Introduction to Video Conferencing
Introduction to Video Conferencing

Best Practice

A successful video conference provides a face-to-face meeting, even if the participants are miles or continents apart. Keep in mind that it still is a meeting—normal etiquette and dress code apply even here.

In the Meeting Room

- Make sure the microphone is placed at the front of the table to ensure that all speech will be detected. The best position is at least 2 m (6.5') in front of the system, on a flat surface with at least 0.3 m (1') of table in front.
- Directive microphones should point away from the video system.
- Make sure that no obstacles block the view to the microphone at all times.
- Microphones should always be placed away from noise sources like computer and projector fans placed on the table. The noise from such sources is often perceived as surprisingly loud by the remote participants.

Other Tips

- To help ensure the most natural meeting environment, position the camera on the top center of the receiving monitor, if possible. The camera should point directly at the meeting participants to guarantee eye contact with those at the far end. Check this out by means of the Selfview feature of your video system. The Selfview shows what the remote party can see from your system (the outgoing video).
- If you are going to share content you will normally make use of duo video. That implies the use of two video streams, one showing the presentation and the other showing the presenter—or the group of presenters. Smaller systems may force you to choose between watching the presentation or the presenter.
- Use Camera Presets
Cisco TelePresence systems let you create predefined zoom and camera pointing directions (pan and tilt). Use these to zoom into the person speaking, if appropriate. Do not forget to zoom out again afterwards. For systems with camera tracking this will not be needed.

Loudspeaker Volume

The audio system will use the loudspeakers built into the monitor or the Cisco Digital Natural Audio Module.

For some systems you can set the default volume level by adjusting the volume on the monitor with the monitor remote.

Brightness Control

To adjust brightness, colors or other settings of the monitor, use the monitor’s own remote control. Adjust the monitor to suit the conditions of the conference room. The monitors supplied by Cisco have on-screen menus that are very easy to use. For more information on configuring the monitor as such, see the corresponding user guides and administration manuals.
Introduction

Logging On With Your Own Credentials

Video systems located in meeting rooms and quiet rooms and running under CUCM (Cisco Unified Communications Manager) may allow you to log in to the video system with your own personal credentials.

CUCM will then route all incoming calls destined for you to that specific video system.

Once you log out from Extension Mobility your list of Recents will be cleared from the system.

Extension Mobility is also referred to as Hot-desking.

About Extension Mobility

1. Tap the Extension Mobility enabled systems have an extra button to let you sign in to the system with your own credentials.

2. Tap the Extension Mobility button.

3. Key in Username and PIN code.

4. Tap Login, as shown.

5. Tap Sign out when leaving.
Video Calls
Your lists of Contacts consist of three parts:

**Favorites.** These contacts have been put there by you. These entries will typically be someone you call frequently or otherwise need to access in a swift and convenient manner from time to time.

**Directory** will typically be a corporate directory installed on your system by your video support team.

**Recents** is a list of calls you have placed, received or missed earlier.

The following options apply:

- You may key in a name, number or an IP address and the system will look in all lists for you.
- You may add the entry to the list of **Favorites**; edit aspects of the entry before calling; change the call rate and remove the entry from **Recents**.

When you have located whom to call, tap the name and then tap the green **Call** button.
Video Calls
Edit a Contact Before Calling

1. Tap the Call button.

2. Tap the Search or Dial field or scroll through any of the lists, as shown on the previous page.

3. Once you have located the entry, tap it to show the Call menu. In the Call menu, tap Edit and call, as shown.

4. Edit as required, and tap the green Call button to place the call.

About Entry Edits

For how to enter the Contacts list, see the previous page.

You may have to edit an entry in one of the Contact lists before you place the call. There may be a need to add a prefix, a suffix or otherwise alter the entry to ensure success.
You may call someone who is not listed in your list of contacts by keying in their name, address or number using the virtual keyboard of the Touch pad.

Anyone you have previously called or who has called you, will appear in the Recents list and you may transfer any of them to your list of Favorites. This is described in the section Contacts.

Sometimes you may be urged to enter numbers during a call, typically to reach extensions or to provide a pin code.

Tap Touch Tones (this button appears as soon as the call is placed) to invoke the keypad needed for this.

