This setting may be useful in difficult lighting conditions, where changes to the brightness setting does not provide satisfactory results. Requires the `Cameras Camera [n] Gamma Mode` to be set to Manual.

Requires user role: ADMIN, INTEGRATOR

Default value: 0

**USAGE:**

```cisco
xConfiguration Cameras Camera n Gamma Level: Level
```

where

- `n`: Unique ID that identifies the camera. Range: 1..2
- `Level`: Integer (0..7)

  Define the gamma level.

**xConfiguration Cameras Camera [1..2] Mirror**

With Mirror mode (horizontal flip) you can mirror the image on screen. Mirroring applies both to the self-view and the video that is transmitted to the far end.

Requires user role: ADMIN, INTEGRATOR

Default value: Auto

**USAGE:**

```cisco
xConfiguration Cameras Camera n Mirror: Mirror
```

where

- `n`: Unique ID that identifies the camera. Range: 1..2
- `Mirror`: Auto/Off/On
  - Auto: If the camera detects that it is mounted upside down, the image is automatically mirrored. If the camera cannot auto-detect whether it is mounted upside down or not, the image is not changed.
  - Off: Display the image as other people see you.
  - On: Display the image as you see yourself in a mirror.

**xConfiguration Cameras Camera [1..2] Whitebalance Mode**

Define the camera white balance mode.

Requires user role: ADMIN, INTEGRATOR

Default value: Auto

**USAGE:**

```cisco
xConfiguration Cameras Camera n Whitebalance Mode: Mode
```

where

- `n`: Unique ID that identifies the camera. Range: 1..2
- `Mode`: Auto/Manual
  - Auto: The camera will continuously adjust the white balance depending on the camera view.
xConfiguration Cameras Camera [1..2] Whitebalance Level

Define the white balance level. Requires the Cameras Camera [n] Whitebalance Mode to be set to manual.

Requires user role: ADMIN, INTEGRATOR
Default value: 1

**USAGE:**

```
xConfiguration Cameras Camera \[n\] Whitebalance Level: Level
```

where

- \( n \): Unique ID that identifies the camera. Range: 1..2
- \( Level \): Integer (1..16)
  - The white balance level.

xConfiguration Cameras SpeakerTrack Mode

Speaker tracking uses automatic camera framing to select the best camera view based on how many people are in the room. The camera uses an audio tracking technique that finds and captures a close-up of the active speaker.

Requires user role: ADMIN, INTEGRATOR
Default value: Auto

**USAGE:**

```
xConfiguration Cameras SpeakerTrack Mode: Mode
```

where

- \( Mode \): Auto/Off
  - Auto: Speaker tracking is switched on. The system will detect people in the room and automatically select the best camera framing. Users can switch speaker track on or off instantly in the camera control panel on the Touch controller.
  - Off: Speaker tracking is switched off.

xConfiguration Cameras SpeakerTrack Closeup

This setting applies only when the Cameras SpeakerTrack Mode is set to Auto. When a person in the room speaks the system will find the person and select the best camera framing. This is called a closeup and may not include all the persons in the room. If you want all the persons in the room to be in the picture at all times you can turn off the closeup functionality.

Requires user role: ADMIN, INTEGRATOR, USER
Default value: Auto

**USAGE:**

```
xConfiguration Cameras SpeakerTrack Closeup: Closeup
```

where

- \( Closeup \): Auto/Off
  - Auto: The system will zoom in on the person speaking.
  - Off: The system will keep all the persons in the room in the camera framing at all times.

xConfiguration Cameras SpeakerTrack Whiteboard Mode

The Snap to Whiteboard feature extends the speaker tracking functionality, thus you need a camera that supports speaker tracking. When a presenter is standing next to the whiteboard, the camera will capture both the presenter and the whiteboard if the Snap to Whiteboard feature is enabled. If the feature is disabled, only the presenter will be captured. The Snap to Whiteboard feature is set up from the Touch controller or web interface.

Requires user role: ADMIN, INTEGRATOR, USER
Default value: Off

**USAGE:**

```
xConfiguration Cameras SpeakerTrack Whiteboard Mode: Mode
```

where

- \( Mode \): Off/On
  - Off: The Snap to Whiteboard feature is disabled.
  - On: The Snap to Whiteboard feature is enabled.
Conference configuration

xConfiguration Conference AutoAnswer Mode
Define the auto answer mode. Use the Conference AutoAnswer Delay setting if you want the system to wait a number of seconds before answering the call, and use the Conference AutoAnswer Mute setting if you want your microphone to be muted when the call is answered.

Requires user role: ADMIN
Default value: Off

Usage:
xConfiguration Conference AutoAnswer Mode: Mode
where
Mode: Off/On
  Off: You must answer incoming calls manually by pressing the OK key or the green Call key on the remote control, or by tapping Answer on the Touch controller.
  On: The system automatically answers incoming calls, except if you are already in a call. You must always answer or decline incoming calls manually when you are already engaged in a call.

xConfiguration Conference AutoAnswer Mute
Define if the microphone shall be muted when an incoming call is automatically answered. Requires that AutoAnswer Mode is switched on.

Requires user role: ADMIN
Default value: Off

Usage:
xConfiguration Conference AutoAnswer Mute: Mute
where
Mute: Off/On
  Off: The incoming call will not be muted.
  On: The incoming call will be muted when automatically answered.

xConfiguration Conference AutoAnswer Delay
Define how long (in seconds) an incoming call has to wait before it is answered automatically by the system. Requires that AutoAnswer Mode is switched on.

Requires user role: ADMIN
Default value: 0

Usage:
xConfiguration Conference AutoAnswer Delay: Delay
where
Delay: Integer (0..50)
  The auto answer delay (seconds).

xConfiguration Conference DefaultCall Protocol
Define the Default Call Protocol to be used when placing calls from the system.

Requires user role: ADMIN
Default value: Auto

Usage:
xConfiguration Conference DefaultCall Protocol: Protocol
where
Protocol: Auto/H320/H323/Sip/Spark
  Auto: Enables auto-selection of the call protocol based on which protocols are available. If multiple protocols are available, the order of priority is: 1) SIP; 2) H323. If the system cannot register, the auto-selection chooses H323.
  H320: Not supported.
  H323: All calls are set up as H.323 calls.
  Sip: All calls are set up as SIP calls.
  Spark: Reserved for Spark registered systems. Do not use.
xConfiguration Conference DefaultCall Rate

Define the Default Call Rate to be used when placing calls from the system.

Requires user role: ADMIN, INTEGRATOR

Default value: 6000

 USAGE:
 \texttt{xConfiguration Conference DefaultCall Rate: Rate}
 \texttt{where Rate: Integer (64..6000)}
 \texttt{The default call rate (kbps).}

xConfiguration Conference DoNotDisturb DefaultTimeout

This setting determines the default duration of a Do Not Disturb session, i.e. the period when incoming calls are rejected and registered as missed calls. The session can be terminated earlier by using the user interface. The default value is 60 minutes.

Requires user role: ADMIN, INTEGRATOR

Default value: 60

 USAGE:
 \texttt{xConfiguration Conference DoNotDisturb DefaultTimeout: DefaultTimeout}
 \texttt{where DefaultTimeout: Integer (1..1440)}
 \texttt{The number of minutes (maximum 1440 minutes = 24 hours) before the Do Not Disturb session times out automatically.}

xConfiguration Conference Encryption Mode

Define the conference encryption mode. A padlock with the text "Encryption On" or "Encryption Off" displays on screen for a few seconds when the conference starts.

NOTE: If the Encryption Option Key is not installed on the video system, the encryption mode is always Off.

Requires user role: ADMIN

Default value: BestEffort

 USAGE:
 \texttt{xConfiguration Conference Encryption Mode: Mode}
 \texttt{where Mode: Off/On/BestEffort}
 \texttt{Off: The system will not use encryption.}
 \texttt{On: The system will only allow calls that are encrypted.}
 \texttt{BestEffort: The system will use encryption whenever possible.}

> In Point to point calls: If the far end system supports encryption (AES-128), the call will be encrypted. If not, the call will proceed without encryption.

> In MultiSite calls: In order to have encrypted MultiSite conferences, all sites must support encryption. If not, the conference will be unencrypted.

xConfiguration Conference FarEndControl Mode

Lets you decide if the remote side (far end) should be allowed to select your video sources and control your local camera (pan, tilt, zoom).

Requires user role: ADMIN

Default value: On

 USAGE:
 \texttt{xConfiguration Conference FarEndControl Mode: Mode}
 \texttt{where Mode: Off/On}
 \texttt{Off: The far end is not allowed to select your video sources or to control your local camera (pan, tilt, zoom).}
 \texttt{On: Allows the far end to be able to select your video sources and control your local camera (pan, tilt, zoom). You will still be able to control your camera and select your video sources as normal.}
xConfiguration Conference MaxReceiveCallRate

Define the maximum receive bit rate to be used when placing or receiving calls. Note that this is the maximum bit rate for each individual call; use the Conference MaxTotalReceiveCallRate setting to set the aggregated maximum for all simultaneous active calls.

Requires user role: ADMIN
Default value: 6000

**USAGE:**

```
xConfiguration Conference MaxReceiveCallRate: MaxReceiveCallRate
where
  MaxReceiveCallRate: Integer (64..6000)
  The maximum receive call rate (kbps).
```

xConfiguration Conference MaxTransmitCallRate

Define the maximum transmit bit rate to be used when placing or receiving calls. Note that this is the maximum bit rate for each individual call; use the Conference MaxTotalTransmitCallRate setting to set the aggregated maximum for all simultaneous active calls.

Requires user role: ADMIN
Default value: 6000

**USAGE:**

```
xConfiguration Conference MaxTransmitCallRate: MaxTransmitCallRate
where
  MaxTransmitCallRate: Integer (64..6000)
  The maximum transmit call rate (kbps).
```

xConfiguration Conference MaxTotalReceiveCallRate

This configuration applies when using a video system's built-in MultiSite feature (optional) to host a multipoint video conference.

Define the maximum overall receive bit rate allowed. The bit rate will be divided fairly among all active calls at any time. This means that the individual calls will be up-speeded or down-speeded as appropriate when someone leaves or enters a multipoint conference, or when a call is put on hold (suspended) or resumed.

The maximum receive bit rate for each individual call is defined in the Conference MaxReceiveCallRate setting.

Requires user role: ADMIN
Default value: 6000

**USAGE:**

```
xConfiguration Conference MaxTotalReceiveCallRate: MaxTotalReceiveCallRate
where
  MaxTotalReceiveCallRate: Integer (64..6000)
  The maximum receive call rate (kbps).
```

xConfiguration Conference MaxTotalTransmitCallRate

This configuration applies when using a video system's built-in MultiSite feature (optional) to host a multipoint video conference.

Define the maximum overall transmit bit rate allowed. The bit rate will be divided fairly among all active calls at any time. This means that the individual calls will be up-speeded or down-speeded as appropriate when someone leaves or enters a multipoint conference, or when a call is put on hold (suspended) or resumed.

The maximum transmit bit rate for each individual call is defined in the Conference MaxTransmitCallRate setting.

Requires user role: ADMIN
Default value: 6000

**USAGE:**

```
xConfiguration Conference MaxTotalTransmitCallRate: MaxTotalTransmitCallRate
where
  MaxTotalTransmitCallRate: Integer (64..6000)
  The maximum transmit call rate (kbps).
```
xConfiguration Conference MultiStream Mode

The video system supports multistream video for conferences.

Requires user role: ADMIN
Default value: Auto

**USAGE:**
xConfiguration Conference MultiStream Mode: \texttt{Mode}
where

- \texttt{Mode}: Auto/Off
  - Auto: Multistream will be used when the conference infrastructure supports the feature. Minimum versions required: CMS 2.2, CUCM 11.5, VCS X8.7.
  - Off: Multistream is disabled.

---

H323 configuration

xConfiguration H323 Authentication Mode

Define the authentication mode for the H.323 profile.

Requires user role: ADMIN
Default value: Off

**USAGE:**
xConfiguration H323 Authentication Mode: \texttt{Mode}
where

- \texttt{Mode}: Off/On
  - Off: The system will not try to authenticate itself to a H.323 Gatekeeper, but will still try a normal registration.
  - On: If an H.323 Gatekeeper indicates that it requires authentication, the system will try to authenticate itself to the gatekeeper. Requires the H323 Authentication LoginName and H323 Authentication Password settings to be defined on both the codec and the Gatekeeper.

---

xConfiguration H323 Authentication LoginName

The system sends the H323 Authentication Login Name and the H323 Authentication Password to an H.323 Gatekeeper for authentication. The authentication is a one way authentication from the codec to the H.323 Gatekeeper, i.e. the system is authenticated to the gatekeeper. If the H.323 Gatekeeper indicates that no authentication is required, the system will still try to register. Requires the H.323 Authentication Mode to be enabled.

Requires user role: ADMIN
Default value: \\

**USAGE:**
xConfiguration H323 Authentication LoginName: \texttt{"LoginName"}
where

- \texttt{LoginName}: String (0, 50)
  - The authentication login name.
xConfiguration H323 Authentication Password

The system sends the H323 Authentication Login Name and the H323 Authentication Password to an H.323 Gatekeeper for authentication. The authentication is a one way authentication from the codec to the H.323 Gatekeeper, i.e. the system is authenticated to the gatekeeper. If the H.323 Gatekeeper indicates that no authentication is required, the system will still try to register. Requires the H.323 Authentication Mode to be enabled.

Requires user role: ADMIN
Default value: ""

**USAGE:**

```plaintext
xConfiguration H323 Authentication Password: "Password"
```

where

```plaintext
Password: String (0, 50)
```

The authentication password.

xConfiguration H323 CallSetup Mode

Defines whether to use a Gatekeeper or Direct calling when establishing H.323 calls. Direct H.323 calls can be made also when H323 CallSetup Mode is set to Gatekeeper.

Requires user role: ADMIN
Default value: Gatekeeper

**USAGE:**

```plaintext
xConfiguration H323 CallSetup Mode: Mode
```

where

```plaintext
Mode: Direct/Gatekeeper
```

- **Direct**: You can only make an H.323 call by dialing an IP address directly.
- **Gatekeeper**: The system uses a Gatekeeper to make an H.323 call. When choosing this option, the H323 Gatekeeper Address must also be configured.

xConfiguration H323 Encryption KeySize

Define the minimum or maximum key size for the Diffie-Hellman key exchange method, which is used when establishing the Advanced Encryption Standard (AES) encryption key.

Requires user role: ADMIN
Default value: Min1024bit

**USAGE:**

```plaintext
xConfiguration H323 Encryption KeySize: KeySize
```

where

```plaintext
KeySize: Min1024bit/Max1024bit/Min2048bit
```

- **Min1024bit**: The minimum size is 1024 bit.
- **Max1024bit**: The maximum size is 1024 bit.
- **Min2048bit**: The minimum size is 2048 bit.

xConfiguration H323 Gatekeeper Address

Define the IP address of the Gatekeeper. Requires H323 CallSetup Mode to be set to Gatekeeper.

Requires user role: ADMIN
Default value: ""

**USAGE:**

```plaintext
xConfiguration H323 Gatekeeper Address: "Address"
```

where

```plaintext
Address: String (0, 255)
```

A valid IPv4 address, IPv6 address or DNS name.
xConfiguration H323 H323Alias E164

The H.323 Alias E.164 defines the address of the system, according to the numbering plan implemented in the H.323 Gatekeeper. The E.164 alias is equivalent to a telephone number, sometimes combined with access codes.

Requires user role: ADMIN
Default value: ""

USAGE:
  xConfiguration H323 H323Alias E164: "E164"
  where
    E164: String (0, 30)
      The H.323 Alias E.164 address. Valid characters are 0-9, * and #.

xConfiguration H323 H323Alias ID

Define the H.323 Alias ID, which is used to address the system on a H.323 Gatekeeper and will be displayed in the call lists.

Requires user role: ADMIN
Default value: ""

USAGE:
  xConfiguration H323 H323Alias ID: "ID"
  where
    ID: String (0, 49)
      The H.323 Alias ID. Example: *firstname.lastname@company.com*, *My H.323 Alias ID*

xConfiguration H323 NAT Mode

The firewall traversal technology creates a secure path through the firewall barrier, and enables proper exchange of audio/video data when connected to an external video conferencing system (when the IP traffic goes through a NAT router). NOTE: NAT does not work in conjunction with gatekeepers.

Requires user role: ADMIN
Default value: Off

USAGE:
  xConfiguration H323 NAT Mode: Mode
  where
    Mode: Auto/Off/On
      Auto: The system will determine if the H323 NAT Address or the real IP address should be used in signaling. This makes it possible to place calls to endpoints on the LAN as well as endpoints on the WAN. If the H323 NAT Address is wrong or not set, the real IP address will be used.
      Off: The system will signal the real IP address.
      On: The system will signal the configured H323 NAT Address instead of its real IP address in Q.931 and H.245. The NAT server address will be shown in the startup-menu as: "My IP Address: 10.0.2.1". If the H323 NAT Address is wrong or not set, H.323 calls cannot be set up.
**xConfiguration H323 NAT Address**

Define the external/global IP address to the router with NAT support. Packets sent to the router will then be routed to the system. Note that NAT cannot be used when registered to a gatekeeper.

In the router, the following ports must be routed to the system's IP address:

* Port 1720
* Port 5555-6555
* Port 2326-2487

Requires user role: ADMIN  
Default value: ""

**USAGE:**

```plaintext
xConfiguration H323 NAT Address: "Address"
where
    Address: String (0, 64)
    A valid IPv4 address or IPv6 address.
```

---

**Macros configuration**

**xConfiguration Macros Mode**

Macros allow you to write snippets of JavaScript code that can automate parts of your video endpoint, thus creating custom behavior. Use of macros is disabled by default, but the first time you open the Macro Editor you will be asked whether to enable use of macros on the codec. Use this setting when you want to manually enable, or to permanently disable the use of macros on the codec. You can disable the use of macros within the Macro Editor. But this will not permanently disable macros from running, because every time the codec is reset the macros will be re-enabled automatically.

Requires user role: ADMIN  
Default value: Off  

**USAGE:**

```plaintext
xConfiguration Macros Mode: Mode
where
    Mode: Off/On
    Off: Permanently disable the use of macros on this video system.
    On: Enable the use of macros on this video system.
```

---

**xConfiguration Macros AutoStart**

All the macros run in a single process on the video endpoint, called the macro runtime. It should be running by default, but you can choose to stop and start it manually. If you restart the video system, the runtime will automatically start again if auto start is enabled.

Requires user role: ADMIN  
Default value: Off

**USAGE:**

```plaintext
xConfiguration Macros AutoStart: AutoStart
where
    AutoStart: Off/On
    Off: The macro runtime will not start automatically after a restart of the video system.
    On: The macro runtime will start automatically after a restart of the video system.
```
Network configuration

xConfiguration Network [1] DNS Domain Name
The DNS Domain Name is the default domain name suffix which is added to unqualified names. Example: If the DNS Domain Name is "company.com" and the name to lookup is "MyVideoSystem", this will result in the DNS lookup "MyVideoSystem.company.com".

Requires user role: ADMIN, USER
Default value: ""

USAGE:
xConfiguration Network n DNS Domain Name: "Name"
where
n: Index that identifies the network. Range: 1..1
Name: String (0, 64)
The DNS domain name.

Define the network addresses for DNS servers. Up to three addresses may be specified. If the network addresses are unknown, contact your administrator or Internet Service Provider.

Requires user role: ADMIN, USER
Default value: ""

USAGE:
xConfiguration Network n DNS Server m Address: "Address"
where
n: Index that identifies the network. Range: 1..1
m: Index that identifies the DNS server. Maximum three DNS servers are allowed. Range: 1..3
Address: String (0, 64)
A valid IPv4 address or IPv6 address.

xConfiguration Network [1] IEEE8021X Mode
The system can be connected to an IEEE 802.1X LAN network, with a port-based network access control that is used to provide authenticated network access for Ethernet networks.

Requires user role: ADMIN, USER
Default value: Off

USAGE:
xConfiguration Network n IEEE8021X Mode: Mode
where
n: Index that identifies the network. Range: 1..1
Mode: Off/On
Off: The 802.1X authentication is disabled (default).
On: The 802.1X authentication is enabled.

xConfiguration Network [1] IEEE8021X TlsVerify
Verification of the server-side certificate of an IEEE802.1x connection against the certificates in the local CA-list when TLS is used. The CA-list must be uploaded to the video system. This can be done from the web interface.
This setting takes effect only when Network [1] IEEE8021X Eap Tls is enabled (On).

Requires user role: ADMIN, USER
Default value: Off

USAGE:
xConfiguration Network n IEEE8021X TlsVerify: TlsVerify
where
n: Index that identifies the network. Range: 1..1
TlsVerify: Off/On
Off: When set to Off, TLS connections are allowed without verifying the server-side X.509 certificate against the local CA-list. This should typically be selected if no CA-list has been uploaded to the codec.
On: When set to On, the server-side X.509 certificate will be validated against the local CA-list for all TLS connections. Only servers with a valid certificate will be allowed.
**xConfiguration Network [1] IEEE8021X UseClientCertificate**

Authentication using a private key/certificate pair during an IEEE802.1x connection. The authentication X.509 certificate must be uploaded to the video system. This can be done from the web interface.

Requires user role: ADMIN, USER
Default value: Off

**USAGE:**

```
xConfiguration Network n IEEE8021X UseClientCertificate: UseClientCertificate
```

- **n**: Index that identifies the network. Range: 1..1
- **UseClientCertificate**: Off/On
  - Off: When set to Off client-side authentication is not used (only server-side).
  - On: When set to On the client (video system) will perform a mutual authentication TLS handshake with the server.

**xConfiguration Network [1] IEEE8021X Identity**

Define the user name for 802.1X authentication.

Requires user role: ADMIN, USER
Default value: 

**USAGE:**

```
xConfiguration Network n IEEE8021X Identity: Identity
```

- **n**: Index that identifies the network. Range: 1..1
- **Identity**: String (0, 64)
  - The user name for 802.1X authentication.

**xConfiguration Network [1] IEEE8021X Password**

Define the password for 802.1X authentication.

Requires user role: ADMIN, USER
Default value: 

**USAGE:**

```
xConfiguration Network n IEEE8021X Password: Password
```

- **n**: Index that identifies the network. Range: 1..1
- **Password**: String (0, 50)
  - The password for 802.1X authentication.

**xConfiguration Network [1] IEEE8021X AnonymousIdentity**

The 802.1X Anonymous ID string is to be used as unencrypted identity with EAP (Extensible Authentication Protocol) types that support different tunneled identity, like EAP-PEAP and EAP-TTLS. If set, the anonymous ID will be used for the initial (unencrypted) EAP Identity Request.

Requires user role: ADMIN, USER
Default value: 

**USAGE:**

```
xConfiguration Network n IEEE8021X AnonymousIdentity: AnonymousIdentity
```

- **n**: Index that identifies the network. Range: 1..1
- **AnonymousIdentity**: String (0, 64)
  - The 802.1X Anonymous ID string.

Define the Md5 (Message-Digest Algorithm 5) mode. This is a Challenge Handshake Authentication Protocol that relies on a shared secret. Md5 is a Weak security.

Requires user role: ADMIN, USER
Default value: On

**USAGE:**
```
```
where
- `n`: Index that identifies the network. Range: 1..1
- `Md5`: Off/On
  - Off: The EAP-MD5 protocol is disabled.
  - On: The EAP-MD5 protocol is enabled (default).

xConfiguration Network [1] IEEE8021X Eap Ttls

Define the TTLS (Tunneled Transport Layer Security) mode. Authenticates LAN clients without the need for client certificates. Developed by Funk Software and Certicom. Usually supported by Agere Systems, Proxim and Avaya.

Requires user role: ADMIN, USER
Default value: On

**USAGE:**
```
xConfiguration Network [1] IEEE8021X Eap Ttls: Ttls
```
where
- `n`: Index that identifies the network. Range: 1..1
- `Ttls`: Off/On
  - Off: The EAP-TTLS protocol is disabled.
  - On: The EAP-TTLS protocol is enabled (default).

xConfiguration Network [1] IEEE8021X Eap Tls

Enable or disable the use of EAP-TLS (Transport Layer Security) for IEEE802.1x connections. The EAP-TLS protocol, defined in RFC 5216, is considered one of the most secure EAP standards. LAN clients are authenticated using client certificates.

Requires user role: ADMIN, USER
Default value: On

**USAGE:**
```
xConfiguration Network [1] IEEE8021X Eap Tls: Tls
```
where
- `n`: Index that identifies the network. Range: 1..1
- `Tls`: Off/On
  - Off: The EAP-TLS protocol is disabled.
  - On: The EAP-TLS protocol is enabled (default).

xConfiguration Network [1] IEEE8021X Eap Peap

Define the Peap (Protected Extensible Authentication Protocol) mode. Authenticates LAN clients without the need for client certificates. Developed by Microsoft, Cisco and RSA Security.

Requires user role: ADMIN, USER
Default value: On

**USAGE:**
```
```
where
- `n`: Index that identifies the network. Range: 1..1
- `Peap`: Off/On
  - Off: The EAP-PEAP protocol is disabled.
  - On: The EAP-PEAP protocol is enabled (default).
xConfiguration Network [1] IPStack

Select if the system should use IPv4, IPv6, or dual IP stack, on the network interface. NOTE: After changing this setting you may have to wait up to 30 seconds before it takes effect.

Requires user role: ADMIN, USER
Default value: Dual

**USAGE:**

```
xConfiguration Network n IPStack: IPStack
```

where

- **n**: Index that identifies the network. Range: 1..1
- **IPStack**: Dual/IPv4/IPv6
  - Dual: When set to Dual, the network interface can operate on both IP versions at the same time, and can have both an IPv4 and an IPv6 address at the same time.
  - IPv4: When set to IPv4, the system will use IPv4 on the network interface.
  - IPv6: When set to IPv6, the system will use IPv6 on the network interface.

xConfiguration Network [1] IPv4 Assignment

Define how the system will obtain its IPv4 address, subnet mask and gateway address. This setting applies only to systems on IPv4 networks.

Requires user role: ADMIN, USER
Default value: DHCP

**USAGE:**

```
xConfiguration Network n IPv4 Assignment: Assignment
```

where

- **n**: Index that identifies the network. Range: 1..1
- **Assignment**: Static/DHCP
  - Static: The addresses must be configured manually using the Network IPv4 Address, Network IPv4 Gateway and Network IPv4 SubnetMask settings (static addresses).
  - DHCP: The system addresses are automatically assigned by the DHCP server.

xConfiguration Network [1] IPv4 Address

Define the static IPv4 network address for the system. Applicable only when Network IPv4 Assignment is set to Static.

Requires user role: ADMIN, USER
Default value: ""

**USAGE:**

```
xConfiguration Network n IPv4 Address: "Address"
```

where

- **n**: Index that identifies the network. Range: 1..1
- **Address**: String (0, 64)
  - A valid IPv4 address.

xConfiguration Network [1] IPv4 Gateway

Define the IPv4 network gateway address. Applicable only when the Network IPv4 Assignment is set to Static.

Requires user role: ADMIN, USER
Default value: ""

**USAGE:**

```
xConfiguration Network n IPv4 Gateway: "Gateway"
```

where

- **n**: Index that identifies the network. Range: 1..1
- **Gateway**: String (0, 64)
  - A valid IPv4 address.
xConfiguration Network [1] IPv4 SubnetMask
Define the IPv4 network subnet mask. Applicable only when the Network IPv4 Assignment is set to Static.

Requires user role: ADMIN, USER
Default value: ""

**USAGE:**
xConfiguration Network n IPv4 SubnetMask: "SubnetMask"

where

- n: Index that identifies the network. Range: 1..1
- SubnetMask: String (0, 64)
  A valid IPv4 address.

xConfiguration Network [1] IPv6 Assignment
Define how the system will obtain its IPv6 address and the default gateway address. This setting applies only to systems on IPv6 networks.

Requires user role: ADMIN, USER
Default value: Autoconf

**USAGE:**
xConfiguration Network n IPv6 Assignment: Assignment

where

- n: Index that identifies the network. Range: 1..1
- Assignment: Static/DHCPv6/Autoconf
  - Static: The codec and gateway IP addresses must be configured manually using the Network IPv6 Address and Network IPv6 Gateway settings. The options, for example NTP and DNS server addresses, must either be set manually or obtained from a DHCPv6 server. The Network IPv6 DHCPOptions setting determines which method to use.
  - DHCPv6: All IPv6 addresses, including options, will be obtained from a DHCPv6 server. See RFC 3315 for a detailed description. The Network IPv6 DHCPOptions setting will be ignored.
  - Autoconf: Enable IPv6 stateless autoconfiguration of the IPv6 network interface. See RFC 4862 for a detailed description. The options, for example NTP and DNS server addresses, must either be set manually or obtained from a DHCPv6 server. The Network IPv6 DHCPOptions setting determines which method to use.

xConfiguration Network [1] IPv6 Address
Define the static IPv6 network address for the system. Applicable only when the Network IPv6 Assignment is set to Static.

Requires user role: ADMIN, USER
Default value: ""

**USAGE:**
xConfiguration Network n IPv6 Address: "Address"

where

- n: Index that identifies the network. Range: 1..1
- Address: String (0, 64)
  A valid IPv6 address including a network mask. Example: 2001:DB8::/48

Define the IPv6 network gateway address. This setting is only applicable when the Network IPv6 Assignment is set to Static.

Requires user role: ADMIN, USER
Default value: ""

**USAGE:**
xConfiguration Network n IPv6 Gateway: "Gateway"

where

- n: Index that identifies the network. Range: 1..1
- Gateway: String (0, 64)
  A valid IPv6 address.
xConfiguration Network [1] IPv6 DHCPOptions
Retrieves a set of DHCP options, for example NTP and DNS server addresses, from a DHCPv6 server.
Requires user role: ADMIN, USER
Default value: On

**USAGE:**
xConfiguration Network n IPv6 DHCPOptions: DHCPOptions
where
  n: Index that identifies the network. Range: 1..1
  DHCPOptions: Off/On
    Off: Disable the retrieval of DHCP options from a DHCPv6 server.
    On: Enable the retrieval of a selected set of DHCP options from a DHCPv6 server.

xConfiguration Network [1] MTU
Define the Ethernet MTU (Maximum Transmission Unit) size. The MTU size must be supported by your network infrastructure. The minimum size is 576 for IPv4 and 1280 for IPv6.
Requires user role: ADMIN, USER
Default value: 1500

**USAGE:**
xConfiguration Network n MTU: MTU
where
  n: Index that identifies the network. Range: 1..1
  MTU: Integer (576..1500)
    Set a value for the MTU (bytes).

xConfiguration Network [1] QoS Mode
The QoS (Quality of Service) is a method which handles the priority of audio, video and data in the network. The QoS settings must be supported by the infrastructure. Diffserv (Differentiated Services) is a computer networking architecture that specifies a simple, scalable and coarse-grained mechanism for classifying, managing network traffic and providing QoS priorities on modern IP networks.
Requires user role: ADMIN, USER
Default value: Diffserv

**USAGE:**
xConfiguration Network n QoS Mode: Mode
where
  n: Index that identifies the network. Range: 1..1
  Mode: Off/Diffserv
    Off: No QoS method is used.
    Diffserv: When you set the QoS Mode to Diffserv, the Network QoS Diffserv Audio, Network QoS Diffserv Video, Network QoS Diffserv Data, Network QoS Diffserv Signalling, Network QoS Diffserv ICMPv6 and Network QoS Diffserv NTP settings are used to prioritize packets.
xConfiguration Network [1] QoS Diffserv Audio

This setting will only take effect if Network QoS Mode is set to Diffserv.
Define which priority Audio packets should have in the IP network.
The priority for the packets ranges from 0 to 63 - the higher the number, the higher the priority. The recommended class for Audio is CS4, which equals the decimal value 32. If in doubt, contact your network administrator.
The priority set here might be overridden when packets are leaving the network controlled by the local network administrator.

Requires user role: ADMIN, USER
Default value: 0

**USAGE:**

```
xConfiguration Network n QoS Diffserv Audio: Audio
```

where

- `n`: Index that identifies the network. Range: 1..1
- `Audio`: Integer (0..63)

Set the priority of the audio packets in the IP network - the higher the number, the higher the priority. The default value is 0 (best effort).

---

xConfiguration Network [1] QoS Diffserv Video

This setting will only take effect if Network QoS Mode is set to Diffserv.
Define which priority Video packets should have in the IP network. The packets on the presentation channel (shared content) are also in the Video packet category. The priority for the packets ranges from 0 to 63 - the higher the number, the higher the priority. The recommended class for Video is CS4, which equals the decimal value 32. If in doubt, contact your network administrator.
The priority set here might be overridden when packets are leaving the network controlled by the local network administrator.

Requires user role: ADMIN, USER
Default value: 0

**USAGE:**

```
xConfiguration Network n QoS Diffserv Video: Video
```

where

- `n`: Index that identifies the network. Range: 1..1
- `Video`: Integer (0..63)

Set the priority of the video packets in the IP network - the higher the number, the higher the priority. The default value is 0 (best effort).
xConfiguration Network [1] QoS DiffServ Data
This setting will only take effect if Network QoS Mode is set to DiffServ.
Define which priority Data packets should have in the IP network.
The priority for the packets ranges from 0 to 63 - the higher the number, the higher the priority. The recommended value for Data is 0, which means best effort. If in doubt, contact your network administrator.
The priority set here might be overridden when packets are leaving the network controlled by the local network administrator.
Requires user role: ADMIN, USER
Default value: 0

 USAGE:
xConfiguration Network n QoS Diffserv Data: Data
  where
  n: Index that identifies the network. Range: 1..1
  Data: Integer (0..63)
  Set the priority of the data packets in the IP network - the higher the number, the higher the priority. The default value is 0 (best effort).

xConfiguration Network [1] QoS DiffServ Signalling
This setting will only take effect if Network QoS Mode is set to DiffServ.
Define which priority Signalling packets that are deemed critical (time-sensitive) for the real-time operation should have in the IP network.
The priority for the packets ranges from 0 to 63 - the higher the number, the higher the priority. The recommended class for Signalling is CS3, which equals the decimal value 24. If in doubt, contact your network administrator.
The priority set here might be overridden when packets are leaving the network controlled by the local network administrator.
Requires user role: ADMIN, USER
Default value: 0

 USAGE:
xConfiguration Network n QoS Diffserv Signalling: Signalling
  where
  n: Index that identifies the network. Range: 1..1
  Signalling: Integer (0..63)
  Set the priority of the signalling packets in the IP network - the higher the number, the higher the priority. The default value is 0 (best effort).
xConfiguration Network [1] QoS Diffserv ICMPv6

This setting will only take effect if Network QoS Mode is set to Diffserv.
Define which priority ICMPv6 packets should have in the IP network.
The priority for the packets ranges from 0 to 63 - the higher the number, the higher the priority.
The recommended value for ICMPv6 is 0, which means best effort. If in doubt, contact your network administrator.
The priority set here might be overridden when packets are leaving the network controlled by the local network administrator.

Requires user role: ADMIN, USER
Default value: 0

**USAGE:**

```
xConfiguration Network n QoS Diffserv ICMPv6: ICMPv6
```

where

- **n**: Index that identifies the network. Range: 1..1
- **ICMPv6**: Integer (0..63)

Set the priority of the ICMPv6 packets in the IP network - the higher the number, the higher the priority. The default value is 0 (best effort).

---

xConfiguration Network [1] QoS Diffserv NTP

This setting will only take effect if Network QoS Mode is set to Diffserv.
Define which priority NTP packets should have in the IP network.
The priority for the packets ranges from 0 to 63 - the higher the number, the higher the priority.
The recommended value for NTP is 0, which means best effort. If in doubt, contact your network administrator.
The priority set here might be overridden when packets are leaving the network controlled by the local network administrator.

Requires user role: ADMIN, USER
Default value: 0

**USAGE:**

```
xConfiguration Network n QoS Diffserv NTP: NTP
```

where

- **n**: Index that identifies the network. Range: 1..1
- **NTP**: Integer (0..63)

Set the priority of the NTP packets in the IP network - the higher the number, the higher the priority. The default value is 0 (best effort).

