collaboration endpoint software version 9.8
July 2019

Administrator guide
for Cisco Webex DX70 and DX80
Thank you for choosing Cisco!

Your Cisco product has been designed to give you many years of safe, reliable operation.

This part of the product documentation is aimed at administrators working with the setup and configuration of the video conferencing device.

Our main objective with this Administrator guide is to address your goals and needs. Please let us know how well we succeeded!

May we recommend that you visit the Cisco web site regularly for updated versions of this guide.

The user documentation can be found on https://www.cisco.com/go/dx-docs

How to use this guide

The top menu bar and the entries in the Table of contents are all hyperlinks. You can click on them to go to the topic.

Table of contents

Introduction .......................................................................................................................... 4

Chapter 1

Introduction
User documentation and software

Products covered in this guide

- Cisco TelePresence DX70
- Cisco TelePresence DX80

From Collaboration Software version 8.2 (CE8.2) all DX80 and DX70 units can run CE software, which is the same software that runs on the Cisco TelePresence SX and MX Series.

Note that Cisco DX650 is not, and will not be, supported by CE software.

User documentation

This guide provides you with the information required to administrate the video conferencing device.

The guide primarily addresses capabilities and configurations of on-premise registered devices (CUCM, VCS), but a sub-set of the capabilities and configurations also applies to devices that are registered to our cloud service (Cisco Webex).

Refer to the User documentation on the Cisco web site appendix for more information about the guides for this product.

Documentation on the Cisco web site

Visit the Cisco web site regularly for updated versions of the guides:

► https://www.cisco.com/go/dx-docs

Documentation for cloud registered devices

For more information about devices that are registered to the Cisco Webex cloud service, visit:

► https://help.webex.com

Cisco Project Workplace

Explore the Cisco Project Workplace to find inspiration and guidelines when preparing an office or meeting room for video conferencing:

► https://www.cisco.com/go/projectworkplace

Software

Download software for the endpoint from the Cisco web site:

► https://software.cisco.com/download/home

We recommend reading the Software release notes (CE9):

Converting to CE software

Until September 2016 DX80 and DX70 were shipped with Android based software. Before converting to CE software, it is important to carefully consider the conversion requirements and the functionality changes compared to Android based software; otherwise migration can leave you with a non-functional deployment that requires you to convert back.

Refer to the software release notes, and the Upgrade the device software chapter.
What’s new in CE9

This chapter provides an overview of the new and changed device settings (configurations), and the new features and improvements in the Cisco Collaboration Endpoint software version 9 (CE9) compared to CE8.

The following products are new in CE9:
• CE9.0 - Room Kit
• CE9.1 - Codec Plus, and Room 55
• CE9.2 - Room 70
• CE9.4 - Codec Pro, Room 70 G2, and Room 55 Dual
• CE9.6 - Room Kit Mini
• CE9.8 - Board 55/55S, Board 70/70S, and Board 85S

For more details, we recommend reading the Software release notes:

New features and improvements in CE9.8

New products
The Cisco Webex Boards, which previously have been available only for cloud registration, are now also available for on-premises registration:
• Cisco Webex Board 55/55S
• Cisco Webex Board 70/70S
• Cisco Webex Board 85S

Support for USB headsets
(Room Kit, Room Kit Mini, Room 55)
You can connect a USB Headset, Handset or USB Bluetooth dongle to the USB-A port on the devices. This is similar to the DX series.

Extended support for HTTP requests
(All products)
Since CE9.6 a device has been able to send arbitrary HTTP(S) Post and Put requests to an HTTP(S) server. This feature is extended to support more request types (Get, Patch, and Delete), and also to handle data that is returned from the server (response headers and body).

Improved USB-C experience (Room Kit Mini)
The Room Kit Mini is in USB camera mode only when it is streaming media to a computer over the USB-C port. In previous releases it was sufficient that at computer was connected to the USB-C port.

Add participant to CMS conference from the device UI (All products)
Any user can add another participant to an ongoing CMS conference using the user interface of the device. This also includes PSTN calls. When the participant accepts the call, the participant will be added to the same CMS conference.

In this case the device will tell the CMS to dial the participant using the Active Control mechanism. Then the CMS will dial directly to the participant you want to add.

For this feature to work, Active Control must be enabled on the device, the call protocol must be SIP, and the CMS must be on version 2.4 or higher. The feature doesn’t work if multipoint mode is set to CUCMMediaResourceGroupList.

Register a device to Cisco Webex using API or local web Interface (All products)
You can register a device to Cisco Webex remotely, so you don’t have to be in the same room as the device. You can do this programmatically from the API or use the local web interface. In earlier releases you had to use the on-screen setup assistant.

From the web interface, you can only start Webex registering if the device is not currently registered anywhere. If you are using the API, you can start Webex registering even if the device is currently registered to an on-premise system (CUCM or VCS).
Pre-installed list of Certificate Authorities -

CAs (All products)

A list of commonly used CA certificates are pre-installed on the video conferencing device. The device uses this list when validating certificates from external servers that it communicates with:

- HTTP servers that host content used by the HttpClient API or macros
- SMTP mail servers (only relevant for Webex Boards)

A factory reset does not delete the list.

xAPI over WebSocket: Authentication using auth protocol header (All products)

Authentication using an auth protocol header is supported. This comes in addition to Basic authentication using an HTTP header field.

This means that browser-based clients, which don’t have direct control over HTTP headers, can authenticate to a device directly from the browser using Javascript.

More device settings can be provisioned from Cisco UCM than before (All products)

If the device is registered to Cisco UCM 12.5(1)SU1 more settings and parameters can be provisioned from UCM than before (Device > Product Specific Configuration Layout). Also, if these settings are changed locally on the device, the new value can be written back to the UCM.

Most of the device’s public settings (xConfiguration), are included. Exceptions are made for Network, Provisioning and SIP settings.

See the Video Endpoints Management Overview section in the Release Notes for Cisco Unified Communications Manager and the IM and Presence Service, Release 12.5(1)SU1 for more information.
New features and improvements in CE9.7

Connect to xAPI over a WebSocket

(All products)

You can now connect to the xAPI over WebSocket. The communication channel over WebSocket is open both ways until it is explicitly closed. This means that the server can send data to the client as soon as the new data is available, and there is no need for re-authentication for every request. This improves speed significantly compared to HTTP.

Each message contains a complete JSON document and nothing else. Many programming languages have good library support for WebSocket and JSON-RPC.

WebSocket is not enabled by default. Note that WebSocket is tied to HTTP and HTTP or HTTPS must be enabled before you can use WebSocket.

For more information, see ► xAPI over WebSocket guide.

Ambient noise reporting

(Codec Plus, Codec Pro, Room 55, Room 55 Dual, Room 70, Room 70 G2, Room Kit, Room Kit Mini)

The Room series devices can be configured to report the stationary ambient noise level in the room. The reported value is an A-weighted decibel value (dBA), which reflects the response of the human ear. Based on reported noise, facility management or a building manager can intervene to troubleshoot the issue.

All signal processing related to this feature is local and the only data transmitted is the calculated noise level.

Support for multiple SRG-120DH/PTZ-12 cameras

(Codec Plus)

You can now connect up to three SRG-120DH/PTZ-12 cameras to a Codec Plus using an HDMI and an Ethernet switch.

Other updates

• 1080p support for Room Kit Mini when it is used as a USB camera. (Room Kit Mini)
• You can turn video off and on during calls. (All products)
• A system administrator can prevent the use of HTTP and only allow HTTPS Post and HTTPS Put requests. (All products)
New features and improvements in CE9.6

New product

- Cisco Webex Room Kit Mini

HDCP support

(Codec Plus, Codec Pro, Room 55 Dual, Room 70, Room 70 G2)

One of the device's HDMI inputs can be configured to support HDCP (High-bandwidth Digital Content Protection) protected content. This allows customers to re-purpose the screen by connecting devices such as a Google Chromecast, an Apple TV, or an HDTV decoder. This type of content cannot be shared while in a call.

When the connector is configured to support HDCP, it is reserved for this type of content. This means that you cannot share any content from this specific connector while in a call, not even non-protected content from a laptop.

Remove default buttons from the user interface

(All products)

If you don’t need all of the default buttons on the user interface, you can remove the ones that you don’t need. This makes it possible to fully customize the user interface. The configuration only removes the buttons, not the functionality as such, and the custom In-Room Control panels can still be exposed.

For more information, see the Customization guide at ►https://www.cisco.com/go/in-room-control-docs

HTTP Post and Put requests

(All products)

This feature makes it possible to send arbitrary HTTP(S) Post and Put requests from a device to an HTTP(S) server.

By using macros, you can send data to an HTTP(S) server whenever you want. You can choose what data to send, and structure them as you like. This way you can adapt the data to an already established service.

Security measures:
- The HTTP(S) Post/Put feature is disabled by default.
- The system administrator can specify a list of HTTP(S) servers that the device is allowed to send data to.
- The number of concurrent Post and Put requests is limited.

Support for 3rd party USB controllers

(Codec Plus, Codec Pro, DX70, DX80, Room 55, Room 55 Dual, Room 70, Room 70 G2, Room Kit)

You can use a 3rd party USB input device to control certain functions on a room device. A Bluetooth remote control with a USB dongle and a USB keyboard are examples of such input devices. You can setup the desired features through macros.

This feature is meant to complement the functionality of the Touch 10 or the DX user interfaces. It is not meant to replace the Touch 10 and DX user interfaces.

For more information, see the Customization guide at ►https://www.cisco.com/go/in-room-control-docs

Content priority

(All products)

You can now configure your device to prioritize bandwidth usage for either Main Video Channel or Presentation Channel.

xConfiguration Video Presentation Priority: <Equal, High>

Equal is the default configuration and means 50 / 50 bandwidth division. Selecting “High” divides the bandwidth 25 / 75 in favor of the presentation channel.

Other updates

(All products)
- You can start and control recording meetings from the device’s user interface, provided that recording is supported by your infrastructure.
- Edit contact’s information on UIs.
- SIP calls now display the SIP Session ID field in the logs to help identify calls.
- Ability to use ICE over MRA to locate the best path for media.
New features and improvements in CE9.5

Presentation source composition
(All products except SX10, DX70, DX80)

With using two or more content sources and sending them as one image, you can create a new experience for sharing in meetings.

This gives users more flexibility with what they present to remote sites. You can configure the presentation composition through in-room controls together with macros or an external controller.

The maximum number of different sources is determined by the device in use:
- SX20, MX200 G2, MX300 G2, and Room Kit: two sources
- Codec Plus, Room 55, Room 55 Dual, and Room 70: three sources
- SX80, MX700, MX800, Codec Pro, and Room 70 G2: four sources

You can only compose content that has been shared through a cable.

Audio Console on the web interface
(SX80, Codec Pro)

The new Audio Console is natively available on the web interface. The audio console gives you simplified tools to route audio from an input to an output. The Audio Console replaces the old java-based CE Console that is no longer maintained.

When you access the Audio Console for the first time you will see the default system audio routes. The Audio Console is controlled by an underlying macro, which is saved and started once you select Choose to overwrite the current device configurations.

For more information, see the Customization guide at https://www.cisco.com/go/in-room-control-docs

Classroom set-up
(SX80, MX700, MX800, Codec Plus, Codec Pro, Room 55 Dual, Room 70, Room 70 G2)

The Classroom template uses macros to tailor a room set-up that works well for presenting and teaching scenarios. The template provides easy setup, management, and use of the room.

The Classroom set-up works similarly to the Briefing Room set-up (which is available for SX80, Codec Pro, MX700, MX800, and Room 70 G2), but it doesn’t require three screens.

Support for Korean keyboard
(All products)

Korean keyboard input is supported on Touch 10 when the user interface language is set to Korean.

Remote monitoring of screen status
(SX20, SX80)

The remote monitoring of screen status that has been available for the Webex Room series and SX10, is now available for SX20 and SX80.

The codec can wake up the screen from standby mode, or put the screen to standby when the codec enters standby. The input source can also be changed automatically when a call is received.

CEC is disabled on the device by default and must be enabled in the Video Output Connector [n] CEC Mode setting. Your screen must support CEC for remote monitoring to work.

Welcome banner
(All products)

You can set up a welcome banner that users see after they sign in to the device’s web interface or command line interface. The banner can for example contain information you need in order to get started, or things you must be aware of when setting up the device.
New features and improvements in CE9.4

New products
- Cisco Webex Codec Pro
- Cisco Webex Room 55 Dual
- Cisco Webex Room 70 G2

Rebranding from Cisco Spark to Cisco Webex
(All products)
Cisco Spark has changed its name to Cisco Webex, and the user interface elements that displayed Spark are changed to Webex. In the activation flow you now see Cisco Webex as a registration option instead of Cisco Spark.

The following products have gotten new names:
- Cisco Spark Room Kit is now Cisco Webex Room Kit
- Cisco Spark Room Kit Plus is now Cisco Webex Room Kit Plus
- Cisco Spark Codec Plus is now Cisco Webex Codec Plus
- Cisco Spark Quad Camera is now Cisco Quad Camera
- Cisco Spark Room 55 are now Cisco Webex Room 55
- Cisco Spark Room 70 are now Cisco Webex Room 70
- Cisco DX70 is now Cisco Webex DX70
- Cisco DX80 is now Cisco Webex DX80

The maximum number of Proximity clients is increased
(Codex Plus, Codec Pro, Room Kit, Room 55, Room 55 Dual, Room 70, Room 70 G2)
A Cisco Webex Room Series device can have up to 30 paired clients simultaneously when the Proximity service ContentShare ToClients is disabled. If ContentShare ToClients is enabled, the limit of paired clients is 7 which is the same as in earlier software versions.

Support for content sharing using H.263 in a call between Cisco Webex Room Series and legacy MXP devices
(Codex Plus, Codec Pro, Room Kit, Room 55, Room 55 Dual, Room 70, Room 70 G2)
Support for H.263 content sharing between MXP and Cisco Webex Room Series is now available. The Room Series previously had a limitation where it could not receive or share content in a separate content channel. Sharing content from a Room Series device to an MXP device would in earlier versions compose the presentation into the main video stream.

This is only supported in certain scenarios:
- Direct H.323 calls (IP dialing) between a Room Series device and an MXP device.
- MXP registered on VCS on H.323 and a Room Series device registered to the same VCS on either SIP or H.323. Note that making an H.323 to SIP call on a VCS requires that an interworking option key is installed on the VCS.

See the CE9 release notes for information on other limitations related to this feature.

CUCM provisioning of the admin settings lockdown configuration
(All products)
The admin settings lockdown configuration, that was introduced in CE9.2.1, can now be provisioned from CUCM. You can lock a selection of the settings on the settings menu on all of your devices simultaneously when you configure them through CUCM.

Your CUCM may require a new device package in order to expose the new fields for this configuration.

Enable backlight compensation from the user interface
(DX70, DX80)
A new setting on the DX70 and DX80 main menu enables and disables backlight compensation. This is a fixed setting that increases (on) or decreases (off) the sensors brightness levels in order to compensate for sunlight or other bright light sources behind the user. The backlight compensation sets the sensor to a fixed level and it is not auto adjusted to the backlight.

Changed default HTTP mode from HTTP+HTTPS to HTTPS
(All products)
The default value of NetworkServices HTTP Mode is changed from HTTP+HTTPS to HTTPS. This is to increase the security of the room devices on default configuration. Upgrading from earlier software versions will not automatically change the default value and it will stay on HTTP+HTTPS to avoid breaking current HTTP implementations.

The change is seen on new devices running CE9.4.0 or later, or if the device is factory reset on CE9.4.0. The HTTP requests are redirect to HTTPS and on the first visit to the device’s web interface, the device displays an “Insecure connection warning”. To proceed to the web interface, you need to create an exception in your browser. This is a one-time operation unless you access the web interface with a different browser that has never visited the device web interface or if the device is factory reset.

In-Room Control update
(All products)
You can add buttons for as many panels as you want on the home screen as well as on the in-call screen of the user interface.
New features and improvements in CE9.3

Backup and restore settings and custom elements (All products)

You can include custom elements as well as configurations in a backup file bundle (zip). You can choose which of the following elements to include in the bundle:

- Branding images
- Macros
- Favorites
- Sign-in banner
- In-room control panels
- Configurations (all or a sub-set)

In previous software versions, you could only backup the configurations.

The backup file can either be restored manually from the device's web interface, or you can generalize the backup bundle so that it can be provisioned across multiple devices, for example using Cisco UCM or TMS.

You will find the backup and restore functionality under Maintenance > Backup and Restore on the device's web interface.

Provisioning of custom elements (All products)

The backup bundle, as described above, can be provisioned to many devices using Cisco UCM or TMS. It is important that device specific information is removed when creating a backup bundle intended for multiple devices. If you include device specific information in such a bundle, you may end up with multiple devices that cannot be reached.

By provisioning a non-device specific backup bundle, you can for example, copy a device's setup with macros, branding elements, and in-room control panels across multiple devices.

Currently, provisioning via Cisco UCM will not restore any configurations, only the other custom elements; TMS will restore everything that is included in the backup bundle.

See the release note for more details about provisioning.

In-Room Control updates (All products)

The following functionality is added to the in-room control feature:

- You can add buttons for up to 20 panels in total. The buttons appear on the home screen or the in-call screen of the user interface depending on the panel type.
- As before, there are three types of in-room control panels: global panels (always available), in-call panels (available only when in call), and out-of-call panels (only available when not in a call). The entry point for the global panel has been removed from the status bar (top right corner of the user interface). Buttons to open global panels are added to both the home screen and the in-call screen instead, together with the buttons for the out-of-call only and in-call only panels, respectively.
- You can make standalone trigger-buttons, which are buttons that trigger an event directly, without opening a panel on the user interface.

Also the following features are added in the in-room control editor:

- Some new icons are available.
- A set of colors to choose from for the in-room-control buttons.
- Double click text elements to edit text directly.
- Drag and drop in-room control XML files into the editor.

For a full description of in-room controls, see the Customization guide at https://www.cisco.com/go/in-room-control-docs
Support for ISDN Link *(All products)*

ISDN Link with software version IL1.1.7 is supported for all devices that supports CE9.3.0.

As before, when using automatic pairing (which allows the ISDN Link to be automatically discovered by the video conferencing device) IPv6 must be enabled on the video conferencing device.

One Button to Push snooze *(All products)*

You are able to snooze an One Button to Push (OBTP) meeting reminder for 5 minutes. The snooze time cannot be changed. The reminder typically appears if you are in a call and a scheduled meeting is about to start. You can snooze the reminder for 5 minutes each time it appears until the meeting has ended.

Adjust the call rate before making a call *(All products)*

As soon as you start typing in the *Search or dial* field, you can open a dialog and select a custom call rate. In earlier releases this was available only when selecting an entry from the Directory.

If you don’t select a custom call rate, you get the rate set in the *Conference DefaultCall Rate* setting.

Select ring-tone and adjust ring-tone volume *(All products)*

You can select a ring-tone and adjust the ring-tone volume from the settings menu on the user interface. In the previous releases this was done from the web interface.

Resume a postponed upgrade *(All products)*

When you get a notification about software upgrade, you can choose *Upgrade now or Postpone*. If you postpone the upgrade, you can resume the upgrade from the *Settings > About this device* menu on the user interface when you are ready; you don’t have to wait for 6 hours like you had to before.

If you don’t manually resume the upgrade, the upgrade will start automatically after 6 hours.

Prevent device information from being exposed in the user interface *(All products)*

You can prevent important device information from being exposed in the user interface, for example:

- IP addresses (video conferencing device, touch controller, UCM/VCS registrar)
- MAC address
- Serial number
- Software version

To enable this feature the following must be done:

- A passphrase must be set for all users with administrator rights
- *UserInterface Settings Menu Mode* must be set to Locked
- *UserInterface Security Mode* must be set to Strong

This feature also means that the IP address is not displayed on the screen when you disconnect a Touch controller.

Mirrored self-view *(DX70, DX80)*

You can configure the device to show the self-view image the way other people see you, or as you would see yourself in a mirror. Use the *Video Selfview Mirrored* setting. Mirrored self-view used to be available only for Cisco DX devices running Android software.

Mirroring only applies to the self-view image, and has no effect on the video that is sent to the far end.

Accessibility: Flashing screen on incoming calls *(All products)*

You can configure the device so that the screen and Touch controller flashes red / light grey when the device receives an incoming call. This feature is mainly targeting hearing impaired users, making it easier for them to notice an incoming call.

The feature is disabled by default, and must be enabled by the *Accessibility IncomingCallNotification* setting.

Screen status monitoring and control *(SX10)*

SX10 now has the same CEC (Consumer Electronics Control) behavior as the devices in the Room series.

The device will use CEC to set the screen in standby when the device itself enters standby, and wake up the screen and select the correct video input when the device itself wakes up from standby. CEC information from the screen is included in the device’s status. Of course, the screen must also support CEC and send the relevant information to the device.

CEC is disabled on the device by default, and must be enabled in the *Video Output Connector [1] CEC Mode* setting.

One common API guide *(All products)*

We have gathered all API information in one API guide, that covers all products. This is in contrast to earlier releases were we had one API guide per product.
New features and improvements in CE9.2

New product
- Cisco Webex Room 70 (formerly Cisco Spark Room 70)

Macro framework (All products except SX10)
The macro framework allows users and integrators to write JavaScript macros in order to automate scenarios and customize endpoint behavior so that it suites an individual customer’s requirements.

The combination of macros and powerful features such as listening for events/status changes, automating execution of commands and configurations, and providing local control functionality for the In-Room control feature, provides many possibilities for custom setups.

Minor behavioral changes, such as having the device in Do Not Disturb for an infinite amount of time, can be easily realized by macros. Some other examples are: Reset configurations automatically, make a call at a certain time of the day, and issue alert or help messages depending on status changes.

The macro editor, which also provides several example macros, is available from the device’s web interface.

HDCP support (Room 55)
The device’s second HDMI input (Connector 3) can be configured to support HDCP (High-bandwidth Digital Content Protection) protected content. This allows customers to re-purpose the device’s screen by connecting devices such as a Google ChromeCast, an AppleTV, or an HDTV decoder. This type of content cannot be shared while in a call.

When the connector is configured to support HDCP, it is reserved for this type of content. This means that you cannot share any content from this specific connector while in a call, not even non-protected content from a laptop.

Branding and halfwake customization (All products except SX10)
You can upload your own text and images to customize the appearance of the screen and user interface in both the halfwake state and the awake state.

In the Halfwake state you can:
- Add a background brand image to the screen and user interface.
- Add a small logo in the bottom right corner of the screen and user interface.

In the Awake state you can:
- Add a small logo in the bottom right corner of the screen and user interface.
- Add a label or message in the bottom left corner of the screen (not the user interface).

Source composition (All products except SX10, DX70, DX80)
You can compose up to four input sources (depending on how many input sources are available on the codec) into one image. This is the image that will be sent in the main video stream to the far end in a call. Source composition can only be enabled via the API, so we recommend creating a user interface extension combined with a macro to control the compositions on demand.

This feature replaces some of the functionality that was provided by the TC Console application for TC software.

HTTP Proxy support (All products)
You can set up the device to go through a HTTP Proxy when registering it to Cisco’s cloud service, Cisco Spark.

User interface features (All products)
- The Settings panel is restructured.
- The Settings panel in the user interface can be protected by the device’s admin password. If the password is blank, anyone can access the Settings and factory reset the device.
- If you select the Russian language on the user interface, you can choose between a Russian keyboard and a keyboard with a Latin character set.
- Arabic and Hebrew languages are added to the user interface. Also localized keyboards are included.
- Basic IEEE 802.1x settings are added to the Settings panel in the user interface.

Cisco TelePresence Precision 60 Camera support (Codec Plus, Room 70)
You can connect Cisco TelePresence Precision 60 cameras to Codec Plus. Note that you need a switch for the camera control cables if you have more than one camera. The People Count feature is not supported if Precision 60 is the only camera type connected to the codec.

Cisco Spark Quad Camera support (SX80)
You can connect a Cisco Spark Quad Camera to the SX80. Note that the Quad Camera uses only one of the codec’s HDMI inputs, while the SpeakerTrack 60 camera uses two. The People Count feature (in call) is also available when using the Quad Camera.
Support for the Snap to Whiteboard feature
(SX80, MX700, MX800, Codec Plus, Room Kit, Room 55, Room 70)

The Snap to Whiteboard feature is now available for all products that have a camera with speaker track functionality: SX80 with Cisco TelePresence Speaker Track 60 camera or Cisco Spark Quad Camera, MX700/MX800 with dual camera, Room Kit, Room Kit Plus, Room 55 and Room 70.

When the device detects a person that is speaking close to the whiteboard, the camera view will switch to the whiteboard area. The wizard in the Settings panel on the Touch 10 user interface helps you to set up the feature and define where the whiteboard area is.

Briefing Room mode (SX80, MX700, MX800)

The Briefing Room feature, which was introduced already in TC software, has been reworked. The in-room control framework is used for creating the associated user interface elements.

For MX700 and MX800, Briefing Room is supported only for dual camera devices. Also, you need a Precision 60 camera, and a total of three screens.

For SX80, Briefing Room is supported when a speaker track camera, a Precision 60 camera, and three screens are connected. The speaker track camera can be either Cisco TelePresence SpeakerTrack 60 or Cisco Spark Quad Camera.

USB to Serial port support
(Codecs Plus, Room Kit, Room 55, Room 70)

You can connect a USB (Type A) to serial (D-sub 9) adapter to access the device’s API. Cisco recommends the UC232R-10 USB to RS232 (FTDI) adapter.

Mute and unmute remote participants in a CMS hosted conference - Active Control (All products)

When a device is enabled for Active Control in a CMS (2.1 or later) conference you can mute and unmute remote participants from the participant list on the user interface (the feature must also be enabled on the CMS).

A device that is running software version CE9.2 will not be unmuted directly. When you try to unmute such a device remotely, a message will show up on its screen requesting the user to unmute the audio locally.

API commands for Custom input prompt
(All products)

API commands are introduced to allow for an input prompt in the user interface: xCommand UserInterface Message TextInput *. When issuing the display command a prompt with your custom text, a text input field for the user, and a submit button, shows up on the user interface. For example, you can prompt a user to leave feedback after an ended call. You can specify what type of input you want from the user: single line text, numeric, password, or PIN code.

The prompt can only be enabled via the API, so it is recommended to combine it with macros and either a custom user interface panel or an auto-triggered event.

Certificate upload via API (All products)

ASCII PEM formatted certificates can be installed directly using multiline API commands (xCommand Security Certificates CA Add, or xCommand Security Certificates Services Add). You can also upload certificates to a device from its web interface, as before.

API commands for user management (All products)

You can create and manage user accounts directly using API commands (xCommand UserManagement User *).

As before, you can also do this from the device’s user interface.

Preview mode for In-Room Controls (All products)

The In-Room Control editor has a new preview mode. A virtual touch interface shows how the design looks. The user interface is interactive so that you can test the functionality. It produces real events on the device, which can trigger any functionality you have created with a third-party control system. A console in the right pane displays both the widget values when interacted with, and control system feedback messages.

Intelligent Proximity changes (All products)

A Proximity indicator is displayed on the screen (middle right) to inform that one or more clients are paired to the device with Cisco Proximity. The old indicator (top left), which was always shown when Proximity was enabled, has been removed.

You can no longer disable the Proximity services from the user interface.

The ultrasound settings have moved from Peripherals Pairing Ultrasound to Audio Ultrasound.
Automatic factory reset when changing the call service – device activation

The device will automatically factory reset and restart when using the user interface to change the device activation method, for example from VCS to Cisco UCM. This will prevent conflicting configurations when provisioning the device to a new service.

