Thank you for choosing Cisco!

Your Cisco product has been designed to give you many years of safe, reliable operation.

This part of the product documentation is aimed at administrators working with the setup and configuration of the video system.

Our main objective with this Administrator guide is to address your goals and needs. Please let us know how well we succeeded!

May we recommend that you visit the Cisco web site regularly for updated versions of this guide.

The user documentation can be found on

https://www.cisco.com/go/dx-docs

How to use this guide

The top menu bar and the entries in the Table of contents are all hyperlinks. You can click on them to go to the topic.

Chapter 1

Introduction
User documentation and software

Products covered in this guide

- Cisco TelePresence DX70
- Cisco TelePresence DX80

From Collaboration Software version 8.2 (CE8.2) all DX80 and DX70 units can run CE software, which is the same software that runs on the Cisco TelePresence SX and MX Series.

Note that Cisco DX650 is not, and will not be, supported by CE software.

User documentation

This guide provides you with the information required to administrate the video system.

The guide primarily addresses capabilities and configurations of on-premise registered video systems (CUCM, VCS), but a sub-set of the capabilities and configurations also applies to devices that are registered to our cloud service (Cisco Webex).

Refer to the ► User documentation on the Cisco web site appendix for more information about the guides for this product.

Documentation on the Cisco web site

Visit the Cisco web site regularly for updated versions of the guides:

► https://www.cisco.com/go/dx-docs

Documentation for cloud registered devices

For more information on Cisco Webex room devices, visit:

► https://collaborationhelp.cisco.com

Software

Download software for the endpoint from the Cisco web site:

► https://software.cisco.com/download/home

We recommend reading the Software release notes (CE9):

Converting to CE software

Until September 2016 DX80 and DX70 were shipped with Android based software. Before converting to CE software, it is important to carefully consider the conversion requirements and the functionality changes compared to Android based software; otherwise migration can leave you with a non-functional deployment that requires you to convert back.

Refer to the software release notes, and the ► Upgrade the system software chapter.

Cisco Project Workplace

Explore the Cisco Project Workplace to find inspiration and guidelines when preparing an office or meeting room for video conferencing:

► https://www.cisco.com/go/projectworkplace
What’s new in CE9

This chapter provides an overview of the new and changed system settings, and the new features and improvements in the Cisco Collaboration Endpoint software version 9 (CE9) compared to CE8.

For more details, we recommend reading the Software release notes:

New features and improvements in CE9.5

Support for Korean keyboard

Korean keyboard input is supported on Touch 10 when the user interface language is set to Korean.

Welcome banner

You can set up a welcome banner that users see after they sign in to the video system’s web interface or command line interface. The banner can for example contain information you need in order to get started, or things you must be aware of when setting up the system.
New features and improvements in CE9.4

Rebranding from Cisco Spark to Cisco Webex
Cisco Spark has changed its name to Cisco Webex, and the user interface elements that displayed Spark are changed to Webex. In the activation flow you now see Cisco Webex as a registration option instead of Cisco Spark.

The following products have gotten new names:
- Cisco Spark Room Kit is now Cisco Webex Room Kit
- Cisco Spark Room Kit Plus is now Cisco Webex Room Kit Plus
- Cisco Spark Codec Plus is now Cisco Webex Codec Plus
- Cisco Spark Quad Camera is now Cisco Quad Camera
- Cisco Spark Room 55 are now Cisco Webex Room 55
- Cisco Spark Room 70 are now Cisco Webex Room 70
- Cisco DX70 is now Cisco Webex DX70
- Cisco DX80 is now Cisco Webex DX80

CUCM provisioning of the admin settings lockdown configuration
The admin settings lockdown configuration, that was introduced in CE9.2.1, can now be provisioned from CUCM. You can lock a selection of the settings on the settings menu on all of your devices simultaneously when you configure them through CUCM.

Your CUCM may require a new device package in order to expose the new fields for this configuration.

Enable backlight compensation from the user interface
A new setting on the DX70 and DX80 main menu enables and disables backlight compensation. This is a fixed setting that increases (on) or decreases (off) the sensors brightness levels in order to compensate for sunlight or other bright light sources behind the user. The backlight compensation sets the sensor to a fixed level and it is not auto adjusted to the backlight.

Changed default HTTP mode from HTTP+HTTPS to HTTPS
The default value of NetworkServices HTTP Mode is changed from HTTP+HTTPS to HTTPS. This is to increase the security of the room devices on default configuration. Upgrading from earlier software versions will not automatically change the default value and it will stay on HTTP+HTTPS to avoid breaking current HTTP implementations.

The change is seen on new systems running CE9.4.0 or later, or if the device is factory reset on CE9.4.0. The HTTP requests are redirect to HTTPS and on the first visit to the device’s web interface, the device displays an “Insecure connection warning”. To proceed to the web interface, you need to create an exception in your browser. This is a one-time operation unless you access the web interface with a different browser that has never visited the device web interface or if the device is factory reset.

In-Room Control update
You can add buttons for as many panels as you want on the home screen as well as on the in-call screen of the user interface.
New features and improvements in CE9.3

Backup and restore settings and custom elements
You can include custom elements as well as configurations in a backup file bundle (zip). You can choose which of the following elements to include in the bundle:

- Branding images
- Macros
- Favorites
- Sign-in banner
- In-room control panels
- Configurations (all or a sub-set)

In previous software versions, you could only backup the configurations.

The backup file can either be restored manually from the video system’s web interface, or you can generalize the backup bundle so that it can be provisioned across multiple video systems, for example using Cisco UCM or TMS.

You will find the backup and restore functionality under Maintenance > Backup and Restore on the video system’s web interface.

Provisioning of custom elements
The backup bundle, as described above, can be provisioned to many video systems using Cisco UCM or TMS. It is important that device specific information is removed when creating a backup bundle intended for multiple video systems. If you include device specific information in such a bundle, you may end up with multiple video systems that cannot be reached.

By provisioning a non-system specific backup bundle, you can for example, copy a video system’s setup with macros, branding elements, and in-room control panels across multiple video systems.

Currently, provisioning via Cisco UCM will not restore any configurations, only the other custom elements; TMS will restore everything that is included in the backup bundle.

See the release note for more details about provisioning.

In-Room Control updates
The following functionality is added to the in-room control feature:

- You can add buttons for up to 20 panels in total. The buttons appear on the home screen or the in-call screen of the user interface depending on the panel type.
- As before, there are three types of in-room control panels: global panels (always available), in-call panels (available only when in call), and out-of-call panels (only available when not in a call). The entry point for the global panel has been removed from the status bar (top right corner of the user interface). Buttons to open global panels are added to both the home screen and the in-call screen instead, together with the buttons for the out-of-call only and in-call only panels, respectively.
- You can make standalone trigger-buttons, which are buttons that trigger an event directly, without opening a panel on the user interface.

Also the following features are added in the in-room control editor:

- Some new icons are available.
- A set of colors to choose from for the in-room-control buttons.
- Double click text elements to edit text directly.
- Drag and drop in-room control XML files into the editor.

For a full description of in-room controls, see the in-room control / customization guide on https://www.cisco.com/go/in-room-control-docs.
Support for ISDN Link

ISDN Link with software version IL1.1.7 is supported for all video systems that supports CE9.3.0.

As before, when using automatic pairing (which allows the ISDN Link to be automatically discovered by the video system) IPv6 must be enabled on the video system.

One Button to Push snooze

You are able to snooze an One Button to Push (OBTP) meeting reminder for 5 minutes. The snooze time cannot be changed. The reminder typically appears if you are in a call and a scheduled meeting is about to start. You can snooze the reminder for 5 minutes each time it appears until the meeting has ended.

Adjust the call rate before making a call

As soon as you start typing in the Search or dial field, you can open a dialog and select a custom call rate. In earlier releases this was available only when selecting an entry from the Directory.

If you don’t select a custom call rate, you get the rate set in the Conference DefaultCall Rate setting.

Select ring-tone and adjust ring-tone volume

You can select a ring-tone and adjust the ring-tone volume from the settings menu on the user interface. In the previous releases this was done from the web interface.

Resume a postponed upgrade

When you get a notification about software upgrade, you can choose Upgrade now or Postpone. If you postpone the upgrade, you can resume the upgrade from the Settings > About this device menu on the user interface when you are ready; you don’t have to wait for 6 hours like you had to before.

If you don’t manually resume the upgrade, the upgrade will start automatically after 6 hours.

Prevent system information from being exposed in the user interface

You can prevent important system information from being exposed in the user interface, for example:

- IP addresses (video system, touch controller, UCM/VCS registrar)
- MAC address
- Serial number
- Software version

To enable this feature the following must be done:

- A passphrase must be set for all users with administrator rights
- User Interface Settings Menu Mode must be set to Locked
- User Interface Security Mode must be set to Strong

This feature also means that the IP address is not displayed on the screen when you disconnect a Touch controller.

Accessibility: Flashing screen on incoming calls

You can configure the video system so that the screen and Touch controller flashes red / light grey when the system receives an incoming call. This feature is mainly targeting hearing impaired users, making it easier for them to notice an incoming call.

The feature is disabled by default, and must be enabled by the Accessibility IncomingCallNotification setting.

Mirrored self-view

You can configure the video system to show the self-view image the way other people see you, or as you would see yourself in a mirror. Use the Video Selfview Mirrored setting. Mirrored self-view used to be available only for Cisco DX devices running Android software.

Mirroring only applies to the self-view image, and has no effect on the video that is sent to the far end.

One common API guide

We have gathered all API information in one API guide, that covers all products. This is in contrast to earlier releases were we have had one API guide per product.
New features and improvements in CE9.2

Macro framework
The macro framework allows users and integrators to write JavaScript macros in order to automate scenarios and customize endpoint behavior so that it suits an individual customer’s requirements.

The combination of macros and powerful features such as listening for events/status changes, automating execution of commands and configurations, and providing local control functionality for the In-Room control feature, provides many possibilities for custom setups.

Minor behavioral changes, such as having the video system in Do Not Disturb for an infinite amount of time, can be easily realized by macros. Some other examples are: Reset configurations automatically, make a call at a certain time of the day, and issue alert or help messages depending on status changes.

The macro editor, which also provides several example macros, is available from the video system’s web interface.

Branding and halfwake customization
You can upload your own text and images to customize the appearance of the screen in both the halfwake state and the awake state.

In the Halfwake state you can:
- Add a background brand image to the screen.
- Add a small logo in the bottom right corner of the screen.

In the Awake state you can:
- Add a small logo in the bottom right corner of the screen.
- Add a label or message in the bottom left corner of the screen.

HTTP Proxy support
You can set up the video system to go through a HTTP Proxy when registering it to Cisco’s cloud service, Cisco Spark.

User interface features
- The Settings panel is restructured.
- The Settings panel in the user interface can be protected by the video system’s admin password. If the password is blank, anyone can access the Settings and factory reset the system.
- If you select the Russian language on the user interface, you can choose between a Russian keyboard and a keyboard with a Latin character set.
- Arabic and Hebrew languages are added to the user interface. Also localized keyboards are included.
- Basic IEEE 802.1x settings are added to the Settings panel in the user interface.

Mute and unmute remote participants in a CMS hosted conference (Active Control)
When a video system is enabled for Active Control in a CMS (2.1 or later) conference you can mute and unmute remote participants from the participant list on the user interface (the feature must also be enabled on the CMS).

A video system that is running software version CE9.2 will not be unmuted directly. When you try to unmute such a video system remotely, a message will show up on its screen requesting the user to unmute the audio locally.

API commands for Custom input prompt
API commands are introduced to allow for an input prompt in the user interface: xCommand UserInterface Message TextInput *. When issuing the display command a prompt with your custom text, a text input field for the user, and a submit button, shows up on the user interface. For example, you can prompt a user to leave feedback after an ended call. You can specify what type of input you want from the user: single line text, numeric, password, or PIN code.

The prompt can only be enabled via the API, so it is recommended to combine it with macros and either a custom user interface panel or an auto-triggered event.

Certificate upload via API
ASCII PEM formatted certificates can be installed directly using multiline API commands (xCommand Security Certificates CA Add, or xCommand Security Certificates Services Add). You can also upload certificates to a video system from its web interface, as before.

API commands for user management
You can create and manage user accounts directly using API commands (xCommand UserManagement User *). As before, you can also do this from the video system’s user interface.
Preview mode for In-Room Controls

The In–Room Control editor has a new preview mode. A virtual touch interface shows how the design looks on the user interface. The user interface is interactive so that you can test the functionality. It produces real events on the video system, which can trigger any functionality you have created with a third-party control system or with a macro. A console in the right pane displays both the widget values when interacted with, and control system feedback messages.

Intelligent Proximity changes

A Proximity indicator is displayed on the screen (middle right) to inform that one or more clients are paired to the system with Cisco Proximity. The old indicator (top left), which was always shown when Proximity was enabled, has been removed.

You can no longer disable the Proximity services from the user interface.

The ultrasound settings have moved from Peripherals Pairing Ultrasound to Audio Ultrasound.

Automatic factory reset when changing the call service (device activation)

The video system will automatically factory reset and restart when using the user interface to change the device activation method, for example from VCS to Cisco UCM. This will prevent conflicting configurations when provisioning the video system to a new service.

Changing the provisioning from the API will not automatically factory reset the video system.

Support for separate RTP port ranges for audio and other media

You can configure the video system so that audio uses a different RTP port range than other media. The two ranges cannot overlap. As default, all media use the same RTP port range.
New features and improvements in CE9.1

New wake-up experience
The wake-up experience has an additional standby state: Halfwake. In Halfwake state, the video system shows a simple on-screen interaction guide when it is not in use.

Bluetooth headset support
A Bluetooth headset can be used with the video system. The headset must support HFP (Hands Free Protocol). The user can enable Bluetooth and set the video system in Bluetooth pairing mode from the user interface.

Support for the EAP authentication framework for wireless networks
In addition to WPA-PSK and WPA2-PSK, the video system now supports the WPA-EAP authentication framework for Wi-Fi connections. In total the following methods are supported:

- Open
- WPA-PSK (AES)
- WPA2-PSK (AES)
- EAP-TLS
- EAP-TTLS
- EAP-FAST
- PEAP
- EAP-MSCHAPv2
- EAP-GTC

Network port 2 can be disabled
You can connect a computer to the network through the video system’s second network port. Then you only need one network wall socket to support both the video system and the computer.

For security reasons, we recommend that you disable this network port if the video system is used in a public environment. This way, you prevent someone from connecting a computer to your network through the video system.
New features and improvements in CE9.0

Updated user interface
The user interfaces on the Touch 10, on screen, and on integrated touch screens have been updated. The main menu items on the home screen have been replaced with more prominent activities.

Some of the settings have been removed from the Touch 10 advanced settings menu to align with the on-screen display menu.

Wakeup on motion detection
Wakeup on motion detection senses when a person walks into the conference room and the video system wakes up automatically. You need to enable the following setting for this feature to work:

```
xConfiguration Standby WakeupOnMotionDetection
```

You can’t manually set the video system in standby when this feature is enabled.

Updated In-Room Control editor
The In-Room Control editor is updated with a new look, improved logic and usability for producing a control interface more efficiently. In addition, a new directional pad widget and an In-Room Control simulator is added.

Added language support
We have added support for Portuguese (Portugal) to the on-screen display and Touch controller menus.

Other changes
- Support for HTTPS client certificates has been added.
- Unplugging the presentation cable stops the presentation sharing instantly.
System configuration changes in CE9.5

New configurations
NetworkServices SSH HostKeyAlgorithm

Configurations that are removed
None

Configurations that are modified
None
System configuration changes in CE9.4

New configurations
Cameras Camera [1] Backlight DefaultMode
Conference FarendMessage Mode

   NEW: User role: ADMIN, USER

UserInterface Language
   NEW: Portuguese added to value space
Configurations with the new INTEGRATOR user role

A new user role - INTEGRATOR - is introduced in CE9.0. It has been added to the following configurations:

- Audio DefaultVolume
- Audio Microphones Mute Enabled
- Audio SoundsAndAlerts *
- CallHistory Mode
- Conference DefaultCall Rate
- Conference DoNotDisturb DefaultTimeout
- FacilityService *
- Peripherals Pairing Ultrasound Volume MaxLevel
- Peripherals Pairing Ultrasound Volume Mode
- SerialPort Mode
- Standby *
- SystemUnit Name
- Time Zone
- UserInterface OSD Output
- UserInterface Wallpaper
- Video ActiveSpeaker DefaultPIPPosition
- Video Input Connector [n] *
- Video Monitors
- Video Output Connector [n] CEC Mode
- Video Output Connector [n] Location HorizontalOffset
- Video Output Connector [n] Location VerticalOffset
- Video Output Connector [n] Resolution
- Video Output Connector [n] RGBQuantizationRange

* <path> means that the change applies to all configurations starting with <path>.
The Cisco Webex DX70 and DX80 are all-in-one units designed to video-enable small collaboration spaces. They are high quality featuring high-definition (HD) video, unified communications features, a display for your laptop, and expanded capabilities.

Features and benefits

- A dedicated, always-on 1080p HD video communication system
- A high-quality audio system for speakerphone
- Support for wireless Bluetooth headset, Bluetooth headset with USB dongle, and USB headset
- A 23-inch (DX80) or 14-inch (DX70) 16:9 screen that provides an engaging experience for video calls
- A multitouch capacitive touchscreen that provides an elegant and powerful user interface
- A self-provisioning device that is simple for users to take out of the box and start using quickly
- Ability for administrators to use Cisco Expressway for the secure connection of their remote workers
- Registers with Cisco Unified Communications Manager (UCM), Cisco TelePresence Video Communication Server (VCS), and Cisco Webex
Power On and Off

Power On/Off with the Power button

The power button, with LED indicator, is placed on the front as shown in the illustration.

Switch on
The video system does not start automatically. Press the power button gently, and hold for a few seconds.

Switch off
Press the power button gently and hold until the light goes out.

Enter/exit standby mode
Press the power button briefly. It takes a few seconds before the unit enters standby.

Restart and standby using the user interface

Restart the system
1. Select the contact information in the upper left corner of the user interface.
2. Select Settings, followed by Restart.
3. Select Restart again to confirm your choice.

Enter/exit standby mode
1. Select the contact information in the upper left corner of the user interface.
2. Select Standby.

Power Off or restart the system remotely

Sign in to the web interface and navigate to Maintenance > Restart.

Restart the system
Click Restart device... and confirm your choice.

Power Off the system
Click Shutdown device... and confirm your choice.

You cannot power the system on again remotely; you have to use the power button.
LED indicators

Status LED

The status LED is a circle around the power button. The normal LED color is white. A red light indicates hardware failure.

- **Normal operation (not standby):** Steady light.
- **In standby mode:** The LED pulsates slowly.
- **No network connection:** The LED repeatedly flashes twice.
- **During startup (boot):** The LED flashes.

Camera LED

The camera LED is just above the camera lens.

- **Incoming call:** The LED flashes.
- **In call:** Steady light.
How to administer the video system

In general, we recommend you to use the web interface to administer and maintain the video system, as described in this administrator guide.

Alternatively, you can access the API of the video system by other methods:

- HTTP or HTTPS (also used by the web interface)
- SSH
- Telnet
- Serial interface (RS-232)

If you want more information about the different access methods, and how to use the API, refer to the API guide for the video system.

**Tip**

If the configuration or status is available in the API, the web interface setting or status translates into an API configuration or status as follows:

| Set X > Y > Z to Value (web) | is the same as | xConfiguration X Y Z: Value (API) |
| Check X > Y > Z status (web) | is the same as | xStatus X Y Z (API) |

For example:

- **Set** SystemUnit > Name to MySystem is the same as xConfiguration SystemUnit Name: MySystem
- **Check** SystemUnit > Software > Version status is the same as xStatus SystemUnit Software Version

More settings and statuses are available in the web interface than in the API.

### Access method

<table>
<thead>
<tr>
<th>Access method</th>
<th>Notes</th>
<th>How to enable/disable the methods</th>
</tr>
</thead>
</table>
| **HTTP/HTTPS** | - Used by the web interface of the video system  
- Non-secure (HTTP) or secure (HTTPS) communication  
- HTTPS: Enabled by default  
- HTTP: Enabled by default only for video systems that have been upgraded to CE9.4 (or later) from an earlier software version, provided that the video system has not been factory reset after the upgrade. | NetworkServices > HTTP > Mode  
Restart the video system for changes to take effect |
| **Telnet** | - Non-secure TCP/IP connection  
- Disabled by default | NetworkServices > Telnet > Mode  
You do not need to restart the video system. It may take some time for changes to take effect |
| **SSH** | - Secure TCP/IP connection  
- Enabled by default | NetworkServices > SSH > Mode  
You do not need to restart the video system. It may take some time for changes to take effect |
| **Serial interface (RS-232)** | - Connect to the video system with a cable. IP-address, DNS, or a network is not required  
- Enabled by default  
- For security reasons, you are asked to sign in by default | SerialPort > Mode  
Restart the video system for changes to take effect |

If all access methods are disabled (set to Off), you can no longer configure the video system. You are not able to re-enable (set to On) any of the access methods, and you must factory reset the video system to recover.
The web interface of the video system

The web interface is the administration portal for the video system. You can connect from a computer and administer the system remotely. It provides full configuration access and offers tools and mechanisms for maintenance.

Note: The web interface requires that HTTP or HTTPS is enabled (refer to NetworkServices > HTTP > Mode setting).

We recommend that you use the latest release of one of the major web browsers.

Connect to the video system
Open a web browser and enter the IP address of the video system in the address bar.

How to find the IP address
1. Select the contact information in the upper left corner of the user interface.
2. Select Settings, followed by About this device.

Sign in
Enter user name and passphrase for the endpoint and click Sign In.

The system is delivered with a default user named admin with no passphrase. Leave the Passphrase field blank when signing in for the first time.

It is mandatory to set a password for the admin user.

Sign out
Hover the mouse over the user name and choose Signout from the drop-down list.
How to administer the video system (page 3 of 4)

How the web interface is organized

The web interface is organized in sub-pages. All sub-pages shown below are available if the video system is registered to an on-premise service (CUCM, VCS); the pages shown in grey color are not available if the video system is registered to the Cisco cloud service (Cisco Webex).

In both cases, a user that is signed in, sees only the pages that he has access rights for.

Read more about user administration, user roles and access rights in the ► User administration chapter.

Settings and system information on the user interface

You have access to system information, and some basic configurations and system tests on the video system’s user interface.

System-critical settings and functions, such as network settings, service activation, and factory reset, may be protected by a passphrase, refer to the ► Restrict the access to the Settings menu chapter.

Some of the settings and tests are also part of the Setup assistant that is launched when the video system is powered up for the first time. The Setup assistant is described in the Getting Started Guide for systems running CE software.

Access Settings

1. Select the contact information in the upper left corner of the user interface.

2. Select Settings.

   A padlock symbol ⬇️ indicates that a setting is protected (locked down).

3. Select the setting you want to change, or the test you want to run.

   If a setting is locked down, an authentication window pops up, and you have to sign in with ADMIN credentials to proceed.
Chapter 2

Configuration
User administration

You have to sign in to get access to the web and command line interfaces. You can assign different roles to users, to determine what they should have access to.

The default user account

The video system comes with a default administrator user account with full access rights. The user name is `admin` and no passphrase is initially set.

It is mandatory to set a passphrase for the `admin` user.

Read how to set the passphrase in the ► Change the system passphrase chapter.

Create a new user account

1. Sign in to the web interface, and navigate to Security > Users.
2. Click Add new user....
3. Fill in the Username, Passphrase and Repeat passphrase input fields.
   - As a default, the user has to change the passphrase when he signs in for the first time.
   - Fill in the Client Certificate DN (Distinguished Name) field only if you use client certificates for authentication.
4. Check the appropriate Roles check boxes.
   - If you assign the ADMIN role to a user, enter your own passphrase in the Your passphrase input field for verification.
5. Set the Status to Active to activate the user.
6. Click Create User.
   - Use the Back button to leave without making any changes.

Edit an existing user account

If you make changes to a user that holds the Admin role, you must always enter your own passphrase in the Your passphrase input field for verification.

Change the user privileges

1. Sign in to the web interface, and navigate to Security > Users.
2. Click the appropriate user in the list.
3. Choose user roles, set the status to Active or Inactive, and decide if the user has to change the passphrase on the next sign in.
   - Fill in the Client Certificate DN (Distinguished Name) field only if you use certificate login on HTTPS.
4. Click Edit User to save the changes.
   - Use the Back button to leave without making any changes.

Change the passphrase

1. Sign in to the web interface, and navigate to Security > Users.
2. Click the appropriate user in the list.
3. Enter the new passphrase in the appropriate input fields.
4. Click Change passphrase to save the change.
   - Use the Back button to leave without making any changes.

Delete the user account

1. Sign in to the web interface, and navigate to Security > Users.
2. Click the appropriate user in the list.
3. Click Delete user... and confirm when prompted.

User roles

A user account may hold one or a combination of user roles. A user account with full access rights, like the default `admin` user, should possess the ADMIN, USER and AUDIT roles.

These are the user roles:

**ADMIN:** A user with this role can create new users, change most settings, make calls, and search the contact lists. The user cannot upload audit certificates and change the security audit settings.

**USER:** A user with this role can make calls and search the contact lists. The user can modify a few settings, for example adjust the ringtone volume and set the time and date format.