---

Define which IP addresses (IPv4/IPv6) are allowed for remote access to the codec from SSH/HTTP/HTTPS. Multiple IP addresses are separated by a white space.
A network mask (IP range) is specified by <ip address>/N, where N is 1-32 for IPv4, and N is 1-128 for IPv6. The /N is a common indication of a network mask where the first N bits are set. Thus 192.168.0.0/24 would match any address starting with 192.168.0, since these are the first 24 bits in the address.

Requires user role: ADMIN, USER
Default value: ""

**USAGE:**

```
xConfiguration Network n RemoteAccess Allow: "Allow"
```

where

- **n**: Index that identifies the network. Range: 1..1
- **Allow**: String (0, 255)

A valid IPv4 address or IPv6 address.
xConfiguration Network [1] Speed

Define the Ethernet link speed. We recommend not to change from the default value, which negotiates with the network to set the speed automatically. If you do not use autonegotiation, make sure that the speed you choose is supported by the closest switch in your network infrastructure.

Requires user role: ADMIN, USER
Default value: Auto

USAGE:

```plaintext
xConfiguration Network [n] Speed: Speed
```

where

- `n`: Index that identifies the network. Range: 1..1
- `Speed`: Auto/10half/10full/100half/100full/1000full
  - Auto: Autonegotiate link speed.
  - 10half: Force link to 10 Mbps half-duplex.
  - 10full: Force link to 10 Mbps full-duplex.
  - 100half: Force link to 100 Mbps half-duplex.
  - 100full: Force link to 100 Mbps full-duplex.
  - 1000full: Force link to 1 Gbps full-duplex.

xConfiguration Network [1] VLAN Voice Mode

Define the VLAN voice mode. The VLAN Voice Mode will be set to Auto automatically if you have Cisco UCM (Cisco Unified Communications Manager) as provisioning infrastructure. Note that Auto mode will NOT work if the NetworkServices CDP Mode setting is Off.

Requires user role: ADMIN, USER
Default value: Auto

USAGE:

```plaintext
xConfiguration Network [n] VLAN Voice Mode: Mode
```

where

- `n`: Index that identifies the network. Range: 1..1
- `Mode`: Auto/Manual/Off
  - Auto: The Cisco Discovery Protocol (CDP), if available, assigns an id to the voice VLAN. If CDP is not available, VLAN is not enabled.
  - Manual: The VLAN ID is set manually using the Network VLAN Voice VlanId setting. If CDP is available, the manually set value will be overruled by the value assigned by CDP.
  - Off: VLAN is not enabled.

xConfiguration Network [1] VLAN Voice VlanId

Define the VLAN voice ID. This setting will only take effect if Network VLAN Voice Mode is set to Manual.

Requires user role: ADMIN, USER
Default value: 1

USAGE:

```plaintext
xConfiguration Network [n] VLAN Voice VlanId: VlanId
```

where

- `n`: Index that identifies the network. Range: 1..1
- `VlanId`: Integer (1..4094)
  - Set the VLAN voice ID.
NetworkServices configuration

xConfiguration NetworkServices CDP Mode
Enable or disable the CDP (Cisco Discovery Protocol) daemon. Enabling CDP will make the endpoint report certain statistics and device identifiers to a CDP-enabled switch. If CDP is disabled, the Network VLAN Voice Mode: Auto setting will not work.

Requires user role: ADMIN
Default value: On

USAGE:
xConfiguration NetworkServices CDP Mode: Mode where
   Mode: Off/On
   Off: The CDP daemon is disabled.
   On: The CDP daemon is enabled.

xConfiguration NetworkServices H323 Mode
Define whether the system should be able to place and receive H.323 calls or not.

Requires user role: ADMIN
Default value: Off

USAGE:
xConfiguration NetworkServices H323 Mode: Mode where
   Mode: Off/On
   Off: Disable the possibility to place and receive H.323 calls.
   On: Enable the possibility to place and receive H.323 calls (default).

xConfiguration NetworkServices HTTP Mode
Define whether or not to allow access to the video system using the HTTP or HTTPS (HTTP Secure) protocols. Note that the video system’s web interface use HTTP or HTTPS. If this setting is switched Off, you cannot use the web interface.

If you need extra security (encryption and decryption of requests, and pages that are returned by the web server), allow only HTTPS.

Requires user role: ADMIN
Default value: HTTP+HTTPS

USAGE:
xConfiguration NetworkServices HTTP Mode: Mode where
   Mode: Off/HTTP+HTTPS/HTTPS
   Off: Access to the video system not allowed via HTTP or HTTPS.
   HTTP+HTTPS: Access to the video system allowed via both HTTP and HTTPS.
   HTTPS: Access to the video system allowed via HTTPS, but not via HTTP.

xConfiguration NetworkServices HTTP Proxy Allowed
The HTTP Proxy Settings are available from the user interface when the system is provisioned to Cisco Spark. The HTTP proxy settings makes it possible to onboard a video system behind a HTTP proxy to Spark.

Requires user role: ADMIN, USER
Default value: True

USAGE:
xConfiguration NetworkServices HTTP Proxy Allowed: Allowed where
   Allowed: False/True
   False: The HTTP proxy settings are not available from the Cisco Spark setup wizard.
   True: The HTTP proxy settings are available from the Cisco Spark setup wizard.
xConfiguration NetworkServices HTTP Proxy LoginName

This is the user name part of the credentials for authentication towards the HTTP proxy. Requires that the NetworkServices HTTP Proxy Mode is set to Manual.

Requires user role: ADMIN, USER
Default value: ""

USAGE:
```
xConfiguration NetworkServices HTTP Proxy LoginName: "LoginName"
```
where
- **LoginName**: String (0, 80)
  - The authentication login name.

xConfiguration NetworkServices HTTP Proxy Password

This is the password part of the credentials for authentication towards the HTTP proxy. Requires that the NetworkServices HTTP Proxy Mode is set to Manual.

Requires user role: ADMIN, USER
Default value: ""

USAGE:
```
xConfiguration NetworkServices HTTP Proxy Password: "Password"
```
where
- **Password**: String (0, 64)
  - The authentication password.

xConfiguration NetworkServices HTTP Proxy Mode

The HTTP proxy for Cisco Spark can be set up manually or turned off.

Requires user role: ADMIN, USER
Default value: Off

USAGE:
```
xConfiguration NetworkServices HTTP Proxy Mode: Mode
```
where
- **Mode**: Manual/Off
  - Manual: Add the address of the proxy server in the NetworkServices HTTP Proxy URL setting. Optionally, you can add the login name HTTP proxy login name and password in the NetworkServices HTTP Proxy LoginName/Password settings.
  - Off: The HTTP proxy mode is turned off.

xConfiguration NetworkServices HTTP Proxy Url

Set the URL of the HTTP proxy server. Requires that the NetworkServices HTTP Proxy Mode is set to Manual.

Requires user role: ADMIN, USER
Default value: ""

USAGE:
```
xConfiguration NetworkServices HTTP Proxy Url: "Url"
```
where
- **Url**: String (0, 255)
  - The URL for the HTTP proxy server.
xConfiguration NetworkServices HTTPS Server MinimumTLSVersion
Set the lowest version of the TLS (Transport Layer Security) protocol that is allowed.
Requires user role: ADMIN
Default value: TLSv1.1

**USAGE:**
xConfiguration NetworkServices HTTPS Server MinimumTLSVersion: MinimumTLSVersion
where
- MinimumTLSVersion: TLSv1.1/TLSv1.2
  - TLSv1.1: Support of TLS version 1.1 or higher.
  - TLSv1.2: Support of TLS version 1.2 or higher.

xConfiguration NetworkServices HTTPS StrictTransportSecurity
The HTTP Strict Transport Security header lets a web site inform the browser that it should never load the site using HTTP and should automatically convert all attempts to access the site using HTTP to HTTPS requests instead.

Requires user role: ADMIN
Default value: Off

**USAGE:**
xConfiguration NetworkServices HTTPS StrictTransportSecurity: StrictTransportSecurity
where
- StrictTransportSecurity: Off/On
  - Off: The HTTP strict transport security feature is disabled.
  - On: The HTTP strict transport security feature is enabled.

xConfiguration NetworkServices HTTPS VerifyServerCertificate
When the video system connects to an external HTTPS server (like a phone book server or an external manager), this server will present a certificate to the video system to identify itself.

Requires user role: ADMIN
Default value: Off

**USAGE:**
xConfiguration NetworkServices HTTPS VerifyServerCertificate: VerifyServerCertificate
where
- VerifyServerCertificate: Off/On
  - Off: Do not verify server certificates.
  - On: Requires the system to verify that the server certificate is signed by a trusted Certificate Authority (CA). This requires that a list of trusted CAs are uploaded to the system in advance.

xConfiguration NetworkServices HTTPS VerifyClientCertificate
When the video system connects to a HTTPS client (like a web browser), the client can be asked to present a certificate to the video system to identify itself.

Requires user role: ADMIN
Default value: Off

**USAGE:**
xConfiguration NetworkServices HTTPS VerifyClientCertificate: VerifyClientCertificate
where
- VerifyClientCertificate: Off/On
  - Off: Do not verify client certificates.
  - On: Requires the client to present a certificate that is signed by a trusted Certificate Authority (CA). This requires that a list of trusted CAs are uploaded to the system in advance.
xConfiguration NetworkServices NTP Mode

The Network Time Protocol (NTP) is used to synchronize the system's time and date to a reference time server. The time server will be queried regularly for time updates.

Requires user role: ADMIN
Default value: Auto

USAGE:
```
xConfiguration NetworkServices NTP Mode: Mode
```

where
- **Mode**: Auto/Manual/Off
  - Auto: The system will use an NTP server for time reference. As default, the server address will be obtained from the network's DHCP server. If a DHCP server is not used, or if the DHCP server does not provide an NTP server address, the NTP server address that is specified in the NetworkServices NTP Server[n] Address setting will be used.
  - Manual: The system will use the NTP server that is specified in the NetworkServices NTP Server[n] Address setting for time reference.
  - Off: The system will not use an NTP server. The NetworkServices NTP Server[n] Address setting will be ignored.

xConfiguration NetworkServices NTP Server [1..3] Address

The address of the NTP server that will be used when NetworkServices NTP Mode is set to Manual, and when NetworkServices NTP Mode is set to Auto and no address is supplied by a DHCP server.

Requires user role: ADMIN
Default value: 0.tandberg.pool.ntp.org

USAGE:
```
xConfiguration NetworkServices NTP Server n Address: "Address"
```

where
- **n**: Unique ID that identifies the NTP server. Range: 1..3
- **Address**: String (0, 255)
  - A valid IPv4 address, IPv6 address or DNS name.

xConfiguration NetworkServices SIP Mode

Define whether the system should be able to place and receive SIP calls or not.

Requires user role: ADMIN
Default value: On

USAGE:
```
xConfiguration NetworkServices SIP Mode: Mode
```

where
- **Mode**: Off/On
  - Off: Disable the possibility to place and receive SIP calls.
  - On: Enable the possibility to place and receive SIP calls (default).

xConfiguration NetworkServices SNMP Mode

SNMP (Simple Network Management Protocol) is used in network management systems to monitor network-attached devices (routers, servers, switches, projectors, etc) for conditions that warrant administrative attention. SNMP exposes management data in the form of variables on the managed systems, which describe the system configuration. These variables can then be queried (set to ReadOnly) and sometimes set (set to ReadWrite) by managing applications.

Requires user role: ADMIN
Default value: ReadOnly

USAGE:
```
xConfiguration NetworkServices SNMP Mode: Mode
```

where
- **Mode**: Off/ReadOnly/ReadWrite
  - Off: Disable the SNMP network service.
  - ReadOnly: Enable the SNMP network service for queries only.
  - ReadWrite: Enable the SNMP network service for both queries and commands.
xConfiguration NetworkServices SNMP Host [1..3] Address
Define the address of up to three SNMP Managers. The system’s SNMP Agent (in the codec) responds to requests from SNMP Managers (a PC program etc.), for example about system location and system contact. SNMP traps are not supported.

Requires user role: ADMIN
Default value: ""

**USAGE:**
xConfiguration NetworkServices SNMP Host \[\text{n}\] Address: "Address"

where
\[\text{n}\]: Identifies the SNMP host. Maximum three SNMP hosts are allowed. Range: 1..3

Address: String (0, 255)
A valid IPv4 address, IPv6 address or DNS name.

xConfiguration NetworkServices SNMP CommunityName
Define the name of the Network Services SNMP Community. SNMP Community names are used to authenticate SNMP requests. SNMP requests must have a password (case sensitive) in order to receive a response from the SNMP Agent in the codec. The default password is "public". If you have the Cisco TelePresence Management Suite (TMS) you must make sure the same SNMP Community is configured there too. NOTE: The SNMP Community password is case sensitive.

Requires user role: ADMIN
Default value: ""

**USAGE:**
xConfiguration NetworkServices SNMP CommunityName: "CommunityName"

where

CommunityName: String (0, 50)
The SNMP community name.

xConfiguration NetworkServices SNMP SystemContact
Define the name of the Network Services SNMP System Contact.

Requires user role: ADMIN
Default value: ""

**USAGE:**
xConfiguration NetworkServices SNMP SystemContact: "SystemContact"

where

SystemContact: String (0, 50)
The name of the SNMP system contact.

xConfiguration NetworkServices SNMP SystemLocation
Define the name of the Network Services SNMP System Location.

Requires user role: ADMIN
Default value: ""

**USAGE:**
xConfiguration NetworkServices SNMP SystemLocation: "SystemLocation"

where

SystemLocation: String (0, 50)
The name of the SNMP system location.

xConfiguration NetworkServices SSH Mode
SSH (or Secure Shell) protocol can provide secure encrypted communication between the codec and your local computer.

Requires user role: ADMIN
Default value: On

**USAGE:**
xConfiguration NetworkServices SSH Mode: Mode

where

Mode: Off/On
Off: The SSH protocol is disabled.
On: The SSH protocol is enabled.
xConfiguration NetworkServices UPnP Mode

Fully disable UPnP (Universal Plug and Play), or enable UPnP for a short time period after the video system has been switched on or restarted.

The default operation is that UPnP is enabled when you switch on or restart the video system. Then UPnP is automatically disabled after the timeout period that is defined in the NetworkServices UPnP Timeout setting. Use the video system’s web interface to set the timeout.

When UPnP is enabled, the video system advertises its presence on the network. The advertisement permits a Touch controller to discover video systems automatically, and you do not need to manually enter the video system’s IP address in order to pair the Touch controller.

Requires user role: ADMIN
Default value: On

USAGE:

xConfiguration NetworkServices UPnP Mode: Mode
where

Mode: <Off/On>

Off: UPnP is disabled. The video system does not advertise its presence, and you have to enter the video system’s IP address manually in order to pair a Touch controller to the video system.

On: UPnP is enabled. The video system advertises its presence until the timeout period expires.

Peripherals configuration

xConfiguration Peripherals Profile Cameras

Define the number of cameras that are expected to be connected to the video system. This information is used by the video system's diagnostics service. If the number of connected cameras does not match this setting, the diagnostics service will report it as an inconsistency.

Requires user role: ADMIN, INTEGRATOR
Default value: Minimum1

USAGE:

xConfiguration Peripherals Profile Cameras: Cameras
where

Cameras: NotSet/Minimum1/0/1/2/3/4/5/6/7

NotSet: No camera check is performed.
Minimum1: At least one camera should be connected to the video system.
0-7: Select the number of cameras that are expected to be connected to the video system.

xConfiguration NetworkServices WelcomeText

Choose which information the user should see when logging on to the codec through SSH.

Requires user role: ADMIN
Default value: On

USAGE:

xConfiguration NetworkServices WelcomeText: WelcomeText
where

WelcomeText: Off/On

Off: The welcome text is: Login successful

On: The welcome text is: Welcome to <system name>; Software version; Software release date; Login successful.
xConfiguration Peripherals Profile ControlSystems

Define if a third-party control system, for example Crestron or AMX, is expected to be connected to the video system. This information is used by the video system’s diagnostics service. If the number of connected control systems does not match this setting, the diagnostics service will report it as an inconsistency. Note that only one third-party control system is supported.

If set to 1, the control system must send heartbeats to the video system using xCommand Peripherals Pair and HeartBeat commands. Failing to do so will cause the in-room control extensions to show a warning that the video system has lost connectivity to the control system.

Requires user role: ADMIN, INTEGRATOR
Default value: NotSet

**USAGE:**

```
xConfiguration Peripherals Profile ControlSystems: ControlSystems
```

where

```
ControlSystems: 1/NotSet
    1: One third-party control system should be connected to the video system.
    NotSet: No check for a third-party control system is performed.
```

xConfiguration Peripherals Profile TouchPanels

Define the number of Cisco Touch controllers that are expected to be connected to the video system. This information is used by the video system’s diagnostics service. If the number of connected Touch controllers does not match this setting, the diagnostics service will report it as an inconsistency.

Requires user role: ADMIN, INTEGRATOR
Default value: Minimum1

**USAGE:**

```
xConfiguration Peripherals Profile TouchPanels: TouchPanels
```

where

```
TouchPanels: NotSet/Minimum1/0/1/2/3/4/5
    NotSet: No touch panel check is performed.
    Minimum1: At least one Cisco Touch controller should be connected to the video system.
    0-5: Select the number of Touch controllers that are expected to be connected to the video system. Note that only one Cisco Touch controller is officially supported.
```

Phonebook configuration

xConfiguration Phonebook Server [1] ID

Define a name for the external phone book.

Requires user role: ADMIN
Default value: ""

**USAGE:**

```
xConfiguration Phonebook Server [n] ID: "ID"
```

where

```
    n: Unique ID that identifies the phonebook server. Range: 1..1
    ID: String (0, 64)
```

The name for the external phone book.

xConfiguration Phonebook Server [1] Type

Select the phonebook server type.

Requires user role: ADMIN
Default value: Off

**USAGE:**

```
xConfiguration Phonebook Server [n] Type: Type
```

where

```
    n: Unique ID that identifies the phonebook server. Range: 1..1
    Type: Off/CUCM/Spark/TMS/VCS
```

Off: Do not use a phonebook.

CUCM: The phonebook is located on the Cisco Unified Communications Manager.
Spark: The phonebook is located on Spark.
TMS: The phonebook is located on the Cisco TelePresence Management Suite server.
VCS: The phonebook is located on the Cisco TelePresence Video Communication Server.
xConfiguration Phonebook Server [1] URL
Define the address (URL) to the external phone book server.

Requires user role: ADMIN
Default value: ""

USAGE:
xConfiguration Phonebook Server n URL: "URL"
where
n: Unique ID that identifies the phonebook server. Range: 1..1
URL: String (0, 255)
A valid address (URL) to the phone book server.

Provisioning configuration

xConfiguration Provisioning Connectivity
This setting controls how the device discovers whether it should request an internal or external configuration from the provisioning server.

Requires user role: ADMIN, USER
Default value: Auto

USAGE:
xConfiguration Provisioning Connectivity: Connectivity
where
Connectivity: Internal/External/Auto
  Internal: Request internal configuration.
  External: Request external configuration.
  Auto: Automatically discover using NAPTR queries whether internal or external configurations should be requested. If the NAPTR responses have the "e" flag, external configurations will be requested. Otherwise internal configurations will be requested.
xConfiguration Provisioning Mode

It is possible to configure a video system using a provisioning system (external manager). This allows video conferencing network administrators to manage many video systems simultaneously. With this setting you choose which type of provisioning system to use. Provisioning can also be switched off. Contact your provisioning system provider/representative for more information.

Requires user role: ADMIN, USER
Default value: Auto

**USAGE:**
```
xConfiguration Provisioning Mode: Mode
```
where
```
Mode: Off/Auto/CUCM/Edge/Spark/TMS/VCS
```
- **Off**: The video system is not configured by a provisioning system.
- **Auto**: The provisioning server is automatically selected as set up in the DHCP server.
- **CUCM**: Push configurations to the video system from CUCM (Cisco Unified Communications Manager).
- **Edge**: Push configurations to the video system from CUCM via the Collaboration Edge infrastructure. In order to register over Edge the encryption option key must be installed on the video system.
- **Spark**: Push configurations to the video system from Spark.
- **TMS**: Push configurations to the video system from TMS (Cisco TelePresence Management System).
- **VCS**: Push configurations to the video system from VCS (Cisco TelePresence Video Communication Server).

xConfiguration Provisioning LoginName

This is the username part of the credentials used to authenticate the video system with the provisioning server. This setting must be used when required by the provisioning server.

Requires user role: ADMIN, USER
Default value:"

**USAGE:**
```
xConfiguration Provisioning LoginName: LoginName
```
where
```
LoginName: String (0, 80)
```
A valid username.

xConfiguration Provisioning Password

This is the password part of the credentials used to authenticate the video system with the provisioning server. This setting must be used when required by the provisioning server.

Requires user role: ADMIN, USER
Default value:"

**USAGE:**
```
xConfiguration Provisioning Password: Password
```
where
```
Password: String (0, 64)
```
A valid password.
xConfiguration Provisioning HttpMethod
Select the HTTP method to be used for the provisioning.

Requires user role: ADMIN, USER
Default value: POST

**USAGE:**
```
xConfiguration Provisioning HttpMethod: HttpMethod
where
    HttpMethod: GET/POST
```
- GET: Select GET when the provisioning server supports GET.
- POST: Select POST when the provisioning server supports POST.

xConfiguration Provisioning ExternalManager Address
Define the IP Address or DNS name of the external manager / provisioning system.

If an External Manager Address (and Path) is configured, the system will send a message to this address when starting up. When receiving this message the external manager / provisioning system can return configurations/commands to the unit as a result.

When using CUCM or TMS provisioning, the DHCP server can be set up to provide the external manager address automatically (DHCP Option 242 for TMS, and DHCP Option 150 for CUCM). An address set in the Provisioning ExternalManager Address setting will override the address provided by DHCP.

Requires user role: ADMIN, USER
Default value: ""

**USAGE:**
```
xConfiguration Provisioning ExternalManager Address: "Address"
where
    Address: String (0, 64)
```
- A valid IPv4 address, IPv6 address or DNS name.

xConfiguration Provisioning ExternalManager AlternateAddress
Only applicable when the endpoint is provisioned by Cisco Unified Communication Manager (CUCM) and an alternate CUCM is available for redundancy. Define the address of the alternate CUCM. If the main CUCM is not available, the endpoint will be provisioned by the alternate CUCM. When the main CUCM is available again, the endpoint will be provisioned by this CUCM.

Requires user role: ADMIN, USER
Default value: ""

**USAGE:**
```
xConfiguration Provisioning ExternalManager AlternateAddress: "AlternateAddress"
where
    AlternateAddress: String (0, 64)
```
- A valid IPv4 address, IPv6 address or DNS name.

xConfiguration Provisioning ExternalManager Protocol
Define whether to use the HTTP (unsecure communication) or HTTPS (secure communication) protocol when sending requests to the external manager / provisioning system.

The selected protocol must be enabled in the NetworkServices HTTP Mode setting.

Requires user role: ADMIN, USER
Default value: HTTP

**USAGE:**
```
xConfiguration Provisioning ExternalManager Protocol: Protocol
where
    Protocol: HTTPS/HTTP
```
- HTTPS: Send requests via HTTPS.
- HTTP: Send requests via HTTP.
xConfiguration Provisioning ExternalManager Path
Define the Path to the external manager / provisioning system. This setting is required when several management services reside on the same server, i.e. share the same External Manager address.

Requires user role: ADMIN, USER
Default value: ""

**USAGE:**
```
xConfiguration Provisioning ExternalManager Path: "Path"
```
where
```
Path: String (0, 255)
```
A valid path to the external manager or provisioning system.

xConfiguration Provisioning ExternalManager Domain
Define the SIP domain for the VCS provisioning server.

Requires user role: ADMIN, USER
Default value: ""

**USAGE:**
```
xConfiguration Provisioning ExternalManager Domain: "Domain"
```
where
```
Domain: String (0, 64)
```
A valid domain name.

Proximity configuration

xConfiguration Proximity Mode
Determine whether the video system will emit ultrasound pairing messages or not.
When the video system emits ultrasound, Proximity clients can detect that they are close to the video system. In order to use a client, at least one of the Proximity services must be enabled (refer to the Proximity Services settings). In general, Cisco recommends enabling all the Proximity services.

Requires user role: ADMIN, USER
Default value: Off

**USAGE:**
```
xConfiguration Proximity Mode: Mode
```
where
```
Mode: Off/On
```
Off: The video system does not emit ultrasound, and Proximity services cannot be used.
On: The video system emits ultrasound, and Proximity clients can detect that they are close to the video system. Enabled Proximity services can be used.

xConfiguration Proximity Services CallControl
Enable or disable basic call control features on Proximity clients. When this setting is enabled, you are able to control a call using a Proximity client (for example dial, mute, adjust volume and hang up). This service is supported by mobile devices (iOS and Android). Proximity Mode must be On for this setting to take any effect.

Requires user role: ADMIN, USER
Default value: Disabled

**USAGE:**
```
xConfiguration Proximity Services CallControl: CallControl
```
where
```
CallControl: Enabled/Disabled
```
Enabled: Call control from a Proximity client is enabled.
Disabled: Call control from a Proximity client is disabled.
xConfiguration Proximity Services ContentShare FromClients
Enable or disable content sharing from Proximity clients. When this setting is enabled, you can share content from a Proximity client wirelessly on the video system, e.g. share your laptop screen. This service is supported by laptops (OS X and Windows). Proximity Mode must be On for this setting to take any effect.

Requires user role: ADMIN, USER
Default value: Enabled

**USAGE:**
xConfiguration Proximity Services ContentShare FromClients:  

where

**FromClients**: Enabled/Disabled
- Enabled: Content sharing from a Proximity client is enabled.
- Disabled: Content sharing from a Proximity client is disabled.

xConfiguration Proximity Services ContentShare ToClients
Enable or disable content sharing to Proximity clients. When enabled, Proximity clients will receive the presentation from the video system. You can zoom in on details, view previous content and take snapshots. This service is supported by mobile devices (iOS and Android). Proximity Mode must be On for this setting to take any effect.

Requires user role: ADMIN, USER
Default value: Disabled

**USAGE:**
xConfiguration Proximity Services ContentShare ToClients:  

where

**ToClients**: Enabled/Disabled
- Enabled: Content sharing to a Proximity client is enabled.
- Disabled: Content sharing to a Proximity client is disabled.

RoomAnalytics configuration

xConfiguration RoomAnalytics PeopleCountOutOfCall
By using face detection, the video system – when a Cisco Spark Quad Camera is connected – has the capability to find how many persons are in the room. By default, the system only counts people when in a call, or when displaying the self-view picture.

Requires user role: ADMIN, INTEGRATOR, USER
Default value: Off

**USAGE:**
xConfiguration RoomAnalytics PeopleCountOutOfCall:  

where

**PeopleCountOutOfCall**: Off/On
- Off: The video system counts people only when the system is in a call, or when self-view is on.
- On: The video system counts people as long as the video system is not in standby mode. This includes outside of call, even if self-view is off.

xConfiguration RoomAnalytics PeoplePresenceDetector
The video system has the capability to find whether or not people are present in the room, and report the result in the RoomAnalytics PeoplePresence status. This feature is based on ultrasound. It takes a minimum of 2 minutes to detect whether people are present or not in the room, and it may take up to 2 minutes for the status to change after the room becomes vacant.

Requires user role: ADMIN, INTEGRATOR, USER
Default value: Off

**USAGE:**
xConfiguration RoomAnalytics PeoplePresenceDetector:  

where

**PeoplePresenceDetector**: Off/On
- Off: The video system’s status does not show whether or not there are people present in the room.
- On: The video system’s status shows whether or not there are people present in the room.
SerialPort configuration

**xConfiguration SerialPort Mode**

Enable/disable the serial port (connection via Micro USB to USB cable). The serial port uses 115200 bps, 8 data bits, no parity and 1 stop bit.

Requires user role: ADMIN, INTEGRATOR
Default value: On

**USAGE:**

```plaintext
xConfiguration SerialPort Mode: Mode
```

where

- **Mode**: Off/On
  - Off: Disable the serial port.
  - On: Enable the serial port.

**xConfiguration SerialPort BaudRate**

Define the baud rate (data transmission rate, bits per second) for the serial port.

Other connection parameters for the serial port are: Data bits: 8; Parity: None; Stop bits: 1; Flow control: None.

Requires user role: ADMIN, INTEGRATOR
Default value: 115200

**USAGE:**

```plaintext
xConfiguration SerialPort BaudRate: BaudRate
```

where

- **BaudRate**: 115200
  - Set a baud rate from the baud rates listed (bps).

**xConfiguration SerialPort LoginRequired**

Define if login shall be required when connecting to the serial port.

Requires user role: ADMIN
Default value: On

**USAGE:**

```plaintext
xConfiguration SerialPort LoginRequired: LoginRequired
```

where

- **LoginRequired**: Off/On
  - Off: The user can access the codec via the serial port without any login.
  - On: Login is required when connecting to the codec via the serial port.
SIP configuration

**xConfiguration SIP Authentication UserName**

This is the user name part of the credentials used to authenticate towards the SIP proxy.

Requires user role: ADMIN
Default value: ""

**USAGE:**
xConfiguration SIP Authentication UserName: "UserName"  
where  
`UserName`: String (0, 128)  
A valid username.

**xConfiguration SIP Authentication Password**

This is the password part of the credentials used to authenticate towards the SIP proxy.

Requires user role: ADMIN
Default value: ""

**USAGE:**
xConfiguration SIP Authentication Password: "Password"  
where  
`Password`: String (0, 128)  
A valid password.

**xConfiguration SIP DefaultTransport**

Select the transport protocol to be used over the LAN.

Requires user role: ADMIN
Default value: Auto

**USAGE:**
xConfiguration SIP DefaultTransport: `DefaultTransport`  
where  
`DefaultTransport`: TCP/UDP/Tls/Auto  
TCP: The system will always use TCP as the default transport method.  
UDP: The system will always use UDP as the default transport method.  
Tls: The system will always use TLS as the default transport method. For TLS connections a SIP CA-list can be uploaded to the video system. If no such CA-list is available on the system then anonymous Diffie Hellman will be used.  
Auto: The system will try to connect using transport protocols in the following order: TLS, TCP, UDP.

**xConfiguration SIP DisplayName**

When configured the incoming call will report the display name instead of the SIP URI.

Requires user role: ADMIN
Default value: ""

**USAGE:**
xConfiguration SIP DisplayName: "DisplayName"  
where  
`DisplayName`: String (0, 550)  
The name to be displayed instead of the SIP URI.
xConfiguration SIP Ice Mode
ICE (Interactive Connectivity Establishment, RFC 5245) is a NAT traversal solution that the video systems can use to discover the optimized media path. Thus the shortest route for audio and video is always secured between the video systems.

Requires user role: ADMIN
Default value: Auto

USAGE:
```
xConfiguration SIP Ice Mode: Mode
```
where

- **Mode**: Auto/Off/On
  - Auto: ICE is enabled if a TURN server is provided, otherwise ICE is disabled.
  - Off: ICE is disabled.
  - On: ICE is enabled.

xConfiguration SIP Ice DefaultCandidate
The ICE protocol needs some time to reach a conclusion about which media route to use (up to the first 5 seconds of a call). During this period media for the video system will be sent to the Default Candidate as defined in this setting.

Requires user role: ADMIN
Default value: Host

USAGE:
```
xConfiguration SIP Ice DefaultCandidate: DefaultCandidate
```
where

- **DefaultCandidate**: Host/Rflx/Relay
  - Host: Send media to the video system’s private IP address.
  - Rflx: Send media to the video system’s public IP address, as seen by the TURN server.
  - Relay: Send media to the IP address and port allocated on the TURN server.

xConfiguration SIP ListenPort
Turn on or off the listening for incoming connections on the SIP TCP/UDP ports. If turned off, the endpoint will only be reachable through the SIP registrar (CUCM or VCS).

Requires user role: ADMIN
Default value: On

USAGE:
```
xConfiguration SIP ListenPort: ListenPort
```
where

- **ListenPort**: Off/On
  - Off: Listening for incoming connections on the SIP TCP/UDP ports is turned off.
  - On: Listening for incoming connections on the SIP TCP/UDP ports is turned on.

xConfiguration SIP Proxy [1..4] Address
The Proxy Address is the manually configured address for the outbound proxy. It is possible to use a fully qualified domain name, or an IP address. The default port is 5060 for TCP and UDP but another one can be provided.

Requires user role: ADMIN
Default value: 

USAGE:
```
xConfiguration SIP Proxy n Address: "Address"
```
where

- **n**: Index that identifies the proxy (maximum 4 proxys can be defined). Range: 1..4
- **Address**: String (0, 255)
  - A valid IPv4 address, IPv6 address or DNS name.
xConfiguration SIP Turn Server

Define the address of the TURN (Traversal Using Relay NAT) server. It is used as a media relay fallback and it is also used to discover the endpoint’s own public IP address.

Requires user role: ADMIN
Default value: ""

USAGE:
```
xConfiguration SIP Turn Server: "Server"
where
  Server: String (0, 255)
  The preferred format is DNS SRV record (e.g. _turn._udp.<domain>), or it can be a valid IPv4 or IPv6 address.
```

xConfiguration SIP Turn UserName

Define the user name needed for accessing the TURN server.

Requires user role: ADMIN
Default value: ""

USAGE:
```
xConfiguration SIP Turn UserName: "UserName"
where
  UserName: String (0, 128)
  A valid user name.
```

xConfiguration SIP Turn Password

Define the password needed for accessing the TURN server.

Requires user role: ADMIN
Default value: ""

USAGE:
```
xConfiguration SIP Turn Password: "Password"
where
  Password: String (0, 128)
  A valid password.
```

xConfiguration SIP URI

The SIP URI (Uniform Resource Identifier) is the address that is used to identify the video system. The URI is registered and used by the SIP services to route inbound calls to the system. The SIP URI syntax is defined in RFC 3261.

Requires user role: ADMIN
Default value: ""

USAGE:
```
xConfiguration SIP URI: "URI"
where
  URI: String (0, 255)
  An address (URI) that is compliant with the SIP URI syntax.
```
Standby configuration

xConfiguration Standby Control

Define whether the system should go into standby mode or not.

Requires user role: ADMIN, INTEGRATOR
Default value: On

**USAGE:**

```plaintext
xConfiguration Standby Control: Control
where
    Control: Off/On
        Off: The system will not enter standby mode.
        On: The system will enter standby mode when the Standby Delay has timed out.
        Requires the Standby Delay to be set to an appropriate value.
```

xConfiguration Standby Delay

Define how long (in minutes) the system shall be in idle mode before it goes into standby mode.

Requires the Standby Control to be enabled.

Requires user role: ADMIN, INTEGRATOR
Default value: 10

**USAGE:**

```plaintext
xConfiguration Standby Delay: Delay
where
    Delay: Integer (1..480)
        Set the standby delay (minutes).
```

xConfiguration Standby BootAction

Define the camera position after a restart of the codec.

Requires user role: ADMIN, INTEGRATOR, USER
Default value: DefaultCameraPosition

**USAGE:**

```plaintext
xConfiguration Standby BootAction: BootAction
where
    BootAction: None/DefaultCameraPosition/RestoreCameraPosition
        None: No action.
        RestoreCameraPosition: When the video system restarts, the camera returns to the position that it had before the restart.
        DefaultCameraPosition: When the video system restarts, the camera moves to the factory default position.
```

xConfiguration Standby StandbyAction

Define the camera position when going into standby mode.

Requires user role: ADMIN, INTEGRATOR
Default value: PrivacyPosition

**USAGE:**

```plaintext
xConfiguration Standby StandbyAction: StandbyAction
where
    StandbyAction: None/PrivacyPosition
        None: No action.
        PrivacyPosition: When the video system enters standby, the camera turns to a sideways position for privacy.
```
xConfiguration Standby WakeupAction
Define the camera position when leaving standby mode.

Requires user role: ADMIN, INTEGRATOR, USER
Default value: RestoreCameraPosition

**USAGE:**
xConfiguration Standby WakeupAction: **WakeupAction**
where
- **WakeupAction**: None/RestoreCameraPosition/DefaultCameraPosition
  - None: No action.
  - RestoreCameraPosition: When the video system leaves standby, the camera returns to the position that it had before entering standby.
  - DefaultCameraPosition: When the video system leaves standby, the camera moves to the factory default position.

xConfiguration Standby WakeupOnMotionDetection
Automatic wake up on motion detection is a feature that will sense when a person walks into the room. The feature is based on ultrasound detection, and the Proximity Mode setting must be On to make the feature work.