Changing the provisioning from the API will not automatically factory reset the device.

Support for separate RTP port ranges for audio and other media

You can configure the device so that audio uses a different RTP port range than other media. The two ranges cannot overlap. As default, all media use the same RTP port range.
New features and improvements in CE9.1

New products

- Cisco Webex Codec Plus (formerly Cisco Spark Codec Plus)
- Cisco Webex Room 55 (formerly Cisco Spark Room 55)

Dual Screen experience and Active Control for CMS based meetings

(SX80, MX700, MX800, Codec Plus, Room Kit, Room 55)

Dual screen devices can utilize both screens for video in a CMS based meeting. The device receives two transcoded video streams and one content stream from the CMS, and utilizes both screens to render the streams.

With Active Control enabled, you get a participant list that shows all meeting participants and their current activity status, such as mute, sharing and active speaker indication. You can change the layout seamlessly from the touch interface by using the layout selection panels.

New wake-up experience (All products)

SX10, DX70, DX80: The wake-up experience has an additional standby state: Halfwake. In Halfwake state, the device shows a simple on-screen interaction guide when it is not in use.

Other products: The wake-up experience has two additional standby states: Halfwake and Standby with motion detection. When automatic wake-up is enabled, the device detects presence using ultrasound (motion detection) or when pairing to a Cisco Proximity client. The device wakes up with a greeting before going into the Halfwake state, which has a simple on-screen interaction guide.

Bluetooth headset support (DX70, DX80)

A Bluetooth headset can be used with the video conferencing device. The headset must support HFP (Hands Free Protocol). The user can enable Bluetooth and set the video conferencing device in Bluetooth pairing mode from the user interface.

Support for the EAP authentication framework for wireless networks

(DX70, DX80, Codec Plus, Room Kit, Room 55)

In addition to WPA-PSK and WPA2-PSK, the device now supports the WPA-EAP authentication framework for Wi-Fi connections. In total the following methods are supported:

- Open
- WPA-PSK (AES)
- WPA2-PSK (AES)
- EAP-TLS
- EAP-TTLS
- EAP-FAST
- PEAP
- EAP-MSCHAPv2
- EAP-GTC

Additions for Room Analytics

(All products except SX10, DX70, DX80)

Detect people presence in the room: The device has the capability to find whether there are people present in the room. The feature is based on ultrasound, and it does not keep record of who was in the room, only whether or not the room is in use.

People count (only for Room Kit, Codec Plus, Room 55): The device counts the number of people in the room when in a call, and when displaying the self-view picture. You can configure the device to also count the number of people outside of call, but the device cannot count the number of people when it is in standby. It does not keep record of who was in the room, only the number of faces that were detected.

Network port 2 can be disabled (DX70, DX80)

You can connect a computer to the network through the video conferencing device’s second network port. Then you only need one network wall socket to support both the video conferencing device and the computer.

For security reasons, we recommend that you disable this network port if the video conferencing device is used in a public environment. This way, you prevent someone from connecting a computer to your network through the device.
New features and improvements in CE9.0

New product
- Cisco Webex Room Kit (formerly Cisco Spark Room Kit)

Updated user interface (All products)
The user interfaces on the Touch 10, on screen, and on integrated touch screens have been updated. The main menu items on the home screen have been replaced with more prominent activities.
Some of the settings have been removed from the Touch 10 advanced settings menu to align with the on-screen display menu.

Wakeup on motion detection (All products)
Wakeup on motion detection senses when a person walks into the conference room and the device wakes up automatically. You need to enable the following setting for this feature to work:

xCConfiguration Standby WakeupOnMotionDetection
You can’t manually set the device in standby when this feature is enabled.

Updated In-Room Control editor (All products)
The In-Room Control editor is updated with a new look, improved logic and usability for producing a control interface more efficiently. In addition, a new directional pad widget and an In-Room Control simulator is added.

Added language support (All products)
We have added support for Potuguese (Portugal) to the on-screen display and Touch controller menus.

Other changes (All products)
- Support for HTTPS client certificates has been added.
- Unplugging the presentation cable stops the presentation sharing instantly.
Configuration changes in CE9.8

New configurations
- Conference Multipoint Mode (SX10, DX70, DX80)
- NetworkServices SMTP From (Boards)
- NetworkServices SMTP Mode (Boards)
- NetworkServices SMTP Password (Boards)
- NetworkServices SMTP Port (Boards)
- NetworkServices SMTP Security (Boards)
- NetworkServices SMTP Server (Boards)
- NetworkServices SMTP Username (Boards)

NEW: Portuguese added to value space
Configurations with the new INTEGRATOR user role

A new user role - INTEGRATOR - is introduced in CE9.0. It has been added to the following configurations:

- **Audio DefaultVolume** *(All products)*
- **Audio Input HDMI [n]** *(SX80, MX700, MX800)*
- **Audio Input Line [n]** *(SX20, SX80, MX700, MX800)*
- **Audio Input Microphone [n]** *(SX10, SX20, SX80, MX200 G2, MX300 G2, MX700, MX800)*
- **Audio MicrophoneReinforcement** *(SX80, MX700, MX800)*
- **Audio Microphones Mute Enabled** *(All products)*
- **Audio Output HDMI [n]** *(SX80)*
- **Audio Output Line [n]** *(SX10, SX20, SX80, MX700, MX800)*
- **Audio SoundsAndAlerts** *(All products)*
- **CallHistory Mode** *(All products)*
- **Cameras Camera [n]** *(SX10, SX20, SX80, MX200 G2, MX300 G2, MX700, MX800)*
- **Cameras PowerLine Frequency** *(SX20, SX80, MX200 G2, MX300 G2, MX700, MX800)*
- **Cameras PresenterTrack** *(SX80, MX700, MX800)*
- **Cameras SpeakerTrack** *(SX80, MX700, MX800)*
- **Conference DefaultCall Rate** *(All products)*
- **Conference DoNotDisturb DefaultTimeout** *(All products)*
- **FacilityService** *(All products)*
- **GPIO Pin [n] Mode** *(SX80, MX700, MX800)*
- **Peripherals Pairing Ultrasound Volume MaxLevel** *(All products)*
- **Peripherals Pairing Ultrasound Volume Mode** *(All products)*
- **SerialPort BaudRate** *(SX20, SX80, MX700, MX800)*
- **SerialPort Mode** *(All products)*
- **Standby** *(SX10, SX20, SX80, MX200 G2, MX300 G2, DX70, DX80)*
- **Standby BootAction** *(MX700, MX800)*
- **Standby Control** *(MX700, MX800)*
- **Standby Delay** *(MX700, MX800)*
- **Standby StandbyAction** *(MX700, MX800)*
- **Standby WakeupAction** *(MX700, MX800)*
- **Standby WakeupOnMotionDetection** *(MX700, MX800)*
- **SystemUnit Name** *(All products)*
- **Time Zone** *(All products)*
- **UserInterface OSD Output** *(All products)*
- **UserInterface Wallpaper** *(All products)*
- **Video ActiveSpeaker DefaultPIPPosition** *(All products)*
- **Video Input Connector [n]** *(SX10, DX70, DX80)*
- **Video Input Connector [n] CameraControl CameraId** *(SX20, SX80, MX200 G2, MX300 G2, MX700, MX800)*
- **Video Input Connector [n] CameraControl Mode** *(SX20, SX80, MX200 G2, MX300 G2, MX700, MX800)*
- **Video Input Connector [n] InputSourceType** *(SX20, SX80, MX200 G2, MX300 G2, MX700, MX800)*
- **Video Input Connector [n] OptimalDefinition Profile** *(SX20, SX80, MX200 G2, MX300 G2, MX700, MX800)*
- **Video Input Connector [n] Resolution** *(SX10, SX20, MX200 G2, MX300 G2, DX70, DX80)*
- **Video Output Connector [n]** *(SX80, MX700, MX800)*
- **Video Output Connector [n] CEC Mode** *(SX10, SX20, MX200 G2, MX300 G2, DX70, DX80)*
- **Video Output Connector [n] Location HorizontalOffset** *(SX20, MX200 G2, MX300 G2, DX70, DX80)*
- **Video Output Connector [n] Location VerticalOffset** *(SX20, MX200 G2, MX300 G2, DX70, DX80)*
- **Video Output Connector [n] MonitorRole** *(SX20)*
- **Video Output Connector [n] Resolution** *(SX10, SX20, MX200 G2, MX300 G2, DX70, DX80)*
Video Output Connector [n] RGBQuantizationRange (SX10, SX20, MX200 G2, MX300 G2, DX70, DX80)

Video Presentation DefaultPIPPosition (All products)

Video Selfview Default * (All products)

Video Selfview OnCall * (All products)

<path> * means that the change applies to all configurations starting with <path>. 

The Cisco Webex DX70 and DX80 are all-in-one units designed to video-enable small collaboration spaces. They are high quality featuring high-definition (HD) video, unified communications features, a display for your laptop, and expanded capabilities.

**Features and benefits**
- A dedicated, always-on 1080p HD video communication device
- A high-quality audio system for speakerphone
- Support for wireless Bluetooth headset, Bluetooth headset with USB dongle, and USB headset
- A 23-inch (DX80) or 14-inch (DX70) 16:9 screen that provides an engaging experience for video calls
- A multitouch capacitive touchscreen that provides an elegant and powerful user interface
- A self-provisioning device that is simple for users to take out of the box and start using quickly
- Ability for administrators to use Cisco Expressway for the secure connection of their remote workers
- Registers with Cisco Unified Communications Manager (UCM), Cisco TelePresence Video Communication Server (VCS), and Cisco Webex
Power On and Off (page 1 of 2)

Power On/Off with the Power button
The power button, with LED indicator, is placed on the front as shown in the illustration.

Switch on
The device does not start automatically. Press the power button gently, and hold for a few seconds.
The LED is lit while the device starts up.

Switch off
Press the power button gently and hold until the light goes out.

Enter/exit standby mode
Press the power button briefly. It takes a few seconds before the device enters standby.
Power On and Off (page 2 of 2)

Restart and standby using the user interface

Restart the device
1. Select the device name or address at the top of the user interface.
2. Select Settings, followed by Restart.
3. Select Restart again to confirm your choice.

Enter standby mode
1. Select the device name or address at the top of the user interface.
2. Select Standby.

Exit standby mode
• Tap the screen.

Power Off or restart the device remotely

Sign in to the web interface and navigate to Maintenance > Restart.

Restart the device
Click Restart device... and confirm your choice.
It takes a few minutes before the device is ready for use.

Power Off the device
Click Shutdown device... and confirm your choice.

You cannot power the device on again remotely; you have to use the power button.
LED indicators

Status LED
The status LED is a circle around the power button. The normal LED color is white. A red light indicates hardware failure.

Normal operation (not standby):
Steady light.

In standby mode:
The LED pulsates slowly.

No network connection:
The LED repeatedly flashes twice.

During startup (boot):
The LED flashes.

Camera LED
The camera LED is just above the camera lens.

Incoming call:
The LED flashes.

In call:
Steady light.
How to administer the video conferencing device

In general, we recommend you to use the web interface to administer and maintain the device, as described in this administrator guide.

Alternatively, you can access the API of the device by other methods:
- HTTP/HTTPS (also used by the web interface)
- WebSocket
- Telnet
- SSH
- Serial connection

If you want more information about the different access methods, and how to use the API, refer to the API guide for the device.

Tip

If the configuration or status is available in the API, the web interface setting or status translates into an API configuration or status as follows:

Set $X > Y > Z$ to Value (web)
is the same as
xConfiguration X Y Z: Value (API)

Check $X > Y > Z$ status (web)
is the same as
xStatus X Y Z (API)

For example:

Set SystemUnit > Name to MySystem
is the same as
xConfiguration SystemUnit Name: MySystem

Check SystemUnit > Software > Version status
is the same as
xStatus SystemUnit Software Version

More settings and statuses are available in the web interface than in the API.

</tbody>
</table>

If all access methods are disabled (set to Off), you can no longer configure the device. You are not able to re-enable (set to On) any of the access methods, and you must factory reset the device to recover.
The web interface of the device

The web interface is the administration portal for the device. You can connect from a computer and administer the device remotely. It provides full configuration access and offers tools and mechanisms for maintenance.

Note: The web interface requires that HTTP or HTTPS is enabled (refer to **NetworkServices > HTTP > Mode** setting).

We recommend that you use the latest release of one of the major web browsers.

Connect to the device

Open a web browser and enter the IP address of the device in the address bar.

**How to find the IP address**

1. Select the device name or address at the top of the user interface.
2. Select **Settings**, followed by **About this device**.

Sign in

Enter user name and passphrase for the endpoint and click **Sign In**.

The device is delivered with a default user named **admin** with no passphrase. Leave the **Passphrase** field blank when signing in for the first time.

It is mandatory to set a password for the **admin** user.

Sign out

Hover the mouse over the user name and choose **Signout** from the drop-down list.
How to administer the video conferencing device (page 3 of 4)

How the web interface is organized

The web interface is organized in sub-pages. All sub-pages shown below are available if the device is registered to an on-premise service (CUCM, VCS); the pages shown in grey color are not available if the device is registered to the Cisco cloud service (Cisco Webex).

In both cases, a user that is signed in, sees only the pages that he has access rights for.

Read more about user administration, user roles and access rights in the ► User administration chapter.
How to administer the video conferencing device (page 4 of 4)

Settings and device information on the user interface

You have access to device information, and some basic configurations and device tests on the device's user interface.

Device-critical settings and functions, such as network settings, service activation, and factory reset, may be protected by a passphrase, refer to the ► Restrict the access to the Settings menu chapter.

Some of the settings and tests are also part of the Setup assistant that is launched when the device is powered up for the first time. The Setup assistant is described in the Getting Started Guide for devices running CE software.

Access Settings

1. Select the device name or address at the top of the user interface.
2. Select Settings.

   A padlock symbol indicates that a setting is protected (locked down).

3. Select the setting you want to change, or the test you want to run.

   If a setting is locked down, an authentication window pops up, and you have to sign in with ADMIN credentials to proceed.
Chapter 2

Configuration
User administration

You have to sign in to get access to the web and command line interfaces. You can assign different roles to users, to determine what they should have access to.

The default user account

The device comes with a default administrator user account with full access rights. The user name is admin and no passphrase is initially set.

It is mandatory to set a passphrase for the admin user.

Read how to set the passphrase in the ► Change the device passphrase chapter.

Create a new user account

1. Sign in to the web interface and navigate to Security > Users.
2. Click Add new user...
3. Fill in the Username, Passphrase and Repeat passphrase input fields.
   As a default, the user has to change the passphrase when he signs in for the first time.
   Fill in the Client Certificate DN (Distinguished Name) field only if you use client certificates for authentication.
4. Check the appropriate Roles check boxes.
   If you assign the ADMIN role to a user, enter your own passphrase in the Your passphrase input field for verification.
5. Set the Status to Active to activate the user.
6. Click Create User.
   Use the Back button to leave without making any changes.

Edit an existing user account

If you make changes to a user that holds the Admin role, you must always enter your own passphrase in the Your passphrase input field for verification.

Change the user privileges

1. Sign in to the web interface and navigate to Security > Users.
2. Click the appropriate user in the list.
3. Choose user roles, set the status to Active or Inactive, and decide if the user has to change the passphrase on the next sign in.
   Fill in the Client Certificate DN (Distinguished Name) field only if you use certificate login on HTTPS.
4. Click Edit User to save the changes.
   Use the Back button to leave without making any changes.

Change the passphrase

1. Sign in to the web interface and navigate to Security > Users.
2. Click the appropriate user in the list.
3. Enter the new passphrase in the appropriate input fields.
4. Click Change passphrase to save the change.
   Use the Back button to leave without making any changes.

Delete the user account

1. Sign in to the web interface and navigate to Security > Users.
2. Click the appropriate user in the list.
3. Click Delete user... and confirm when prompted.

User roles

A user account may hold one or a combination of user roles. A user account with full access rights, like the default admin user, should possess the ADMIN, USER and AUDIT roles.

These are the user roles:

ADMIN: A user with this role can create new users, change most settings, make calls, and search the contact lists. The user cannot upload audit certificates and change the security audit settings.

USER: A user with this role can make calls and search the contact lists. The user can modify a few settings, for example adjust the ringtones volume and set the time and date format.

AUDIT: A user with this role can change the security audit settings and upload audit certificates.

ROOMCONTROL: A user with this role can create in-room controls. The user has access to the in-room control editor and corresponding development tools.

INTEGRATOR: A user with this role has access to settings, commands and status that are required to set up advanced AV scenarios, and to integrate our devices with 3rd party equipment. Such a user can also create in-room controls.
Change the device passphrase

You need to know the device passphrase in order to:

- Sign in to the web interface
- Sign in and use the command line interfaces

The default user account

The device is delivered with a default user account with full access rights. The user name is admin, and initially, no passphrase is set.

It is mandatory to set a passphrase for the default admin user in order to restrict access to device configuration. It is also mandatory to set a passphrase for any other user with ADMIN rights.

A warning, saying that the device passphrase is not set, is shown on screen until a passphrase is set for the admin user.

Other user accounts

You can create many user accounts for the device.

Read more about how to create and manage user accounts in the User administration chapter.

Change your passphrase

1. Sign in to the web interface, hover the mouse over the user name, and choose Change Passphrase in the drop down list.
2. Enter the current passphrase and new passphrase in the input fields, and click Change passphrase.

The passphrase format is a string with 0–64 characters.

If the passphrase currently is not set, leave the Current passphrase field blank.

Change another user’s passphrase

If you have administrator access rights, you can change the password of any user.

1. Sign in to the web interface and navigate to Security > Users.
2. Click the appropriate user in the list.
3. Enter the new passphrase in the Passphrase and Repeat passphrase input fields.

   If the user holds the Admin role, you must enter your own passphrase in the Your passphrase input field for verification.

4. Click Change passphrase to save the change.

   Use the Back button to leave without making any changes.
Restrict the access to the Settings menu

By default, any user has access to the Settings menu on the user interface.

We recommend that you restrict the access to prevent unauthorized users from changing the configuration of the device.

Lock down the Settings menu

1. Sign in to the web interface and navigate to Setup > Configuration.
2. Go to UserInterface > SettingsMenu > Mode, and select Locked.
3. Click Save for the change to take effect.
Now a user has to sign in with ADMIN credentials to get access to the device-critical settings on the user interface.

Unlock the Settings menu

1. Sign in to the web interface and navigate to Setup > Configuration.
2. Go to UserInterface > SettingsMenu > Mode, and select Unlocked.
3. Click Save for the change to take effect.
Now any user has access to the complete Settings menu on the user interface.

The Settings menu on the user interface

If the menu is locked down, you must sign in to access the device-critical settings.
Select the device name or address at the top of the user interface followed by Settings, in order to open the Settings menu.

Locked down settings

Locked down settings are marked with a padlock.
Device configuration

Sign in to the web interface and navigate to Setup > Configuration.

Find a device setting

Search for settings

Enter as many letters as needed in the search field. All settings that contain these letters are shown in the right pane. Settings that have these letters in their value space are also shown.

Change a device setting

Check the value space

A setting's value space is specified either by text following the input field or in a drop-down list that opens when you click the arrow.

Change a value

1. Choose the preferred value from the drop-down list, or enter new text in the input field.
2. Click Save for the change to take effect.

Use the Undo or Revert buttons if you do not want to make any changes.

About device settings

All device settings can be changed from the web interface.

Each device setting is described in the ► Device settings chapter.

Different settings may require different user credentials. In order to be sure that an administrator is able to change all device settings, an administrator user must possess all user roles.

You can read more about user administration and user roles in the ► User administration chapter.

Categories with unsaved changes are marked with an edit symbol ().
Add a sign in banner

Sign in to the web interface and navigate to Security > Sign In Banner.

1. Enter the message that you want to present to the user when he signs in.
2. Click Save to activate the banner.

About sign in banner

If a device administrator wants to provide initial information to all users, he can create a sign in banner. The message is shown when the user signs in to the web interface or the command line interface. The maximum size is 4 kByte.

Welcome banner versus sign in banner

Sign in banner:
- The banner is shown before the user signs in to the web interface or the command line interface.

Welcome banner:
- The banner is shown after the user has signed in to the web interface or the command line interface.
Add a welcome banner

Adding a Welcome banner is only available using API commands; we don’t provide a dedicated user interface for it.

API commands

xCommand SystemUnit WelcomeBanner Set

This is a multiline command. Anything you input after you issue the command, is input to the command (including line breaks). Finish the input with a separate line containing just a period ending with a line break.

There are also a few more welcome banner commands, refer to the API-guide for more details.

xCommand SystemUnit WelcomeBanner Clear

xCommand SystemUnit WelcomeBanner Get

Example

xCommand SystemUnit WelcomeBanner Set <enter>

This is a welcome banner. <enter>

A welcome banner may have multiple lines. <enter>

. <enter>

About welcome banner

You can set up a welcome banner that users see after they sign in to the device’s web interface or command line interface. The banner can have multiple lines.

The banner can for example contain information you need in order to get started, or things you must be aware of when setting up the device.

The maximum size is: 4 kByte

Welcome banner versus sign in banner

Sign in banner:

• The banner is shown before the user signs in to the web interface or the command line interface.

Welcome banner:

• The banner is shown after the user has signed in to the web interface or the command line interface.
Manage the service certificates of the device

Sign in to the web interface and navigate to Security > Service Certificates.

You need the following files:
- Certificate (file format: .PEM)
- Private key, either as a separate file or included in the same file as the certificate (file format: .PEM format)
- Passphrase (required only if the private key is encrypted)

The certificate and the private key will be stored in the same file on the device.

Enable or disable, view or delete a certificate

Use the On and Off buttons to enable or disable a certificate for the different services.

Use the corresponding button to view or delete a certificate.

Add a certificate

1. Browse to find the Certificate file and Private key file (optional) on your computer.
2. Fill in the Passphrase if required.
3. Click Add certificate... to store the certificate on the device.

About the service certificates of the device

Certificate validation may be required when using TLS (Transport Layer Security).

A server or client may require that the device presents a valid certificate to them before communication can be set up.

The device’s certificates are text files that verify the authenticity of the device. These certificates may be issued by a certificate authority (CA).

Certificates are used for the following services: HTTPS server, SIP, IEEE 802.1X and audit logging.

You can store many certificates on the device, but only one certificate can be enabled for each service at a time.

If authentication fails, the connection will not be established.
Manage the lists of trusted certificate authorities - CAs

Certificate validation may be required when using TLS (Transport Layer Security).

You can configure the device to demand that a server or client presents its certificate before communication is set up. The device uses the certificate to verify the authenticity of the server or client. If authentication fails, the connection will not be established.

The certificate (text file) must be signed by a trusted Certificate Authority (CA). Lists of certificates from trusted CAs reside on the device.

The CA certificate lists

You can check and maintain the lists of trusted CAs from the web interface of the device:

- Sign in to the web interface, navigate to Security > Certificate Authorities. There is one tab for each CA list.

These are the CA lists:

- **Preinstalled**: Pre-installed CA certificates that are used to validate the certificates of external servers (HTTP) that the device communicates with.
- **Collaboration Edge**: Pre-installed CA certificates that are used to validate the certificates of servers contacted over the Internet when the device is provisioned by Cisco Unified Communications Manager (CUCM) via Expressway (also known as MRA or Edge).
- **Custom**: CA certificates that you have uploaded to the device yourself. The list must include all CAs that are needed in order to verify certificates for both audit logging and other connections (provided that they are not included in the pre-installed lists).
Manage pre-installed CA certificates for external servers

Sign in to the web interface, navigate to Security > Certificate Authorities, and open the Preinstalled tab.

<table>
<thead>
<tr>
<th>Certificate</th>
<th>Issuer</th>
</tr>

<tr>
<td>Certificate_04</td>
<td>Issuer_4</td>
</tr>
</tbody>
</table>

View or disable certificates

Use the Details... and Disable buttons respectively, to view or disable certificates.

As an alternative to using the pre-installed certificates, you can append the certificates you need to the custom certificate list manually.

Refer to the Upload a CA certificate to the device chapter how to update the list of trusted CA certificates.

Pre-installed CA certificates

A list of commonly used CA certificates are pre-installed on the device. The device uses this list when validating certificates from external servers that it communicates with:

- HTTP servers that host content used by the HttpClient API or macros

Factory resetting the device does not delete the list of pre-installed certificates.
Manage pre-installed CA certificates for CUCM via Expressway provisioning

Sign in to the web interface, navigate to Security > Certificate Authorities, and open the Collaboration Edge tab.

Pre-installed CA certificates for CUCM via Expressway

The pre-installed CA certificates in this list are only used when the device is provisioned by Cisco Unified Communications Manager (CUCM) via Expressway (Edge).

Only Cisco Expressway infrastructure certificates are checked against this list.

If the validation of the Cisco Expressway infrastructure certificate fails, the device will not be provisioned and registered.

Factory resetting the device does not delete the list of pre-installed certificates.

View or disable certificates

Use the Details... and Disable buttons respectively, to view or disable certificates.

The certificates and certificate issuers in the illustration are examples. Your device has other certificates.

As an alternative to using the pre-installed certificates, you can append the certificates you need to the custom certificate list manually.

Refer to the ► Upload a CA certificate to the device chapter how to update the list of trusted CA certificates.
Upload a CA certificate to the device

Sign in to the web interface, navigate to Security > Certificate Authorities, and open the Custom tab.

You need the following file:

• CA certificate list (file format: .PEM).

View or delete a certificate

Use the corresponding button to view or delete a certificate.

Upload a list of CA certificates

1. Browse to find the file containing the CA certificates on your computer (file format: .PEM).

2. Click Add certificate authority... to store the new CA certificates on the device.

The certificates and certificate issuers in the illustration are examples. Your device has other certificates.

About the custom list of trusted CA certificates

This list contains the CA certificates that you have uploaded to the device yourself. They can be used to validate client and server certificates for both audit logging and other connections.

If not covered by the lists of pre-installed CA certificates, they can be used for HTTP servers and Cisco Expressway infrastructure as well.

Previously stored certificates are not deleted automatically.

The entries in a new file with CA certificates are appended to the existing list.
Set up secure audit logging

Sign in to the web interface and navigate to Setup > Configuration.

1. Open the Security category.
2. Find the Audit > Server settings, and enter the Address of the audit server. If you set PortAssignment to Manual, you must also enter a Port number for the audit server.
3. Set Audit > Logging > Mode to ExternalSecure.
4. Click Save for the change to take effect.

![Configuration interface](image)

The certificate authority (CA) that verifies the certificate of the audit server must be in the device’s list of trusted certificate authorities. Otherwise, logs will not be sent to the external server. Refer to the Upload a CA certificate to the device chapter how to update the list.

About secure audit logging

When audit logging is enabled, all sign in activity and configuration changes on the device are recorded.

Use the Security > Audit > Logging > Mode setting to enable audit logging. Audit logging is disabled by default.

In ExternalSecure audit logging mode the device sends encrypted audit logs to an external audit server (syslog server), which identity must be verified by a signed certificate.

The signature of the audit server is verified using the custom CA list.

If the audit server authentication fails, no audit logs are sent to the external server.
Delete CUCM trust lists

The information in this chapter is only relevant for devices that are registered to a Cisco Unified Communications Manager (CUCM).

Sign in to the web interface and navigate to Security > CUCM Certificates.

Delete the CUCM trust lists

Click Delete CTL/ITL to remove the trust lists.