**AUDIT:** A user with this role can change the security audit settings and upload audit certificates.

**ROOMCONTROL:** A user with this role can create in-room controls. The user has access to the In-room control editor and corresponding development tools.

**INTEGRATOR:** A user with this role has access to settings, commands and status that are required to set up advanced AV scenarios, and to integrate our video systems with 3rd party equipment. Such a user can also create in-room controls.

Cisco Webex registered systems

If a video system is registered to Cisco’s cloud service (Cisco Webex), only local users with the INTEGRATOR and ROOMCONTROL user roles are available.
Change the system passphrase

You need to know the system passphrase in order to:
- Sign in to the web interface
- Sign in and use the command line interfaces

The default user account
The video system is delivered with a default user account with full access rights. The user name is admin, and initially, no passphrase is set.

- It is mandatory to set a passphrase for the default admin user in order to restrict access to system configuration. It is also mandatory to set a passphrase for any other user with ADMIN rights.

A warning, saying that the system passphrase is not set, is shown on screen until a passphrase is set for the admin user.

Other user accounts
You can create many user accounts for the video system.
Read more about how to create and manage user accounts in the User administration chapter.

Change your passphrase

1. Sign in to the web interface, hover the mouse over the user name, and choose Change Passphrase in the drop down list.

2. Enter the current passphrase and new passphrase in the input fields, and click Change passphrase.
   The passphrase format is a string with 0–64 characters.
   
   - If the passphrase currently is not set, leave the Current passphrase field blank.

Change another user’s passphrase

If you have administrator access rights, you can change the password of any user.

1. Sign in to the web interface, and navigate to Security > Users.
2. Click the appropriate user in the list.
3. Enter the new passphrase in the Passphrase and Repeat passphrase input fields.
   - If the user holds the Admin role, you must enter your own passphrase in the Your passphrase input field for verification.
4. Click Change passphrase to save the change.
   Use the Back button to leave without making any changes.
Restrict the access to the Settings menu

By default, any user has access to the Settings menu on the user interface.

We recommend that you restrict the access to prevent unauthorized users from changing the configuration of the video system.

Lock down the Settings menu

1. Sign in to the web interface, and navigate to Setup > Configuration.
2. Go to UserInterface > SettingsMenu > Mode, and select Locked.
3. Click Save for the change to take effect.

Now a user has to sign in with ADMIN credentials to get access to the system-critical settings on the user interface.

Unlock the Settings menu

1. Sign in to the web interface, and navigate to Setup > Configuration.
2. Go to UserInterface > SettingsMenu > Mode, and select Unlocked.
3. Click Save for the change to take effect.

Now any user has access to the complete Settings menu on the user interface.

The Settings menu on the user interface

If the menu is locked down, you must sign in to access the system-critical settings.

Select the contact information in the upper left corner of the user interface followed by Settings, in order to open the Settings menu.

Locked down settings

Locked down settings are marked with a padlock.

Unlock settings

If you click on the padlock, you are asked to sign in with an ADMIN user.

Once signed in, you can access all settings until you close the Settings menu.
System configuration

Sign in to the web interface, and navigate to Setup > Configuration.

Find a system setting

Search for settings

Enter as many letters as needed in the search field. All settings that contain these letters are shown in the right pane. Settings that have these letters in their value space are also shown.

Change a system setting

Check the value space

A setting's value space is specified either by text following the input field or in a drop-down list that opens when you click the arrow.

Change a value

1. Choose the preferred value from the drop-down list, or enter new text in the input field.
2. Click Save for the change to take effect.

Use the Undo or Revert buttons if you do not want to make any changes.

About system settings

All system settings can be changed from the web interface.

Each system setting is described in the System settings chapter.

Different settings may require different user credentials. In order to be sure that an administrator is able to change all system settings, an administrator user must possess all user roles.

You can read more about user administration and user roles in the User administration chapter.
Add a sign in banner

Sign in to the web interface, and navigate to Security > Sign In Banner.

1. Enter the message that you want to present to the user when he signs in.
2. Click Save to activate the banner.

About sign in banner

If a system administrator wants to provide initial information to all users, he can create a sign in banner. The message is shown when the user signs in to the web interface or the command line interface.

The maximum size is: 4 kByte

Welcome banner versus sign in banner

Sign in banner:
- The banner is shown before the user signs in to the web interface or the command line interface.

Welcome banner:
- The banner is shown after the user has signed in to the web interface or the command line interface.
Add a welcome banner

Adding a Welcome banner is only available using API commands; we don't provide a dedicated user interface for it.

API commands

```
xCommand SystemUnit WelcomeBanner Set
```

This is a multiline command. Anything you input after you issue the command, is input to the command (including line breaks). Finish the input with a separate line containing just a period ending with a line break.

There are also a few more welcome banner commands, refer to the API-guide for more details.

```
xCommand SystemUnit WelcomeBanner Clear
xCommand SystemUnit WelcomeBanner Get
```

Example

```
xCommand SystemUnit WelcomeBanner Set <enter>
This is a welcome banner. <enter>
A welcome banner may have multiple lines. <enter>
. <enter>
```

About welcome banner

You can set up a welcome banner that users see after they sign in to the video system's web interface or command line interface. The banner can have multiple lines.

The banner can for example contain information you need in order to get started, or things you must be aware of when setting up the system.

The maximum size is: 4 kByte

Welcome banner versus sign in banner

Sign in banner:
• The banner is shown before the user signs in to the web interface or the command line interface.

Welcome banner:
• The banner is shown after the user has signed in to the web interface or the command line interface.
Manage the service certificates of the video system

Sign in to the web interface and navigate to Security > Service Certificates. You need the following files:

- Certificate (file format: .PEM)
- Private key, either as a separate file or included in the same file as the certificate (file format: .PEM format)
- Passphrase (required only if the private key is encrypted)

The certificate and the private key will be stored in the same file on the video system.

Enable or disable, view or delete a certificate

Use the On and Off buttons to enable or disable a certificate for the different services.

Use the corresponding button to view or delete a certificate.

Add a certificate

1. Browse to find the Certificate file and Private key file (optional) on your computer.
2. Fill in the Passphrase if required.
3. Click Add certificate... to store the certificate on the video system.

About the service certificates of the video system

Certificate validation may be required when using TLS (Transport Layer Security).

A server or client may require that the video system presents a valid certificate to them before communication can be set up.

The video system’s certificates are text files that verify the authenticity of the system. These certificates may be issued by a certificate authority (CA).

Certificates are used for the following services: HTTPS server, SIP, IEEE 802.1X and audit logging.

You can store many certificates on the video system, but only one certificate can be enabled for each service at a time.

If authentication fails, the connection will not be established.
Manage the list of trusted certificate authorities (CAs)

Sign in to the web interface, navigate to Security > Certificate Authorities, and open the Custom CAs tab.

You need the following file:
- CA certificate list (file format: .PEM).

Upload a list of certificate authorities

1. Browse to find the file containing a list of CA certificates on your computer (file format: .PEM).
2. Click Add certificate authority... to store the new CA certificates on the video system.

View or delete a certificate

Use the corresponding button to view or delete a certificate.

About trusted CAs

Certificate validation may be required when using TLS (Transport Layer Security).

The video system may be set up to require that a server or client presents its certificate to the video system before communication can be set up.

The certificates are text files that verify the authenticity of a server or client. The certificates must be signed by a trusted CA.

In order to verify the signature of the certificates, a list of trusted CAs must reside on the video system.

If authentication fails, the connection will not be established.
Set up secure audit logging

Sign in to the web interface, navigate to Setup > Configuration.

1. Open the Security category.
2. Find the Audit > Server settings, and enter the Address of the audit server. If you set PortAssignment to Manual, you must also enter a Port number for the audit server.
3. Set Audit > Logging > Mode to ExternalSecure.
4. Click Save for the change to take effect.

The certificate authority (CA) that verifies the certificate of the audit server must be in the video system’s list of trusted certificate authorities. Otherwise, logs will not be sent to the external server.

Refer to the Manage the list of trusted certificate authorities (CAs) chapter how to update the list.

About secure audit logging

When audit logging is enabled, all sign in activity and configuration changes on the video system are recorded.

Use the Security > Audit > Logging > Mode setting to enable audit logging. Audit logging is disabled by default.

In ExternalSecure audit logging mode the video system sends encrypted audit logs to an external audit server (syslog server), which identity must be verified by a signed certificate.

The signature of the audit server is verified using the same CA list as other servers/clients.

If the audit server authentication fails, no audit logs are sent to the external server.
Manage pre-installed certificates for CUCM via Expressway provisioning

Sign in to the web interface, navigate to Security > Certificate Authorities, and open the Preinstalled CAs tab.

View or disable certificates

Use the Details... and Disable buttons respectively, to view or disable certificates.

As an alternative to using the pre-installed certificates, you can append the certificates you need to the certificate list manually.

Refer to the Manage the list of trusted certificate authorities (CAs) chapter how to update the list of trusted certificates.

About pre-installed certificates

The pre-installed certificates in this list are only used when the video system is provisioned by Cisco Unified Communications Manager (CUCM) via Expressway (Edge).

Only Cisco Expressway infrastructure certificates are checked against this list.

If the validation of the Cisco Expressway infrastructure certificate fails, the video system will not be provisioned and registered.

Factory resetting the video system does not delete the list of pre-installed certificates.
Delete CUCM trust lists

The information in this chapter is only relevant for video systems that are registered to a Cisco Unified Communications Manager (CUCM).

Sign in to the web interface, navigate to Security > CUCM Certificates.

Delete the CUCM trust lists

Click Delete CTL/ITL to remove the trust lists.

As a general rule, you should not delete old CTL (Certificate Trust List) and ITL (Initial Trust List) files.

In these cases, you must still delete them:

- When you change the CUCM IP address.
- When you move the endpoint between CUCM clusters.
- When you need to re-generate or change the CUCM certificate.

Overview of trust list fingerprints and certificates

The trust lists’ fingerprints and an overview of the certificates in the lists are displayed on the web page.

This information may be useful for troubleshooting.

More information about trust lists

For more information about CUCM and trust lists, read the Deployment guide for TelePresence endpoints on CUCM that is available on the Cisco web site.
Change the persistency mode

Sign in to the web interface and navigate to Security > Non-persistent Mode.

Check the persistency status

The active radio buttons show the current persistency status of the video system.

Alternatively, you can navigate to Setup > Status, and then open the Security category to see the Persistency status.

Change the persistency settings

All persistency settings are set to Persistent by default. You only have to change these settings if you want to make them Non-persistent.

1. Click the radio buttons to set the persistency for configurations, call history, internal logging, local phonebook (local directory and favorites) and IP connectivity (DHCP) information.

2. Click Save and reboot....

   The video system restarts automatically. After the restart, the behavior changes according to the new persistency settings.

   Logs, configurations, and other data that was stored before you switched to Non-persistent mode, are NOT cleared or deleted.

Persistency mode

Configurations, call history, internal logs, local phonebook (local directory and favorites list), and IP connectivity information are stored by default. Because all persistency settings are set to Persistent, a system restart does not delete this information.

Generally, we recommend you NOT to change the persistency settings. Only change to Non-persistent mode if you have to prevent users from being able to see or traceback to any logged information from the previous session.

In Non-persistent mode, the following information is lost or cleared each time the system restarts:

• System configuration changes
• Information about placed and received calls (call history)
• Internal log files
• Changes to the local contacts or favorites list
• All IP related information (DHCP) from the last session

Information that was stored before changing to Non-persistent mode is not automatically cleared or deleted. You must factory reset the video system to delete such information.

There is more information about performing a factory reset in the Factory reset the video system chapter.
Set strong security mode

1. If you want to use strong security mode, click *Enable Strong Security Mode...* and confirm your choice in the dialog box that appears.
   The video system restarts automatically.

2. Change the passphrase when you are prompted. The new passphrase must meet the strict criteria as described.
   How to change the system passphrase is described in the *Change the system passphrase* chapter.

About strong security mode

Use strong security mode only when compliance with DoD JITC regulations is required.

Strong security mode sets very strict passphrase requirements, and requires all users to change their passphrase on the next sign in.
Cisco Proximity allows users to see, control, capture and share content directly on their own mobile devices (smartphone, tablet, or laptop), when the device is near a video system.

The mobile device can automatically pair with the video system when it comes within range of ultrasound transmitted by the video system.

The number of simultaneous Proximity connections depends on the type of video system. The client warns new users if the maximum number of connections has been reached.

<table>

* 30 connections when the View shared content on a mobile device Proximity service is disabled; 7 connections when this service is enabled.

**Proximity services**

**Place calls and control the video system:**
- Dial, mute, adjust volume, hang up
- Available on smartphones and tablets (iOS and Android)

**View shared content on a mobile device:**
- View shared content, review previous slides, save selected slides
- Available on smartphones and tablets (iOS and Android)
- For DX70 and DX80, this service is available only when in a call

**Wireless share from a desktop client:**
- Share content without connecting a presentation cable
- Available on laptops (OS X and Windows)
Set up Intelligent Proximity for content sharing (page 2 of 5)

Install a Cisco Proximity client

Where to find the clients
You can download the Cisco Proximity clients for smartphones and tablets (Android and iOS), and laptops (Windows and OS X) free of charge from [https://proximity.cisco.com](https://proximity.cisco.com). Clients for smartphones and tablets are also available directly through Google Play (Android) and Apple App Store (iOS).

End-user license agreement

Supported operating systems
- iOS 7 and above
- Android 4.0 and above
- Mac OS X 10.9 and above
- Windows 7 and above
The tile based interface introduced with Windows 8 is not supported.
Set up Intelligent Proximity for content sharing (page 3 of 5)

Ultrasound emission
Cisco video systems emit ultrasound as part of the Proximity feature.

Use the Proximity > Mode setting to switch the Proximity feature - and thereby also ultrasound emission - On and Off.

Most people are exposed to ultrasound more or less daily in many environments, including industry, commercial applications and home appliances.

Even if airborne ultrasound may cause subjective effects for some individuals, it is very unlikely that any effects will occur for levels below 75 dB.

Room 70, Room 70 G2, Room 55, Room 55 Dual, Room Kit, Room Kit Plus, SX10N and MX Series:
- The ultrasound sound pressure level is below 75 dB at a distance of 50 cm or more from the loudspeaker.

DX70 and DX80:
- The ultrasound sound pressure level is below 75 dB at a distance of 20 cm or more from the loudspeaker.

Codec Plus, Codec Pro, SX10, SX20, and SX80:
- We cannot foresee the ultrasound sound pressure level on these video systems, because they emit ultrasound on third-party loudspeakers.

The volume control on the loudspeaker itself, and the Audio > Ultrasound > MaxVolume setting affect the ultrasound sound pressure level; the volume control on the remote control or Touch controller does not have any effect.

Headsets

DX70, DX80, and SX10N:
You can always use a headset with these systems because:
- DX70 and DX80 have dedicated headset outputs, on which we never emit ultrasound.
- SX10N plays ultrasound on the built-in loudspeakers.
Ultrasound is never emitted on the HDMI or audio outputs.

Room 70, Room 70 G2, Room 55, Room 55 Dual, Room Kit, Room Kit Plus, Codec Plus, Codec Pro, SX10, SX20, SX80, and MX Series:
- These systems are not designed for headset use.
- We strongly recommend you to switch off ultrasound emission if you use a headset with these video systems (set Proximity > Mode to Off). Then you cannot use the Proximity feature.
- Since these systems don't have dedicated headset outputs, we are not able to control the sound pressure level from the connected headsets.
Set up Intelligent Proximity for content sharing (page 4 of 5)

Enable Proximity services

1. Sign in to the web interface, and navigate to Setup > Configuration.
2. Go to Proximity > Mode, and switch Proximity On.

The video system starts sending ultrasound pairing messages.

Enable the services you want to allow. Only Wireless share from a desktop client is enabled by default.

In order to fully utilise the Proximity functionality, we recommend that you enable all services.

Place calls and control the video system:
• Go to Proximity > Services > CallControl and choose Enabled.

View shared content on a mobile device:
• Go to Proximity > Services > ContentShare > ToClients and choose Enabled.

Wireless share from a desktop client:
• Go to Proximity > Services > ContentShare > FromClients and choose Enabled.

The Proximity indicator

You can see the Proximity indicator on the screen as long as at least one Proximity client is paired with the system.

The indicator doesn’t disappear immediately when the last client unpairs. It may take a few minutes.

About Proximity

The Proximity feature is switched Off by default, because the DX products are often deployed in open offices with several systems close to each other. In such environments, pairing could be unstable. In general, Proximity should be switched On only on one system per room.

When Proximity is switched On, the video system transmits ultrasound pairing messages.

The ultrasound pairing messages are received by nearby devices with Proximity clients, and triggers the authentication and authorization of the device.

Provided that you have verified that Proximity is suitable in your environment, Cisco recommends - for the best user experience - that Proximity always is switched On.

In order to get full access to Proximity, the Proximity services (Proximity > Services > ...) must be Enabled as well.
Set up Intelligent Proximity for content sharing (page 5 of 5)

About privacy

In the Cisco Privacy statement and the Cisco Proximity Supplement you find information about data collection in the clients and privacy concerns that needs to be considered when deploying this feature in the organization. Refer to:

► https://www.cisco.com/web/siteassets/legal/privacy.html

Note that the mobile devices in the room only can receive and view content when the video system is in a call.

Basic troubleshooting

Cannot detect devices with Proximity clients

- Some Windows laptops are not able to record sound in the ultrasound frequency range (20kHz-22kHz). This can be due to frequency limitations with the sound card, sound driver or the internal microphone of the particular device. Refer to the Support forum for more information.
- Check Settings > Issues and diagnostics on the user interface, or Maintenance > Diagnostics on the web interface of the video system. If there are no ultrasound related Issues listed ("Unable to verify the ultrasound signal"), ultrasound pairing messages are emitted by the video system as they should. Refer to the Proximity Support forum for further assistance with the client detection issues.

Audio artifacts

- If you can hear audio artifacts, like humming or clipping noise, decrease the maximum ultrasound volume (Audio > Ultrasound > MaxVolume).

Cannot share content from a laptop

- For content sharing to work, the video system and the laptop must be on the same network. For this reason Proximity sharing might fail if your video system is connected to your company network via Expressway, and your laptop is connected via VPN (VPN client dependent).

Additional resources

Cisco Intelligent Proximity site:

Adjust the video quality to call rate ratio

Video input quality settings

When encoding and transmitting video there is a trade-off between high resolution (sharpness) and high frame rate (motion).

The Video Input Connector n Quality setting must be set to Motion for the optimal definition settings to take any effect. With the video input quality set to Sharpness, the endpoint will transmit the highest resolution possible, regardless of frame rate.

Optimal definition profile

The optimal definition profile should reflect the lighting conditions in the video conferencing room and the quality of the camera (video input source). The better the lighting conditions and the better the quality of the camera, the higher the profile should be used.

Generally, the Medium profile is recommended. However, if the lighting conditions are very good, we recommend that you test the endpoint on the various Optimal Definition Profile settings before deciding on a profile. The High profile may be set in order to increase the resolution for a given call rate.

Some typical resolutions used for different optimal definition profiles, call rates and transmit frame rates are shown in the table. The resolution and frame rate must be supported by both the calling and called systems.

<table>

</tbody>
</table>

Sign in to the web interface and navigate to Setup > Configuration.

1. Go to Video > Input > Connector n > Quality and set the video quality parameter to Motion (skip this step for Connector 1 (integrated camera)).
2. Go to Video > Input > Connector n > OptimalDefinition > Profile and choose the preferred optimal definition profile.
Add corporate branding to the screen (page 1 of 2)

Sign in to the web interface, and navigate to Setup > Personalization, and open the Branding tab.

From this page you can add your own branding elements (background brand image, logo, custom message) to the video system.

Branding in the awake state
In the awake state you can:
- Add a logo in the bottom right corner
- Add a short message (text only) in the bottom left corner

About Branding
The Branding feature, as described in this chapter, allows you to customize the screen appearance without compromising the overall Cisco user experience.

We recommend that you use this feature rather than our legacy Custom wallpaper feature, which prevents the use of functionality such as One Button to Push.

You cannot use the Branding feature and a Custom wallpaper at the same time.

If your video system is set up with a Custom wallpaper, you must click Disable the custom wallpaper before adding branding elements.

Logo
We recommend:
- A black logo (the video system will add a white overlay with 40% opacity so that the logo and the other user interface elements go well together)
- PNG-format with transparent background
- Minimum 272x272 pixels (it will be scaled automatically)
Add corporate branding to the screen (page 2 of 2)

Branding in the halfwake state

In halfwake state you can:

- Add a background brand image
- Add a logo in the bottom right corner
- Customize or remove the message at the center of the screen. This is the message that informs the user how to start using the video system

In general, we recommend that you keep the standard message. Change the message only if you have to adapt it to a different scenario, for example if you have a third party user interface.

Background brand image

- When the video system wakes up, the image is shown in full color; after a few seconds the image is automatically dimmed (transparent black overlay)
- Image format: PNG or JPEG
- Recommended size: 1920 × 1080 pixels

Logo

We recommend:

- A white logo (so that it goes well with the dark background brand image)
- PNG-format with transparent background
- Minimum 272×272 pixels
Add a custom wallpaper

Sign in to the web interface, and navigate to Setup > Personalization, and open the Custom wallpaper tab.

Upload a custom wallpaper
Overwrites any old custom wallpaper.

1. Browse to find the custom wallpaper image file.
2. Click Upload to save the file on the video system.
   - Supported file formats: BMP, GIF, JPEG, PNG
   - Maximum file size: 16 megapixels

The custom wallpaper is automatically activated once uploaded.

Delete the custom wallpaper
Delete fully removes the custom wallpaper from the video system.
You have to upload it anew if you want use it again.

About a custom wallpaper
If you want a custom picture as background on your screen, you may upload and use a custom wallpaper. A custom wallpaper will not appear on the Touch controller.

You can only store one custom wallpaper on the video system at a time; a new custom wallpaper overwrites the old one.

We recommend that you use our new Branding feature rather than this legacy Custom wallpaper feature. You will get a better overall Cisco user experience, and avoid losing functionality such as One Button To Push and meeting information. See the Add corporate branding to the screen chapter.

You cannot use the Branding feature and a Custom wallpaper at the same time.

If your video system is set up with branding elements you must click Continue without branding before adding a custom wallpaper.
Choose a ringtone and set the ringtone volume

Sign in to the web interface, and navigate to Setup > Personalization, and open the Ringtones tab.

Change the ringtone

1. Choose a ringtone from the drop-down list.
2. Click Save to make it the active ringtone.

Set the ringtone volume

Use the slide bar to adjust the ringtone volume.

About ringtones

A set of ringtones are installed on the video system. Use the web interface to choose a ringtone, and set the ringtone volume.

You can play back the chosen ringtone from the web interface. Note that the ringtone will be played back on the video system itself, and not on the computer running the web interface.

Play back the ringtone

Click the play button (►) to play back the ringtone.
Use the stop button (■) to end the playback.
Manage the Favorites list

Sign in to the web interface and navigate to Setup > Favorites.

Import/Export contacts from file

Click Export to save the local contacts in a file; and click Import to bring in contacts from a file.

The current local contacts are discarded when you import new contacts from a file.

Add or edit a contact

1. Click Add contact to make a new local contact, or click a contact’s name followed by Edit contact.
2. Fill in or update the form that pops up.
   Choose a folder in the folder drop down list in order to store the contact in a sub-folder.
   Click Add contact method and fill in the new input fields if you want to store more than one contact method for the contact (for example video address, telephone and mobile number).
3. Click Save to store the local contact.

Delete a contact

1. Click a contacts name followed by Edit contact.
2. Click Delete to remove the local contact.

Add or edit a sub-folder

1. Click Add folder to make a new sub-folder, or click one of the listed sub-folders followed by Edit folder to change an existing sub-folder.
2. Fill in or update the form that pops up.
3. Click Save to create or update the folder.

Delete a sub-folder

1. Click a folder’s name followed by Edit folder.
2. Click Delete to remove the folder and all its contacts and sub-folders. Confirm your choice in the dialog that pops up.

Manage Favorites using the video system’s user interface

Add a contact in the Favorites list
1. Select Call on the home screen.
2. Select the contact you want to add.
3. Select the three dots that appear under the Call button on the contact card.
4. Select Mark as favorite.

The contact you add will be placed in the top folder. You cannot select or create a sub-folder.

Remove a contact from the Favorites list
1. Select Call on the home screen.
2. Select the Favorites tab.
3. Select the contact you want to remove.
4. Select the three dots that appear under the Call button on the contact card.
5. Select Unmark as favorite.
Set up accessibility features

Flashing screen for incoming calls
To make it easier for the hearing impaired users to notice when someone is calling, the screen can be setup to flash red and gray on incoming calls.

1. Sign in to the web interface, and navigate to Setup > Configuration.
2. Go to UserInterface > Accessibility > IncomingCallNotification and select AmplifiedVisuals.
3. Click Save.
Chapter 3

Peripherals
Connect a computer

Connect a computer to the HDMI input port in order to use the video system as screen for the computer, and to share content with conference participants.

Flip the connector cover up to uncover the connector panel.
Extend the number of input sources

You can customize our touch user interfaces to include input sources that are connected to a third-party external video switch. The sources will appear and behave as any other video source that is connected directly to the video system.