Requires user role: ADMIN, INTEGRATOR
Default value: Off

**USAGE:**
xConfiguration Standby WakeupOnMotionDetection: **WakeupOnMotionDetection**
where
- **WakeupOnMotionDetection**: Off/On
  - Off: The wake up on motion detection is disabled.
  - On: When people walk into the room the system will automatically wake up from standby.

SystemUnit configuration

xConfiguration SystemUnit Name
Define the system name. The system name will be sent as the hostname in a DHCP request and when the codec is acting as an SNMP Agent.

Requires user role: ADMIN
Default value: ""

**USAGE:**
xConfiguration SystemUnit Name: "Name"
where
- **Name**: String (0, 50)
  - Define the system name.
**Time configuration**

**xConfiguration Time TimeFormat**
Define the time format.

Requires user role: ADMIN, USER
Default value: 24H

**USAGE:**
xConfiguration Time TimeFormat: **TimeFormat**
where
- **TimeFormat**: 24H/12H
  - 24H: Set the time format to 24 hours.
  - 12H: Set the time format to 12 hours (AM/PM).

**xConfiguration Time DateFormat**
Define the date format.

Requires user role: ADMIN, USER
Default value: DD_MM_YY

**USAGE:**
xConfiguration Time DateFormat: **DateFormat**
where
- **DateFormat**: DD_MM_YY/MM_DD_YY/YY_MM_DD
  - DD_MM_YY: The date January 30th 2010 will be displayed: 30.01.10
  - MM_DD_YY: The date January 30th 2010 will be displayed: 01.30.10
  - YY_MM_DD: The date January 30th 2010 will be displayed: 10.01.30

**xConfiguration Time Zone**
Define the time zone for the geographical location of the video system. The information in the value space is from the tz database, also called the IANA Time Zone Database.

Requires user role: ADMIN, INTEGRATOR, USER
Default value: Etc/UTC

**USAGE:**
xConfiguration Time Zone: **Zone**
where
Select a time zone from the list.
UserInterface configuration

xConfiguration UserInterface ContactInfo Type
Choose which type of contact information to show in the status field in the upper left corner of the display and Touch controller.
Requires user role: ADMIN
Default value: Auto

**USAGE:**
```
xConfiguration UserInterface ContactInfo Type: Type
```
where
```
Type: Auto/DisplayName/E164Alias/H320Number/H323Id/IPv4/IPv6/None/SipUri/SystemName
```
- Auto: Show the address which another system should dial to reach this video system. The address depends on the default call protocol and system registration.
- None: Do not show any contact information.
- IPv4: Show the system's IPv4 address.
- IPv6: Show the system's IPv6 address.
- H323Id: Show the system's H.323 ID (refer to the H323 H323Alias ID setting).
- H320Number: Not applicable in this software version.
- E164Alias: Show the system's H.323 E164 Alias as contact information (refer to the H323 H323Alias E164 setting).
- SipUri: Show the system's SIP URI (refer to the SIP URI setting).
- SystemName: Show the system's name (refer to the SystemUnit Name setting).
- DisplayName: Show the system's display name (refer to the SIP DisplayName setting).

xConfiguration UserInterface CustomMessage
A custom message can be displayed, in the lower left side of the screen, in awake mode.
Requires user role: ADMIN, INTEGRATOR
Default value: ""

**USAGE:**
```
xConfiguration UserInterface CustomMessage: "CustomMessage"
```
where
```
CustomMessage: String (0..128)
```
- Add a custom message. Add an empty string to remove a custom message.

xConfiguration UserInterface KeyTones Mode
You can configure the system to make a keyboard click sound effect (key tone) when typing text or numbers.
Requires user role: ADMIN, USER
Default value: On

**USAGE:**
```
xConfiguration UserInterface KeyTones Mode: Mode
```
where
```
Mode: Off/On
```
- Off: There is no key tone sound effect.
- On: The key tone sound effect is turned on.
xConfiguration UserInterface Language
Select the language to be used in menus and messages on the screen and Touch controller.

Requires user role: ADMIN, USER
Default value: English

**USAGE:**
```
xConfiguration UserInterface Language: Language
```
where

```
Language: Arabic/Catalan/ChineseSimplified/ChineseTraditional/Czech/Danish/Dutch/English/EnglishUK/Finnish/French/FrenchCanadian/German/Hebrew/Hungarian/Italian/Japanese/Korean/Norwegian/Polish/Portuguese/PortugueseBrazilian/Russian/Spanish/SpanishLatin/Swedish/Turkish
```
Select a language from the list.

xConfiguration UserInterface OSD HalfwakeMessage
A custom message can be displayed in the middle of the main screen when the system is in
the half wake state. This will replace the default message "Tap the touch panel to get started"
together with an illustration of a Touch panel. You can also choose not to have a message.

Requires user role: ADMIN
Default value: ""

**USAGE:**
```
xConfiguration UserInterface OSD HalfwakeMessage: "HalfwakeMessage"
```
where

```
HalfwakeMessage: String (0..128)
```
Add a custom message. If you add a space, there will be no visible message. Add an
empty string to remove a custom message.

xConfiguration UserInterface OSD SettingsMenu Mode
The Settings panel in the user interface (Touch 10 or on-screen) can be protected by the
video system's admin password. If this password is blank, anyone can access the settings in
the Settings menu, and for example factory reset the system. If authentication is enabled, all
settings that require authentication have a padlock icon. You will be prompted to enter the
administrator's username and passphrase when you select the setting. Some settings do not
require authentication, they do not have a padlock icon.

Requires user role: ADMIN
Default value: Unlocked

**USAGE:**
```
xConfiguration UserInterface OSD SettingsMenu Mode: Mode
```
where

```
Mode: Locked/Unlocked
```
Locked: Authentication with administrator's username and passphrase is required.
Unlocked: No authentication is required.
UserManagement configuration

xConfiguration UserManagement LDAP Mode
The video system supports the use of an LDAP (Lightweight Directory Access Protocol) server as a central place to store and validate user names and passwords. Use this setting to configure whether or not to use LDAP authentication. Our implementation is tested for the Microsoft Active Directory (AD) service.

Requires user role: ADMIN
Default value: Off

 USAGE:
 xConfiguration UserManagement LDAP Mode: Mode
 where
 Mode: Off/On
 Off: LDAP authentication is not allowed.
 On: For client certificate verification to work when LDAP authentication is enabled, the codec requires a CA (Certificate Authority) certificate, and the user must have a Client Certificate that matches their user distinguishing name (DN) in the active directory (AD).

xConfiguration UserManagement LDAP Server Address
Set the IP address or hostname of the LDAP server.

Requires user role: ADMIN
Default value: ""

 USAGE:
 xConfiguration UserManagement LDAP Server Address: "Address"
 where
 Address: String (0, 255)
 A valid IPv4 address, IPv6 address or hostname.

xConfiguration UserManagement LDAP Server Port
Set the port to connect to the LDAP server on. If set to 0, use the default for the selected protocol (see the UserManagement LDAP Encryption setting).

Requires user role: ADMIN
Default value: 0

 USAGE:
 xConfiguration UserManagement LDAP Server Port: Port
 where
 Port: Integer (0..65535)
 The LDAP server port number.

xConfiguration UserManagement LDAP Encryption
Define how to secure the communication between the video system and the LDAP server. You can override the port number by using the UserManagement LDAP Server Port setting.

Requires user role: ADMIN
Default value: LDAPS

 USAGE:
 xConfiguration UserManagement LDAP Encryption: Encryption
 where
 Encryption: LDAPS/None/STARTTLS
 LDAPS: Connect to the LDAP server on port 636 over TLS (Transport Layer Security).
 None: Connect to LDAP server on port 389 with no encryption.
 STARTTLS: Connect to LDAP server on port 389, then send STARTTLS to enable TLS encryption.
xConfiguration UserManagement LDAP MinimumTLSVersion

Set the lowest version of the TLS (Transport Layer Security) protocol that is allowed.

Requires user role: ADMIN
Default value: TLSv1.2

**USAGE:**

```
xConfiguration UserManagement LDAP MinimumTLSVersion: MinimumTLSVersion

where

MinimumTLSVersion: TLSv1.0/TLSv1.1/TLSv1.2
  - TLSv1.0: Support TLS version 1.0 or higher.
  - TLSv1.1: Support TLS version 1.1 or higher.
  - TLSv1.2: Support TLS version 1.2 or higher.
```

xConfiguration UserManagement LDAP VerifyServerCertificate

When the video system connects to an LDAP server, the server will identify itself to the video
system by presenting its certificate. Use this setting to determine whether or not the video
system will verify the server certificate.

Requires user role: ADMIN
Default value: On

**USAGE:**

```
xConfiguration UserManagement LDAP VerifyServerCertificate: VerifyServerCertificate

where

VerifyServerCertificate: Off/On
  - Off: The video system will not verify the LDAP server’s certificate.
  - On: The video system must verify that the LDAP server’s certificate is signed by a
    trusted Certificate Authority (CA). The CA must be on the list of trusted CAs that are
    uploaded to the system in advance. Use the video system’s web interface to manage
    the list of trusted CAs (see more details in the administrator guide).
```

xConfiguration UserManagement LDAP Admin Filter

The LDAP filter is used to determine which users should be granted administrator privileges. If
set, this setting takes precedence over the UserManagement LDAP Admin Group setting.

Requires user role: ADMIN
Default value: ""

**USAGE:**

```
xConfiguration UserManagement LDAP Admin Filter: "Filter"

where

Filter: String (0, 1024)
  - Refer to the LDAP specification for the syntax of this string. Example: "(CN=adminuser)"
```

xConfiguration UserManagement LDAP Admin Group

Members of this AD (Active Directory) group will be given administrator access. This
setting is a shorthand for saying (memberOf:1.2.840.113556.1.4.1941:="<group name>"). If
UserManagement LDAP Admin Filter is set, this setting is ignored.

Requires user role: ADMIN
Default value: ""

**USAGE:**

```
xConfiguration UserManagement LDAP Admin Group: "Group"

where

Group: String (0, 255)
  - The distinguishing name of the AD group. Example: "CN=admin_group, OU=company
    groups, DC=company, DC=com"
```
xConfiguration UserManagement LDAP Attribute

The attribute used to map to the provided username. If not set, sAMAccountName is used.

Requires user role: ADMIN
Default value: ""

**USAGE:**

```
xConfiguration UserManagement LDAP Attribute: "Attribute"
```

where

```
Attribute: String (0, 255)
```

The attribute name.

Video configuration

xConfiguration Video DefaultMainSource

Define which video input source to be used as the default main video source when you start a call.

Requires user role: ADMIN, USER
Default value: 1

**USAGE:**

```
xConfiguration Video DefaultMainSource: DefaultMainSource
```

where

```
DefaultMainSource: 1/2/3
```

Set the source to be used as the default main video source.

xConfiguration Video Input Connector [1..3] CameraControl Mode

Define whether the camera that is connected to this video input connector can be controlled or not.

Requires user role: ADMIN, INTEGRATOR
Default value: On

**USAGE:**

```
xConfiguration Video Input Connector n CameraControl Mode: Mode
```

where

```
n: Unique ID that identifies the video input connector. Range: 1..3
Mode: Off/On
```

- Off: Disable camera control.
- On: Enable camera control.
xConfiguration Video Input Connector [1..3] CameraControl CameraId
The camera ID is a unique identifier of the cameras that are connected to the video input.
Requires user role: ADMIN, INTEGRATOR
Default value: Connector n: n

**Usage:**
xConfiguration Video Input Connector n CameraControl CameraId: CameraId
where
- n: Unique ID that identifies the video input connector. Range: 1..3
  - CameraId: 1/2/3/4/5/6/7
    - Select the ID of the camera.

xConfiguration Video Input Connector [1..3] CEC Mode
The video input (HDMI) supports Consumer Electronics Control (CEC). When this setting is On, information about the connected device (for example device type and device name) is available in the video system status (Video Input Connector[n] ConnectedDevice CEC [n]), provided that the connected device also supports CEC.
Requires user role: ADMIN, INTEGRATOR
Default value: On

**Usage:**
xConfiguration Video Input Connector n CEC Mode: Mode
where
- n: Unique ID that identifies the video input connector. Range: 1..3
  - Mode: Off/On
    - Off: CEC is disabled.
    - On: CEC is enabled.

xConfiguration Video Input Connector [1..3] InputSourceType
Select which type of input source is connected to the video input. The integrated camera is connected to Connector 1.
Requires user role: ADMIN, INTEGRATOR
Default value: Connector 1: camera Other connectors: PC

**Usage:**
xConfiguration Video Input Connector n InputSourceType: InputSourceType
where
- n: Unique ID that identifies the video input connector. Range: 1..3
  - InputSourceType: PC/camera/document_camera/mediaplayer/whiteboard/other
    - Camera: Use this when a camera is connected to the video input.
    - Document_camera: Use this when a document camera is connected to the video input.
    - Mediaplayer: Use this when a media player is connected to the video input.
    - PC: Use this when a computer is connected to the video input.
    - Whiteboard: Use this when a whiteboard camera is connected to the video input.
    - Other: Use this when the other options do not match.

xConfiguration Video Input Connector [1..3] Name
Define a name for the video input connector.
Requires user role: ADMIN, INTEGRATOR
Default value: Connector 1: "Camera" Connector 2: "PC 1 (HDMI)" Connector 3: "PC 2 (HDMI)"

**Usage:**
xConfiguration Video Input Connector n Name: Name
where
- n: Unique ID that identifies the video input connector. Range: 1..3
  - Name: String (0, 50)
    - Name for the video input connector.
xConfiguration Video Input Connector [1..3] PreferredResolution

Define the screen resolution and refresh rate that the video system advertises as its preferred resolution to the source devices that connect to the system via HDMI (for example a laptop). The logic for selection of the resolution on the source side will choose this resolution and refresh rate automatically, unless it is overridden manually by the source device (for example the laptop's display configuration software).

Note that the formats 2560_1440_60 and 3840_2160_30 use about twice the amount of data compared to the 1920_1080_60 format, and requires a presentation cable (or adapter) that is qualified for at least HDMI 1.4b data rates.

Requires user role: ADMIN, INTEGRATOR

Default value: 1920_1080_60

**USAGE:**

```
xConfiguration Video Input Connector n PreferredResolution: PreferredResolution
```

where

- `n`: Unique ID that identifies the video input connector. Range: 1..3
- `PreferredResolution`: Connector 1: 1920_1080_60   Connector 2, 3: 1920_1080_60/2560_1440_60/3840_2160_30

  - 1920_1080_60: The resolution is 1920 x 1080, and the refresh rate is 60 Hz.
  - 2560_1440_60: The resolution is 2560 x 1440, and the refresh rate is 60 Hz.
  - 3840_2160_30: The resolution is 3840 x 2160, and the refresh rate is 30 Hz.

xConfiguration Video Input Connector [1..3] PresentationSelection

Define how the video system will behave when you connect a presentation source to the video input. In general, any input source can be used as a presentation source; normally, the main camera will not be used as a presentation source.

If the video system is in standby mode, it will wake up when you connect a presentation source. Sharing the presentation with the far end requires additional action (select Share on the user interface) except when this setting is set to AutoShare.

Requires user role: ADMIN, INTEGRATOR

Default value: Connector 1: Manual   Other connectors: OnConnect

**USAGE:**

```
xConfiguration Video Input Connector n PresentationSelection: PresentationSelection
```

where

- `n`: Unique ID that identifies the video input connector. Range: 1..3
- `PresentationSelection`: AutoShare/Desktop/Manual/OnConnect

  - AutoShare: While in a call, the content on the video input will automatically be presented to the far end as well as on the local screen when you connect the cable, or when the source is activated otherwise (for example when a connected computer wakes up from sleep mode). You do not have to select Share on the user interface. If a presentation source is already connected when you make or answer a call, you have to manually select Share on the user interface.

  - Desktop: The content on the video input will be presented on the screen when you connect the cable, or when the source is activated otherwise (for example when a connected computer wakes up from sleep mode). This applies both when idle and in a call. Also, the content on the video input will stay on the screen when you leave the call, provided that it was the active input at the time of leaving.

  - Manual: The content on the video input will not be presented on the screen until you select Share from the user interface.

  - OnConnect: The content on the video input will be presented on screen when you connect the cable, or when the source is activated otherwise (for example when a connected computer wakes up from sleep mode). Otherwise, the behavior is the same as in manual mode.
xConfiguration Video Input Connector [1..3] Quality

When encoding and transmitting video there is a trade-off between high resolution and high frame rate. For some video sources it is more important to transmit high frame rate than high resolution and vice versa. This setting specifies whether to give priority to high frame rate or to high resolution.

Requires user role: ADMIN, INTEGRATOR
Default value: Connector 1: Motion  Connector 2, 3: Sharpness

**USAGE:**

```
xConfiguration Video Input Connector [n] Quality: Quality
```

where

- **n**: Unique ID that identifies the video input connector. Range: 1..3
- **Quality**: Motion/Sharpness
  - **Motion**: Gives the highest possible frame rate. Used when there is a need for higher frame rates, typically when a large number of participants are present or when there is a lot of motion in the picture.
  - **Sharpness**: Gives the highest possible resolution. Used when you want the highest quality of detailed images and graphics.

xConfiguration Video Input Connector [1..3] Visibility

Define the visibility of the video input connector in the menus on the user interface.

Requires user role: ADMIN, INTEGRATOR
Default value: Connector 1: Never  Other connectors: Always

**USAGE:**

```
xConfiguration Video Input Connector [n] Visibility: Visibility
```

where

- **n**: Unique ID that identifies the video input connector. Range: 1..3
- **Visibility**: Always/IfSignal/Never
  - **Always**: The menu selection for the video input connector will always be visible on the user interface.
  - **IfSignal**: The menu selection for the video input connector will only be visible when something is connected to the video input.
  - **Never**: The input source is not expected to be used as a presentation source, and will not show up on the user interface.

xConfiguration Video Monitors

A role is assigned to each monitor using the Video Output Connector [n] MonitorRole setting. The monitor role decides which layout (call participants and presentation) will appear on the monitor that is connected to this output. Monitors with the same monitor role will get the same layout; monitors with different monitor roles will have different layouts.

The monitor layout mode that is set in the Video Monitors setting should reflect the number of different layouts you want in your room setup. Note that some monitors can be reserved for presentations.

Requires user role: ADMIN, INTEGRATOR
Default value: Auto

**USAGE:**

```
xConfiguration Video Monitors: Monitors
```

where

- **Monitors**: Auto/Single/Dual/DualPresentationOnly
  - **Auto**: The number of monitors connected to the codec is automatically detected, and the layout is distributed on the monitors according to the MonitorRole settings.
  - **Single**: The layout is shown on one monitor. If two monitors are connected to the codec, one of them will be disabled.
  - **Dual**: The layout is distributed on monitors with monitor role First and Second. If a presentation is part of the layout, all participants in the call are shown on the monitor with monitor role First, and the presentation is shown on the monitor with monitor role Second.
  - **DualPresentationOnly**: All participants in the call are shown on the monitor with monitor role First. If a presentation is part of the layout, the presentation is shown on the monitor with monitor role Second.
xConfiguration Video Output Connector [1..2] MonitorRole

The monitor role describes which video streams will be shown on the monitor connected to this video output connector. Together the Video Monitors setting and the MonitorRole settings for all outputs define which layout (video streams) will be shown on each monitor.

Requires user role: ADMIN, INTEGRATOR
Default value: Dual: Connector [1]: Auto Connector [2]: Auto, Single: Connector [1]: Auto Connector [2]: PresentationOnly

USAGE:
```
xConfiguration Video Output Connector n MonitorRole: MonitorRole
```
where
- `n`: Unique ID that identifies the video output connector. Range: 1..2
- `MonitorRole`: Auto/First/Second/PresentationOnly
  - Auto: The system will detect when a monitor is connected, and a monitor role (First, Second) that corresponds with the Video Monitors setting will be assigned automatically.
  - First/Second: Define the role of the monitor in a multi-monitor setup. In a single-monitor setup, there is no difference between First and Second.
  - PresentationOnly: Show presentation video stream if active, and nothing else. Monitors/outputs with this monitor role are disregarded by the Video Monitors setting.

xConfiguration Video Output Connector [1..2] Resolution

Define the resolution and refresh rate for the connected screen. The formats larger than 1920_1200_60 requires use of high quality display cables. For guaranteed operation, use display cables that are pre-qualified from Cisco for use at 3840_2160_60, or use a cable that has passed the "Premium HDMI certification" program. Some UHD TVs/displays only enable 3840_2160_30 (30 Hz) and not 3840_2160_60 (60 Hz) as their default configuration. In such cases the corresponding setting on the TV/display has to be located in the menus of the TV/display and be reconfigured to allow 3840_2160_60 for the HDMI input where the video system is connected.

Requires user role: ADMIN, INTEGRATOR, USER
Default value: Auto

USAGE:
```
xConfiguration Video Output Connector n Resolution: Resolution
```
where
- `n`: Unique ID that identifies the video output connector. Range: 1..2
- `Resolution`: Auto/1920_1080_50/1920_1080_60/1920_1200_50/1920_1200_60/2560_1440_60/3840_2160_30/3840_2160_60
  - Auto: The system will automatically try to set the optimal resolution based on negotiation with the connected monitor.
  - 1920_1080_50: The resolution is 1920 x 1080, and the refresh rate is 50 Hz.
  - 1920_1080_60: The resolution is 1920 x 1080, and the refresh rate is 60 Hz.
  - 1920_1200_50: The resolution is 1920 x 1200, and the refresh rate is 50 Hz.
  - 1920_1200_60: The resolution is 1920 x 1200, and the refresh rate is 60 Hz.
  - 2560_1440_60: The resolution is 2560 x 1440, and the refresh rate is 60 Hz.
  - 3840_2160_30: The resolution is 3840 x 2160, and the refresh rate is 30 Hz.
  - 3840_2160_60: The resolution is 3840 x 2160, and the refresh rate is 60 Hz.
xConfiguration Video Presentation DefaultSource
Define which video input source to use as a default presentation source. This setting may be used by the API and 3rd party user interfaces. It is not relevant when using the user interfaces provided by Cisco.

Requires user role: ADMIN, USER
Default value: 2

**USAGE:**
```xml
xConfiguration Video Presentation DefaultSource: DefaultSource
```
where
```xml
DefaultSource: 1/2/3
```
The video input source to use as default presentation source.

xConfiguration Video Selfview Default Mode
Define if the main video source (self-view) shall be displayed on screen after a call. The position and size of the self-view window is determined by the Video Selfview Default PIPPosition and the Video Selfview Default FullscreenMode settings respectively.

Requires user role: ADMIN, INTEGRATOR
Default value: Current

**USAGE:**
```xml
xConfiguration Video Selfview Default Mode: Mode
```
where
```xml
Mode: Off/Current/On
```
- **Off**: self-view is switched off when leaving a call.
- **Current**: self-view is left as is, i.e. if it was on during the call, it remains on after the call; if it was off during the call, it remains off after the call.
- **On**: self-view is switched on when leaving a call.

xConfiguration Video Selfview Default FullscreenMode
Define if the main video source (self-view) shall be shown in full screen or as a small picture-in-picture (PiP) after a call. The setting only takes effect when self-view is switched on (see the Video Selfview Default Mode setting).

Requires user role: ADMIN, INTEGRATOR
Default value: Current

**USAGE:**
```xml
xConfiguration Video Selfview Default FullscreenMode: FullscreenMode
```
where
```xml
FullscreenMode: Off/Current/On
```
- **Off**: self-view will be shown as a PiP.
- **Current**: The size of the self-view picture will be kept unchanged when leaving a call, i.e. if it was a PiP during the call, it remains a PiP after the call; if it was full screen during the call, it remains full screen after the call.
- **On**: The self-view picture will be shown in full screen.
xConfiguration Video Selfview Default OnMonitorRole

Define which monitor/output to display the main video source (self-view) on after a call. The value reflects the monitor roles set for the different outputs in the Video Output Connector [n] MonitorRole settings. The setting applies both when self-view is displayed in full screen, and when it is displayed as picture-in-picture (PiP), but only if the Video Monitors setting is set to Dual.

Requires user role: ADMIN, INTEGRATOR

Default value: Current

USAGE:

   xConfiguration Video Selfview Default OnMonitorRole: OnMonitorRole

   where

   OnMonitorRole: Current/First/Second

   - Current: When leaving a call, the self-view picture will be kept on the same output as it was during the call.
   - First: The self-view picture will be shown on outputs with the Video Output HDMI MonitorRole set to First.
   - Second: The self-view picture will be shown on outputs with the Video Output HDMI MonitorRole set to Second.

xConfiguration Video Selfview Default PIPPosition

Define the position on screen of the small self-view picture-in-picture (PiP) after a call. The setting only takes effect when self-view is switched on (see the Video Selfview Default Mode setting) and full-screen view is switched off (see the Video Selfview Default FullscreenMode setting).

Requires user role: ADMIN, INTEGRATOR

Default value: Current

USAGE:

   xConfiguration Video Selfview Default PIPPosition: PIPPosition

   where

   PIPPosition: Current/UpperLeft/UpperCenter/UpperRight/CenterLeft/CenterRight/LowerLeft/LowerRight

   - Current: The position of the self-view PiP will be kept unchanged when leaving a call.
   - UpperLeft: The self-view PiP will appear in the upper left corner of the screen.
   - UpperCenter: The self-view PiP will appear in the upper center position.
   - UpperRight: The self-view PiP will appear in the upper right corner of the screen.
   - CenterLeft: The self-view PiP will appear in the center left position.
   - CentreRight: The self-view PiP will appear in the center right position.
   - LowerLeft: The self-view PiP will appear in the lower left corner of the screen.
   - LowerRight: The self-view PiP will appear in the lower right corner of the screen.
xConfiguration Video Selfview OnCall Mode

This setting is used to switch on self-view for a short while when setting up a call. The Video Selfview OnCall Duration setting determines for how long it remains on. This applies when self-view in general is switched off.

Requires user role: ADMIN, INTEGRATOR
Default value: On

**USAGE:**
xConfiguration Video Selfview OnCall Mode: \textit{Mode}

where

\textit{Mode}: Off/On

- Off: Self-view is not shown automatically during call setup.
- On: Self-view is shown automatically during call setup.

xConfiguration Video Selfview OnCall Duration

This setting only has an effect when the Video Selfview OnCall Mode setting is switched On. In this case, the number of seconds set here determines for how long self-view is shown before it is automatically switched off.

Requires user role: ADMIN, INTEGRATOR
Default value: 10

**USAGE:**
xConfiguration Video Selfview OnCall Duration: \textit{Duration}

where

\textit{Duration}: Integer (1..60)

Range: Choose for how long self-view remains on. The valid range is between 1 and 60 seconds.
Chapter 4

xCommand commands
Description of the xCommand commands

In this chapter, you can find a complete list of all xCommand type commands with parameters.

We recommend you visit our web site regularly for updated versions of the manual.

Audio commands

**xCommand Audio Diagnostics MeasureDelay**

This command will measure the audio delay/latency in a device connected to the video system. A typical use case is to measure the delay in a TV connected to the video system via the HDMI connector. If the delay in a TV is too high, the real-time experience of a video call will be substantially degraded. If the delay is more than 50 ms we recommend the user to find a TV setting that has shorter delay. Typical TV settings that can reduce the delay are: Gaming Mode and PC Mode.

This command will measure the delay between output and input (microphone). This means that if you are using an external acoustic echo canceller or audio mixer, this command will also measure the delay of these devices.

Requires user role: ADMIN, USER

**USAGE:**

```
xCommand Audio Diagnostics MeasureDelay [MeasurementLength: MeasurementLength] [Output: Output] [Volume: Volume]
```

where

- **MeasurementLength**: Integer (1..100)
  The length of the measurement in number of seconds. In a noisy environment a longer measurement time will give a more reliable and robust result. The default is set to 6.

- **Output**: HDMI/Line/Internal/All
  - HDMI: Measure the delay of the device connected to the HDMI output.
  - Line: Measure the delay of the device connected to the Line output (only available on video systems that have a Line output).
  - Internal: Measure the delay of the internal loudspeaker (only available on video systems that have an internal loudspeaker).
  - All: Will measure the maximum delay of all outputs.
  The default is set to HDMI.

- **Volume**: Integer (1..50)
  The volume for the test signal. In a noisy environment a higher volume gives more reliable and robust results. The default is set to 20.

**xCommand Audio Microphones Mute**

Mute all microphones.

Requires user role: ADMIN, INTEGRATOR, USER

**USAGE:**

```
xCommand Audio Microphones Mute
```

**xCommand Audio Microphones ToggleMute**

Toggle the microphone between muted and unmuted.

Requires user role: ADMIN, INTEGRATOR, USER

**USAGE:**

```
xCommand Audio Microphones ToggleMute
```

**xCommand Audio Microphones Unmute**

Unmute all microphones.

Requires user role: ADMIN, INTEGRATOR, USER

**USAGE:**

```
xCommand Audio Microphones Unmute
```
xCommand Audio Sound Play

Play a specified audio sound.

Requires user role: ADMIN, INTEGRATOR, USER

USAGE:

xCommand Audio Sound Play [Loop: Loop] Sound: Sound

where

Loop: Off/On
Determined whether or not to loop the playout of the audio sound. The sound is looped by default. Irrespective of how this parameter is set, some of the sounds (Busy, CallWaiting, Dial, Ringing, and SpecialInfo) will play until the Audio Sound Stop command is issued. The default is set to Off.

Sound: Alert/Bump/Busy/CallDisconnect/CallInitiate/CallWaiting/Dial/KeyInput/KeyInputDelete/KeyTone/Nav/NavBack/Notification/OK/Pairing/PresentationConnect/Ringing/SignIn/SpecialInfo/TelephoneCall/VideoCall/VolumeAdjust/WakeUp
Choose which ringtone to play.

xCommand Audio Sound Stop

Stop playing audio sound.

Requires user role: ADMIN, INTEGRATOR, USER

USAGE:

xCommand Audio Sound Stop

xCommand Audio SpeakerCheck

Runs a test that you can use to check that all the internal speakers are connected correctly. A test tone will be emitted from each speaker in sequence, from left to right. If the speakers don’t play in correct order, reconnect the loudspeaker cables to obtain the correct sequence. All speakers are part of the test sequence, and you must be in the same room as the video system to verify that the test sequence plays correctly.

The video system uses the connected microphones to listen for the test signal, and the result of the test is returned in the API.

Requires user role: ADMIN, USER

USAGE:

xCommand Audio SpeakerCheck [MeasurementLength: MeasurementLength] [Volume: Volume]

where

MeasurementLength: Integer (1..5)
Test signal duration for each speaker in seconds. The default is 1 second.

Volume: Integer (1..30)
Test signal level. The default value is 1.

xCommand Audio SoundsAndAlerts Ringtone List

List all available ringtones. Use the xConfiguration Audio SoundsAndAlerts RingTone setting to choose a ringtone.

Requires user role: ADMIN, INTEGRATOR, USER

USAGE:

xCommand Audio SoundsAndAlerts Ringtone List
xCommand Audio SoundsAndAlerts Ringtone Play
Play one of the available ringtones. Use the xCommand Audio SoundsAndAlerts Ringtone List command to get a list of the available ringtones.

Requires user role: ADMIN, INTEGRATOR, USER

USAGE:
xCommand Audio SoundsAndAlerts Ringtone Play RingTone: "RingTone"
where
RingTone: String (1, 100)
The name of the ringtone.

xCommand Audio Volume Decrease
Decrease the volume on the endpoint. By default, the volume is increased by 5 steps (each step is 0.5 dB). Use the Steps parameter if you want to override the default behavior.

Requires user role: ADMIN, USER

USAGE:
xCommand Audio Volume Decrease [Steps: Steps]
where
Steps: Integer (1..10)
Choose the number of steps to decrease the volume with. One step is 0.5 dB. The default is set to 5.

xCommand Audio Volume Increase
Increase the volume on the endpoint. By default, the volume is increased by 5 steps (each step is 0.5 dB). Use the Steps parameter if you want to override the default behavior.

Requires user role: ADMIN, USER

USAGE:
xCommand Audio Volume Increase [Steps: Steps]
where
Steps: Integer (1..10)
Choose the number of steps to increase the volume with. One step is 0.5 dB. The default is set to 5.

xCommand Audio Volume Mute
Mute the volume on the endpoint.

Requires user role: ADMIN, USER

USAGE:
xCommand Audio Volume Mute

xCommand Audio Volume Set
Set the volume on the endpoint to a specified level.

Requires user role: ADMIN, USER

USAGE:
xCommand Audio Volume Set Level: Level
where
Level: Integer (0..100)
Select the gain level. 70 equals 0 dB gain, and 100 equals 15 dB gain.

xCommand Audio Volume SetToDefault
Set the volume to the default level that is defined in the xConfiguration Audio DefaultVolume setting.

Requires user role: ADMIN, USER

USAGE:
xCommand Audio Volume SetToDefault

xCommand Audio Volume ToggleMute
Toggle the loudspeaker between muted and unmuted.

 Requires user role: ADMIN, USER

USAGE:
xCommand Audio Volume ToggleMute
xCommand Audio Volume Unmute
Set the volume on the endpoint back on after muting.
Requires user role: ADMIN, USER

USAGE:
  xCommand Audio Volume Unmute

xCommand Audio VuMeter Start
Start a VU meter to show the audio signal level on the specified connector. You have to specify both the connector’s type and number (ConnectorType, ConnectorId) to uniquely identify the connector. The VU meter measures the input level for frequencies below 20 kHz.
Requires user role: ADMIN, USER

USAGE:
  xCommand Audio VuMeter Start ConnectorID: [ConnectorID] ConnectorType: [ConnectorType] [IncludePairingQuality: IncludePairingQuality] where
  ConnectorID: Integer (1..2) for Microphone; Integer (1..1) for HDMI
  Select a connector number. Together with the ConnectorType it uniquely identifies the connector. Microphone [1] is the built-in microphone, and Microphone [2] is a microphone connected to the mini-jack input connector.
  ConnectorType: HDMI/Microphone
  Select the connector type.
  IncludePairingQuality: Literal (Off / On)
  The default is set to Off

xCommand Audio VuMeter Stop
Stop the VU meter on the specified connector. You have to specify both the connector’s type and number (ConnectorType, ConnectorId) to uniquely identify the connector.
Requires user role: ADMIN, USER

USAGE:
  xCommand Audio VuMeter Stop ConnectorID: [ConnectorID] ConnectorType: [ConnectorType] where
  ConnectorId: Integer (1..2) for Microphone; Integer (1..1) for HDMI
  Select a connector number. Together with the ConnectorType it uniquely identifies the connector. Microphone [1] is the built-in microphone, and Microphone [2] is a microphone connected to the mini-jack input connector.
  ConnectorType: HDMI/Microphone
  Select the connector type.

xCommand Audio VuMeter StopAll
Stop all VU meters.
Requires user role: ADMIN, USER

USAGE:
  xCommand Audio VuMeter StopAll
Bookings commands

xCommand Bookings Clear
Clear the current stored list of bookings.
Requires user role: ADMIN, USER

**USAGE:**
```
xCommand Bookings Clear
```

xCommand Bookings Get
Get the booking information for a specific ID.
Requires user role: ADMIN, USER

**USAGE:**
```
xCommand Bookings Get Id: "Id"
```

```Id```
The booking ID of a call or conference.

xCommand Bookings List
List the stored bookings for the system. The list of booking details is received from the management system. All parameters are optional, and can be used to limit the search result. If no parameters are set, past, present and future bookings are all listed. To avoid listing bookings from yesterday and before, use DayOffset = 0.

Requires user role: ADMIN, USER

**USAGE:**
```
xCommand Bookings List [Days: Days] [DayOffset: DayOffset] [Limit: Limit] [Offset: Offset]
```

```Days```
Number of days to retrieve bookings from.

```DayOffset```
Which day to start the search from (today: 0, tomorrow: 1…). The default is set to 0.