As a general rule, you should not delete old CTL (Certificate Trust List) and ITL (Initial Trust List) files.

In these cases, you must still delete them:
- When you change the CUCM IP address.
- When you move the endpoint between CUCM clusters.
- When you need to re-generate or change the CUCM certificate.

Overview of trust list fingerprints and certificates

The trust lists’ fingerprints and an overview of the certificates in the lists are displayed on the web page.

This information may be useful for troubleshooting.

More information about trust lists

For more information about CUCM and trust lists, read the Deployment guide for TelePresence endpoints on CUCM that is available on the Cisco web site.
Change the persistency mode

Sign in to the web interface and navigate to Security > Non-persistent Mode.

Check the persistency status

The active radio buttons show the current persistency status of the device.

Alternatively, you can navigate to Setup > Status, and then open the Security category to see the Persistency status.

Change the persistency settings

All persistency settings are set to Persistent by default. You only have to change these settings if you want to make them Non-persistent.

1. Click the radio buttons to set the persistency for configurations, call history, internal logging, local phonebook (local directory and favorites) and IP connectivity (DHCP) information.

2. Click Save and restart...

   The device restarts automatically. After the restart, the behavior changes according to the new persistency settings.

   Logs, configurations, and other data that was stored before you switched to Non-persistent mode, are NOT cleared or deleted.

Persistency mode

Configurations, call history, internal logs, local phonebook (local directory and favorites list), and IP connectivity information are stored by default. Because all persistency settings are set to Persistent, a device restart does not delete this information.

Generally, we recommend you NOT to change the persistency settings. Only change to Non-persistent mode if you have to prevent users from being able to see or traceback to any logged information from the previous session.

In Non-persistent mode, the following information is lost or cleared each time the device restarts:

- Device configuration changes
- Information about placed and received calls (call history)
- Internal log files
- Changes to the local contacts or favorites list
- All IP related information (DHCP) from the last session

Information that was stored before changing to Non-persistent mode is not automatically cleared or deleted. You must factory reset the device to delete such information.

There is more information about performing a factory reset in the Factory reset the video conferencing device chapter.
Set strong security mode

Sign in to the web interface and navigate to Security > Strong Security Mode.

Set strong security mode
Read carefully about the consequences of strong security mode before you continue.

1. If you want to use strong security mode, click Enable Strong Security Mode... and confirm your choice in the dialog box that appears. The device restarts automatically.

2. Change the passphrase when you are prompted. The new passphrase must meet the strict criteria as described. How to change the device passphrase is described in the Change the device passphrase chapter.

About strong security mode
Use strong security mode only when compliance with DoD JITC regulations is required.

Strong security mode sets very strict passphrase requirements, and requires all users to change their passphrase on the next sign in.

Return to normal mode
Click Disable Strong Security Mode... in order to restore the device to normal mode. Confirm your choice in the dialog box that appears. The device restarts automatically.
Set up Intelligent Proximity for content sharing (page 1 of 5)

Cisco Proximity allows users to see, control, capture and share content directly on their own mobile devices (smartphone, tablet, or laptop), when the mobile device is close to a video conferencing device.

The mobile device can automatically pair with the video conferencing device when it comes within range of ultrasound transmitted by the video conferencing device.

The number of simultaneous Proximity connections depends on the type of video conferencing device. The client warns new users if the maximum number of connections has been reached.

<table>

* 30 connections when the View shared content on a mobile device service is disabled; 7 connections when this service is enabled.

Proximity services

**Place calls and control the video conferencing device:**
- Dial, mute, adjust volume, hang up
- Available on laptops (OS X and Windows), smartphones and tablets (iOS and Android)

**View shared content on a mobile device:**
- View shared content, review previous slides, save selected slides
- Available on smartphones and tablets (iOS and Android)
- For DX70 and DX80, this service is available only when in a call

**Wireless share from a laptop:**
- Share content without connecting a presentation cable
- Available on laptops (OS X and Windows)
Set up Intelligent Proximity for content sharing (page 2 of 5)

Install a Cisco Proximity client

Where to find the clients
You can download the Cisco Proximity clients for smartphones and tablets (Android and iOS), and laptops (Windows and OS X) free of charge from https://proximity.cisco.com
Clients for smartphones and tablets are also available directly through Google Play (Android) and Apple App Store (iOS).

End-user license agreement
Read the end-user license agreement carefully, https://www.cisco.com/c/en/us/td/docs/general/warranty/English/EU1KEN_.html

Supported operating systems
- iOS 7 and above
- Android 4.0 and above
- Mac OS X 10.9 and above
- Windows 7 and above

The tile based interface introduced with Windows 8 is not supported.
Ultrasound emission
Cisco video conferencing devices emit ultrasound as part of the Proximity feature.

Use the Proximity > Mode setting to switch the Proximity feature - and thereby also ultrasound emission - On and Off.

Most people are exposed to ultrasound more or less daily in many environments, including industry, commercial applications and home appliances.

Even if airborne ultrasound may cause subjective effects for some individuals, it is very unlikely that any effects will occur for levels below 75 dB.

Room 70, Room 70 G2, Room 55, Room 55 Dual, Room Kit, Room Kit Mini, Room Kit Plus, SX10N and MX Series:
- The ultrasound sound pressure level is below 75 dB at a distance of 50 cm or more from the loudspeaker.

DX70 and DX80:
- The ultrasound sound pressure level is below 75 dB at a distance of 20 cm or more from the loudspeaker.

Boards:
- The ultrasound sound pressure level is below 75 dB at a distance of 20 cm or more from the screen.
  - For Board 50 and 70 (not S Series) the level can be slightly higher right below the screen due to the downward-facing loudspeakers.

Codec Plus, Codec Pro, SX10, SX20, and SX80:
- We cannot foresee the ultrasound sound pressure level on these video conferencing devices, because they emit ultrasound on third-party loudspeakers.
  - The volume control on the loudspeaker itself, and the Audio > Ultrasound > MaxVolume setting affect the ultrasound sound pressure level; the volume control on the remote control or Touch controller does not have any effect.

Headsets

DX70, DX80, and SX10N:
You can always use a headset with these devices because:
- DX70 and DX80 have dedicated headset outputs, on which we never emit ultrasound.
- SX10N plays ultrasound on the built-in loudspeakers.
  - Ultrasound is never emitted on the HDMI or audio outputs.

Room 70, Room 70 G2, Room 55 Dual, Room Kit Plus, Codec Plus, Codec Pro, Boards, SX10, SX20, SX80, and MX Series:
- These devices are not designed for headset use.
- We strongly recommend you to switch off ultrasound emission if you use a headset with these video conferencing devices (set Proximity > Mode to Off). Then you cannot use the Proximity feature.
- Since these devices don’t have dedicated headset outputs, we are not able to control the sound pressure level from the connected headsets.

Room 55, Room Kit, Room Kit Mini:
- You can always connect a headset to the USB output of these devices, because we don’t emit ultrasound on this output.
- The audio line outputs (mini-jack) of the Room 55 and Room Kit are not designed for headset use. We are not able to control the sound pressure level from a headset that is connected to one of these outputs.

If you connect a headset to an audio line output, we strongly recommend you to switch off ultrasound emission (set Proximity > Mode to Off). Then you cannot use the Proximity feature.
Set up Intelligent Proximity for content sharing (page 4 of 5)

Enable Proximity services

1. Sign in to the web interface and navigate to Setup > Configuration.
2. Go to Proximity > Mode, and switch Proximity On. The video conferencing device starts sending ultrasound pairing messages. Enable the services you want to allow. Only Wireless share from a desktop client is enabled by default. In order to fully utilise the Proximity functionality, we recommend that you enable all services.

Place calls and control the video conferencing device:
- Go to Proximity > Services > CallControl and choose Enabled.

View shared content on a mobile device:
- Go to Proximity > Services > ContentShare > ToClients and choose Enabled.

Wireless share from a desktop client:
- Go to Proximity > Services > ContentShare > FromClients and choose Enabled.

The Proximity indicator

You can see the Proximity indicator on the screen as long as at least one Proximity client is paired with the device. The indicator doesn’t disappear immediately when the last client unpairs. It may take a few minutes.

About Proximity

The Proximity feature is switched Off by default, because the DX products are often deployed in open offices with several devices close to each other. In such environments, pairing could be unstable. In general, Proximity should be switched On only on one device per room.

When Proximity is switched On, the video conferencing device transmits ultrasound pairing messages. The ultrasound pairing messages are received by nearby devices with Proximity clients, and triggers the authentication and authorization of the device.

Provided that you have verified that Proximity is suitable in your environment, Cisco recommends - for the best user experience - that Proximity always is switched On.

In order to get full access to Proximity, the Proximity services (Proximity > Services > ...) must be Enabled as well.
Set up Intelligent Proximity for content sharing (page 5 of 5)

About privacy
In the Cisco Privacy statement and the Cisco Proximity Supplement you find information about data collection in the clients and privacy concerns that needs to be considered when deploying this feature in the organization. Refer to:
► https://www.cisco.com/web/siteassets/legal/privacy.html

Note that the mobile devices in the room only can receive and view content when the video conferencing device is in a call.

Basic troubleshooting

Cannot detect devices with Proximity clients
- Some Windows laptops are not able to record sound in the ultrasound frequency range (20kHz-22kHz). This can be due to frequency limitations with the sound card, sound driver or the internal microphone of the particular device. Refer to the Support forum for more information.
- Check Settings > Issues and diagnostics on the user interface, or Maintenance > Diagnostics on the web interface of the video conferencing device. If there are no ultrasound related issues listed (“Unable to verify the ultrasound signal”), ultrasound pairing messages are emitted by the video conferencing device as they should. Refer to the Proximity Support forum for further assistance with the client detection issues.

Audio artifacts
- If you can hear audio artifacts, like humming or clipping noise, decrease the maximum ultrasound volume (Audio > Ultrasound > MaxVolume).

Cannot share content from a laptop
- For content sharing to work, the video conferencing device and the laptop must be on the same network. For this reason Proximity sharing might fail if your video conferencing device is connected to your company network via Expressway, and your laptop is connected via VPN (VPN client dependent).

Adjust the video quality to call rate ratio

Video input quality settings
When encoding and transmitting video there is a trade-off between high resolution (sharpness) and high frame rate (motion).

The Video Input Connector n Quality setting must be set to Motion for the optimal definition settings to take any effect. With the video input quality set to Sharpness, the endpoint will transmit the highest resolution possible, regardless of frame rate.

Optimal definition profile
The optimal definition profile should reflect the lighting conditions in the video conferencing room and the quality of the camera (video input source). The better the lighting conditions and the better the quality of the camera, the higher the profile should be used.

Generally, the Medium profile is recommended. However, if the lighting conditions are very good, we recommend that you test the endpoint on the various Optimal Definition Profile settings before deciding on a profile. The High profile may be set in order to increase the resolution for a given call rate.

Some typical resolutions used for different optimal definition profiles, call rates and transmit frame rates are shown in the table. The resolution and frame rate must be supported by both the calling and called devices.

Sign in to the web interface and navigate to Setup > Configuration.

1. Go to Video > Input > Connector n > Quality and set the video quality parameter to Motion (skip this step for Connector 1 (integrated camera)).
2. Go to Video > Input > Connector n > OptimalDefinition > Profile and choose the preferred optimal definition profile.

</table>
Add corporate branding to the screen (page 1 of 2)

Sign in to the web interface, navigate to Setup > Personalization, and open the Branding tab.

From this page you can add your own branding elements (background brand image, logo, custom message) to the video conferencing device.

Branding in the awake state

In the awake state you can:

- Add a logo in the bottom right corner
- Add a short message (text only) in the bottom left corner

About Branding

The Branding feature, as describe in this chapter, allows you to customize the screen appearance without compromising the overall Cisco user experience.

We recommend that you use this feature rather than our legacy Custom wallpaper feature, which prevents the use of functionality such as One Button to Push.

You cannot use the Branding feature and a Custom wallpaper at the same time.

If your device is set up with a Custom wallpaper, you must click Disable the custom wallpaper before adding branding elements.

We recommend:

- A black logo (the device will add a white overlay with 40% opacity so that the logo and the other user interface elements go well together)
- PNG-format with transparent background
- Minimum 272×272 pixels (it will be scaled automatically)
Add corporate branding to the screen (page 2 of 2)

Branding in the halfwake state

In halfwake state you can:

- Add a background brand image
- Add a logo in the bottom right corner
- Customize or remove the message at the center of the screen. This is the message that informs the user how to start using the device

In general, we recommend that you keep the standard message. Change the message only if you have to adapt it to a different scenario, for example if you have a third-party user interface.

Background brand image

- When the device wakes up, the image is shown in full color; after a few seconds the image is automatically dimmed (transparent black overlay)
- Image format: PNG or JPEG
- Recommended size: 1920 × 1080 pixels

Logo

We recommend:

- A white logo (so that it goes well with the dark background brand image)
- PNG-format with transparent background
- Minimum 272×272 pixels
Add a custom wallpaper

Sign in to the web interface, navigate to Setup > Personalization, and open the Custom wallpaper tab.

**Upload a custom wallpaper**
Overwrites any old custom wallpaper.

1. Browse to find the custom wallpaper image file.
2. Click Upload to save the file on the device.
   - Supported file formats: BMP, GIF, JPEG, PNG
   - Maximum file size: 16 megapixels

The custom wallpaper is automatically activated once uploaded.

**Delete the custom wallpaper**
Delete fully removes the custom wallpaper from the device.

You have to upload it anew if you want use it again.

**About a custom wallpaper**
If you want a custom picture as background on your screen, you may upload and use a custom wallpaper. A custom wallpaper will not appear on the Touch controller.

You can only store one custom wallpaper on the device at a time; a new custom wallpaper overwrites the old one.

We recommend that you use our new Branding feature rather than this legacy Custom wallpaper feature. You will get a better overall Cisco user experience, and avoid loosing functionality such as One Button To Push and meeting information. See the Add corporate branding to the screen chapter.

You cannot use the Branding feature and a Custom wallpaper at the same time.

If your device is set up with branding elements you must click Continue without branding before adding a custom wallpaper.
Choose a ringtone and set the ringtone volume

Sign in to the web interface, navigate to Setup > Personalization, and open the Ringtones tab.

Change the ringtone

1. Choose a ringtone from the drop-down list.
2. Click Save to make it the active ringtone.

Set the ringtone volume

Use the slide bar to adjust the ringtone volume.

About ringtones

A set of ringtones is installed on the device. Use the web interface to choose a ringtone, and set the ringtone volume.

You can play back the chosen ringtone from the web interface. Note that the ringtone will be played back on the device itself, and not on the computer running the web interface.

Play back the ringtone

Click the play button (►) to play back the ringtone.

Use the stop button (■) to end the playback.
Manage the Favorites list

Sign in to the web interface and navigate to Setup > Favorites.

Import/Export contacts from file

Click Export to save the local contacts in a file; and click Import to bring in contacts from a file.

The current local contacts are discarded when you import new contacts from a file.

Add or edit a contact

1. Click Add contact to make a new local contact, or click a contact’s name followed by Edit contact.
2. Fill in or update the form that pops up.
   - Choose a folder in the folder drop down list in order to store the contact in a sub-folder.
   - Click Add contact method and fill in the new input fields if you want to store more than one contact method for the contact (for example video address, telephone and mobile number).
3. Click Save to store the local contact.

Delete a contact

1. Click a contacts name followed by Edit contact.
2. Click Delete to remove the local contact.

Manage Favorites using the device’s user interface

Add a contact in the Favorites list

1. Select Call on the home screen.
2. Select the contact you want to add.
3. Select the three dots that appear under the Call button on the contact card.
4. Select Mark as favorite.

The contact you add will be placed in the top folder. You cannot select or create a sub-folder.

Remove a contact from the Favorites list

1. Select Call on the home screen.
2. Select the Favorites tab.
3. Select the contact you want to remove.
4. Select the three dots that appear under the Call button on the contact card.
5. Select Unmark as favorite.
Set up accessibility features

Flashing screen for incoming calls

To make it easier for the hearing impaired users to notice when someone is calling, the screen can be setup to flash red and gray on incoming calls.

1. Sign in to the web interface and navigate to Setup > Configuration.
2. Go to UserInterface > Accessibility > IncomingCallNotification and select AmplifiedVisuals.
3. Click Save.
This chapter describes how to provision settings or parameters to a device (endpoint) using the method that was introduced in Cisco UCM Release 12.5(1)SU1.

Prior to Cisco UCM release 12.5(1)SU1, only a limited set of product-specific configurations were pushed from UCM to the device. The administrator had to rely on Cisco TMS or the web interface of the device to configure all the other settings.

From CUCM release 12.5(1)SU1 more settings or parameters can be provisioned from CUCM. The list of settings matches what users see on their device (public xConfigurations), with the exception of Network, Provisioning, SIP and H.323 settings.

For more information about CUCM refer to the Video Endpoints Management chapter of the Feature Configuration Guide for Cisco Unified Communications Manager, Release 12.5(1)SU1.

### Configuration control modes

Based on the deployment needs, administrators can configure various configuration control modes in the CUCM administration interface. You can decide whether you want to control the configuration settings from CUCM, the device, or both of them together.

These are the various configuration control modes:

- **Unified CM and Endpoint** (default): Use this mode if you want the CUCM and the device to operate as the multi-master source for provisioning device data. CUCM reads the xConfiguration data automatically from the device, and any updates made locally on the device is synchronised with the CUCM server instantly.

- **Unified CM**: CUCM operates as the centralized master source for provisioning device data. CUCM ignores any changes that are done locally on the device, and therefore such changes will be overridden the next time CUCM applies a new configuration to the device.

- **Endpoint**: The endpoint operates as the centralized master source of configuration data. In this mode, the endpoint ignores any configuration data from the CUCM and doesn’t synchronize back the changes done locally.

  This mode is typically used when an integrator is installing the devices and wants to control the configuration locally from the device.

### Pull configurations from the device on-demand

Administrators can use the Pull xConfig. from Device option in CUCM to pull configuration changes from the devices on-demand at any time.

This option is enabled only if the device is registered.

### Supported CE software versions

Any device that supports CE9.8 or higher can use this new provisioning layout in CUCM.

If the device has a software version prior to CE9.8, you will be able to view the complete set of parameters in the CUCM user interface; but you can only configure the subset that is marked with a "#". The "#" is to the right of each parameter value.

The full set of parameters functions only if you upgrade the device to CE9.8 or higher.
Set up provisioning from CUCM

1. Sign in to CUCM, navigate to Device > Phone, and find your device.

2. Find the Product Specific Configuration Layout section (see illustration).

3. Click the Miscellaneous category and find the Configuration Control Mode setting. Choose your preferred mode: Unified CM, Endpoint, or Unified CM and Endpoint (see the description on the previous page).

4. Click the Pull xConfig. from Device button if you want to load the current configuration from the device.

5. Select a category and set a value for the configurations you want to change.

6. Finally, click Save and Apply Config, just like you do in earlier CUCM versions.

Categories

The device settings are grouped in categories. These are the same categories that you find in the web interface of the device. They also correspond to the API command path.

Miscellaneous is an exception to this rule. In this category you find settings that only can be set by CUCM. They don’t correspond to a local setting on the device.

Settings marked with a hash, #

Settings that also were available in Cisco UCM releases prior to 12.5(1) SU1.

Settings or parameters

The settings that belong to the selected category.
Chapter 3

Peripherals
Connect a computer

Connect a computer to the HDMI input port in order to use the device as screen for the computer, and to share content with conference participants.

Flip the connector cover up to uncover the connector panel.
Extend the number of input sources

You can customize our touch user interfaces to include input sources that are connected to a third-party external video switch. The sources will appear and behave as any other video source that is connected directly to the video conferencing device.

Architecture

You need a Cisco video conferencing device with a touch interface, a third-party control system, for example Crestron or AMX, and a third-party video switch. It is the control system, not the video conferencing device, that controls the video switch.

When you program the control system you must use the video conferencing device’s API (events and commands) in order to connect with the video switch and the controls on the touch interface. This way you can synchronize what is shown and done on the user interface with the actual state of the input sources.

Consult the Customization guide for full details about how to extend the user interface, and how to use the device’s API to set it up. Go to:

► https://www.cisco.com/go/in-room-control-docs

* You need a user that holds the ROOMCONTROL, INTEGRATOR, or ADMIN user roles in order to access the API commands that you need when programming the control system.
Bluetooth headset

DX70 and DX80 supports the following Bluetooth profiles:

- HFP (Hands-Free Profile)
- A2DP (Advanced Audio Distribution Profile)
- The headset must support both HFP and A2DP or HFP-only. Headsets with A2DP-only is not supported.

A Bluetooth headset is supported directly with the embedded Bluetooth radio or using a USB Bluetooth dongle. Multiple headsets can be paired to the video conferencing device, but only one can be connected at a time.

The range is up to 10 m (30 ft). If you move outside the range when in a call, the audio will switch to the speakers on the video conferencing device.

Most headsets have built-in volume controls. When in a call, the volume of the headset and video conferencing device is synchronized. When not in a call, the volume buttons on the headset and video conferencing device operate independently.

Supported Bluetooth features:

- Answer incoming calls
- Reject incoming calls
- Hang up calls
- Volume up and down
- Some headsets have mute control. This operates independently from the mute control on on video conferencing device.

USB Bluetooth dongle

- Using the USB Bluetooth dongle is advisable as it gives better audio quality.
- When using a USB Bluetooth dongle the headset is detected as a USB headset.
- There will be no synchronization of headset volume and video conferencing device volume when using a dongle.
- We have tested Jabra Link 360, Plantronics BT300 and Plantronics BT600; though others might work as well.

Pairing a Bluetooth headset

1. Activate Bluetooth pairing on the headset. Refer to the instruction manual for the headset if in doubt.
2. Select the device name or address at the top of the user interface. Select Settings, followed by Bluetooth. If Bluetooth is disabled, turn it on. Bluetooth is enabled by default.
3. The video conferencing device will scan for Bluetooth devices. Upon successful discovery the Bluetooth headset should be displayed in the device list.
4. Select the device and pairing begins. It may take a few seconds for the pairing to complete.
5. If the pairing is successful the video conferencing device will now list the headset as connected. The pairing is now completed.

Switch between devices

You can switch between the speaker on the video conferencing device and the devices that are connected via Bluetooth or USB.

Select the icon in the status bar of the user interface, and choose from the available devices.

- Speakers
- Analog headset (DX70 only)
- USB headset
- USB handset
- Bluetooth device

You may use Bluetooth pairing directly to the video conferencing device, or use a USB dongle.
Connect the ISDN Link

The ISDN Link enables a video conferencing device to use ISDN lines for connectivity, and enables both video calls and telephone calls over the PSTN (Public Switched Telephone Network).

ISDN Link support ISDN BRI, ISDN PRI and V.35. ISDN can be used in addition to regular IP connectivity for SIP or H.323 calls, or without any IP infrastructure.

ISDN Link is managed from the video conferencing device’s web interface. Sign in to the web interface and navigate to Setup > Peripherals.

Requirements and limitations:
- The ISDN Link must be running IL1.1.7 software or later
- The video conferencing device must be running CE9.3 software or later. The video conferencing device must have IPv6 enabled in the web interface or API in order to communicate with the ISDN Link
- Observe the network topology in the ISDN Link Installation Guide in order to guarantee a successful installation
- The video conferencing device and ISDN Link must be on the same subnet. If the endpoint or ISDN Link are assigned new IP addresses they will only remain paired as long as they are kept in the same subnet.
- Video conferencing devices that are registered to the Cisco Webex cloud service are not able to use ISDN Link.

Setup and configuration

Setup with LAN and direct connection between the video conferencing device and ISDN Link

This is the recommended setup. But there are other options, so see the user documentation for additional examples:

► https://www.cisco.com/go/isdnlink-docs
Chapter 4

Maintenance
Upgrade the device software (page 1 of 2)

Convert between Android-based software and CE software

From Collaboration Software version 8.2 (CE8.2) all DX80 and DX70 units can run CE software, which is the same software that runs on the Cisco TelePresence SX and MX Series.

DX80 and DX70 were originally shipped with Android based software, but are now shipping with CE software.

Before converting to CE software, it is important to carefully consider the conversion requirements and the functionality changes compared to Android based software.

The CE software on DX devices does not support the following features in CE9.1:
- 3rd party app installation
- Keyboard control, keyboard and mouse redirect

Refer to the Software Release Notes for further information.

Upgrading from CE8 to CE9

The MultiStream feature with Cisco TelePresence Server is deprecated in CE9.

Also, some features that were available from the touch interface in CE8, are not available in the first CE9 releases. Read the release notes for details before you upgrade.

Find a detailed description about how to convert from Android-based software and CE software, and vice versa, in the Cisco Webex DX70 and DX80 Convert between CE and Android based software guide available under Install and Upgrade Guides at https://www.cisco.com/go/dx-docs
Upgrade the device software (page 2 of 2)

You can only upgrade to another CE software version using this procedure, for example from CE8.2.x to CE8.2.y.

If you want to convert between Android-based software, and CE software, refer to the previous page.

Sign in to the web interface and navigate to Maintenance > Software Upgrade.

Download new software

Each software version has a unique file name. Go to the Cisco Download Software web page, and select your product: https://software.cisco.com/download/home

The format of the file name is:
"s52040ce9_x_y-yyy.pkg"

where "x" represents the dot dot release number, and "yyy" represents a unique identifier of the software.

Install new software

Download the appropriate software package and store it on your computer. This is a .pkg file. Don’t change the file name.

1. Click Browse... and find the .pkg file that contains the new software.
   The software version will be detected and shown.
2. Click Install software to start the installation process.

The complete installation normally take no longer than 15 minutes. You can follow the progress on the web page. The device restarts automatically after the installation.

You must sign in anew in order to continue working with the web interface after the restart.

Software release notes

For a complete overview of the news and changes, we recommend reading the Software Release Notes (CE9).

Software download

Go to the Cisco Download Software web page, and select your product: https://software.cisco.com/download/home

The Webex Boards and Room series can be upgraded from the web interface using COP files.
The SX, MX and DX series can be upgraded from the web interface using PKG files.
Add option keys

Sign in to the web interface and navigate to `Maintenance > Option Keys`.

You see a list of all option keys, also the ones that are not installed on your device.

Contact your Cisco representative for information about how to get option keys for the uninstalled options.

### The device’s serial number

You need the device’s serial number when ordering an option key.

### Add an option key

1. Enter an `Option Key` in the text input field.
2. Click `Add option key`.

If you want to add more than one option key, repeat these steps for all keys.

### About option keys

Your device may or may not have one or more software options installed. In order to activate the optional functionality the corresponding option key must be present on the device.

Each device has unique option keys.

Option keys are not deleted when performing a software upgrade or factory reset, so they need to be added only once.
Device status

Device information overview

Sign in to the web interface to see the System Information page. This page shows the product type, device name and basic information about the hardware, software, installed options and network address. Registration status for the video networks (SIP and H.323) is included, as well as the number/URI to use when making a call to the device.

Detailed device status

Sign in to the web interface and navigate to Setup > Status in order to find more detailed status information.

Search for a status entry

Enter as many letters as needed in the search field. All entries that contain these letters are shown in the right pane. Entries that have these letters in their value space are also shown.

Select a category and navigate to the correct status

The device status is grouped in categories. Choose a category in the left pane to show the related status to the right.

* The status shown in the illustration serve as an example. The status of your device may be different.
Run diagnostics

Sign in to the web interface and navigate to Maintenance > Diagnostics.

The diagnostics page lists the status for some common sources of errors.

Errors and critical issues are clearly marked in red color; warnings are yellow.