Consult the CE Customization guide for full details about how to extend the user interface, and how to use the video system’s API to set it up. Go to:

► https://www.cisco.com/go/in-room-control-docs

Architecture

You need a Cisco video system with a touch interface, a third-party control system, for example Crestron or AMX, and a third-party video switch. It is the control system, not the video system, that controls the video switch.

When you program the control system you must use the video system’s API (events and commands)* in order to connect with the video switch and the controls on the touch interface. This way you can synchronize what is shown and done on the user interface with the actual state of the input sources.

* You need a user that holds the ROOMCONTROL, INTEGRATOR, or ADMIN user roles in order to access the API commands that you need when programming the control system.
Bluetooth headset

Bluetooth headset is supported on DX70 and DX80.

- Bluetooth profiles supported:
  - HFP (Hands-Free Profile)
  - A2DP (Advanced Audio Distribution Profile)
  - The headset must support both HFP and A2DP or HFP-only. Headsets with A2DP-only is not supported.
- Bluetooth headset is supported directly with the embedded Bluetooth radio or using a USB Bluetooth dongle.
- Multiple headsets can be paired to the video system, but only one can be connected at a time.
- The range is up to 10 m (30 ft). If you move outside the range when in a call, the audio will switch to the speakers on the video system.
- Most headsets have built in volume controls. When in a call, the volume of the headset and video system is synchronized. When not in a call, the volume buttons on the headset and video system operates independently.

Supported Bluetooth features:

- Answer incoming calls
- Reject incoming calls
- Hang up calls
- Volume up and down
- Some headsets have mute control. This operates independently from the mute control on on video system.

USB Bluetooth dongle

- Using the USB Bluetooth dongle is advisable as it gives better audio quality.
- When using a USB Bluetooth dongle the headset is detected as a USB headset.
- There will be no synchronization of headset volume and video system volume when using a dongle.
- We have tested Jabra Link 360, Plantronics BT300 and Plantronics BT600; though others might work as well.

Pairing a Bluetooth headset

1. Activate Bluetooth pairing on the headset. Refer to the instruction manual for the headset if in doubt.
2. Select the contact information in the upper left corner of the user interface. Select Settings, followed by Bluetooth. If Bluetooth is disabled, turn it on. Bluetooth is enabled by default.
3. The video system will scan for devices. Upon successful discovery the Bluetooth headset should be displayed in the device list.
4. Select the device and pairing begins. It may take a few seconds for the pairing to complete.
5. If the pairing is successful the video system will now list the headset as connected. The pairing is now completed.

Switch between devices

You can switch between the speaker on the video system and the devices that are connected via Bluetooth or USB.

Select the icon in the status bar of the user interface, and choose from the available devices.

- Speakers
- Analog headset (DX70 only)
- USB headset
- USB handset
- Bluetooth device

You may use Bluetooth pairing directly to the video system, or use a USB dongle.
Connect the ISDN Link

The ISDN Link enables a video system to use ISDN lines for connectivity, and enables both video calls and telephone calls over the PSTN (Public Switched Telephone Network).

ISDN Link support ISDN BRI, ISDN PRI and V.35. ISDN can be used in addition to regular IP connectivity for SIP or H.323 calls, or without any IP infrastructure.

ISDN Link is managed from the video systems web interface. Sign in to the web interface, and navigate to Setup > Peripherals.

Requirements:

- The ISDN Link must be running IL1.1.7 software or later
- The video system (codec) must be running CE9.3 software or later. The ISDN Link must be re-paired with the video system after the video system has been converted from TC software to CE software.
- The video endpoint must have IPv6 enabled in the web interface or API in order to communicate with the ISDN Link
- Observe the network topology in the ISDN Link Installation Guide in order to guarantee a successful installation
- The video system and ISDN Link must be on the same subnet. If the endpoint or ISDN Link are assigned new IP addresses they will only remain paired as long as they are kept in the same subnet.

Limitations:

- Video systems that are registered to the Cisco Webex cloud service are not able to use ISDN Link.

Setup and configuration

When converting the video system from TC (TC6 or later) to CE software (CE9.3 or later) the ISDN Link will automatically be unpaired due to security reasons.

Chapter 4

Maintenance
Upgrade the system software (page 1 of 2)

Convert between Android-based software and CE software

From Collaboration Software version 8.2 (CE8.2) all DX80 and DX70 units can run CE software, which is the same software that runs on the Cisco TelePresence SX and MX Series.

DX80 and DX70 were originally shipped with Android based software, but are now shipping with CE software.

Before converting to CE software, it is important to carefully consider the conversion requirements and the functionality changes compared to Android based software.

The CE software on DX devices does not support the following features in CE9.1:

- 3rd party app installation
- Keyboard control, keyboard and mouse redirect

Refer to the Software Release Notes for further information.

Upgrading from CE8 to CE9

The MultiStream feature with Cisco TelePresence Server is deprecated in CE9.

Also, some features that were available from the touch interface in CE8, are not available in the first CE9 releases. Read the release notes for details before you upgrade.

Find a detailed description about how to convert from Android-based software and CE software, and vice versa, in the Cisco Webex DX70 and DX80 Convert between CE and Android based software guide available under Install and Upgrade Guides at https://www.cisco.com/go/dx-docs
Upgrade the system software (page 2 of 2)

Note: You can only upgrade to another CE software version using this procedure, for example from CE8.2.x to CE8.2.y.

If you want to convert between Android-based software, and CE software, refer to the previous page.

Sign in to the web interface and navigate to Maintenance > Software Upgrade.

Download new software

For software download, go to the Cisco Download Software web page, and select your product:
► https://software.cisco.com/download/home

Each software version has a unique file name. The format of the file name is “s52040ce9_5_x.pkg”.

Install new software

Download the appropriate software package and store it on your computer. This is a .pkg file. Don’t change the file name.

1. Click Browse... and find the .pkg file that contains the new software.
   The software version will be detected and shown.

2. Click Install software to start the installation process.

   The complete installation normally take no longer than 15 minutes. You can follow the progress on the web page. The video system restarts automatically after the installation.

   You must sign in anew in order to continue working with the web interface after the restart.

Software release notes

For a complete overview of the news and changes, we recommend reading the Software Release Notes (CE9).

About software versions

This video conference system is using CE software. The version described in this document is CE9.5.x.
Add option keys

Sign in to the web interface and navigate to Maintenance > Option Keys.

You see a list of all option keys, also the ones that are not installed on your video system.

Contact your Cisco representative for information about how to get option keys for the uninstalled options.

About option keys

Your video system may or may not have one or more software options installed. In order to activate the optional functionality the corresponding option key must be present on the video system.

Each video system has unique option keys.

Option keys are not deleted when performing a software upgrade or factory reset, so they need to be added only once.

The video system's serial number

You need the video system's serial number when ordering an option key.

Add an option key

1. Enter an Option Key in the text input field.
2. Click Add option key.

If you want to add more than one option key, repeat these steps for all keys.
System status

System information overview
Sign in to the web interface to see the System Information page.
This page shows the product type, system name and basic information about the hardware, software, installed options and network address. Registration status for the video networks (SIP and H.323) is included, as well as the number/URI to use when making a call to the system.

Detailed system status
Sign in to the web interface, and navigate to Setup > Status in order to find more detailed status information.

Search for a status entry
Enter as many letters as needed in the search field. All entries that contain these letters are shown in the right pane. Entries that have these letters in their value space are also shown.

Select a category and navigate to the correct status
The system status is grouped in categories. Choose a category in the left pane to show the related status to the right.

* The status shown in the illustration serve as an example. The status of your system may be different.
Run diagnostics

Sign in to the web interface and navigate to Maintenance > Diagnostics.

The diagnostics page lists the status for some common sources of errors.*

Errors and critical issues are clearly marked in red color; warnings are yellow.

Run diagnostics

Click Re-run diagnostics to ensure that the list is up to date.

Leave standby mode

Click Wake up the system to wake up a video system that is in standby mode.

* The messages shown in the illustration serve as examples. Your system may show other information.
Download log files

Sign in to the web interface and navigate to Maintenance > System Logs.

Download all log files

Click Download logs archive... and follow the instructions.

An anonymized call history is included in the log files by default.

Use the drop down list if you want to exclude the call history from the log files, or if you want to include the full call history (non-anonymous caller/callee).

Open/save one log file

Click the file name to open the log file in the web browser; right click to save the file on the computer.

Start extended logging

Click Start extended logging...

Extended logging lasts for 3 or 10 minutes, depending on whether full capture of network traffic is included or not.

Click Stop extended logging if you want to stop the extended logging before it times out.

As default, the network traffic is not captured. Use the drop down menu if you want to include partial or full capture of network traffic.

Refresh a log file list

Click the refresh button for Current logs or Historical logs to update the corresponding lists.

About log files

The log files are Cisco specific debug files which may be requested by the Cisco support organization if you need technical support.

The current log files are time stamped event log files.

All current log files are archived in a time stamped historical log file each time the video system restarts. If the maximum number of historical log files is reached, the oldest one will be overwritten.

Extended logging mode

Extended logging mode may be switched on to help diagnose network issues and problems during call setup. While in this mode more information is stored in the log files.

Extended logging uses more of the video system’s resources, and may cause the video system to under-perform. Only use extended logging mode when you are troubleshooting an issue.
Create a remote support user

Sign in to the web interface, navigate to **Maintenance > System Recovery** and select the **Remote Support User** tab.

⚠️ The remote support user should only be enabled for troubleshooting reasons when instructed by Cisco TAC.

### Create remote support user

1. Click **Create user**.
2. Open a case with Cisco TAC.
3. Copy the text in the **Token** field and send it to Cisco TAC.
4. Cisco TAC will generate a **password**.

The remote support user is valid for seven days, or until it is deleted.

### Delete remote support user

Click **Delete user**.

---

### About the remote support user

In cases where you need to diagnose problems on the video system you can create a remote support user.

The remote support user is granted read access to the system and has access to a limited set of commands that can aid troubleshooting.

You will need assistance from Cisco Technical Assistance Center (TAC) to acquire the password for the remote support user.
Backup and restore configurations and custom elements

Sign in to the web interface and navigate to Maintenance > Backup and Restore.

You can include custom elements as well as configurations in a backup file (zip-format). You can choose which of the following elements to include in the bundle:

- Branding images
- Macros
- Favorites
- Sign-in banner
- In-room control panels
- Configurations/settings (all or a sub-set)

The backup file can either be restored manually from the video system's web interface, or you can generalize the backup bundle so that it can be provisioned across multiple video systems, for example using Cisco UCM or TMS (see the next chapters).

Create a backup file

1. Open the Create backup tab.
2. Select the elements you want to include in the backup file. Elements that currently don't exist on the video system are greyed out.
3. Select which settings - if any - you want to include in the backup file. Note the following:
   - As default, all settings are included in the backup file.
   - You can remove one or more settings manually by deleting them from the list on the web page.
   - If you want to remove all settings that are specific to one video system, click Remove system-specific configurations.
     This is useful if you are going to restore the backup bundle on other video systems.
4. Click Download backup to store the elements in a zip-file on your computer.

Restore a backup file

1. Choose the Restore backup tab.
2. Click Browse... and find the backup file you want to restore.
   All settings and elements in the backup file will be applied.
3. Click Upload file to apply the backup.
   Some settings may require that you restart the video system before they take effect.

Additional information

Restoring macros

If a backup file that contains macros is restored on a video system the following applies:

- The macro runtime is started or restarted.
- The macros are automatically activated (started).

Restoring branding images

If a backup bundle contains branding images, the UserInterface Wallpaper setting is automatically set to Auto.

This means that the branding images will automatically be displayed, possibly replacing a custom wallpaper.

The backup file

The backup file is a zip-file that contains several files. It is important that the files are at the top level within the zip-file, and not include in a folder.
CUCM provisioning of custom elements

A backup file, as described in the ► Backup and restore configurations and custom elements chapter, can be used as a customization template for multiple video systems.

The customization template (backup file) may be hosted on either:
• the CUCM TFTP file service, or
• a custom web server that can be reached by the video systems on HTTP or HTTPS.

When a video system get information from CUCM (Cisco Unified Communications Manager) about the name and location of a customization template, the video system will contact the server, download the file, and restore the custom elements.

Configurations will not be restored on the video system, even if they are part of the backup file that you use as a customization template.

Upload a customization template to the TFTP file server

1. Sign in to Cisco Unified OS Administration.
2. Navigate to Software Upgrades > TFTP File Management.
3. Click Upload File. Enter the name and path of the customization template in the input field.
4. Click Upload File.

Add customization provisioning information for each video system

1. Sign in to Cisco Unified CM Administration.
2. Navigate to Device > Phone.
3. Fill in the Customization Provisioning fields in the product specific configuration section of the relevant devices:
   • Customization File: The customization template file name (for example: backup.zip)
   • Customization Hash Type: SHA512
   • Customization Hash: The SHA512 checksum for the customization template.
   If these fields are not present, you must install a newer Device Package on CUCM.
4. Click Save and Apply Config to push the configuration to the video systems.

* If not using the TFTP Service, you must enter the complete URI for the customization template: <hostname>:<portnumber>/<path-and-filename>

For example:
• http://host:6970/backup.zip, or
• https://host:6971/backup.zip

SHA512 checksum

Tip! You can find the SHA512 checksum of a file by restoring it to a video system using its web interface.

1. Sign in to the web interface and navigate to Maintenance > Backup and Restore.
2. Choose the Restore backup tab.
3. Click Browse... and find the file you want to calculate the checksum for.
   Then you can see the SHA512 checksum at the bottom of the page.

CUCM documentation

TMS provisioning of custom elements

A backup file, as described in the Backup and restore configurations and custom elements chapter, can be used as a customization template for multiple video systems.

The backup file must be hosted on a custom web server that can be reached by the video systems on HTTP or HTTPS.

When a video system get information from TMS (TelePresence Management Suite) about the name and location of the backup file, the video system will contact the server, download the file, and restore the custom elements.

Create and apply a configuration template

1. Create a configurations template.
2. Add a custom command containing the following XML string in the configuration template:

   ```xml
   <Command>
     <Provisioning>
       <Service>
         <Fetch>
           <URL>web-server-address</URL>
           <Checksum>checksum</Checksum>
           <Origin>origin</Origin>
         </Fetch>
       </Service>
     </Provisioning>
   </Command>
   ``

   where

   - `web-server-address`: The URI to the backup file (for example, http://host/backup.zip).
   - `checksum`: The SHA512 checksum of the backup file.
   - `origin`: Provisioning

3. Select the video systems you want to push the configuration template to, and click Set on systems.

Read the Cisco TMS administrator guide for details how to create TMS configurations templates and make custom commands.

SHA512 checksum

Tip! You can find the SHA512 checksum of a file by restoring it to a video system using its web interface.

1. Sign in to the web interface and navigate to Maintenance > Backup and Restore.
2. Choose the Restore backup tab.
3. Click Browse... and find the file you want to calculate the checksum for. Then you can see the SHA512 checksum at the bottom of the page.

* If not setting this parameter to Provisioning, also configurations that are part of the backup file will be pushed to the video system. If the backup file contains configurations that are specific to one video system, for example static IP addresses, system name, and contact information, you may and up with video systems that you cannot reach.
Revert to the previously used software image

Sign in to the web interface and navigate to Maintenance > System Recovery.

Note: You can only revert to another CE software version using this procedure, for example from CE8.3.y to CE8.2.x.

If you want to convert back to Android-based software, refer to the Upgrade the system software chapter.

We recommend you to back up the log files, configurations, and custom elements of the video system before you swap to the previously used software image.

Back up log files, configurations and custom elements

1. Select the Backup tab.
2. Click Download logs and follow the instructions to save the log files on your computer.
3. Click Download backup and follow the instructions to save the backup bundle on your computer.

Revert to the previously used software image

Only administrators, or when in contact with Cisco technical support, should perform this procedure.

1. Select the Software Recovery Swap tab.
2. Click Switch to software: cex.y.z..., where x.y.z indicates the software version.
3. Click Yes to confirm your choice, or Cancel if you have changed your mind.

Wait while the system resets. The system restarts automatically when finished. This procedure may take a few minutes.

About the previously used software image

If there is a severe problem with the video system, switching to the previously used software image may help solving the problem.

If the system has not been factory reset since the last software upgrade, the previously used software image still resides on the system. You do not have to download the software again.
Factory reset the video system

If there is a severe problem with the video system, the last resort may be to reset it to its default factory settings.

It is not possible to undo a factory reset.

Always consider reverting to the previously used software image before performing a factory reset. In many situations this will recover the system. Read about software swapping in the Revert to the previously used software image chapter.

We recommend that you use the web interface or user interface to factory reset the video system. If these interfaces are not available, use the reset pin-hole for DX80 and the mute and volume buttons for DX70.

A factory reset implies:

- Call logs are deleted.
- Passphrases are reset to default.
- All system parameters are reset to default values.
- All files that have been uploaded to the system are deleted. This includes, but is not limited to, custom wallpaper, certificates, and favorites lists.
- The previous (inactive) software image is deleted.
- Option keys are not affected.

The video system restarts automatically after the factory reset. It is using the same software image as before.

We recommend that you back up the log files, configurations, and custom elements of the video system before you perform a factory reset; otherwise these data will be lost.
Factory reset the video system

Factory reset using the web interface

We recommend that you back up the log files and configuration of the video system before you continue with the factory reset.

Sign in to the web interface and navigate to Maintenance > System Recovery.

1. Select the Factory Reset tab, and read the provided information carefully.
2. Click Perform a factory reset....
3. Click Yes to confirm your choice, or Cancel if you have changed your mind.
4. Wait while the video system reverts to the default factory settings. When finished, the video system restarts automatically. This may take a few minutes.

When the system has been successfully reset to factory settings, the Setup assistant starts with the Welcome screen.

Factory reset from the user interface

We recommend that you back up the log files and configuration of the video system before you continue with the factory reset.

1. Select the contact information in the upper left corner of the user interface.
2. Select Settings.
4. Select Reset to confirm your choice, or Back if you have changed your mind.
5. Wait while the video system reverts to the default factory settings. When finished, the video system restarts automatically. This may take a few minutes.

When the system has been successfully reset to factory settings, the Setup assistant starts with the Welcome screen.

Back up log files, configurations, and custom elements

Sign in to the web interface and navigate to Maintenance > System Recovery.

Back up log files, configurations, and custom element

1. Select the Backup tab.
2. Click Download logs and follow the instructions to save the log files on your computer.
3. Click Download backup and follow the instructions to save the backup bundle on your computer.
Factory reset the video system (page 3 of 4)

We recommend that you back up the log files and configuration of the video system before you continue with the factory reset.

Factory reset DX80 using the mute and volume buttons

Follow these steps to factory reset a DX80 on boot up. If the video system is on, press and hold the power button until the system shuts down before you continue.

1. Locate the **Mute** and **Volume up** buttons.
2. Press and hold the **Volume Up** button and power on the device.
3. Release the **Volume Up** button when the **Mute** button is lit red, then press the **Mute** button.

Wait while the video system reverts to the default factory settings. The video system restarts automatically when finished. This may take a few minutes.

When the system has been successfully reset to factory settings, the Setup assistant starts and you will see the Welcome screen.

Factory reset DX80 using the reset button

To use this method, the DX80 must be up and running.

1. Flip the connector cover up to uncover the connector panel at the rear of the video system.
2. Use the tip of a pen (or similar) to press the recessed reset button. Hold the button for 1-2 seconds, until a notification Resetting to factory settings shows on screen.
3. Wait while the video system reverts to the default factory settings. The video system restarts automatically when finished. This may take a few minutes.

When the system has been successfully reset to factory settings, the Setup assistant starts and you will see the Welcome screen.
We recommend that you back up the log files and configuration of the video system before you continue with the factory reset.

Factory reset DX70 using the mute and volume buttons

Follow these steps to factory reset a DX70 on boot up. If the video system is on, press and hold the power button until the system shuts down before you continue.

1. Locate the *Mute* and *Volume up* buttons (LEDs).
2. Press the power button, and pay attention to the *Mute* button.
3. When the *Mute* button has blinked twice, press the *Volume up* button, immediately followed by pressing and holding the *Mute* button for approximately 4 seconds. During this process the *Mute* button turns red for a few seconds.

Wait while the video system reverts to the default factory settings. The video system restarts automatically when finished. This may take a few minutes.

When the system has been successfully reset to factory settings, the Setup assistant starts with the *Welcome* screen.
Capture user interface screenshots

Sign in to the web interface and navigate to Maintenance > User Interface Screenshots.

### About user interface screenshots

You can capture screenshots of the on-screen display (menus, indicators and messages on the main display).

### Delete screenshots

If you want to delete all screenshots, click Remove all.

To delete just one screenshot, click the × button for that screenshot.

### Capture a screenshot

Click Take screenshot of OSD to capture a screenshot of the on-screen display.

The screenshot displays in the area below the buttons. It may take up to 30 seconds before the screenshot is ready.

All captured snapshots are included in the list above the buttons. Click the screenshot ID to display the image.
Chapter 5

System settings
Overview of the system settings

In the following pages you will find a complete list of the system settings which are configured from the Setup > Configuration page on the web interface.

Open a web browser and enter the IP address of the video system then sign in.

How to find the IP address

1. Select the contact information in the upper left corner of the user interface.
2. Select Settings, followed by About this device.

Audio settings

### Audio DefaultVolume

Define the default volume for the speakers. The volume is set to this value when you switch on or restart the video system. Use the controls on the user interface to change the volume while it is running. You may also use API commands (xCommand Audio Volume) to change the volume while the video system is running, and to reset to default value.

Requires user role: ADMIN, INTEGRATOR, USER

Default value: 50

Value space: Integer (0..100)

Range: Select a value between 1 and 100. This corresponds to the dB range from −34.5 dB to 15 dB, in steps of 0.5 dB. If set to 0 the audio is switched off.

### Audio Input MicrophoneMode

This setting applies only to DX80.

The DX80 has microphones in both legs. If you set the microphone mode to Focused, the microphones can be combined to focus sound sensitivity. As a result, the noise in the room is suppressed, and you can be heard better when sitting right in front of the video system.

The voice of people not sitting right in front of the system will be suppressed.

If you set the microphone mode to Wide, the system behaves like any other system. The voice of people sitting beside you will be heard, and also more noise from the room.

We recommend that you use Focused mode when you are the only speaker. Use Wide mode when several speakers are in front of the system.

Requires user role: ADMIN, INTEGRATOR

Default value: Wide

Value space: Focused/Wide

- Focused: Focused sound sensitivity, suppressing sound from sources that are not right in front of the video system.
- Wide: Default microphone operation with normal sound sensitivity.

### Audio Microphones Mute Enabled

Define the microphone mute behavior on the video system.

Requires user role: ADMIN, INTEGRATOR

Default value: True

Value space: True/InCallOnly

- True: Muting of audio is always available.
- InCallOnly: Muting of audio is only available when the device is in a call. When Idle it is not possible to mute the microphone. This is useful when an external telephone service/audio system is connected via the codec and is to be available when the codec is not in a call. When set to InCallOnly this will prevent the audio-system from being muted by mistake.

### Audio SoundsAndAlerts RingTone

Define which ringtone to use for incoming calls.

Requires user role: ADMIN, INTEGRATOR, USER

Default value: Sunrise

Value space: Sunrise/Mischief/Ripples/Reflections/Vibes/Delight/Evolve/Playful/Ascent/Calculation/Mellow/Ringer

Select a ringtone from the list.

### Audio SoundsAndAlerts RingVolume

Define the ring volume for incoming calls.

Requires user role: ADMIN, INTEGRATOR, USER

Default value: 50

Value space: Integer (0..100)

Range: The value goes in steps of 5 from 0 to 100 (from −34.5 dB to 15 dB). Volume 0 = Off.
Audio Ultrasound Mode

This setting applies to the Intelligent Proximity feature. Keep the setting at its default value.

Requires user role: ADMIN, INTEGRATOR
Default value: Dynamic

Value space: Dynamic/Static
  - Dynamic: The video system adjusts the ultrasound volume dynamically. The volume may vary up to the maximum level as defined in the Audio Ultrasound Volume MaxVolume setting.
  - Static: Use only if advised by Cisco.

Audio Ultrasound MaxVolume

This setting applies to the Intelligent Proximity feature. Set the maximum volume of the ultrasound pairing message.

Requires user role: ADMIN, INTEGRATOR
Default value: DX80: 70   DX70: 60

Value space: DX80: Integer (0..90)   DX70: Integer (0..60)
  - Select a value in the specified range. If set to 0, the ultrasound is switched off.
Bluetooth settings

Bluetooth Allowed
The video system has a built-in Bluetooth module. As a default, the user can turn it on or off using the user interface. With this setting, the administrator can disable Bluetooth configuration, so that it cannot be set up from the user interface.

Requires user role: ADMIN
Default value: True
Value space: False/True
- False: Bluetooth is switched off by the administrator, and the user cannot turn it on from the user interface.
- True: Bluetooth is allowed. The user can turn it on or off from the user interface.

Bluetooth Enabled
Provided that Bluetooth connections are allowed (see the Bluetooth Allowed setting), you can use this setting to enable and disable Bluetooth. The video system supports the HFP (Hands-Free Profile) and A2DP (Advanced Audio Distribution Profile) profiles. Headsets that only supports A2DP cannot be used.

Requires user role: ADMIN
Default value: False
Value space: False/True
- False: Bluetooth is disabled, and no Bluetooth devices can pair with the video system.
- True: Bluetooth is enabled, and you can pair and use a Bluetooth headset.
CallHistory settings

CallHistory Mode
Determine whether or not information about calls that are placed or received are stored, including missed calls and calls that are not answered (call history). This determines whether or not the calls appear in the Recents list in the user interfaces.

Requires user role: ADMIN, INTEGRATOR
Default value: On

Value space: Off/On
- Off: New entries are not added to the call history.
- On: New entries are stored in the call history list.
Cameras settings

Cameras Camera [1..1] Backlight DefaultMode
This configuration turns backlight compensation on or off. Backlight compensation is useful when there is much light behind the persons in the room. Without compensation the persons will easily appear very dark to the far end.

Requires user role: ADMIN, INTEGRATOR
Default value: Off

Value space: Off/On
- Off: Turn off the camera backlight compensation.
- On: Turn on the camera backlight compensation.
Conference settings

Conference ActiveControl Mode
Active control is a feature that allows conference participants to administer a conference on Cisco TelePresence Server or Cisco Meeting Server using the video system’s interfaces. Each user can see the participant list, change video layout, disconnect participants, etc. from the interface. The active control feature is enabled by default, provided that it is supported by the infrastructure (Cisco Unified Communications Manager (CUCM) version 9.1.2 or newer, Cisco TelePresence Video Communication Server (VCS) version X8.1 or newer, Cisco Media Server (CMS) version 2.1 or newer). Change this setting if you want to disable the active control features.

Requires user role: ADMIN
Default value: Auto
Value space: Auto/Off
  Auto: Active control is enabled when supported by the infrastructure.
  Off: Active control is disabled.

Conference AutoAnswer Mode
Define the auto answer mode. Use the Conference AutoAnswer Delay setting if you want the system to wait a number of seconds before answering the call, and use the Conference AutoAnswer Mute setting if you want your microphone to be muted when the call is answered.

Requires user role: ADMIN
Default value: Off
Value space: Off/On
  Off: You can answer incoming calls manually by tapping Answer.
  On: The system automatically answers incoming calls, except if you are already in a call. You can answer or decline incoming calls manually when you are already engaged in a call.

Conference AutoAnswer Mute
Define if the microphone shall be muted when an incoming call is automatically answered. Requires that AutoAnswer Mode is switched on.

Requires user role: ADMIN
Default value: Off
Value space: Off/On
  Off: The incoming call will not be muted.
  On: The incoming call will be muted when automatically answered.

Conference AutoAnswer Delay
Define how long (in seconds) an incoming call has to wait before it is answered automatically by the system. Requires that AutoAnswer Mode is switched on.

Requires user role: ADMIN
Default value: 0
Value space: Integer (0..50)
  The auto answer delay (seconds).

Conference CallProtocolIPStack
Select if the system should enable IPv4, IPv6, or dual IP stack on the call protocol (SIP, H323).

Requires user role: ADMIN
Default value: Dual
Value space: Dual/IPv4/IPv6
  Dual: Enables both IPv4 and IPv6 for the call protocol.
  IPv4: When set to IPv4, the call protocol will use IPv4.
  IPv6: When set to IPv6, the call protocol will use IPv6.
Conference DefaultCall Protocol

Define the Default Call Protocol to be used when placing calls from the system.

Requires user role: ADMIN
Default value: Auto

Value space: Auto/H320/H323/Sip/Spark
  Auto: Enables auto-selection of the call protocol based on which protocols are available. If multiple protocols are available, the order of priority is: 1) SIP; 2) H323; 3) H320. If the system cannot register, the auto-selection chooses H323.
  H320: All calls are set up as H.320 calls (only applicable if used with Cisco TelePresence ISDN Link).
  H323: All calls are set up as H.323 calls.
  Sip: All calls are set up as SIP calls.
  Spark: Reserved for Webex registered systems. Do not use.

Conference DefaultCall Rate

Define the Default Call Rate to be used when placing calls from the system.

Requires user role: ADMIN, INTEGRATOR
Default value: 3072

Value space: Integer (64..3072)
  The default call rate (kbps).

Conference DoNotDisturb DefaultTimeout

This setting determines the default duration of a Do Not Disturb session, i.e. the period when incoming calls are rejected and registered as missed calls. The session can be terminated earlier by using the user interface.

Requires user role: ADMIN, INTEGRATOR
Default value: 60

Value space: Integer (1..1440)
  The number of minutes (maximum 1440 minutes = 24 hours) before the Do Not Disturb session times out automatically.

Conference Encryption Mode

Define the conference encryption mode. A padlock with the text “Encryption On” or “Encryption Off” displays on screen for a few seconds when the conference starts.

NOTE: If the Encryption Option Key is not installed on the video system, the encryption mode is always Off.

Requires user role: ADMIN
Default value: BestEffort

Value space: Off/On/BestEffort
  Off: The system will not use encryption.
  On: The system will only allow calls that are encrypted.
  BestEffort: The system will use encryption whenever possible.
  > In Point to point calls: If the far end system supports encryption (AES-128), the call will be encrypted. If not, the call will proceed without encryption.
  > In MultiSite calls: In order to have encrypted MultiSite conferences, all sites must support encryption. If not, the conference will be unencrypted.

Conference FarEndControl Mode

Lets you decide if the remote side (far end) should be allowed to select your video sources and control your local camera (pan, tilt, zoom).

Requires user role: ADMIN
Default value: On

Value space: Off/On
  Off: The far end is not allowed to select your video sources or to control your local camera (pan, tilt, zoom).
  On: Allows the far end to be able to select your video sources and control your local camera (pan, tilt, zoom). You will still be able to control your camera and select your video sources as normal.
**Conference FarEndControl SignalCapability**
Define the far end control (H.224) signal capability mode.
Requires user role: ADMIN
Default value: On
Value space: Off/On
   Off: Disable the far end control signal capability.
   On: Enable the far end control signal capability.

**Conference FarEndMessage Mode**
Toggle whether it is allowed to send data between two codecs in a point-to-point call, for use with control systems or macros. Works with SIP calls only. This setting will enable/disable the use of the xCommand Call FarEndMessage Send command.
Requires user role: ADMIN
Default value: Off
Value space: Off/On
   Off: It is not possible to send messages between two codecs.
   On: It is possible to send messages between two codecs in a point-to-point call.

**Conference MaxReceiveCallRate**
Define the maximum receive bit rate to be used when placing or receiving calls. Note that this is the maximum bit rate for each individual call; use the Conference MaxTotalReceiveCallRate setting to set the aggregated maximum for all simultaneous active calls.
Requires user role: ADMIN
Default value: 3072
Value space: Integer (64..3072)
   The maximum receive call rate (kbps).

**Conference MaxTransmitCallRate**
Define the maximum transmit bit rate to be used when placing or receiving calls. Note that this is the maximum bit rate for each individual call; use the Conference MaxTotalTransmitCallRate setting to set the aggregated maximum for all simultaneous active calls.
Requires user role: ADMIN
Default value: 3072
Value space: Integer (64..3072)
   The maximum transmit call rate (kbps).

**Conference MaxTotalReceiveCallRate**
Define the maximum overall receive bit rate allowed. This product does not support multiple simultaneous calls, so the total receive call rate will be the same as the receive bit rate for one call (ref. Conference MaxReceiveCallRate setting).
Requires user role: ADMIN
Default value: 3072
Value space: Integer (64..3072)
   The maximum receive call rate (kbps).

**Conference MaxTotalTransmitCallRate**
Define the maximum overall transmit bit rate allowed. This product does not support multiple simultaneous calls, so the total transmit call rate will be the same as the transmit bit rate for one call (ref. Conference MaxTransmitCallRate setting).
Requires user role: ADMIN
Default value: 3072
Value space: Integer (64..3072)
   The maximum transmit call rate (kbps).
Conference MicUnmuteOnDisconnect Mode
Define if the microphones shall be unmuted automatically when all calls are disconnected. In a meeting room or other shared resources this may be done to prepare the system for the next user.

Requires user role: ADMIN
Default value: On

Value space: Off/On
- Off: If muted during a call, let the microphones remain muted after the call is disconnected.
- On: Unmute the microphones after the call is disconnected.

Conference Presentation OnPlacedOnHold
Define whether or not to continue sharing a presentation after the remote site has put you on hold.

Requires user role: ADMIN
Default value: NoAction

Value space: NoAction/Stop
- NoAction: The video system will not stop the presentation sharing when put on hold. The presentation will not be shared while you are on hold, but it will continue automatically when the call is resumed.
- Stop: The video system stops the presentation sharing when the remote site puts you on hold. The presentation will not continue when the call is resumed.

Conference VideoBandwidth Mode
Define the conference video bandwidth mode.

Requires user role: ADMIN
Default value: Dynamic

Value space: Dynamic/Static
- Dynamic: The available transmit bandwidth for the video channels are distributed among the currently active channels. If there is no presentation, the main video channels will use the bandwidth of the presentation channel.
- Static: The available transmit bandwidth is assigned to each video channel, even if it is not active.
FacilityService settings

FacilityService Service [1..5] Type

Up to five different facility services can be supported simultaneously. With this setting you can select what kind of services they are. A facility service is not available unless both the FacilityService Service [n] Name and the FacilityService Service [n] Number settings are properly set. Facility services are available from the user interface.

Requires user role: ADMIN, INTEGRATOR
Default value: Helpdesk

Value space: Catering/Concierge/Emergency/Helpdesk/Security/Transportation/Other
- Catering: Select this option for catering services.
- Concierge: Select this option for concierge services.
- Emergency: Select this option for emergency services.
- Helpdesk: Select this option for helpdesk services.
- Security: Select this option for security services.
- Transportation: Select this option for transportation services.
- Other: Select this option for services not covered by the other options.

FacilityService Service [1..5] Name

Define the name of the facility service. Up to five different facility services are supported. A facility service is not available unless both the FacilityService Service [n] Name and the FacilityService Service [n] Number settings are properly set. The name will show on the facility service call button, which appears when you tap the question mark icon in the top bar. Facility services are available from the user interface.

Requires user role: ADMIN, INTEGRATOR
Default value: Service 1: "Live Support"   Other services: ""

Value space: String (0, 1024)
- The name of the facility service.

FacilityService Service [1..5] Number

Define the number (URI or phone number) of the facility service. Up to five different facility services are supported. A facility service is not available unless both the FacilityService Service [n] Name and the FacilityService Service [n] Number settings are properly set. Facility services are available from the user interface.

Requires user role: ADMIN, INTEGRATOR
Default value: **

Value space: String (0, 1024)
- The number (URI or phone number) of the facility service.

FacilityService Service [1..5] CallType

Define the call type for each facility service. Up to five different facility services are supported. A facility service is not available unless both the FacilityService Service [n] Name and the FacilityService Service [n] Number settings are properly set. Facility services are available from the user interface.

Requires user role: ADMIN, INTEGRATOR
Default value: Video

Value space: Audio/Video
- Audio: Select this option for audio calls.
- Video: Select this option for video calls.
H323 settings

H323 Authentication Mode
Define the authentication mode for the H.323 profile.
Requires user role: ADMIN
Default value: Off
Value space: Off/On
  Off: The system will not try to authenticate itself to a H.323 Gatekeeper, but will still try a normal registration.
  On: If an H.323 Gatekeeper indicates that it requires authentication, the system will try to authenticate itself to the gatekeeper. Requires the H323 Authentication LoginName and H323 Authentication Password settings to be defined on both the codec and the Gatekeeper.

H323 Authentication LoginName
The system sends the H323 Authentication Login Name and the H323 Authentication Password to an H.323 Gatekeeper for authentication. The authentication is a one way authentication from the codec to the H.323 Gatekeeper, i.e. the system is authenticated to the gatekeeper. If the H.323 Gatekeeper indicates that no authentication is required, the system will still try to register. Requires the H.323 Authentication Mode to be enabled.
Requires user role: ADMIN
Default value: ""
Value space: String (0, 50)
  The authentication login name.

H323 Authentication Password
The system sends the H323 Authentication Login Name and the H323 Authentication Password to an H.323 Gatekeeper for authentication. The authentication is a one way authentication from the codec to the H.323 Gatekeeper, i.e. the system is authenticated to the gatekeeper. If the H.323 Gatekeeper indicates that no authentication is required, the system will still try to register. Requires the H.323 Authentication Mode to be enabled.
Requires user role: ADMIN
Default value: "*
Value space: String (0, 50)
  The authentication password.

H323 CallSetup Mode
Defines whether to use a Gatekeeper or Direct calling when establishing H.323 calls.
Direct H.323 calls can be made also when H323 CallSetup Mode is set to Gatekeeper.
Requires user role: ADMIN
Default value: Gatekeeper
Value space: Direct/Gatekeeper
  Direct: You can only make an H.323 call by dialing an IP address directly.
  Gatekeeper: The system uses a Gatekeeper to make an H.323 call. When choosing this option, the H323 Gatekeeper Address must also be configured.
H323 Encryption KeySize
Define the minimum or maximum key size for the Diffie-Hellman key exchange method, which is used when establishing the Advanced Encryption Standard (AES) encryption key.
Requires user role: ADMIN
Default value: Min1024bit
Value space: Max1024bit/Min1024bit/Min2048bit
- Max1024bit: The maximum size is 1024 bit.
- Min1024bit: The minimum size is 1024 bit.
- Min2048bit: The minimum size is 2048 bit.

H323 Gatekeeper Address
Define the IP address of the Gatekeeper. Requires H323 CallSetup Mode to be set to Gatekeeper.
Requires user role: ADMIN
Default value: ""
Value space: String (0, 255)
- A valid IPv4 address, IPv6 address or DNS name.

H323 H323Alias E164
The H.323 Alias E.164 defines the address of the system, according to the numbering plan implemented in the H.323 Gatekeeper. The E.164 alias is equivalent to a telephone number, sometimes combined with access codes.
Requires user role: ADMIN
Default value: ""
Value space: String (0, 30)
- The H.323 Alias E.164 address. Valid characters are 0-9, * and #.

H323 H323Alias ID
Define the H.323 Alias ID, which is used to address the system on a H.323 Gatekeeper and will be displayed in the call lists.
Requires user role: ADMIN
Default value: ""
Value space: String (0, 49)
- The H.323 Alias ID. Example: "firstname.lastname@company.com", "My H.323 Alias ID"

H323 NAT Mode
The firewall traversal technology creates a secure path through the firewall barrier, and enables proper exchange of audio/video data when connected to an external video conferencing system (when the IP traffic goes through a NAT router). NOTE: NAT does not work in conjunction with gatekeepers.
Requires user role: ADMIN
Default value: Off
Value space: Auto/Off/On
- Auto: The system will determine if the H323 NAT Address or the real IP address should be used in signaling. This makes it possible to place calls to endpoints on the LAN as well as endpoints on the WAN. If the H323 NAT Address is wrong or not set, the real IP address will be used.
- Off: The system will signal the real IP address.
- On: The system will signal the configured H323 NAT Address instead of its real IP address in Q.931 and H.245. The NAT server address will be shown in the startup-menu as: "My IP Address: 10.0.2.1". If the H323 NAT Address is wrong or not set, H.323 calls cannot be set up.
H323 NAT Address

Define the external/global IP address to the router with NAT support. Packets sent to the router will then be routed to the system. Note that NAT cannot be used when registered to a gatekeeper.

In the router, the following ports must be routed to the system’s IP address:

* Port 1720
* Port 5555–6555
* Port 2326–2487

Requires user role: ADMIN
Default value: ""

Value space: String (0, 64)
   A valid IPv4 address or IPv6 address.

H323 PortAllocation

This setting affects the H.245 port numbers used for H.323 call signaling.

Requires user role: ADMIN
Default value: Dynamic

Value space: Dynamic/Static
   Dynamic: The system will allocate which ports to use when opening a TCP connection. The reason for doing this is to avoid using the same ports for subsequent calls, as some firewalls consider this as a sign of attack. When Dynamic is selected, the H.323 ports used are from 11000 to 20999. Once 20999 is reached they restart again at 11000. The ports are automatically selected by the system within the given range. Firewalls administrators should not try to deduce which ports are used when, as the allocation schema within the mentioned range may change without any further notice.
   Static: When set to Static the ports are given within a static predefined range [5555–6555].
Logging settings

Logging External Mode
Determine whether or not to use a remote syslog server for logging.

Requires user role: ADMIN
Default value: Off
Value space: Off/On
  Off: Disable logging to a remote syslog server.
  On: Enable logging to a remote syslog server.

Logging External Protocol
Determine which protocol to use toward the remote logging server. You can use either the syslog protocol over TLS (Transport Layer Security), or the syslog protocol in plaintext. For details about the syslog protocol, see RFC 5424.

Requires user role: ADMIN
Default value: SyslogTLS
Value space: Syslog/SyslogTLS
  Syslog: Syslog protocol in plain text.
  SyslogTLS: Syslog protocol over TLS.

Logging External Server Address
The address of the remote syslog server.

Requires user role: ADMIN
Default value: 
Value space: String (0, 255)
  A valid IPv4 address, IPv6 address or DNS name.

Logging External Server Port
The port that the remote syslog server listens for messages on. If set to 0, the video system will use the standard syslog port. The standard syslog port is 514 for syslog, and 6514 for syslog over TLS.

Requires user role: ADMIN
Default value: 514
Value space: Integer (0..65535)
  The number of the port that the remote syslog server is using. 0 means that the video system uses the standard syslog port.

Logging Mode
Define the logging mode for the video system (syslog service). When disabled, the syslog service does not start, and most of the event logs are not generated. The Historical Logs and Call Logs are not affected.

Requires user role: ADMIN
Default value: On
Value space: Off/On
  Off: Disable the system logging service.
  On: Enable the system logging service.
Macros settings

Macros Mode

Macros allow you to write snippets of JavaScript code that can automate parts of your video endpoint, thus creating custom behavior. Use of macros is disabled by default, but the first time you open the Macro Editor you will be asked whether to enable use of macros on the codec. Use this setting when you want to manually enable, or to permanently disable the use of macros on the codec. You can disable the use of macros within the Macro Editor. But this will not permanently disable macros from running, because every time the codec is reset the macros will be re-enabled automatically.

Requires user role: ADMIN
Default value: Off

Value space: Off/On
  Off: Permanently disable the use of macros on this video system.
  On: Enable the use of macros on this video system.

Macros AutoStart

All the macros run in a single process on the video endpoint, called the macro runtime. It should be running by default, but you can choose to stop and start it manually. If you restart the video system, the runtime will automatically start again if auto start is enabled.

Requires user role: ADMIN
Default value: On

Value space: Off/On
  Off: The macro runtime will not start automatically after a restart of the video system.
  On: The macro runtime will start automatically after a restart of the video system.
Network settings

Network [1..1] DNS DNSSEC Mode
Domain Name System Security extensions (DNSSEC) is a set of extensions to DNS. It is used to authenticate DNS replies for zones that are signed. It will still allow unsigned zones.

Requires user role: ADMIN
Default value: Off
Value space: Off/On
- Off: Disable Domain Name System Security Extensions.
- On: Enable Domain Name System Security Extensions.