Note that Recents can be cleared from the web interface only.
Video Calls

Receive Calls—When not In a Call Already

If Someone Calls You

- If someone calls you, you may accept, decline or ignore the call.
- If you decline the call, busy information will be sent to the calling party.
- If you ignore the call, the calling party will perceive this as if you were absent (you did not pick up the call).
- Your video infrastructure may allow you to receive multiple incoming calls. Consult your video support team, if needed.

An incoming call may be answered or declined.

If your system allows you to receive multiple incoming calls, you may elect to add all or decline all.
Video Calls

Receive Calls While in Another Call

If Someone Calls You

If you already are in a call, you may accept another incoming call under certain circumstances.
Video Calls

Disconnect Yourself From Call

To disconnect yourself from a call, tap **End**.

**About Disconnecting Yourself**

Tapping **End** in a call will disconnect yourself from a call. In a call with two parties only, this will then terminate the call.

In a conference call with multiple participants tapping **End** will terminate your participation only if you are a regular participant.

However, if you are the host of such a conference, tapping **End** will, for some types of conferences, cause the entire conference to terminate.
Putting someone on hold is typically something you do as an initial step when transferring someone to another person, but it may also be used when you need to consult a person, or as an alternative to muting where you will also include stopping the video transmission.

**Video Calls**

**Put Call on Hold and Resume a Call on Hold**

1. Assume that you are in a call. Tap **Hold**.

2. Tap **Resume** to go back to the one you were in call with (to undo your action).
Video Calls

Transfer an Ongoing Call

1. Tap the **Transfer** button. This will cause the current call to be put on hold.

2. Search for whom to call in the usual way.

3. Tap the green **Call** button. Talk to the person to confirm that transfer is OK. The person to be transferred is still on hold.

4. Tap **Complete Transfer**.

About Transfer

You may transfer an ongoing call to another person. Transfer is always consultative, i.e., you will be able to talk to the person you are going to transfer a call to, before you actually transfer the call.
Your system can be set to not respond to incoming calls. You may, however, use it to call others as much as you want.

Your video support team may have set a time-out on this feature, after which the system will return to respond to incoming calls as usual. Default time-out setting is 60 minutes.

About Do Not Disturb

1

Video Calls

Activate Do Not Disturb

Tap in the upper left corner, as shown.

2

Tap Do not disturb, as indicated. To deactivate the feature, repeat the procedure.
Video Calls

Automated Forwarding of All Calls

1. Tap in the upper left corner, as shown.

2. You may now choose to forward all calls to either a receiver specified by you, or to your voicemail.

About Forwarding Calls

Your video support team may have activated the option of forwarding all calls received. You may then choose between voicemail and a receiver appointed by you.

If you tap **Forward all calls**, the familiar **Call** menu will appear letting you specify whom to receive your calls.
In a call, tap **Keypad** to invoke the dial pad.

**Using Keypad in a Call**

In a call you may get prompted to submit numbers to be able to reach an extension or otherwise gain entrance to something (for example by means of a PIN-code).

To be able to submit this you will need to invoke the keypad on the touch screen.
Video Calls

Add Additional Participants to Existing Call

1. Assume that you already are in a call. This call may have been initiated by you or by someone else (someone called you). Tap Add.

2. Locate whom to call, in the usual way.

3. Place the call, in the usual way.

4. This new call will now be added to the existing and you have now established a conference.

About Video Conferences

Your video system network may be equipped with the capability to initiate a video conference with several participants.

The maximum number of participants supported by your video system will depend on system configuration and the video infrastructure. If in doubt, contact your video support team.

If you want to initiate a video conference, you must call each participant one by one.

Assume that you already are in a call. This call may have been initiated by you or by someone else (someone called you). Tap Add.

Locate whom to call, in the usual way.

Place the call, in the usual way.

This new call will now be added to the existing and you have now established a conference.

You may repeat this procedure to the extent permitted by your video infrastructure to add more participants.
The ability to conduct a video conference from your video system is an optional feature that may, or may not, be available for your system.

Note that you must be the host of the conference to be able to disconnect others from a conference.

**Video Calls**

**Disconnect a Participant From a Conference**

1. In a call, tap the Participants icon in the upper right corner, as shown, to invoke the list of participants.

2. Tap the one you want to disconnect from the conference.

3. Tap Drop.
Intelligent Proximity
Using Intelligent Proximity

The Intelligent Proximity feature allows you to share content from a video system wirelessly on your own device (smart phone, iPad, Android tablet, PC or Mac).