---

* The messages shown in the illustration serve as examples. Your device may show other information.
Download log files

Sign in to the web interface and navigate to Maintenance > System Logs.

Download all log files
Click Download logs archive... and follow the instructions.
An anonymized call history is included in the log files by default.
Use the drop down list if you want to exclude the call history from the log files, or if you want to include the full call history (non-anonymous caller/callee).

Open/save one log file
Click the file name to open the log file in the web browser; right click to save the file on the computer.

Start extended logging
Click Start extended logging...
Extended logging lasts for 3 or 10 minutes, depending on whether full capture of network traffic is included or not.
Click Stop extended logging if you want to stop the extended logging before it times out.
As default, the network traffic is not captured. Use the drop down menu if you want to include partial or full capture of network traffic.

Refresh a log file list
Click the refresh button for Current logs or Historical logs to update the corresponding lists.

About log files
The log files are Cisco specific debug files which may be requested by the Cisco support organization if you need technical support.
The current log files are time stamped event log files.
All current log files are archived in a time stamped historical log file each time the device restarts. If the maximum number of historical log files is reached, the oldest one will be overwritten.

Extended logging mode
Extended logging mode may be switched on to help diagnose network issues and problems during call setup. While in this mode more information is stored in the log files.
Extended logging uses more of the device’s resources, and may cause the device to under-perform. Only use extended logging mode when you are troubleshooting an issue.
Create a remote support user

Sign in to the web interface, navigate to **Maintenance > System Recovery** and select the **Remote Support User** tab.

⚠️ The remote support user should only be enabled for troubleshooting reasons when instructed by Cisco TAC.

Create remote support user

1. Click **Create user**.
2. Open a case with Cisco TAC.
3. Copy the text in the **Token** field and send it to Cisco TAC.
4. Cisco TAC will generate a **password**.

   The remote support user is valid for seven days, or until it is deleted.

Delete remote support user

Click **Delete user**.

About the remote support user

In cases where you need to diagnose problems on the device you can create a remote support user.

The remote support user is granted read access to the device and has access to a limited set of commands that can aid troubleshooting.

You will need assistance from Cisco Technical Assistance Center (TAC) to acquire the password for the remote support user.
Backup and restore configurations and custom elements

Sign in to the web interface and navigate to Maintenance > Backup and Restore.

You can include custom elements as well as configurations in a backup file (zip-format). You can choose which of the following elements to include in the bundle:

- Branding images
- Macros
- Favorites
- Sign-in banner
- In-room control panels
- Configurations/settings (all or a sub-set)

The backup file can either be restored manually from the device's web interface, or you can generalize the backup bundle so that it can be provisioned across multiple devices, for example using Cisco UCM or TMS (see the next chapters).

Create a backup file

1. Open the Create backup tab.
2. Select the elements you want to include in the backup file. Elements that currently don't exist on the device are greyed out.
3. Select which settings - if any - you want to include in the backup file. Note the following:
   - As default, all settings are included in the backup file.
   - You can remove one or more settings manually by deleting them from the list on the web page.
   - If you want to remove all settings that are specific to one device, click Remove system-specific configurations. This is useful if you are going to restore the backup bundle on other devices.
4. Click Download backup to store the elements in a zip-file on your computer.

Restore a backup file

1. Choose the Restore backup tab.
2. Click Browse... and find the backup file you want to restore. All settings and elements in the backup file will be applied.
3. Click Upload file to apply the backup. Some settings may require that you restart the device before they take effect.

Additional information

Restoring macros

If a backup file that contains macros is restored on a device the following applies:

- The macro runtime is started or restarted.
- The macros are automatically activated (started).

Restoring branding images

If a backup bundle contains branding images, the UserInterface Wallpaper setting is automatically set to Auto. This means that the branding images will automatically be displayed, possibly replacing a custom wallpaper.

The backup file

The backup file is a zip-file that contains several files. It is important that the files are at the top level within the zip-file, and not include in a folder.
CUCM provisioning of custom elements

A backup file, as described in the Backup and restore configurations and custom elements chapter, can be used as a customization template for multiple devices.

The customization template (backup file) may be hosted on either:
- the CUCM TFTP file service, or
- a custom web server that can be reached by the devices on HTTP or HTTPS.

When a device gets information from CUCM (Cisco Unified Communications Manager) about the name and location of a customization template, the device will contact the server, download the file, and restore the custom elements.

Configurations will not be restored on the device, even if they are part of the backup file that you use as a customization template.

Upload a customization template to the TFTP file server
1. Sign in to Cisco Unified OS Administration.
2. Navigate to Software Upgrades > TFTP File Management.
3. Click Upload File. Enter the name and path of the customization template in the input field.
4. Click Upload File.

Add customization provisioning information for each device
1. Sign in to Cisco Unified CM Administration.
2. Navigate to Device > Phone.
3. Fill in the Customization Provisioning fields in the product specific configuration section of the relevant devices:
   - Customization File: The customization template file name (for example: backup.zip) *
   - Customization Hash Type: SHA512
   - Customization Hash: The SHA512 checksum for the customization template.

   If these fields are not present, you must install a newer Device Package on CUCM.
4. Click Save and Apply Config to push the configuration to the devices.

* If not using the TFTP Service, you must enter the complete URI for the customization template: <hostname>:<portnumber>/path-and-filename

For example:
- http://host:6970/backup.zip, or
- https://host:6971/backup.zip

SHA512 checksum
Tip! You can find the SHA512 checksum of a file by restoring it to a device using its web interface.
1. Sign in to the web interface and navigate to Maintenance > Backup and Restore.
2. Choose the Restore backup tab.
3. Click Browse... and find the file you want to calculate the checksum for.
   Then you can see the SHA512 checksum at the bottom of the page.

CUCM documentation
Tip! You can find the SHA512 checksum of a file by restoring it to a device using its web interface.
TMS provisioning of custom elements

A backup file, as described in the "Backup and restore configurations and custom elements" chapter, can be used as a customization template for multiple devices.

The backup file must be hosted on a custom web server that can be reached by the devices on HTTP or HTTPS.

When a device gets information from TMS (TelePresence Management Suite) about the name and location of the backup file, the device will contact the server, download the file, and restore the custom elements.

Create and apply a configuration template

1. Create a configurations template.

2. Add a custom command containing the following XML string in the configuration template:

```
<Command>
  <Provisioning>
    <Service>
      <Fetch>
        <URL>web-server-address</URL>
        <Checksum>checksum</Checksum>
        <Origin>origin</Origin>
      </Fetch>
    </Service>
  </Provisioning>
</Command>
```

where

- `web-server-address`: The URI to the backup file (for example, http://host/backup.zip).
- `checksum`: The SHA512 checksum of the backup file.
- `origin`: Provisioning

3. Select the devices you want to push the configuration template to, and click Set on systems.

Read the "Cisco TMS administrator guide" for details how to create TMS configurations templates and make custom commands.

SHA512 checksum

Tip! You can find the SHA512 checksum of a file by restoring it to a device using its web interface.

1. Sign in to the web interface and navigate to Maintenance > Backup and Restore.

2. Choose the Restore backup tab.

3. Click Browse... and find the file you want to calculate the checksum for.

Then you can see the SHA512 checksum at the bottom of the page.

* If not setting this parameter to Provisioning, also configurations that are part of the backup file will be pushed to the device. If the backup file contains configurations that are specific to one device, for example static IP addresses, device name, and contact information, you may end up with devices that you cannot reach.
Revert to the previously used software image

Sign in to the web interface and navigate to Maintenance > System Recovery.

Note: You can only revert to another CE software version using this procedure, for example from CE8.3.y to CE8.2.x.

If you want to convert back to Android-based software, refer to the Upgrade the device software chapter.

We recommend you to back up the log files, configurations, and custom elements of the device before you swap to the previously used software image.

Back up log files, configurations and custom elements

1. Select the Backup tab.
2. Click Download logs and follow the instructions to save the log files on your computer.
3. Click Download backup and follow the instructions to save the backup bundle on your computer.

About the previously used software image

If there is a severe problem with the device, switching to the previously used software image may help solving the problem.

If the device has not been factory reset since the last software upgrade, the previously used software image still resides on the device. You do not have to download the software again.

Revert to the previously used software image

Only administrators, or when in contact with Cisco technical support, should perform this procedure.

1. Select the Software Recovery Swap tab.
2. Click Switch to software: cex.y.z..., where x.y.z indicates the software version.
3. Click OK to confirm your choice, or Cancel if you have changed your mind.

Wait while the device resets. The device restarts automatically when finished. This procedure may take a few minutes.
Factory reset the video conferencing device  (page 1 of 4)

If there is a severe problem with the device, the last resort may be to reset it to its default factory settings.

⚠️ It is not possible to undo a factory reset.

Always consider reverting to the previously used software image before performing a factory reset. In many situations this will recover the device. Read about software swapping in the ► Revert to the previously used software image chapter.

We recommend that you use the web interface or user interface to factory reset the device. If these interfaces are not available, use the reset pin-hole for DX80 and the mute and volume buttons for DX70.

A factory reset implies:

• Call logs are deleted.
• Passphrases are reset to default.
• All device parameters are reset to default values.
• All files that have been uploaded to the device are deleted. This includes, but is not limited to, custom wallpaper, branding elements, certificates, and favorites lists.
• The previous (inactive) software image is deleted.
• Option keys are not affected.

The device restarts automatically after the factory reset. It is using the same software image as before.

We recommend that you back up the log files, configurations, and custom elements of the device before you perform a factory reset; otherwise these data will be lost.
Factory reset the video conferencing device (page 2 of 4)

Factory reset using the web interface

We recommend that you back up the log files and configuration of the device before you continue with the factory reset.

Sign in to the web interface and navigate to Maintenance > System Recovery.

1. Select the Factory Reset tab, and read the provided information carefully.
2. Click Perform a factory reset....
3. Click Yes to confirm your choice, or Cancel if you have changed your mind.
4. Wait while the device reverts to the default factory settings. When finished, the device restarts automatically. This may take a few minutes.

When the device has been successfully reset to factory settings, the Setup assistant starts with the Welcome screen.

Factory reset from the user interface

We recommend that you back up the log files and configuration of the device before you continue with the factory reset.

1. Select the device name or address at the top of the user interface.
2. Select Settings.
4. Select Reset to confirm your choice, or Back if you have changed your mind.
5. Wait while the device reverts to the default factory settings. When finished, the device restarts automatically. This may take a few minutes.

When the device has been successfully reset to factory settings, the Setup assistant starts with the Welcome screen.

Back up log files, configurations, and custom elements

Sign in to the web interface and navigate to Maintenance > System Recovery.

1. Select the Backup tab.
2. Click Download logs and follow the instructions to save the log files on your computer.
3. Click Download backup and follow the instructions to save the backup bundle on your computer.
Factory reset the video conferencing device  (page 3 of 4)

We recommend that you back up the log files and configuration of the device before you continue with the factory reset.

Factory reset DX80 using the mute and volume buttons
Follow these steps to factory reset a DX80 on boot up. If the device is on, press and hold the power button until the device shuts down before you continue.

1. Locate the Mute and Volume up buttons.
2. Press and hold the Volume Up button and power on the device.
3. Release the Volume Up button when the Mute button is lit red, then press the Mute button.
   Wait while the device reverts to the default factory settings. The device restarts automatically when finished. This may take a few minutes.
   When the device has been successfully reset to factory settings, the Setup assistant starts and you will see the Welcome screen.

Factory reset DX80 using the reset button
To use this method, the DX80 must be up and running.

1. Flip the connector cover up to uncover the connector panel at the rear of the device.
2. Use the tip of a pen (or similar) to press the recessed reset button. Hold the button for 1-2 seconds, until a notification Resetting to factory settings shows on screen.
3. Wait while the device reverts to the default factory settings. The device restarts automatically when finished. This may take a few minutes.
   When the device has been successfully reset to factory settings, the Setup assistant starts and you will see the Welcome screen.
Factory reset the video conferencing device (page 4 of 4)

We recommend that you back up the log files and configuration of the device before you continue with the factory reset.

Factory reset DX70 using the mute and volume buttons

Follow these steps to factory reset a DX70 on boot up. If the device is on, press and hold the power button until the device shuts down before you continue.

1. Locate the Mute and Volume up buttons (LEDs).
2. Press the power button, and pay attention to the Mute button.
3. When the Mute button has blinked twice, press the Volume up button, immediately followed by pressing and holding the Mute button for approximately 4 seconds. During this process the Mute button turns red for a few seconds.

Wait while the device reverts to the default factory settings. The device restarts automatically when finished. This may take a few minutes.

When the device has been successfully reset to factory settings, the Setup assistant starts with the Welcome screen.
Capture user interface screenshots

Sign in to the web interface and navigate to Maintenance > User Interface Screenshots.

Capture a screenshot

Click Take screenshot of OSD to capture a screenshot of the main screen (on screen display).

The screenshot displays in the area below the buttons. It may take up to 30 seconds before the screenshot is ready.

All captured snapshots are included in the list above the buttons. Click the screenshot ID to display the image.

Delete screenshots

If you want to delete all screenshots, click Remove all.

To delete just one screenshot, click the button for that screenshot.

About user interface screenshots

You can capture screenshots of the main screen with menus, indicators and messages (also know as on-screen display).
Chapter 5

Device settings
Overview of the device settings

In the following pages you will find a complete list of the device settings which are configured from the Setup > Configuration page on the web interface.

Open a web browser and enter the IP address of the device then sign in.

How to find the IP address

1. Select the device name or address at the top of the user interface.
2. Select Settings, followed by About this device.

## Experimental settings .............................................................................................. 169
Audio settings

Audio DefaultVolume
Define the default volume for the speakers. The volume is set to this value when you switch on or restart the video conferencing device. Use the controls on the user interface to change the volume while it is running. You may also use API commands (xCommand Audio Volume) to change the volume while the device is running, and to reset to default value.

Requires user role: ADMIN, INTEGRATOR, USER
Default value: 50

Value space: Integer (0..100)
Range: Select a value between 1 and 100. This corresponds to the dB range from -34.5 dB to 15 dB, in steps of 0.5 dB. If set to 0 the audio is switched off.

Audio Input MicrophoneMode
This setting applies only to DX80.
The DX80 has microphones in both legs. If you set the microphone mode to Focused, the microphones can be combined to focus sound sensitivity. As a result, the noise in the room is suppressed, and you can be heard better when sitting right in front of the device. The voice of people not sitting right in front of the device will be suppressed.
If you set the microphone mode to Wide, the device behaves like any other device. The voice of people sitting beside you will be heard, and also more noise from the room.
We recommend that you use Focused mode when you are the only speaker. Use Wide mode when several speakers are in front of the device.

Requires user role: ADMIN, INTEGRATOR
Default value: Wide

Value space: Focused/Wide
Focused: Focused sound sensitivity, suppressing sound from sources that are not right in front of the device.
Wide: Default microphone operation with normal sound sensitivity.

Audio Microphones Mute Enabled
Define the microphone mute behavior on the device.

Requires user role: ADMIN, INTEGRATOR
Default value: True

Value space: True/InCallOnly
True: Muting of audio is always available.
InCallOnly: Muting of audio is only available when the device is in a call. When Idle, it is not possible to mute the microphone. This is useful when an external telephone service/audio system is connected via the device and is to be available when the device is not in a call. When set to InCallOnly this will prevent the audio-system from being muted by mistake.

Audio SoundsAndAlerts RingTone
Define which ringtone to use for incoming calls.

Requires user role: ADMIN, INTEGRATOR, USER
Default value: Sunrise

Value space: Sunrise/Mischief/Ripples/Reflections/Vibes/Delight/Evolve/Playful/Ascent/Calculation/Mellow/Ringer
Select a ringtone from the list.

Audio SoundsAndAlerts RingVolume
Define the ring volume for incoming calls.

Requires user role: ADMIN, INTEGRATOR, USER
Default value: 50

Value space: Integer (0..100)
Range: The value goes in steps of 5 from 0 to 100 (from -34.5 dB to 15 dB). Volume 0 = Off.
Audio Ultrasound Mode
This setting applies to the Intelligent Proximity feature. Keep the setting at its default value.
Requires user role: ADMIN, INTEGRATOR
Default value: Dynamic
Value space: Dynamic/Static
  Dynamic: The device adjusts the ultrasound volume dynamically. The volume may vary up to the maximum level as defined in the Audio Ultrasound Volume MaxVolume setting.
  Static: Use only if advised by Cisco.

Audio Ultrasound MaxVolume
This setting applies to the Intelligent Proximity feature. Set the maximum volume of the ultrasound pairing message.
Requires user role: ADMIN, INTEGRATOR
Default value: DX80: 70  DX70: 60
Value space: DX80: Integer (0..90)  DX70: Integer (0..60)
Select a value in the specified range. If set to 0, the ultrasound is switched off.
Bluetooth settings

Bluetooth Allowed
The device has a built-in Bluetooth module. As a default, the user can turn it on or off using the user interface. With this setting, the administrator can disable Bluetooth configuration, so that it cannot be set up from the user interface.

Requires user role: ADMIN
Default value: True
Value space: False/True
   False: Bluetooth is switched off by the administrator, and the user cannot turn it on from the user interface.
   True: Bluetooth is allowed. The user can turn it on or off from the user interface.

Bluetooth Enabled
Provided that Bluetooth connections are allowed (see the Bluetooth Allowed setting), you can use this setting to enable and disable Bluetooth. The video conferencing device supports the HFP (Hands-Free Profile) and A2DP (Advanced Audio Distribution Profile) profiles. Headsets that only supports A2DP cannot be used.

Requires user role: ADMIN
Default value: False
Value space: False/True
   False: Bluetooth is disabled, and no Bluetooth devices can pair with the video conferencing device.
   True: Bluetooth is enabled, and you can pair and use a Bluetooth headset.
CallHistory settings

CallHistory Mode

Determine whether or not information about calls that are placed or received are stored, including missed calls and calls that are not answered (call history). This determines whether or not the calls appear in the Recents list in the user interfaces.

Requires user role: ADMIN, INTEGRATOR
Default value: On

Value space: Off/On
  - Off: New entries are not added to the call history.
  - On: New entries are stored in the call history list.
Cameras settings

Cameras Camera [n] Backlight DefaultMode

n: 1..1

This configuration turns backlight compensation on or off. Backlight compensation is useful when there is much light behind the persons in the room. Without compensation the persons will easily appear very dark to the far end.

Requires user role: ADMIN, INTEGRATOR
Default value: Off

Value space: Off/On
  Off: Turn off the camera backlight compensation.
  On: Turn on the camera backlight compensation.
Conference settings

Conference ActiveControl Mode
Active control is a feature that allows conference participants to administer a conference on Cisco TelePresence Server or Cisco Meeting Server using the video conferencing device’s interfaces. Each user can see the participant list, change video layout, disconnect participants, etc., from the interface. The active control feature is enabled by default, provided that it is supported by the infrastructure (Cisco Unified Communications Manager (CUCM) version 9.1.2 or newer, Cisco TelePresence Video Communication Server (VCS) version X8.1 or newer, Cisco Media Server (CMS) version 2.1 or newer). Change this setting if you want to disable the active control features.

Requires user role: ADMIN
Default value: Auto
Value space: Auto/Off
  Auto: Active control is enabled when supported by the infrastructure.
  Off: Active control is disabled.

Conference AutoAnswer Mode
Define the auto answer mode. Use the Conference AutoAnswer Delay setting if you want the device to wait a number of seconds before answering the call, and use the Conference AutoAnswer Mute setting if you want your microphone to be muted when the call is answered.

Requires user role: ADMIN
Default value: Off
Value space: Off/On
  Off: You can answer incoming calls manually by tapping Answer.
  On: The device automatically answers incoming calls, except if you are already in a call. You can answer or decline incoming calls manually when you are already engaged in a call.

Conference AutoAnswer Mute
Define if the microphone shall be muted when an incoming call is automatically answered. Requires that AutoAnswer Mode is switched on.

Requires user role: ADMIN
Default value: Off
Value space: Off/On
  Off: The incoming call will not be muted.
  On: The incoming call will be muted when automatically answered.

Conference AutoAnswer Delay
Define how long (in seconds) an incoming call has to wait before it is answered automatically by the device. Requires that AutoAnswer Mode is switched on.

Requires user role: ADMIN
Default value: 0
Value space: Integer (0..50)
  The auto answer delay (seconds).

Conference CallProtocolIPStack
Select if the device should enable IPv4, IPv6, or dual IP stack on the call protocol (SIP, H323).

Requires user role: ADMIN
Default value: Dual
Value space: Dual/IPv4/IPv6
  Dual: Enables both IPv4 and IPv6 for the call protocol.
  IPv4: When set to IPv4, the call protocol will use IPv4.
  IPv6: When set to IPv6, the call protocol will use IPv6.
Conference Default Call Protocol
Define the Default Call Protocol to be used when placing calls from the device.

Requires user role: ADMIN
Default value: Auto

Value space: Auto/H320/H323/Sip/Spark
- Auto: Enables auto-selection of the call protocol based on which protocols are available. If multiple protocols are available, the order of priority is: 1) SIP; 2) H323; 3) H320. If the device cannot register, the auto-selection chooses H323.
- H320: All calls are set up as H.320 calls (only applicable if used with Cisco TelePresence ISDN Link).
- H323: All calls are set up as H.323 calls.
- Sip: All calls are set up as SIP calls.
- Spark: Reserved for Webex registered devices. Do not use.

Conference Default Call Rate
Define the Default Call Rate to be used when placing calls from the device.

Requires user role: ADMIN, INTEGRATOR
Default value: 3072

Value space: Integer (64..3072)
The default call rate (kbps).

Conference Do Not Disturb Default Timeout
This setting determines the default duration of a Do Not Disturb session, i.e. the period when incoming calls are rejected and registered as missed calls. The session can be terminated earlier by using the user interface.

Requires user role: ADMIN, INTEGRATOR
Default value: 60

Value space: Integer (1..1440)
The number of minutes (maximum 1440 minutes = 24 hours) before the Do Not Disturb session times out automatically.

Conference Encryption Mode
Define the conference encryption mode. A padlock with the text "Encryption On" or "Encryption Off" displays on screen for a few seconds when the conference starts.

NOTE: If the Encryption Option Key is not installed on the device, the encryption mode is always Off.

Requires user role: ADMIN
Default value: BestEffort

Value space: Off/On/BestEffort
- Off: The device will not use encryption.
- On: The device will only allow calls that are encrypted.
- BestEffort: The device will use encryption whenever possible.
  > For Point to point calls: If the far end device supports encryption (AES-128), the call will be encrypted. If not, the call will proceed without encryption.
  > In MultiSite calls: In order to have encrypted MultiSite conferences, all sites must support encryption. If not, the conference will be unencrypted.

Conference Far End Control Mode
Lets you decide if the remote side (far end) should be allowed to select your video sources and control your local camera (pan, tilt, zoom).

Requires user role: ADMIN
Default value: On

Value space: Off/On
- Off: The far end is not allowed to select your video sources or to control your local camera.
- On: Allows the far end to be able to select your video sources and control your local camera (pan, tilt, zoom). You will still be able to control your camera and select your video sources as normal.
Conference FarEndControl SignalCapability
Define the far end control (H.224) signal capability mode.

Requires user role: ADMIN
Default value: On

Value space: Off/On
  Off: Disable the far end control signal capability.
  On: Enable the far end control signal capability.

Conference FarEndMessage Mode
Toggle whether it is allowed to send data between two devices in a point-to-point call, for use with control systems or macros. Works with SIP calls only. This setting will enable/disable the use of the xCommand Call FarEndMessage Send command.

Requires user role: ADMIN
Default value: Off

Value space: Off/On
  Off: It is not possible to send messages between two devices.
  On: It is possible to send messages between two devices in a point-to-point call.

Conference MaxReceiveCallRate
Define the maximum receive bit rate to be used when placing or receiving calls. Note that this is the maximum bit rate for each individual call; use the Conference MaxTotalReceiveCallRate setting to set the aggregated maximum for all simultaneous active calls.

Requires user role: ADMIN
Default value: 3072

Value space: Integer (64..3072)
  The maximum receive call rate (kbps).

Conference MaxTransmitCallRate
Define the maximum transmit bit rate to be used when placing or receiving calls. Note that this is the maximum bit rate for each individual call; use the Conference MaxTotalTransmitCallRate setting to set the aggregated maximum for all simultaneous active calls.

Requires user role: ADMIN
Default value: 3072

Value space: Integer (64..3072)
  The maximum transmit call rate (kbps).

Conference MaxTotalReceiveCallRate
Define the maximum overall receive bit rate allowed. This product does not support multiple simultaneous calls, so the total receive call rate will be the same as the receive bit rate for one call (ref. Conference MaxReceiveCallRate setting).

Requires user role: ADMIN
Default value: 3072

Value space: Integer (64..3072)
  The maximum receive call rate (kbps).

Conference MaxTotalTransmitCallRate
Define the maximum overall transmit bit rate allowed. This product does not support multiple simultaneous calls, so the total transmit call rate will be the same as the transmit bit rate for one call (ref. Conference MaxTransmitCallRate setting).

Requires user role: ADMIN
Default value: 3072

Value space: Integer (64..3072)
  The maximum transmit call rate (kbps).
Conference MicUnmuteOnDisconnect Mode

Define if the microphones shall be unmuted automatically when all calls are disconnected. In a meeting room or other shared resources this may be done to prepare the device for the next user.

Requires user role: ADMIN
Default value: On

Value space: Off/On
- Off: If muted during a call, let the microphones remain muted after the call is disconnected.
- On: Unmute the microphones after the call is disconnected.

Conference Multipoint Mode

Define how the device handles multiparty video conferences (ad hoc conferences). If registered to a Cisco Unified Communications Manager (CUCM) version 8.6.2 or newer, the device can use the CUCM conference bridge (set-up by CUCM), which allows you to set up conferences with many participants.

Requires user role: ADMIN
Default value: Auto

Value space: Auto/CUCMMediaResourceGroupList
- Auto: The multipoint method is selected automatically.
- CUCMMediaResourceGroupList: Multiparty conferences are hosted by the CUCM configured conference bridge. This setting is provisioned by CUCM in a CUCM environment, and should never be set manually by the user.

Conference Presentation OnPlacedOnHold

Define whether or not to continue sharing a presentation after the remote site has put you on hold.

Requires user role: ADMIN
Default value: NoAction

Value space: NoAction/Stop
- NoAction: The device will not stop the presentation sharing when put on hold. The presentation will not be shared while you are on hold, but it will continue automatically when the call is resumed.
- Stop: The device stops the presentation sharing when the remote site puts you on hold. The presentation will not continue when the call is resumed.

Conference VideoBandwidth Mode

Define the conference video bandwidth mode.

Requires user role: ADMIN
Default value: Dynamic

Value space: Dynamic/Static
- Dynamic: The available transmit bandwidth for the video channels are distributed among the currently active channels. If there is no presentation, the main video channels will use the bandwidth of the presentation channel.
- Static: The available transmit bandwidth is assigned to each video channel, even if it is not active.
FacilityService settings

FacilityService Service [n] Type
n: 1..5
Up to five different facility services can be supported simultaneously. With this setting you can select what kind of services they are. A facility service is not available unless both the FacilityService Service [n] Name and the FacilityService Service [n] Number settings are properly set. Facility services are available from the user interface.