```Limit```
Max number of bookings to list.

```Offset```
Offset number of bookings for this search. The default is set to 0.
Call commands

xCommand Call Accept
Accept an incoming call. If no CallId is specified, all incoming calls are accepted.
Requires user role: ADMIN, USER

USAGE:
xCommand Call Accept [CallId: CallId]
where
CallId: Integer (0..65534)
The CallID is returned when the xCommand Dial command is run. During the call you can run the xStatus Call command to see the CallId. The default is set to 0.

xCommand Call Disconnect
Disconnect a call.
Requires user role: ADMIN,INTEGRATOR, USER

USAGE:
xCommand Call Disconnect [CallId: CallId]
where
CallId: Integer (0..65534)
The CallID is returned when the xCommand Dial command is run. During the call you can run the xStatus Call command to see the CallId. The default is set to 0.

xCommand Call DTMFSend
Send DTMF tones to the far end.
Requires user role: ADMIN, USER

USAGE:
xCommand Call DTMFSend [CallId: CallId] DTMFString: "DTMFString"
where
CallId: Integer (0..65534)
The CallID is returned when the xCommand Dial command is run. During the call you can run the xStatus Call command to see the CallId. The default is set to -1.
DTMFString: String (0, 32)
Enter the DTMF string.

xCommand Call FarEndControl Camera Move
Move the far end camera (the remote camera).
NOTE: The far end camera moves in the specified direction until the stop command (ref: xCommand FarEndControl Camera Stop) is issued.
Requires user role: ADMIN, USER

USAGE:
xCommand Call FarEndControl Camera Move [CallId: CallId] Value: Value
where
CallId: Integer (0..65534)
The CallID is returned when the xCommand Dial command is run. During the call you can run the xStatus Call command to see the CallId. The default is set to -1.
Value: Left/Right/Up/Down/ZoomIn/ZoomOut
Select the action for how to move the camera.
xCommand Call FarEndControl Camera Stop

Stop the far end camera after the xCommand FarEndControl Camera Move has been issued.

Requires user role: ADMIN, USER

**USAGE:**

```
xCommand Call FarEndControl Camera Stop [CallId: CallId]
```

where

- **CallId**: Integer (0..65534)
  - The CallID is returned when the xCommand Dial command is run. During a call you can run the xStatus Call command to see the CallId. The default is set to -1.

xCommand Call FarEndControl RoomPreset Activate

While in a call, this command is used to activate a preset on the far end codec. The preset covers the far end codec's camera positions and input video switcher settings.

The preset must be stored on the far end codec beforehand, either by using the xCommand Preset Store command locally on the far end codec, or by using the xCommand FarEndControl Preset Store command from a remote codec.

Note: The far end codec's xConfiguration Conference FarEndControl Mode setting must be switched On for the FarEndControl commands to work.

Requires user role: ADMIN, USER

**USAGE:**

```
xCommand Call FarEndControl RoomPreset Activate [CallId: CallId] PresetId: PresetId
```

where

- **CallId**: Integer (0..65534)
  - The CallId is required to identify the far end codec only when in a Multipoint call. The CallId is returned when issuing the xCommand Dial command. During a call you can run the xStatus Call command to see the CallId. The default is set to -1.

- **PresetId**: Integer (1..15)
  - The ID of the preset that is stored on the far end codec.

xCommand Call FarEndControl Source Select

Select which video input source to use as the main source on the far end system.

Requires user role: ADMIN, USER

**USAGE:**

```
xCommand Call FarEndControl Source Select [CallId: CallId] SourceId: SourceId
```

where

- **CallId**: Integer (0..65534)
  - The CallID is returned when the xCommand Dial command is run. During a call you can run the xStatus Call command to see the CallId. The default is set to -1.

- **SourceId**: Integer (0..15)
  - Select a video input source on the far end.

xCommand Call Forward

Specifies what number or URI you want to forward your incoming calls to. The display name is a local reference for the forwarded destination. A message, together with the local reference, is shown on screen when you have configured the system to forward all calls.

Requires user role: ADMIN, USER

**USAGE:**

```
xCommand Call Forward DisplayName: "DisplayName" Number: "Number"
```

where

- **DisplayName**: String (0, 255)
  - The local reference for the forwarded destination.

- **Number**: String (0, 255)
  - The directory number or URI which you want to forward the incoming calls to.
xCommand Call Hold
Put a call on hold.
Requires user role: ADMIN, USER

USAGE:
xCommand Call Hold [CallId: CallId] [Reason: Reason]
where
CallId: Integer (0..65534)
The CallID is returned when the xCommand Dial command is run. During a call you can run the xStatus Call command to see the CallId. The default is set to 0.
Reason: Conference/Transfer/Other
Internal usage only. The default is set to Other.

xCommand Call Ignore
Turns off the ringtone for the incoming call. The call can still be answered.
Requires user role: ADMIN, USER

USAGE:
xCommand Call Ignore CallId: CallId
where
CallId: Integer (0..65534)
The CallID is returned when the xCommand Dial command is run. During a call you can run the xStatus Call command to see the CallId.

xCommand Call Join
Internal usage only.
Requires user role: ADMIN, USER

USAGE:
xCommand Call Join CallId: CallId
where
CallId: Integer (0..65534)
You can have from 1 to 10 CallId parameters in the same command.

xCommand Call Reject
Reject incoming call. If no call id is specified, all incoming calls are rejected.
Requires user role: ADMIN, USER

USAGE:
xCommand Call Reject [CallId: CallId]
where
CallId: Integer (0..65534)
The CallID is returned when the xCommand Dial command is run. During a call you can run the xStatus Call command to see the CallId. The default is set to 0.

xCommand Call Resume
Resume a call that have been put on hold.
Requires user role: ADMIN, USER

USAGE:
xCommand Call Resume [CallId: CallId]
where
CallId: Integer (0..65534)
The CallID is returned when the xCommand Dial command is run. During a call you can run the xStatus Call command to see the CallId. The default is set to 0.
xCommand Call UnattendedTransfer
Transfers an ongoing call to another participant. Fully supported for SIP calls only.
Requires user role: ADMIN, USER

USAGE:
```
xCommand Call UnattendedTransfer CallId: CallId Number: "Number"
```

Where
- **CallId**: Integer (0..65534)
  - The CallID is returned when the xCommand Dial command is run. During a call you can run the xStatus Call command to see the CallId.
- **Number**: String (0, 255)
  - The number the call is transferred to.

CallHistory commands

xCommand CallHistory AcknowledgeAllMissedCalls
Turns off the missed calls indicator on the touch controller for all missed calls.
Requires user role: ADMIN, USER

USAGE:
```
xCommand CallHistory AcknowledgeAllMissedCalls
```

xCommand CallHistory AcknowledgeMissedCall
Turns off the missed calls indicator on the touch controller for the specified call.
Requires user role: ADMIN, USER

USAGE:
```
xCommand CallHistory AcknowledgeMissedCall CallHistoryId: CallHistoryId [AcknowledgeConsecutiveDuplicates: AcknowledgeConsecutiveDuplicates]
```

Where
- **CallHistoryId**: Integer (1..2147483647)
  - CallHistoryId for the call in question. Run xCommand CallHistory Get to get the id number.
- **AcknowledgeConsecutiveDuplicates**: False/True
  - You can include or exclude all surrounding calls with duplicate information. The default is set to False.

xCommand CallHistory DeleteAll
Deletes all information on previous calls.
Requires user role: ADMIN, USER

USAGE:
```
xCommand CallHistory DeleteAll [Filter: Filter]
```

Where
- **Filter**: All/Missed/Placed/Received
  - You can filter which calls to delete. The default is set to All.
xCommand CallHistory DeleteEntry

Deletes all information on the specified call.

Requires user role: ADMIN, USER

USAGE:

xCommand CallHistory DeleteEntry CallHistoryId: CallHistoryId

[AcknowledgeConsecutiveDuplicates: AcknowledgeConsecutiveDuplicates]
[DeleteConsecutiveDuplicates: DeleteConsecutiveDuplicates]

where

CallHistoryId: Integer (1..2147483647)

CallHistoryId for the call in question. Run xCommand CallHistory Get to get the id number.

AcknowledgeConsecutiveDuplicates: False/True

You can include or exclude all surrounding calls with duplicate information.

DeleteConsecutiveDuplicates: False/True

You can delete the surrounding calls with duplicate information or not. The default is set to False.

xCommand CallHistory Get

Retrieve all information on previous calls made on the video system.

Requires user role: ADMIN, USER

USAGE:

xCommand CallHistory Get [Filter: Filter] [Offset: Offset] [Limit: Limit]
[DetailLevel: DetailLevel] [SearchString: "SearchString"] [CallHistoryId: CallHistoryId]

where

Filter: All/Missed/AnsweredElsewhere/Forwarded/Placed/NoAnswer/Received/Rejected/UnacknowledgedMissed

You can filter which calls to retrieve. The default is set to All.

Offset: Integer (0..65534)

Sets the call from which to start. The default is set to 0.

Limit: Integer (0..65534)

Defines the amount of calls in the output. The default is set to 65534.

DetailLevel: Basic/Full

Sets the level of detail for the information on these calls. The default is set to Basic.

SearchString: String (0, 255)

Allows you to set the command to apply to a specified display name or call back number.

CallHistoryId: Integer (0..65534)

CallHistoryId for the call in question.
xCommand CallHistory Recents
Retrieve aggregated information on previous calls made on the video system.

Requires user role: ADMIN, USER

**USAGE:**
```
xCommand CallHistory Recents [Filter: Filter] [Offset: Offset] [Limit: Limit] [DetailLevel: DetailLevel] [SearchString: "SearchString"] [CallHistoryId: CallHistoryId] [Order: Order] where
```
*Filter: All/Missed/AnsweredElsewhere/Forwarded/Placed/NoAnswer/Received/Rejected/UnacknowledgedMissed*
You can filter which calls to retrieve. The default is set to All.

*Offset: Integer (0..65534)*
Sets the call from which to start. The default is set to 0.

*Limit: Integer (0..65534)*
Defines the amount of calls in the output. The default is set to 65534.

*DetailLevel: Basic/Full*
Sets the level of detail for the information on these calls. The default is set to Basic.

*SearchString: String (0, 255)*
Allows you to set the command to apply to a specified display name or callback number.

*CallHistoryId: Integer (0..65534)*
CallHistoryId for the call in question.

*Order: OccurrenceTime/OccurrenceFrequency*
Define the order in which the previous calls are presented. The default is set to OccurrenceTime.

Camera commands

xCommand Camera PositionReset
Reset the camera position to default position.

Requires user role: ADMIN, INTEGRATOR, USER

**USAGE:**
```
xCommand Camera PositionReset [Axis: Axis] CameraId: CameraId where
```
*Axis: All/Focus/PanTilt/Zoom*
Select which function to reset. If not specified all are reset. The default is set to All.

*CameraId: Integer (1..7)*
The ID of the camera preset you want to reset.
**xCommand Camera PositionSet**

Set the camera position.

Requires user role: ADMIN, USER

**USAGE:**

xCommand Camera PositionSet CameraId: CameraId [Focus: Focus] [Lens: Lens] [Pan: Pan] [Tilt: Tilt] [Zoom: Zoom]

where

CameraId: Integer (1..7)

The ID of the camera preset you want to reset.

Focus: Integer (0..65535)

Focus the camera near or far.

Lens: Literal (Wide / Center / Left / Right)

Sets the camera’s lens position.

Pan: Integer (-10000..10000)

Move the camera to the left or right.

Tilt: Integer (-2500..2500)

Move the camera up or down.

Zoom: Integer (0..8500)

Zoom in or out.

---

**xCommand Camera Preset Activate**

Activate one of the stored camera presets.

Note that the xCommand Camera Preset commands applies to an individual camera. This is in contrast to the xCommand Preset commands where a single preset covers ALL connected cameras plus the Video Input switcher settings.

Requires user role: ADMIN, USER

**USAGE:**

xCommand Camera Preset Activate PresetId: PresetId

where

PresetId: Integer (1..35)

The ID of the camera preset you want to activate.

---

**xCommand Camera Preset ActivateDefaultPosition**

Sets the cameras to their default position, if one is defined. The default position is defined by xCommand Camera Preset Store or by xCommand Camera Preset Edit. Only one default position can be defined per camera.

Requires user role: ADMIN, USER

**USAGE:**

xCommand Camera Preset ActivateDefaultPosition [CameraId: CameraId]

where

CameraId: Integer (1..7)

The ID of the camera preset you want to activate. If CameraId is not specified, all cameras will be set in their respective default position, if one is defined.
xCommand Camera Preset Edit

Edit a stored camera preset. You can change the name of the camera preset and its position in the list that is returned by the xCommand Camera Preset List command. You can also change whether or not this preset is the default position for the associated camera.

Note that the xCommand Camera Preset commands applies to an individual camera. This is in contrast to the xCommand Preset commands where a single preset covers ALL connected cameras and the Video Input switcher settings.

Requires user role: ADMIN, USER

USAGE:

xCommand Camera Preset Edit PresetId: PresetId [ListPosition: ListPosition] [Name: "Name"] [DefaultProsition: DefaultProsition]

where

PresetId: Integer (1..35)
  The ID of the camera preset you want to edit.

ListPosition: Integer (1..35)
  The position in the list returned by the xCommand Camera Preset List command.

Name: String (0, 255)
  The name of the camera preset. It will be used in the list returned by the xCommand Camera Preset List command.

DefaultProsition: False/True
  Defines whether or not this preset is the default position for the associated camera. Note that each camera can only have one default position, so if set, the old default preset will automatically be marked as not default.

xCommand Camera Preset List

List information about available camera presets.

Note that the xCommand Camera Preset commands applies to an individual camera. This is in contrast to the xCommand Preset commands where a single preset covers ALL connected cameras plus the Video Input switcher settings.

Requires user role: ADMIN, USER

USAGE:

xCommand Camera Preset List CameraId: CameraId [DefaultPosition: DefaultPosition]

where

CameraId: Integer (1..7)
  Only list presets for the specified camera.

DefaultPosition: False/True
  List default positions only, or only those that are not default positions.

xCommand Camera Preset Remove

Remove a camera preset.

Note that the xCommand Camera Preset commands applies to an individual camera. This is in contrast to the xCommand Preset commands where a single preset covers ALL connected cameras plus the Video Input switcher settings.

Requires user role: ADMIN, USER

USAGE:

xCommand Camera Preset Remove PresetId: PresetId

where

PresetId: Integer (1..35)
  The ID of the camera preset you want to remove.
xCommand Camera Preset Show
Shows the preset details for the requested PresetId.
Requires user role: ADMIN, USER

**USAGE:**
```
xCommand Camera Preset Show PresetId: PresetId
```
where
PresetId: Integer (1..35)
The ID of the camera preset you wish to see.

xCommand Camera Preset Store
Store the current position (pan and tilt), zoom and focus of the chosen camera. The camera is identified by the CameraId parameter.
Note that the xCommand Camera Preset commands applies to an individual camera. This is in contrast to the xCommand Preset commands where a single preset covers ALL connected cameras plus the Video Input switcher settings. The xCommand Camera Preset commands are useful when you want to handle multiple camera positions individually per camera, rather than working with complete sets of camera positions. The individual camera presets are not available for far end control.
Requires user role: ADMIN, USER

**USAGE:**
```
xCommand Camera Preset Store [PresetId: PresetId] CameraId: CameraId
[ListPosition: ListPosition] [Name: "Name"] [TakeSnapshot: TakeSnapshot]
[DefaultProsition: DefaultProsition]
```
where
PresetId: Integer (1..35)
The ID of this camera preset. If not set explicitly, the codec will assign a preset ID automatically.

CameraId: Integer (1..7)
Select the camera for which to store the preset position.

ListPosition: Integer (1..35)
The new camera preset's position in the list returned by the xCommand Camera Preset List command.

Name: String (0, 255)
The name of the new camera preset. It will be used in the list returned by the xCommand Camera Preset List command.

TakeSnapshot: False/True
Allow or disallow snapshot of the preview.

DefaultProsition: False/True
Defines whether or not this preset shall be the default position of the associated camera. Note that each camera can hold only one default position, so if set, the old default preset will automatically be marked as not default.
**xCommand Camera Ramp**

Move the camera in a specified direction. The camera moves at specified speed until a stop command is issued. In a daisy chain, you need to know the CameraId for the camera you want to address. Be aware that pan and tilt can be operated simultaneously, but no other combinations. In the latter case only the first operation specified is executed. For example, if you try to run both zoom and pan at the same time, only zoom is executed.

**NOTE:** You must run a stop command to stop the camera, see the example below.

Requires user role: ADMIN, INTEGRATOR, USER

**USAGE:**

```plaintext
xCommand Camera Ramp CameraId: CameraId [Pan: Pan] [PanSpeed: PanSpeed] [Tilt: Tilt] [TiltSpeed: TiltSpeed] [Zoom: Zoom] [ZoomSpeed: ZoomSpeed] [Focus: Focus]
```

**CameraId:** Integer (1..7)
Select the camera.

**Pan:** Left/Right/Stop
Move the camera to the Left or Right, followed by Stop.

**PanSpeed:** Integer (1..15)
Set the pan speed.

**Tilt:** Down/Up/Stop
Move the camera Up or Down, followed by Stop.

**TiltSpeed:** Integer (1..15)
Set the tilt speed.

**Zoom:** In/Out/Stop
Zoom the camera In or Out, followed by Stop.

**ZoomSpeed:** Integer (1..15)
Set the zoom speed.

**Focus:** Far/Near/Stop
Focus the camera Far or Near, followed by Stop.

---

**xCommand Camera TriggerAutofocus**

Trigger the auto-focus functionality. The camera must support auto-focus functionality. If the camera is daisy chained, the CameraId is given by its place in the chain.

Requires user role: ADMIN, USER

**USAGE:**

```plaintext
xCommand Camera TriggerAutofocus CameraId: CameraId
```

**CameraId:** Integer (1..7)
Select the camera to auto-focus.
Cameras commands

xCommand Cameras AutoFocus Diagnostics Start
Start diagnostics on auto focus.
Requires user role: ADMIN, INTEGRATOR

**USAGE:**
```
xCommand Cameras AutoFocus Diagnostics Start CameraId: CameraId
```

**CameraId:** 1..7
Select which camera to diagnose.

xCommand Cameras AutoFocus Diagnostics Stop
Stop diagnostics on auto focus.
Requires user role: ADMIN, INTEGRATOR

**USAGE:**
```
xCommand Cameras AutoFocus Diagnostics Stop CameraId: CameraId
```

**CameraId:** 1..7
Select which camera to diagnose.

xCommand Cameras SpeakerTrack Activate
Activate SpeakerTrack mode. Requires that xConfiguration Cameras SpeakerTrack Mode is set to Auto (default).
This setting applies only when using a Cisco TelePresence SpeakerTrack 60 camera. The SpeakerTrack 60 camera assembly consists of two cameras and uses an audio tracking technique that finds and captures a close-up of the active speaker. When a change of speaker is detected, the system can switch automatically between the two cameras to always show the best camera view.
Requires user role: ADMIN, USER

**USAGE:**
```
xCommand Cameras SpeakerTrack Activate
```

xCommand Cameras SpeakerTrack Deactivate
Deactivate SpeakerTrack mode.
This setting applies only when using a Cisco TelePresence SpeakerTrack 60 camera. The SpeakerTrack 60 camera assembly consists of two cameras and uses an audio tracking technique that finds and captures a close-up of the active speaker. When a change of speaker is detected, the system can switch automatically between the two cameras to always show the best camera view.
Requires user role: ADMIN, USER

**USAGE:**
```
xCommand Cameras SpeakerTrack Deactivate
```
xCommand Cameras SpeakerTrack Diagnostics Start
Starts diagnostics on the SpeakerTrack cameras' tracking.
Requires user role: ADMIN, INTEGRATOR, USER

**USAGE:**
xCommand Cameras SpeakerTrack Diagnostics Start Tracking: Tracking

where

Tracking: On/Off
On: Displays diagnostics from both cameras simultaneously. In this mode the tracking is determined by who is talking in the room identical to SpeakerTrack's standard behaviour.
Off: Displays diagnostics from one camera at a time. Diagnostics is switched from one camera to the other in 15 seconds intervals, and camera related diagnostics are shown for the active camera. Both cameras stay in full wide position. Use Tracking: Off when you wish to see the tracking diagnostics from one camera at a time.
The default is set to On.

xCommand Cameras SpeakerTrack Diagnostics Stop
Stops diagnostics on the SpeakerTrack cameras.
Requires user role: ADMIN, INTEGRATOR, USER

**USAGE:**
xCommand Cameras SpeakerTrack Diagnostics Stop

xCommand Cameras SpeakerTrack Whiteboard ActivatePosition
Moves the specified camera to the position stored with xCommand Cameras SpeakerTrack Whiteboard StorePosition.
Requires user role: ADMIN, USER

**USAGE:**
xCommand Cameras SpeakerTrack Whiteboard ActivatePosition CameraId: CameraId
[WhiteboardId: WhiteboardId]

where

CameraId: Integer(1..1)
The ID of the camera that is being positioned.

WhiteboardId: Integer(1..8)
The id set for the camera position used for the snap-to-whiteboard feature. Currently only id 1 can be used.

xCommand Cameras SpeakerTrack Whiteboard AlignPosition
Not applicable.
Requires user role: ADMIN, USER

**USAGE:**
xCommand Cameras SpeakerTrack Whiteboard AlignPosition
xCommand Cameras SpeakerTrack Whiteboard SetDistance

Set the cameras distance to the whiteboard. This information is needed by the camera to frame the whiteboard automatically.

Requires user role: ADMIN, USER

**USAGE:**

```
xCommand Cameras SpeakerTrack Whiteboard SetDistance Distance: Distance
[WhiteboardId: WhiteboardId]
```

where

Distance: Integer (0..65534)
- Set distance to whiteboard in centimeters. Use an accurate measurement for the feature to work seamlessly.

WhiteboardId: Integer (1..8)
- The id set for the camera position used for the snap-to-whiteboard feature. Currently only id 1 can be used.

---

Conference commands

xCommand Conference DoNotDisturb Activate

This command switches on the Do Not Disturb mode, and the Timeout parameter allows you to control when it is switched off again. When Do Not Disturb is switched on, all incoming calls are rejected and registered as missed calls. The calling side receives a busy signal.

Requires user role: ADMIN, USER

**USAGE:**

```
xCommand Conference DoNotDisturb Activate [Timeout: Timeout]
```

where

Timeout: Integer (1..1440)
- Set the number of minutes before Do Not Disturb is switched off. If not set, Do Not Disturb times out after 1440 minutes (24 hours).

xCommand Conference DoNotDisturb Deactivate

Switch off the Do Not Disturb mode. When Do Not Disturb is switched off incoming calls come through as normal.

Requires user role: ADMIN, USER

**USAGE:**

```
xCommand Conference DoNotDisturb Deactivate
```

---

xCommand Conference SpeakerLock Release

Releases locked speaker set by xCommand Conference SpeakerLock Set. Default voice switching is switched back on.

Requires user role: ADMIN, USER

**USAGE:**

```
xCommand Conference SpeakerLock Release
```
xCommand Conference SpeakerLock Set

For manually locking one of the speakers to the prominent speaker position. This overrides the default voice switching.

Requires user role: ADMIN, USER

**USAGE:**

xCommand Conference SpeakerLock Set Target: Target [CallId: CallId]

where

Target: local/remote

Identifies local or remote participant.

CallId: Integer (0..65534)

Identify CallID for the remote participant. Only relevant if Target is set to "remote". The default is set to 0.

---

Diagnostics commands

xCommand Diagnostics Run

This command runs self-diagnostics commands on the system.

Requires user role: ADMIN

**USAGE:**

xCommand Diagnostics Run [ResultSet: ResultSet]

where

ResultSet: Alerts/All/None

You can filter the diagnostics results to alerts, all or none. If not set, the result will show all results. The default is set to Alerts.
## Dial commands

### xCommand Dial

Dial out from the system. Returns information about the CallId and ConferenceId, which are required for some of the other commands.

Requires user role: ADMIN, INTEGRATOR, USER

**USAGE:**

```
xCommand Dial Number: "Number" [Protocol: Protocol] [CallRate: CallRate] [CallType: CallType] [BookingId: "BookingId"] [Appearance: Appearance] [DisplayName: "DisplayName"]
```

where

- **Number**: String (0, 255)
  - Enter the number or address.

- **Protocol**: H320/H323/Sip/Spark
  - Select the call protocol.

- **CallRate**: Integer (64..6000)
  - Set the call rate.

- **CallType**: Audio/Video
  - Select the call type.

- **BookingId**: String (0, 255)
  - Any identifier that an external booking system (e.g. TMS, CTS-MAN) can use for its own references to match placed calls with the booking systems internal identifier for a meeting. This can be any string, e.g. a GUID. The booking Id is supplied in call logs, call events etc for the call.

- **Appearance**: Integer (1..999999999)
  - Internal usage only.

- **DisplayName**: String (0, 255)
  - The display name of the remote participant.

## HttpFeedback commands

### xCommand HttpFeedback Deregister

Deregister the HTTP feedback over HTTP(S).

Requires user role: ADMIN

**USAGE:**

```
xCommand HttpFeedback Deregister FeedbackSlot: FeedbackSlot
```

where

- **FeedbackSlot**: Integer (1..4)
  - Deregister the feedback slot that was registered using the xCommand HttpFeedback Register command.
xCommand HttpFeedback Register
Register the system to a HTTP(S) server to return XML feedback over HTTP(S) to specific URLs.
Requires user role: ADMIN

**USAGE:**
```
xCommand HttpFeedback Register FeedbackSlot: FeedbackSlot [Format: Format]
ServerUrl: "ServerUrl" [Expression: "Expression"]
```
where

FeedbackSlot: Integer (1..4)
The codec can register up to 4 slots of servers requesting HTTP feedback. Set the registering to one of them.

Note: Avoid using FeedbackSlot 3 in an environment where Cisco TelePresence Management Suite (TMS) is used as TMS uses this feedback slot to register its expressions.

Format: XML/JSON
Set the format for the feedback from the HTTP server to XML or JSON. The default is set to XML.

ServerUrl: String (1, 2048)
The URL to the HTTP server where you want the codec to post the HTTP feedback messages to.

Expression: String (1, 255)
The XPath expression specifies which parts of the Status, Configuration or Event XML documents are monitored. You can have from 0 to 15 XPath expressions in the same command.

**Macros commands**

xCommand Macros Log Clear
Clears the Macros Logs.
Requires user role: ADMIN

**USAGE:**
```
xCommand Macros Log Clear
```

xCommand Macros Log Get
Shows the logs for all running macros and for the runtime itself.
Requires user role: ADMIN

**USAGE:**
```
xCommand Macros Log Get [Offset: "Offset"]
```
where

Offset: String (0..65534)
Shows lines with the same or higher Offset than the one provided. The default is set to 0.

xCommand Macros Macro Activate
Activates a macro created on this video system.
Requires user role: ADMIN

**USAGE:**
```
xCommand Macros Macro Activate Name: "Name"
```
where

Name: String (0..255)
Specifies the name of the macro to activate.
xCommand Macros Macro Deactivate
Deactivates a macro currently running on this video system.
Requires user role: ADMIN

**USAGE:**
```plaintext
xCommand Macros Macro Deactivate Name: "Name"
```

**Name:** String (0..255)
The name of the macro to deactivate.

xCommand Macros Macro Get
Shows the details of a macro created on this video system.
Requires user role: ADMIN

**USAGE:**
```plaintext
xCommand Macros Macro Get [Content: Content] [Name: "Name"]
```

**Content:** Literal (False / True)
Shows the content for the specified Macro or not. The default is set to false.

**Name:** String (0..255)
The name of the macro.

xCommand Macros Macro Remove
Removes a macro created on this video system.
Requires user role: ADMIN

**USAGE:**
```plaintext
xCommand Macros Macro Remove Name: "Name"
```

**Name:** String (0..255)
The name of the macro that is removed.

xCommand Macros Macro Rename
Renames a macro created on this video system.
Requires user role: ADMIN

**USAGE:**
```plaintext
xCommand Macros Macro Rename Name: "Name" NewName: "NewName" [Overwrite: Overwrite]
```

**Name:** String (0..255)
The name of the macro that is renamed.

**NewName:** String (0..255)
The new name of the macro.

**Overwrite:** Literal (False / True)
Overwrites the existing content or not. The default is set to false.

xCommand Macros Macro Roles Set
Sets the role for a macro.
Requires user role: ADMIN

**USAGE:**
```plaintext
xCommand Macros Macro Roles Set Name: "Name" [Role: "Role"]
```

**Name:** String (0..255)
The name of the macro that is set.

**Role:** String (0..255)
The name of the role that is set.
xCommand Macros Macro Save
Saves the details of a macro. This is a multiline command.
Requires user role: ADMIN

**USAGE:**
```
xCommand Macros Macro Save Name: "Name" [Overwrite: True]
```
where

**Name:** String (0..255)
The name of the macro that is saved.

**Overwrite:** Literal (False / True)
Overwrites the existing content or not. The default is set to true.

xCommand Macros Runtime Restart
Restarts all of the macros set up on this device.
Requires user role: ADMIN

**USAGE:**
```
xCommand Macros Runtime Restart
```

xCommand Macros Runtime Start
Starts all of the macros set up on this device.
Requires user role: ADMIN

**USAGE:**
```
xCommand Macros Runtime Start
```

xCommand Macros Runtime Status
Shows the current status of the macros runtime on this device.
Requires user role: ADMIN

**USAGE:**
```
xCommand Macros Runtime Status
```
Message commands

xCommand Message Send
Triggers a Message Send event which sends text to any listening clients.
Requires user role: ADMIN, INTEGRATOR

**USAGE:**
```
xCommand Message Send Text: "Text"
```
where

**Text:** String (0..255)
The text that the message contains.

Peripherals commands

xCommand Peripherals Connect
Register peripherals that are connected to the codec, such as control systems and touch panels. The registered peripherals are displayed on the web interface under Configuration > Peripherals.

This command should be used when the peripheral connects to the codec for the first time or when the software version on the peripheral has changed. The list of connected devices is available with the command xStatus Peripherals ConnectedDevice [n] Status.

Requires user role: ADMIN, INTEGRATOR, ROOMCONTROL, USER

**USAGE:**
```
xCommand Peripherals Connect [HardwareInfo: "HardwareInfo"] ID: "ID" [Name: "Name"] [NetworkAddress: "NetworkAddress"] [SerialNumber: "SerialNumber"] [SoftwareInfo: "SoftwareInfo"] Type: Type
```
where

**HardwareInfo:** String (0, 100)
The device's hardware number.

**ID:** String (1, 100)
A unique ID for the device you are connecting to, typically a MAC address.

**Name:** String (0, 100)
Define a name for the device.

**NetworkAddress:** String (0, 100)
Network address for the device you are connecting to.

**SerialNumber:** String (0, 100)
The device's serial number.

**SoftwareInfo:** String (0, 100)
Software version the device is running.

**Type:** Byod/ControlSystem/Other/TouchPanel
Define the type of device you are connecting to.
xCommand Peripherals HeartBeat
When a peripheral is registered as a connected device, you can set it to send a heartbeat to the codec to let the codec know that it is still connected. This will keep the device on the xStatus Peripherals ConnectedDevice list. If the peripheral is not set to send a heartbeat, the device will disappear from the list after a while. Note: Does not apply to cameras.

Requires user role: ADMIN, INTEGRATOR, ROOMCONTROL, USER

USAGE:
xCommand Peripherals HeartBeat ID: "ID" [Timeout: Timeout]
where
ID: String (1, 100)
A unique ID for the device you are connecting to, typically a MAC address.
Timeout: Integer (1..65535)
Set how long the device will send heartbeat. The default is set to 60.

xCommand Peripherals List
Lists all currently and previously connected peripherals.

Requires user role: ADMIN, INTEGRATOR, ROOMCONTROL

USAGE:
xCommand Peripherals List [Connected: Connected] [Type: Type]
where
Connected: False/True
Limit the search to currently connected devices.
Type: All/ControlSystem/ISDNLink/Other/TouchPanel
Limit the search by device type.

xCommand Peripherals Pairing DeviceDiscovery Start
Start device discovery to detect ISDN Links in the same network.

Requires user role: ADMIN

USAGE:
xCommand Peripherals Pairing DeviceDiscovery Start [AutoPairing: AutoPairing] [DeviceType: DeviceType] [Timeout: Timeout]
where
AutoPairing: On/Off
You can select to automatically pair the detected device to the endpoint. The default is set to Off.
DeviceType: ISDNLink
Only look for ISDN Link.
Timeout: Integer (3..60)
Set a maximum time for the search from 3 to 60 seconds. The default is set to 10.

xCommand Peripherals Pairing Pair
Pair an ISDN Link to an endpoint.

Requires user role: ADMIN

USAGE:
xCommand Peripherals Pairing Pair MacAddress: "MacAddress"
where
MacAddress: String (1, 1450)
Enter the MAC address for the ISDN Link you wish to pair to the endpoint.
xCommand Peripherals Pairing Unpair

Unpair endpoint from an ISDN Link, when the two have contact.

Requires user role: ADMIN

**USAGE:**

```
xCommand Peripherals Pairing Unpair MacAddress: "MacAddress"
```

where

*MacAddress*: String (1, 100)

MacAddress: Enter the MAC address for the ISDN Link you wish to unpair from the endpoint.

---

xCommand Peripherals Purge

Force unpair an endpoint from an ISDN Link when a connection has been lost. Note: You must also unpair the ISDN Link to be able to pair it to another endpoint.

Requires user role: ADMIN, USER

**USAGE:**

```
xCommand Peripherals Purge ID: "ID"
```

where

*ID*: String (1, 100)

ID: Mac address of the ISDN Link in the format "xxxxxxxxxxxx".

---

**Phonebook commands**

**xCommand Phonebook Contact Add**

Requires user role: ADMIN, USER

**USAGE:**

```
xCommand Phonebook Contact Add Name: "Name" [FolderId: "FolderId"] [ImageURL: "ImageURL"] [Title: "Title"] [Number: "Number"] [Protocol: Protocol] [CallRate: CallRate] [CallType: CallType] [Device: Device] [Tag: Tag]
```

where

*Name*: String (0, 255)

The name of the contact.

*FolderId*: String (0, 255)

The unique identifier for the folder that you want to store the contact in. The identifier will be returned by an xCommand Phonebook Search command. It was also returned when the xCommand Phonebook Folder Add command was issued to make the folder.

*ImageURL*: String (0, 255)

Currently not in use.

*Title*: String (0, 255)

The title of the contact.

*Number*: String (0, 255)

The phone number or address of the contact.

*Protocol*: Auto/H320/H323/SIP/Spark

Select the Auto, Spark, SIP, H323 or H320 protocol.

*CallRate*: Integer (0..6000)

Set a call rate. The default is set to 0.

*CallType*: Audio/Video

Select a call type (audio or video).

*Device*: Mobile/Other/Telephone/Video

Select the device type.
Tag: Untagged/Favorite

Tag the contact as a Favorite, or untag an already tagged contact.

xCommand Phonebook Contact Delete
Delete an existing contact from the local phonebook.
Requires user role: ADMIN, USER

USAGE:
xCommand Phonebook Contact Delete ContactId: "ContactId"

where

Contactld: String (0, 255)
The unique identifier for the contact. The identifier will be returned by an xCommand Phonebook Search command. It was also returned when the xCommand Phonebook Contact Add command was issued to make the contact.

xCommand Phonebook Contact Modify
Modify contact details of an existing contact in the local phonebook. The following parameters can be changed using this command: Name, FolderId, ImageURL and Title. You must use the xCommand Phonebook ContactMethod Modify command to change the other parameters: Number, Protocol, CallRate, CallType and Device.
Requires user role: ADMIN, USER

USAGE:
xCommand Phonebook Contact Modify ContactId: "ContactId" [Name: "Name"] [FolderId: "FolderId"] [ImageURL: "ImageURL"] [Title: "Title"] [Tag: Tag]

where

Contactld: String (0, 255)
The unique identifier for the contact you want to modify. The identifier will be returned by an xCommand Phonebook Search command. It was also returned when the xCommand Phonebook Contact Add command was issued to make the contact.

Name: String (0, 255)
The name of the contact.

FolderId: String (0, 255)
A unique identifier for the folder. The identifier will be returned by an xCommand Phonebook Search command. It was also returned when the xCommand Phonebook Folder Add command was issued.

ImageURL: String (0, 255)
Currently not in use.

Title: String (0, 255)
The title of the contact.

Tag: Untagged/Favorite
Tag the contact as a Favorite, or untag an already tagged contact.
xCommand Phonebook ContactMethod Add

Add contact details for an existing contact in the local phonebook. The command returns the ContactMethodId, which is a unique string that identifies the contact method, typically the format is "n".

You can add several contact methods to a contact. Note that only the first contact method will appear in the Favorites list on the Cisco TelePresence Touch controller. The first contact method may have been created when issuing the xCommand Phonebook Contact Add command to make the contact. All contact methods are available in the API, on the web interface and when using the remote control.

Requires user role: ADMIN, USER

USAGE:

```
xCommand Phonebook ContactMethod Add
ContactId: "ContactId" [Device: Device]
Number: "Number" [Protocol: Protocol] [CallRate: CallRate] [CallType: CallType]
```

where

**ContactId**: String (0, 255)

The unique identifier for the contact that you want to add a contact method to. The identifier will be returned by an xCommand Phonebook Search command. It was also returned when the xCommand Phonebook Contact Add command was issued to make the contact.

**Device**: Mobile/Other/Telephone/Video

Set which type of device to call to.

**Number**: String (0, 255)

The phone number or address of the contact.

**Protocol**: Auto/H320/H323/SIP/Spark

Select protocol.

**CallRate**: Integer (0..6000)

Set a call rate. The default is set to 0.

**CallType**: Audio/Video

Select a call type (audio or video).

xCommand Phonebook ContactMethod Delete

Delete a contact method from an existing contact in the local phonebook.

Requires user role: ADMIN, USER

USAGE:

```
xCommand Phonebook ContactMethod Delete
ContactId: "ContactId" ContactMethodId: "ContactMethodId"
```

where

**ContactId**: String (0, 255)

The unique identifier for the contact you want to change. The identifier will be returned by an xCommand Phonebook Search command. It was also returned when the xCommand Phonebook Contact Add command was issued to make the contact.

**ContactMethodId**: String (0, 255)

The unique identifier for the contact method you want to delete. The identifier will be returned by an xCommand Phonebook Search command. It was also returned when the xCommand Phonebook ContactMethod Add command was issued to make the contact method.
xCommand Phonebook ContactMethod Modify

Modify details about the contact method for an existing contact in the local phonebook.

Requires user role: ADMIN, USER

USAGE:
```
xCommand Phonebook ContactMethod Modify ContactId: "ContactId" ContactMethodId: "ContactMethodId" [Device: Device] [Number: "Number"] [Protocol: Protocol] [CallRate: CallRate] [CallType: CallType]
```

where

```
ContactId: String (0, 255)
The unique identifier for the contact. The identifier will be returned by an xCommand Phonebook Search command. It was also returned when the xCommand Phonebook Contact Add command was issued to make the contact.