Network [1..1] DNS Domain Name
The DNS Domain Name is the default domain name suffix which is added to unqualified names.
Example: If the DNS Domain Name is "company.com" and the name to lookup is "MyVideoSystem", this will result in the DNS lookup "MyVideoSystem.company.com".

Requires user role: ADMIN, USER
Default value: ""
Value space: String (0, 64)
- The DNS domain name.

Network [1..1] DNS Server [1..3] Address
Define the network addresses for DNS servers. Up to three addresses may be specified. If the network addresses are unknown, contact your administrator or Internet Service Provider.

Requires user role: ADMIN, USER
Default value: ""
Value space: String (0, 64)
- A valid IPv4 address or IPv6 address.

Network [1..1] IEEE8021X Mode
The system can be connected to an IEEE 802.1X LAN network, with a port-based network access control that is used to provide authenticated network access for Ethernet networks.

Requires user role: ADMIN, USER
Default value: Off
Value space: Off/On
- Off: The 802.1X authentication is disabled.
- On: The 802.1X authentication is enabled.

Network [1..1] IEEE8021X TlsVerify
Verification of the server-side certificate of an IEEE802.1x connection against the certificates in the local CA-list when TLS is used. The CA-list must be uploaded to the video system. This can be done from the web interface.
This setting takes effect only when Network [1] IEEE8021X Eap Tls is enabled (On).

Requires user role: ADMIN, USER
Default value: Off
Value space: Off/On
- Off: When set to Off, TLS connections are allowed without verifying the server-side X.509 certificate against the local CA-list. This should typically be selected if no CA-list has been uploaded to the codec.
- On: When set to On, the server-side X.509 certificate will be validated against the local CA-list for all TLS connections. Only servers with a valid certificate will be allowed.
Network [1..1] IEEE8021X UseClientCertificate
Authentication using a private key/certificate pair during an IEEE802.1x connection. The authentication X.509 certificate must be uploaded to the video system. This can be done from the web interface.

Requires user role: ADMIN, USER
Default value: Off
Value space: Off/On
  Off: When set to Off client-side authentication is not used (only server-side).
  On: When set to On the client (video system) will perform a mutual authentication TLS handshake with the server.

Network [1..1] IEEE8021X Identity
Define the user name for 802.1X authentication.

Requires user role: ADMIN, USER
Default value: ""
Value space: String (0, 64)
  The user name for 802.1X authentication.

Network [1..1] IEEE8021X Password
Define the password for 802.1X authentication.

Requires user role: ADMIN, USER
Default value: ""
Value space: String (0, 50)
  The password for 802.1X authentication.

Network [1..1] IEEE8021X AnonymousIdentity
The 802.1X Anonymous ID string is to be used as unencrypted identity with EAP (Extensible Authentication Protocol) types that support different tunneled identity, like EAP-PEAP and EAP-TTLS. If set, the anonymous ID will be used for the initial (unencrypted) EAP Identity Request.

Requires user role: ADMIN, USER
Default value: ""
Value space: String (0, 64)
  The 802.1X Anonymous ID string.

Network [1..1] IEEE8021X Eap Md5
Define the Md5 (Message-Digest Algorithm 5) mode. This is a Challenge Handshake Authentication Protocol that relies on a shared secret. Md5 is a Weak security.

Requires user role: ADMIN, USER
Default value: On
Value space: Off/On
  Off: The EAP-MD5 protocol is disabled.
  On: The EAP-MD5 protocol is enabled.

Network [1..1] IEEE8021X Eap Ttls
Define the TTLS (Tunneled Transport Layer Security) mode. Authenticates LAN clients without the need for client certificates. Developed by Funk Software and Certicom. Usually supported by Agere Systems, Proxim and Avaya.

Requires user role: ADMIN, USER
Default value: On
Value space: Off/On
  Off: The EAP-TTLS protocol is disabled.
  On: The EAP-TTLS protocol is enabled.
Network [1..1] IEEE8021X Eap Tls
Enable or disable the use of EAP-TLS (Transport Layer Security) for IEEE802.1x connections. The EAP-TLS protocol, defined in RFC 5216, is considered one of the most secure EAP standards. LAN clients are authenticated using client certificates.

Requires user role: ADMIN, USER
Default value: On
Value space: Off/On
  Off: The EAP-TLS protocol is disabled.
  On: The EAP-TLS protocol is enabled.

Network [1..1] IEEE8021X Eap Peap
Define the Peap (Protected Extensible Authentication Protocol) mode. Authenticates LAN clients without the need for client certificates. Developed by Microsoft, Cisco and RSA Security.

Requires user role: ADMIN, USER
Default value: On
Value space: Off/On
  Off: The EAP-PEAP protocol is disabled.
  On: The EAP-PEAP protocol is enabled.

Network [1..1] IPStack
Select if the system should use IPv4, IPv6, or dual IP stack, on the network interface. NOTE: After changing this setting you may have to wait up to 30 seconds before it takes effect.

Requires user role: ADMIN, USER
Default value: Dual
Value space: Dual/IPv4/IPv6
  Dual: When set to Dual, the network interface can operate on both IP versions at the same time, and can have both an IPv4 and an IPv6 address at the same time.
  IPv4: When set to IPv4, the system will use IPv4 on the network interface.
  IPv6: When set to IPv6, the system will use IPv6 on the network interface.

Network [1..1] IPv4 Assignment
Define how the system will obtain its IPv4 address, subnet mask and gateway address. When using DHCP for address assignment, "01" appended by the MAC address is used as client identifier in DHCP requests.

Requires user role: ADMIN, USER
Default value: DHCP
Value space: Static/DHCP
  Static: The addresses must be configured manually using the Network IPv4 Address, Network IPv4 Gateway and Network IPv4 SubnetMask settings (static addresses).
  DHCP: The system addresses are automatically assigned by the DHCP server.

Network [1..1] IPv4 Address
Define the static IPv4 network address for the system. Applicable only when Network IPv4 Assignment is set to Static.

Requires user role: ADMIN, USER
Default value: *
Value space: String (0, 64)
  A valid IPv4 address.

Network [1..1] IPv4 Gateway
Define the IPv4 network gateway address. Applicable only when the Network IPv4 Assignment is set to Static.

Requires user role: ADMIN, USER
Default value: *
Value space: String (0, 64)
  A valid IPv4 address.
Network [1..1] IPv4 SubnetMask

Define the IPv4 network subnet mask. Applicable only when the Network IPv4 Assignment is set to Static.

Requires user role: ADMIN, USER
Default value: ""
Value space: String (0, 64)
A valid IPv4 address.

Network [1..1] IPv6 Assignment

Define how the system will obtain its IPv6 address and the default gateway address.

When using DHCPv6 for address assignment, "01" appended by the MAC address is used as client identifier in DHCP requests.

Requires user role: ADMIN, USER
Default value: Autoconf
Value space: Static/DHCPv6/Autoconf
- Static: The codec and gateway IP addresses must be configured manually using the Network IPv6 Address and Network IPv6 Gateway settings. The options, for example NTP and DNS server addresses, must either be set manually or obtained from a DHCPv6 server. The Network IPv6 DHCPOptions setting determines which method to use.
- DHCPv6: All IPv6 addresses, including options, will be obtained from a DHCPv6 server. See RFC 3315 for a detailed description. The Network IPv6 DHCPOptions setting will be ignored.
- Autoconf: Enable IPv6 stateless autoconfiguration of the IPv6 network interface. See RFC 4862 for a detailed description. The options, for example NTP and DNS server addresses, must either be set manually or obtained from a DHCPv6 server. The Network IPv6 DHCPOptions setting determines which method to use.

Network [1..1] IPv6 Address

Define the static IPv6 network address for the system. Applicable only when the Network IPv6 Assignment is set to Static.

Requires user role: ADMIN, USER
Default value: ""
Value space: String (0, 64)
A valid IPv6 address including a network mask. Example: 2001:DB8::/48

Network [1..1] IPv6 Gateway

Define the IPv6 network gateway address. This setting is only applicable when the Network IPv6 Assignment is set to Static.

Requires user role: ADMIN, USER
Default value: ""
Value space: String (0, 64)
A valid IPv6 address.

Network [1..1] IPv6 DHCPOptions

Retrieve a set of DHCP options, for example NTP and DNS server addresses, from a DHCPv6 server.

Requires user role: ADMIN, USER
Default value: On
Value space: Off/On
- Off: Disable the retrieval of DHCP options from a DHCPv6 server.
- On: Enable the retrieval of a selected set of DHCP options from a DHCPv6 server.
Network [1..1] MTU
Define the Ethernet MTU (Maximum Transmission Unit) size. The MTU size must be supported by your network infrastructure. The minimum size is 576 for IPv4 and 1280 for IPv6.

Requires user role: ADMIN, USER
Default value: 1500
Value space: Integer (576..1500)
Set a value for the MTU (bytes).

Network [1..1] QoS Mode
The QoS (Quality of Service) is a method which handles the priority of audio, video and data in the network. The QoS settings must be supported by the infrastructure. Diffserv (Differentiated Services) is a computer networking architecture that specifies a simple, scalable and coarse-grained mechanism for classifying, managing network traffic and providing QoS priorities on modern IP networks.

Requires user role: ADMIN, USER
Default value: Diffserv
Value space: Off/Diffserv
Off: No QoS method is used.
Diffserv: When you set the QoS Mode to Diffserv, the Network QoS Diffserv Audio, Network QoS Diffserv Video, Network QoS Diffserv Data, Network QoS Diffserv Signalling, Network QoS Diffserv ICMPv6 and Network QoS Diffserv NTP settings are used to prioritize packets.

Network [1..1] QoS Diffserv Audio
This setting will only take effect if Network QoS Mode is set to Diffserv.
Define which priority Audio packets should have in the IP network.
The priority for the packets ranges from 0 to 63 - the higher the number, the higher the priority. The recommended class for Audio is CS4, which equals the decimal value 32. If in doubt, contact your network administrator.
The priority set here might be overridden when packets are leaving the network controlled by the local network administrator.

Requires user role: ADMIN, USER
Default value: 0
Value space: Integer (0..63)
Set the priority of the audio packets in the IP network - the higher the number, the higher the priority. 0 means "best effort".

Network [1..1] QoS Diffserv Video
This setting will only take effect if Network QoS Mode is set to Diffserv.
Define which priority Video packets should have in the IP network. The packets on the presentation channel (shared content) are also in the Video packet category. The priority for the packets ranges from 0 to 63 - the higher the number, the higher the priority. The recommended class for Video is CS4, which equals the decimal value 32. If in doubt, contact your network administrator.
The priority set here might be overridden when packets are leaving the network controlled by the local network administrator.

Requires user role: ADMIN, USER
Default value: 0
Value space: Integer (0..63)
Set the priority of the video packets in the IP network - the higher the number, the higher the priority. 0 means "best effort".
Network [1..1] QoS Diffserv Data
This setting will only take effect if Network QoS Mode is set to Diffserv.
Define which priority Data packets should have in the IP network.
The priority for the packets ranges from 0 to 63 - the higher the number, the higher the priority. The recommended value for Data is 0, which means best effort. If in doubt, contact your network administrator.
The priority set here might be overridden when packets are leaving the network controlled by the local network administrator.
Requires user role: ADMIN, USER
Default value: 0
Value space: Integer (0..63)
Set the priority of the data packets in the IP network - the higher the number, the higher the priority. 0 means "best effort".

Network [1..1] QoS Diffserv Signalling
This setting will only take effect if Network QoS Mode is set to Diffserv.
Define which priority Signalling packets that are deemed critical (time-sensitive) for the real-time operation should have in the IP network.
The priority for the packets ranges from 0 to 63 - the higher the number, the higher the priority. The recommended class for Signalling is CS3, which equals the decimal value 24. If in doubt, contact your network administrator.
The priority set here might be overridden when packets are leaving the network controlled by the local network administrator.
Requires user role: ADMIN, USER
Default value: 0
Value space: Integer (0..63)
Set the priority of the signalling packets in the IP network - the higher the number, the higher the priority. 0 means "best effort".

Network [1..1] QoS Diffserv ICMPv6
This setting will only take effect if Network QoS Mode is set to Diffserv.
Define which priority ICMPv6 packets should have in the IP network.
The priority for the packets ranges from 0 to 63 - the higher the number, the higher the priority. The recommended value for ICMPv6 is 0, which means best effort. If in doubt, contact your network administrator.
The priority set here might be overridden when packets are leaving the network controlled by the local network administrator.
Requires user role: ADMIN, USER
Default value: 0
Value space: Integer (0..63)
Set the priority of the ICMPv6 packets in the IP network - the higher the number, the higher the priority. 0 means "best effort".

Network [1..1] QoS Diffserv NTP
This setting will only take effect if Network QoS Mode is set to Diffserv.
Define which priority NTP packets should have in the IP network.
The priority for the packets ranges from 0 to 63 - the higher the number, the higher the priority. The recommended value for NTP is 0, which means "best effort". If in doubt, contact your network administrator.
The priority set here might be overridden when packets are leaving the network controlled by the local network administrator.
Requires user role: ADMIN, USER
Default value: 0
Value space: Integer (0..63)
Set the priority of the NTP packets in the IP network - the higher the number, the higher the priority. 0 means "best effort".
Network [1..1] RemoteAccess Allow

Define which IP addresses (IPv4/IPv6) are allowed for remote access to the codec from SSH/Telnet/HTTP/HTTPS. Multiple IP addresses are separated by a white space.

A network mask (IP range) is specified by <ip address>/N, where N is 1-32 for IPv4, and N is 1-128 for IPv6. The /N is a common indication of a network mask where the first N bits are set. Thus 192.168.0.0/24 would match any address starting with 192.168.0, since these are the first 24 bits in the address.

Requires user role: ADMIN, USER
Default value: ""
Value space: String (0..255)
A valid IPv4 address or IPv6 address.

Network [1..1] Speed

Define the Ethernet link speed. We recommend not to change from the default value, which negotiates with the network to set the speed automatically. If you do not use auto-negotiation, make sure that the speed you choose is supported by the closest switch in your network infrastructure.

Requires user role: ADMIN, INTEGRATOR
Default value: Auto
Value space: Auto/10half/10full/100half/100full/1000full
Auto: Auto-negotiate link speed.
10half: Force link to 10 Mbps half-duplex.
10full: Force link to 10 Mbps full-duplex.
100half: Force link to 100 Mbps half-duplex.
100full: Force link to 100 Mbps full-duplex.
1000full: Force link to 1 Gbps full-duplex.

Network [1..1] TrafficControl Mode

Define the network traffic control mode to decide how to control the video packets transmission speed.

Requires user role: ADMIN, USER
Default value: On
Value space: Off/On
Off: Transmit video packets at link speed.
On: Transmit video packets at maximum 20 Mbps. Can be used to smooth out bursts in the outgoing network traffic.

Network [1..1] VLAN Voice Mode

Define the VLAN voice mode. The VLAN Voice Mode will be set to Auto automatically if you have Cisco UCM (Cisco Unified Communications Manager) as provisioning infrastructure. Note that Auto mode will NOT work if the NetworkServices CDP Mode setting is Off.

Requires user role: ADMIN, USER
Default value: Auto
Value space: Auto/Manual/Off
Auto: The Cisco Discovery Protocol (CDP), if available, assigns an id to the voice VLAN. If CDP is not available, VLAN is not enabled.
Manual: The VLAN ID is set manually using the Network VLAN Voice VlanId setting. If CDP is available, the manually set value will be overruled by the value assigned by CDP.
Off: VLAN is not enabled.

Network [1..1] VLAN Voice VlanId

Define the VLAN voice ID. This setting will only take effect if Network VLAN Voice Mode is set to Manual.

Requires user role: ADMIN, USER
Default value: 1
Value space: Integer (1..4094)
Set the VLAN voice ID.
NetworkPort settings

NetworkPort [2..2] Mode

The video system has two network ports. The first network port is for connecting the video system to Ethernet LAN. The second network port (also called the computer network port) allows you to connect a computer to the Ethernet LAN via the video system. In this way, you only need one network wall socket to support both the video system and the computer.

If the video system is used in a public environment we recommend that you disable this network port, to prevent people from connecting a computer to your network through the video system.

You have to restart the video system for any change to this setting to take effect.

Requires user role: ADMIN

Default value: On

Value space: Off/On
  - Off: The computer network port is disabled.
  - On: The computer network port is available for use.
NetworkServices settings

NetworkServices CDP Mode
Enable or disable the CDP (Cisco Discovery Protocol) daemon. Enabling CDP will make the endpoint report certain statistics and device identifiers to a CDP-enabled switch. If CDP is disabled, the Network VLAN Voice Mode: Auto setting will not work.

Requires user role: ADMIN
Default value: On
Value space: Off/On
  Off: The CDP daemon is disabled.
  On: The CDP daemon is enabled.

NetworkServices H323 Mode
Define whether the system should be able to place and receive H.323 calls or not.

Requires user role: ADMIN
Default value: Off
Value space: Off/On
  Off: Disable the possibility to place and receive H.323 calls.
  On: Enable the possibility to place and receive H.323 calls.

NetworkServices HTTP Mode
Define whether or not to allow access to the video system using the HTTP or HTTPS (HTTP Secure) protocols. Note that the video system's web interface use HTTP or HTTPS. If this setting is switched Off, you cannot use the web interface.

For additional security (encryption and decryption of requests and pages that are returned by the web server), allow only HTTPS.

Note: The default value is HTTP+HTTPS for video systems that have been upgraded to CE9.4 (or later) from an earlier software version, provided that the video system has not been factory reset after the upgrade.

Requires user role: ADMIN
Default value: HTTPS (changed from HTTP+HTTPS to HTTPS in CE9.4)
Value space: Off/HTTP+HTTPS/HTTPS
  Off: Access to the video system not allowed via HTTP or HTTPS.
  HTTP+HTTPS: Access to the video system allowed via both HTTP and HTTPS.
  HTTPS: Access to the video system allowed via HTTPS, but not via HTTP.

NetworkServices HTTP Proxy LoginName
This is the user name part of the credentials for authentication towards the HTTP proxy.

Requires that the NetworkServices HTTP Proxy Mode is set to Manual.

Requires user role: ADMIN, USER
Default value: *
Value space: String (0, 80)
  The authentication login name.
**NetworkServices HTTP Proxy Password**

This is the password part of the credentials for authentication towards the HTTP proxy. Requires that the NetworkServices HTTP Proxy Mode is set to Manual.

Requires user role: ADMIN, USER
Default value: ""

Value space: String (0, 64)
- The authentication password.

**NetworkServices HTTP Proxy Mode**

The HTTP proxy for Cisco Webex can be set up manually, it can be auto-configured (PACUrl), fully automated (WPAD), or it can be turned off.

Requires user role: ADMIN, USER
Default value: Off

Value space: Manual/Off/PACUrl/WPAD
- Manual: Enter the address of the proxy server in the NetworkServices HTTP Proxy URL setting. Optionally, also add the HTTP proxy login name and password in the NetworkServices HTTP Proxy LoginName/Password settings.
- Off: The HTTP proxy mode is turned off.
- PACUrl: The HTTP proxy is auto-configured. You must enter the URL for the PAC (Proxy Auto Configuration) script in the NetworkServices HTTP Proxy PACUrl setting.
- WPAD: With WPAD (Web Proxy Auto Discovery) the HTTP proxy is fully automated and auto-configured.

**NetworkServices HTTP Proxy URL**

Set the URL of the HTTP proxy server. Requires that the NetworkServices HTTP Proxy Mode is set to Manual.

Requires user role: ADMIN, USER
Default value: ""

Value space: String (0..255)
- The URL of the HTTP proxy server.

**NetworkServices HTTP Proxy PACUrl**

Set the URL of the PAC (Proxy Auto Configuration) script. Requires that the NetworkServices HTTP Proxy Mode is set to PACUrl.

Requires user role: ADMIN, USER
Default value: ""

Value space: String (0..255)
- The URL of the PAC (Proxy Auto Configuration) script.

**NetworkServices HTTPS OCSP Mode**

Define the support for OCSP (Online Certificate Status Protocol) responder services. The OCSP feature allows users to enable OCSP instead of certificate revocation lists (CRLs) to check the certificate status.

For any outgoing HTTPS connection, the OCSP responder is queried of the status. If the corresponding certificate has been revoked, then the HTTPS connection will not be used.

Requires user role: ADMIN
Default value: Off

Value space: Off/On
- Off: Disable OCSP support.
- On: Enable OCSP support.

**NetworkServices HTTPS OCSP URL**

Define the URL of the OCSP responder (server) that will be used to check the certificate status.

Requires user role: ADMIN
Default value: ""

Value space: String (0..255)
- A valid URL.
NetworkServices HTTPS Server Minimum TLSVersion
Set the lowest version of the TLS (Transport Layer Security) protocol that is allowed.
Requires user role: ADMIN
Default value: TLSv1.1
Value space: TLSv1.1/TLSv1.2
  TLSv1.1: Support of TLS version 1.1 or higher.
  TLSv1.2: Support of TLS version 1.2 or higher.

NetworkServices HTTPS StrictTransportSecurity
The HTTP Strict Transport Security header lets a web site inform the browser that it should never load the site using HTTP and should automatically convert all attempts to access the site using HTTP to HTTPS requests instead.
Requires user role: ADMIN
Default value: Off
Value space: Off/On
  Off: The HTTP strict transport security feature is disabled.
  On: The HTTP strict transport security feature is enabled.

NetworkServices HTTPS VerifyServerCertificate
When the video system connects to an external HTTPS server (like a phone book server or an external manager), this server will present a certificate to the video system to identify itself.
Requires user role: ADMIN
Default value: Off
Value space: Off/On
  Off: Do not verify server certificates.
  On: Requires the system to verify that the server certificate is signed by a trusted Certificate Authority (CA). This requires that a list of trusted CAs are uploaded to the system in advance.

NetworkServices HTTPS VerifyClientCertificate
When the video system connects to a HTTPS client (like a web browser), the client can be asked to present a certificate to the video system to identify itself.
Requires user role: ADMIN
Default value: Off
Value space: Off/On
  Off: Do not verify client certificates.
  On: Requires the client to present a certificate that is signed by a trusted Certificate Authority (CA). This requires that a list of trusted CAs are uploaded to the system in advance.

NetworkServices NTP Mode
The Network Time Protocol (NTP) is used to synchronize the system’s time and date to a reference time server. The time server will be queried regularly for time updates.
Requires user role: ADMIN
Default value: Auto
Value space: Auto/Manual/Off
  Auto: The system will use an NTP server for time reference. As default, the server address will be obtained from the network’s DHCP server. If a DHCP server is not used, or if the DHCP server does not provide an NTP server address, the NTP server address that is specified in the NetworkServices NTP Server [n] Address setting will be used.
  Manual: The system will use the NTP server that is specified in the NetworkServices NTP Server [n] Address setting for time reference.
  Off: The system will not use an NTP server. The NetworkServices NTP Server [n] Address setting will be ignored.
NetworkServices NTP Server [1..3] Address
The address of the NTP server that will be used when NetworkServices NTP Mode is set to Manual, and when NetworkServices NTP Mode is set to Auto and no address is supplied by a DHCP server.

Requires user role: ADMIN
Default value: "0.tandberg.pool.ntp.org"

Value space: String (0, 255)
  A valid IPv4 address, IPv6 address or DNS name.

NetworkServices SIP Mode
Define whether the system should be able to place and receive SIP calls or not.

Requires user role: ADMIN
Default value: On

Value space: Off/On
  Off: Disable the possibility to place and receive SIP calls.
  On: Enable the possibility to place and receive SIP calls.

NetworkServices SNMP Mode
SNMP (Simple Network Management Protocol) is used in network management systems to monitor network-attached devices (routers, servers, switches, projectors, etc) for conditions that warrant administrative attention. SNMP exposes management data in the form of variables on the managed systems, which describe the system configuration. These variables can then be queried (set to ReadOnly) and sometimes set (set to ReadWrite) by managing applications.

Requires user role: ADMIN, INTEGRATOR
Default value: ReadOnly

Value space: Off/ReadOnly/ReadWrite
  Off: Disable the SNMP network service.
  ReadOnly: Enable the SNMP network service for queries only.
  ReadWrite: Enable the SNMP network service for both queries and commands.

NetworkServices SNMP Host [1..3] Address
Define the address of up to three SNMP Managers.
The system’s SNMP Agent (in the codec) responds to requests from SNMP Managers (a PC program etc.), for example about system location and system contact. SNMP traps are not supported.

Requires user role: ADMIN, INTEGRATOR
Default value: **

Value space: String (0..255)
  A valid IPv4 address, IPv6 address or DNS name.

NetworkServices SNMP CommunityName
Define the name of the Network Services SNMP Community. SNMP Community names are used to authenticate SNMP requests. SNMP requests must have a password (case sensitive) in order to receive a response from the SNMP Agent in the codec. The default password is "public". If you have the Cisco TelePresence Management Suite (TMS) you must make sure the same SNMP Community is configured there too. NOTE: The SNMP Community password is case sensitive.

Requires user role: ADMIN, INTEGRATOR
Default value: **

Value space: String (0, 50)
  The SNMP community name.

NetworkServices SNMP SystemContact
Define the name of the Network Services SNMP System Contact.

Requires user role: ADMIN, INTEGRATOR
Default value: **

Value space: String (0, 50)
  The name of the SNMP system contact.
NetworkServices SNMP SystemLocation
Define the name of the Network Services SNMP System Location.
Requires user role: ADMIN, INTEGRATOR
Default value: ""
Value space: String (0, 50)
The name of the SNMP system location.

NetworkServices SSH Mode
SSH (or Secure Shell) protocol can provide secure encrypted communication between the codec and your local computer.
Requires user role: ADMIN
Default value: On
Value space: Off/On
  Off: The SSH protocol is disabled.
  On: The SSH protocol is enabled.

NetworkServices SSH HostKeyAlgorithm
Choose the cryptographic algorithm that shall be used for the SSH host key. Choices are RSA (Rivest-Shamir-Adleman) with 2048 bits keysize, ECDSA (Elliptic Curve Digital Signature Algorithm) with NIST curve P-384, and EdDSA (Edwards-curve Digital Signature Algorithm) with ed25519 signature schema.
Requires user role: ADMIN
Default value: RSA
Value space: ECDSA/RSA/ed25519
  ECDSA: Use the ECDSA algorithm (nist-384p).
  RSA: Use the RSA algorithm (2048 bits).
  ed25519: Use the ed25519 algorithm.

NetworkServices SSH AllowPublicKey
Secure Shell (SSH) public key authentication can be used to access the codec.
Requires user role: ADMIN
Default value: On
Value space: Off/On
  Off: The SSH public key is not allowed.
  On: The SSH public key is allowed.

NetworkServices Telnet Mode
Telnet is a network protocol used on the Internet or Local Area Network (LAN) connections.
Requires user role: ADMIN
Default value: Off
Value space: Off/On
  Off: The Telnet protocol is disabled. This is the factory setting.
  On: The Telnet protocol is enabled.

NetworkServices WelcomeText
Choose which information the user should see when logging on to the codec through Telnet/SSH.
Requires user role: ADMIN
Default value: On
Value space: Off/On
  Off: The welcome text is: Login successful
  On: The welcome text is: Welcome to <system name>; Software version; Software release date; Login successful.
NetworkServices Wifi Allowed

Video systems that have a built-in Wi-Fi adapter, can connect to the network either via Ethernet or Wi-Fi. Both Ethernet and Wi-Fi are allowed by default, and the user can choose which one to use from the user interface. With this setting, the administrator can disable Wi-Fi configuration, so that it cannot be set up from the user interface.

The systems support the following standards: IEEE 802.11a, IEEE 802.11b, IEEE 802.11g, and IEEE 802.11n. The system supports the following security protocols: WPA-EAP-PEAP, WPA-EAP-TLS, WPA-EAP-TTLS, WPA-EAP-FAST, WPA-EAP-MSCAPv2, WPA-EAP-GTC, WPA-PSK (AES), WPA2-PSK (AES), and open networks (not secured).

If the PID (Product ID), found on the rating label at the rear of the video system, contains the letters NR (No Radio) the system does not support Wi-Fi.

Requires user role: ADMIN, USER
Default value: True
Value space: False/True
   False: Wi-Fi cannot be used. You must connect to the network via Ethernet.
   True: Both Ethernet and Wi-Fi are allowed.

NetworkServices Wifi Enabled

Provided that the video system is allowed to connect to the network via Wi-Fi (see the NetworkServices WIFI Allowed setting), you can use this setting to enable and disable Wi-Fi.

You cannot use Ethernet and Wi-Fi at the same time. If you try to configure Wi-Fi while an Ethernet cable is connected, you must unplug the Ethernet cable to proceed. If you connect an Ethernet cable while connected to Wi-Fi, Ethernet will take precedence. If you unplug the Ethernet cable, the video system will automatically connect to the last connected Wi-Fi network, if available.

Requires user role: ADMIN, USER
Default value: True
Value space: False/True
   False: Wi-Fi is disabled.
   True: Wi-Fi is enabled.

NetworkServices XMLAPI Mode

Enable or disable the video system’s XML API. For security reasons this may be disabled. Disabling the XML API will limit the remote manageability with for example TMS, which no longer will be able to connect to the video system.

Requires user role: ADMIN
Default value: On
Value space: Off/On
   Off: The XML API is disabled.
   On: The XML API is enabled.
Peripherals settings

Peripherals Profile ControlSystems

Define if a third-party control system, for example Crestron or AMX, is expected to be connected to the video system. This information is used by the video system's diagnostics service. If the number of connected control systems does not match this setting, the diagnostics service will report it as an inconsistency. Note that only one third-party control system is supported.

If set to 1, the control system must send heartbeats to the video system using xCommand Peripherals Pair and HeartBeat commands. Failing to do so will cause the in-room control extensions to show a warning that the video system has lost connectivity to the control system.

Requires user role: ADMIN, INTEGRATOR
Default value: NotSet
Value space: 1/NotSet
  1: One third-party control system should be connected to the video system.
  NotSet: No check for a third-party control system is performed.
Phonebook settings

Phonebook Server [1..1] ID
Define a name for the external phone book.
Requires user role: ADMIN
Default value: ""
Value space: String (0, 64)
   The name for the external phone book.

Phonebook Server [1..1] Type
Select the phonebook server type.
Requires user role: ADMIN
Default value: Off
Value space: Off/CUCM/Spark/TMS/VCS
   Off: Do not use a phonebook.
   CUCM: The phonebook is located on the Cisco Unified Communications Manager.
   Spark: The phonebook is located in the Cisco Webex cloud service.
   TMS: The phonebook is located on the Cisco TelePresence Management Suite server.
   VCS: The phonebook is located on the Cisco TelePresence Video Communication Server.

Phonebook Server [1..1] URL
Define the address (URL) to the external phone book server.
Requires user role: ADMIN
Default value: ""
Value space: String (0..255)
   A valid address (URL) to the phone book server.
Provisioning settings

Provisioning Connectivity
This setting controls how the device discovers whether it should request an internal or external configuration from the provisioning server.

Requires user role: ADMIN, USER
Default value: Auto

Value space: Internal/External/Auto
  Internal: Request internal configuration.
  External: Request external configuration.
  Auto: Automatically discover using NAPTR queries whether internal or external configurations should be requested. If the NAPTR responses have the “e” flag, external configurations will be requested. Otherwise internal configurations will be requested.

Provisioning ExternalManager Address
Define the IP Address or DNS name of the external manager / provisioning system. If an External Manager Address (and Path) is configured, the system will send a message to this address when starting up. When receiving this message the external manager / provisioning system can return configurations/cmds to the unit as a result.

When using CUCM or TMS provisioning, the DHCP server can be set up to provide the external manager address automatically (DHCP Option 242 for TMS, and DHCP Option 150 for CUCM). An address set in the Provisioning ExternalManager Address setting will override the address provided by DHCP.

Requires user role: ADMIN, USER
Default value: **

Value space: String (0, 64)
  A valid IPv4 address, IPv6 address or DNS name.

Provisioning ExternalManager AlternateAddress
Only applicable when the endpoint is provisioned by Cisco Unified Communication Manager (CUCM) and an alternate CUCM is available for redundancy. Define the address of the alternate CUCM. If the main CUCM is not available, the endpoint will be provisioned by the alternate CUCM. When the main CUCM is available again, the endpoint will be provisioned by this CUCM.

Requires user role: ADMIN, USER
Default value: **

Value space: String (0, 64)
  A valid IPv4 address, IPv6 address or DNS name.

Provisioning ExternalManager Protocol
Define whether to use the HTTP (unsecure communication) or HTTPS (secure communication) protocol when sending requests to the external manager / provisioning system.

The selected protocol must be enabled in the NetworkServices HTTP Mode setting.

Requires user role: ADMIN, USER
Default value: HTTP

Value space: HTTPS/HTTP
  HTTPS: Send requests via HTTPS.
  HTTP: Send requests via HTTP.
Provisioning ExternalManager Path

Define the Path to the external manager / provisioning system. This setting is required when several management services reside on the same server, i.e. share the same External Manager address.

Requires user role: ADMIN, USER
Default value: ""
Value space: String (0..255)
A valid path to the external manager or provisioning system.

Provisioning ExternalManager Domain

Define the SIP domain for the VCS provisioning server.

Requires user role: ADMIN, USER
Default value: ""
Value space: String (0, 64)
A valid domain name.

Provisioning Mode