Requires user role: ADMIN, INTEGRATOR
Default value: Helpdesk
Value space: Catering/Concierge/Emergency/Helpdesk/Security/Transportation/Other
- Catering: Select this option for catering services.
- Concierge: Select this option for concierge services.
- Emergency: Select this option for emergency services.
- Helpdesk: Select this option for helpdesk services.
- Security: Select this option for security services.
- Transportation: Select this option for transportation services.
- Other: Select this option for services not covered by the other options.

FacilityService Service [n] Name
n: 1..5
Define the name of the facility service. Up to five different facility services are supported. A facility service is not available unless both the FacilityService Service [n] Name and the FacilityService Service [n] Number settings are properly set. The name will show on the facility service call button, which appears when you tap the question mark icon in the top bar. Facility services are available from the user interface.

Requires user role: ADMIN, INTEGRATOR
Default value: Service 1: "Live Support" Other services: ""
Value space: String (0, 1024)
- The name of the facility service.

FacilityService Service [n] Number
n: 1..5
Define the number (URI or phone number) of the facility service. Up to five different facility services are supported. A facility service is not available unless both the FacilityService Service [n] Name and the FacilityService Service [n] Number settings are properly set. Facility services are available from the user interface.

Requires user role: ADMIN, INTEGRATOR
Default value: ""
Value space: String (0, 1024)
- The number (URI or phone number) of the facility service.

FacilityService Service [n] CallType
n: 1..5
Define the call type for each facility service. Up to five different facility services are supported. A facility service is not available unless both the FacilityService Service [n] Name and the FacilityService Service [n] Number settings are properly set. Facility services are available from the user interface.

Requires user role: ADMIN, INTEGRATOR
Default value: Video
Value space: Audio/Video
- Audio: Select this option for audio calls.
- Video: Select this option for video calls.
H323 settings

H323 Authentication Mode
Define the authentication mode for the H.323 profile.

Requires user role: ADMIN
Default value: Off

Value space: Off/On
- Off: The device will not try to authenticate itself to a H.323 Gatekeeper, but will still try a normal registration.
- On: If an H.323 Gatekeeper indicates that it requires authentication, the device will try to authenticate itself to the gatekeeper. Requires the H323 Authentication LoginName and H323 Authentication Password settings to be defined on both the device and the Gatekeeper.

H323 Authentication LoginName
The device sends the H323 Authentication Login Name and the H323 Authentication Password to an H.323 Gatekeeper for authentication. The authentication is a one way authentication from the device to the H.323 Gatekeeper, i.e. the device is authenticated to the gatekeeper. If the H.323 Gatekeeper indicates that no authentication is required, the device will still try to register. Requires the H.323 Authentication Mode to be enabled.

Requires user role: ADMIN
Default value: ""

Value space: String (0, 50)
- The authentication login name.

H323 Authentication Password
The device sends the H323 Authentication Login Name and the H323 Authentication Password to an H.323 Gatekeeper for authentication. The authentication is a one way authentication from the device to the H.323 Gatekeeper, i.e. the device is authenticated to the gatekeeper. If the H.323 Gatekeeper indicates that no authentication is required, the device will still try to register. Requires the H.323 Authentication Mode to be enabled.

Requires user role: ADMIN
Default value: "**"

Value space: String (0, 50)
- The authentication password.

H323 CallSetup Mode
Defines whether to use a Gatekeeper or Direct calling when establishing H.323 calls. Direct H.323 calls can be made also when H323 CallSetup Mode is set to Gatekeeper.

Requires user role: ADMIN
Default value: Gatekeeper

Value space: Direct/Gatekeeper
- Direct: You can only make an H.323 call by dialing an IP address directly.
- Gatekeeper: The device uses a Gatekeeper to make an H.323 call. When choosing this option, the H323 Gatekeeper Address must also be configured.
H323 Encryption KeySize
Define the minimum or maximum key size for the Diffie-Hellman key exchange method, which is used when establishing the Advanced Encryption Standard (AES) encryption key.

Requires user role: ADMIN
Default value: Min1024bit

Value space: Max1024bit/Min1024bit/Min2048bit
- Max1024bit: The maximum size is 1024 bit.
- Min1024bit: The minimum size is 1024 bit.
- Min2048bit: The minimum size is 2048 bit.

H323 Gatekeeper Address
Define the IP address of the Gatekeeper. Requires H323 CallSetup Mode to be set to Gatekeeper.

Requires user role: ADMIN
Default value: **

Value space: String (0, 255)
- A valid IPv4 address, IPv6 address or DNS name.

H323 H323Alias E164
The H.323 Alias E.164 defines the address of the device, according to the numbering plan implemented in the H.323 Gatekeeper. The E.164 alias is equivalent to a telephone number, sometimes combined with access codes.

Requires user role: ADMIN
Default value: **

Value space: String (0, 30)
- The H.323 Alias E.164 address. Valid characters are 0-9, *, and #.

H323 H323Alias ID
Define the H.323 Alias ID, which is used to address the device on a H.323 Gatekeeper and will be displayed in the call lists.

Requires user role: ADMIN
Default value: **

Value space: String (0, 49)
- The H.323 Alias ID. Example: *firstname.lastname@company.com*, *My H.323 Alias ID*

H323 NAT Mode
The firewall traversal technology creates a secure path through the firewall barrier, and enables proper exchange of audio/video data when connected to an external video conferencing device (when the IP traffic goes through a NAT router). NOTE: NAT does not work in conjunction with gatekeepers.

Requires user role: ADMIN
Default value: Off

Value space: Auto/Off/On
- Auto: The device will determine if the H323 NAT Address or the real IP address should be used in signaling. This makes it possible to place calls to devices on the LAN as well as devices on the WAN. If the H323 NAT Address is wrong or not set, the real IP address will be used.
- Off: The device will signal the real IP address.
- On: The device will signal the configured H323 NAT Address instead of its real IP address in Q.931 and H.245. The NAT server address will be shown in the startup-menu as: *My IP Address: 10.0.2.1*. If the H323 NAT Address is wrong or not set, H.323 calls cannot be set up.
**H323 NAT Address**

Define the external/global IP address to the router with NAT support. Packets sent to the router will then be routed to the video conferencing device. Note that NAT cannot be used when registered to a gatekeeper.

In the router, the following ports must be routed to the video conferencing device's IP address:

* Port 1720
* Port 5555–6555
* Port 2326–2487

Requires user role: ADMIN

Default value: ""

Value space: String (0, 64)

A valid IPv4 address or IPv6 address.

**H323 Port Allocation**

This setting affects the H.245 port numbers used for H.323 call signaling.

Requires user role: ADMIN

Default value: Dynamic

Value space: Dynamic/Static

Dynamic: The system will allocate which ports to use when opening a TCP connection. The reason for doing this is to avoid using the same ports for subsequent calls, as some firewalls consider this as a sign of attack. When Dynamic is selected, the H.323 ports used are from 11000 to 20999. Once 20999 is reached they restart again at 11000. The ports are automatically selected by the system within the given range. Firewall administrators should not try to deduce which ports are used when, as the allocation schema within the mentioned range may change without any further notice.

Static: When set to Static the ports are given within a static predefined range [5555–6555].
HttpClient settings

HttpClient Mode
Allow or prohibit communication with an external HTTP(S) server using HTTP(S) requests and responses.

Requires user role: ADMIN
Default value: Off

Value space: Off/On
  - Off: The video conferencing device cannot communicate with an external HTTP(S) server.
  - On: The video conferencing device is allowed to communicate with an external HTTP(S) server.

HttpClient AllowHTTP
The HttpClient Mode setting is used to allow or prohibit communication with an external HTTP(S) server. The Mode setting does not distinguish between HTTP and HTTPS. You must use the HttpClient AllowHTTP setting to further allow or prohibit the use of HTTP.

Requires user role: ADMIN
Default value: True

Value space: False/True
  - False: The video conferencing device can communicate only over HTTPS.
  - True: The video conferencing device can communicate over both HTTPS and HTTP.

HttpClient AllowInsecureHTTPS
You can choose whether or not to allow the video conferencing device to communicate with a server over HTTPS without checking the server’s certificate first.

Even if the device is allowed to skip the certificate validation process, it doesn’t automatically do it. You must specifically set the AllowInsecureHTTPS parameter in each xCommand HttpClient command for data to be exchanged with the server without certificate validation.

Requires user role: ADMIN
Default value: False

Value space: False/True
  - False: The device always checks that the HTTPS server has a valid certificate. No communication with the server takes place if the certificate validation fails.
  - True: The device is allowed to skip the certificate validation process before communicating with the server.
Logging settings

Logging Debug Wifi
When this option is enabled, the device logs more information about the set-up and maintenance of the Wi-Fi connection between the device and the access point. This may be useful when you are troubleshooting Wi-Fi connection issues. We recommend that this setting is Off if the Wi-Fi connection is working as expected.

Requires user role: ADMIN
Default value: On
Value space: Off/On
  Off: Logging only basic Wi-Fi information.
  On: Logging a large amount of information about the Wi-Fi connection.

Logging External Mode
Determine whether or not to store the device logs on a remote syslog server. This setting has no effect if the Logging Mode setting is set to Off.
You must enter the address of the remote server in the Logging External Server Address setting. Unless otherwise specified in the Logging External Server Port setting, the standard syslog port is used.

Requires user role: ADMIN
Default value: Off
Value space: Off/On
  Off: Device logs will not be stored on the remote syslog server.
  On: Device logs will be stored on the remote syslog server.

Logging External Protocol
Determine which protocol to use toward the remote logging server. You can use either the syslog protocol over TLS (Transport Layer Security), or the syslog protocol in plaintext. For details about the syslog protocol, see RFC 5424.

Requires user role: ADMIN
Default value: SyslogTLS
Value space: Syslog/SyslogTLS
  Syslog: Syslog protocol in plain text.
  SyslogTLS: Syslog protocol over TLS.

Logging External Server Address
The address of the remote syslog server.

Requires user role: ADMIN
Default value: *
Value space: String (0, 255)
  A valid IPv4 address, IPv6 address or DNS name.

Logging External Server Port
The port that the remote syslog server listens for messages on. If set to 0, the device will use the standard syslog port. The standard syslog port is 514 for syslog, and 6514 for syslog over TLS.

Requires user role: ADMIN
Default value: 514
Value space: Integer (0..65535)
  The number of the port that the remote syslog server is using. 0 means that the device uses the standard syslog port.
Logging Internal Mode

Determine whether or not to store the system logs on the device (local files). These are the files that you get when you download the log bundles from the device. This setting has no effect if the Logging Mode setting is set to Off.

Requires user role: ADMIN
Default value: On
Value space: Off/On
  - Off: System logs will not be stored on the device.
  - On: System logs will be stored on the device.

Logging Mode

Define the logging mode for the device (syslog service). When disabled, the syslog service does not start, and most of the system and audit logs are not generated. The Historical Logs and Call Logs are not affected.

Requires user role: ADMIN
Default value: On
Value space: Off/On
  - Off: Disable the system logging service.
  - On: Enable the system logging service.
Macros settings

Macros Mode
Macros allow you to write snippets of JavaScript code that can automate parts of your video conferencing device, thus creating custom behavior. Use of macros is disabled by default, but the first time you open the Macro Editor you will be asked whether to enable use of macros on the device. Use this setting when you want to manually enable, or to permanently disable the use of macros on the device. You can disable the use of macros within the Macro Editor. But this will not permanently disable macros from running, because every time the device is reset the macros will be re-enabled automatically.

Requires user role: ADMIN
Default value: Off

Value space: Off/On
  Off: Permanently disable the use of macros on this device.
  On: Enable the use of macros on this device.

Macros AutoStart
All the macros run in a single process on the video conferencing device, called the macro runtime. It should be running by default, but you can choose to stop and start it manually. If you restart the device, the runtime will automatically start again if auto start is enabled.

Requires user role: ADMIN
Default value: On

Value space: Off/On
  Off: The macro runtime will not start automatically after a restart of the device.
  On: The macro runtime will start automatically after a restart of the device.
Network settings

Network [n] DNS DNSSEC Mode

Domain Name System Security extensions (DNSSEC) is a set of extensions to DNS. It is used to authenticate DNS replies for zones that are signed. It will still allow unsigned zones.

Requires user role: ADMIN
Default value: Off

Value space: Off/On
  Off: Disable Domain Name System Security Extensions.
  On: Enable Domain Name System Security Extensions.

Network [n] DNS Domain Name

The DNS Domain Name is the default domain name suffix which is added to unqualified names.

Example: If the DNS Domain Name is "company.com" and the name to lookup is "MyVideoSystem", this will result in the DNS lookup "MyVideoSystem.company.com".

Requires user role: ADMIN, USER
Default value: ""

Value space: String (0, 64)
  The DNS domain name.

Network [n] DNS Server [m] Address

Define the network addresses for DNS servers. Up to three addresses may be specified. If the network addresses are unknown, contact your administrator or Internet Service Provider.

Requires user role: ADMIN, USER
Default value: ""

Value space: String (0, 64)
  A valid IPv4 address or IPv6 address.

Network [n] IEEE8021X Mode

The device can be connected to an IEEE 802.1X LAN network, with a port-based network access control that is used to provide authenticated network access for Ethernet networks.

Requires user role: ADMIN, USER
Default value: Off

Value space: Off/On
  Off: The 802.1X authentication is disabled.
  On: The 802.1X authentication is enabled.
**Network [n] IEEE8021X TlsVerify**
n: 1..1

Verification of the server-side certificate of an IEEE802.1x connection against the certificates in the local CA-list when TLS is used. The CA-list must be uploaded to the video conferencing device. This can be done from the web interface.
This setting takes effect only when Network [1] IEEE8021X Eap Tls is enabled (On).

Requires user role: ADMIN, USER
Default value: Off

Value space: Off/On
  - Off: When set to Off, TLS connections are allowed without verifying the server-side X.509 certificate against the local CA-list. This should typically be selected if no CA-list has been uploaded to the device.
  - On: When set to On, the server-side X.509 certificate will be validated against the local CA-list for all TLS connections. Only servers with a valid certificate will be allowed.

**Network [n] IEEE8021X UseClientCertificate**
n: 1..1

Authentication using a private key/certificate pair during an IEEE802.1x connection. The authentication X.509 certificate must be uploaded to the video conferencing device. This can be done from the web interface.

Requires user role: ADMIN, USER
Default value: Off

Value space: Off/On
  - Off: When set to Off client-side authentication is not used (only server-side).
  - On: When set to On the client (video conferencing device) will perform a mutual authentication TLS handshake with the server.

**Network [n] IEEE8021X Identity**
n: 1..1

Define the username for 802.1X authentication.

Requires user role: ADMIN, USER
Default value: **

Value space: String (0, 64)
  - The username for 802.1X authentication.

**Network [n] IEEE8021X Password**
n: 1..1

Define the password for 802.1X authentication.

Requires user role: ADMIN, USER
Default value: **

Value space: String (0, 50)
  - The password for 802.1X authentication.

**Network [n] IEEE8021X AnonymousIdentity**
n: 1..1

The 802.1X Anonymous ID string is to be used as unencrypted identity with EAP (Extensible Authentication Protocol) types that support different tunnelled identity, like EAP-PEAP and EAP-TTLS. If set, the anonymous ID will be used for the initial (unencrypted) EAP Identity Request.

Requires user role: ADMIN, USER
Default value: **

Value space: String (0, 64)
  - The 802.1X Anonymous ID string.
Network [n] IEEE8021X Eap Md5
n: 1..1
Define the Md5 (Message-Digest Algorithm 5) mode. This is a Challenge Handshake Authentication Protocol that relies on a shared secret. Md5 is a Weak security.

Requires user role: ADMIN, USER
Default value: On
Value space: Off/On
   Off: The EAP-MD5 protocol is disabled.
   On: The EAP-MD5 protocol is enabled.

Network [n] IEEE8021X Eap Ttls
n: 1..1
Define the TTLS (Tunneled Transport Layer Security) mode. Authenticates LAN clients without the need for client certificates. Developed by Funk Software and Certicom. Usually supported by Agere Systems, Proxim and Avaya.

Requires user role: ADMIN, USER
Default value: On
Value space: Off/On
   Off: The EAP-TTLS protocol is disabled.
   On: The EAP-TTLS protocol is enabled.

Network [n] IEEE8021X Eap Peap
n: 1..1
Define the Peap (Protected Extensible Authentication Protocol) mode. Authenticates LAN clients without the need for client certificates. Developed by Microsoft, Cisco and RSA Security.

Requires user role: ADMIN, USER
Default value: On
Value space: Off/On
   Off: The EAP-PEAP protocol is disabled.
   On: The EAP-PEAP protocol is enabled.

Network [n] IPStack
n: 1..1
Select if the device should use IPv4, IPv6, or dual IP stack, on the network interface. NOTE: After changing this setting you may have to wait up to 30 seconds before it takes effect.

Requires user role: ADMIN, USER
Default value: Dual
Value space: Dual/IPv4/IPv6
   Dual: When set to Dual, the network interface can operate on both IP versions at the same time, and can have both an IPv4 and an IPv6 address at the same time.
   IPv4: When set to IPv4, the device will use IPv4 on the network interface.
   IPv6: When set to IPv6, the device will use IPv6 on the network interface.
Network [n] IPv4 Assignment

n: 1..1

Define how the device will obtain its IPv4 address, subnet mask and gateway address.
When using DHCP for address assignment, "01" appended by the MAC address is used as
client identifier in DHCP requests.

Requires user role: ADMIN, USER
Default value: DHCP

Value space: Static/DHCP
  Static: The addresses must be configured manually using the Network IPv4 Address,
  Network IPv4 Gateway and Network IPv4 SubnetMask settings (static addresses).
  DHCP: The device addresses are automatically assigned by the DHCP server.

Network [n] IPv4 Address

n: 1..1

Define the static IPv4 network address for the device. Applicable only when Network IPv4
Assignment is set to Static.

Requires user role: ADMIN, USER
Default value: ""

Value space: String (0, 64)
  A valid IPv4 address.

Network [n] IPv4 Gateway

n: 1..1

Define the IPv4 network gateway address. Applicable only when the Network IPv4
Assignment is set to Static.

Requires user role: ADMIN, USER
Default value: ""

Value space: String (0, 64)
  A valid IPv4 address.

Network [n] IPv4 SubnetMask

n: 1..1

Define the IPv4 network subnet mask. Applicable only when the Network IPv4 Assignment
is set to Static.

Requires user role: ADMIN, USER
Default value: ""

Value space: String (0, 64)
  A valid IPv4 address.

Network [n] IPv6 Assignment

n: 1..1

Define how the device will obtain its IPv6 address and the default gateway address.
When using DHCPv6 for address assignment, "01" appended by the MAC address is used
as client identifier in DHCP requests.

Requires user role: ADMIN, USER
Default value: Autoconf

Value space: Static/DHCPv6/Autoconf
  Static: The device and gateway IP addresses must be configured manually using the
  Network IPv6 Address and Network IPv6 Gateway settings. The options, for example
  NTP and DNS server addresses, must either be set manually or obtained from a DHCPv6
  server. The Network IPv6 DHCPOptions setting determines which method to use.
  DHCPv6: All IPv6 addresses, including options, will be obtained from a DHCPv6 server.
  See RFC 3315 for a detailed description. The Network IPv6 DHCPOptions setting will be
  ignored.
  Autoconf: Enable IPv6 stateless autoconfiguration of the IPv6 network interface. See
  RFC 4862 for a detailed description. The options, for example NTP and DNS server
  addresses, must either be set manually or obtained from a DHCPv6 server. The Network
  IPv6 DHCPOptions setting determines which method to use.
Network [n] IPv6 Address

n: 1..1

Define the static IPv6 network address for the device. Applicable only when the Network IPv6 Assignment is set to Static.

Requires user role: ADMIN, USER
Default value: ""

Value space: String (0, 64)
   A valid IPv6 address including a network mask. Example: 2001:DB8::/48

Network [n] IPv6 Gateway

n: 1..1

Define the IPv6 network gateway address. This setting is only applicable when the Network IPv6 Assignment is set to Static.

Requires user role: ADMIN, USER
Default value: ""

Value space: String (0, 64)
   A valid IPv6 address.

Network [n] IPv6 DHCPOptions

n: 1..1

Retrieve a set of DHCP options, for example NTP and DNS server addresses, from a DHCPv6 server.

Requires user role: ADMIN, USER
Default value: On

Value space: Off/On
   Off: Disable the retrieval of DHCP options from a DHCPv6 server.
   On: Enable the retrieval of a selected set of DHCP options from a DHCPv6 server.

Network [n] MTU

n: 1..1

Define the Ethernet MTU (Maximum Transmission Unit) size. The MTU size must be supported by your network infrastructure. The minimum size is 576 for IPv4 and 1280 for IPv6.

Requires user role: ADMIN, USER
Default value: 1500

Value space: Integer (576..1500)
   Set a value for the MTU (bytes).

Network [n] QoS Mode

n: 1..1

The QoS (Quality of Service) is a method which handles the priority of audio, video and data in the network. The QoS settings must be supported by the infrastructure. Diffserv (Differentiated Services) is a computer networking architecture that specifies a simple, scalable and coarse-grained mechanism for classifying, managing network traffic and providing QoS priorities on modern IP networks.

Requires user role: ADMIN, USER
Default value: Diffserv

Value space: Off/Diffserv
   Off: No QoS method is used.
   Diffserv: When you set the QoS Mode to Diffserv, the Network QoS Diffserv Audio, Network QoS Diffserv Video, Network QoS Diffserv Data, Network QoS Diffserv Signalling, Network QoS Diffserv ICMPv6 and Network QoS Diffserv NTP settings are used to prioritize packets.
Network [n] QoS Diffserv Audio

This setting will only take effect if Network QoS Mode is set to Diffserv.
Define which priority Audio packets should have in the IP network.
The priority for the packets ranges from 0 to 63 – the higher the number, the higher the priority. The recommended class for Audio is CS4, which equals the decimal value 32. If in doubt, contact your network administrator.
The priority set here might be overridden when packets are leaving the network controlled by the local network administrator.

Requires user role: ADMIN, USER
Default value: 0
Value space: Integer (0..63)

Set the priority of the audio packets in the IP network - the higher the number, the higher the priority. 0 means "best effort".

Network [n] QoS Diffserv Video

This setting will only take effect if Network QoS Mode is set to Diffserv.
Define which priority Video packets should have in the IP network. The packets on the presentation channel (shared content) are also in the Video packet category. The priority for the packets ranges from 0 to 63 – the higher the number, the higher the priority. The recommended class for Video is CS4, which equals the decimal value 32. If in doubt, contact your network administrator.
The priority set here might be overridden when packets are leaving the network controlled by the local network administrator.

Requires user role: ADMIN, USER
Default value: 0
Value space: Integer (0..63)

Set the priority of the video packets in the IP network - the higher the number, the higher the priority. 0 means "best effort".

Network [n] QoS Diffserv Data

This setting will only take effect if Network QoS Mode is set to Diffserv.
Define which priority Data packets should have in the IP network.
The priority for the packets ranges from 0 to 63 – the higher the number, the higher the priority. The recommended value for Data is 0, which means best effort. If in doubt, contact your network administrator.
The priority set here might be overridden when packets are leaving the network controlled by the local network administrator.

Requires user role: ADMIN, USER
Default value: 0
Value space: Integer (0..63)

Set the priority of the data packets in the IP network - the higher the number, the higher the priority. 0 means "best effort".

Network [n] QoS Diffserv Signalling

This setting will only take effect if Network QoS Mode is set to Diffserv.
Define which priority Signalling packets that are deemed critical (time-sensitive) for the real-time operation should have in the IP network.
The priority for the packets ranges from 0 to 63 – the higher the number, the higher the priority. The recommended class for Signalling is CS3, which equals the decimal value 24. If in doubt, contact your network administrator.
The priority set here might be overridden when packets are leaving the network controlled by the local network administrator.

Requires user role: ADMIN, USER
Default value: 0
Value space: Integer (0..63)

Set the priority of the signalling packets in the IP network - the higher the number, the higher the priority. 0 means "best effort".
Network [n] QoS Diffserv ICMPv6

n: 1..1

This setting will only take effect if Network QoS Mode is set to Diffserv.
Define which priority ICMPv6 packets should have in the IP network.
The priority for the packets ranges from 0 to 63 - the higher the number, the higher the priority. The recommended value for ICMPv6 is 0, which means best effort. If in doubt, contact your network administrator.
The priority set here might be overridden when packets are leaving the network controlled by the local network administrator.

Requires user role: ADMIN, USER
Default value: 0
Value space: Integer (0..63)

Set the priority of the ICMPv6 packets in the IP network - the higher the number, the higher the priority. 0 means "best effort".

Network [n] QoS Diffserv NTP

n: 1..1

This setting will only take effect if Network QoS Mode is set to Diffserv.
Define which priority NTP packets should have in the IP network.
The priority for the packets ranges from 0 to 63 - the higher the number, the higher the priority. The recommended value for NTP is 0, which means "best effort". If in doubt, contact your network administrator.
The priority set here might be overridden when packets are leaving the network controlled by the local network administrator.

Requires user role: ADMIN, USER
Default value: 0
Value space: Integer (0..63)

Set the priority of the NTP packets in the IP network - the higher the number, the higher the priority. 0 means "best effort".

Network [n] RemoteAccess Allow

n: 1..1

Define which IP addresses (IPv4/IPv6) are allowed for remote access to the device from SSH/Telnet/HTTP/HTTPS. Multiple IP addresses are separated by a white space.
A network mask (IP range) is specified by <ip address>/N, where N is 1-32 for IPv4, and N is 1-128 for IPv6. The /N is a common indication of a network mask where the first N bits are set. Thus 192.168.0.0/24 would match any address starting with 192.168.0, since these are the first 24 bits in the address.

Requires user role: ADMIN, USER
Default value: **
Value space: String (0..255)
A valid IPv4 address or IPv6 address.

Network [n] Speed

n: 1..1

Define the Ethernet link speed. We recommend not to change from the default value, which negotiates with the network to set the speed automatically. If you do not use auto-negotiation, make sure that the speed you choose is supported by the closest switch in your network infrastructure.

Requires user role: ADMIN, INTEGRATOR
Default value: Auto
Value space: Auto/10half/10full/100half/100full/1000full
Auto: Auto-negotiate link speed.
10half: Force link to 10 Mbps half-duplex.
10full: Force link to 10 Mbps full-duplex.
100half: Force link to 100 Mbps half-duplex.
100full: Force link to 100 Mbps full-duplex.
1000full: Force link to 1 Gbps full-duplex.
Network [n] TrafficControl Mode

\text{n: 1..1}

Define the network traffic control mode to decide how to control the video packets transmission speed.

Requires user role: ADMIN, USER
Default value: On

Value space: Off/On
- Off: Transmit video packets at link speed.
- On: Transmit video packets at maximum 20 Mbps. Can be used to smooth out bursts in the outgoing network traffic.

Network [n] VLAN Voice Mode

\text{n: 1..1}

Define the VLAN voice mode. The VLAN Voice Mode will be set to Auto automatically if you have Cisco UCM (Cisco Unified Communications Manager) as provisioning infrastructure. Note that Auto mode will NOT work if the NetworkServices CDP Mode setting is Off.

Requires user role: ADMIN, USER
Default value: Auto

Value space: Auto/Manual/Off
- Auto: The Cisco Discovery Protocol (CDP), if available, assigns an id to the voice VLAN. If CDP is not available, VLAN is not enabled.
- Manual: The VLAN ID is set manually using the Network VLAN Voice VlanId setting. If CDP is available, the manually set value will be overruled by the value assigned by CDP.
- Off: VLAN is not enabled.

Network [n] VLAN Voice VlanId

\text{n: 1..1}

Define the VLAN voice ID. This setting will only take effect if Network VLAN Voice Mode is set to Manual.