ContactMethodId: String (0, 255)
The unique identifier for the contact method you want to modify. The identifier will be returned by an xCommand Phonebook Search command. It was also returned when the xCommand Phonebook ContactMethod Add or xCommand Phonebook Contact Add commands were issued to make the contact.

Device: Mobile/Other/Telephone/Video
Set which type of device to call to.

Number: String (0, 255)
The phone number or address of the contact.

Protocol: Auto/H320/H323/SIP/Spark
Select protocol.

CallRate: Integer (0..6000)
Set a call rate. The default is set to 0.

CallType: Audio/Video
Select a call type (audio or video).
```

xCommand Phonebook Folder Add

Phonebook entries can be stored in folders. Use this command to add a folder to the local phonebook. The command returns the FolderId, which is a unique string that identifies the folder; typically the format is "localGroupId-n".

Requires user role: ADMIN, USER

USAGE:
```
xCommand Phonebook Folder Add Name: "Name" [ParentFolderId: "ParentFolderId"]
```

where

```
Name: String (0, 255)
The name of the folder.

ParentFolderId: String (0, 255)
The unique identifier for the parent folder. The identifier will be returned by an xCommand Phonebook Search command. It was also returned when the xCommand Phonebook Folder Add command was issued to make the parent folder.
```

xCommand Phonebook Folder Delete

Delete an existing folder from the local phonebook.

Requires user role: ADMIN, USER

USAGE:
```
xCommand Phonebook Folder Delete FolderId: "FolderId"
```

where

```
FolderId: String (0, 255)
The unique identifier for the folder. The identifier will be returned by an xCommand Phonebook Search command. It was also returned when the xCommand Phonebook Folder Add command was issued to make the folder.
```
xCommand Phonebook Folder Modify
Modify an existing phonebook folder.

Requires user role: ADMIN, USER

USAGE:
xCommand Phonebook Folder Modify FolderId: "FolderId" [Name: "Name"] [ParentFolderId: "ParentFolderId"]
where
FolderId: String (0, 255)
The unique identifier for the folder. The identifier will be returned by an xCommand Phonebook Search command. It was also returned when the xCommand Phonebook Folder Add command was issued to make the folder.

Name: String (0, 255)
The name of the contact.

ParentFolderId: String (0, 255)
The unique identifier for the parent folder. The identifier will be returned by an xCommand Phonebook Search command. It was also returned when the xCommand Phonebook Folder Add command was issued to make the parent folder.

xCommand Phonebook Search
The search command lets you search in both the local and corporate phone books. A search gives a ResultSet.

The total number of folders and contacts (TotalRows) is always included in the result set when searching the local phone book. When searching a corporate phonebook the total number of folders and contacts may not be included. Whether it is included or not depends on the backend corporate phonebook service (e.g. CUCM, VCS, TMS) and its version.

Requires user role: ADMIN, USER

USAGE:
xCommand Phonebook Search [PhonebookId: "PhonebookId"] [PhonebookType: "Corporate/Local"] [SearchString: "SearchString"] [SearchField: "Name/Number"] [Offset: Offset] [FolderId: "FolderId"] [Limit: Limit] [Recursive: Recursive] [ContactType: ContactType] [Tag: Tag]
where
PhonebookId: String (0, 255)
The identifier of the phonebook server that will be searched. See the xConfiguration Phonebook Server ID setting.

PhonebookType: Corporate/Local
Define whether to search the local phone book or the corporate phonebook. The default is set to Local.

SearchString: String (0, 255)
Search for entries containing this string (note that the entry does not have to begin with the string). If no FolderId is specified, all folders / phonebook directories will be searched.

SearchField: Name/Number
Currently not in use.

Offset: Integer (0..65534)
Get records starting with this offset in a search. The default value is 0. Offset is used together with Limit to support paging. The default is set to 0.

FolderId: String (0, 255)
Search only in the specified folder. The FolderId (string) is listed in the ResultSet of a search result containing folders.

Limit: Integer (0..65534)
Limit the number of records in the result set to this number. For example, if the limit is
set to 10, the ResultSet will contain only 10 entries (Contacts and Folders) even if the
total number of hits is larger. The maximum limit is 1000. The default is set to 50.

Recursive: False/True
This parameter will only have effect when searching the local phone book. The setting
determines whether a local phone book search should be limited to the given FolderId,
or also recursively search in its subfolders. If not specified, the search will be recursive.
When issuing the command without specifying any parameters, all folders, contacts and
contact methods in the local phone book will be returned. The default is set to True.

ContactType: Any/Folder/Contact
Search all contact types, or limit the search to folders or individual contacts. The default
is set to Any.

Tag: Untagged/Favorite
Limits the search to either contacts that have been tagged as favorite or the untagged
contacts.

Presentation commands

xCommand Presentation Start
Open a media stream from the selected presentation source.
Requires user role: ADMIN, USER

USAGE:
xCommand Presentation Start [PresentationSource: PresentationSource] [SendingMode: SendingMode] [ConnectorId: ConnectorId] [Instance: Instance] where

PresentationSource: Integer (1..3)
Select the video input source to be used for presentation, identified by source number.

SendingMode: LocalRemote/LocalOnly
Select whether the presentation is shown locally or locally and remotely. The default
value is LocalRemote.

ConnectorId: Integer (1..3)
Select the video input source to be used for presentation, identified by connectorId.

Instance: New/1/2/3/4/5/6
Select which local presentation instance you wish to start.

xCommand Presentation Stop
Stop the media stream from the presentation source.
Requires user role: ADMIN, USER

USAGE:
xCommand Presentation Stop [Instance: Instance] [PresentationSource: PresentationSource] where

Instance: 1/2/3/4/5/6
Select which local presentation you wish to stop, identified by presentation instance.

PresentationSource: Integer (1..3)
Select which local presentation you wish to stop, identified by source number.
Provisioning commands

**xCommand Provisioning CompleteUpgrade**
Starts installing the software upgrade if you wish to install it before it is set to do so.
Requires user role: ADMIN, USER

**USAGE:**
```
xCommand Provisioning CompleteUpgrade
```

**xCommand Provisioning PostponeUpgrade**
Postpones the installing of the software upgrade.
Requires user role: ADMIN, USER

**USAGE:**
```
xCommand Provisioning PostponeUpgrade
SecondsToPostpone: SecondsToPostpone
```
where

- **SecondsToPostpone: Integer (0..65534)**
  Set how long to postpone the upgrade. The value is in seconds.

**xCommand Provisioning StartUpgrade**
The codec software can be upgraded from the provisioning server. When starting the upgrade the software is automatically downloaded and installed. The codec reboots to complete the software upgrade.
Requires user role: ADMIN, USER

**USAGE:**
```
xCommand Provisioning StartUpgrade
```

**xCommand Provisioning ExtensionMobility Login**
Login command for the Extension Mobility service. You log in to the Extension Mobility service with a user name (UserId) and pin code (Pin). The user name and pin code are set up in CUCM. CUCM also supports multiple profiles for a user.

If you, for a user that has multiple profiles, submit a login command with only user name and pin code, CUCM will send a list of available profiles back to the video system. Then the video system will create corresponding ExtensionMobilityProfileSelection Profile events, so that a new login command, which contains the Profile parameter in addition to the user name and pin code, can be submitted.

Requires user role: ADMIN, USER

**USAGE:**
```
xCommand Provisioning ExtensionMobility Login
UserId: "UserId"
Pin: "Pin"
[Profile: "Profile"]
```
where

- **UserId: String (1, 255)**
  A valid user name, as set up in CUCM.

- **Pin: String (1, 255)**
  A valid pin code for the user, as set up in CUCM.

- **Profile: String (1, 255)**
  A valid profile for the user, as set up in CUCM. This parameter applies only if the user has multiple profiles.

**xCommand Provisioning ExtensionMobility Logout**
This command will log you out of your Extension Mobility profile.
Requires user role: ADMIN, USER

**USAGE:**
```
xCommand Provisioning ExtensionMobility Logout
```
Proximity commands

**xCommand Proximity Services Activate**

Reactivate the Proximity services that were deactivated with xCommand Proximity Services Deactivate.

Requires user role: ADMIN, USER

**USAGE:**

xCommand Proximity Services Activate

**xCommand Proximity Services Deactivate**

This command deactivates all proximity services on the endpoint. To reactivate proximity services use the command xCommand Proximity Services Activate.

Requires user role: ADMIN, USER

**USAGE:**

xCommand Proximity Services Deactivate

RoomPreset commands

**xCommand RoomPreset Activate**

Activate one of the locally stored presets.

Note that information about all video input sources, and pan, tilt, zoom and focus values for all cameras are included in the same preset. In contrast, the xCommand Camera Preset commands applies to individual cameras only.

Requires user role: ADMIN, USER

**USAGE:**

xCommand RoomPreset Activate PresetId: *PresetId*

where

PresetId: Integer (1..15)

The ID of the preset you want to activate.

**xCommand RoomPreset Clear**

Delete a preset.

Note that information about all video input sources, and pan, tilt, zoom and focus values for all cameras are included in the same preset. In contrast, the xCommand Camera Preset commands applies to individual cameras only.

Requires user role: ADMIN, USER

**USAGE:**

xCommand RoomPreset Clear PresetId: *PresetId*

where

PresetId: Integer (1..15)

The ID of the preset you want to delete.
xCommand RoomPreset Store

Store the connector selections for all video input sources and the current position (pan and tilt), zoom and focus values for all cameras.

Note that information about all video input sources, and pan, tilt, zoom and focus values for all cameras are included in the same preset. The system may hold 15 such predefined video input presets. These presets are available for far end control, i.e. they are referred in the PresetId parameter of the xCommand FarEndControl Preset Activate command. In contrast, the xCommand Camera Preset commands apply to individual cameras only. Those presets are not available for far end control.

Requires user role: ADMIN, USER

USAGE:

```
xCommand RoomPreset Store [Description: "Description"] PresetId: PresetId Type: Type
```
where

- **Description**: String (0, 255)
  - Enter a description of the camera preset.

- **PresetId**: Integer (1..15)
  - The ID of this preset.

- **Type**: All/Camera
  - Not applicable. If you want to ensure that a preset only affects camera positions we recommend that you select Camera.

Security commands

xCommand Security Certificates CA Add

Uploads CA security certificates to this device. This is a multiline command.

Requires user role: ADMIN

USAGE:

```
xCommand Security Certificates CA Add
```

xCommand Security Certificates CA Delete

Deletes a CA security certificate from this device.

Requires user role: ADMIN

USAGE:

```
xCommand Security Certificates CA Delete Fingerprint: "Fingerprint"
```
where

- **Fingerprint**: String (0..128)
  - The unique Identifier for the certificate that is deleted. You can get the fingerprint ID by running xCommand Security Certificates CA Show.

xCommand Security Certificates CA Show

Shows the details for the CA security certificates on this device.

Requires user role: ADMIN, USER

USAGE:

```
xCommand Security Certificates CA Show [Format: Format]
```
where

- **Format**: Literal (PEM / Text)
  - Specifies the format of the results. The default is set to Text.
xCommand Security Certificates Services Activate
Activates a security certificate on this device.
Requires user role: ADMIN

USAGE:
```
xCommand Security Certificates Services Activate Fingerprint: "Fingerprint"
```

Fingerprint: String (0..128)
The unique Identifier for the certificate that is activated. You can get the fingerprint ID by running xCommand Security Certificates Services Show.

Purpose: Literal (802.1X / HTTPS / Audit / SIP)
The type of service which applies to this certificate.

xCommand Security Certificates Services Add
Uploads security certificates to this device. This is a multiline command.
Requires user role: ADMIN

USAGE:
```
xCommand Security Certificates Services Add [PrivateKeyPassword: "PrivateKeyPassword"]
```

PrivateKeyPassword: String (0..128)
Stores the details of the private key for the password.

xCommand Security Certificates Services Deactivate
Deactivates security certificates on this device.
Requires user role: ADMIN

USAGE:
```
xCommand Security Certificates Services Deactivate Fingerprint: "Fingerprint"
```

Fingerprint: String (0..128)
The unique Identifier for the certificate that is deactivated. You can get the fingerprint ID by running xCommand Security Certificates Services Show.

Purpose: Literal (802.1X / HTTPS / Audit / SIP)
The type of service which applies to this certificate.

xCommand Security Certificates Services Delete
Deletes security certificates from this device.
Requires user role: ADMIN

USAGE:
```
xCommand Security Certificates Services Delete Fingerprint: "Fingerprint"
```

Fingerprint: String (0..128)
The unique Identifier for the certificate that is deleted. You can get the fingerprint ID by running xCommand Security Certificates Services Show.
xCommand Security Certificates Services Show
Shows details for security certificates on this device.
Requires user role: ADMIN, USER

**USAGE:**
xCommand Security Certificates Services Show [Filter: Filter] [Format: Format]
where
Filter: Literal (802.1X / HTTPS / Audit / SIP)
  Filters the results according to the chosen service.
Format: Literal (PEM / Text)
  Specifies the format of the results. The default is set to text.

xCommand Security Persistency
Set the following features to persistent or non-persistent mode. In non-persistent mode the information gathered by the specified feature does not persist a reboot of the system. Persistent mode is the default. This command reboots the system.
Requires user role: ADMIN

**USAGE:**
xCommand Security Persistency Configurations: Configurations CallHistory: CallHistory InternalLogging: InternalLogging LocalPhonebook: LocalPhonebook DHCP: DHCP ConfirmAndReboot: ConfirmAndReboot
where
Configurations: NonPersistent/Persistent
  In non-persistent mode, all configurations are set back to default when the system reboots.
CallHistory: NonPersistent/Persistent
  In non-persistent mode call history is deleted when the system reboots.
InternalLogging: NonPersistent/Persistent
  In non-persistent mode eventlog is deleted when the system reboots.
LocalPhonebook: NonPersistent/Persistent
  In non-persistent mode local phone book is deleted when the system reboots.
DHCP: NonPersistent/Persistent
  In non-persistent mode all IP related information is deleted when the system reboots.
ConfirmAndReboot: Yes
  Reboots the system.

xCommand Security Session List
List active sessions.
Requires user role: ADMIN, USER

**USAGE:**
xCommand Security Session List
xCommand Security Session Terminate

Terminate a session.

Requires user role: ADMIN, USER

**USAGE:**

```
xCommand Security Session Terminate SessionId: "SessionId"
```

**SessionId:** String (0, 32)

The session ID number.

---

Standby commands

xCommand Standby Activate

Set the system in standby mode, which turns off the video outputs and put the camera into sleep mode.

Requires user role: ADMIN, INTEGRATOR, USER

**USAGE:**

```
xCommand Standby Activate
```

xCommand Standby Deactivate

Bring the system out of standby mode.

Requires user role: ADMIN, INTEGRATOR, USER

**USAGE:**

```
xCommand Standby Deactivate
```

xCommand Standby Halfwake

Sets the system to "Halfwake" state. This state informs the user from the UI, to pick up a remote or to tap the touch device to get started.

Requires user role: ADMIN, INTEGRATOR

**USAGE:**

```
xCommand Standby Halfwake
```
xCommand Standby ResetTimer

Set a temporary standby delay. If the system is in standby mode when the reset timer is set, the system is brought out of standby mode. When left idle for the given delay the system goes into standby mode. Setting the reset timer does not affect the Standby Delay in the Advanced configuration menu (or by xConfiguration Standby Delay). Next time this delay is the valid standby delay.

Requires user role: ADMIN, USER

USAGE:

```
xCommand Standby ResetTimer Delay: Delay
```

where

```
Delay: Integer (1..480)
```

Set the delay in minutes.

SystemUnit commands

xCommand SystemUnit Boot

Reboot the system.

Requires user role: ADMIN, INTEGRATOR, USER

USAGE:

```
xCommand SystemUnit Boot [Action: Action]
```

where

```
Action: Restart/Shutdown
```

As a default the system restarts after a reboot. By selecting Shutdown, the system will not restart. The default value is Restart.
xCommand SystemUnit FactoryReset
Reset the codec to factory default settings. The call logs are deleted and all system parameters are reset to default values. All files that have been uploaded to the codec are deleted. Option key(s) are not affected.
As a default the system restarts after the factory reset, but other behaviour can be forced by selecting a different TrailingAction.
Requires user role: ADMIN, USER

USAGE:
xCommand SystemUnit FactoryReset Confirm: Confirm [Keep: Keep] [TrailingAction: TrailingAction]
where
Confirm: Yes
Include to confirm your choice.
Keep: Certificates/LocalSetup/Network/Provisioning/SerialPort/Spark
Select which configurations to keep when you factory reset the system. You can have up to 6 CallId parameters in the same command.
LocalSetup:
  xConfiguration Audio DefaultVolume
  xConfiguration Audio SoundsAndAlerts RingVolume
  xConfiguration Time Zone
  xConfiguration UserInterface Language
  xConfiguration Video Output Connector OverscanLevel
  xCommand Camera Preset Store
Network:
  xConfiguration Network 1
  xConfiguration NetworkServices Wifi Allowed
  xConfiguration NetworkServices Wifi Enabled
Spark:
  xConfiguration Spark ServiceOverrides WdmBaseUrl
  Provisioning:
  xConfiguration Provisioning Mode
  SerialPort:
  xConfiguration SerialPort Mode
  xConfiguration SerialPort BaudRate
  xConfiguration SerialPort LoginRequired
Certificate:
  Not supported in this software version.
TrailingAction:
  NoAction/Restart/Shutdown
Select Shutdown or NoAction to override the default behaviour (Restart). The default is set to Restart

xCommand SystemUnit FirstTimeWizard Stop
Stops the wizard which appears the first time you start the system, so the system can be set up without it. The wizard only appears again if the system is reset to its factory default settings.
Requires user role: ADMIN, INTEGRATOR, USER

USAGE:
xCommand SystemUnit FirstTimeWizard Stop

xCommand SystemUnit Notifications RemoveAll
Clears the list of system notifications that are reported by xStatus SystemUnit Notifications Text/Type.
Requires user role: ADMIN

USAGE:
xCommand SystemUnit Notifications RemoveAll
xCommand SystemUnit OptionKey Add
Add an option key to support additional features.
Requires user role: ADMIN

**USAGE:**
xCommand SystemUnit OptionKey Add Key: "Key"
where

**Key:** String (16, 24)
The key you have received for the option you wish to switch on.

xCommand SystemUnit OptionKey List
List all option keys.
Requires user role: ADMIN

**USAGE:**
xCommand SystemUnit OptionKey List

xCommand SystemUnit OptionKey Remove
Remove a specified option key.
Requires user role: ADMIN

**USAGE:**
xCommand SystemUnit OptionKey Remove Type: Type
where

**Type:** RemoteMonitoring

xCommand SystemUnit OptionKey RemoveAll
Remove all option keys.
Requires user role: ADMIN

**USAGE:**
xCommand SystemUnit OptionKey RemoveAll Confirm: Confirm
where

**Confirm:** Yes

xCommand SystemUnit SignInBanner Clear
Clear the sign in banner set with xCommand SystemUnit SignInBanner Set.
Requires user role: ADMIN

**USAGE:**
xCommand SystemUnit SignInBanner Clear

xCommand SystemUnit SignInBanner Get
Get the custom message set with xCommand SystemUnit SignInBanner Set.
Requires user role: ADMIN

**USAGE:**
xCommand SystemUnit SignInBanner Get
xCommand SystemUnit SignInBanner Set
Set a sign in banner with a custom message on the system's user interface.
Use:
xCommand SystemUnit SignInBanner Set <enter>
Banner text <enter>

Requires user role: ADMIN

USAGE:
xCommand SystemUnit SignInBanner Set

xCommand SystemUnit SoftReset
Reset most parameters to their default values. This does not include parameters associated with room setup, such as camera position, language, and volume.

Requires user role: ADMIN, USER

USAGE:
xCommand SystemUnit SoftReset Confirm: Confirm

xCommand SystemUnit SoftwareUpgrade
Initiate a software upgrade by fetching the software from a given URL. If the server requires username and password these parameters must be included.

Requires user role: ADMIN

USAGE:
xCommand SystemUnit SoftwareUpgrade URL: "URL" [UserName: "UserName"] [Password: "Password"] [Forced: Forced]

where
URL: String (0, 255)
The software package location
UserName: String (0, 255)
User name to access the server location, if needed.
Password: String (0, 255)
Password to access the server location, if needed.
Forced: False/True
You can force a system to accept a software upgrade immediately, without giving users a chance to acknowledge or postpone the update. The default value is True.
Time commands

xCommand Time DateTime Get
Read the time and date from the system.
Requires user role: ADMIN, USER

USAGE:
xCommand Time DateTime Get

xCommand Time DateTime Set
Set the date and time for the system, if not available from NTP (Network Time Protocol).
Requires user role: ADMIN, USER

USAGE:
xCommand Time DateTime Set [Year: Integer (2015..2037)] [Month: Integer (1..12)] [Day: Integer (1..31)] [Hour: Integer (0..23)] [Minute: Integer (0..59)] [Second: Integer (0..59)]

UserInterface commands

xCommand UserInterface Branding Delete
Deletes the chosen image from this device.
Requires user role: ADMIN, INTEGRATOR, USER

USAGE:
xCommand UserInterface Branding Delete Type: Type

Type: Literal (Background / Branding / HalfwakeBackground / HalfwakeBranding) Specifies which image to delete from this device.

xCommand UserInterface Branding Get
Shows the chosen image in base64/encoded format in the requested size, if available.
Requires user role: ADMIN, INTEGRATOR, USER

USAGE:
xCommand UserInterface Branding Get [Size: Literal (Large / Small / Thumbnail)] Type: Type

Size: Literal (Large / Small / Thumbnail) Specifies the size in which to show the image. Default is set to Large.

Type: Literal (Background / Branding / HalfwakeBackground / HalfwakeBranding) Specifies which image to show.
xCommand UserInterface Branding Updated
Updates the chosen branding image.
Requires user role: ADMIN, INTEGRATOR, USER

USAGE:
xCommand UserInterface Branding Updated Type: \texttt{Type} \\
where \\
\texttt{Type: Literal (Background / Branding / HalfwakeBackground / HalfwakeBranding)} \\
Specifies which image to update.

xCommand UserInterface Branding Upload
Uploads a branding image to this device, which displays in the chosen area. This is a multiline command.
Requires user role: ADMIN, INTEGRATOR, USER

USAGE:
xCommand UserInterface Branding Upload Type: \texttt{Type} \\
where \\
\texttt{Type: Literal (Background / Branding / HalfwakeBackground / HalfwakeBranding)} \\
Specifies the area in which the uploaded image is to display.

xCommand UserInterface Extensions Clear
Delete all user interface extensions (widgets) from the video system.
Requires user role: ADMIN

USAGE:
xCommand UserInterface Extensions Clear

xCommand UserInterface Extensions List
List all user interface extensions (widgets) that exist on the video system.
Requires user role: INTEGRATOR, ROOMCONTROL, USER

USAGE:
xCommand UserInterface Extensions List

xCommand UserInterface Extensions Set
Set the configuration scheme you have chosen in the user interface extensions (widgets) for your room system. Updates the UserInterface Extensions status tree. This is a multiline command.
Requires user role: ADMIN, INTEGRATOR, ROOMCONTROL

USAGE:
xCommand UserInterface Extensions Set ConfigId: \texttt{"ConfigId"} \\
where \\
\texttt{ConfigId: String (0, 40)} \\
The unique identifier for the configuration.

xCommand UserInterface Extensions Widget Action
Sets the action of the given widget. Updates the UserInterface Extensions status tree.
Requires user role: ADMIN, INTEGRATOR, ROOMCONTROL, USER

USAGE:
xCommand UserInterface Extensions Widget Action [Type: \texttt{"Type"}] [Value: \texttt{"Value"}] \\
WidgetId: \texttt{"WidgetId"} \\
where \\
\texttt{Type: String (0..255)} \\
The type of widget that is set.
\texttt{Value: String (0..255)} \\
The value of the widget. The range of values depends on the widget type.
\texttt{WidgetId: String (0..40)} \\
The unique identifier for the widget.
xCommand UserInterface Extensions Widget SetValue

Set the value of the given widget. Updates the UserInterface Extensions status tree. Returns an error if the value is out of range.

Requires user role: ADMIN, INTEGRATOR, ROOMCONTROL

USAGE:

```
xCommand UserInterface Extensions Widget SetValue Value: "Value" WidgetId: "WidgetId"
```

where

Value: String (0, 255)
   The value of the widget. The range of values depends on the widget type.

WidgetId: String (0, 40)
   The unique identifier for the widget.

xCommand UserInterface Extensions Widget UnsetValue

Empties the value of the given widget. Updates the UserInterface Extensions status tree and notifies the user interface that this widget is no longer selected.

Requires user role: ADMIN, INTEGRATOR, ROOMCONTROL

USAGE:

```
xCommand UserInterface Extensions Widget UnsetValue WidgetId: "WidgetId"
```

where

WidgetId: String (0, 40)
   The unique identifier for the widget.

xCommand UserInterface Message Alert Display

Display a message on screen, for a specified duration of time (in seconds).

NOTE: If Duration is not set, the command must be followed by xCommand Message Alert Clear.

Use the xFeedback commands to monitor the feedback from the user. Read more about the xFeedback commands in the API introduction section in this guide.

Requires user role: ADMIN, INTEGRATOR, ROOMCONTROL

USAGE:

```
xCommand UserInterface Message Alert Display [Title: "Title"] Text: "Text" [Duration: Duration]
```

where

Title: String (0, 255)
   Enter a message title.

Text: String (0, 255)
   Enter the message to be displayed. The <p> and <br> HTML tags will result in line breaks as normal; any other tags will appear as plain text.

Duration: Integer (0..3600)
   Set how long (in seconds) the message is to be displayed on the screen. If set to 0 (zero) the message does not disappear until a xCommand Message Alert Clear message has been sent. The default value is set to 0.

xCommand UserInterface Message Prompt Clear

Remove the window displayed using the xCommand Message Alert Display command.

Use the xFeedback commands to monitor the feedback from the user. Read more about the xFeedback commands in the API introduction section in this guide.

Requires user role: ADMIN, INTEGRATOR, ROOMCONTROL, USER

USAGE:

```
xCommand UserInterface Message Prompt Clear [FeedbackId: "FeedbackId"]
```

where

FeedbackId: String (0, 255)
   The FeedbackId corresponds to the FeedbackId given by the xCommand Message Prompt Display command.
xCommand UserInterface Message Prompt Display

Display a small window on screen with a title, text and up to five options for response from the user. The message is displayed on screen until the user gives a response, or until the system receives the following command xCommand Message Prompt Clear.

Use the xFeedback commands to monitor the feedback from the user. Read more about the xFeedback commands in the API introduction section in this guide.

Title: String (0, 255)
Enter the message title.

Text: String (0, 255)
Enter the text line to be displayed. The <p> and <br> HTML tags will result in line breaks as normal; any other tags will appear as plain text.

FeedbackId: String (0, 255)
To identify the feedback enter a FeedbackId.

Option.1 to Option.5:
Enter the text to appear on the feedback options.

Requires user role: ADMIN, INTEGRATOR, ROOMCONTROL

USAGE:
xCommand UserInterface Message Prompt Display [Title: "Title"] Text: "Text" [FeedbackId: "FeedbackId"] [Duration: Duration] [Option.1: "Option.1"] [Option.2: "Option.2"] [Option.3: "Option.3"] [Option.4: "Option.4"] [Option.5: "Option.5"]

where

Title: String (0, 255)
Enter the message title.

Text: String (0, 255)
Enter the text line to be displayed. The <p> and <br> HTML tags will result in line breaks as normal; any other tags will appear as plain text.

FeedbackId: String (0, 255)
To identify the feedback enter a FeedbackId.

Duration: Integer (0, 3600)
Set how long (in seconds) the message window is to be displayed on the screen. If set to 0 (zero) the message window is displayed until a xCommand UserInterface Message Prompt Clear command has been sent. The default is set to 0.

Option.1: String (0, 255)
Enter the text to appear on the feedback options.

Option.2: String (0, 255)
Enter the text to appear on the feedback options.

Option.3: String (0, 255)
Enter the text to appear on the feedback options.

xCommand UserInterface Message Prompt Response

Give a response to the xCommand Message Prompt Display.

Use the xFeedback commands to monitor the feedback from the user. Read more about the xFeedback commands in the API introduction section in this guide.

Requires user role: ADMIN, INTEGRATOR, ROOMCONTROL, USER

USAGE:
xCommand UserInterface Message Prompt Response [FeedbackId: "FeedbackId"]
OptionId: OptionId

where

FeedbackId: String (0, 255)
The FeedbackId corresponds to the FeedbackId given by the xCommand Message Prompt Display command.

OptionId: Integer (1..5)
The OptionId corresponds to the OptionIds given as possible responses in the xCommand Message Prompt Display command.

xCommand UserInterface Message TextInput Clear

Removes the text input message.

Requires user role: ADMIN, INTEGRATOR, ROOMCONTROL, USER

USAGE:
xCommand UserInterface Message TextInput Clear
xCommand UserInterface Message TextInput Display
Displays an input dialog box to which a user can respond, on the Cisco Telepresence Touch 10 and on the main screen of the Cisco DX80.

Requires user role: ADMIN, INTEGRATOR, ROOMCONTROL, USER

USAGE:
```
xCommand UserInterface Message TextInput Display [Duration: Duration]