You can also use your own device (smart phones and tablets only) to control calls on the video system.

Observe the following:
You will need to download (free of charge) the Cisco Intelligent Proximity app from App Store or Google Play.

Windows or OS X users, go to https://proximity.cisco.com/.

Your video support team may have activated none of the features, all of them, or just a subset of them.

Intelligent Proximity makes use of ultrasound when connecting users. Do not block the microphone of your computer, smart phone or tablet.

Intelligent Proximity has been designed not to work outside the meeting room when doors to the room are kept closed. You will need to be in close proximity of the video endpoint to use the feature.

When privacy dictates, always keep the meeting room entrance doors closed to avoid possible eavesdropping from adjacent rooms.

About Proximity
Content Sharing
Content Sharing

Sharing Content In a Call

1. Connect the source to the video system with a suitable cable, make sure it has been switched on and tap Share.

2. Tap Local preview to view the content to be shared on your own video system only. This will not be shared with the remote participants.
   Tap the X in the upper right corner, as shown, to return to the previous display.

3. To discontinue the preview, tap Stop preview.
   To share content with the remote participants, tap Share in call.

4. To discontinue sharing content with the remote participants, tap Stop sharing.

About Content Sharing

Your video system supports the ability to show presentations in a video call.

If your source device has been Intelligent Proximity enabled, just switch on Proximity on your device, let your device pair with the video system and you will be able to share content wirelessly.

Observe that you may change the layout of the screen during presentations, see the following pages for more on this.

Note! Your system may have been configured to let one of the video input connectors of your video system share HDCP protected content, thus allowing you to watch video through Google ChromeCast, AppleTV or a HD TV decoder etc.

This feature is available outside calls only.

If you attempt to share content through this specific video connector while in a call, no content sharing will take place. Instead, the part of the screen normally allocated to content sharing will turn black in order to maintain the HDCP regime.

This will apply to any content you attempt to share in a call via this input connector—be it HDCP protected or not.
Content Sharing

Sharing Content Outside Calls

1. Connect the source device to the video system with a suitable cable, make sure it has been switched on and tap **Share**.

2. Tap **Share** to show the content on your video system’s screen(s).
   - Tap the X in the upper right corner, as shown, to return to the previous display.

3. Tap **Stop sharing** to end the session.

Local Content Sharing

You may also use your video system in local meetings to present and share content outside calls.

If your source device has been Intelligent Proximity enabled, just switch on Proximity on your device, let your device pair with the video system and you will be able to share content right away.

**Note!** Your system may have been configured to let one of the video input connectors of your video system share HDCP protected content, thus allowing you to watch video through Google ChromeCast, AppleTV or a HD TV decoder etc.

See also the previous page for more on this.
You may change the layout of the screen during presentations. Typical options available will be with or without showing the presenter and showing the presenter as either a PIP (Picture in Picture) or PoP (Picture outside Picture). The layout options available on your system may differ from those shown here, but the layouts shown are always those you may choose between.

1. Tap the Layout icon, as shown.

2. Tap the layout you want to use. Tap anywhere outside the filmstrip when you’re done.
Scheduled Meetings
Scheduled Meetings

Join a Scheduled Meeting

When time is due, you will be prompted to join the meeting. Tap Join.

Joining a Meeting

Your video system may be connected to a management system capable of scheduling video meetings. Any meetings scheduled will then appear as shown at left.

Tap Join to participate in the meeting.

Should the meeting have started already, you may still join.
Contacts

Favorites, Recents and Directory

About the Contacts Lists

Your lists of Contacts consist of three parts:

**Favorites.** These contacts have been put there by you. These entries will typically be someone you call frequently or otherwise need to access in a swift and convenient manner from time to time.

**Directory** will typically be a corporate directory installed on your system by your video support team.

**Recents** is a list of calls you have placed, received or missed earlier.

Note that removing entries from Recents can only be done from the web interface.
Contacts

Add Someone to Favorites, While in a Call

1. In a call, tap the Participants icon in the upper right corner, as shown, to invoke the list of participants.

2. In the list of participants tap the one to become a Favorite.

3. Tap Favorite.

4. The participant is now a member of the list of Favorites (the star has turned golden).

   To remove an entry from the list of Favorites, go to Favorites in the Contact lists and repeat the procedure.
   Tap anywhere outside the menu when you’re done.