Requires user role: ADMIN, USER
Default value: 1

Value space: Integer (1..4094)
- Set the VLAN voice ID.
NetworkPort settings

NetworkPort [n] Mode

n: 2..2

The video conferencing device has two network ports. The first network port is for connecting the device to Ethernet LAN. The second network port (also called the computer network port) allows you to connect a computer to the Ethernet LAN via the device. In this way, you only need one network wall socket to support both the video conferencing device and the computer.

If the video conferencing device is used in a public environment we recommend that you disable this network port, to prevent people from connecting a computer to your network through the device.

You have to restart the device for any change to this setting to take effect.

Requires user role: ADMIN

Default value: On

Value space: Off/On

Off: The computer network port is disabled.

On: The computer network port is available for use.
NetworkServices settings

NetworkServices CDP Mode
Enable or disable the CDP (Cisco Discovery Protocol) daemon. Enabling CDP will make the
device report certain statistics and device identifiers to a CDP-enabled switch. If CDP is
disabled, the Network VLAN Voice Mode: Auto setting will not work.

Requires user role: ADMIN
Default value: On

Value space: Off/On
  Off: The CDP daemon is disabled.
  On: The CDP daemon is enabled.

NetworkServices H323 Mode
Define whether the device should be able to place and receive H.323 calls or not.

Requires user role: ADMIN
Default value: Off

Value space: Off/On
  Off: Disable the possibility to place and receive H.323 calls.
  On: Enable the possibility to place and receive H.323 calls.

NetworkServices HTTP Mode
Define whether or not to allow access to the device using the HTTP or HTTPS (HTTP
Secure) protocols. Note that the device’s web interface use HTTP or HTTPS. If this setting
is switched Off, you cannot use the web interface.

For additional security (encryption and decryption of requests and pages that are returned
by the web server), allow only HTTPS.

Note: The default value is HTTP+HTTPS for devices that have been upgraded to CE9.4 (or
later) from an earlier software version, provided that the device has not been factory reset
after the upgrade.

Requires user role: ADMIN
Default value: HTTPS (changed from HTTP+HTTPS to HTTPS in CE9.4)

Value space: Off/HTTP+HTTPS/HTTPS
  Off: Access to the device not allowed via HTTP or HTTPS.
  HTTP+HTTPS: Access to the device allowed via both HTTP and HTTPS.
  HTTPS: Access to the device allowed via HTTPS, but not via HTTP.

NetworkServices HTTP Proxy LoginName
This is the username part of the credentials for authentication towards the HTTP proxy.
Requires that the NetworkServices HTTP Proxy Mode is set to Manual.

Requires user role: ADMIN, USER
Default value: ""

Value space: String (0, 80)
  The authentication login name.
NetworkServices HTTP Proxy Password

This is the password part of the credentials for authentication towards the HTTP proxy. Requires that the NetworkServices HTTP Proxy Mode is set to Manual.

Requires user role: ADMIN, USER
Default value: ""
Value space: String (0, 64)

The authentication password.

NetworkServices HTTP Proxy Mode

The HTTP proxy for Cisco Webex can be set up manually, it can be auto-configured (PACUrl), fully automated (WPAD), or it can be turned off.

Requires user role: ADMIN, USER
Default value: Off
Value space: Manual/Off/PACUrl/WPAD
  Manual: Enter the address of the proxy server in the NetworkServices HTTP Proxy URL setting. Optionally, also add the HTTP proxy login name and password in the NetworkServices HTTP Proxy LoginName/Password settings.
  Off: The HTTP proxy mode is turned off.
  PACUrl: The HTTP proxy is auto-configured. You must enter the URL for the PAC (Proxy Auto Configuration) script in the NetworkServices HTTP Proxy PACUrl setting.
  WPAD: With WPAD (Web Proxy Auto Discovery) the HTTP proxy is fully automated and auto-configured.

NetworkServices HTTP Proxy URL

Set the URL of the HTTP proxy server. Requires that the NetworkServices HTTP Proxy Mode is set to Manual.

Requires user role: ADMIN, USER
Default value: ""
Value space: String (0..255)
  The URL of the HTTP proxy server.

NetworkServices HTTP Proxy PACUrl

Set the URL of the PAC (Proxy Auto Configuration) script. Requires that the NetworkServices HTTP Proxy Mode is set to PACUrl.

Requires user role: ADMIN, USER
Default value: ""
Value space: String (0..255)
  The URL of the PAC (Proxy Auto Configuration) script.

NetworkServices HTTPS OCSP Mode

Define the support for OCSP (Online Certificate Status Protocol) responder services. The OCSP feature allows users to enable OCSP instead of certificate revocation lists (CRLs) to check the certificate status.

For any outgoing HTTPS connection, the OCSP responder is queried of the status. If the corresponding certificate has been revoked, then the HTTPS connection will not be used.

Requires user role: ADMIN
Default value: Off
Value space: Off/On
  Off: Disable OCSP support.
  On: Enable OCSP support.

NetworkServices HTTPS OCSP URL

Define the URL of the OCSP responder (server) that will be used to check the certificate status.

Requires user role: ADMIN
Default value: ""
Value space: String (0..255)
  A valid URL.
NetworkServices HTTPS Server MinimumTLSVersion
Set the lowest version of the TLS (Transport Layer Security) protocol that is allowed.
Requires user role: ADMIN
Default value: TLSv1.1
Value space: TLSv1.1/TLSv1.2
   TLSv1.1: Support of TLS version 1.1 or higher.
   TLSv1.2: Support of TLS version 1.2 or higher.

NetworkServices HTTPS StrictTransportSecurity
The HTTP Strict Transport Security header lets a web site inform the browser that it should
never load the site using HTTP and should automatically convert all attempts to access the
site using HTTP to HTTPS requests instead.
Requires user role: ADMIN
Default value: Off
Value space: Off/On
   Off: The HTTP strict transport security feature is disabled.
   On: The HTTP strict transport security feature is enabled.

NetworkServices HTTPS VerifyServerCertificate
When the video conferencing device connects to an external HTTPS server (like a phone
book server or an external manager), this server will present a certificate to the device to
identify itself.
Requires user role: ADMIN
Default value: Off
Value space: Off/On
   Off: Do not verify server certificates.
   On: Requires the device to verify that the server certificate is signed by a trusted
Certificate Authority (CA). This requires that a list of trusted CAs are uploaded to the
device in advance.

NetworkServices HTTPS VerifyClientCertificate
When the video conferencing device connects to an HTTPS client (like a web browser),
the client can be asked to present a certificate to the video conferencing device to identify
itself.
Requires user role: ADMIN
Default value: Off
Value space: Off/On
   Off: Do not verify client certificates.
   On: Requires the client to present a certificate that is signed by a trusted Certificate
Authority (CA). This requires that a list of trusted CAs are uploaded to the device in
advance.

NetworkServices NTP Mode
The Network Time Protocol (NTP) is used to synchronize the device’s time and date to a
reference time server. The time server will be queried regularly for time updates.
Requires user role: ADMIN
Default value: Auto
Value space: Auto/Manual/Off
   Auto: The device will use an NTP server for time reference. As default, the server
address will be obtained from the network’s DHCP server. If a DHCP server is not used,
or if the DHCP server does not provide an NTP server address, the NTP server address
that is specified in the NetworkServices NTP Server [n] Address setting will be used.
   Manual: The device will use the NTP server that is specified in the NetworkServices NTP
Server [n] Address setting for time reference.
   Off: The device will not use an NTP server. The NetworkServices NTP Server [n] Address
setting will be ignored.
NetworkServices NTP Server [n] Address

n: 1..3

The address of the NTP server that will be used when NetworkServices NTP Mode is set to Manual, and when NetworkServices NTP Mode is set to Auto and no address is supplied by a DHCP server.

Requires user role: ADMIN
Default value: "0.tandberg.pool.ntp.org"

Value space: String (0, 255)
   A valid IPv4 address, IPv6 address or DNS name.

NetworkServices NTP Server [n] Key

n: 1..3

To make sure that the NTP information comes from a trusted source, the video conferencing device must know the ID/key pair that the NTP source uses. Use the NetworkServices NTP Server [n] Key and NetworkServices NTP Server [n] KeyId settings for the key and ID respectively.

Requires user role: ADMIN
Default value: ""

Value space: String (0, 2045)
   The key, which is part of the ID/key pair that the NTP source uses.

NetworkServices NTP Server [n] KeyId

n: 1..3

To make sure that the NTP information comes from a trusted source, the video conferencing device must know the ID/key pair that the NTP source uses. Use the NetworkServices NTP Server [n] Key and NetworkServices NTP Server [n] KeyId settings for the key and ID respectively.

Requires user role: ADMIN
Default value: ""

Value space: String (0, 10)
   The ID, which is part of the ID/key pair that the NTP source uses.

NetworkServices NTP Server [n] KeyAlgorithm

n: 1..3

Choose the authentication hash function that the NTP server uses, and that the video conferencing device must use to authenticate the time messages.

Requires user role: ADMIN
Default value: ""

Value space: None/SHA1/SHA256
   None: The NTP server doesn't use a hash function.
   SHA1: The NTP server uses the SHA-1 hash function.
   SHA256: The NTP server uses the SHA-256 hash function (from the SHA-2 family of hash functions).

NetworkServices SIP Mode

Define whether the device should be able to place and receive SIP calls or not.

Requires user role: ADMIN
Default value: On

Value space: Off/On
   Off: Disable the possibility to place and receive SIP calls.
   On: Enable the possibility to place and receive SIP calls.
NetworkServices SNMP Mode

SNMP (Simple Network Management Protocol) is used in network management systems to monitor network-attached devices (routers, servers, switches, projectors, etc) for conditions that warrant administrative attention. SNMP exposes management data in the form of variables on the managed devices, which describe the device configuration. These variables can then be queried (set to ReadOnly) and sometimes set (set to ReadWrite) by managing applications.

Requires user role: ADMIN, INTEGRATOR
Default value: ReadOnly
Value space: Off/ReadOnly/ReadWrite
- Off: Disable the SNMP network service.
- ReadOnly: Enable the SNMP network service for queries only.
- ReadWrite: Enable the SNMP network service for both queries and commands.

NetworkServices SNMP Host [n] Address

n: 1..3

Define the address of up to three SNMP Managers.
The device's SNMP Agent (in the codec) responds to requests from SNMP Managers (a PC program etc.), for example about device location and device contact. SNMP traps are not supported.

Requires user role: ADMIN, INTEGRATOR
Default value: ""
Value space: String (0..255)
A valid IPv4 address, IPv6 address or DNS name.

NetworkServices SNMP CommunityName

Define the name of the Network Services SNMP Community. SNMP Community names are used to authenticate SNMP requests. SNMP requests must have a password (case sensitive) in order to receive a response from the SNMP Agent in the device. The default password is "public". If you have the Cisco TelePresence Management Suite (TMS) you must make sure the same SNMP Community is configured there too. NOTE: The SNMP Community password is case sensitive.

Requires user role: ADMIN, INTEGRATOR
Default value: ""
Value space: String (0, 50)
The SNMP community name.

NetworkServices SNMP SystemContact

Define the name of the Network Services SNMP System Contact.

Requires user role: ADMIN, INTEGRATOR
Default value: ""
Value space: String (0, 50)
The name of the SNMP system contact.

NetworkServices SNMP SystemLocation

Define the name of the Network Services SNMP System Location.

Requires user role: ADMIN, INTEGRATOR
Default value: ""
Value space: String (0, 50)
The name of the SNMP system location.
NetworkServices SSH Mode

The SSH (or Secure Shell) protocol can provide secure encrypted communication between the video conferencing device and your local computer.

Requires user role: ADMIN
Default value: On
Value space: Off/On
  Off: The SSH protocol is disabled.
  On: The SSH protocol is enabled.

NetworkServices SSH HostKeyAlgorithm

Choose the cryptographic algorithm that shall be used for the SSH host key. Choices are RSA (Rivest-Shamir-Adleman) with 2048 bits keysize, ECDSA (Elliptic Curve Digital Signature Algorithm) with NIST curve P-384, and EdDSA (Edwards-curve Digital Signature Algorithm) with ed25519 signature schema.

Requires user role: ADMIN
Default value: RSA
Value space: ECDSA/RSA/ed25519
  ECDSA: Use the ECDSA algorithm (nist-384p).
  RSA: Use the RSA algorithm (2048 bits).
  ed25519: Use the ed25519 algorithm.

NetworkServices SSH AllowPublicKey

Secure Shell (SSH) public key authentication can be used to access the device.

Requires user role: ADMIN
Default value: On
Value space: Off/On
  Off: The SSH public key is not allowed.
  On: The SSH public key is allowed.

NetworkServices Telnet Mode

Telnet is a network protocol used on the Internet or Local Area Network (LAN) connections.

Requires user role: ADMIN
Default value: Off
Value space: Off/On
  Off: The Telnet protocol is disabled. This is the factory setting.
  On: The Telnet protocol is enabled.

NetworkServices Websocket

It is possible to interact with the API of the device over the WebSocket protocol, both the insecure and secure versions (ws and wss). A WebSocket is tied to HTTP, so that also HTTP or HTTPS must be enabled before you can use WebSockets (see the NetworkServices HTTP Mode setting).

Requires user role: ADMIN
Default value: Off
Value space: FollowHTTPService/Off
  FollowHTTPService: Communication over the WebSocket protocol is allowed when HTTP or HTTPS is enabled.
  Off: Communication over the WebSocket protocol is not allowed.

NetworkServices WelcomeText

Choose which information the user should see when logging on to the device through Telnet/SSH.

Requires user role: ADMIN
Default value: On
Value space: Off/On
  Off: The welcome text is: Login successful
  On: The welcome text is: Welcome to <system name>; Software version; Software release date; Login successful.
NetworkServices Wifi Allowed

Devices that have a built-in Wi-Fi adapter, can connect to the network either via Ethernet or Wi-Fi. Both Ethernet and Wi-Fi are allowed by default, and the user can choose which one to use from the user interface. With this setting, the administrator can disable Wi-Fi configuration, so that it cannot be set up from the user interface.

The devices support the following standards: IEEE 802.11a, IEEE 802.11b, IEEE 802.11g, and IEEE 802.11n. The device supports the following security protocols: WPA-PSK (AES), WPA2-PSK (AES), EAP-TLS, EAP-TTLS, EAP-FAST, PEAP, EAP-MSCHAPv2, EAP-GTC, and open networks (not secured).

If the PID (Product ID), found on the rating label at the rear of the device, contains the letters NR (No Radio) the device does not support Wi-Fi.

Requires user role: ADMIN, USER
Default value: True
Value space: False/True
- False: Wi-Fi cannot be used. You must connect to the network via Ethernet.
- True: Both Ethernet and Wi-Fi are allowed.

NetworkServices Wifi Enabled

Provided that the device is allowed to connect to the network via Wi-Fi (see the NetworkServices WIFI Allowed setting), you can use this setting to enable and disable Wi-Fi.

You cannot use Ethernet and Wi-Fi at the same time. If you try to configure Wi-Fi while an Ethernet cable is connected, you must unplug the Ethernet cable to proceed. If you connect an Ethernet cable while connected to Wi-Fi, Ethernet will take precedence. If you unplug the Ethernet cable, the device will automatically connect to the last connected Wi-Fi network, if available.

Requires user role: ADMIN, USER
Default value: True
Value space: False/True
- False: Wi-Fi is disabled.
- True: Wi-Fi is enabled.

NetworkServices XMLAPI Mode

Enable or disable the device's XML API. For security reasons this may be disabled. Disabling the XML API will limit the remote manageability with for example TMS, which no longer will be able to connect to the device.

Requires user role: ADMIN
Default value: On
Value space: Off/On
- Off: The XML API is disabled.
- On: The XML API is enabled.
Peripherals settings

Peripherals InputDevice Mode
Define whether or not to allow the use of a third-party input device, such as a USB keyboard or a wireless remote control with a USB dongle. The input device must advertise itself as a USB keyboard. You must define and implement the actions to be taken as response to key clicks yourself.

Requires user role: ADMIN
Default value: Off
Value space: Off/On
  Off: A third-party USB input device is not allowed.
  On: A third-party USB input device can be used to control certain functions on the video conferencing device.

Peripherals Profile ControlSystems
Define if a third-party control system, for example Crestron or AMX, is expected to be connected to the video conferencing device. This information is used by the video conferencing device’s diagnostics service. If the number of connected control systems does not match this setting, the diagnostics service will report it as an inconsistency. Note that only one third-party control system is supported.

If set to 1, the control system must send heartbeats to the video conferencing device using xCommand Peripherals Pair and HeartBeat commands. Failing to do so will cause the in-room control extensions to show a warning that the video conferencing device has lost connectivity to the control system.

Requires user role: ADMIN, INTEGRATOR
Default value: NotSet
Value space: 1/NotSet
  1: One third-party control system should be connected to the device.
  NotSet: No check for a third-party control system is performed.
Phonebook settings

Phonebook Server [n] ID
n: 1..1
Define a name for the external phone book.
Requires user role: ADMIN
Default value: **
Value space: String (0, 64)
The name for the external phone book.

Phonebook Server [n] Pagination
n: 1..1
Configure if the phonebook server supports pagination (paging) or not. Pagination means that the server supports consecutive searches, and these searches can be relative to an offset. This allows the user interface to perform as many consecutive searches as required to get the complete search result.
If Pagination is Disabled the device does a single search and returns a maximum of 100 entries in the search result. It is not possible to scroll to any further search results beyond that.
Requires user role: ADMIN
Default value: Enabled
Value space: Disabled/Enabled
Disabled: The phonebook server does not support pagination. The device does a single search, and the maximum number of entries in the search result is 100.
Enabled: The phonebook server supports pagination.

Phonebook Server [n] Type
n: 1..1
Select the phonebook server type.
Requires user role: ADMIN
Default value: Off
Value space: Off/CUCM/Spark/TMS/VCS
Off: Do not use a phonebook.
CUCM: The phonebook is located on the Cisco Unified Communications Manager.
Spark: The phonebook is located in the Cisco Webex cloud service.
TMS: The phonebook is located on the Cisco TelePresence Management Suite server.
VCS: The phonebook is located on the Cisco TelePresence Video Communication Server.

Phonebook Server [n] URL
n: 1..1
Define the address (URL) to the external phone book server.
Requires user role: ADMIN
Default value: **
Value space: String (0..255)
A valid address (URL) to the phone book server.
Provisioning Connectivty
This setting controls how the device discovers whether it should request an internal or external configuration from the provisioning server.

Requires user role: ADMIN, USER
Default value: Auto

Value space: Internal/External/Auto
Internal: Request internal configuration.
External: Request external configuration.
Auto: Automatically discover using NAPTR queries whether internal or external configurations should be requested. If the NAPTR responses have the "e" flag, external configurations will be requested. Otherwise internal configurations will be requested.

Provisioning ExternalManager Address
Define the IP Address or DNS name of the external manager / provisioning system. If an External Manager Address (and Path) is configured, the device will send a message to this address when starting up. When receiving this message the external manager / provisioning system can return configurations/commands to the unit as a result. When using CUCM or TMS provisioning, the DHCP server can be set up to provide the external manager address automatically (DHCP Option 242 for TMS, and DHCP Option 150 for CUCM). An address set in the Provisioning ExternalManager Address setting will override the address provided by DHCP.

Requires user role: ADMIN, USER
Default value: **

Value space: String (0, 64)
A valid IPv4 address, IPv6 address or DNS name.

Provisioning ExternalManager AlternateAddress
Only applicable when the device is provisioned by Cisco Unified Communication Manager (CUCM) and an alternate CUCM is available for redundancy. Define the address of the alternate CUCM. If the main CUCM is not available, the device will be provisioned by the alternate CUCM. When the main CUCM is available again, the device will be provisioned by this CUCM.

Requires user role: ADMIN, USER
Default value: **

Value space: String (0, 64)
A valid IPv4 address, IPv6 address or DNS name.

Provisioning ExternalManager Protocol
Define whether to use the HTTP (unsecure communication) or HTTPS (secure communication) protocol when sending requests to the external manager / provisioning system. The selected protocol must be enabled in the NetworkServices HTTP Mode setting.

Requires user role: ADMIN, USER
Default value: HTTP

Value space: HTTPS/HTTP
HTTPS: Send requests via HTTPS.
HTTP: Send requests via HTTP.
Provisioning ExternalManager Path

Define the Path to the external manager / provisioning system. This setting is required when several management services reside on the same server, i.e. share the same External Manager address.

Requires user role: ADMIN, USER
Default value: ""
Value space: String (0..255)
A valid path to the external manager or provisioning system.

Provisioning ExternalManager Domain

Define the SIP domain for the VCS provisioning server.

Requires user role: ADMIN, USER
Default value: ""
Value space: String (0, 64)
A valid domain name.

Provisioning Mode

It is possible to configure a device using a provisioning system (external manager). This allows video conferencing network administrators to manage many devices simultaneously. With this setting you choose which type of provisioning system to use. Provisioning can also be switched off. Contact your provisioning system provider/representative for more information.

Requires user role: ADMIN, USER
Default value: Auto
Value space: Off/Auto/CUCM/Edge/Webex/TMS/VCS
- Off: The device is not configured by a provisioning system.
- Auto: The provisioning server is automatically selected as set up in the DHCP server.
- CUCM: Push configurations to the device from CUCM (Cisco Unified Communications Manager).
- Edge: Push configurations to the device from CUCM (Cisco Unified Communications Manager). The device connects to CUCM via the Expressway infrastructure. In order to register over Expressway the encryption option key must be installed on the device.
- Webex: Push configurations to the device from the Cisco Webex cloud service.
- TMS: Push configurations to the device from TMS (Cisco TelePresence Management System).
- VCS: Push configurations to the device from VCS (Cisco TelePresence Video Communication Server).

Provisioning LoginName

This is the username part of the credentials used to authenticate the device with the provisioning server. This setting must be used when required by the provisioning server.

Requires user role: ADMIN, USER
Default value: ""
Value space: String (0, 80)
A valid username.
Provisioning Password

This is the password part of the credentials used to authenticate the device with the provisioning server. This setting must be used when required by the provisioning server.

Requires user role: ADMIN, USER
Default value: ""
Value space: String (0, 64)
   A valid password.
Proximity settings

Proximity Mode
Determine whether the device will emit ultrasound pairing messages or not.
When the device emits ultrasound, Proximity clients can detect that they are close to the device. In order to use a client, at least one of the Proximity services must be enabled (refer to the Proximity Services settings). In general, Cisco recommends enabling all the Proximity services.

Requires user role: ADMIN, USER
Default value: Off
Value space: Off/On
- Off: The device does not emit ultrasound, and Proximity services cannot be used.
- On: The device emits ultrasound, and Proximity clients can detect that they are close to the device. Enabled Proximity services can be used.

Proximity Services CallControl
Enable or disable basic call control features on Proximity clients. When this setting is enabled, you are able to control a call using a Proximity client (for example dial, mute, adjust volume and hang up). This service is supported by mobile devices (iOS and Android). Proximity Mode must be On for this setting to take any effect.

Requires user role: ADMIN, USER
Default value: Disabled
Value space: Enabled/Disabled
- Enabled: Call control from a Proximity client is enabled.
- Disabled: Call control from a Proximity client is disabled.

Proximity Services ContentShare FromClients
Enable or disable content sharing from Proximity clients. When this setting is enabled, you can share content from a Proximity client wirelessly on the device, e.g. share your laptop screen. This service is supported by laptops (OS X and Windows). Proximity Mode must be On for this setting to take any effect.

Requires user role: ADMIN, USER
Default value: Enabled
Value space: Enabled/Disabled
- Enabled: Content sharing from a Proximity client is enabled.
- Disabled: Content sharing from a Proximity client is disabled.

Proximity Services ContentShare ToClients
Enable or disable content sharing to Proximity clients. When enabled, Proximity clients will receive the presentation from the device. You can zoom in on details, view previous content and take snapshots. This service is supported by mobile devices (iOS and Android). Proximity Mode must be On for this setting to take any effect.

Requires user role: ADMIN, USER
Default value: Disabled
Value space: Enabled/Disabled
- Enabled: Content sharing to a Proximity client is enabled.
- Disabled: Content sharing to a Proximity client is disabled.
RoomReset settings

RoomReset Control
This setting is for use with control systems or macros. Macros allow you to write snippets of JavaScript code that can automate parts of your video conferencing device, thus creating custom behavior.

When a room has been idle for some time the video conferencing device can send an event to indicate that the room is ready to be reset.

The events that are sent when this setting is enabled are:
*e RoomReset SecondsToReset: 30
** end
*e RoomReset Reset
** end

Requires user role: ADMIN
Default value: On

Value space: CameraPositionsOnly/Off/On
- CameraPositionsOnly: Not applicable.
- Off: No RoomReset events will be sent.
- On: The room reset control is enabled and RoomReset events will be sent.
RTP settings

RTP Ports Range Start
Define the first port in the range of RTP ports.
As default, the device is using the ports in the range 2326 to 2487 for RTP and RTCP media data. The minimum range is 100 when RTP Video Ports Range is disabled, and 20 when RTP Video Ports Range is enabled.
If the RTP Video Ports Range is enabled, audio will use the range defined by the RTP Ports Range settings, and other media data will use the range defined by the RTP Video Ports Range settings. The two ranges must not overlap.
A change in the setting will take effect on new calls.
Requires user role: ADMIN
Default value: 2326
Value space: Integer (1024..65438)
Set the first port in the range of RTP ports. The value must be an even number.

RTP Ports Range Stop
Define the last port in the range of RTP ports.
As default, the device is using the ports in the range 2326 to 2487 for RTP and RTCP media data. If the RTP Video Ports Range is enabled the device is using the ports in the range 1024 to 65436. The minimum range is 100 when RTP Video Ports Range is disabled, and 20 when RTP Video Ports Range is enabled.
If the RTP Video Ports Range is enabled, audio will use the range defined by the RTP Ports Range settings, and other media data will use the range defined by the RTP Video Ports Range settings. The two ranges must not overlap.
A change in the setting will take effect on new calls.
Requires user role: ADMIN
Default value: 2486
Value space: Integer (1120..65535)
Set the last port in the range of RTP ports. The value must be an odd number. If you enter an even value, +1 will be automatically applied.

RTP Video Ports Range Start
Define the first port in the range of RTP video ports.
If both the start and stop values are set to 0, the RTP Video Ports Range is disabled. To enable it, set the first port to a value between 1024 and 65454 and the last port between 1024 and 65535. The minimum range is 80.
If the RTP Video Ports Range is enabled, audio will use the range defined by the RTP Ports Range settings, and other media data will use the range defined by the RTP Video Ports Range settings. The two ranges must not overlap.
A change in the setting will take effect on new calls.
Requires user role: ADMIN
Default value: 0
Value space: Integer (0, 1024..65454)
Set the first port in the range of RTP video ports.

RTP Video Ports Range Stop
Define the last port in the range of RTP video ports.
If both the start and stop values are set to 0, the RTP Video Ports Range is disabled. To enable it, set the first port to a value between 1024 and 65454 and the last port between 1024 and 65535. The minimum range is 80.
If the RTP Video Ports Range is enabled, audio will use the range defined by the RTP Ports Range settings, and other media data will use the range defined by the RTP Video Ports Range settings. The two ranges must not overlap.
A change in the setting will take effect on new calls.
Requires user role: ADMIN
Default value: 0
Value space: Integer (0, 1024..65535)
Set the last port in the range of RTP video ports.
Security settings

Security Audit Logging Mode

Define where to record or transmit the audit logs. The audit logs are sent to a syslog server. This setting has no effect if the Logging Mode setting is set to Off.