FeedbackId: "FeedbackId" [InputType: InputType] [KeyboardState: KeyboardState] [Placeholder: "Placeholder"] [SubmitText: "SubmitText"] Text: "Text" [Title: "Title"]
```

where

Duration: Integer (0..3600)
Set how long (in seconds) the message is to be displayed on the screen. If set to 0 (zero) the message does not disappear until the xCommand UserInterface Message TextInput Clear message has been sent. The default is set to 0.

FeedbackId: String (0..255)
To identify the feedback enter a FeedbackId.

InputType: Literal (SingleLine / Numeric / Password / PIN)
Sets the type of text input dialog box that is displayed. This also determines the keyboard layout that it displayed. The default is set to SingleLine.

KeyboardState: Literal (Open / Closed)
Specifies if the device’s keyboard should open when the text input message displays. The default is set to Open.

Placeholder: String (0..255)
Contains the placeholder text displayed in the input dialog box before it is focused.

SubmitText: String (0..32)
The text that is shown on the green Submit button on the keyboard. The default is set to OK.

Text: String (0..128)
The message that is to be displayed to the user.

Title: String (0..40)
The title of the input dialog box.

xCommand UserInterface Message TextLine Clear
Clears the text line which was defined by the xCommand Message TextLine Display command.

Requires user role: ADMIN, INTEGRATOR, ROOMCONTROL, USER

USAGE:
```
xCommand UserInterface Message TextLine Clear
```

xCommand UserInterface Message TextLine Display
Display a text line on screen. Optionally you can place the text line at a specified location and for a specified duration of time (in seconds).

NOTE: If Duration is not set, the command must be followed by xCommand Message TextLine Clear.

Requires user role: ADMIN, INTEGRATOR, ROOMCONTROL

USAGE:
```
xCommand UserInterface Message TextLine Display Text: "Text" [X: X] [Y: Y] [Duration: Duration]
```

where

Text: String (0..140)
Enter the text line to be displayed. The <p> and <br> HTML tags will result in line breaks as normal; any other tags will appear as plain text.

X: Integer (1..10000)
Enter the X-coordinate (horizontal) on screen. X=0 is in the upper left corner. The default is set to 0.

Y: Integer (1..10000)
Enter the Y-coordinate (vertical) on screen. Y=0 is in the upper left corner. The default is set to 0.

Duration: Integer (0..3600)
Set how long (in seconds) the text line is to be displayed on the screen. If set to 0 (zero) the text line is displayed until a xCommand Message TextLine Clear command has been sent. The default is set to 0.
xCommand UserInterface Presentation ExternalSource Add
Establish and set up an input source that is connected to the video system via an external switch.

Requires user role: ADMIN, INTEGRATOR, ROOMCONTROL

USAGE:
```
xCommand UserInterface Presentation ExternalSource Add ConnectorId: ConnectorId SourceIdentifier: SourceIdentifier" Name: Name" Type: Type
```

where

**ConnectorId:** Integer (0..5)
The ID of the video system connector that the external switch is connected to.

**SourceIdentifier:** String (0, 40)
A unique string that identifies the input source. The identifier is used by other commands and events when addressing this specific input source.

**Name:** String (0, 40)
The name of the input source. This name will be displayed on the user interface.

**Type:** camera/desktop/document_camera/mediaplayer/PC/whiteboard/other
The type of input source. The type determines which icon to display on the user interface.

xCommand UserInterface Presentation ExternalSource List
Returns the current list of external input sources.

Requires user role: ADMIN, INTEGRATOR, ROOMCONTROL

USAGE:
```
xCommand UserInterface Presentation ExternalSource List
```

xCommand UserInterface Presentation ExternalSource Remove
Remove the input source (specified by the SourceIdentifier) from the list of external input sources.

Requires user role: ADMIN, INTEGRATOR, ROOMCONTROL

USAGE:
```
xCommand UserInterface Presentation ExternalSource Remove SourceIdentifier: SourceIdentifier
```

where

**SourceIdentifier:** String (0, 40)
The unique string that identifies this input source. It was defined when the source was created with the UserInterface Presentation ExternalSource Add command.

xCommand UserInterface Presentation ExternalSource RemoveAll
Remove all input sources from the list of external input sources.

Requires user role: ADMIN, INTEGRATOR, ROOMCONTROL

USAGE:
```
xCommand UserInterface Presentation ExternalSource RemoveAll
```

xCommand UserInterface Presentation ExternalSource Select
Starts to present the input source (specified by the SourceIdentifier) if it is in Ready state (see the UserInterface Presentation ExternalSource State Set command). The input source will be shown in the user interface sharetray as "Presenting".

Requires user role: ADMIN, INTEGRATOR, ROOMCONTROL, USER

USAGE:
```
xCommand UserInterface Presentation ExternalSource Select SourceIdentifier: SourceIdentifier
```

where

**SourceIdentifier:** String (0, 40)
The unique string that identifies this input source. It was defined when the source was created with the UserInterface Presentation ExternalSource Add command.
**xCommand UserInterface Presentation ExternalSource State Set**

Set or change the state of the input source (specified by the SourceIdentifier).

Requires user role: ADMIN, INTEGRATOR, ROOMCONTROL

**USAGE:**
```
xCommand UserInterface Presentation ExternalSource State Set SourceIdentifier: "SourceIdentifier" State: State [ErrorReason: "ErrorReason"]
```  
where

**SourceIdentifier:** String (0, 40)

The unique string that identifies this input source. It was defined when the source was created with the UserInterface Presentation ExternalSource Add command.

**State:** Hidden/Ready/NotReady/Error

- **Ready:** The input source will be presented when someone selects it (taps it on the user interface, or when the UserInterface Presentation ExternalSource Select command is issued).
- **NotReady:** The input source is not ready, and cannot be selected.
- **Error:** The input source is in an erroneous state. The ErrorReason parameter may be used to inform the user about the reason for failure.
- **Hidden:** The input source will not be displayed in the user interface sharetray.

**ErrorReason:** String (0, 80)

This string is displayed in the user interface sharetray, given that the State parameter is set to Error.

---

**UserManagement commands**

**xCommand UserManagement RemoteSupportUser Create**

Create a remote support user passphrase that Technical Assistance Center (TAC) can use to access the system for troubleshooting.

Requires user role: ADMIN

**USAGE:**
```
```  
where

**ExpiryDays:** Integer (1..31)

Define the duration for the passphrase validity. Default is 7 days.

**xCommand UserManagement RemoteSupportUser Delete**

Delete the remote support user created with the command xCommand UserManagement RemoteSupportUser Create.

Requires user role: ADMIN

**USAGE:**
```
xCommand UserManagement RemoteSupportUser Delete
```

**xCommand UserManagement RemoteSupportUser DisablePermanently**

Disable the creation of new remote support users. To enable the remote support user again you must factory reset your system.

Requires user role: ADMIN

**USAGE:**
```
xCommand UserManagement RemoteSupportUser DisablePermanently Confirm: Confirm
```  
where

**Confirm:** Yes
xCommand UserManagement RemoteSupportUser GetState
Retrieves the state of the generated remote support user, if one exists.
Requires user role: ADMIN

** USAGE:**
xCommand UserManagement RemoteSupportUser GetState

xCommand UserManagement User Add
Adds a new user to this device.
Requires user role: ADMIN

** USAGE:**
where

**Active:** Literal (False / True)
Specifies whether this is an active user or not.

**ClientCertificateDN:** String (0..255)
Identifies a user who logs in with a client certificate instead of a username and password.

**Passphrase:** String (0..255)
Specifies a Passphrase for the user.

**PassphraseChangeRequired:** Literal (False / True)
Specifies whether the user’s passphrase requires changing or not.

**PinChangeRequired:** Literal (False / True)
Specifies whether a user’s PIN requires changing or not.

**Role:** Literal (Admin / Audit / Integrator / RoomControl / User)
Sets the user’s role.

**ShellLogin:** Literal (False / True)
Specifies whether the user should have a shell login or not.

**Username:** String (0..127)
Specifies the user’s username.

**YourPassphrase:** String (0..255)
The user's passphrase.
xCommand UserManagement User Delete
Deletes a user from this device.
Requires user role: ADMIN

USAGE:
xCommand UserManagement User Delete Username: "Username" [YourPassphrase: "YourPassphrase"]
where
Username: String (0..127)
  Specifies the username of the user that is deleted.

YourPassphrase: String (0..255)
The passphrase of the user that is deleted.

xCommand UserManagement User Get
Shows the details of users on this device.
Requires user role: ADMIN

USAGE:
[Username: "Username"]
where
ClientCertificateDN: String (0..255)
  Identifies a user who logs in with a client certificate instead of a username and password.

Username: String (0..127)
  Specify a username to show the details of a particular user.

xCommand UserManagement User List
Shows the list of users on this device.
Requires user role: ADMIN

USAGE:
xCommand UserManagement User List [Limit: Limit] [Offset: Offset]
where
Limit: Integer (0..65536)
  Limits the number of results that are shown. The default is set to 0.

Offset: Integer (0..65536)
  Shows lines with the same or higher Offset than the one provided. The default is set to 0.
**xCommand UserManagement User Modify**

Modifies the details of a particular user.

Requires user role: ADMIN

**USAGE:**

```
```

where

- **Active**: Literal (False / True)
  
  Specifies whether this is an active user or not.

- **AddRole**: Literal (Admin / Audit / Integrator / RoomControl / User)
  
  Adds a new role for the specified user.

- **ClientCertificateDN**: String (0..255)
  
  Identifies a user who logs in with a client certificate instead of a username and password.

- **PassphraseChangeRequired**: Literal (False / True)
  
  Specifies whether the user's passphrase requires changing or not.

- **PinChangeRequired**: Literal (False / True)
  
  Specifies whether a user's PIN requires changing or not.

- **RemoveRole**: Literal (Admin / Audit / Integrator / RoomControl / User)
  
  Removes a role from the specified user.

- **ShellLogin**: Literal (False / True)
  
  Removes a role from the specified user.

- **Username**: String (0..127)
  
  Specifies whether the user should have a shell login or not.

- **YourPassphrase**: String (0..255)
  
  The user's passphrase.

**xCommand UserManagement User Passphrase Change**

Change the passphrase for the user you logged in as. If you are logged in as the administrator, this will change the administrator passphrase.

Requires user role: ADMIN, AUDIT, INTEGRATOR, ROOMCONTROL, USER

**USAGE:**

```
xCommand UserManagement User Passphrase Change NewPassphrase: "NewPassphrase" OldPassphrase: "OldPassphrase"
```

where

- **NewPassphrase**: String (0, 255)

  Required when setting the passphrase.

- **OldPassphrase**: String (0, 255)

  Required when setting the passphrase.

**xCommand UserManagement User Passphrase Set**

Set a user passphrase for the specified user. You must be logged in as an administrator to set a user passphrase.

Requires user role: ADMIN

**USAGE:**

```
```

where

- **NewPassphrase**: String (0, 255)

  Required when setting the passphrase.

- **Username**: String (0, 127)

  Required when setting the passphrase.

- **YourPassphrase**: String (0, 255)

  The user's passphrase.
Video commands

xCommand Video ActiveSpeakerPIP Set
Sets position for the active speakers PiP (picture in picture).

Requires user role: ADMIN, USER

USAGE:
```
xCommand Video ActiveSpeakerPIP Set Position: Position
```
where
```
Position: CenterLeft/CenterRight/LowerLeft/LowerRight/UpperCenter/UpperLeft/UpperRight
```
Select one of the predefined positions.

xCommand Video CEC Input KeyClick
Mimics a remote control key click event from the input device.

Requires user role: ADMIN, INTEGRATOR

USAGE:
```
xCommand Video CEC Input KeyClick ConnectorId: ConnectorId [Key: Key] LogicalAddress: LogicalAddress [NamedKey: NamedKey]
```
where
```
ConnectorId: Integer (1 – 3)
The unique identifier of the connector.
```
```
Key: Integer (0..255)
The CEC specified key code for the key that is sent to the logical address of the device 
as if it was pushed on a remote control.
```
```
LogicalAddress: Integer (0..15)
The logical address of the connected device.
```
```
NamedKey: Literal (Up / Down / Right / Left / Ok / Back / Stop / Play)
The name of the key that is sent to the logical address of the device as if it was pushed 
on a remote control.
```

xCommand Video CEC Output KeyClick
Mimics a remote control key click event from this device.

Requires user role: ADMIN, INTEGRATOR

USAGE:
```
xCommand Video CEC Output KeyClick ConnectorId: ConnectorId Key: Key LogicalAddress: LogicalAddress [NamedKey: NamedKey]
```
where
```
ConnectorId: Integer (1 – 3)
The unique identifier of the connector.
```
```
Key: Integer (0..255)
The CEC specified key code for the key that is sent to the logical address of the device 
as if it was pushed on a remote control.
```
```
LogicalAddress: Integer (0..15)
The logical address of the connected device.
```
```
NamedKey: Literal (Up / Down / Right / Left / Ok / Back / Stop / Play)
The name of the key that is sent to the logical address of the device as if it was pushed 
on a remote control.
```
xCommand Video Input SetMainVideoSource

Set which input source is the main video source. You can identify the input source by either the physical connector that it is connected to (ConnectorId) or the logical source identifier (SourceId).

You can combine up to four input sources in a single main video stream (the maximum number of different input sources depend on the type of video system) by adding multiple ConnectorIds or SourceIds in the same command. There cannot be a mix of identifier types in the same command; use either ConnectorId or SourceId.

Requires user role: ADMIN, INTEGRATOR, USER

USAGE:

xCommand Video Input SetMainVideoSource [ConnectorId: ConnectorId] [SourceId: SourceId]

where

ConnectorId: Integer (1..5)
The identifier (ID) of the connector. Connector [n] has ID n. Run the following API command to find the ID: xStatus Video Input Connector.

SourceId: Integer (1..4)
The identifier (ID) of the input source. Input Source [n] has ID n. Run the following API command to find the ID: xStatus Video Input Source.

xCommand Video Layout LayoutFamily Set

Select the screen layout mode.

Requires user role: ADMIN, USER

USAGE:

xCommand Video Layout LayoutFamily Set [Target: Target] [CallId: CallId] LayoutFamily: LayoutFamily [CustomLayoutName: "CustomLayoutName"]

where

Target: local/remote
Select if the target is the local layout or the remote layout.

CallId: Integer (0..65534)
The CallID is returned when the xCommand Dial command is run. During the call you can run the xStatus Call command to see the CallId.

LayoutFamily: auto/custom/equal/overlay/prominent/single
Select a layout family.

CustomLayoutName: String (1, 128)
Enter a name for the layout.

xCommand Video Output Monitor Backlight Set

Adjust the monitor backlight.

Requires user role: ADMIN

USAGE:

xCommand Video Output Monitor Backlight Set Position: Position Value: Value

where

Position: Left/Right
Choose whether to apply the command to the left or right integrated screen. This parameter is only present for video systems with two integrated screens (dual screen systems).

Value: Integer (0..100)
Select the level.
xCommand Video Output Monitor Color Select

Adjust the monitor’s color temperature.

Requires user role: ADMIN

**USAGE:**
xCommand Video Output Monitor Color Select Position: Position Value: Value

where

**Position:** Left/Right
Choose whether to apply the command to the left or right integrated screen. This parameter is only present for video systems with two integrated screens (dual screen systems).

**Value:** 4900K/5500K/6500K/7200K/9300K/10500K/12000K

xCommand Video Output Monitor Reset

Reset monitor settings.

Requires user role: ADMIN

**USAGE:**
xCommand Video Output Monitor Reset Position: Position

where

**Position:** Left/Right
Choose whether to apply the command to the left or right integrated screen. This parameter is only present for video systems with two integrated screens (dual screen systems).

xCommand Video PresentationPIP Set

Sets position for the presentation PiP (picture in picture).

Requires user role: ADMIN, USER

**USAGE:**
xCommand Video PresentationPIP Set Position: Position

where

**Position:** CenterLeft/CenterRight/LowerLeft/LowerRight/UpperCenter/UpperLeft/UpperRight
Select one of the predefined positions.

xCommand Video PresentationView Set

Set the presentation view mode

Requires user role: ADMIN, USER

**USAGE:**
xCommand Video PresentationView Set View: View

where

**View:** Default/Maximized/Minimized
Select Default when you want the presentation to be viewed with the default settings for the codec. Select Maximized when you want the presentation to be displayed in full screen. Select Minimized when you want the presentation to be displayed in a small picture on screen.
xCommand Video Selfview Set

Sets self-view on/off and specifies its size and position. If the parameter is not specified, current value is used.

Requires user role: ADMIN, USER

**USAGE:**

```
xCommand Video Selfview Set [Mode: Mode] [FullscreenMode: FullscreenMode] [PIPPosition: PIPposition] [OnMonitorRole: OnMonitorRole]
```

where

**Mode:** On/Off

- Selfview is set to on or off.

**FullscreenMode:** On/Off

- Choose between displaying the self-view in full screen or as picture-in-picture.

**PIPPosition:** CenterLeft/CenterRight/LowerLeft/LowerRight/UpperCenter/UpperLeft/UpperRight

- Select the position for the self-view image.

**OnMonitorRole:** First/Fourth/Second/Third

- Displays self-view on monitors with this role.
Chapter 5

xStatus commands
Description of the xStatus commands

In this chapter, you can find all of the xStatus commands and the responses. Status type commands return information about the system and system processes. You can query all information or just some of it.

We recommend you visit our web site regularly for updated versions of the manual.

Audio status

**xStatus Audio Input Connectors HDMI [n] EcReferenceDelay**
Returns the detected latency for each loudspeaker to microphone path for systems supporting HDMI input used as microphone input. The result is in milliseconds.

Requires user role: ADMIN, USER

**Value space of the result returned:**
Integer

**Example:**
xStatus Audio Input Connectors HDMI 1 EcReferenceDelay
*s Audio Connectors HDMI 1 EcReferenceDelay: 0
** end

**xStatus Audio Input Connectors Microphone [n] ConnectionStatus**
Indicates whether a microphone is detected on the microphone input connector.

Requires user role: ADMIN, INTEGRATOR, USER

**Value space of the result returned:**
Connected/NotConnected/Unknown

**Example:**
xStatus Audio Input Connectors Microphone ConnectionStatus
*s Audio Input Connectors Microphone 1 ConnectionStatus: NotConnected
*s Audio Input Connectors Microphone 2 ConnectionStatus: Connected
** end

**xStatus Audio Microphones Mute**
Shows whether the microphones are muted.

Requires user role: ADMIN, INTEGRATOR, USER

**Value space of the result returned:**
On/Off

**Example:**
xStatus Audio Microphones Mute
*s Audio Microphones Mute: Off
** end
xStatus Audio Output Connectors Line [n] DelayMs
Shows the delay in milliseconds.
Requires user role: ADMIN, INTEGRATOR, USER
Value space of the result returned:
Integer (0..290)
Example:
  xStatus Audio Output Connectors Line 1 DelayMs
  *s Audio Output Connectors Line 1 DelayMs: 60
  ** end

xStatus Audio Output Connectors Line [n] ConnectionStatus
Shows whether the audio output line is connected.
Requires user role: ADMIN, INTEGRATOR, USER
Value space of the result returned:
Connected / NotConnected / Unknown
Example:
  xStatus Audio Output Connectors Line 1 ConnectionStatus
  *s Audio Output Connectors Line 1 ConnectionStatus: Connected
  ** end

xStatus Audio Volume
Shows the volume level (dB) of the loudspeaker output.
Requires user role: ADMIN, INTEGRATOR, USER
Value space of the result returned:
0..100
Example:
  xStatus Audio Volume
  *s Audio Volume: 70
  ** end

xStatus Audio VolumeMute
Shows whether the endpoint volume is set to mute.
Requires user role: ADMIN, USER
Value space of the result returned:
Off/On
Example:
  xStatus Audio VolumeMute
  *s Audio VolumeMute: Off
  ** end
Bookings status

xStatus Bookings Current Id
The ID of the on going booking event, if any.
Requires user role: ADMIN, USER
Value space of the result returned: String

Example:
  xStatus Bookings Current Id
  *s Bookings Current Id: "123"
  ** end

Call status

xStatus Call [n] AnswerState
Indicates if a call is answered, ignored or has been automatically answered by a system.
Requires user role: ADMIN, USER
Value space of the result returned: Unanswered/Ignored/Autoanswered/Answered

Example:
  xStatus Call AnswerState
  *s Call 5 AnswerState: Answered
  ** end

xStatus Call [n] AttendedTransferFrom
Shows the CallId for the call the current call was transferred from.
Requires user role: ADMIN, USER
Value space of the result returned: Integer

Example:
  xStatus Call 1 AttendedTransferFrom
  *s Call 1 AttendedTransferFrom: 1234
  ** end

xStatus Call [n] CallbackNumber
Shows the remote (far end) number or URI of an incoming or outgoing call, including the call protocol, for call back. You can run the command xStatus Call to find the call identity.
Requires user role: ADMIN, USER
Value space of the result returned: String

Example:
  xStatus Call 27 CallbackNumber
  *s Call 27 CallbackNumber: "h323:firstname.lastname@company.com"
  ** end
xStatus Call [n] CallType
Shows the call type of the incoming or outgoing call. You can run the command xStatus Call to find the call identity.

Requires user role: ADMIN, USER

Value space of the result returned:
Video/Audio/AudioCanEscalate/ForwardAllCall/Unknown

Example:
```
xStatus Call 27 CallType
's Call 27 CallType: Video
  ** end
```

xStatus Call [n] DeviceType
Shows if the remote (far end) system is an endpoint (point-to-point call) or a multipoint conferencing unit (MCU) in the network. A MultiSite call hosted on an endpoint will also show as MCU.

Requires user role: ADMIN, USER

Value space of the result returned:
Endpoint/MCU

Example:
```
xStatus Call DeviceType
's Call 4 DeviceType: Endpoint
  ** end
```

xStatus Call [n] Direction
States the direction of the call initiation. You can run the command xStatus Call to find the call identity.

Requires user role: ADMIN, USER

Value space of the result returned:
Incoming/Outgoing

Example:
```
xStatus Call 27 Direction
's Call 27 Direction: Outgoing
  ** end
```

xStatus Call [n] DisplayName
Shows the name of the remote (far end) participant in an incoming or outgoing call. You can run the command xStatus Call to find the call identity.

Requires user role: ADMIN, USER

Value space of the result returned:
String

Example:
```
xStatus Call 27 DisplayName
's Call 27 DisplayName: "firstname.lastname@company.com"
  ** end
```

xStatus Call [n] Duration
Shows the duration of a call (in seconds). You can run the command xStatus Call to find the call identity.

Requires user role: ADMIN, USER

Value space of the result returned:
Integer

Example:
```
xStatus Call 27 Duration
's Call 27 Duration: 2354
  ** end
```

xStatus Call [n] Encryption Type
Shows the encryption type of the call. You can run the command xStatus Call to find the call identity.

Requires user role: ADMIN, USER

Value space of the result returned:
None/Aes-128

Example:
```
xStatus Call 27 Encryption Type
's Call 27 Encryption Type: "None"
  ** end
```
xStatus Call [n] FacilityServiceId
When calling a facility service, the facility service id is shown. Otherwise the value 0 is returned.
Requires user role: ADMIN, INTEGRATOR, USER
Value space of the result returned:
0..5
Example:
xStatus Call FacilityServiceId
*s Call 3 FacilityServiceId: 1
** end

xStatus Call [n] HoldReason
Shows the reason the current outgoing call was put on hold.
Conference: On hold while the call is being merged into a conference.
Transfer: On hold while the call is being transferred.
None: All other instances.
Requires user role: ADMIN, USER
Value space of the result returned:
Conference/Transfer/None
Example:
xStatus Call 2 HoldReason
*s Call 2 HoldReason: None
** end

xStatus Call [n] PlacedOnHold
Shows the placed on hold status of the call. You can run the command xStatus Call to find the call identity.
Requires user role: ADMIN, USER
Value space of the result returned:
True/False
Example:
xStatus Call 27 PlacedOnHold
*s Call 27 PlacedOnHold: False
** end

xStatus Call [n] Protocol
Shows the call protocol of the incoming or outgoing call. You can run the command xStatus Call to find the call identity.
Requires user role: ADMIN, USER
Value space of the result returned:
H320/H323/SIP/Spark/Unknown
Example:
xStatus Call 27 Protocol
*s Call 27 Protocol: "h323"
** end

xStatus Call [n] ReceiveCallRate
Shows the receive bandwidth in the call in kilobits per second (kbps). You can run the command xStatus Call to find the call identity.
Requires user role: ADMIN, INTEGRATOR, USER
Value space of the result returned:
Integer
Example:
xStatus Call 27 ReceiveCallRate
*s Call 27 ReceiveCallRate: 4000
** end
xStatus Call [n] RemoteNumber
Shows the remote (far end) number or URI of an incoming or outgoing call. You can run the command xStatus Call to find the call identity.
Requires user role: ADMIN, USER

Value space of the result returned:
String

Example:
```
xStatus Call 27 RemoteNumber
*s Call 27 RemoteNumber: "5585232"
** end
```

xStatus Call [n] Status
Shows the status of a call. You can run the command xStatus Call to find the call identity.
Requires user role: ADMIN, USER

Value space of the result returned:
Idle/Dialling/Ringing/Connecting/Disconnecting/OnHold/EarlyMedia/Preserved/RemotePreserved

Example:
```
xStatus Call 27 Status
*s Call 27 Status: Connected
** end
```

xStatus Call [n] TransmitCallRate
Shows the transmit bandwidth in the call in kilobits per second (kbps). You can run the command xStatus Call to find the call identity.
Requires user role: ADMIN, INTEGRATOR, USER

Value space of the result returned:
Integer

Example:
```
xStatus Call 27 TransmitCallRate
*s Call 27 TransmitCallRate: 768
** end
```

Cameras status

xStatus Cameras Camera [n] Capabilities Options
Shows the camera capabilities (ptzf = pan, tilt, zoom, focus).
Requires user role: ADMIN, INTEGRATOR, USER, ROOMCONTROL

Value space of the result returned:
String

Example:
```
xStatus Cameras Camera 1 Capabilities Options
*s Camera 1 Capabilities Options: "ptzf"
** end
```

xStatus Cameras Camera [n] Connected
Shows if the camera is connected or not.
Requires user role: ADMIN, INTEGRATOR, USER, ROOMCONTROL

Value space of the result returned:
True/False

Example:
```
xStatus Cameras Camera 1 Connected
*s Camera 1 Connected: True
** end
```

xStatus Cameras Camera [n] DetectedConnector
Shows the connector number the camera has detected it is connected to, or shows 0 if no connection is detected.
Requires user role: ADMIN, INTEGRATOR, USER, ROOMCONTROL

Value space of the result returned:
Integer

Example:
```
xStatus Cameras Camera 1 DetectedConnector
*s Cameras Camera 1 DetectedConnector: 1
** end
```
**xStatus Cameras Camera [n] Flip**

In Flip mode (vertical flip) the image can be flipped upside down.

Requires user role: ADMIN, INTEGRATOR, USER, ROOMCONTROL

**Value space of the result returned:**

Auto/On/Off

**Example:**

```plaintext
xStatus Cameras Camera 1 Flip
*s Camera 1 Flip: "Off"
** end
```

**xStatus Cameras Camera [n] HardwareID**

Shows the hardware identity of the camera.

Requires user role: ADMIN, INTEGRATOR, USER, ROOMCONTROL

**Value space of the result returned:**

String

**Example:**

```plaintext
xStatus Cameras Camera 1 HardwareID
*s Camera 1 HardwareID: "50000000"
** end
```

**xStatus Cameras Camera [n] MacAddress**

Shows the MAC (Media Access Control) address for the camera.

Requires user role: ADMIN, INTEGRATOR, USER, ROOMCONTROL

**Value space of the result returned:**

String

**Example:**

```plaintext
xStatus Cameras Camera 1 MacAddress
*s Camera 1 MacAddress: ""
** end
```

**xStatus Cameras Camera [n] Position Focus**

Shows the current focus position of the camera. The value range depends on camera type.

Requires user role: ADMIN, INTEGRATOR, USER, ROOMCONTROL

**Value space of the result returned:**

0..65535

**Example:**