About Favorites

The Favorites is your own shortlist of contacts you frequently call or otherwise want to have easy access to.

Favorites may be populated from the Recents or Directory lists as well as from manual entries.
Add Someone to Favorites, Outside a Call

1. Tap **Call** (not shown) to invoke the Contacts list, as shown. Tap **Recents** or **Directory** and search for the entry to become a Favorite.

2. Tap the entry to be turned into a Favorite. This will cause the above screen to be shown.

3. Tap **Add to Favorites**. The entry has now become a Favorite.

4. A Favorite is denoted by a golden star, as indicated. To remove an entry from the list of Favorites, repeat the procedure. To exit this menu, tap the X, as shown.

About this feature

The Favorites is your own shortlist of contacts you frequently call or otherwise want to have easy access to. Favorites may be populated from the Recents or Directory lists as well as from manual entries.
View Camera Settings

1. Tap Camera to invoke the camera adjustment menu.

Any camera presets defined will be listed here.

Pan and tilt controls.

Turn Selfview On and Off.

Turn Speaker tracking On and Off.

Maximize/minimize Selfview.

Zoom in and out.

About Camera Control

The camera settings let you control the zoom, pan and tilt of the camera as well as define and edit camera position presets.

In addition, selfview (the image that the others see from your system) can be turned on and off as well as be shown minimized or maximized.

If the position of the selfview blocks important parts of the image on your screen, it can be moved.

For systems equipped with Speaker tracking, turning this on will cause the camera system to zoom in on the person currently speaking.
Your video system lets you create predefined zoom and camera pointing directions (also known as pan and tilt). Use these to zoom into the person speaking, if appropriate. Do not forget to zoom out again afterwards.

This means that if you want to create one or more zoom-in presets you should also create a zoom-out (overview) preset to conveniently switch back to overview mode.

Although you may control the far end camera, i.e. the camera of any of the other participants (given that those cameras are remotely controllable), you cannot define nor make use of their presets.
Camera

Edit Camera Position Preset

1. Tap **Camera** to access the Camera menu.

2. Tap the preset to be edited. Selfview will be activated automatically.

3. Adjust **Pan**, **Tilt** and **Zoom**, as required.

4. Tap the little arrowhead of the preset to be edited.

5. Tap **Update to current position** to put your changes into effect.

   To delete an existing preset tap **Remove**.

6. Tap anywhere outside the menu when you’re done.

About Editing Presets

Preset editing is all about taking an existing preset, altering it and then saving it under the same name.

If you want to change the name, we recommend that you delete the preset and create a new one with the preferred name.
Camera

Speaker Tracking

1. To enable Speaker Tracking, tap **Camera**, in the upper right corner.

2. Activate the Speaker Tracking feature by tapping the button in the upper right corner.

3. Tap anywhere outside the menu to exit.

To deactivate Speaker Tracking, repeat the procedure.

About Speaker Tracking

Systems equipped with a speaker tracking camera system use camera working together with a built-in microphone array. The system will track and show the person speaking so that you won’t have to use the Camera Control menu or Camera Presets to zoom in and out.

When speaker tracking has been activated, the camera position presets will not be available. You must turn off speaker tracking to get access to the presets.

Activate speaker tracking as shown on this page again, if needed.

**Note** Speaker tracking will not work if the microphones are muted.

Speaker tracking may be expanded to include the Snap to Whiteboard and Presenter Tracking features, as outlined on the following page.
Camera

Presenter Track

1. To enable Presenter Tracking, tap Camera, in the upper right corner.

2. Systems with PresenterTrack enabled will have this as a camera preset, as shown. Be aware that camera presets will not be accessible if Speaker Tracking has been activated (see the previous page for more on this).

3. Tap anywhere outside the menu to exit. To deactivate Presenter Track, press the preset again.

About Presenter Tracking

Systems with SpeakerTrack may include the Presenter preset. This preset must have been implemented by your video support team to work.

PresenterTrack enables the camera to zoom in and track a presenter who is moving about the stage presenting. The stage zone will have been defined by your video support team.