When using the External or ExternalSecure mode you must enter the address of the audit server in the Security Audit Server Address setting.

Requires user role: AUDIT
Default value: Internal

Value space: External/ExternalSecure/Internal/Off
- External: The device sends the audit logs to an external syslog server. The syslog server must support UDP.
- ExternalSecure: The device sends encrypted audit logs to an external syslog server that is verified by a certificate in the Audit CA list. The Audit CA list file must be uploaded to the device using the web interface. The common_name parameter of a certificate in the CA list must match the IP address or DNS name of the syslog server, and the secure TCP server must be set up to listen for secure (TLS) TCP Syslog messages.
- Internal: The device records the audit logs to internal logs, and rotates logs when they are full.
- Off: No audit logging is performed.

Security Audit OnError Action

Define what happens when the connection to the syslog server is lost. This setting is only relevant when Security Audit Logging Mode is set to ExternalSecure.

Requires user role: AUDIT
Default value: Ignore

Value space: Halt/Ignore
- Halt: If a halt condition is detected the device is rebooted and only the auditor is allowed to operate the unit until the halt condition has passed. When the halt condition has passed the audit logs are re-spooled to the syslog server. Halt conditions are: A network breach (no physical link), no syslog server running (or incorrect address or port to the syslog server), TLS authentication failed (if in use), local backup (re-spooling) log full.
- Ignore: The device will continue its normal operation, and rotate internal logs when full. When the connection is restored it will again send its audit logs to the syslog server.

Security Audit Server Address

Set the IP address or DNS name of the syslog server that the audit logs are sent to. This setting is only relevant when Security Audit Logging Mode is set to External or ExternalSecure.

Requires user role: AUDIT
Default value: *

Value space: String (0..255)
- A valid IPv4 address, IPv6 address, or DNS name.

Security Audit Server Port

The audit logs are sent to a syslog server. Define the port of the syslog server that the device shall send its audit logs to. This setting is only relevant when Security Audit Server PortAssignment is set to Manual.

Requires user role: AUDIT
Default value: 514

Value space: Integer (0..65535)
- Set the audit server port.
Security Audit Server Port Assignment

The audit logs are sent to a syslog server. You can define how the port number of the external syslog server will be assigned. This setting is only relevant when Security Audit Logging Mode is set to External or ExternalSecure. To see which port number is used you can check the Security Audit Server Port status. Navigate to Setup > Status on the web interface or; if on a command line interface, run the command xStatus Security Audit Server Port.

Requires user role: AUDIT
Default value: Auto
Value space: Auto/Manual
  - Auto: Will use UDP port number 514 when the Security Audit Logging Mode is set to External. Will use TCP port number 6514 when the Security Audit Logging Mode is set to ExternalSecure.
  - Manual: Will use the port value defined in the Security Audit Server Port setting.

Security Session FailedLogins Lockout Time

Define how long the device will lock out a user after failed login to a web or SSH session. Restart the device for any change to this setting to take effect.

Requires user role: ADMIN
Default value: 60
Value space: Integer (0..10000)
  - Set the lockout time (minutes).

Security Session Max FailedLogins

Define the maximum number of failed login attempts per user for a web or SSH session. If the user exceeded the maximum number of attempts the user will be locked out. 0 means that there is no limit for failed logins.

Requires user role: ADMIN
Default value: 0
Value space: Integer (0..10)
  - Set the maximum number of failed login attempts per user.

Security Session Max Sessions Per User

The maximum number of simultaneous sessions per user is 20 sessions.

Requires user role: ADMIN
Default value: 20
Value space: Integer (1..20)
  - Set the maximum number of simultaneous sessions per user.

Security Session Max Total Sessions

The maximum number of simultaneous sessions in total is 20 sessions.

Requires user role: ADMIN
Default value: 20
Value space: Integer (1..20)
  - Set the maximum number of simultaneous sessions in total.
Security Session ShowLastLogon

When logging in to the device using SSH or Telnet you will see the UserId, time and date of the last session that did a successful login.

Requires user role: ADMIN
Default value: Off
Value space: Off/On
  On: Show information about the last session.
  Off: Do not show information about the last session.
SerialPort settings

SerialPort Mode
Enable/disable the serial port.
Requires user role: ADMIN, INTEGRATOR
Default value: On
Value space: Off/On
  Off: Disable the serial port.
  On: Enable the serial port.

SerialPort LoginRequired
Define if login shall be required when connecting to the serial port.
Requires user role: ADMIN
Default value: On
Value space: Off/On
  Off: The user can access the device via the serial port without any login.
  On: Login is required when connecting to the device via the serial port.
SIP settings

SIP ANAT
ANAT (Alternative Network Address Types) enables media negotiation for multiple addresses and address types, as specified in RFC 4091.

Requires user role: ADMIN
Default value: Off
Value space: Off/On
  Off: Disable ANAT.
  On: Enable ANAT.

SIP Authentication UserName
This is the username part of the credentials used to authenticate towards the SIP proxy.

Requires user role: ADMIN
Default value: ""
Value space: String (0, 128)
  A valid username.

SIP Authentication Password
This is the password part of the credentials used to authenticate towards the SIP proxy.

Requires user role: ADMIN
Default value: ""
Value space: String (0, 128)
  A valid password.

SIP DefaultTransport
Select the transport protocol to be used over the LAN.

Requires user role: ADMIN
Default value: Auto
Value space: Auto/TCP/Tls/UDP
  TCP: The device will always use TCP as the default transport method.
  UDP: The device will always use UDP as the default transport method.
  Tls: The device will always use TLS as the default transport method. For TLS connections a SIP CA-list can be uploaded to the device. If no such CA-list is available on the device then anonymous Diffie Hellman will be used.
  Auto: The device will try to connect using transport protocols in the following order: TLS, TCP, UDP.

SIP DisplayName
When configured the incoming call will report the display name instead of the SIP URI.

Requires user role: ADMIN
Default value: ""
Value space: String (0, 550)
  The name to be displayed instead of the SIP URI.
SIP Ice DefaultCandidate

The ICE protocol needs some time to reach a conclusion about which media route to use (up to the first 5 seconds of a call). During this period media for the device will be sent to the Default Candidate as defined in this setting.

Requires user role: ADMIN
Default value: Host

Value space: Host/Rflx/Relay
- Host: Send media to the device’s private IP address.
- Rflx: Send media to the device’s public IP address, as seen by the TURN server.
- Relay: Send media to the IP address and port allocated on the TURN server.

SIP Ice Mode

ICE (Interactive Connectivity Establishment, RFC 5245) is a NAT traversal solution that the devices can use to discover the optimized media path. Thus the shortest route for audio and video is always secured between the devices.

Requires user role: ADMIN
Default value: Auto

Value space: Auto/Off/On
- Auto: ICE is enabled if a TURN server is provided, otherwise ICE is disabled.
- Off: ICE is disabled.
- On: ICE is enabled.

SIP Line

When registered to a Cisco Unified Communications Manager (CUCM) the device may be part of a shared line. This means that several devices share the same directory number. The different devices sharing the same number receive status from the other appearances on the line as defined in RFC 4235.

Note that shared lines are set up by CUCM, not by the device. Therefore do not change this setting manually; CUCM pushes this information to the device when required.

Requires user role: ADMIN
Default value: Private

Value space: Private/Shared
- Shared: The device is part of a shared line and is therefore sharing its directory number with other devices.
- Private: This device is not part of a shared line.

SIP ListenPort

Turn on or off the listening for incoming connections on the SIP TCP/UDP ports. If turned off, the device will only be reachable through the SIP registrar (CUCM or VCS). As a security measure, SIP ListenPort should be Off when the device is registered to a SIP Proxy.

Requires user role: ADMIN
Default value: On

Value space: Off/On
- Off: Listening for incoming connections on the SIP TCP/UDP ports is turned off.
- On: Listening for incoming connections on the SIP TCP/UDP ports is turned on.

SIP Mailbox

When registered to a Cisco Unified Communications Manager (CUCM) you may be offered the option of having a private voice mailbox.

Requires user role: ADMIN
Default value: **

Value space: String (0, 255)
- A valid number or address. Leave the string empty if you do not have a voice mailbox.
SIP MinimumTLSVersion

Set the lowest version of the TLS (Transport Layer Security) protocol that is allowed.

Requires user role: ADMIN
Default value: TLSv1.0
Value space: TLSv1.0/TLSv1.1/TLSv1.2
  TLSv1.0: Support TLS version 1.0 or higher.
  TLSv1.1: Support TLS version 1.1 or higher.
  TLSv1.2: Support TLS version 1.2 or higher.

SIP PreferredIPSignaling

Define the preferred IP version for signaling (audio, video, data). Only applicable when both Network IPStack and Conference CallProtocolIPStack are set to Dual, and the network does not have a mechanism for choosing the preferred IP version. It also determines the priority of the A/AAAA lookups in DNS, so that the preferred IP version is used for registration.

Requires user role: ADMIN
Default value: IPv4
Value space: IPv4/IPv6
  IPv4: The preferred IP version for signaling is IPv4.

SIP Proxy [n] Address

n: 1..4

The Proxy Address is the manually configured address for the outbound proxy. It is possible to use a fully qualified domain name, or an IP address. The default port is 5060 for TCP and UDP but another one can be provided.

 Requires user role: ADMIN
Default value: ""
Value space: String (0..255)
  A valid IPv4 address, IPv6 address or DNS name.

SIP TlsVerify

For TLS connections a SIP CA-list can be uploaded to the device. This can be done from the web interface.

Requires user role: ADMIN
Default value: Off
Value space: Off/On
  Off: Set to Off to allow TLS connections without verifying them. The TLS connections are allowed to be set up without verifying the x.509 certificate received from the server against the local CA-list. This should typically be selected if no SIP CA-list has been uploaded.
  On: Set to On to verify TLS connections. Only TLS connections to servers, whose x.509 certificate is validated against the CA-list, will be allowed.

SIP Turn DiscoverMode

Define the discover mode to enable/disable the application to search for available Turn servers in DNS. Before making calls, the device will test if port allocation is possible.

Requires user role: ADMIN
Default value: On
Value space: Off/On
  Off: Set to Off to disable discovery mode.
  On: When set to On, the device will search for available Turn servers in DNS, and before making calls the device will test if port allocation is possible.

SIP Turn DropRflx

DropRflx will make the device force media through the Turn relay, unless the remote device is on the same network.

Requires user role: ADMIN
Default value: Off
Value space: Off/On
  Off: Disable DropRflx.
  On: The device will force media through the Turn relay when the remote device is on another network.
SIP Turn Server
Define the address of the TURN (Traversal Using Relay NAT) server. It is used as a media relay fallback and it is also used to discover the device's own public IP address.

Requires user role: ADMIN
Default value: ""

Value space: String (0..255)
The preferred format is DNS SRV record (e.g. _turn._udp.<domain>), or it can be a valid IPv4 or IPv6 address.

SIP Turn UserName
Define the username needed for accessing the TURN server.

Requires user role: ADMIN
Default value: ""

Value space: String (0, 128)
A valid username.

SIP Turn Password
Define the password needed for accessing the TURN server.

Requires user role: ADMIN
Default value: ""

Value space: String (0, 128)
A valid password.

SIP Type
Enables SIP extensions and special behavior for a vendor or provider.

Requires user role: ADMIN
Default value: Standard

Value space: Standard/Cisco
  Standard: Use this when registering to standard SIP Proxy (tested with Cisco TelePresence VCS).
  Cisco: Use this when registering to Cisco Unified Communication Manager.

SIP URI
The SIP URI (Uniform Resource Identifier) is the address that is used to identify the device. The URI is registered and used by the SIP services to route inbound calls to the device. The SIP URI syntax is defined in RFC 3261.

Requires user role: ADMIN
Default value: ""

Value space: String (0..255)
An address (URI) that is compliant with the SIP URI syntax.
Standby settings

Standby Control
Define whether the device should go into standby mode or not.

Requires user role: ADMIN, INTEGRATOR
Default value: On
Value space: Off/On
   Off: The device will not enter standby mode.
   On: The device will enter standby mode when the Standby Delay has timed out. Requires the Standby Delay to be set to an appropriate value.

Standby Delay
Define how long (in minutes) the device shall be in idle mode before it goes into standby mode. Requires the Standby Control to be enabled.

Requires user role: ADMIN, INTEGRATOR
Default value: 10
Value space: Integer (1..480)
   Set the standby delay (minutes).

Standby WakeupOnMotionDetection
Automatic wake up on motion detection is a feature that will sense when a person walks into the room. The feature is based on ultrasound detection.

Requires user role: ADMIN, INTEGRATOR
Default value: Off
Value space: Off/On
   Off: The wake up on motion detection is disabled.
   On: When people walk into the room the device will automatically wake up from standby (only applicable to DX80).
SystemUnit settings

SystemUnit Name
Define the device name. The device name will be sent as the hostname in a DHCP request and when the device is acting as an SNMP Agent.

Requires user role: ADMIN
Default value: ""

Value space: String (0, 50)
  Define the device name.

SystemUnit CrashReporting Advanced
If the device crashes, the device can automatically send logs to the Cisco Automatic Crash Report tool (ACR) for analyses. The ACR tool is for Cisco internal usage only and not available to customers.

Requires user role: ADMIN
Default value: Off

Value space: Off/On
  Off: The ACR tool will perform standard log analyses.
  On: The ACR tool will perform advanced log analyses.

SystemUnit CrashReporting Mode
If the device crashes, the device can automatically send logs to the Cisco Automatic Crash Report tool (ACR) for analyses. The ACR tool is for Cisco internal usage only and not available to customers.

 Requires user role: ADMIN
Default value: Off

Value space: Off/On
  Off: No logs will be sent to ACR tool.
  On: The logs will automatically be sent to ACR tool.

SystemUnit CrashReporting Url
If the device crashes, the device can automatically send logs to the Cisco Automatic Crash Report tool (ACR) for analyses. The ACR tool is for Cisco internal usage only and not available to customers.

Requires user role: ADMIN
Default value: ""

Value space: String (0..255)
  The URL to the Cisco Automatic Crash Report tool (ACR).
Time settings

Time TimeFormat

Define the time format.

Requires user role: ADMIN, USER
Default value: 24H

Value space: 24H/12H
24H: Set the time format to 24 hours.
12H: Set the time format to 12 hours (AM/PM).

Time DateFormat

Define the date format.

Requires user role: ADMIN, USER
Default value: DD_MM_YY

Value space: DD_MM_YY/MM_DD_YY/YY_MM_DD
DD_MM_YY: The date January 30th 2010 will be displayed: 30.01.10
MM_DD_YY: The date January 30th 2010 will be displayed: 01.30.10
YY_MM_DD: The date January 30th 2010 will be displayed: 10.01.30
Time Zone

Define the time zone for the geographical location of the device. The information in the value space is from the tz database, also called the IANA Time Zone Database.

Requires user role: ADMIN, INTEGRATOR, USER

Default value: Etc/UTC

Value space: Africa/Abidjan, Africa/Accra, Africa/Addis_Ababa, Africa/Algiers, Africa/Asmara, Africa/Asmera, Africa/Bamako, Africa/Bangui, Africa/Banjul, Africa/Bissau, Africa/Blantyre, Africa/Brazzaville, Africa/Bujumbura, Africa/Cairo, Africa/Casablanca, Africa/Ceuta, Africa/Conakry, Africa/Dakar, Africa/Dar_es_Salaam, Africa/Djibouti, Africa/Douala, Africa/El_Aaiun, Select a time zone from the list.
UserInterface settings

UserInterface Accessibility IncomingCallNotification
You can enable an incoming call notification with amplified visuals. The screen and Touch 10 will flash red/white approximately once every second (1.75 Hz) to make it easier for hearing impaired users to notice an incoming call. If the device is already in a call the screen will not flash as this will disturb the on-going call, instead you will get a normal notification on screen and touch panel.

Requires user role: ADMIN, INTEGRATOR, USER
Default value: Default
Value space: AmplifiedVisuals/Default
  AmplifiedVisuals: Enable the amplified visuals on screen and touch panel when the device receives a call.
  Default: Enable the default behavior with a notification on screen and touch panel.

UserInterface Branding AwakeBranding Colors
If the device is set up with branding customizations, this setting affects the colors of the logo that is shown when the device is awake. You can choose whether you want to show the logo in full color, or reduce the opacity of the logo so that it blends in more naturally with the background and other elements on the screen.

Requires user role: ADMIN, INTEGRATOR
Default value: Auto
Value space: Auto/Native
  Auto: The opacity of the logo is reduced.
  Native: The logo has full colors.

UserInterface ContactInfo Type
Choose which type of contact information to show in the user interface.

Requires user role: ADMIN
Default value: Auto
Value space: Auto/DisplayName/E164Alias/H320Number/H323Id/IPv4/IPv6/None/SipUri/SystemName
  Auto: Show the address which another device should dial to reach this video conferencing device. The address depends on the default call protocol and device registration.
  None: Do not show any contact information.
  IPv4: Show the device’s IPv4 address.
  IPv6: Show the device's IPv6 address.
  H320Number: Show the device's H.320 number as contact information (only supported if used with Cisco TelePresence ISDN Link).
  E164Alias: Show the device's H.323 E164 Alias as contact information (refer to the H323 H323Alias E164 setting).
  SipUri: Show the device’s SIP URI (refer to the SIP URI setting).
  SystemName: Show the device’s name (refer to the SystemUnit Name setting).
  DisplayName: Show the device’s display name (refer to the SIP DisplayName setting).

UserInterface CustomMessage
A custom message can be displayed, in the lower left side of the screen, in awake mode.

Requires user role: ADMIN, INTEGRATOR
Default value: **
Value space: String (0, 128)
  Add a custom message. Add an empty string to remove a custom message.
UserInterface KeyTones Mode
You can configure the device to make a keyboard click sound effect (key tone) when typing text or numbers.
Requires user role: ADMIN, USER
Default value: Off
Value space: Off/On
  Off: There is no key tone sound effect.
  On: The key tone sound effect is turned on.

UserInterface Features Call End
Choose whether or not to remove the default End Call button from the user interface. The setting removes only the button, not its functionality as such.
Requires user role: ADMIN, INTEGRATOR
Default value: Auto
Value space: Auto/Hidden
  Auto: Shows the default button in the user interface.
  Hidden: Removes the default button from the user interface.

UserInterface Features Call MidCallControls
Choose whether or not to remove the default Hold, Transfer, and Resume in-call buttons from the user interface. The setting removes only the buttons, not their functionality as such.
Requires user role: ADMIN, INTEGRATOR
Default value: Auto
Value space: Auto/Hidden
  Auto: Shows the default buttons in the user interface.
  Hidden: Removes the default buttons from the user interface.

UserInterface Features Call Start
Choose whether or not to remove the default Call button (including the directory, favorites, and recent calls lists) and the default in-call Add participant button from the user interface. The setting removes only the buttons, not their functionality as such.
Requires user role: ADMIN, INTEGRATOR
Default value: Auto
Value space: Auto/Hidden
  Auto: Shows the default buttons in the user interface.
  Hidden: Removes the default buttons from the user interface.

UserInterface Features HideAll
Choose whether or not to remove all default buttons from the user interface. The setting removes only the buttons, not their functionality as such.
Requires user role: ADMIN, INTEGRATOR
Default value: False
Value space: False/True
  False: Shows all default buttons in the user interface.
  True: Removes all default buttons from the user interface.

UserInterface Features Share Start
Choose whether or not to remove the default buttons and other UI elements for sharing and previewing content, both in call and out of call, from the user interface. The setting removes only the buttons and UI elements, not their functionality as such. You can share content using Proximity or the Cisco Webex Teams app still.
Requires user role: ADMIN, INTEGRATOR
Default value: Auto
Value space: Auto/Hidden
  Auto: Shows the default buttons and UI elements in the user interface.
  Hidden: Removes the default buttons and UI elements from the user interface.
UserInterface Features Whiteboard Start

Choose whether or not to remove the default Whiteboard button from the user interface. The setting removes only the button, not its functionality as such. This setting only applies to Cisco Webex registered devices.

Requires user role: ADMIN, INTEGRATOR
Default value: Auto
Value space: Auto/Hidden
  Auto: Shows the default button in the user interface.
  Hidden: Removes the default button from the user interface.

UserInterface Language

Select the language to be used in the user interface. If the language is not supported, the default language (English) will be used.

Requires user role: ADMIN, USER
Default value: English
Value space: Arabic/Catalan/ChineseSimplified/ChineseTraditional/Czech/Danish/Dutch/English/EnglishUK/Finnish/French/FrenchCanadian/German/Hebrew/Hungarian/Italian/Japanese/Korean/Norwegian/Polish/Portuguese/PortugueseBrazilian/Russian/Spanish/SpanishLatin/Swedish/Turkish
  Select a language from the list.

UserInterface OSD EncryptionIndicator

Define for how long the encryption indicator is shown on screen. The icon for encrypted calls is a locked padlock.

Requires user role: ADMIN
Default value: Auto
Value space: Auto/AlwaysOn/AlwaysOff
  Auto: If the call is encrypted, a "Call is encrypted" notification is shown for 5 seconds. Then, an encryption indicator icon is shown for the rest of the call.
  If the call is not encrypted, a "Call is not encrypted" notification is shown for 5 seconds. No encryption indicator icon is shown.
  AlwaysOn: The "Call is encrypted" notification is shown for 5 seconds. Then, an encryption indicator icon is shown for the rest of the call.
  AlwaysOff: The encryption indicator is never displayed on screen.

UserInterface OSD HalfwakeMessage

A custom message can be displayed in the middle of the main screen when the device is in the half wake state. The custom message will replace the default message, which gives instructions how to start using the device. You can also delete the default message, without adding a custom message.

Requires user role: ADMIN
Default value:"
Value space: String (0, 128)
  The custom message. An empty string: Restore the default message. A space only: There will be no message at all.

UserInterface OSD Output

Define on which monitor the on-screen information and indicators (OSD) should be displayed.

Requires user role: ADMIN, INTEGRATOR
Default value: Auto
Value space: Auto
  Auto: The device sends the on-screen information and indicators to the device’s screen.
UserInterface Phonebook Mode

This setting determines if a user is allowed to add or change a contact in the Directory and Favorites list from the user interface of the device.

Requires user role: ADMIN, INTEGRATOR
Default value: ReadWrite
Value space: ReadOnly/ReadWrite
  ReadOnly: You neither can add a contact to the Favorites list, edit a contact in the Favorites list, nor edit any contact from the Directory or Favorites list before calling.
  ReadWrite: You are able to add a contact to the Favorites list, edit a contact in the Favorites list, and edit a contact from the Directory or Favorites list before calling.

UserInterface Security Mode

This setting allows you to prevent important device information from being exposed in the user interface (drop down menu and Settings panel), for example the contact information and IP addresses of the video conferencing device, touch controller, and UCM/VCS registrars. It is important to note that such information is not hidden when navigating further into the Settings panel.

If you want to fully prevent that people without administrator rights can see the contact information, IP addresses, MAC address, serial number, and software version, you must also set the UserInterface SettingsMenu Mode to Locked, and of course have a passphrase for all user accounts with administrator rights.

Requires user role: ADMIN
Default value: Normal
Value space: Normal/Strong
  Normal: IP addresses and other device information are shown on the user interface.
  Strong: Contact information and IP addresses are not displayed on the user interface (drop down menu and Settings panel).

UserInterface SettingsMenu Mode

The Settings panel in the user interface (Touch 10 or on-screen) can be protected by the device’s admin password. If this password is blank, anyone can access the settings in the Settings panel, and for example factory reset the device. If authentication is enabled, all settings that require authentication have a padlock icon. You will be prompted to enter the administrator’s username and passphrase when you select the setting. Some settings do not require authentication, they do not have a padlock icon.

Requires user role: ADMIN
Default value: Unlocked
Value space: Locked/Unlocked
  Locked: Authentication with administrator's username and passphrase is required.
  Unlocked: No authentication is required.

UserInterface SettingsMenu Visibility

Choose whether or not to show the device name (or contact information) and the associated drop down menu and Settings panel on the user interface.

Requires user role: ADMIN
Default value: Auto
Value space: Auto/Hidden
  Auto: Shows the device name with drop down menu and Settings panel on the user interface.
  Hidden: Doesn't show the device name with drop down menu and Settings panel on the user interface.
UserInterface SoundEffects Mode

You can configure the device to make a sound effect, e.g. when someone connects a laptop or mobile through Proximity.

The keyboard click sound effect when typing text is not affected by this setting (refer to the UserInterface Keytones Mode setting).

Requires user role: ADMIN, USER
Default value: On

Value space: Off/On
  - Off: There are no sound effects.
  - On: The sound effects are switched on.

UserInterface Wallpaper

Select a background image (wallpaper) for the video screen when idle.

You may upload a custom wallpaper to the device using the web interface. The following file formats are supported: BMP, GIF, JPEG, PNG. The maximum file size is 4 MByte. When you use a custom wallpaper, the clock and the list of upcoming meetings are removed from the main display.

Requires user role: ADMIN, INTEGRATOR, USER
Default value: Auto

Value space: Auto/Custom/None
  - Auto: Use the default wallpaper.
  - None: There is no background image on the screen.
  - Custom: Use the custom wallpaper as background image on the screen. If no custom wallpaper is uploaded to the device, the setting will revert to the default value.
UserManagement settings

UserManagement LDAP Admin Filter

The LDAP filter is used to determine which users should be granted administrator privileges. You always have to set either an LDAP Admin Group or an LDAP Admin Filter. An LDAP Admin Filter takes precedence, so if the UserManagement LDAP Admin Filter is set, the UserManagement LDAP Admin Group setting is ignored.

Requires user role: ADMIN
Default value: ""
Value space: String (0, 1024)

Refer to the LDAP specification for the syntax of this string. Example: "(|(memberof=CN=admin group, OU=company groups, DC=company, DC=com)(sAMAccountName=username))"

UserManagement LDAP Admin Group

Members of this AD (Active Directory) group will be given administrator access. This setting is a shorthand for saying (memberOf:1.2.840.113556.1.4.1941:=<group name>). You always have to set either an LDAP Admin Group or an LDAP Admin Filter. An LDAP Admin Filter takes precedence, so if the UserManagement LDAP Admin Filter is set, the UserManagement LDAP Admin Group setting is ignored.

Requires user role: ADMIN
Default value: ""
Value space: String (0..255)

The distinguished name of the AD group. Example: "*CN=admin group, OU=company groups, DC=company, DC=com"

UserManagement LDAP Attribute

The attribute used to map to the provided username. If not set, sAMAccountName is used.

Requires user role: ADMIN
Default value: ""
Value space: String (0..255)
The attribute name.

UserManagement LDAP BaseDN

The distinguishing name of the entry at which to start a search (base).

Requires user role: ADMIN
Default value: ""
Value space: String (0..255)
The distinguished name of the base. Example: "*DC=company, DC=com"

UserManagement LDAP Encryption

Define how to secure the communication between the device and the LDAP server. You can override the port number by using the UserManagement LDAP Server Port setting.

Requires user role: ADMIN
Default value: LDAPS
Value space: LDAPS/None/STARTTLS

LDAPS: Connect to the LDAP server on port 636 over TLS (Transport Layer Security).
None: Connect to the LDAP server on port 389 with no encryption.
STARTTLS: Connect to the LDAP server on port 389, then send a STARTTLS command to upgrade to an encrypted connection (TLS).
UserManagement LDAP MinimumTLSVersion
Set the lowest version of the TLS (Transport Layer Security) protocol that is allowed.
Requires user role: ADMIN
Default value: TLSv1.2
Value space: TLSv1.0/TLSv1.1/TLSv1.2
  TLSv1.0: Support TLS version 1.0 or higher.
  TLSv1.1: Support TLS version 1.1 or higher.
  TLSv1.2: Support TLS version 1.2 or higher.