```plaintext
xStatus Cameras Camera 1 Position Focus
*s Camera 1 Position Focus: 4597
** end
```
xStatus Cameras Camera [n] Position Lens
Shows the camera's current lens position.
Requires user role: ADMIN, INTEGRATOR, USER, ROOMCONTROL

Value space of the result returned:
Literal (Default / Wide / Center / Left / Right)

Example:
  xStatus Cameras Camera 1 Position Lens
  *s Cameras Camera 1 Position Lens: Center
  ** end

xStatus Cameras Camera [n] Position Pan
Shows the current pan (move left and right) position of the camera. The value range depends on camera type.
Requires user role: ADMIN, INTEGRATOR, USER, ROOMCONTROL

Value space of the result returned:
-65535..65535

Example:
  xStatus Cameras Camera 1 Position Pan
  *s Camera 1 Position Pan: 412
  ** end

xStatus Cameras Camera [n] Position Tilt
Shows the current tilt (move up and down) position of the camera. The value range depends on camera type.
Requires user role: ADMIN, INTEGRATOR, USER, ROOMCONTROL

Value space of the result returned:
-65535..65535

Example:
  xStatus Cameras Camera 1 Position Tilt
  *s Camera 1 Position Tilt: 106
  ** end

xStatus Cameras Camera [n] Position Zoom
Shows the current zoom (zoom in and out) position of the camera. The value range depends on camera type.
Requires user role: ADMIN, INTEGRATOR, USER

Value space of the result returned:
0..65535

Example:
  xStatus Cameras Camera 1 Position Zoom
  *s Camera 1 Position Zoom: 828
  ** end

xStatus Cameras Camera [n] SerialNumber
Shows the camera serial number.
Requires user role: ADMIN, INTEGRATOR, USER, ROOMCONTROL

Value space of the result returned:
String

Example:
  xStatus Cameras Camera 1 SerialNumber
  *s Camera 1 SerialNumber: "B1AB26B00010"
  ** end

xStatus Cameras Camera [n] SoftwareID
Shows the software identity of the camera.
Requires user role: ADMIN, INTEGRATOR, USER, ROOMCONTROL

Value space of the result returned:
String

Example:
  xStatus Cameras Camera 1 SoftwareID
  *s Camera 1 SoftwareID: "S01718-4.0FINAL [ID:40063] 2014-10-20"
  ** end
xStatus Cameras SpeakerTrack ActiveConnector
Shows the connector number currently chosen by SpeakerTrack.
Requires user role: ADMIN, INTEGRATOR, USER, ROOMCONTROL

Value space of the result returned:
Integer

Example:
   xStatus Cameras SpeakerTrack
   *s Cameras SpeakerTrack Availability: Available
   *s Cameras SpeakerTrack Status: Active
   ** end

xStatus Cameras SpeakerTrack Availability
Shows whether speaker tracking is available.
Off: Speaker tracking is turned off with the command xConfiguration Cameras SpeakerTrack
Mode: Off
Unavailable: Speaker tracking hardware is not found.
Available: Speaker tracking hardware and the two cameras are found, and it is possible to turn
speaker tracking on or off.

Requires user role: ADMIN, INTEGRATOR, USER, ROOMCONTROL

Value space of the result returned:
Off/Unavailable/Available

Example:
   xStatus Cameras SpeakerTrack Availability
   *s Cameras SpeakerTrack Availability: Unavailable
   ** end

xStatus Cameras SpeakerTrack Status
Shows whether speaker tracking is set to active or inactive.
Requires user role: ADMIN, INTEGRATOR, USER, ROOMCONTROL

Value space of the result returned:
Active/Inactive

Example:
   xStatus Cameras SpeakerTrack Status
   *s Cameras SpeakerTrack Status: Active
   ** end
Capabilities status

xStatus Capabilities Conference MaxActiveCalls
Shows the the maximum number of simultaneous active calls. Calls that are set on hold/transfer are not counted as active.

Requires user role: ADMIN, USER

Value space of the result returned:
0..5

Example:
```
xStatus Capabilities Conference MaxNumberOfActiveCalls
*s Capabilities Conference MaxNumberOfActiveCalls: 3
** end
```

xStatus Capabilities Conference MaxAudioCalls
Shows the the maximum number of simultaneous audio calls that is supported.

Requires user role: ADMIN, USER

Value space of the result returned:
Integer

Example:
```
xStatus Capabilities Conference MaxAudioCalls
*s Capabilities Conference MaxAudioCalls: 4
** end
```

xStatus Capabilities Conference MaxCalls
Shows the the maximum number of simultaneous calls.

Requires user role: ADMIN, USER

Value space of the result returned:
0..5

Example:
```
xStatus Capabilities Conference MaxCalls
*s Capabilities Conference MaxCalls: 3
** end
```
Conference status

xStatus Conference ActiveSpeaker CallId
Shows the CallId of the current active speaker.
Requires user role: ADMIN, USER
Value space of the result returned:
Integer
Example:
  xStatus Conference ActiveSpeaker CallId
  *s Conference ActiveSpeaker CallId: 3
  ** end

xStatus Conference Call [n] BookingId
Shows the booking ID of a conference (if assigned). The booking ID can be used for easy identification of a call or conference.
Requires user role: ADMIN, USER
Value space of the result returned:
String
Example:
  xStatus Conference Call 2 BookingId
  *s Conference Call 2 BookingId: "MyConference"
  ** end

xStatus Conference Call [n] Capabilities FarendMessage Mode
Not applicable in this release.
Requires user role: ADMIN, USER
Value space of the result returned:
On/Off
Example:
  xStatus Conference Call Capabilities FarendMessage Mode
  *s Conference Call 4 Capabilities FarendMessage Mode: Off
  ** end

xStatus Conference Call [n] Capabilities FECC Mode
Shows whether or not you have permission to control the input sources at a far end site.
On: Far end input source control is permitted.
Off: Far end input source control is not permitted.
Requires user role: ADMIN, USER
Value space of the result returned:
On/Off
Example:
  xStatus Conference Call 2 Capabilities FECC Mode
  *s Conference Call 2 Capabilities FECC Mode: On
  ** end

xStatus Conference Call [n] Capabilities FECC NumberOfPresets
Shows the number of presets available for the input sources at a far end site.
Requires user role: ADMIN, USER
Value space of the result returned:
1..15
Example:
  xStatus Conference Call 2 Capabilities FECC NumberOfPresets
  *s Conference Call 2 Capabilities FECC NumberOfPresets: 15
  ** end

xStatus Conference Call [n] Capabilities FECC NumberOfSources
Shows the number of input sources that can be connected at a far end site.
Requires user role: ADMIN, USER
Value space of the result returned:
1..5
Example:
  xStatus Conference Call 2 Capabilities FECC NumberOfSources
  *s Conference Call 2 Capabilities FECC NumberOfSources: 5
  ** end
xStatus Conference Call [n] Capabilities FECC Source [n] Name
Shows the name of an input source that can be connected at a far end site.
Requires user role: ADMIN, USER
Value space of the result returned:
String
Example:
  xStatus Conference Call 2 Capabilities FECC Source 1 Name
  *s Conference Call 2 Capabilities FECC Source 1 Name: "Main camera"
  ** end

xStatus Conference Call [n] Capabilities FECC Source [n] Options
Shows available options for an input source that can be connected at a far end site (for a camera: p=pan; t=tilt; z=zoom; f=focus).
Requires user role: ADMIN, USER
Value space of the result returned:
String
Example:
  xStatus Conference Call 2 Capabilities FECC Source 1 Options
  *s Conference Call 2 Capabilities FECC Source 1 Options: "ptzf"
  ** end

xStatus Conference Call [n] Capabilities FECC Source [n] SourceId
Shows the ID of an input source that can be connected at a far end site.
Requires user role: ADMIN, USER
Value space of the result returned:
Integer
Example:
  xStatus Conference Call 2 Capabilities FECC Source 1 SourceId
  *s Conference Call 2 Capabilities FECC Source 1 SourceId: 6
  ** end

xStatus Conference Call [n] Capabilities Hold
Indicates whether the far-end site can be placed on hold or not.
Requires user role: ADMIN, USER
Value space of the result returned:
True/False
Example:
  xStatus Conference Call Capabilities Hold
  *s Conference Call 2 Capabilities Hold: True
  ** end

xStatus Conference Call [n] Capabilities IxChannel Status
Not applicable in this release.
Requires user role: ADMIN, USER
Value space of the result returned:
Active/Failed/Off
Example:
  xStatus Conference Call 4 Capabilities IxChannel Status
  *s Conference Call 4 Capabilities IxChannel Status: Active
  ** end

xStatus Conference Call [n] Capabilities Presentation
Lists the presentation capabilities for other participants in the conference.
Requires user role: ADMIN, USER
Value space of the result returned:
True/False
Example:
  xStatus Conference Call 2 Capabilities Presentation
  *s Conference Call 2 Capabilities Presentation: True
  ** end
xStatus Conference Call [n] Manufacturer
Shows the manufacturer of the video system at a far end site.
Requires user role: ADMIN, USER

Value space of the result returned:
String

Example:
```
xStatus Conference Call 2 Manufacturer
  *s Conference Call 2 Manufacturer: "Cisco"
  ** end
```

xStatus Conference Call [n] MicrophonesMuted
Lists the audio mute status for other participants in the conference.
Requires user role: ADMIN, USER

Value space of the result returned:
True/False

Example:
```
xStatus Conference Call 2 MicrophonesMuted
  *s Conference Call 2 MicrophonesMuted: True
  ** end
```

xStatus Conference Call [n] SoftwareID
Shows the ID of the software running of the video system at a far end site.
Requires user role: ADMIN, USER

Value space of the result returned:
String

Example:
```
xStatus Conference Call 2 SoftwareID
  *s Conference Call 2 SoftwareID: "CE8"
  ** end
```

xStatus Conference DoNotDisturb
Shows whether DoNotDisturb mode is switched on or not.
Requires user role: ADMIN, INTEGRATOR, USER

Value space of the result returned:
Active/Inactive

Example:
```
xStatus Conference DoNotDisturb
  *s Conference DoNotDisturb: Inactive
  ** end
```

xStatus Conference Line [n] Mode
Indicates whether the system is configured as private or shared line on CUCM.
Requires user role: ADMIN, USER

Value space of the result returned:
Shared/Private

Example:
```
xStatus Conference Line Mode
  *s Conference Line 1 Mode: Private
  ** end
```
xStatus Conference Multipoint Mode
Shows how the Multipoint video conferences are handled.
Auto: The multipoint method available will be chosen automatically; if none are available the Multipoint Mode will automatically be set to Off. If both MultiWay and MultiSite are available, the MultiWay service takes priority over the built-in MultiSite.
Off: Multiparty conferences are not allowed.
MultiSite: Multiparty conferences are set up using the built-in MultiSite feature. If MultiSite is chosen when the MultiSite feature is not available, the Multipoint Mode will automatically be set to Off.
CUCMMediaResourceGroupList: Multiparty conferences (ad hoc conferences) are hosted by the CUCM configured conference bridge. This setting is provisioned by CUCM in a CUCM environment and should never be set manually by the user.
Requires user role: ADMIN, USER
Value space of the result returned:
Auto/CUCMMediaResourceGroupList/MultiSite/Off
Example:
```
xStatus Conference Multipoint Mode
*s Conference Multipoint Mode: "Auto"
** end
```

xStatus Conference Presentation CallId
Shows the identity of the system that sends the presentation.
Requires user role: ADMIN, INTEGRATOR, USER, ROOMCONTROL
Value space of the result returned:
Integer
Example:
```
xStatus Conference Presentation CallId
*s Conference Presentation CallId: 0
** end
```

xStatus Conference Presentation LocalInstance [n] SendingMode
Shows whether a presentation source is shared locally or with a remote participant. There can be multiple local presentations which all have their own instance.
Requires user role: ADMIN, INTEGRATOR, USER, ROOMCONTROL
Value space of the result returned:
LocalOnly/LocalRemote/Off
Example:
```
xStatus Conference Presentation LocalInstance 1 SendingMode
*s Conference Presentation LocalInstance 1 SendingMode: LocalOnly
** end
```

xStatus Conference Presentation LocalInstance [n] Source
Shows the SourceId for a current presentation. There can be multiple local presentations which all have their own instance.
Requires user role: ADMIN, INTEGRATOR, USER, ROOMCONTROL
Value space of the result returned:
Integer
Example:
```
xStatus Conference Presentation LocalInstance 1 Source
*s Conference Presentation LocalInstance 1 Source: 1
** end
```

xStatus Conference Presentation Mode
Shows the status of the secondary video stream.
Requires user role: ADMIN, INTEGRATOR, USER, ROOMCONTROL
Value space of the result returned:
On/Off
Example:
```
xStatus Conference Presentation Mode
*s Conference Presentation Mode: Off
** end
```
xStatus Conference SpeakerLock CallId
Shows the CallId for the participant locked as the prominent speaker in the conference.

Requires user role: ADMIN, USER

**Value space of the result returned:**
Integer

**Example:**
```
xStatus Conference SpeakerLock CallId
's Conference SpeakerLock CallId: 0
```

xStatus Conference SpeakerLock Mode
Shows whether the speaker lock is enabled or not.

Requires user role: ADMIN, USER

**Value space of the result returned:**
On/Off

**Example:**
```
xStatus Conference SpeakerLock Mode
's Conference SpeakerLock Mode: Off
```

Diagnostics status

xStatus Diagnostics Message [n] Description
Shows a description of the current diagnostics alerts.

Requires user role: ADMIN, USER

**Value space of the result returned:**
String

**Example:**
```
xStatus Diagnostics Message Description
's DiagnosticsResult Message 1 Description: "IP configuration incomplete"
```

xStatus Diagnostics Message [n] Level
Shows the level of importance of the diagnostics message.

Error: There is an error in the system. The system can still be used, but there can be some restrictions.

Warning: A problem is detected and a more specific report follows indicating the exact problem.

Critical: The warning level is critical. The system cannot be used.

Requires user role: ADMIN, USER

**Value space of the result returned:**
Error/Warning/Critical

**Example:**
```
xStatus Diagnostics Message 4 Level
's Diagnostics Message 4 Level: Warning
```
xStatus Diagnostics Message [n] References
Additional information on the diagnostics alert, if available.

Requires user role: ADMIN, USER

Value space of the result returned:
String

Example:
xStatus Diagnostics Message 10 References
*s Diagnostics Message 10 References: "delay=190"
** end

xStatus Diagnostics Message [n] Type
Shows information on the results of the latest diagnostics on the system.

Requires user role: ADMIN, USER

Value space of the result returned:
CAPFOperationState / CTLinstallation / CUCMVendorConfigurationFile / CallProtocolDualStackConfig / CallProtocolIPStackPlatformCompatibility / CallProtocolVcsProvisioningCompatibility / Camerald / CameraPairing / CameraSerial / CameraSoftwareVersion / CameraStatus / CameraDetected / CamerasDetected / CertificateExpiry / ConfigurationFile / DefaultCallProtocolRegistered / EthernetDuplexMatches / FanStatus / PresenterTrack / H320GatewayStatus / H323GatekeeperStatus / HasValidReleaseKey / IpCameraStatus / IPv4Assignment / IPv6Assignment / IPv6Mtu / ISDNLinkCompatibility / ISDNLinklpStack / ITLinstallation / InvalidSIPTransportConfig / LockDown / RoomControl / MediaBlockingDetected / MacrosRuntimeStatus / NetLinkStatus / NetSpeedAutoNegotiated / NetworkQuality / NTPStatus / OSDVideoOutput / OutputConnectorLocations / ProvisioningDeveloperOptions / ProvisioningStatus / SIPEncryption / SIPListenPortAndOutboundMode / SIPProfileRegistration / SIPProfileType / SelectedVideoInputSourceConnected / SipIceAndAnatConflict / SIPListenPortAndRegistration / TCPMediaFallback / TemperatureCheck / TLSVerifyRequiredCerts / TouchPanelConnection / ControlSystemConnection / TurnBandwidth / MediaPortRangeNegative / MediaPortRangeTooSmall / MediaPortRangeOdd / MediaPortRangeValueSpace / MediaPortRangeOverlap / VideoPortRangeNegative / VideoPortRangeTooSmall / VideoPortRangeOdd / VideoPortRangeValueSpace / UltrasoundConfigSettings / UltrasoundSpeakerAvailability / ValidPasswords / VideoFromInternalCamera / VideoInputStability / VideoInputSignalQuality / SparkConnectivity / SparkActivationRequired / SpeakerTrackFrontPanelMountedCorrectly / SpeakerTrackMicrophoneConnection / SpeakerTrackVideoInputs / SpeakerTrackEthernetConnection / ANATOnVCS / ECReferenceDelay / AudioEcrRefDelay / AudioPairingNoise / AudioPairingRate / AudioPairingSNR / AudioPairingInterference / AudioPairingTokenDecode / AudioInternalSpeakerDisabled / AbnormalCallTermination / HasActiveCallProtocol / SipOrH323ButNotBothEnabled / PresentationSourceSelection / SoftwareUpgrade / PlatformSanity / ContactInfoMismatch / MicrophoneReinforcement / FirstTimeWizardNotCompleted / CaptivePortalDetected / MonitorDelay / WtiCARequired / MicrophonesConnected

Example:
xStatus Diagnostics Message Type
*s Diagnostics Message 1 Type: CamerasDetected
** end
H323 status

xStatus H323 Gatekeeper Address
Displays the IP address of the gatekeeper where the system is registered.
Requires user role: ADMIN, USER
Value space of the result returned:
String
Example:
```plaintext
xStatus H323 Gatekeeper Address
'*s H323 Gatekeeper Address: "192.0.1.20"
** end
```

xStatus H323 Gatekeeper Port
Shows the port which is used when connecting to on the gatekeeper.
Requires user role: ADMIN, USER
Value space of the result returned:
Integer
Example:
```plaintext
xStatus H323 Gatekeeper Port
'*s H323 Gatekeeper Port: 1719
** end
```

xStatus H323 Gatekeeper Reason
Shows the reason for rejected registration.
Requires user role: ADMIN, USER
Value space of the result returned:
String
Example:
```plaintext
xStatus H323 Gatekeeper Reason
'*s H323 Gatekeeper Reason: ""
** end
```

xStatus H323 Gatekeeper Status
Shows the gatekeeper registration status.
Requires user role: ADMIN, USER
Value space of the result returned:
Required/Discovering/Discovered/Authenticating/Authenticated/Registering/Registered/Inactive/Rejected
Example:
```plaintext
xStatus H323 Gatekeeper Status
'*s H323 Gatekeeper Status: Registered
** end
```

xStatus H323 Mode Reason
Shows whether there is a conflict between H.323 settings and xStatus H323 Mode Status.

*: When H.323 is set to On and there is no conflict between H.323 Mode configuration and the rest of the system settings.

"SIP is enabled": When H.323 Mode is set to On and SIP is enabled on a system that does not support the two simultaneously.

"Not available": When a system does not support H.323.
Requires user role: ADMIN, USER
Value space of the result returned:
String
Example:
```plaintext
xStatus H323 Mode Reason
'*s H323 Mode Reason: ""
** end
```
xStatus H323 Mode Status
Shows the status for H.323 registration.
Enabled: Registration is enabled.
Disabled: Registration is disable, because SIP is enabled.
Requires user role: ADMIN, USER

Value space of the result returned:
Enabled/Disabled

Example:
xStatus H323 Mode Status
  *s H323 Mode Status: "Disabled"
  ** end

HttpFeedback status

xStatus HttpFeedback [1..4] Expression [1..15]
Shows the feedback from the HTTP server. There can be up to 15 expressions for each URL.
See the xCommand HttpFeedback commands for more information.
Requires user role: ADMIN, USER

Value space of the result returned:
String

Example:
xStatus HttpFeedback 1 Format
  *s HttpFeedback 1 Format: XML
  ** end

xStatus HttpFeedback [1..4] Format
Shows the format of the HTTP Feedback feedback from the HTTP server.
Requires user role: ADMIN, USER

Value space of the result returned:
XML/JSON

Example:
xStatus HttpFeedback 1 Format
  *s HttpFeedback 1 Format: XML
  ** end

xStatus HttpFeedback [1..4] URL
Shows the URL (Uniform Resource Locator) of the HTTP server. There can be up to three HTTP
servers, specified by the URL.
Requires user role: ADMIN, USER

Value space of the result returned:
String

Example:
xStatus HttpFeedback 1 URL
  ** end
MediaChannels status

**xStatus MediaChannels Call [n] Channel [n] Audio Channels**
Shows the number of incoming or outgoing audio channels.
Requires user role: ADMIN, USER

**Value space of the result returned:**
Integer

**Example:**
```
xStatus MediaChannels Call 27 Channel 327 Audio Channels
  *s MediaChannels Call 27 Channel 327 Audio Channels: 1
  ** end
```

**xStatus MediaChannels Call [n] Channel [n] Audio Mute**
Audio mute status of the incoming audio.
Requires user role: ADMIN, USER

**Value space of the result returned:**
True/False

**Example:**
```
xStatus MediaChannels Call 27 Channel 327 Audio Mute
  *s MediaChannels Call 27 Channel 327 Audio Mute: False
  ** end
```

**xStatus MediaChannels Call [n] Channel [n] Audio Protocol**
Shows the audio algorithm of the incoming or outgoing audio.

**Value space of the result returned:**
AACLD/G711A/G711Mu/G722/G7221/G7221C/G723_1/G728/G729/G729A/G729AB/Off/Opus

**Example:**
```
xStatus MediaChannels Call 27 Channel 327 Audio Protocol
  *s MediaChannels Call 27 Channel 327 Audio Protocol: AACLD
  ** end
```
xStatus MediaChannels Call [n] Channel [n] Direction
Shows the direction of the call.
Incoming: The call is an incoming call.
Outgoing: The call is an outgoing call.
Requires user role: ADMIN, USER
Value space of the result returned:
Incoming/Outgoing
Example:
    xStatus MediaChannels Call 27 Channel 327 Direction
    *s MediaChannels Call 27 Channel 327 Direction: Incoming
    ** end

xStatus MediaChannels Call [n] Channel [n] Encryption
Shows the encryption status for audio or video on the incoming or outgoing call.
Requires user role: ADMIN, USER
Value space of the result returned:
On/Off
Example:
    xStatus MediaChannels Call 27 Channel 327 Encryption
    *s MediaChannels Call 27 Channel 327 Encryption: On
    ** end

xStatus MediaChannels Call [n] Channel [n] NetStat Bytes
Shows the number of bytes for audio, video or data on the incoming or outgoing channel.
Requires user role: ADMIN, USER
Value space of the result returned:
Integer
Example:
    xStatus MediaChannels Call 27 Channel 327 NetStat Bytes
    *s MediaChannels Call 27 Channel 327 NetStat Bytes: 496640
    ** end

xStatus MediaChannels Call [n] Channel [n] NetStat ChannelRate
Shows the bandwidth for audio, video or data on the incoming or outgoing channel.
Requires user role: ADMIN, USER
Value space of the result returned:
Integer
Example:
    xStatus MediaChannels Call 27 Channel 327 NetStat ChannelRate
    *s MediaChannels Call 27 Channel 327 NetStat ChannelRate: 128000
    ** end

xStatus MediaChannels Call [n] Channel [n] NetStat Jitter
Shows the jitter for audio, video or data at the present moment on the incoming or outgoing channel, as specified by RFC 3550.
Requires user role: ADMIN, USER
Value space of the result returned:
Integer
Example:
    xStatus MediaChannels Call 27 Channel 327 NetStat Jitter
    *s MediaChannels Call 27 Channel 327 NetStat Jitter: 2
    ** end

xStatus MediaChannels Call [n] Channel [n] NetStat LastIntervalLost
Shows the number of packets lost for audio, video or data during the last interval on the incoming or outgoing channels.
Requires user role: ADMIN, USER
Value space of the result returned:
Integer
Example:
    xStatus MediaChannels Call 27 Channel 327 NetStat LastIntervalLost
    *s MediaChannels Call 27 Channel 327 NetStat LastIntervalLost: 0
    ** end
xStatus MediaChannels Call [n] Channel [n] NetStat LastIntervalReceived
Shows the number of packets received for audio, video or data during the last interval on the incoming or outgoing channels.

Requires user role: ADMIN, USER

Value space of the result returned:
Integer

Example:
xStatus MediaChannels Call 27 Channel 327 NetStat LastIntervalReceived
*s MediaChannels Call 27 Channel 327 NetStat LastIntervalReceived: 289
** end

xStatus MediaChannels Call [n] Channel [n] NetStat Loss
Shows the number of packets lost for audio, video or data on the incoming or outgoing channels.

Requires user role: ADMIN, USER

Value space of the result returned:
Integer

Example:
xStatus MediaChannels Call 27 Channel 327 NetStat Loss
*s MediaChannels Call 27 Channel 327 NetStat Loss: 0
** end

xStatus MediaChannels Call [n] Channel [n] NetStat MaxJitter
Shows the maximum jitter for audio, video or data that has been measured during last interval (about 5 seconds).

Requires user role: ADMIN, USER

Value space of the result returned:
Integer

Example:
xStatus MediaChannels Call 27 Channel 327 NetStat MaxJitter
*s MediaChannels Call 27 Channel 327 NetStat MaxJitter: 2
** end

xStatus MediaChannels Call [n] Channel [n] NetStat Packets
Shows the number of packets that was received or sent for audio, video or data on the incoming or outgoing channels.

Requires user role: ADMIN, USER

Value space of the result returned:
Integer

Example:
xStatus MediaChannels Call 27 Channel 327 NetStat Packets
*s MediaChannels Call 27 Channel 327 NetStat Packets: 1551
** end

xStatus MediaChannels Call [n] Channel [n] ParticipantId
Shows the ID of the Active Control participant on the incoming audio or video channel.

Requires user role: ADMIN, USER

Value space of the result returned:
String

Example:
xStatus MediaChannels Call 27 Channel 327 ParticipantId
*s MediaChannels Call 27 Channel 327 ParticipantId: ""
** end
xStatus MediaChannels Call [n] Channel [n] Type
Shows the media type on the incoming or outgoing channel.
Audio: The media type on the incoming or outgoing channel is audio.
Video: The media type on the incoming or outgoing channel is video.
Data: The media type on the incoming or outgoing channel is data.

Requires user role: ADMIN, USER

Value space of the result returned:
Audio/Video/Data

Example:
xStatus MediaChannels Call 27 Channel 327 Type
*s MediaChannels Call 27 Channel 327 Type: Audio
** end

xStatus MediaChannels Call [n] Channel [n] Video ChannelRole
Shows the role of the incoming or outgoing video channel.
Main: The main video is on the incoming or outgoing video channel.
Presentation: The presentation is on the incoming or outgoing video channel.

Requires user role: ADMIN, USER

Value space of the result returned:
Main/Presentation

Example:
xStatus MediaChannels Call 27 Channel 327 Video ChannelRole
*s MediaChannels Call 27 Channel 327 Video ChannelRole: Main
** end

xStatus MediaChannels Call [n] Channel [n] Video FrameRate
Shows the frame rate of the incoming or outgoing video channel.

Requires user role: ADMIN, USER

Value space of the result returned:
Integer

Example:
xStatus MediaChannels Call 27 Channel 327 Video FrameRate
*s MediaChannels Call 27 Channel 327 Video FrameRate: 30
** end

xStatus MediaChannels Call [n] Channel [n] Video Protocol
Shows the video algorithm of the incoming or outgoing video channel.

Requires user role: ADMIN, USER

Value space of the result returned:
H261/H263/H263p/H263pp/H264/HEVC/JPEG/MP4V/Off

Example:
xStatus MediaChannels Call 27 Channel 327 Video Protocol
*s MediaChannels Call 27 Channel 327 Video Protocol: H264
** end
xStatus MediaChannels Call [n] Channel [n] Video ResolutionX
Shows the width (resolution in direction X) of the incoming or outgoing video.

Requires user role: ADMIN, USER

Value space of the result returned:
Integer

Example:
xStatus MediaChannels Call 27 Channel 327 Video ResolutionX
's MediaChannels Call 27 Channel 327 Video ResolutionX: 1920
** end

xStatus MediaChannels Call [n] Channel [n] Video ResolutionY
Shows the width (resolution in direction Y) of the incoming or outgoing video.

Requires user role: ADMIN, USER

Value space of the result returned:
Integer

Example:
xStatus MediaChannels Call 27 Channel 327 Video ResolutionY
's MediaChannels Call 27 Channel 327 Video ResolutionY: 1080
** end

Network status

xStatus Network 1 CDP Address
Returns the first network address of both receiving and sending devices.

Requires user role: ADMIN, USER

Value space of the result returned:
String

Example:
xStatus Network CDP Address
's Network 1 CDP Address: "192.0.1.20"
** end

xStatus Network 1 CDP Capabilities
Describes the functional capability for the switch in form of a device type. See documentation for CDP protocol for more information.

Requires user role: ADMIN, USER

Value space of the result returned:
String

Example:
xStatus Network CDP Capabilities
's Network 1 CDP Capabilities: "0x0029"
** end

xStatus Network 1 CDP DeviceId
Identifies the name of the switch in form of a character string.

Requires user role: ADMIN, USER

Value space of the result returned:
String

Example:
xStatus Network CDP DeviceId
's Network 1 CDP DeviceId: "123456.company.com"
** end
xStatus Network 1 CDP Duplex
Indicates the status (duplex configuration) of the CDP broadcast interface. Used by network operators to diagnose connectivity problems between adjacent network elements.

Requires user role: ADMIN, USER

Value space of the result returned:
String

Example:
xStatus Network CDP Duplex
's Network 1 CDP Duplex: "Full"
** end

xStatus Network 1 CDP Platform
Returns the hardware platform name of the switch connected to the endpoint.

Requires user role: ADMIN, USER

Value space of the result returned:
String

Example:
xStatus Network CDP Platform
's Network 1 CDP Platform: "cisco WS-C3750X-48P"
** end

xStatus Network 1 CDP PortID
Returns the identification the switch uses of the port the endpoint is connected to.

Requires user role: ADMIN, USER

Value space of the result returned:
String

Example:
xStatus Network CDP PortID
's Network 1 CDP PortID: "GigabitEthernet1/0/23"
** end

xStatus Network 1 CDP PrimaryMgmtAddress
Returns the management address used to configure and monitor the switch the endpoint is connected to.

Requires user role: ADMIN, USER

Value space of the result returned:
String

Example:
xStatus Network CDP PrimaryMgmtAddress
's Network 1 CDP PrimaryMgmtAddress: "10.1.1.2"
** end

xStatus Network 1 CDP SysName
Returns the SysName as configured in the switch the endpoint is connected to.

Requires user role: ADMIN, USER

Value space of the result returned:
String

Example:
xStatus Network CDP SysName
's Network 1 CDP SysName: ""
** end

xStatus Network 1 CDP SysObjectID
Returns the SysObjectID as configured in the switch the endpoint is connected to.

Requires user role: ADMIN, USER

Value space of the result returned:
String

Example:
xStatus Network CDP SysObjectID
's Network 1 CDP SysObjectID: ""
** end
xStatus Network 1 CDP Version

Returns information about the software release version the switch is running.

Requires user role: ADMIN, USER

Value space of the result returned:
String

Example:
xStatus Network 1 CDP Version
** end

xStatus Network 1 CDP VoIPApplianceVlanID

Identifies the VLAN used for VoIP traffic from the endpoint to the switch. For more information see documentation of the IEEE 802.1Q protocol.

Requires user role: ADMIN, USER

Value space of the result returned:
String

Example:
xStatus Network CDP VoIPApplianceVlanID
*s Network 1 CDP VoIPApplianceVlanID: "300"
** end

xStatus Network 1 CDP VTPMgmtDomain

Returns the switch's configured VTP management domain name-string.

Requires user role: ADMIN, USER

Value space of the result returned:
String

Example:
xStatus Network 1 CDP VTPMgmtDomain
*s Network 1 CDP VTPMgmtDomain: "anyplace"
** end

xStatus Network 1 DNS Domain Name

Shows the domain name.

Requires user role: ADMIN, USER

Value space of the result returned:
String

Example:
xStatus Network 1 DNS Domain Name
*s Network 1 DNS Domain Name: "www.example.com www.example.int"
** end

xStatus Network 1 DNS Server [1..5] Address

Shows the IP address of the DNS server.

Requires user role: ADMIN, USER

Value space of the result returned:
String

Example:
xStatus Network 1 DNS Server 1 Address
*s Network 1 DNS Server 1 Address: "192.0.2.60"
** end

xStatus Network 1 Ethernet MacAddress

Shows the MAC (Media Access Control) address for the Ethernet interface.

Requires user role: ADMIN, USER

Value space of the result returned:
String

Example:
xStatus Network 1 Ethernet MacAddress
*s Network 1 Ethernet MacAddress: "00:50:60:02:FD:C7"
** end
xStatus Network 1 Ethernet Speed
Shows the Ethernet speed in Mbps. The speed can be in full-duplex or half-duplex.

Requires user role: ADMIN, USER

Value space of the result returned:
10half/10full/100half/100full/1000full

Example:
```plaintext
xStatus Network 1 Ethernet Speed
*s Network 1 Ethernet Speed: "100full"
** end
```

xStatus Network 1 IPv4 Address
Shows the IPv4 address that uniquely identifies this system.

Requires user role: ADMIN, USER

Value space of the result returned:
String

Example:
```plaintext
xStatus Network 1 IPv4 Address
*s Network 1 IPv4 Address: "192.0.2.149"
** end
```

xStatus Network 1 IPv4 Gateway
Shows the address of the IPv4 gateway.

Requires user role: ADMIN, USER

Value space of the result returned:
String

Example:
```plaintext
xStatus Network 1 IPv4 Gateway
*s Network 1 IPv4 Gateway: "192.0.2.149"
** end
```

xStatus Network 1 IPv4 SubnetMask
Shows the subnet mask which determines which subnet an IPv4 address belongs to.

Requires user role: ADMIN, USER

Value space of the result returned:
String

Example:
```plaintext
xStatus Network 1 IPv4 SubnetMask
*s Network 1 IPv4 SubnetMask: "255.255.255.0"
** end
```

xStatus Network 1 IPv6 Address
Shows the IPv6 address that uniquely identifies this system.

Requires user role: ADMIN, USER

Value space of the result returned:
String

Example:
```plaintext
xStatus Network 1 IPv6 Address
*s Network 1 IPv6 Address: ""
** end
```

xStatus Network 1 IPv6 Gateway
Shows the address of the IPv6 gateway.

Requires user role: ADMIN, USER

Value space of the result returned:
String

Example:
```plaintext
xStatus Network 1 IPv6 Gateway
*s Network 1 IPv6 Gateway: ""
** end
```
xStatus Network 1 VLAN Voice VlanId

The feedback shows the VLAN Voice ID; or Off if the VLAN Voice Mode is not enabled.

Requires user role: ADMIN, USER

Value space of the result returned:
Off/1..4094

Example:
```bash
xStatus Network 1 VLAN Voice VlanId
*s Network 1 VLAN Voice VlanId: "Off"
** end
```

NetworkServices status

xStatus NetworkServices NTP CurrentAddress

Returns the address of the NTP server that is currently in use.

Requires user role: ADMIN, USER

Value space of the result returned:
String

Example:
```bash
xStatus NetworkServices NTP CurrentAddress
*s NetworkServices NTP CurrentAddress: "123.254.15.121"
** end
```

xStatus NetworkServices NTP Server [n] Address

Returns the address of the NTP server(s) the codec is using.

Requires user role: ADMIN, USER

Value space of the result returned:
String

Example:
```bash
xStatus NetworkServices NTP Address
*s NetworkServices NTP Address: "12.104.193.12 64.104.222.16 144.254.15.121"
** end
```
xStatus NetworkServices NTP Status

Returns the status of the endpoints synchronizing with the NTP server.
Discarded: The NTP result has been discarded.
Synced: The system is in sync with the NTP server.
NotSynced: The system is not in sync with the NTP server.
Unknown: The state of the synchronization is unknown.
Off: No synchronization with the NTP server.

Requires user role: ADMIN, USER

Value space of the result returned:
Discarded/Synced/NotSynced/Unknown/Off

Example:
```
xStatus NetworkServices NTP Status
*s NetworkServices NTP Status: Synced
** end
```

Peripherals status

xStatus Peripherals ConnectedDevice [n] HardwareInfo

Shows hardware information about connected device.

Requires user role: ADMIN, INTEGRATOR, USER, ROOMCONTROL

Value space of the result returned:
String

Example:
```
xStatus Peripherals ConnectedDevice 1007 HardwareInfo
*s Peripherals ConnectedDevice 1007 HardwareInfo: "1122330-0"
** end
```

xStatus Peripherals ConnectedDevice [n] ID

Shows the MAC-address of the connected device.

Requires user role: ADMIN, INTEGRATOR, USER, ROOMCONTROL

Value space of the result returned:
String

Example:
```
xStatus Peripherals ConnectedDevice 1007 ID
*s Peripherals ConnectedDevice 1007 ID: "00:10:20:20:be:21"
** end
```

xStatus Peripherals ConnectedDevice [n] Name

Shows the product name of connected device.

Requires user role: ADMIN, INTEGRATOR, USER, ROOMCONTROL

Value space of the result returned:
String

Example:
```
xStatus Peripherals ConnectedDevice 1007 Name
*s Peripherals ConnectedDevice 1007 Name: "Cisco TelePresence Touch"
** end
```
xStatus Peripherals ConnectedDevice [n] SoftwareInfo
Shows information of the software version running on the connected device.
Requires user role: ADMIN, INTEGRATOR, USER, ROOMCONTROL

Value space of the result returned:
String

Example:
  xStatus Peripherals ConnectedDevice 1007 SoftwareInfo
  *s Peripherals ConnectedDevice 1007 SoftwareInfo: "TI7.2.0"
  ** end

xStatus Peripherals ConnectedDevice [n] Status
Shows peripheral devices that are currently connected to the endpoint.
Requires user role: ADMIN, INTEGRATOR, USER, ROOMCONTROL

Value space of the result returned:
Connected/ResponseTimedOut

Example:
  xStatus Peripherals ConnectedDevice 1001 Status
  *s Peripherals ConnectedDevice 1001 Status: Connected
  ** end

xStatus Peripherals ConnectedDevice [n] Type
Shows the peripheral types that are connected to the endpoint.
Note: The value space Camera only shows Precision 60 cameras.
Requires user role: ADMIN, INTEGRATOR, USER, ROOMCONTROL

Value space of the result returned:
Byod/Camera/ControlSystem/ISDNLink/Other/SpeakerTrack/TouchPanel

Example:
  xStatus Peripherals ConnectedDevice 1001 Type
  *s Peripherals ConnectedDevice 1001 Type: TouchPanel
  ** end

xStatus Peripherals ConnectedDevice [n] UpgradeStatus
Shows the status of the previous software upgrade on the currently connected peripherals.
Requires user role: ADMIN, INTEGRATOR, USER, ROOMCONTROL

Value space of the result returned:
Downloading/Failed/Installing/InstallationReady/None/Succeeded/Rebooting/Retrying/Aborted/Paused

Example:
  xStatus Peripherals ConnectedDevice 1001 UpgradeStatus
  *s Peripherals ConnectedDevice 1001 UpgradeStatus: None
  ** end
Provisioning status

xStatus Provisioning CUCM ExtensionMobility Enabled
Shows if Extension Mobility is enabled for a CUCM registered device.

Requires user role: ADMIN, USER

Value space of the result returned:
True/False

Example:
```
xStatus Provisioning CUCM ExtensionMobility Enabled
  *s Provisioning CUCM ExtensionMobility Enabled: False
  ** end
```

xStatus Provisioning CUCM ExtensionMobility LastLoggedInUserId
Returns the user id that was last logged in to the system. Only in use if CUCM Extension Mobility is enabled, and CUCM is configured to remember the last logged in user on an endpoint.

Requires user role: ADMIN, USER

Value space of the result returned:
String

Example:
```
xStatus Provisioning CUCM ExtensionMobility LastLoggedInUserId
  *s Provisioning CUCM ExtensionMobility LastLoggedInUserId: "User 1"
  ** end
```

xStatus Provisioning CUCM ExtensionMobility LoggedIn
Shows if someone is logged in to Extension Mobility or not.

Requires user role: ADMIN, USER

Value space of the result returned:
True/False

Example:
```
xStatus Provisioning CUCM ExtensionMobility LoggedIn
  *s Provisioning CUCM ExtensionMobility LoggedIn: False
  ** end
```

xStatus Provisioning Software Current CompletedAt
Shows date and time for when the current software upgrade was completed.

Requires user role: ADMIN, USER

Value space of the result returned:
String

Example:
```
xStatus Provisioning Software Current CompletedAt
  *s Provisioning Software Current CompletedAt: "2011-06-07T07:20:03Z"
  ** end
```

xStatus Provisioning Software Current URL
Shows the URL that the current software was uploaded from.

Requires user role: ADMIN, USER

Value space of the result returned:
String

Example:
```
xStatus Provisioning Software Current URL
  *s Provisioning Software Current URL: "http://.../s52020ce8_0_0.pkg"
  ** end
```
xStatus Provisioning Software Current VersionId
Shows the version ID of the current software.
Requires user role: ADMIN, USER
Value space of the result returned:
String
Example:
xStatus Provisioning Software Current VersionId
  "s52020ce8_0_0.pkg"
** end

xStatus Provisioning Software UpgradeStatus LastChange
Shows the date and time for the latest software upgrade.
Requires user role: ADMIN, USER
Value space of the result returned:
String
Example:
xStatus Provisioning Software UpgradeStatus LastChange
  "2011-06-07T07:20:03Z"
** end

xStatus Provisioning Software UpgradeStatus Message
Shows the system message for the software upgrade.
Requires user role: ADMIN, USER
Value space of the result returned:
String
Example:
xStatus Provisioning Software UpgradeStatus Message
  ""
** end

xStatus Provisioning Software UpgradeStatus Status
Shows the status of the software upgrade.
Requires user role: ADMIN, USER
Value space of the result returned:
None/InProgress/Failed/InstallationFailed/Succeeded
Example:
xStatus Provisioning Software UpgradeStatus Status
  "None"
** end

xStatus Provisioning Software UpgradeStatus Phase
Shows the phase of the software upgrade.
Requires user role: ADMIN, USER
Value space of the result returned:
None/DownloadPending/FormingHierarchy/Downloading/DownloadPaused/DownloadDone/
  Seeding/AboutToInstallUpgrade/Postponed/PeripheralsReady/UpgradingPeripherals/Installing/
  InstallingPeripherals
Example:
xStatus Provisioning Software UpgradeStatus Phase
  "None"
** end

xStatus Provisioning Software UpgradeStatus SessionId
Shows the ID of the session for the software upgrade.
Requires user role: ADMIN, USER
Value space of the result returned:
String
Example:
xStatus Provisioning Software UpgradeStatus SessionId
  ""
** end
xStatus Provisioning Software UpgradeStatus URL
Shows the URL that the new software currently is being uploaded and installed from.
Requires user role: ADMIN, USER
**Value space of the result returned:**
String
**Example:**
```
*xStatus Provisioning Software UpgradeStatus URL
 *s Provisioning Software UpgradeStatus URL: "http://.../s52020ce8_0_0.pkg"
 ** end
```

xStatus Provisioning Software UpgradeStatus VersionId
Shows the version ID of the software currently being uploaded and installed.
Requires user role: ADMIN, USER
**Value space of the result returned:**
String
**Example:**
```
*xStatus Provisioning Software UpgradeStatus VersionId
 *s Provisioning Software UpgradeStatus VersionId: "s52010ce8_0_0.pkg"
 ** end
```

xStatus Provisioning Status
Shows the status of the provisioning.
Failed: The provisioning failed.
AuthenticationFailed: The authentication failed.
Provisioned: The endpoint is provisioned.
Idle: The provisioning is not active.
NeedConfig: The endpoint needs to be configured.
ConfigError: An error occurred during configuration.
Requires user role: ADMIN, USER
**Value space of the result returned:**
Failed/AuthenticationFailed/Provisioned/Idle/NeedConfig/ConfigError
**Example:**
```
xStatus Provisioning Status
 *s Provisioning Status: Provisioned
 ** end
```
Proximity status

xStatus Proximity Services Availability

Shows whether proximity services are available on the endpoint.
Available: Proximity mode has been enabled with the command xConfiguration Proximity Mode and one or more of the proximity services have been enabled with xConfiguration Proximity Services commands.
Disabled: Proximity mode has been disabled with xConfiguration Proximity Mode, or none of the services have been enabled with the xConfiguration Proximity Services commands.
Deactivated: Proximity services have been deactivated with the command xCommand Proximity Services Deactivate.

Requires user role: ADMIN, USER

Example:
```
xStatus Proximity Services Availability
'*s Proximity Services Availability: Disabled
** end
```
Security status

xStatus Security FIPS Mode
Shows the FIPS mode status.
Requires user role: ADMIN, USER
Value space of the result returned:
On/Off
Example:
xStatus Security FIPS Mode
's Security FIPS Mode: Off
** end

xStatus Security Persistency CallHistory
Shows whether call history logging is set to persistent or non-persistent mode. Persistent is the default mode.
Requires user role: ADMIN, USER
Value space of the result returned:
NonPersistent/Persistent
Example:
xStatus Security Persistency CallHistory
's Security Persistency CallHistory: Persistent
** end

xStatus Security Persistency Configurations
Shows whether the systems all configurations are set to persistent or non-persistent mode. Persistent is the default mode.
Requires user role: ADMIN, USER
Value space of the result returned:
NonPersistent/Persistent
Example:
xStatus Security Persistency Configurations
's Security Persistency Configurations: Persistent
** end

xStatus Security Persistency DHCP
Shows whether DHCP logging is set to persistent or non-persistent mode. Persistent is the default mode.
Requires user role: ADMIN, USER
Value space of the result returned:
NonPersistent/Persistent
Example:
xStatus Security Persistency DHCP
's Security Persistency DHCP: Persistent
** end

xStatus Security Persistency InternalLogging
Shows whether internal logging is set to persistent or non-persistent mode. Persistent is the default mode.
Requires user role: ADMIN, USER
Value space of the result returned:
NonPersistent/Persistent
Example:
xStatus Security Persistency InternalLogging
's Security Persistency InternalLogging: Persistent
** end
xStatus Security Persistency LocalPhonebook
Shows whether local phone book is set to persistent or non-persistent mode. Persistent is the default mode.

Requires user role: ADMIN, USER

Value space of the result returned:
NonPersistent/Persistent

Example:
```
xStatus Security Persistency LocalPhonebook
*s Security Persistency LocalPhonebook: Persistent
** end
```

SIP status

xStatus SIP AlternateURI Alias [n] URI

Requires user role: ADMIN, USER

Value space of the result returned:
String

Example:
```
xStatus SIP AlternateURI Alias
*s SIP AlternateURI Alias URI: ""
** end
```

xStatus SIP AlternateURI Primary [n] URI

Requires user role: ADMIN, USER

Value space of the result returned:
String

Example:
```
xStatus SIP AlternateURI Primary
*s SIP AlternateURI Primary URI: ""
** end
```

xStatus SIP Authentication

Shows which authentication mechanism is used when registering to the SIP Proxy Server. Digest: Uses the Digest access authentication method, as specified by RFC 2069. NTLM: Uses the NTLM authentication method, which is a Microsoft authentication protocol. Off: No authentication mechanism is used.

Requires user role: ADMIN, USER

Value space of the result returned:
Digest/Off

Example:
```
xStatus SIP Authentication
*s SIP Authentication: Off
** end
```
**xStatus SIP CallForward DisplayName**
Returns the URI that is displayed on the user interface for the forwarded call.

Requires user role: ADMIN, USER

**Value space of the result returned:** String

**Example:**
```csharp
xStatus SIP CallForward DisplayName
's SIP CallForward DisplayName: ""
** end
```

**xStatus SIP CallForward Mode**
Indicates whether the call forward mode for SIP is set to on or off.

Requires user role: ADMIN, USER

**Value space of the result returned:** On/Off

**Example:**
```csharp
xStatus SIP CallForward Mode
's SIP CallForward Mode: Off
** end
```

**xStatus SIP CallForward URI**
Indicates the address the incoming calls are directed to when call forward mode is set on.

Requires user role: ADMIN, USER

**Value space of the result returned:** String

**Example:**
```csharp
xStatus SIP CallForward URI
's SIP CallForward URI: ""
** end
```

**xStatus SIP Mailbox MessagesWaiting**
Indicates how many new messages are in the mailbox.

Requires user role: ADMIN, USER

**Value space of the result returned:** Integer

**Example:**
```csharp
xStatus SIP Mailbox MessagesWaiting
's SIP Mailbox MessagesWaiting: 0
** end
```

**xStatus SIP Mailbox URI**
Returns the URI for your SIP mailbox.

Requires user role: ADMIN, USER

**Value space of the result returned:** String

**Example:**
```csharp
xStatus SIP Mailbox URI
's SIP Mailbox URI: "12345678"
** end
```

**xStatus SIP Proxy [n] Address**
Shows the address of the SIP Proxy that the system communicates with.

Requires user role: ADMIN, USER

**Value space of the result returned:** String

**Example:**
```csharp
xStatus SIP Proxy 1 Address
's SIP Proxy 1 Address: "192.0.2.50"
** end
```
xStatus SIP Proxy [n] Status
Shows the status of the communication between the endpoint and the SIP Proxy server.
Active: The communication between the endpoint and the SIP Proxy is active.
DNSFailed: The attempt to establish communication to the DNS server failed.
Off: There is no communication between the endpoint and the SIP Proxy.
Timeout: The attempt to establish communication to the SIP Proxy timed out.
UnableTCP: The system is unable to use TCP as the transport method.
UnableTLS: The system is unable to use TLS as the transport method.
Unknown: The status of the communication is not known.
AuthenticationFailed: Wrong user name or password.
Requires user role: ADMIN, USER
Value space of the result returned:
Active/DNSFailed/Off/Timeout/UnableTCP/UnableTLS/Unknown/AuthenticationFailed
Example:
xStatus SIP Proxy 1 Status
*s SIP Proxy 1 Status: Active
** end

xStatus SIP Registration [n] Authentication
Shows which authentication mechanism is used when registering to the SIP Proxy Server.
Digest: Uses the Digest access authentication method, as specified by RFC 2069.
NTLM: Uses the NTLM authentication method, which is a Microsoft authentication protocol.
Off: No authentication mechanism is used.
Requires user role: ADMIN, USER
Value space of the result returned:
Digest/Off
Example:
xStatus SIP Registration 1 Authentication
*s SIP Registration 1 Authentication: Off
** end

xStatus SIP Registration [n] Reason
Shows a message to explain the reason why the SIP registration failed.
Requires user role: ADMIN, USER
Value space of the result returned:
String
Example:
xStatus SIP Registration 1 Reason
*s SIP Registration 1 Reason: "404 Not Found"
** end

xStatus SIP Registration [n] Status
Shows the status of the registration to the SIP Proxy Server.
Deregister: The system is in the process of de-registering to the SIP Proxy.
Failed: The system failed to register to the SIP Proxy.
Inactive: The system is not registered to any SIP Proxy.
Registered: The system is registered to the SIP Proxy.
Registering: The system is in the process of registering to the SIP Proxy.
Requires user role: ADMIN, USER
Value space of the result returned:
Deregister/Failed/Inactive/Registered/Registering
Example:
xStatus SIP Registration 1 Status
*s SIP Registration 1 Status: Registered
** end
xStatus SIP Registration [n] URI
Shows the URI used for registration to the SIP Proxy server.
Requires user role: ADMIN, USER
Value space of the result returned: String
Example:
  xStatus SIP Registration 1 URI
  *s SIP Registration 1 URI: "firstname.lastname@company.com"
  ** end

xStatus SIP Secure
Shows the encryption status of the signaling with the SIP Proxy server.
Requires user role: ADMIN, USER
Value space of the result returned: True/False
Example:
  xStatus SIP Secure
  *s SIP Secure: True
  ** end

xStatus SIP Verified
Shows whether or not the SSL certificate of the server that the video system / codec tries to register to is included in the codec's trusted CA-list. The server is typically a Cisco VCS or CUCM.
True: The server’s SIP certificate is checked against the trusted CA-list on the codec and found valid. Additionally, the fully qualified domain name of the server matches the valid certificate.
False: A TLS connection is not set up because the SIP certificate verification failed or the domain name did not match. Note that the status also returns False when TLS is not used (xConfiguration SIP DefaultTransport not set to TLS) or certificate verification is switched off (SIP TlsVerify: Off. This setting is accessible through your products web interface).
Requires user role: ADMIN, USER
Value space of the result returned: True/False
Example:
  xStatus SIP Verified
  *s SIP Verified: False
  ** end
Standby status

_xStatus Standby State_

Shows whether the system is in standby mode or not.

* **Standby**: The system is in standby state.
* **EnteringStandby**: The system is entering the standby state.
* **Halfwake**: The system is in standby, but greets the user when presence is detected by motion or the Proximity pairing app.
* **Off**: The system is not in standby.

Requires user role: ADMIN, INTEGRATOR, USER, ROOMCONTROL

_value space of the result returned:_
- Standby/EnteringStandby/Halfwake/Off

_example:_