Once the presenter leaves the stage the tracking is brought to a halt.

The procedure for setting this up and the products supporting this feature can be found in the CE9.2 Administrator Guide for our room systems and codecs.
Camera

Control Own Camera

Using your camera presets

1. In a call or outside a call (shown here), tap Camera.

2. Select the preset to use.

3. Tap anywhere outside the menu when you’re done.

About Editing Presets

Existing camera presets can be used right away during a call. Your video system may have more than one camera, for example one camera showing the participants, while another shows the whiteboard. If you need to add new or modify existing camera presets, this is done in the same way as you do outside a call. As an alternative to adding or editing presets, a simple adjustment of your camera’s pan tilt and zoom should also be considered.

Adjusting your camera’s pan, tilt and zoom

4. In a call or outside a call (shown here), tap Camera.

5. Adjust Pan, Tilt and Zoom. The selfview will be temporarily turned on to assist you.

6. Tap anywhere outside the menu when you’re done.
Camera

Manage Selfview

Outside a call

1. In a call or outside a call (shown here), tap Camera.
2. Tap Selfview to turn it on.
   You may now resize the selfview image (see the following page for more), or control the camera’s pan, tilt and zoom (see the previous page for more).
   Repeat to turn it off again.
3. Tap anywhere outside the menu when you’re done.

In a call

1. If you want to turn the selfview off, while in a call, tap the Selfview avatar, as shown.
2. Tap Turn off, as shown.

About Editing Presets

The Selfview shows what others see from your video system. You will normally use it to confirm that they see what you want them to see.
The Selfview appears as a PiP (Picture-in-Picture), but also in full screen (see the next page).
The position of Selfview PiP can be changed anytime, be it in a call or outside a call. For details on this see two pages ahead.
Camera

Resize the Selfview PiP

Outside a call

1. In a call or outside a call (shown here), tap Camera.

2. Tap Maximize to resize the selfview image.
   Repeat procedure to minimize it.

3. Tap anywhere outside the menu, when you’re done.

In a call

If you want to turn the selfview off, while in a call, tap the Selfview avatar, as shown.
To turn the selfview on, in a call, do as explained above (Outside a call).

Why Resize Selfview?

The selfview shows what others see from your video system. You will normally use it to confirm that they see what you want them to see.

The selfview appears as a PiP (Picture-in-Picture).

From time to time you may want to have the selfview activated during the meeting.

You may want to zoom, pan or tilt your camera to provide a better view for the other participant(s). To get a better view, you may want to maximize the selfview.

Tap Maximize, to resize the selfview image, as shown.
Repeat to minimize.
Move the Selfview PiP

1. Tap and hold the selfview image.

2. The selfview image will now turn blue. You will also see the alternate positions available for the selfview image. Keep holding the image.

3. Drag the image to a new position, shown here is the upper left corner.

4. Release the image by lifting your finger from the screen. The selfview image has now assumed its new position.

Why Move the Selfview?

Selfview shows what others see from your video system. You will normally use it to confirm that they see what you want them to see. The selfview appears as a PiP (Picture-in-Picture).

From time to time you may want to have the selfview activated during the meeting. This could, for example, be to ensure that you remain seen on the screen.

It may happen that the current position of the selfview blocks important parts of the image on your screen. You may therefore want to move it.
Far End Camera Control

In a call, tap the Participants icon in the upper right corner, as shown, to invoke the list of participants.

1. Tap Camera.

2. Tap the one whose camera you want to control.

3. Adjust the remote camera. Tap anywhere outside the camera control buttons when you’re done.

About Camera Control

You may be in a video call in which one or more of the other video systems have a remotely controllable camera. You will then be able to control those cameras from your own video system. This is referred to as Far End Camera Control (FECC).

If the far end system has activated camera tracking (which takes place when the camera tracks and shows who is speaking) you will not be offered the option of FECC.

You do not have access to any remote camera presets.
Settings
Gaining Access to the Settings

The System information page provides information on IP address, MAC address, SIP Proxy, software version installed and device name. In addition it contains a set of wizards to help you set useful things.

If you need to go further into the settings, you must access the system via its web interface, for which you will need administrator credentials.
Cisco has more than 200 offices worldwide. Addresses, phone numbers, and fax numbers are listed on the Cisco Website at www.cisco.com/go/offices.