It is possible to configure a video system using a provisioning system (external manager). This allows video conferencing network administrators to manage many video systems simultaneously. With this setting you choose which type of provisioning system to use. Provisioning can also be switched off. Contact your provisioning system provider/representative for more information.

Requires user role: ADMIN, USER
Default value: Auto
Value space: Off/Auto/CUCM/Edge/Spark/TMS/VCS
  Off: The video system is not configured by a provisioning system.
  Auto: The provisioning server is automatically selected as set up in the DHCP server.
  CUCM: Push configurations to the video system from CUCM (Cisco Unified Communications Manager).
  Edge: Push configurations to the video system from CUCM (Cisco Unified Communications Manager). The system connects to CUCM via the Collaboration Edge infrastructure. In order to register over Edge the encryption option key must be installed on the video system.
  Spark: Push configurations to the video system from the Cisco Webex cloud service.
  TMS: Push configurations to the video system from TMS (Cisco TelePresence Management System).
  VCS: Push configurations to the video system from VCS (Cisco TelePresence Video Communication Server).

Provisioning LoginName

This is the username part of the credentials used to authenticate the video system with the provisioning server. This setting must be used when required by the provisioning server.

Requires user role: ADMIN, USER
Default value: ""
Value space: String (0, 80)
A valid username.
Provisioning Password

This is the password part of the credentials used to authenticate the video system with the provisioning server. This setting must be used when required by the provisioning server.

Requires user role: ADMIN, USER
Default value: ""
Value space: String (0, 64)
A valid password.
Proximity settings

Proximity Mode
Determine whether the video system will emit ultrasound pairing messages or not.
When the video system emits ultrasound, Proximity clients can detect that they are close
to the video system. In order to use a client, at least one of the Proximity services must be
enabled (refer to the Proximity Services settings). In general, Cisco recommends enabling
all the Proximity services.

Requires user role: ADMIN, USER
Default value: Off

Value space: Off/On
   Off: The video system does not emit ultrasound, and Proximity services cannot be used.
   On: The video system emits ultrasound, and Proximity clients can detect that they are
close to the video system. Enabled Proximity services can be used.

Proximity Services CallControl
Enable or disable basic call control features on Proximity clients. When this setting is
enabled, you are able to control a call using a Proximity client (for example dial, mute,
adjust volume and hang up). This service is supported by mobile devices (iOS and Android).
Proximity Mode must be On for this setting to take any effect.

Requires user role: ADMIN, USER
Default value: Disabled

Value space: Enabled/Disabled
   Enabled: Call control from a Proximity client is enabled.
   Disabled: Call control from a Proximity client is disabled.

Proximity Services ContentShare FromClients
Enable or disable content sharing from Proximity clients. When this setting is enabled, you
can share content from a Proximity client wirelessly on the video system, e.g. share your
laptop screen. This service is supported by laptops (OS X and Windows). Proximity Mode
must be On for this setting to take any effect.

Requires user role: ADMIN, USER
Default value: Enabled

Value space: Enabled/Disabled
   Enabled: Content sharing from a Proximity client is enabled.
   Disabled: Content sharing from a Proximity client is disabled.

Proximity Services ContentShare ToClients
Enable or disable content sharing to Proximity clients. When enabled, Proximity clients will
receive the presentation from the video system. You can zoom in on details, view previous
content and take snapshots. This service is supported by mobile devices (iOS and Android).
Proximity Mode must be On for this setting to take any effect.

Requires user role: ADMIN, USER
Default value: Disabled

Value space: Enabled/Disabled
   Enabled: Content sharing to a Proximity client is enabled.
   Disabled: Content sharing to a Proximity client is disabled.
RoomReset settings

RoomReset Control

This setting is for use with control systems or macros. Macros allow you to write snippets of JavaScript code that can automate parts of your video endpoint, thus creating custom behavior.

When a room has been idle for some time the system can send an event to indicate that the room is ready to be reset.

The events that are sent when this setting is enabled are:

* `RoomReset` SecondsToReset: 30
  ** end
* `RoomReset` Reset
  ** end

Requires user role: ADMIN

Default value: On

Value space: CameraPositionsOnly/Off/On
  CameraPositionsOnly: Not applicable.
  Off: No RoomReset events will be sent.
  On: The room reset control is enabled and RoomReset events will be sent.
RTP settings

RTP Ports Range Start
Define the first port in the range of RTP ports.
As default, the system is using the ports in the range 2326 to 2486 for RTP and RTCP media data. The minimum range is 100 when RTP Video Ports Range is disabled, and 20 when RTP Video Ports Range is enabled.
If the RTP Video Ports Range is enabled, audio will use the range defined by the RTP Ports Range settings, and other media data will use the range defined by the RTP Video Ports Range settings. The two ranges must not overlap.
A change in the setting will take effect on new calls.

Requires user role: ADMIN
Default value: 2326
Value space: Integer (1024..65438)
    Set the first port in the range of RTP ports.

RTP Ports Range Stop
Define the last port in the range of RTP ports.
As default, the system is using the ports in the range 2326 to 2487 for RTP and RTCP media data. If the RTP Video Ports Range is enabled the system is using the ports in the range 1024 to 65436. The minimum range is 100 when RTP Video Ports Range is disabled, and 20 when RTP Video Ports Range is enabled.
If the RTP Video Ports Range is enabled, audio will use the range defined by the RTP Ports Range settings, and other media data will use the range defined by the RTP Video Ports Range settings. The two ranges must not overlap.
A change in the setting will take effect on new calls.

Requires user role: ADMIN
Default value: 2486
Value space: Integer (1120..65535)
    Set the last port in the range of RTP ports.

RTP Video Ports Range Start
Define the first port in the range of RTP video ports.
If both the start and stop values are set to 0, the RTP Video Ports Range is disabled. To enable it, set the first port to a value between 1024 and 65454 and the last port between 1024 and 65535. The minimum range is 80.
If the RTP Video Ports Range is enabled, audio will use the range defined by the RTP Ports Range settings, and other media data will use the range defined by the RTP Video Ports Range settings. The two ranges must not overlap.
A change in the setting will take effect on new calls.

Requires user role: ADMIN
Default value: 0
Value space: Integer (0, 1024..65454)
    Set the first port in the range of RTP video ports.

RTP Video Ports Range Stop
Define the last port in the range of RTP video ports.
If both the start and stop values are set to 0, the RTP Video Ports Range is disabled. To enable it, set the first port to a value between 1024 and 65454 and the last port between 1024 and 65535. The minimum range is 80.
If the RTP Video Ports Range is enabled, audio will use the range defined by the RTP Ports Range settings, and other media data will use the range defined by the RTP Video Ports Range settings. The two ranges must not overlap.
A change in the setting will take effect on new calls.

Requires user role: ADMIN
Default value: 0
Value space: Integer (0, 1024..65535)
    Set the last port in the range of RTP video ports.
Security settings

Security Audit Logging Mode
Define where to record or transmit the audit logs. The audit logs are sent to a syslog server. When using the External/ExternalSecure modes and setting the port assignment to manual in the Security Audit Server PortAssignment setting, you must also enter the address and port number for the audit server in the Security Audit Server Address and Security Audit Server Port settings.

Requires user role: AUDIT
Default value: Internal
Value space: External/ExternalSecure/Internal/Off
External: The system sends the audit logs to an external syslog server. The syslog server must support UDP.
ExternalSecure: The system sends encrypted audit logs to an external syslog server that is verified by a certificate in the Audit CA list. The Audit CA list file must be uploaded to the codec using the web interface. The common_name parameter of a certificate in the CA list must match the IP address of the syslog server, and the secure TCP server must be set up to listen for secure (TLS) TCP Syslog messages.
Internal: The system records the audit logs to internal logs, and rotates logs when they are full.
Off: No audit logging is performed.

Security Audit OnError Action
Define what happens when the connection to the syslog server is lost. This setting is only relevant when Security Audit Logging Mode is set to ExternalSecure.

Requires user role: AUDIT
Default value: Ignore
Value space: Halt/Ignore
Halt: If a halt condition is detected the system codec is rebooted and only the auditor is allowed to operate the unit until the halt condition has passed. When the halt condition has passed the audit logs are re-spoled to the syslog server. Halt conditions are: A network breach (no physical link), no syslog server running (or incorrect address or port to the syslog server), TLS authentication failed (if in use), local backup (re-spooling) log full.
Ignore: The system will continue its normal operation, and rotate internal logs when full. When the connection is restored it will again send its audit logs to the syslog server.

Security Audit Server Address
The audit logs are sent to a syslog server. Define the IP address of the syslog server. Only valid IPv4 or IPv6 address formats are accepted. Host names are not supported. This setting is only relevant when Security Audit Logging Mode is set to External or ExternalSecure.

Requires user role: AUDIT
Default value: *
Value space: String (0..255)
A valid IPv4 address or IPv6 address
Security Audit Server Port
The audit logs are sent to a syslog server. Define the port of the syslog server that the system shall send its audit logs to. This setting is only relevant when Security Audit Server PortAssignment is set to Manual.

Requires user role: AUDIT
Default value: 514
Value space: Integer (0..65535)
  Set the audit server port.

Security Audit Server PortAssignment
The audit logs are sent to a syslog server. You can define how the port number of the external syslog server will be assigned. This setting is only relevant when Security Audit Logging Mode is set to External or ExternalSecure. To see which port number is used you can check the Security Audit Server Port status. Navigate to Setup > Status on the web interface or, if on a command line interface, run the command xStatus Security Audit Server Port.

Requires user role: AUDIT
Default value: Auto
Value space: Auto/Manual
  Auto: Will use UDP port number 514 when the Security Audit Logging Mode is set to External. Will use TCP port number 6514 when the Security Audit Logging Mode is set to ExternalSecure.
  Manual: Will use the port value defined in the Security Audit Server Port setting.

Security Session FailedLoginsLockoutTime
Define how long the system will lock out a user after failed login to a web or SSH session. Restart the system for any change to this setting to take effect.

Requires user role: ADMIN
Default value: 60
Value space: Integer (0..10000)
  Set the lockout time (minutes).

Security Session InactivityTimeout
Define how long the system will accept inactivity from the user before he is automatically logged out from a web, Telnet, or SSH session. Restart the system for any change to this setting to take effect.

Requires user role: ADMIN
Default value: 0
Value space: Integer (0..10000)
  Set the inactivity timeout (minutes); or select 0 when inactivity should not enforce automatic logout.

Security Session MaxFailedLogins
Define the maximum number of failed login attempts per user for a web or SSH session. If the user exceeded the maximum number of attempts the user will be locked out. 0 means that there is no limit for failed logins. Restart the system for any change to this setting to take effect.

Requires user role: ADMIN
Default value: 0
Value space: Integer (0..10)
  Set the maximum number of failed login attempts per user.

Security Session MaxSessionsPerUser
The maximum number of simultaneous sessions per user is 20 sessions.

Requires user role: ADMIN
Default value: 20
Value space: Integer (1..20)
  Set the maximum number of simultaneous sessions per user.
Security Session MaxTotalSessions
The maximum number of simultaneous sessions in total is 20 sessions.
Requires user role: ADMIN
Default value: 20
Value space: Integer (1..20)
Set the maximum number of simultaneous sessions in total.

Security Session ShowLastLogon
When logging in to the system using SSH or Telnet you will see the UserId, time and date of the last session that did a successful login.
Requires user role: ADMIN
Default value: Off
Value space: Off/On
On: Show information about the last session.
Off: Do not show information about the last session.
SerialPort settings

SerialPort Mode
Enable/disable the serial port.
Requires user role: ADMIN, INTEGRATOR
Default value: On
Value space: Off/On
- Off: Disable the serial port.
- On: Enable the serial port.

SerialPort LoginRequired
Define if login shall be required when connecting to the serial port.
Requires user role: ADMIN
Default value: On
Value space: Off/On
- Off: The user can access the codec via the serial port without any login.
- On: Login is required when connecting to the codec via the serial port.
SIP settings

SIP ANAT
ANAT (Alternative Network Address Types) enables media negotiation for multiple addresses and address types, as specified in RFC 4091.

Requires user role: ADMIN
Default value: Off
Value space: Off/On
  Off: Disable ANAT.
  On: Enable ANAT.

SIP Authentication UserName
This is the user name part of the credentials used to authenticate towards the SIP proxy.

Requires user role: ADMIN
Default value: ""
Value space: String (0, 128)
  A valid username.

SIP Authentication Password
This is the password part of the credentials used to authenticate towards the SIP proxy.

Requires user role: ADMIN
Default value: ""
Value space: String (0, 128)
  A valid password.

SIP DefaultTransport
Select the transport protocol to be used over the LAN.

Requires user role: ADMIN
Default value: Auto
Value space: Auto/TCP/Tls/UDP
  TCP: The system will always use TCP as the default transport method.
  UDP: The system will always use UDP as the default transport method.
  Tls: The system will always use TLS as the default transport method. For TLS connections a SIP CA-list can be uploaded to the video system. If no such CA-list is available on the system then anonymous Diffie Hellman will be used.
  Auto: The system will try to connect using transport protocols in the following order: TLS, TCP, UDP.

SIP DisplayName
When configured the incoming call will report the display name instead of the SIP URI.

Requires user role: ADMIN
Default value: ""
Value space: String (0, 550)
  The name to be displayed instead of the SIP URI.
SIP Ice DefaultCandidate

The ICE protocol needs some time to reach a conclusion about which media route to use (up to the first 5 seconds of a call). During this period media for the video system will be sent to the Default Candidate as defined in this setting.

Requires user role: ADMIN
Default value: Host

Value space: Host/Rflx/Relay
- Host: Send media to the video system's private IP address.
- Rflx: Send media to the video system's public IP address, as seen by the TURN server.
- Relay: Send media to the IP address and port allocated on the TURN server.

SIP Ice Mode

ICE (Interactive Connectivity Establishment, RFC 5245) is a NAT traversal solution that the video systems can use to discover the optimized media path. Thus the shortest route for audio and video is always secured between the video systems.

Requires user role: ADMIN
Default value: Auto

Value space: Auto/Off/On
- Auto: ICE is enabled if a TURN server is provided, otherwise ICE is disabled.
- Off: ICE is disabled.
- On: ICE is enabled.

SIP Line

When registered to a Cisco Unified Communications Manager (CUCM) the endpoint may be part of a shared line. This means that several devices share the same directory number. The different devices sharing the same number receive status from the other appearances on the line as defined in RFC 4235.

Note that shared lines are set up by CUCM, not by the endpoint. Therefore do not change this setting manually; CUCM pushes this information to the endpoint when required.

Requires user role: ADMIN
Default value: Private

Value space: Private/Shared
- Shared: The system is part of a shared line and is therefore sharing its directory number with other devices.
- Private: This system is not part of a shared line.

SIP ListenPort

Turn on or off the listening for incoming connections on the SIP TCP/UDP ports. If turned off, the endpoint will only be reachable through the SIP registrar (CUCM or VCS).

Requires user role: ADMIN
Default value: On

Value space: Off/On
- Off: Listening for incoming connections on the SIP TCP/UDP ports is turned off.
- On: Listening for incoming connections on the SIP TCP/UDP ports is turned on.

SIP Mailbox

When registered to a Cisco Unified Communications Manager (CUCM) you may be offered the option of having a private voice mailbox.

Requires user role: ADMIN
Default value: *

Value space: String (0, 255)
- A valid number or address. Leave the string empty if you do not have a voice mailbox.
SIP MinimumTLSVersion
Set the lowest version of the TLS (Transport Layer Security) protocol that is allowed.
Requires user role: ADMIN
Default value: TLSv1.0
Value space: TLSv1.0/TLSv1.1/TLSv1.2
  - TLSv1.0: Support TLS version 1.0 or higher.
  - TLSv1.1: Support TLS version 1.1 or higher.
  - TLSv1.2: Support TLS version 1.2 or higher.

SIP PreferredIPMedia
Define the preferred IP version for sending and receiving media (audio, video, data). Only applicable when both Network IPStack and Conference CallProtocolIPStack are set to Dual, and the network does not have a mechanism for choosing the preferred IP version.
Requires user role: ADMIN
Default value: IPv4
Value space: IPv4/IPv6
  - IPv4: The preferred IP version for media is IPv4.
  - IPv6: The preferred IP version for media is IPv6.

SIP PreferredIPSignaling
Define the preferred IP version for signaling (audio, video, data). Only applicable when both Network IPStack and Conference CallProtocolIPStack are set to Dual, and the network does not have a mechanism for choosing the preferred IP version. It also determines the priority of the A/AAAAA lookups in DNS, so that the preferred IP version is used for registration.
Requires user role: ADMIN
Default value: IPv4
Value space: IPv4/IPv6
  - IPv4: The preferred IP version for signaling is IPv4.

SIP Proxy [1..4] Address
The Proxy Address is the manually configured address for the outbound proxy. It is possible to use a fully qualified domain name, or an IP address. The default port is 5060 for TCP and UDP but another one can be provided.
Requires user role: ADMIN
Default value: 
Value space: String (0..255)
  - A valid IPv4 address, IPv6 address or DNS name.

SIP TlsVerify
For TLS connections a SIP CA-list can be uploaded to the video system. This can be done from the web interface.
Requires user role: ADMIN
Default value: Off
Value space: Off/On
  - Off: Set to Off to allow TLS connections without verifying them. The TLS connections are allowed to be set up without verifying the x.509 certificate received from the server against the local CA-list. This should typically be selected if no SIP CA-list has been uploaded.
  - On: Set to On to verify TLS connections. Only TLS connections to servers, whose x.509 certificate is validated against the CA-list, will be allowed.

SIP Turn DiscoverMode
Define the discover mode to enable/disable the application to search for available Turn servers in DNS. Before making calls, the system will test if port allocation is possible.
Requires user role: ADMIN
Default value: On
Value space: Off/On
  - Off: Set to Off to disable discovery mode.
  - On: When set to On, the system will search for available Turn servers in DNS, and before making calls the system will test if port allocation is possible.
SIP Turn DropRflx
DropRflx will make the endpoint force media through the Turn relay, unless the remote endpoint is on the same network.
Requires user role: ADMIN
Default value: Off
Value space: Off/On
  Off: Disable DropRflx.
  On: The system will force media through the Turn relay when the remote endpoint is on another network.

SIP Turn Server
Define the address of the TURN (Traversal Using Relay NAT) server. It is used as a media relay fallback and it is also used to discover the endpoint’s own public IP address.
Requires user role: ADMIN
Default value: ""
Value space: String (0..255)
  The preferred format is DNS SRV record (e.g. _turn._udp.<domain>), or it can be a valid IPv4 or IPv6 address.

SIP Turn UserName
Define the user name needed for accessing the TURN server.
Requires user role: ADMIN
Default value: ""
Value space: String (0, 128)
  A valid user name.

SIP Turn Password
Define the password needed for accessing the TURN server.
Requires user role: ADMIN
Default value: **
Value space: String (0, 128)
  A valid password.

SIP Type
Enables SIP extensions and special behavior for a vendor or provider.
Requires user role: ADMIN
Default value: Standard
Value space: Standard/Cisco
  Standard: Use this when registering to standard SIP Proxy (tested with Cisco TelePresence VCS).
  Cisco: Use this when registering to Cisco Unified Communication Manager.

SIP URI
The SIP URI (Uniform Resource Identifier) is the address that is used to identify the video system. The URI is registered and used by the SIP services to route inbound calls to the system. The SIP URI syntax is defined in RFC 3261.
Requires user role: ADMIN
Default value: **
Value space: String (0..255)
  An address (URI) that is compliant with the SIP URI syntax.
Standby settings

Standby Control
Define whether the system should go into standby mode or not.
Requires user role: ADMIN, INTEGRATOR
Default value: On
Value space: Off/On
   Off: The system will not enter standby mode.
   On: The system will enter standby mode when the Standby Delay has timed out.
   Requires the Standby Delay to be set to an appropriate value.

Standby Delay
Define how long (in minutes) the system shall be in idle mode before it goes into standby mode. Requires the Standby Control to be enabled.
Requires user role: ADMIN, INTEGRATOR
Default value: 10
Value space: Integer (1..480)
   Set the standby delay (minutes).

Standby WakeupOnMotionDetection
Automatic wake up on motion detection is a feature that will sense when a person walks into the room. The feature is based on ultrasound detection, and the Proximity Mode setting must be On to make the feature work.
Requires user role: ADMIN, INTEGRATOR
Default value: Off
Value space: Off/On
   Off: The wake up on motion detection is disabled.
   On: When people walk into the room the system will automatically wake up from standby (only applicable to DX80).
SystemUnit settings

SystemUnit Name
Define the system name. The system name will be sent as the hostname in a DHCP request and when the codec is acting as an SNMP Agent.

Requires user role: ADMIN
Default value: ""
Value space: String (0, 50)
   Define the system name.

SystemUnit CrashReporting Advanced
If the video system (codec) crashes, the system can automatically send logs to the Cisco Automatic Crash Report tool (ACR) for analyses. The ACR tool is for Cisco internal usage only and not available to customers.

Requires user role: ADMIN
Default value: Off
Value space: Off/On
   Off: The ACR tool will perform standard log analyses.
   On: The ACR tool will perform advanced log analyses.

SystemUnit CrashReporting Mode
If the video system (codec) crashes, the system can automatically send logs to the Cisco Automatic Crash Report tool (ACR) for analyses. The ACR tool is for Cisco internal usage only and not available to customers.

Requires user role: ADMIN
Default value: Off
Value space: Off/On
   Off: No logs will be sent to ACR tool.
   On: The logs will automatically be sent to ACR tool.

SystemUnit CrashReporting Url
If the video system (codec) crashes, the system can automatically send logs to the Cisco Automatic Crash Report tool (ACR) for analyses. The ACR tool is for Cisco internal usage only and not available to customers.

Requires user role: ADMIN
Default value: ""
Value space: String (0..255)
   The URL to the Cisco Automatic Crash Report tool (ACR).
Time settings

Time TimeFormat
Define the time format.
Requires user role: ADMIN, USER
Default value: 24H
Value space: 24H/12H
24H: Set the time format to 24 hours.
12H: Set the time format to 12 hours (AM/PM).

Time DateFormat
Define the date format.
Requires user role: ADMIN, USER
Default value: DD_MM_YY
Value space: DD_MM_YY/MM_DD_YY/YY_MM_DD
DD_MM_YY: The date January 30th 2010 will be displayed: 30.01.10
MM_DD_YY: The date January 30th 2010 will be displayed: 01.30.10
YY_MM_DD: The date January 30th 2010 will be displayed: 10.01.30
Time Zone

Define the time zone for the geographical location of the video system. The information in
the value space is from the tz database, also called the IANA Time Zone Database.

Requires user role: ADMIN, INTEGRATOR, USER

Default value: Etc/JUTC

Value space: Africa/Abidjan, Africa/Accra, Africa/Addis_Ababa, Africa/Algiers, Africa/
Asmara, Africa/Asmera, Africa/Bamako, Africa/Bangui, Africa/Banjul, Africa/Bissau, Africa/
Blantyre, Africa/Brazzaville, Africa/Bujumbura, Africa/Cairo, Africa/Casablanca, Africa/Ceuta,

UserInterface settings

UserInterface Accessibility IncomingCallNotification
You can enable an incoming call notification with amplified visuals. The screen and Touch 10 will flash red/white approximately once every second (1.75 Hz) to make it easier for hearing impaired users to notice an incoming call. If the system is already in a call the screen will not flash as this will disturb the on-going call, instead you will get a normal notification on screen and touch panel.

Requires user role: ADMIN, INTEGRATOR, USER
Default value: Default
Value space: AmplifiedVisuals/Default
- AmplifiedVisuals: Enable the amplified visuals on screen and touch panel when the video system receives a call.
- Default: Enable the default behavior with a notification on screen and touch panel.

UserInterface ContactInfo Type
Choose which type of contact information to show in the user interface.

Requires user role: ADMIN
Default value: Auto
Value space: Auto/DisplayName/E164Alias/H320Number/H323Id/IPv4/IPv6/None/SipUri/SystemName
- Auto: Show the address which another system should dial to reach this video system. The address depends on the default call protocol and system registration.
- None: Do not show any contact information.
- IPv4: Show the system's IPv4 address.
- IPv6: Show the system's IPv6 address.
- H323Id: Show the system's H.323 ID (refer to the H323 Alias ID setting).
- H320Number: Show the system's H.320 number as contact information (only supported if used with Cisco TelePresence ISDN Link).
- E164Alias: Show the system's H.323 E164 Alias as contact information (refer to the H323 Alias E164 setting).
- SipUri: Show the system's SIP URI (refer to the SIP URI setting).
- SystemName: Show the system's name (refer to the SystemUnit Name setting).
- DisplayName: Show the system's display name (refer to the SIP DisplayName setting).

UserInterface CustomMessage
A custom message can be displayed, in the lower left side of the screen, in awake mode.

Requires user role: ADMIN, INTEGRATOR
Default value: ""
Value space: String (0, 128)
- Add a custom message. Add an empty string to remove a custom message.
UserInterface KeyTones Mode
You can configure the system to make a keyboard click sound effect (key tone) when typing text or numbers.
Requires user role: ADMIN, USER
Default value: Off
Value space: Off/On
  Off: There is no key tone sound effect.
  On: The key tone sound effect is turned on.

UserInterface Language
Select the language to be used in the user interface. If the language is not supported, the default language (English) will be used.
Requires user role: ADMIN, USER
Default value: English
Value space: Arabic/Catalan/ChineseSimplified/ChineseTraditional/Czech/Danish/Dutch/English/EnglishUK/Finnish/French/FrenchCanadian/German/Hebrew/Hungarian/Italian/Japanese/Korean/Norwegian/Polish/Portuguese/PortugueseBrazilian/Russian/Spanish/SpanishLatin/Swedish/Turkish
Select a language from the list.

UserInterface OSD EncryptionIndicator
Define for how long the encryption indicator is shown on screen. The icon for encrypted calls is a locked padlock.
Requires user role: ADMIN
Default value: Auto
Value space: Auto/AlwaysOn/AlwaysOff
  Auto: If the call is encrypted, a "Call is encrypted" notification is shown for 5 seconds. Then, an encryption indicator icon is shown for the rest of the call.
  If the call is not encrypted, a "Call is not encrypted" notification is shown for 5 seconds. No encryption indicator icon is shown.
  AlwaysOn: The "Call is encrypted" notification is shown for 5 seconds. Then, an encryption indicator icon is shown for the rest of the call.
  AlwaysOff: The encryption indicator is never displayed on screen.

UserInterface OSD HalfwakeMessage
A custom message can be displayed in the middle of the main screen when the system is in the half wake state. The custom message will replace the default message, which gives instructions how to start using the video system. You can also delete the default message, without adding a custom message.
Requires user role: ADMIN
Default value: 
Value space: String (0, 128)
The custom message. An empty string: Restore the default message. A space only: There will be no message at all.

UserInterface OSD Output
Define on which monitor the on-screen information and indicators (OSD) should be displayed.
Requires user role: ADMIN, INTEGRATOR
Default value: Auto
Value space: Auto
Auto: The system sends the on-screen information and indicators to the system's integrated screen.
UserInterface Security Mode

This setting allows you to prevent important system information from being exposed in the user interface (drop down menu and Settings panel), for example the contact information and IP addresses of the video system, touch controller, and UCM/VCS registrars. It is important to note that such information is not hidden when navigating further into the Settings panel.

If you want to fully prevent that people without administrator rights can see the contact information, IP addresses, MAC address, serial number, and software version, you must also set the UserInterface SettingsMenu Mode to Locked, and of course have a passphrase for all user accounts with administrator rights.

Requires user role: ADMIN
Default value: Normal
Value space: Normal/Strong
  Normal: IP addresses and other system information are shown on the user interface.
  Strong: Contact information and IP addresses are not displayed on the user interface (drop down menu and Settings panel).

UserInterface SettingsMenu Mode

The Settings panel in the user interface (Touch 10 or on-screen) can be protected by the video system's admin password. If this password is blank, anyone can access the settings in the Settings menu, and for example factory reset the system. If authentication is enabled, all settings that require authentication have a padlock icon. You will be prompted to enter the administrator's user name and passphrase when you select the setting. Some settings do not require authentication, they do not have a padlock icon.

Requires user role: ADMIN
Default value: Unlocked
Value space: Locked/Unlocked
  Locked: Authentication with administrator's user name and passphrase is required.
  Unlocked: No authentication is required.

UserInterface Wallpaper

Select a background image (wallpaper) for the video screen when idle.

You may upload a custom wallpaper to the video system using the web interface. The following file formats are supported: BMP, GIF, JPEG, PNG. The maximum file size is 4 MByte. When you use a custom wallpaper, the clock and the list of upcoming meetings are removed from the main display.

Requires user role: ADMIN, INTEGRATOR, USER
Default value: Auto
Value space: Auto/Custom/None
  Auto: Use the default wallpaper.
  None: There is no background image on the screen.
  Custom: Use the custom wallpaper as background image on the screen. If no custom wallpaper is uploaded to the system, the setting will revert to the default value.
UserManagement settings

UserManagement LDAP Admin Filter
The LDAP filter is used to determine which users should be granted administrator privileges. You always have to set either an LDAP Admin Group or an LDAP Admin Filter. An LDAP Admin Filter takes precedence, so if the UserManagement LDAP Admin Filter is set, the UserManagement LDAP Admin Group setting is ignored.

Requires user role: ADMIN
Default value: ""
Value space: String (0, 1024)
  Refer to the LDAP specification for the syntax of this string. Example:
  "(|(memberof=CN=admin group, OU=company groups, DC=company, DC=com)
  (sAMAccountName=username))"

UserManagement LDAP Admin Group
Members of this AD (Active Directory) group will be given administrator access. This setting is a shorthand for saying (memberOf:1.2.840.113556.1.4.1941:=<group name>). You always have to set either an LDAP Admin Group or an LDAP Admin Filter. An LDAP Admin Filter takes precedence, so if the UserManagement LDAP Admin Filter is set, the UserManagement LDAP Admin Group setting is ignored.

Requires user role: ADMIN
Default value: ""
Value space: String (0..255)
  The distinguished name of the AD group. Example: "*CN=admin group, OU=company groups, DC=company, DC=com"

UserManagement LDAP Attribute
The attribute used to map to the provided username. If not set, sAMAccountName is used.

Requires user role: ADMIN
Default value: ""
Value space: String (0..255)
  The attribute name.

UserManagement LDAP BaseDN
The distinguishing name of the entry at which to start a search (base).

Requires user role: ADMIN
Default value: ""
Value space: String (0..255)
  The distinguishing name of the base. Example: "*DC=company, DC=com"

UserManagement LDAP Encryption
Define how to secure the communication between the video system and the LDAP server. You can override the port number by using the UserManagement LDAP Server Port setting.

Requires user role: ADMIN
Default value: LDAPS
Value space: LDAPS/None/STARTTLS
  LDAPS: Connect to the LDAP server on port 636 over TLS (Transport Layer Security).
  None: Connect to LDAP server on port 389 with no encryption.
  STARTTLS: Connect to LDAP server on port 389, then send STARTTLS to enable TLS encryption.
UserManagement LDAP MinimumTLSVersion
Set the lowest version of the TLS (Transport Layer Security) protocol that is allowed.

Requires user role: ADMIN
Default value: TLSv1.2

Value space: TLSv1.0/TLSv1.1/TLSv1.2
- TLSv1.0: Support TLS version 1.0 or higher.
- TLSv1.1: Support TLS version 1.1 or higher.
- TLSv1.2: Support TLS version 1.2 or higher.

UserManagement LDAP Mode
The video system supports the use of an LDAP (Lightweight Directory Access Protocol) server as a central place to store and validate user names and passwords. Use this setting to configure whether or not to use LDAP authentication. Our implementation is tested for the Microsoft Active Directory (AD) service.

If you switch on LDAP Mode, make sure to configure the other UserManagement LDAP settings to suit your setup. Here is a few examples.

Example 1:
- UserManagement LDAP Mode: On
  - UserManagement LDAP Address: "192.0.2.20"
  - UserManagement LDAP BaseDN: "DC=company, DC=com"
  - UserManagement LDAP Admin Group: "CN=admin group, OU=company groups, DC=company, DC=com"

Example 2:
- UserManagement LDAP Mode: On
  - UserManagement LDAP Address: "192.0.2.20"
  - UserManagement LDAP BaseDN: "DC=company, DC=com"