```
*xStatus Standby State
*s Standby State: Off
** end
```

SystemUnit status

_xStatus SystemUnit Hardware Module CompatibilityLevel_

The Cisco TelePresence endpoints are using a NAND flash memory for general storage. The endpoints running TC software are manufactured with a new version of the flash memory. Endpoints having the new version of the flash memory must run software TC4.2.1 or later. Some previous TC software versions are updated to support the new flash memory. Please check the release note to find if the new version of the flash memory is supported. If your endpoint does not have the CompatibilityLevel command it does not have the new flash memory installed.

The result returned when running the command is either 0 or 1:

* **0**: The system does not have the new flash memory installed.
* **1**: The system has the new flash memory installed. If downgraded, it can only be downgraded to previous TC software versions having support for the new version of the flash memory.

Requires user role: ADMIN, USER

_value space of the result returned:_
- 1/0

_example:_

```
*xStatus SystemUnit Hardware Module CompatibilityLevel
*s SystemUnit Hardware Module CompatibilityLevel: 1
** end
```

_xStatus SystemUnit Hardware Module SerialNumber_

Shows the serial number of the hardware module in the codec.

Requires user role: ADMIN, USER

_value space of the result returned:_
- String

_example:_

```
xStatus SystemUnit Hardware MainBoard SerialNumber
*s SystemUnit Hardware MainBoard SerialNumber: "FOC99999999"
** end
```
xStatus SystemUnit Hardware Monitoring Fan [n] Status
The feedback shows the speed (rpm) for the specified fan.
Requires user role: ADMIN, USER
Value space of the result returned:
String
Example:
xStatus SystemUnit Hardware Monitoring Fan 1 Status
's SystemUnit Hardware Monitoring Fan 1 Status: "locked on 1096 rpm"
** end

xStatus SystemUnit Notifications Notification [n] Text
Lists text related to important system notifications. Notifications are issued e.g. when a system was rebooted because of a software upgrade, or when a factory reset has been performed.
All the notifications can be removed from the list by issuing the xCommand SystemUnit Notifications RemoveAll command.
Requires user role: ADMIN, USER
Value space of the result returned:
String
Example:
xStatus SystemUnit Notifications Notification 1 Text
's SystemUnit Notifications Notification 1 Text: "OK"
** end

xStatus SystemUnit Notifications Notification [n] Type
Lists the system notification types. Notifications are issued e.g. when a system is rebooted because of a software upgrade, or when a factory reset is performed.
FactoryResetOK: This value is returned after a successful factory reset.
FactoryResetFailed: This value is returned after a failed factory reset attempt.
SoftwareUpgradeOK: This value is returned after a successful software upgrade.
SoftwareUpgradeFailed: This value is returned after a failed software upgrade attempt.
RebootRequired: This value is returned when a reboot is required.
Other: This value is returned for any other notifications.
All the notifications can be removed from the list by issuing the xCommand SystemUnit Notifications RemoveAll command.
Requires user role: ADMIN, USER
Value space of the result returned:
FactoryResetOK, FactoryResetFailed, SoftwareUpgradeOK, SoftwareUpgradeFailed, RebootRequired, Other
Example:
xStatus SystemUnit Notifications Notification 1 Type
's SystemUnit Notifications Notification 1 Type: SoftwareUpgradeOK
** end

xStatus SystemUnit ProductId
Shows the product identity.
Requires user role: ADMIN, USER
Value space of the result returned:
String
Example:
xStatus SystemUnit ProductId
's SystemUnit ProductId: "Cisco TelePresence Codec SX80"
** end
xStatus SystemUnit ProductPlatform
Shows the product platform.
Requires user role: ADMIN, USER
Value space of the result returned:
String
Example:
```
xStatus SystemUnit ProductPlatform
  "SystemUnit ProductPlatform: "SX80"
** end
```

xStatus SystemUnit ProductType
Shows the product type.
Requires user role: ADMIN, USER
Value space of the result returned:
String
Example:
```
xStatus SystemUnit ProductType
  "SystemUnit ProductType: "Cisco Codec"
** end
```

xStatus SystemUnit Software DisplayName
Shows the name of the software that is installed on the codec, as it is displayed in the UI.
Requires user role: ADMIN, USER
Value space of the result returned:
String
Example:
```
xStatus SystemUnit Software DisplayName
  "SystemUnit Software DisplayName: "Display Name"
** end
```

xStatus SystemUnit Software Name
Shows the name of the software that is installed on the codec.
Requires user role: ADMIN, USER
Value space of the result returned:
String
Example:
```
xStatus SystemUnit Software Name
  "SystemUnit Software Name: "s53200"
** end
```

xStatus SystemUnit Software OptionKeys Encryption
Shows if the software on the system have support for encryption.
Requires user role: ADMIN, USER
Value space of the result returned:
False/True
Example:
```
xStatus SystemUnit Software OptionKeys Encryption
  "SystemUnit Software OptionKeys Encryption: "true"
** end
```

xStatus SystemUnit Software OptionKeys MultiSite
Shows if the system has the option key installed that supports the MultiSite functionality.
Requires user role: ADMIN, USER
Value space of the result returned:
False/True
Example:
```
xStatus SystemUnit Software OptionKeys MultiSite
  "SystemUnit Software OptionKeys MultiSite: "true"
** end
```
xStatus SystemUnit Software OptionKeys RemoteMonitoring
Shows whether the system has the remote monitoring option key installed. Remote monitoring option key enables snapshots from the web interface, and from a remote paired Touch 10.

Requires user role: ADMIN, USER

Value space of the result returned:
False/True

Example:
```plaintext
xStatus SystemUnit Software OptionKeys RemoteMonitoring
*s SystemUnit Software OptionKeys RemoteMonitoring: "true"
** end
```

xStatus SystemUnit Software ReleaseDate
Shows the release date of the software installed on the codec.

Requires user role: ADMIN, USER

Value space of the result returned:
String

Example:
```plaintext
xStatus SystemUnit Software ReleaseDate
*s SystemUnit Software ReleaseDate: "2015-05-05"
** end
```

xStatus SystemUnit Software Version
Shows the software version installed on the codec.

Requires user role: ADMIN, USER

Value space of the result returned:
String

Example:
```plaintext
xStatus SystemUnit Software Version
*s SystemUnit Software Version: "CE8.0.0"
** end
```
**xStatus SystemUnit Uptime**

Shows the number of seconds since the last restart of the codec.

Requires user role: ADMIN, USER

**Value space of the result returned:**

Integer

**Example:**

```
xStatus SystemUnit Uptime
*s SystemUnit Uptime: 597095
** end
```

---

**Time status**

**xStatus Time SystemTime**

Returns the date and time set on the system.

Requires user role: ADMIN, INTEGRATOR, USER

**Value space of the result returned:**

String

**Example:**

```
xStatus Time SystemTime
*s Time SystemTime: "2014-04-25T10:04:03Z"
** end
```
UserInterface status

xStatus UserInterface ContactInfo ContactMethod [n] Number
Returns the system's active contact information. This address is used to reach this endpoint.
Requires user role: ADMIN, USER
Value space of the result returned:
String
Example:
   xStatus UserInterface ContactInfo ContactMethod Number
   *s UserInterface ContactInfo ContactMethod 1 Number: "12345678"
   ** end

xStatus UserInterface ContactInfo Name
Returns the system's active contact name. The result depends on which protocol, if any, the system is registered on. The automatically set contact name may have been overridden with the command xConfiguration UserInterface ContactInfo Type. This results in a diagnostics warning about contact mismatch.
Requires user role: ADMIN, USER
Value space of the result returned:
String
Example:
   xStatus UserInterface ContactInfo Name
   *s UserInterface ContactInfo Name: "MySystem"
   ** end

xStatus UserInterface Extensions Widget [n] Value
Returns the value for a widget. Widgets are used in custom panels, for example in-room controls, that are added to the user interface. The value space depends on the widget type. The value is an empty string until a value is set with the UserInterface Extensions Widget SetValue command.
Requires user role: ADMIN, INTEGRATOR, USER, ROOMCONTROL
Value space of the result returned:
String
Video status

xStatus Video ActiveSpeaker PIPPosition
Shows the position of the active speaker’s image on the screen.
Requires user role: ADMIN, INTEGRATOR, USER

Value space of the result returned:
UpperLeft/UpperCenter/UpperRight/CenterLeft/CenterRight/LowerLeft/LowerRight

Example:
  xStatus Video ActiveSpeaker PIPPosition
  *s Video PIP ActiveSpeaker Position: UpperCenter
  ** end

xStatus Video Input Connector [n] Connected
Shows whether something is connected to the specified connector. Not all connections can be detected.
Requires user role: ADMIN, INTEGRATOR, USER

Value space of the result returned:
False/True/Unknown

Example:
  xStatus Video Input Connector 1 Connected
  *s Video Input Connector 1 Connected: True
  ** end

xStatus Video Input Connector [n] ConnectedDevice CEC [n] LogicalAddress
Shows the CEC logical address of the connected input device. The address is fixed at 0.
Requires user role: ADMIN, INTEGRATOR, USER

Value space of the result returned:
Integer

Example:
  xStatus Video Input Connector 1 ConnectedDevice CEC 1 LogicalAddress
  *s Video Input Connector 1 ConnectedDevice CEC 1 LogicalAddress: 0
  ** end

xStatus Video Input Connector [n] SignalState
Shows the signal state for the specified input.
Unknown: The signal format is unknown.
OK: A signal is detected and the signal format is supported.
Unsupported: A signal is detected, but the signal format is not supported.
Requires user role: ADMIN, INTEGRATOR, USER

Value space of the result returned:
OK/Unknown/Unsupported

Example:
  xStatus Video Input Connector 1 SignalState
  *s Video Input Connector 1 SignalState: OK
  ** end

xStatus Video Input Connector [n] SourceId
Shows the identifier of the input source that the connector is associated with.
Requires user role: ADMIN, INTEGRATOR, USER

Value space of the result returned:
Integer

Example:
  xStatus Video Input Connector 1 SourceId
  *s Video Input Connector 1 SourceId: 1
  ** end
xStatus Video Input Connector [n] Type
Shows which connector type it is.
Requires user role: ADMIN, INTEGRATOR, USER

Value space of the result returned:
Composite/DVI/HDMI/Unknown/YC

Example:
  xStatus Video Input Connector 1 Type
  *s Video Input Connector 1 Type: HDMI
  ** end

xStatus Video Input MainVideoSource
Returns the local video input currently used as the main source. The value Composed is returned if the main source is composed of more than one local input. The default main video source is set with the xConfiguration Video DefaultMainSource command. It can be changed using xCommand Video Input SetMainVideoSource.

Requires user role: ADMIN, USER

Value space of the result returned:
Literal (1 / 2 / 3 / 4 / Composed)

Example:
  xStatus Video Input MainVideoSource
  *s Video Input MainVideoSource: 1
  ** end

xStatus Video Input Source [n] ConnectorId
Shows the identifier of the connector that is associated with the input source.
Requires user role: ADMIN, INTEGRATOR, USER

Value space of the result returned:
Integer

Example:
  xStatus Video Input Source 1 ConnectorId
  *s Video Input Source 1 ConnectorId: 1
  ** end

xStatus Video Input Source [n] FormatStatus
Shows the resolution format status for the video input source.
Requires user role: ADMIN, INTEGRATOR, USER

Value space of the result returned:
Ok/OutOfRange/NotFound/Interlaced/Error/Unknown

Example:
  xStatus Video Input Source 1 FormatStatus
  *s Video Input Source 1 Resolution FormatStatus: Ok
  ** end

xStatus Video Input Source [n] FormatType
Shows the resolution format type for the video input source.
Requires user role: ADMIN, INTEGRATOR, USER

Value space of the result returned:
Unknown/AnalogCVTBlanking/AnalogCVTReducedBlanking/AnalogGTFDefault/AnalogGTFSecondary/AnalogDiscreteTiming/AnalogDMTBlanking/AnalogCEABlanking/Digital

Example:
  xStatus Video Input Source 1 FormatType
  *s Video Input Source 1 Resolution FormatType: Digital
  ** end

xStatus Video Input Source [n] MediaChannelId
For internal use only.
Requires user role: ADMIN, USER

Value space of the result returned:
Integer

Example:
  xStatus Video Input Source MediaChannelId
  *s Video Input Source 1 MediaChannelId: 2
  *s Video Input Source 2 MediaChannelId: 3
  ** end
xStatus Video Input Source [n] Resolution Height
Shows the resolution height (in pixels) for the video input source.
Requires user role: ADMIN, INTEGRATOR, USER

**Value space of the result returned:**
0..3000

**Example:**
  xStatus Video Input Source 1 Resolution Height
  *s Video Input Source 1 Resolution Height: 1080
  ** end

xStatus Video Input Source [n] Resolution RefreshRate
Shows the resolution refresh rate (Hz) for the video input source.
Requires user role: ADMIN, INTEGRATOR, USER

**Value space of the result returned:**
0..300

**Example:**
  xStatus Video Input Source 1 Resolution RefreshRate
  *s Video Input Source 1 Resolution RefreshRate: 50
  ** end

xStatus Video Input Source [n] Resolution Width
Shows the resolution width (in pixels) for the video input source.
Requires user role: ADMIN, INTEGRATOR, USER

**Value space of the result returned:**
0..4000

**Example:**
  xStatus Video Input Source 1 Resolution Width
  *s Video Input Source 1 Resolution Width: 1920
  ** end

xStatus Video Layout LayoutFamily Local
Shows the local screen layout family.
Requires user role: ADMIN, USER

**Value space of the result returned:**
String

**Example:**
  xStatus Video Layout LayoutFamily Local
  *s Video Layout LayoutFamily Local: "equal"
  ** end

xStatus Video Layout LayoutFamily Remote
Shows the remote screen layout family.
Requires user role: ADMIN, USER

**Value space of the result returned:**
String

**Example:**
  xStatus Video Layout LayoutFamily Remote
  *s Video Layout LayoutFamily Remote: "equal"
  ** end
xStatus Video Monitors
Returns the monitor layout mode.
Single: The same layout is shown on all monitors.
Dual: The layout is distributed on two monitors.
DualPresentationOnly: All participants in the call will be shown on the first monitor, while the presentation (if any) will be shown on the second monitor.
Quadruple: The layout is distributed on four monitors, so that each remote participant and the presentation will be shown on separate monitors.
Requires user role: ADMIN, USER
Value space of the result returned:
Single/Dual/DualPresentationOnly/Triple/TriplePresentationOnly/Quadruple
Example:
xStatus Video Monitors
*s Video Monitors: Single
** end

xStatus Video Output Connector [n] Connected
Describes whether a device (for example a display) is connected to the output connector or not.
When a display enters standby mode, the endpoint may not be able to detect it. The connector status will then return False/Unknown even if the display is physically connected.
True: A device is connected to the video output connector.
False: Nothing is connected to the video output connector.
Requires user role: ADMIN, INTEGRATOR, USER
Value space of the result returned:
True/False
Example:
xStatus Video Output Connector 1 Connected
*s Video Output Connector 1 Connected: True
** end

xStatus Video Output Connector [n] ConnectedDevice CEC DeviceType
Shows the type of CEC enabled device connected to the HDMI output the codec has detected.
This information is only available when the device connected to the HDMI output has the CEC feature configured on and the codec has the configuration xConfiguration Video Output Connector [n] CEC Mode set to on.
Requires user role: ADMIN, INTEGRATOR, USER
Value space of the result returned:
Unknown/TV/Reserved/Recorder/Tuner/Playback/Audio
Example:
xStatus Video Output Connector 1 ConnectedDevice CEC DeviceType
*s Video Output Connector 1 ConnectedDevice CEC DeviceType: TV
** end

xStatus Video Output Connector [n] ConnectedDevice CEC [n] LogicalAddress
Shows the CEC logical address of the device.
Requires user role: ADMIN, INTEGRATOR, USER
Value space of the result returned:
Integer (0..15)
Example:
xStatus Video Output Connector 1 ConnectedDevice CEC 1 LogicalAddress
*s Video Output Connector 1 ConnectedDevice CEC 1 LogicalAddress: 4
** end

xStatus Video Output Connector [n] ConnectedDevice CEC Name
Returns the name of the connected device.
Requires user role: ADMIN, INTEGRATOR, USER
Value space of the result returned:
String
Example:
xStatus Video Output Connector 1 ConnectedDevice CEC 1 Name
*s Video Output Connector 1 ConnectedDevice CEC 1 Name: "LG SIGNAGE TV"
** end
xStatus Video Output Connector [n] ConnectedDevice CEC PowerControl
Shows whether the codec is controlling the CEC enabled device connected to the HDMI output. This information is only available when the device connected to the HDMI output has the CEC feature configured on and the codec has the configuration xConfiguration Video Output Connector CEC PowerControl set to on.
Requires user role: ADMIN, INTEGRATOR, USER

Value space of the result returned:
Unknown/Ok/In progress/Failed to power on/Failed to standby

Example:
xStatus Video Output Connector 1 ConnectedDevice CEC PowerControl
*s Video Output Connector 1 ConnectedDevice CEC PowerControl: Ok
** end

xStatus Video Output Connector [n] ConnectedDevice CEC PowerStatus
Shows the state of the CEC enabled device connected to the HDMI output. This information is only available when the device connected to the HDMI output has the CEC feature configured on and the codec has the configuration xConfiguration Video Output Connector CEC Mode set to on.
Requires user role: ADMIN, INTEGRATOR, USER

Value space of the result returned:
Unknown/Ok/In progress/Failed to power on/Failed to standby

Example:
xStatus Video Output Connector 1 ConnectedDevice CEC PowerStatus
*s Video Output Connector 1 ConnectedDevice CEC PowerStatus: Ok
** end

xStatus Video Output Connector [n] ConnectedDevice CEC VendorId
Returns the vendor ID for the connected device.
Requires user role: ADMIN, INTEGRATOR, USER

Value space of the result returned:
String

Example:
xStatus Video Output Connector 1 ConnectedDevice CEC VendorId
*s Video Output Connector 1 ConnectedDevice CEC 1 VendorId: "57489"
** end

xStatus Video Output Connector [n] ConnectedDevice Name
Shows the name of the monitor connected to the HDMI port as defined in the monitors EDID.
Requires user role: ADMIN, INTEGRATOR, USER

Value space of the result returned:
String

Example:
xStatus Video Output Connector 1 ConnectedDevice Name
*s Video Output Connector 1 ConnectedDevice Name: "G2420HDBX"
** end

xStatus Video Output Connector [n] ConnectedDevice PreferredFormat
Shows the preferred input format of the monitor connected to the HDMI port as defined in the monitors EDID. This is not necessarily the format the codec is sending out.
Requires user role: ADMIN, INTEGRATOR, USER

Value space of the result returned:
String

Example:
xStatus Video Output Connector 1 ConnectedDevice PreferredFormat
*s Video Output Connector 1 ConnectedDevice PreferredFormat: "1920x1080@60Hz"
** end
xStatus Video Output Connector [n] ConnectedDevice ScreenSize
Shows the screen size of the connected device in inches. If this information is not available, the default value is set to 0.
Requires user role: ADMIN, USER
Value space of the result returned:
Integer
Example:
xStatus Video Output Connector 1 ConnectedDevice ScreenSize
  *s Video Output Connector 1 ConnectedDevice ScreenSize: 55
  ** end

xStatus Video Output Connector [n] MonitorRole
Describes which video stream is shown on the device that is connected to the video output connector.
First/Second/Third: The role of the monitor in a multimonitor setup. In a singlemonitor setup, there is no difference between First, Second and Third.
PresentationOnly: Shows presentation video stream if active.
Recorder: Shows all participants, including the local main video. If active, shows also the presentation.
Requires user role: ADMIN, USER
Value space of the result returned:
First/Second/Third/PresentationOnly/Recorder
Example:
xStatus Video Output Connector 1 MonitorRole
  *s Video Output Connector 1 MonitorRole: First
  ** end

xStatus Video Output Connector [n] Resolution Height
Shows the resolution height (in pixels) for the video output connector.
Requires user role: ADMIN, USER
Value space of the result returned:
120..3000
Example:
xStatus Video Output Connector 1 Resolution Height
  *s Video Output Connector 1 Resolution Height: 1080
  ** end

xStatus Video Output Connector [n] Resolution RefreshRate
Shows the resolution refresh rate (Hz) for the video output connector.
Requires user role: ADMIN, USER
Value space of the result returned:
1..300
Example:
xStatus Video Output Connector 1 Resolution RefreshRate
  *s Video Output Connector 1 Resolution RefreshRate: 60
  ** end

xStatus Video Output Connector [n] Resolution Width
Shows the resolution width (in pixels) for the video output connector.
Requires user role: ADMIN, USER
Value space of the result returned:
176..4000
Example:
xStatus Video Output Connector 1 Resolution Width
  *s Video Output Connector 1 Resolution Width: 1920
  ** end
xStatus Video Output Connector [n] Type
Shows the type of connector.
HDMI: It is an HDMI connector.
DVI: It is a DVI connector.
Requires user role: ADMIN, USER
Value space of the result returned:
HDMI/DVI
Example:
xStatus Video Output Connector 1 Type
  *s Video Output Connector 1 Type: HDMI
** end

xStatus Video Output Monitor [n] Backlight
Returns the monitors backlight level, that has been set with xCommand Video Output Monitor[n] Backlight.
Requires user role: ADMIN, USER
Value space of the result returned:
Integer
Example:
xStatus Video Output Monitor 1 Backlight
  *s Video Output Monitor 1 Backlight: 80
** end

xStatus Video Output Monitor [n] ColorTemperature Selected
Returns the monitors color temperature, that has been set with xCommand Video Output Monitor Color Select.
Requires user role: ADMIN, USER
Value space of the result returned:
4900/5500/6500/7200/9300/10500/12000/User
Example:
xStatus Video Output Monitor 1 ColorTemperature Selected
  *s Video Output Monitor 1 ColorTemperature Selected: 6500
** end

xStatus Video Output Monitor [n] Position
Shows whether the monitor is positioned on the left or the right. Applicable for dual screen systems only.
Requires user role: ADMIN, USER
Value space of the result returned:
Left/Right
Example:
xStatus Video Output Monitor 1 Position
  *s Video Output Monitor 1 Position: Left
** end

xStatus Video Presentation PIPPosition
Shows the position of the presentation image on the screen.
Requires user role: ADMIN, USER
Value space of the result returned:
UpperLeft/UpperCenter/UpperRight/CenterLeft/CenterRight/LowerLeft/LowerRight
Example:
xStatus Video Presentation PIPPosition
  *s Video PIP Presentation Position: CenterLeft
** end

xStatus Video Selfview FullscreenMode
Shows whether selfview is set on full screen mode or not.
Requires user role: ADMIN, INTEGRATOR, USER
Value space of the result returned:
On/Off
Example:
xStatus Video Selfview FullscreenMode
  *s Video Selfview FullscreenMode: Off
** end
xStatus Video Selfview Mode
Shows whether selfview mode is set on or not.
Requires user role: ADMIN, INTEGRATOR, USER

Value space of the result returned:
On/Off

Example:
xStatus Video Selfview Mode
  *s Video Selfview Mode: Off
  ** end

xStatus Video Selfview OnMonitorRole
Identifies which monitor(s) contains the selfview, if present.
Requires user role: ADMIN, INTEGRATOR, USER

Value space of the result returned:
First/Second/Third/Fourth

Example:
xStatus Video Selfview OnMonitorRole
  *s Video Selfview OnMonitorRole: First
  ** end

xStatus Video Selfview PIPPosition
Shows the position of the selfview image on the screen.
Requires user role: ADMIN, INTEGRATOR, USER

Value space of the result returned:
UpperLeft/UpperCenter/UpperRight/CenterLeft/CenterRight/LowerLeft/LowerRight

Example:
xStatus Video Selfview PIPPosition
  *s Video Selfview PIPPosition: LowerRight
  ** end
Chapter 6

Appendices
About startup scripts

You can add one or more startup scripts to the codec. A startup script contains commands (xCommand) and configurations (xConfiguration) that will be executed as part of the start up procedure every time the codec boots. A few commands and configurations cannot be placed in a startup script, e.g. xCommand SystemUnit Boot.

Use the codec’s web interface to create and manage startup scripts.

Read more about the web interface and startup scripts in the Administrator guide for your product.
The SystemTools commands

NOTE: The systemtools commands are used for administrative control of the codec and are only available from a command line interface. Systemtools should not be used to program the codec.

Required parameters in angle brackets: <text>
Optional parameters in square brackets: [text]

To get an overview of the supported commands type “systemtools ?”.

Example:

- systemtools ?
- rootsettings
- selectsw
- whoami
- license
- network
- ntp
- passwd
- pki
- securitysettings
- securitystatus
- sudo
- idefixversion

To see the usage of the commands add a question mark after the command.

Example:

- systemtools network ?
  usage: network ping <hostname> | traceroute <hostname> | netstat | addr | ifconfig | ifstats <ifname>

- systemtools idefixversion
  Returns the software version of a Touch controller that is connected to the codec.

- systemtools license list
  Lists all the licenses for the codec.

- systemtools license show <name>
  Shows the content of a license file, defined by the name.
  <name>: The name of the license file.

- systemtools network ping <hostname>
  Network debug command.
  <hostname>: The IP address or URL of the host.

- systemtools network traceroute <hostname>
  Network debug command.
  <hostname>: The IP address or URL of the host.

- systemtools network netstat
  Network debug command.

- systemtools network addrs
  Check the systems IP address.

- systemtools network ifconfig
  Network debug command.

- systemtools passwd
  Change the password for the logged in user.

- systemtools pki list
  Lists the codec certificate and CA list if they exist.

- systemtools pki delete <cert-name>
  Delete the codec certificate and CA list if they exist.
  <cert-name>: The name of the certificate.

- systemtools securitysettings jitc
  Set up security requirements so they meet JITC.
  Set password and PIN polices enforced on the codec.

- systemtools securitysettings isjitc
  Check if the current settings are JTIC compliant.

- systemtools securitysettings default
  Revert to default security settings.

- systemtools securitysettings ask
  Query for the separate configurations. When issuing this command you can see each policy separately.
  - Press enter to keep the current value.
  - Enter a number and press enter to change the given policy.
    - The default value “0” indicates no restrictions.
    - Max failed login attempts [0]?
      - Number of failed logins until a user is set inactive.
    - Suspend-time after max failed login attempts (minutes) [0]?
      - Number of minutes the user is set inactive after maximum failed login attempts have been exceeded.
    - Max simultaneous sessions total [0]?
      - Maximum number of users that can be logged in simultaneous to web and maximum number of users that can be logged in simultaneous to ssh/Telnet.
    - Max simultaneous sessions per user [0]?
      - Maximum number of simultaneous sessions per user.
    - Number of passwords to remember [0]?
      - Number of previous passwords that the new password
must differ from.

Number of PINs to remember [0]?
  • Number of previous PINs that the new PIN must differ from.

Maximum time between password renewals (days) [0]?
  • If the user has not changed the password within the renewal time the user will be set inactive.

Minimum time between password renewals (hours) [0]?
  • The user can only change password once within this limit.

Maximum time between PIN renewals (days) [0]?
  • If the user has not changed the PIN within the renewal time the user will be set inactive.

Minimum time between PIN renewals (hours) [0]?
  • The user can only change PIN once within this limit.

Maximum time between logins (days) [0]?
  • If the user has not logged in within this limit the user will be set inactive.

Max consecutive equal digits in PINs [0]?
  • Maximum consecutive equal digits in PINs.

Minimum number of digits in PINs [0]?
  • Minimum number of digits in PINs.

Maximum number of digits in PINs [0]?
  • Maximum number of digits in PINs.

Min consecutive identical characters in passwords [0]?
  • Maximum consecutive identical characters in passwords.

Minimum number of characters in passwords [0]?
  • Minimum number of characters in passwords.

Maximum number of characters in passwords [0]?
  • Maximum number of characters in passwords.

Minimum number of lower-case letters in passwords [0]?
  • Minimum number of lower-case letters in passwords.

Minimum number of upper-case letters in passwords [0]?
  • Minimum number of upper-case letters in passwords.

Minimum number of numerical characters in passwords [0]?
  • Minimum number of numerical characters in passwords.

Minimum number of special characters in passwords [0]?
  • Minimum number of special characters in passwords.

Minimum number of character groups in passwords [0]?
  • Minimum number of character groups in passwords.

Minimum number of character changed from previous password [0]?
  • Minimum number of character changed from previous password.

**systemtools securitystatus**

Shows the security status for the codec.

**systemtools selectsw**

Select which of the available software images to use. Changing the software image will restart the codec.

No argument given: Lists the version of the available software images, and shows which one is active.

*image name:* Swap to the software with this name.

**systemtools sudo on**

Changes the user role of the current session to the role of the specified user

<username>: The name of the sudo user.

$password>: The password for the sudo user.

**systemtools sudo off**

Reverts back to the user role of the signed in user.

**systemtools whoami**

Lists the name and id of the signed in user, and the user roles held by this user.
About disconnect cause types
The following parameters are logged when a call is disconnected. The disconnect cause types are used in disconnect events (xEvent).

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>CauseValue</td>
<td>Proprietary. We recommend the use of CauseType and CauseCode.</td>
</tr>
<tr>
<td>CauseType</td>
<td>Describes why the call was disconnected. The value space is { OtherLocal, LocalDisconnect, UnknownRemoteSite, LocalBusy, LocalReject, InsufficientSecurity, OtherRemote, RemoteDisconnect, RemoteBusy, RemoteRejected, RemoteNoAnswer, CallForwarded, NetworkRejected }</td>
</tr>
<tr>
<td>CauseString</td>
<td>Describes the Cause Code.</td>
</tr>
<tr>
<td>CauseCode</td>
<td>The disconnect Cause Codes are defined in SIP and Q.850.</td>
</tr>
<tr>
<td>CauseOrigin</td>
<td>SIP, Q.850, internal.</td>
</tr>
</tbody>
</table>

Example:
```plaintext
xEvent DisconnectEvent

*e CallDisconnect CauseValue: 1
  CauseType: "LocalDisconnect"
  CauseString: ""
  OrigCallDirection: "outgoing"
  RemoteURI: "firstname.lastname@company.com"
  CallId: 89
  CauseCode: 0
  CauseOrigin: SIP
** end
```
User documentation on the Cisco web site

User documentation for the Cisco Collaboration Endpoint products is available at [http://www.cisco.com/go/telepresence/docs](http://www.cisco.com/go/telepresence/docs)

Choose a product category in the right pane until you find the correct product. This is the path you have to follow:

Collaboration Endpoints > Collaboration Room Endpoints > Cisco Spark Room Series

Alternatively, use the following short-link to find the documentation:

The documents are organized in the following categories:

**Install and Upgrade > Install and Upgrade Guides**
- Installation guides: How to install the product
- Getting started guide: Initial configurations required to get the system up and running
- RCSI guide: Regulatory compliance and safety information

**Maintain and Operate > Maintain and Operate Guides**
- Getting started guide: Initial configurations required to get the system up and running
- Administrator guide: Information required to administer your product
- Administering CE Endpoints on CUCM: Tasks to perform to start using the product with the Cisco Unified Communications Manager (CUCM)

**Maintain and Operate > End-User Guides**
- User guides: How to use the product
- Quick reference guides: How to use the product

**Reference Guides | Command references**
- API reference guides: Reference guide for the Application Programmer Interface (API)

**Reference Guides | Technical References**
- CAD drawings: 2D CAD drawings with measurements

**Design > Design Guides**
- Video conferencing room guidelines: General guidelines for room design and best practice
- Video conferencing room guidelines: Things to do to improve the perceived audio quality

**Software Downloads, Release and General Information > Licensing Information**
- Open source documentation: Licenses and notices for open source software used in this product

**Software Downloads, Release and General Information > Release Notes**
- Software release notes