  - UserManagement LDAP Admin Filter: "((memberOf=CN=admin group, OU=company groups, DC=company, DC=com)(sAMAccountName=username))"

Requires user role: ADMIN
Default value: Off
Value space: Off/On
- Off: LDAP authentication is not allowed.
- On: LDAP authentication is allowed.

UserManagement LDAP Server Address
Set the IP address or hostname of the LDAP server.

Requires user role: ADMIN
Default value: *
Value space: String (0..255)
A valid IPv4 address, IPv6 address or hostname.

UserManagement LDAP Server Port
Set the port to connect to the LDAP server on. If set to 0, use the default for the selected protocol (see the UserManagement LDAP Encryption setting).

Requires user role: ADMIN
Default value: 0
Value space: Integer (0..65535)
The LDAP server port number.

UserManagement LDAP VerifyServerCertificate
When the video system connects to an LDAP server, the server will identify itself to the video system by presenting its certificate. Use this setting to determine whether or not the video system will verify the server certificate.

Requires user role: ADMIN
Default value: On
Value space: Off/On
- Off: The video system will not verify the LDAP server’s certificate.
- On: The video system must verify that the LDAP server’s certificate is signed by a trusted Certificate Authority (CA). The CA must be on the list of trusted CAs that are uploaded to the system in advance. Use the video system’s web interface to manage the list of trusted CAs (see more details in the administrator guide).
Video settings

Video ActiveSpeaker Default PIP Position
Define the position on screen of the active speaker picture-in-picture (PiP). The setting only takes effect when using a video layout where the active speaker is a PiP, i.e. the Overlay layout, or possibly a Custom layout (refer to the Video Default Layout Family Local setting). The setting takes effect from the next call onwards; if changed during a call, it will have no effect on the current call.

Requires user role: ADMIN, INTEGRATOR
Default value: Current
Value space: Current/UpperLeft/UpperCenter/UpperRight/CenterLeft/CenterRight/LowerLeft/LowerRight
  - Current: The position of the active speaker PiP will be kept unchanged when leaving a call.
  - UpperLeft: The active speaker PiP will appear in the upper left corner of the screen.
  - UpperCenter: The active speaker PiP will appear in the upper center position.
  - UpperRight: The active speaker PiP will appear in the upper right corner of the screen.
  - CenterLeft: The active speaker PiP will appear in the center left position.
  - CentreRight: The active speaker PiP will appear in the center right position.
  - LowerLeft: The active speaker PiP will appear in the lower left corner of the screen.
  - LowerRight: The active speaker PiP will appear in the lower right corner of the screen.

Video Default Layout Family Local
Select which video layout family to use locally.

Requires user role: ADMIN
Default value: Auto
Value space: Auto/Equal/Prominent/Overlay/Single
  - Auto: The default layout family, as given in the layout database provided by the system, will be used as the local layout.
  - Equal: The Equal layout family will be used as the local layout. All videos have equal size, as long as there is space enough on the screen.
  - Prominent: The Prominent layout family will be used as the local layout. The active speaker, or the presentation if present, will be a large picture, while the other participants will be small pictures. Transitions between active speakers are voice switched.
  - Overlay: The Overlay layout family will be used as the local layout. The active speaker, or the presentation if present, will be shown in full screen, while the other participants will be small pictures-in-picture (PiP). Transitions between active speakers are voice switched.
  - Single: The active speaker, or the presentation if present, will be shown in full screen. The other participants are not shown. Transitions between active speakers are voice switched.
Video DefaultLayoutFamily Remote

Select which video layout family to be used for the remote participants.

Requires user role: ADMIN
Default value: Auto

Value space: Auto/Equal/Prominent/Overlay/Single

- Auto: The default layout family, as given by the local layout database, will be used as the remote layout.
- Equal: The Equal layout family will be used as the remote layout. All videos have equal size, as long as there is space enough on the screen.
- Prominent: The Prominent layout family will be used as the remote layout. The active speaker, or the presentation if present, will be a large picture, while the other participants will be small pictures. Transitions between active speakers are voice switched.
- Overlay: The Overlay layout family will be used as the remote layout. The active speaker, or the presentation if present, will be shown in full screen, while the other participants will be small pictures-in-picture (PiP). Transitions between active speakers are voice switched.
- Single: The active speaker, or the presentation if present, will be shown in full screen. The other participants are not shown. Transitions between active speakers are voice switched.

Video DefaultMainSource

Define which video input source to be used as the default main video source when you start a call.

Requires user role: ADMIN, USER
Default value: 1

Value space: 1

Set the source to be used as the default main video source.

Video Input Connector [1..2] CameraControl CameraId

The camera ID is a unique identifier of the cameras that are connected to the video input.

Requires user role: ADMIN, INTEGRATOR
Default value: Connector n: 1

Value space: Connector n: 1

- The camera ID is fixed and cannot be changed.

Video Input Connector [1..2] CameraControl Mode

Define whether a camera can be controlled or not. This value is fixed for both Connector 1 (integrated camera) and Connector 2 (HDMI), and cannot be changed.

Requires user role: ADMIN, INTEGRATOR
Default value: Connector n: Off

Value space: Connector n: Off

- Off: Disable camera control.

Video Input Connector [1..2] InputSourceType

Select which type of input source is connected to the video input. Note that Connector 1 is the system's integrated camera.

Requires user role: ADMIN, INTEGRATOR
Default value: Connector 1: camera Connector 2: PC

Value space: Connector 1: camera Connector 2: PC/camera/document_camera/mediaplayer/whiteboard/other

- PC: Use this when a computer is connected to the video input.
- camera: Use this when a camera is connected to the video input.
- document_camera: Use this when a document camera is connected to the video input.
- mediaplayer: Use this when a media player is connected to the video input.
- whiteboard: Use this when a whiteboard camera is connected to the video input.
- other: Use this when the other options do not match.
Video Input Connector [1..2] Name
Define a name for the video input connector.

Requires user role: ADMIN, INTEGRATOR
Default value: Connector n: ""

Value space: String (0, 50)
- Name for the video input connector.

Video Input Connector [1..2] OptimalDefinition Profile
This setting will not take effect if the corresponding Video Input Connector [n] Quality setting is set to Sharpness.

The optimal definition profile reflects the lighting conditions in the video conferencing room and the quality of the camera. The better lighting conditions and the better quality of the camera, the higher the profile. Generally, the Normal or Medium profiles are recommended. However, when the lighting conditions are very good, the High profile can be set in order to increase the resolution for a given call rate. The resolution must be supported by both the calling and called systems.

Requires user role: ADMIN, INTEGRATOR
Default value: Medium

Value space: Normal/Medium/High
- Normal: Use this profile for a normally to poorly lit environment. Resolutions will be set rather conservative.
- Medium: Requires good and stable lighting conditions and a good quality video input. For some call rates this leads to higher resolution.
- High: Requires nearly optimal video conferencing lighting conditions and a good quality video input in order to achieve a good overall experience. Rather high resolutions will be used.

Video Input Connector [2..2] PresentationSelection
Define how the video system will behave when you connect a presentation source to the video input.

If the video system is in standby mode, it will wake up when you connect a presentation source. Sharing the presentation with the far end requires additional action (select Share on the user interface) except when this setting is set to AutoShare.

Requires user role: ADMIN, INTEGRATOR
Default value: Connector n: Desktop

Value space: Connector n: AutoShare/Desktop/Manual/OnConnect
- AutoShare: While in a call, the content on the video input will automatically be presented to the far end as well as on the local screen when you connect the cable, or when the source is activated otherwise (for example when a connected computer wakes up from sleep mode). You do not have to select Share on the user interface. If a presentation source is already connected when you make or answer a call, you have to manually select Share on the user interface.
- Desktop: The content on the video input will be presented on the screen when you connect the cable, or when the source is activated otherwise (for example when a connected computer wakes up from sleep mode). This applies both when idle and in a call. Also, the content on the video input will stay on the screen when you leave the call, provided that it was the active input at the time of leaving.
- Manual: The content on the video input will not be presented on the screen until you select Share from the user interface.
- OnConnect: The content on the video input will be presented on screen when you connect the cable, or when the source is activated otherwise (for example when a connected computer wakes up from sleep mode). Otherwise, the behavior is the same as in manual mode.
Video Input Connector [2..2] Quality

When encoding and transmitting video there is a trade-off between high resolution and high frame rate. For some video sources it is more important to transmit high frame rate than high resolution and vice versa. This setting specifies whether to give priority to high frame rate or to high resolution.

Requires user role: ADMIN, INTEGRATOR
Default value: Connector n: Sharpness

Value space: Connector n: Motion/Sharpness
  - Motion: Gives the highest possible frame rate. Used when there is a need for higher frame rates, typically when a large number of participants are present or when there is a lot of motion in the picture.
  - Sharpness: Gives the highest possible resolution. Used when you want the highest quality of detailed images and graphics.

Video Input Connector [2..2] RGBQuantizationRange

The devices connected to the video input should follow the rules for RGB video quantization range defined in CEA-861. Unfortunately some devices do not follow the standard and this configuration may be used to override the settings to get a perfect image with any source.

Requires user role: ADMIN, INTEGRATOR
Default value: Auto

Value space: Auto/Full/Limited
  - Auto: RGB quantization range is automatically selected based on video format according to CEA-861-E. CE video formats will use limited quantization range levels. IT video formats will use full quantization range levels.
  - Full: Full quantization range. The R, G, B quantization range includes all code values (0 - 255). This is defined in CEA-861-E.
  - Limited: Limited Quantization Range. R, G, B quantization range that excludes some code values at the extremes (16 - 235). This is defined in CEA-861-E.

Video Monitors

Define the monitor layout mode. Note that this video system supports only one screen, so this value is fixed and cannot be changed.

Requires user role: ADMIN, INTEGRATOR
Default value: Single

Value space: Single
  - Single: The layout is shown on the video system’s screen.

Video Output Connector [1..1] Brightness

Define the brightness level for the video system’s integrated screen.

Requires user role: ADMIN, USER
Default value: 80

Value space: Integer (0..100)
  - Range: The value must be between 0 and 100.
Video Output Connector [1..1] Resolution

The resolution and refresh rate for the integrated screen. This value is fixed and cannot be changed.

Default value: Connector 1: 1920_1080_60

Value space: Connector 1: 1920_1080_60
1920_1080_60: The resolution is 1920 x 1080, and the refresh rate is 60 Hz.

Video Output Connector [1..1] Whitebalance Level

The integrated screen's color temperature (white balance) is adjustable from 4000 K (warm) to 9000 K (cool).

Requires user role: ADMIN, USER
Default value: 6500

Value space: Integer (4000..9000)
The color temperature in Kelvin.

Video Presentation DefaultPIPPosition

Define the position on screen of the presentation picture-in-picture (PiP). The setting only takes effect when the presentation is explicitly minimized to a PiP, for example using the user interface. The setting takes effect from the next call onwards; if changed during a call, it will have no effect on the current call.

Requires user role: ADMIN, INTEGRATOR
Default value: Current

Value space: Current/UpperLeft/UpperCenter/UpperRight/CenterLeft/CenterRight/LowerLeft/LowerRight
Current: The position of the presentation PiP will be kept unchanged when leaving a call.
UpperLeft: The presentation PiP will appear in the upper left corner of the screen.
UpperCenter: The presentation PiP will appear in the upper center position.
UpperRight: The presentation PiP will appear in the upper right corner of the screen.
CenterLeft: The presentation PiP will appear in the center left position.
CenterRight: The presentation PiP will appear in the center right position.
LowerLeft: The presentation PiP will appear in the lower left corner of the screen.
LowerRight: The presentation PiP will appear in the lower right corner of the screen.

Video Presentation DefaultSource

Define which video input source to use as a default presentation source. This setting may be used by the API and 3rd party user interfaces. It is not relevant when using the user interfaces provided by Cisco.

Requires user role: ADMIN, USER
Default value: 2

Value space: 2
The video input source to use as default presentation source.

Video Selfview Default FullscreenMode

Define if the main video source (self-view) shall be shown in full screen or as a small picture-in-picture (PiP) after a call. The setting only takes effect when self-view is switched on (see the Video Selfview Default Mode setting).

Requires user role: ADMIN, INTEGRATOR
Default value: Current

Value space: Off/Current/On
Off: Self-view will be shown as a PiP.
Current: The size of the self-view picture will be kept unchanged when leaving a call, i.e. if it was a PiP during the call, it remains a PiP after the call; if it was full screen during the call, it remains full screen after the call.
On: The self-view picture will be shown in full screen.
Video Selfview Default Mode

Define if the main video source (self-view) shall be displayed on screen after a call. The position and size of the self-view window is determined by the Video Selfview Default PIPPosition and the Video Selfview Default FullscreenMode settings respectively.

Requires user role: ADMIN, INTEGRATOR
Default value: Current

Value space: Off/Current/On
- Off: Self-view is switched off when leaving a call.
- Current: Self-view is left as is, i.e. if it was on during the call, it remains on after the call; if it was off during the call, it remains off after the call.
- On: Self-view is switched on when leaving a call.

Video Selfview Default OnMonitorRole

Define which screen to display the main video source (self-view) after a call. Note that this video system has only one screen, so this value is fixed and cannot be changed.

Requires user role: ADMIN, INTEGRATOR
Default value: First

Value space: First
- First: The self-view picture will be shown on the integrated screen.

Video Selfview Default PIPPosition

Define the position on screen of the small self-view picture-in-picture (PiP) after a call. The setting only takes effect when self-view is switched on (see the Video Selfview Default Mode setting) and fullscreen view is switched off (see the Video Selfview Default FullscreenMode setting).

Requires user role: ADMIN, INTEGRATOR
Default value: Current

Value space: Current/UpperLeft/UpperCenter/UpperRight/CenterLeft/CenterRight/LowerLeft/LowerRight
- Current: The position of the self-view PiP will be kept unchanged when leaving a call.
- UpperLeft: The self-view PiP will appear in the upper left corner of the screen.
- UpperCenter: The self-view PiP will appear in the upper center position.
- UpperRight: The self-view PiP will appear in the upper right corner of the screen.
- CenterLeft: The self-view PiP will appear in the center left position.
- CentreRight: The self-view PiP will appear in the center right position.
- LowerLeft: The self-view PiP will appear in the lower left corner of the screen.
- LowerRight: The self-view PiP will appear in the lower right corner of the screen.

Video Selfview Mirrored

You can configure the video system to show the self-view image the way other people see you, or as you would see yourself in a mirror. This setting has no effect on the video that is sent to the far end.

Requires user role: ADMIN, INTEGRATOR
Default value: On

Value space: Off/On
- Off: Display the self-view image as other people see you.
- On: Display the self-view image as you see yourself in a mirror.
Video Selfview OnCall Mode

This setting is used to switch on self-view for a short while when setting up a call. The Video Selfview OnCall Duration setting determines for how long it remains on. This applies when self-view in general is switched off.

Requires user role: ADMIN, INTEGRATOR
Default value: On

Value space: Off/On
  Off: Self-view is not shown automatically during call setup.
  On: Self-view is shown automatically during call setup.

Video Selfview OnCall Duration

This setting only has an effect when the Video Selfview OnCall Mode setting is switched On. In this case, the number of seconds set here determines for how long self-view is shown before it is automatically switched off.

Requires user role: ADMIN, INTEGRATOR
Default value: 10

Value space: Integer (1..60)
  Range: Choose for how long self-view remains on. The valid range is between 1 and 60 seconds.
Experimental settings

The Experimental settings are for testing only and should not be used unless agreed with Cisco. These settings are not documented and WILL change in later releases.
Appendices
The user interface

The user interface and its use are described in full detail in the User guide for the video system.

Tap the system name or contact information to access System Information, Settings, Restart and Factory reset. You can also adjust the brightness of the screen and activate Call forwarding, Standby, and Do not disturb modes.

Time of day.

Entry point for user interface extensions (your system may have zero or more such buttons with different color, text and icons)

Tap Call to invoke the contacts including Favorites, Directory and Recents lists; and to open the Search or Dial field.

Tap Messages to invoke the voice mail system, if available.

On the right side of the unit:
- USB and mini-jack sockets for headset
- Microphone: mute/unmute.
- Loudspeaker volume control.
- Selfview: on/off
- Microphone mute indicator.
- Indicates that at least one client is paired to the video system using Proximity.
- Tap ? to contact Help desk or access other facility services, if available.

On the right side of the unit:
- Microphone mute button
- Loudspeaker volume controls
- USB socket for headset
Set up remote monitoring

Requirement:

- RemoteMonitoring option

Remote monitoring is useful when you want to control the video system from another location.

Snapshots from input sources appear in the web interface, so you can check the camera view and control the camera without being in the room.

If enabled, snapshots are refreshed automatically approximately every 5 seconds.

Check whether or not the video system has the RemoteMonitoring option

1. Sign in to the web interface.
2. Check the Home page to see if RemoteMonitoring is on the list of Installed options.
   - If not on the list, remote monitoring is not available.

Enable remote monitoring

Install the RemoteMonitoring option key. How to install option keys are described in the Add option keys chapter.

PLEASE BE AWARE THAT IF YOU ENABLE THE REMOTE MONITORING OPTION YOU MUST MAKE SURE THAT YOU COMPLY WITH LOCAL LAWS AND REGULATIONS WITH REGARD TO PRIVACY AND PROVIDE ADEQUATE NOTICE TO USERS OF THE SYSTEM THAT THE SYSTEM ADMINISTRATOR MAY MONITOR AND CONTROL THE CAMERA AND SCREEN. IT IS YOUR RESPONSIBILITY TO COMPLY WITH PRIVACY REGULATIONS WHEN USING THE SYSTEM AND CISCO DISCLAIMS ALL LIABILITY FOR ANY UNLAWFUL USE OF THIS FEATURE.

About snapshots

Local input sources

Snapshots of the local input sources of the video system appear on the Call Control page.

Snapshots appear both when the video system is idle, and when in a call.

Far end snapshots

When in call, you may also see snapshots from the far end camera. It does not matter whether or not the far end video system has the RemoteMonitoring option.

Far end snapshots are not displayed if the call is encrypted.
Access call information and answer a call while using the web interface

Call indicator
The call indicator is present to notify you about an incoming call, and to show when the system is in a call.

If the system is idle, there is no call indicator.

Notification of an incoming call
Click the Call indicator to open the Call Control page, where you can accept or decline the call.

The system is in a call

Control the call
Relevant control buttons are present on the Call Control page. Use the buttons to:
- Show call details
- Put the call on hold
- Answer the call
- Disconnect the call
Place a call using the web interface (page 1 of 2)

Sign in to the web interface and navigate to Call Control.

Place a call

Even if the web interface is used to initiate the call, it is the video system (display, microphones and loudspeakers) that is used for the call; it is not the PC running the web interface.

1. Navigate the Favorites, Directory or Recents lists to find the correct entry; or enter one or more characters in the Search or Dial field*. Click the correct contact name.

2. Click Call in the contact card.

Alternatively, enter the complete URI or number in the Search and Dial field. Then click the Call button that appears next to the URI or number.

Send DTMF tones

Click to open a key pad that you can use if your application requires DTMF (dual-tone multi-frequency) signaling.

Show/hide call details

Click the information button to show details about the call.

Click the button again to hide the information.

Hold and resume a call

Use the button next to a participant’s name to put that participant on hold.

To resume the call, use the button that is present when a participant is on hold.

End a call

If you want to terminate a call, click Disconnect all or the button.
Place a call using the web interface (page 2 of 2)

Sign in to the web interface and navigate to Call Control.

Calling more than one

Calling more than one using a conference bridge (CUCM ad hoc conferencing) is not supported from the web interface, even if it is supported by the video system itself.

Adjust the volume

Mute the microphone

Click Microphone: On to mute the microphone. Then the text changes to Microphone: Off.

Click Microphone: Off to unmute.

Volume down

Volume up
Share content using the web interface

Sign in to the web interface and navigate to Call Control.

Share content

1. Click Start Presentation. Then the text changes to Stop Presentation.

Stop content sharing:
Click the Stop Presentation button that is present while sharing.

About content sharing

You can connect a presentation source, most often a PC, to the HDMI computer connector at the back of the video system.

While in a call you can share content with the other participant in the call (far end).

If you are not in a call, the content is shown locally.
Local layout control

Sign in to the web interface and navigate to Call Control.

Change the layout

Click Layout, and choose your preferred layout in the window that opens.

The set of layouts to choose from depends on the system configuration.

You may change the layout both when idle and in a call.

About layouts

The term layout is used to describe the various ways presentations and videos can appear on the screen. Different types of meetings may require different layouts.
Control a far end camera

Sign in to the web interface and navigate to Call Control.

Prerequisites

While in a call, you can control the remote participant’s camera (far end) provided that:

- The Conference > FarEndControl > Mode setting is switched On on the far end video system.
- The far end camera has pan, tilt or zoom functionality. Only the relevant controls will appear.
- Speaker tracking is not switched On on the far end camera.
- The local video system has the Remote Monitoring option.

Control the remote participant’s camera

1. Click the camera icon to open the remote camera control window.

2. Use the left and right arrows to pan the camera; the up and down arrows to tilt it; and + and - to zoom in and out.

   If you are not allowed to control the far end camera, the controls will not appear in the image.

   If the call is encrypted, the far end snapshot behind the controls are not displayed.
Packet loss resilience - ClearPath

ClearPath introduces several mechanisms for advanced packet loss resilience. These mechanisms increase the experienced quality when you use your video system in an error prone environment.

ClearPath is a Cisco proprietary protocol. All endpoints running CE software support ClearPath.

If the involved endpoints and infrastructure elements support ClearPath, all packet loss resilience mechanisms are used in point-to-point connections (including hosted conferences).
Customize the video system's user interface

You can customize the user interface to allow control of peripherals in a meeting room, for example lights and blinds, or to modify the video system’s behavior by triggering macros. This allows for the powerful combination of a control system’s functionality and the video system’s user-friendly user interface.

In-room control architecture

You need a Cisco video system with a touch interface, and a control system. The control system may be a third-party system, such as Crestron or AMX, with hardware drivers for peripherals. It is the control system, not the video system, that controls the peripherals.

When you program the control system you must use the video system’s API (events and commands) in order to connect with the controls on the video system’s user interface.

Consult the CE Customization guide for full details about how to design custom user interface panels (in-room control panels) using the In-Room Control editor, and how to use the video system’s API to program the in-room controls. Go to:

► https://www.cisco.com/go/in-room-control-docs

In-room control schematics

The video system’s macro framework may also serve as a control system. In this case the control system can use the video system’s API to trigger all sorts of local functionality: Speed dial, language selection, customized system reset, and much more.
Customize the video system's user interface (page 2 of 2)

The In-Room Control editor

Free of charge editor

An easy to use drag-and-drop editor, which you should use to compose the custom user interface panels (in-room control panels), comes free of charge with the video system's software.

Sign in* to the web interface, and navigate to Integration > In-Room Control.

- Click Launch Editor to launch the editor directly from the video system's web interface.

  You can push a new in-room control panel to the video system, and see the result immediately on the Touch controller.

- Click Download Editor to download a stand-alone version that you can run locally on your browser from your hard drive.

  Then you can compose your custom interfaces without being connected to a video system. You can export and import to file to move your work between your local version and the video system later.

Preview function

The editor also provides a preview function, which allows you to see how the custom interfaces will appear on the user interface.

The preview function is also a complete software version of your custom (in-room control) panels, so clicking the controls will result in the same actions as selecting them on the real user interface.

Therefore, you can use the preview function to test your integrations without having a real user interface available. You can also use the video system's in-room controls from a remote location.

The room simulator

You can use the room simulator to visualise how the in-room controls on the user interface changes the state of the room.

⚠ Back up any existing in-room configuration you may have before you export the simulator configuration to the video system. The simulator configuration will replace the existing configuration on the video system.

Sign in to the web interface, and navigate to Integration > In-Room Control.

- Click Launch Simulator to open a room simulator in your browser.

  The room simulator contains a predefined in-room control configuration that you can export to the video system. Then you can control the simulator's virtual meeting room from your real user interface.

- Click Load simulator config to export the simulator configuration to the video system.

* You need a user that holds the ROOMCONTROL, INTEGRATOR, or ADMIN user roles in order to access the In-Room Control editor and the API commands that you need when programming the control system.
Customize the video system's behavior using macros

With macros, you can create your own snippets of code that run on the video system. The language is JavaScript / ECMAScript 6 with support for features such as arrow functions, promises and classes.

The macro framework allows an integrator to write scripts that tailor a video system’s behavior to suite an individual customer’s requirements. The integrators can, for example, implement their own features or variations of features, automate specific configurations or re-configurations, and create custom tests and monitoring functions.

By combining the use of macros and creation of a custom user interface panel (formerly referred to as in-room control panel), you can amend the user interface to trigger customized local functionality. For examples:

- Add speed dialling buttons
- Add a button for room reset, which set all configurations back to your preferred default setup

Consult the CE Customization guide for details about macros and how to use the video system's built in Macro editor. Go to:

► https://www.cisco.com/go/in-room-control-docs

Allow using macros on the video system

Sign in to the web interface and navigate to Setup > Configuration.

- Set Macros > Mode to On.

If you try to launch the Macro editor while this setting is Off, a pop-up message appears. If you respond by tapping Enable Macros, the Macros > Mode setting will automatically change to On, and the editor will launch.

Launch the macro editor

Sign in’ to the web interface, and navigate to Integration > Macro Editor.

We don’t offer a stand-alone version of the editor that you can use to work offline.

The Macro editor

The Macro editor is a powerful tool where you can:

- Load our code examples, which you can modify, use as is, or use as inspiration when writing your own macros.
- Read our detailed macro scripting tutorial, which also explains the code examples in more detailed.
- Write your own macros, and upload them to the video system.
- Enable/Disable individual macros.
- Check in an embedded Log Console what happens when you run a macro.

---

* You need a user that holds the ADMIN user role in order to access the Macro editor.
Manage startup scripts

Sign in to the web interface, and navigate to Integration > Startup Scripts.

List of startup scripts

You can create one or more startup scripts*. A green dot appears next to an active startup script; a red ring appears next to an inactive startup script. If you have more than one startup script, they will run in the order from top to bottom of the list.

Create a startup script

1. Click Create new....
2. Enter a name for the startup script in the title input field.
3. Enter the commands (xConfiguration or xCommand) in the command input area. Start each command on a new line.
4. Click Save.
5. Click On to activate the startup script.

If you want to use an existing script as a starting point for editing, select that script and click Copy.

Run a startup script immediately

1. Select the startup script from the list.
2. Click Run.
   Both active and inactive startup scripts can be run immediately.

Activate or deactivate a startup script

1. Select the startup script from the list.
2. Click On to activate, or Off to deactivate a script.
   Active startup scripts will run every time the video system starts up.

Delete a startup script

1. Select the startup script from the list.
2. Click Delete.

About startup scripts

A startup script contains commands (xCommand) and configurations (xConfiguration) that will be executed as part of the start up procedure.

A few commands and configurations cannot be placed in a startup script, for example xCommand SystemUnit Boot. It is not possible to save a script that contains illegal commands and configurations.

Syntax and semantics for xCommand and xConfiguration are explained in the API guide for the product.
Access the video system’s XML files

Sign in to the web interface and navigate to Integration > Developer API.

The XML files are part of the video system's API. They structure information about the system in a hierarchy.

- **Configuration.xml** contains the current system settings (configuration). These settings are controlled from the web interface or from the API (Application Programmer Interface).
- The information in **status.xml** is constantly updated by the video system to reflect system and process changes. The status information is monitored from the web interface or from the API.
- **Command.xml** contains an overview of the commands available to instruct the system to perform an action. The commands are issued from the API.
- **Valuespace.xml** contains an overview of all the value spaces of system settings, status information, and commands.

Open an XML file

Click the file name to open the XML file.

About the API

The application programming interface (API) is a tool for integration professionals and developers working with the video system. The API is described in detail in the API guide for the video system.
Execute API commands and configurations from the web interface

Sign in to the web interface and navigate to Integration > Developer API.

Commands (xCommand) and configurations (xConfiguration) can be executed from the web interface. Syntax and semantics are explained in the API guide for the video system.

Execute API commands and configurations

1. Enter a command (xCommand or xConfiguration), or a sequence of commands, in the text area.
2. Click Execute to issue the command(s).

About the API

The application programming interface (API) is a tool for integration professionals and developers working with the video system. The API is described in detail in the API guide for the video system.
Serial interface

Use the micro USB connector for direct communication with the video system. You need a micro USB to USB cable. If the computer doesn't auto-install a serial port driver, you need to install a serial port driver on the computer manually.

Use a terminal emulator (SSH client) to connect to the serial interface. For the most common computer types (PC, MAC) and operating systems, PuTTY or Tera Term will work.

The serial connection can be used without an IP-address, DNS, or a network.

Parameters:
- Baud rate: 115200 bps
- Data bits: 8
- Parity: None
- Stop bit: 1
- Hardware flow control: Off

Video system settings

Serial communication is enabled by default. Use the following configuration to change the behavior:

```
SerialPort > Mode
```

For security reasons, you are asked to sign in before using the serial interface. Use the following setting to change the behavior:

```
SerialPort > LoginRequired
```

Restart the video system when you have made changes to the serial port settings.

If your video system is provisioned by CUCM, the serial port settings should be configured from CUCM.
Open TCP Ports

The web server within the codec prohibit or restrict the use of nonsecure or unnecessary ports, protocols, modules, and/or services. Some ports are open or closed by default.

TCP 22: SSH
You can close the port by setting SSH mode to Off.
NetworkServices SSH Mode: Off/On

TCP 80: HTTP
You can close the port by setting HTTP mode to Off or HTTPS.
NetworkServices HTTP Mode: HTTP+HTTPS/HTTPS/Off

TCP 443: HTTPS
You can close the port by setting HTTP mode to Off.
NetworkServices HTTP Mode: HTTP+HTTPS/HTTPS/Off

TCP 5060/5061: SIP listen ports
The SIP listen ports are open by default. The SIP listen ports are disabled by the Cisco UCM (Unified Communication Manager). You can close the ports by setting the SIP listen ports to Off.
SIP ListenPort: Off/On

The system settings are configured from the Setup > Configuration page on the web interface. Open a web browser and enter the IP address of the video system then sign in.
Get a new HTTPFeedback address from TMS

When a video system is added to Cisco TelePresence Management Suite (TMS), it is automatically configured to send information (events) back to TMS. The video system receives the address that these events should be sent to from TMS (HTTPFeedback address). If this address is absent or misconfigured, the video system cannot send events to TMS.

Missing response to events

If the video system does not receive a response to an event, it will retry sending it to the HTTPFeedback address up to 10 times at 1 second intervals.

If the video system does not receive a response to any of the retries, the endpoint deletes the HTTPFeedback address and cannot send events to TMS anymore.

This causes loss of Call Detail Records (CDR) on TMS.

Get a new HTTPFeedback address from TMS

In order to get a new address to send events to, you must restart the video system and wait for the next management address push from TMS (scheduled or triggered by the TMS administrator).
Technical specification (page 1 of 2)

SOFTWARE COMPATIBILITY
- Collaboration Endpoint Software Version 8.2 or later

PRODUCT DELIVERED WITH:
- DX80 or DX70 system with integrated HD camera and microphone
- Network cable
- HDMI/USB cable (DX80 only)
- Power adapter and regional power cable

INTEGRATED HD CAMERA
- -5° to 70° from the display
- 63° horizontal field of view
- 38° vertical field of view
- Resolution: 1080p30
- Focus: F 2.2
- Instant focus based on face detection
- Privacy shutter

USER INTERFACE
- On-screen graphical user interface

LANGUAGE SUPPORT (depends on software version)
- Arabic, Catalan, Chinese-Simplified, Chinese-Traditional, Czech, Danish, Dutch, English, English-UK, Finnish, French, French-Canadian, German, Hebrew, Hungarian, Italian, Japanese, Korean, Norwegian, Polish, Portuguese, Portuguese-Brazilian, Russian, Spanish, Spanish-Latin, Swedish, Turkish

SYSTEM MANAGEMENT
- Total management through embedded SNMP, Telnet, SSH, XML, and SOAP
- Remote software upload using web server, HTTP, and HTTPS
- On-screen menu system

DIRECTORY SERVICES
- Support for local directories (Favorites)
- Corporate directory (through Cisco Unified Communications Manager and Cisco TelePresence Management Suite)
- Server directory supporting LDAP and H.350 (requires Cisco TelePresence Management Suite)
- Call history with received, placed and missed calls with date and time

POWER
- Rated: 60W maximum
- Low-power standby mode

OPERATING TEMPERATURE AND HUMIDITY
- Ambient temperature: 0°C to 40°C (32°F to 99°F)
- Relative humidity (RH): 10 to 90%

STORAGE AND TRANSPORT TEMPERATURE
- -20°C to 60°C (-4°F to 140°F) at RH 10–90%
- Noncondensing

DX80 SYSTEM DIMENSIONS
- Width: 22.2 in. (56.5 cm)
- Height: 20.2 in. (51.2 cm)
- Depth: 3.5 in. (8.9 cm)
- Weight: 15.65 lb (7.1 kg)

DX70 SYSTEM DIMENSIONS
- Width: 13.91 in. (35.31 cm)
- Height: 14.84 in. (37.71 cm)
- Depth: 2.45 in. (6.23 cm)
- Weight: 7.5 lb (3.4 kg)

BANDWIDTH
- Up to 3Mbps

MINIMUM BANDWIDTH FOR RESOLUTION AND FRAME RATE
- 720p30 from 768kbps
- 1080p30 from 1472kbps

LIVE VIDEO RESOLUTIONS (ENCODE/DECODE)
Supports encode/decode video formats up to maximum 1920 × 1080@30 (HD1080p30), including:
- 176 × 144 @ 30 fps (QCIF) (decode only)
- 352 × 288 @ 30 fps (CIF)
- 512 × 288 @ 30 fps (w288p)
- 576 × 448 @ 30 fps (448p)
- 640 × 480 @ 30 fps (VGA)
- 704 × 576 @ 30 fps (4CIF)
- 768 × 448 @ 30 fps (w448p)
- 800 × 600 @ 30 fps (SVGA)
- 1024 × 576 @ 30 fps (w576p)
- 1024 × 768 @ 30 fps (XGA)
- 1280 × 720 @ 30 fps (HD720p)
- 1280 × 768 @ 30 fps (WXGA)
- 1280 × 1024 @ 30 fps (WUXGA+)
- 1440 × 900 @ 30 fps (WXGA+)
- 1680 × 1050 @ 30 fps (WSXGA+)
- 1920 × 1080 @ 30 fps (HD1080p)

AUDIO STANDARDS
- 64kbps AAC-LD
- OPUS
- G.722
- G.722.1
- G.711mu
- G.711a
- G.729AB

AUDIO FEATURES
- Up to 48 kHz sampling rate
- High quality 20 kHz audio
- Acoustic echo cancellers
- Automatic gain control
- Automatic noise reduction
- Active lip synchronization

AUDIO INPUTS
- Integrated microphone array
- One HDMI audio-in

* HDMI version 1.3

www.cisco.com — Copyright © 2018 Cisco Systems, Inc. All rights reserved.
Audio Outputs
- One line out, mini-jack (DX70)
- One HDMI (digital main audio)

Dual Stream
- H.239 dual stream (H.323)
- BFCP dual stream (SIP)
- Support for resolutions up to 1920×1080 at 15 fps

Multipoint Support
- Cisco Ad-Hoc Conferencing (requires Cisco Unified Communications Manager (CUCM), and Cisco Meeting Server (CMS) or Cisco TelePresence Server with Cisco TelePresence Conductor)

Protocols
- SIP and H.323

Embedded Encryption
- SIP and H.323 point-to-point
- Standards-based: H.235v3 and Advanced Encryption Standard (AES)
- Automatic key generation and exchange
- Supported in dual stream

IP Network Features
- DNS lookup for service configuration
- Differentiated Services (QoS)
- IP adaptive bandwidth management (including flow control)
- Auto-gatekeeper discovery
- Dynamic playout and lip-sync buffering
- H.245 dual-tone multifrequency (DTMF) tones in H.323
- Date and time support via NTP
- Packet loss based downsampling
- URI dialing
- TCP/IP
- DHCP
- IEEE 802.1x network authentication
- IEEE 802.1q Virtual LAN
- IEEE 802.1p QoS and class of service
- Cisco ClearPath

IPv6 Network Support
- Dual stack IPv4 and IPv6 for H.323 and SIP
- Dual stack IPv4 and IPv6 for DHCP, SSH, HTTP, HTTPS, DNS, DiffServ
- Support for static IP address assignment, stateless autoconfiguration and DHCPv6

Supported Infrastructure
- Cisco Unified Communications Manager 8.6.2 and later
- Cisco TelePresence Video Communication Server (Cisco VCS)

Security Features
- Management using web interface (HTTPS/HTTP) and SSH
- Password protected IP administration
- Password protected administration menu
- Disable IP services
- Network settings protection

Network Interfaces
- Internal 2-port Cisco Ethernet switch (RJ-45)
  10/100/1000BASE-T (only auto-negotiation)
- Wi-Fi: IEEE 802.11a/b/g/n, 2.4 GHz, 5 GHz
- Bluetooth 4.0 LE

Other Interfaces
- Three USB ports
- One MicroSD card slot for future use
- One Micro USB port for maintenance

Approvals and Compliance
- Directive 2014/35/EU (Low-Voltage Directive)
- Directive 2014/30/EU (EMC Directive) – Class A
- Directive 2011/65/EU (RoHS)
- Directive 2002/96/EC (WEEE)
- NRTL approved (Product Safety)
- FCC CFR 47 Part 15B (EMC) – Class B
- FCC Listed (Radio Equipment)
Please check the Product Approval Status Database at http://www.ciscofax.com for approval documents per country.

April 2018
Supported RFCs

The RFC (Request for Comments) series contains technical and organizational documents about the Internet, including the technical specifications and policy documents produced by the Internet Engineering Task Force (IETF).

CE software supports a range of RFCs, including the following:

- RFC 2782 DNS RR for specifying the location of services (DNS SRV)
- RFC 3261 SIP: Session Initiation Protocol
- RFC 3263 Locating SIP Servers
- RFC 3361 DHCP Option for SIP Servers
- RFC 3550 RTP: A Transport Protocol for Real-Time Applications
- RFC 3711 The Secure Real-time Transport Protocol (SRTP)
- RFC 4091 The Alternative Network Address Types (ANAT) Semantics for the Session Description Protocol (SDP) Grouping Framework
- RFC 4092 Usage of the Session Description Protocol (SDP) Alternative Network Address Types (ANAT) Semantics in the Session Initiation Protocol (SIP)
- RFC 4582 The Binary Floor Control Protocol
draft-ietf-bfcpbis/rfc4582bis-00 Revision of the Binary Floor Control Protocol (BFCP) for use over an unreliable transport
- RFC 4733 RTP Payload for DTMF Digits, Telephony Tones and Telephony Signals
- RFC 5245 Interactive Connectivity Establishment (ICE): A Protocol for Network Address Translator (NAT) Traversal for Offer/Answer Protocols
- RFC 5589: SIP Call Control Transfer
- RFC 5766 Traversal Using Relays around NAT (TURN): Relay Extensions to Session Traversal Utilities for NAT (STUN)
User documentation on the Cisco web site

Use the following short-links to find the documentation for the product series running CE software.

Room Series:  
► https://www.cisco.com/go/roomkit-docs

MX Series:  
► https://www.cisco.com/go/mx-docs

SX Series:  
► https://www.cisco.com/go/sx-docs

DX Series:  
► https://www.cisco.com/go/dx-docs

In general, you can find user documentation for all Cisco Collaboration endpoints at ► https://www.cisco.com/go/telepresence/docs

The documents are organized in the following categories - some documents are not available for all products:

Install and Upgrade > Install and Upgrade Guides
• Installation guides: How to install the product
• Getting started guide: Initial configurations required to get the system up and running
• RCSI guide: Regulatory compliance and safety information

Maintain and Operate > Maintain and Operate Guides
• Getting started guide: Initial configurations required to get the system up and running
• Administrator guide: Information required to administer your product
• Deployment guide for TelePresence endpoints on CUCM: Tasks to perform to start using the video system with the Cisco Unified Communications Manager (CUCM)
• Spare parts overview, Spare parts replacement guides, Cable schemas: Useful information when replacing spare parts

Maintain and Operate > End-User Guides
• User guides: How to use the product
• Quick reference guides: How to use the product
• Physical interface guide: Details about the codec’s physical interface, including the connector panel and LEDs

Reference Guides > Command references
• API reference guides: Reference guide for the Application Programmer Interface (API)

Reference Guides > Technical References
• CAD drawings: 2D CAD drawings with measurements

Configure > Configuration Guides
• CE Customization guide: How to customize the user interface, how to use the video system's API to program in-room controls, making macros, use a video switch, and configure advanced audio set-ups using the Audio Console.

Design > Design Guides
• Video conferencing room guidelines: General guidelines for room design and best practice
• Video conferencing room guidelines: Things to do to improve the perceived audio quality

Software Downloads, Release and General Information > Licensing Information
• Open source documentation: Licenses and notices for open source software used in this product

Software Downloads, Release and General Information > Release Notes
• Software release notes