UserManagement LDAP Mode
The device supports the use of an LDAP (Lightweight Directory Access Protocol) server as a central place to store and validate usernames and passwords. Use this setting to configure whether or not to use LDAP authentication. Our implementation is tested for the Microsoft Active Directory (AD) service.
If you switch on LDAP Mode, make sure to configure the other UserManagement LDAP settings to suit your setup. Here are a few examples.
Example 1:
- UserManagement LDAP Mode: On
- UserManagement LDAP Address: "192.0.2.20"
- UserManagement LDAP BaseDN: "DC=company, DC=com"
- UserManagement LDAP Admin Group: "CN=admin group, OU=company groups, DC=company, DC=com"
Example 2:
- UserManagement LDAP Mode: On
- UserManagement LDAP Address: "192.0.2.20"
- UserManagement LDAP BaseDN: "DC=company, DC=com"
- UserManagement LDAP Admin Filter: "((memberOf=CN=admin group, OU=company groups, DC=company, DC=com)(sAMAccountName=username))"
Requires user role: ADMIN
Default value: Off
Value space: Off/On
  Off: LDAP authentication is not allowed.
  On: LDAP authentication is allowed.

UserManagement LDAP Server Address
Set the IP address or hostname of the LDAP server.
Requires user role: ADMIN
Default value: *
Value space: String (0..255)
  A valid IPv4 address, IPv6 address or hostname.

UserManagement LDAP Server Port
Set the port to connect to the LDAP server on. If set to 0, use the default for the selected protocol (see the UserManagement LDAP Encryption setting).
Requires user role: ADMIN
Default value: 0
Value space: Integer (0..65535)
  The LDAP server port number.

UserManagement LDAP VerifyServerCertificate
When the device connects to an LDAP server, the server will identify itself to the device by presenting its certificate. Use this setting to determine whether or not the device will verify the server certificate.
Requires user role: ADMIN
Default value: On
Value space: Off/On
  Off: The device will not verify the LDAP server’s certificate.
  On: The device must verify that the LDAP server’s certificate is signed by a trusted Certificate Authority (CA). The CA must be on the list of trusted CAs that are uploaded to the device in advance. Use the device’s web interface to manage the list of trusted CAs (see more details in the administrator guide).
Video settings

Video ActiveSpeaker DefaultPIPPosition
Define the position on screen of the active speaker picture-in-picture (PiP). The setting only takes effect when using a video layout where the active speaker is a PiP, i.e. the Overlay layout, or possibly a Custom layout (refer to the Video DefaultLayoutFamily Local setting). The setting takes effect from the next call onwards; if changed during a call, it will have no effect on the current call.

Requires user role: ADMIN, INTEGRATOR
Default value: Current
Value space: Current/UpperLeft/UpperCenter/UpperRight/CenterLeft/CenterRight/LowerLeft/LowerRight
- Current: The position of the active speaker PiP will be kept unchanged when leaving a call.
- UpperLeft: The active speaker PiP will appear in the upper left corner of the screen.
- UpperCenter: The active speaker PiP will appear in the upper center position.
- UpperRight: The active speaker PiP will appear in the upper right corner of the screen.
- CenterLeft: The active speaker PiP will appear in the center left position.
- CentreRight: The active speaker PiP will appear in the center right position.
- LowerLeft: The active speaker PiP will appear in the lower left corner of the screen.
- LowerRight: The active speaker PiP will appear in the lower right corner of the screen.

Video DefaultLayoutFamily Local
Select which video layout family to use locally.

Requires user role: ADMIN
Default value: Auto
Value space: Auto/Equal/Prominent/Overlay/Single
- Auto: The default layout family, as given in the layout database provided by the device, will be used as the local layout.
- Equal: The Equal layout family will be used as the local layout. All videos have equal size, as long as there is space enough on the screen.
- Prominent: The Prominent layout family will be used as the local layout. The active speaker, or the presentation if present, will be a large picture, while the other participants will be small pictures. Transitions between active speakers are voice switched.
- Overlay: The Overlay layout family will be used as the local layout. The active speaker, or the presentation if present, will be shown in full screen, while the other participants will be small pictures-in-picture (PiP). Transitions between active speakers are voice switched.
- Single: The active speaker, or the presentation if present, will be shown in full screen. The other participants are not shown. Transitions between active speakers are voice switched.

Video DefaultMainSource
Define which video input source to be used as the default main video source when you start a call.

Requires user role: ADMIN, USER
Default value: 1
Value space: 1
The source that is used as the default main video source.
Video Input Connector [n] CameraControl CameraId
n: 1..2

The camera ID is a unique identifier of the camera that is connected to this video input.

Requires user role: ADMIN, INTEGRATOR
Default value: Connector n: 1

Value space: Connector n: 1
   The camera ID is fixed and cannot be changed.

Video Input Connector [n] CameraControl Mode
n: 1..2

Define whether a camera can be controlled or not. This value is fixed for both Connector 1 (integrated camera) and Connector 2 (HDMI), and cannot be changed.

Requires user role: ADMIN, INTEGRATOR
Default value: Connector n: Off

Value space: Connector n: Off
   Off: Disable camera control.

Video Input Connector [n] InputSourceType
n: 1..2

Select which type of input source is connected to the video input.

Note that Connector 1 is the device’s integrated camera.

Requires user role: ADMIN, INTEGRATOR
Default value: Connector 1: camera   Connector 2: PC

Value space: Connector 1: camera   Connector 2: PC/camera/document_camera/mediaplayer/whiteboard/other
   PC: Use this when a computer is connected to the video input.
   camera: Use this when a camera is connected to the video input.
   document_camera: Use this when a document camera is connected to the video input.
   mediaplayer: Use this when a media player is connected to the video input.
   whiteboard: Use this when a whiteboard camera is connected to the video input.
   other: Use this when the other options do not match.

Video Input Connector [n] Name
n: 1..2

Define a name for the video input connector.

Requires user role: ADMIN, INTEGRATOR
Default value: Connector n: 

Value space: String (0, 50)
   Name for the video input connector.
Video Input Connector [n] OptimalDefinition Profile

This setting will not take effect if the corresponding Video Input Connector [n] Quality setting is set to Sharpness.

The optimal definition profile reflects the lighting conditions in the video conferencing room and the quality of the camera. The better lighting conditions and the better quality of the camera, the higher the profile. Generally, the Normal or Medium profiles are recommended. However, when the lighting conditions are very good, the High profile can be set in order to increase the resolution for a given call rate. The resolution must be supported by both the calling and called devices.

Requires user role: ADMIN, INTEGRATOR

Default value: Medium

Value space: Normal/Medium/High

- Normal: Use this profile for a normally to poorly lit environment. Resolutions will be set rather conservative.
- Medium: Requires good and stable lighting conditions and a good quality video input. For some call rates this leads to higher resolution.
- High: Requires nearly optimal video conferencing lighting conditions and a good quality video input in order to achieve a good overall experience. Rather high resolutions will be used.

Video Input Connector [n] PresentationSelection

Define how the video conferencing device will behave when you connect a presentation source to the video input.

If the device is in standby mode, it will wake up when you connect a presentation source. Sharing the presentation with the far end requires additional action (select Share on the user interface) except when this setting is set to AutoShare.

Requires user role: ADMIN, INTEGRATOR

Default value: Connector n: Desktop

Value space: Connector n: AutoShare/Desktop/Manual/OnConnect

- AutoShare: While in a call, the content on the video input will automatically be presented to the far end as well as on the local screen when you connect the cable, or when the source is activated otherwise (for example when a connected computer wakes up from sleep mode). You do not have to select Share on the user interface. If a presentation source is already connected when you make or answer a call, you have to manually select Share on the user interface.
- Desktop: The content on the video input will be presented on the screen when you connect the cable, or when the source is activated otherwise (for example when a connected computer wakes up from sleep mode). This applies both when idle and in a call. Also, the content on the video input will stay on the screen when you leave the call, provided that it was the active input at the time of leaving.
- Manual: The content on the video input will not be presented on the screen until you select Share from the user interface.
- OnConnect: The content on the video input will be presented on screen when you connect the cable, or when the source is activated otherwise (for example when a connected computer wakes up from sleep mode). Otherwise, the behavior is the same as in manual mode.
Video Input Connector [n] Quality

When encoding and transmitting video there is a trade-off between high resolution and high frame rate. For some video sources it is more important to transmit high frame rate than high resolution and vice versa. This setting specifies whether to give priority to high frame rate or to high resolution.

Requires user role: ADMIN, INTEGRATOR
Default value: Connector n: Sharpness

Value space: Connector n: Motion/Sharpness
  Motion: Gives the highest possible frame rate. Used when there is a need for higher frame rates, typically when a large number of participants are present or when there is a lot of motion in the picture.
  Sharpness: Gives the highest possible resolution. Used when you want the highest quality of detailed images and graphics.

Video Input Connector [n] RGBQuantizationRange

The devices connected to the video input should follow the rules for RGB video quantization range defined in CEA-861. Unfortunately some devices do not follow the standard and this configuration may be used to override the settings to get a perfect image with any source.

Requires user role: ADMIN, INTEGRATOR
Default value: Auto

Value space: Auto/Full/Limited
  Auto: RGB quantization range is automatically selected based on video format according to CEA-861-E. CE video formats will use limited quantization range levels. IT video formats will use full quantization range levels.
  Full: Full quantization range. The R, G, B quantization range includes all code values (0 – 255). This is defined in CEA-861-E.
  Limited: Limited Quantization Range. R, G, B quantization range that excludes some code values at the extremes (16 – 235). This is defined in CEA-861-E.

Video Input Connector [n] Visibility

Define the visibility of the video input connector in the menus on the user interface. Note that Connector 1 is the device’s integrated camera, which is not available as a presentation source.

Requires user role: ADMIN, INTEGRATOR
Default value: Connector 1: Never  Connector 2: IfSignal

Value space: Connector 1: Never  Connector 2: Always/IfSignal/Never
  Always: The menu selection for the video input connector will always be visible on the user interface.
  IfSignal: The menu selection for the video input connector will only be visible when something is connected to the video input.
  Never: The input source is not expected to be used as a presentation source, and will not show up on the user interface.

Video Monitors

Define the monitor layout mode. Note that this device supports only one screen, so this value is fixed and cannot be changed.

Requires user role: ADMIN, INTEGRATOR
Default value: Single

Value space: Single
  Single: The layout is shown on the device’s screen.

Video Output Connector [n] Brightness

Define the brightness level for the device’s integrated screen.

Requires user role: ADMIN, USER
Default value: 80

Value space: Integer (0..100)
  Range: The value must be between 0 and 100.
Video Output Connector [n] Resolution

The resolution and refresh rate for the integrated screen. This value is fixed and cannot be changed.

Default value: 1920_1080_60

Value space: 1920_1080_60: The resolution is 1920 x 1080, and the refresh rate is 60 Hz.

Video Output Connector [n] Whitebalance Level

The integrated screen's color temperature (white balance) is adjustable from 4000 K (warm) to 9000 K (cool).

Requires user role: ADMIN, USER

Default value: 6500

Value space: Integer (4000..9000)

The color temperature in Kelvin.

Video Presentation DefaultPIPPosition

Define the position on screen of the presentation picture-in-picture (PiP). The setting only takes effect when the presentation is explicitly minimized to a PiP, for example using the user interface. The setting takes effect from the next call onwards; if changed during a call, it will have no effect on the current call.

Requires user role: ADMIN, INTEGRATOR

Default value: Current

Value space: Current/UpperLeft/UpperCenter/UpperRight/CenterLeft/CenterRight/LowerLeft/LowerRight

- Current: The position of the presentation PiP will be kept unchanged when leaving a call.
- UpperLeft: The presentation PiP will appear in the upper left corner of the screen.
- UpperCenter: The presentation PiP will appear in the upper center position.
- UpperRight: The presentation PiP will appear in the upper right corner of the screen.
- CenterLeft: The presentation PiP will appear in the center left position.
- CenterRight: The presentation PiP will appear in the center right position.
- LowerLeft: The presentation PiP will appear in the lower left corner of the screen.
- LowerRight: The presentation PiP will appear in the lower right corner of the screen.

Video Presentation DefaultSource

Define which video input source to use as a default presentation source. This setting may be used by the API and third-party user interfaces. It is not relevant when using the user interfaces provided by Cisco.

Requires user role: ADMIN, USER

Default value: 2

Value space: 2

The video input source to use as default presentation source.
Video Presentation Priority

Determine how to distribute the bandwidth between the presentation channel and the main video channel.

Requires user role: ADMIN
Default value: Equal

Value space: Equal/High/Low
  Equal: The available bandwidth is shared equally between the presentation channel and the main video channel.
  High: The presentation channel is assigned a larger portion of the available bandwidth at the expense of the main video channel.
  Low: The main video channel is assigned a larger portion of the available bandwidth at the expense of the presentation channel.

Video Selfview Default FullscreenMode

Define if the main video source (self-view) shall be shown in full screen or as a small picture-in-picture (PiP) after a call. The setting only takes effect when self-view is switched on (see the Video Selfview Default Mode setting).

Requires user role: ADMIN, INTEGRATOR
Default value: Current

Value space: Off/Current/On
  Off: Self-view will be shown as a PiP.
  Current: The size of the self-view picture will be kept unchanged when leaving a call, i.e. if it was a PiP during the call, it remains a PiP after the call; if it was fullscreen during the call, it remains fullscreen after the call.
  On: The self-view picture will be shown in fullscreen.

Video Selfview Default Mode

Define if the main video source (self-view) shall be displayed on screen after a call. The position and size of the self-view window is determined by the Video Selfview Default PiPPosition and the Video Selfview Default FullscreenMode settings respectively.

Requires user role: ADMIN, INTEGRATOR
Default value: Current

Value space: Off/Current/On
  Off: Self-view is switched off when leaving a call.
  Current: Self-view is left as is, i.e. if it was on during the call, it remains on after the call; if it was off during the call, it remains off after the call.
  On: Self-view is switched on when leaving a call.

Video Selfview Default OnMonitorRole

Define which screen to display the main video source (self-view) after a call. Note that this device has only one screen, so this value is fixed and cannot be changed.

Requires user role: ADMIN, INTEGRATOR
Default value: First

Value space: First
  First: The self-view picture will be shown on the integrated screen.
Video Selfview Default PiPPosition

Define the position on screen of the small self-view picture-in-picture (PiP) after a call. The setting only takes effect when self-view is switched on (see the Video Selfview Default Mode setting) and fullscreen view is switched off (see the Video Selfview Default FullscreenMode setting).

Requires user role: ADMIN, INTEGRATOR
Default value: Current
Value space: Current/UpperLeft/UpperCenter/UpperRight/CenterLeft/CenterRight/LowerLeft/LowerRight
  - Current: The position of the self-view PiP will be kept unchanged when leaving a call.
  - UpperLeft: The self-view PiP will appear in the upper left corner of the screen.
  - UpperCenter: The self-view PiP will appear in the upper center position.
  - UpperRight: The self-view PiP will appear in the upper right corner of the screen.
  - CenterLeft: The self-view PiP will appear in the center left position.
  - CentreRight: The self-view PiP will appear in the center right position.
  - LowerLeft: The self-view PiP will appear in the lower left corner of the screen.
  - LowerRight: The self-view PiP will appear in the lower right corner of the screen.

Video Selfview Mirrored

You can configure the device to show the self-view image the way other people see you, or as you would see yourself in a mirror.
This setting has no effect on the video that is sent to the far end.

Requires user role: ADMIN, INTEGRATOR
Default value: On
Value space: Off/On
  - Off: Display the self-view image as other people see you.
  - On: Display the self-view image as you see yourself in a mirror.

Video Selfview OnCall Mode

This setting is used to switch on self-view for a short while when setting up a call. The Video Selfview OnCall Duration setting determines for how long it remains on. This applies when self-view in general is switched off.

Requires user role: ADMIN, INTEGRATOR
Default value: On
Value space: Off/On
  - Off: Self-view is not shown automatically during call setup.
  - On: Self-view is shown automatically during call setup.

Video Selfview OnCall Duration

This setting only has an effect when the Video Selfview OnCall Mode setting is switched On. In this case, the number of seconds set here determines for how long self-view is shown before it is automatically switched off.

Requires user role: ADMIN, INTEGRATOR
Default value: 10
Value space: Integer (1..60)
  Range: Choose for how long self-view remains on. The valid range is between 1 and 60 seconds.
Experimental settings

The Experimental settings are for testing only and should not be used unless agreed with Cisco. These settings are not documented and WILL change in later releases.
Appendices
The user interface

The user interface and its use are described in full detail in the User guide for the video conferencing device.

Tap the device name or address to access System Information, Settings, Restart and Factory reset. You can also adjust the brightness of the screen and activate Call forwarding, Standby, and Do not disturb modes.

Time of day.

Entry point for user interface extensions (your device may have zero or more such buttons with different color, text and icons)

Tap Call to invoke the contacts including Favorites, Directory and Recents lists, and to open the Search or Dial field.

Tap Messages to invoke the voice mail system, if available.

On the right side of the unit:
- USB and mini-jack sockets for headset
- Microphone: mute/unmute.
- Loudspeaker volume control.
- Selfview: on/off
- Microphone mute indicator.

Tap ? to contact Help desk or access other facility services, if available.

Indicates that at least one client is paired to the device using Proximity.

On the right side of the unit:
- Microphone mute button
- Loudspeaker volume controls
- USB socket for headset
Set up remote monitoring

Requirement:
- RemoteMonitoring option

Remote monitoring is useful when you want to control the device from another location.

Snapshots from input sources appear in the web interface, so you can check the camera view and control the camera without being in the room.

If enabled, snapshots are refreshed automatically approximately every 5 seconds.

Check whether or not the device has the RemoteMonitoring option

1. Sign in to the web interface.
2. Check the Home page to see if RemoteMonitoring is on the list of Installed options.
   - If not on the list, remote monitoring is not available.

Enable remote monitoring

Install the RemoteMonitoring option key. How to install option keys are described in the Add option keys chapter.

PLEASE BE AWARE THAT IF YOU ENABLE THE REMOTE MONITORING OPTION YOU MUST MAKE SURE THAT YOU COMPLY WITH LOCAL LAWS AND REGULATIONS WITH REGARD TO PRIVACY AND PROVIDE ADEQUATE NOTICE TO USERS OF THE DEVICE THAT THE SYSTEM ADMINISTRATOR MAY MONITOR AND CONTROL THE CAMERA AND SCREEN. IT IS YOUR RESPONSIBILITY TO COMPLY WITH PRIVACY REGULATIONS WHEN USING THE DEVICE AND CISCO DISCLAIMS ALL LIABILITY FOR ANY UNLAWFUL USE OF THIS FEATURE.

About snapshots

Local input sources

Snapshots of the local input sources of the device appear on the Call Control page.

Snapshots appear both when the device is idle, and when in a call.

Far end snapshots

When in call, you may also see snapshots from the far end camera. It does not matter whether or not the far end device has the RemoteMonitoring option.

Far end snapshots are not displayed if the call is encrypted.
Access call information and answer a call while using the web interface

Notification of an incoming call
Click the Call indicator to open the Call Control page, where you can accept or decline the call.

The device is in a call

Call indicator
The call indicator is present to notify you about an incoming call, and to show when the device is in a call.
If the device is idle, there is no call indicator.

Control the call
Relevant control buttons are present on the Call Control page. Use the buttons to:

- Show call details
- Put the call on hold
- Answer the call
- Disconnect the call
Place a call using the web interface (page 1 of 2)

Sign in to the web interface and navigate to Call Control.

Place a call

Even if the web interface is used to initiate the call, it is the video conferencing device (display, microphones and loudspeakers) that is used for the call; it is not the PC running the web interface.

1. Navigate the Favorites, Directory or Recents lists to find the correct entry; or enter one or more characters in the Search or Dial field*. Click the correct contact name.

2. Click Call in the contact card.

Alternatively, enter the complete URI or number in the Search and Dial field. Then click the Call button that appears next to the URI or number.

Send DTMF tones

Click to open a key pad that you can use if your application requires DTMF (dual-tone multi-frequency) signaling.

Show/hide call details

Click the information button to show details about the call.

Click the button again to hide the information.

Hold and resume a call

Use the button next to a participant’s name to put that participant on hold.

To resume the call, use the button that is present when a participant is on hold.

End a call

If you want to terminate a call, click Disconnect all or the button.

* When searching, matching entries from the Favorites, Directory and Recents lists will be listed as you type.
Place a call using the web interface (page 2 of 2)

Sign in to the web interface and navigate to Call Control.

Calling more than one

Calling more than one using a conference bridge (CUCM ad hoc conferencing) is not supported from the web interface, even if it is supported by the video conferencing device itself.

Adjust the volume

Mute the microphone

Click Microphone: On to mute the microphone. Then the text changes to Microphone: Off.

Click Microphone: Off to unmute.

Volume up

Volume down
Share content using the web interface

Sign in to the web interface and navigate to Call Control.

Share content

1. Click Start Presentation. Then the text changes to Stop Presentation.

Stop content sharing:
Click the Stop Presentation button that is present while sharing.

About content sharing

You can connect a presentation source, most often a PC, to the HDMI input connector at the back of the device.

While in a call you can share content with the other participant in the call (far end).

If you are not in a call, the content is shown locally.

Snapshot area

Shows snapshots of the selected presentation source.

Only available on devices that have the Remote Monitoring option.
Local layout control

Sign in to the web interface and navigate to Call Control.

Change the layout

Click Layout, and choose your preferred layout in the window that opens.

The set of layouts to choose from depends on the device configuration.

You may change the layout both when idle and in a call.

About layouts

The term layout is used to describe the various ways presentations and videos can appear on the screen. Different types of meetings may require different layouts.
Control a far end camera

Sign in to the web interface and navigate to Call Control.

Prerequisites
While in a call, you can control the remote participant’s camera (far end) provided that:

- The Conference > FarEndControl > Mode setting is switched On on the far end device.
- The far end camera has pan, tilt or zoom functionality. Only the relevant controls will appear.
- Speaker tracking is not switched On on the far end camera.
- The local device has the Remote Monitoring option.

Control the remote participant’s camera

1. Click the camera icon to open the remote camera control window.
2. Use the left and right arrows to pan the camera; the up and down arrows to tilt it; and + and − to zoom in and out.
   If you are not allowed to control the far end camera, the controls will not appear in the image.
   If the call is encrypted, the far end snapshot behind the controls are not displayed.
Packet loss resilience - ClearPath

ClearPath introduces several mechanisms for advanced packet loss resilience. These mechanisms increase the experienced quality when you use your device in an error prone environment.

ClearPath is a Cisco proprietary protocol. All endpoints running CE software support ClearPath.

If the involved endpoints and infrastructure elements support ClearPath, all packet loss resilience mechanisms are used in point-to-point connections (including hosted conferences).
Customization

**Customize the video conferencing device's user interface** (page 1 of 2)

You can customize the user interface to allow control of peripherals in a meeting room, for example lights and blinds, or to modify the video conferencing device’s behavior by triggering macros.

This allows for the powerful combination of a control system’s functionality and the video conferencing device’s user-friendly user interface.

**In-room control architecture**

You need a Cisco video conferencing device with a touch interface, and a control system. The control system may be a third-party system, such as Crestron or AMX, with hardware drivers for peripherals. It is the control system, not the video conferencing device, that controls the peripherals.

When you program the control system you must use the video conferencing device’s API (events and commands) in order to connect with the controls on the video conferencing device’s user interface.

Consult the *Customization guide* for full details about how to design custom user interface panels (in-room control panels) using the In-Room Control editor, and how to use the video conferencing device’s API to program the in-room controls. Go to:

► [https://www.cisco.com/go/in-room-control-docs](https://www.cisco.com/go/in-room-control-docs)

The video conferencing device’s macro framework may also serve as a control system. In this case the control system can use the device’s API to trigger all sorts of local functionality: Speed dial, language selection, customized system reset, and much more.
Customization

Customize the video conferencing device's user interface (page 2 of 2)

The In-Room Control editor

Free of charge editor

An easy to use drag-and-drop editor, which you should use to compose the custom user interface panels (in-room control panels), comes free of charge with the video conferencing device’s software.

Sign in* to the web interface and navigate to Integration > In-Room Control.

• Click Launch Editor to launch the editor directly from the device’s web interface.

You can push a new in-room control panel to the device, and see the result immediately on the Touch controller.

• Click Download Editor to download a stand-alone version that you can run locally on your browser from your hard drive.

Then you can compose your custom interfaces without being connected to a device. You can export and import to file to move your work between your local version and the device later.

Preview function

The editor also provides a preview function, which allows you to see how the custom interfaces will appear on the user interface.

The preview function is also a complete software version of your custom (in-room control) panels, so clicking the controls will result in the same actions as selecting them on the real user interface.

Therefore, you can use the preview function to test your integrations without having a real user interface available. You can also use the device’s in-room controls from a remote location.

The room simulator

You can use the room simulator to visualise how the in-room controls on the user interface changes the state of the room.

⚠️ Back up any existing in-room configuration you may have before you export the simulator configuration to the device. The simulator configuration will replace the existing configuration on the device.

Sign in to the web interface and navigate to Integration > In-Room Control.

• Click Launch Simulator to open a room simulator in your browser.

The room simulator contains a predefined in-room control configuration that you can export to the device. Then you can control the simulator’s virtual meeting room from your real user interface.

• Click Load simulator config to export the simulator configuration to the device.

* You need a user that holds the ROOMCONTROL, INTEGRATOR, or ADMIN user roles in order to access the In-Room Control editor and the API commands that you need when programming the control system.
Customization

Customize the video conferencing device's behavior using macros

With macros, you can create your own snippets of code that run on the device. The language is JavaScript / ECMAScript 6 with support for features such as arrow functions, promises and classes.

The macro framework allows an integrator to write scripts that tailor a device's behavior to suite an individual customer's requirements. The integrators can, for example, implement their own features or variations of features, automate specific configurations or re-configurations, and create custom tests and monitoring functions.

By combining the use of macros and creation of a custom user interface panel (also referred to as in-room control panel), you can amend the user interface to trigger customized local functionality. For examples:

- Add speed dialling buttons
- Add a button for room reset, which set all configurations back to your preferred default setup

Consult the Customization guide for details about macros and how to use the device's built in Macro editor. Go to:

► https://www.cisco.com/go/in-room-control-docs

Allow using macros on the device

Sign in to the web interface and navigate to Setup > Configuration.

- Set Macros > Mode to On.

If you try to launch the Macro editor while this setting is Off, a pop-up message appears. If you respond by tapping Enable Macros, the Macros > Mode setting will automatically change to On, and the editor will launch.

Launch the macro editor

Sign in to the web interface and navigate to Integration > Macro Editor.

We don't offer a stand-alone version of the editor that you can use to work offline.

The Macro editor

The Macro editor is a powerful tool where you can:

- Load our code examples, which you can modify, use as is, or use as inspiration when writing your own macros.
- Read our detailed macro scripting tutorial, which also explains the code examples in more detailed.
- Write your own macros, and upload them to the device.
- Enable/Disable individual macros.
- Check in an embedded Log Console what happens when you run a macro.

* You need a user that holds the ADMIN user role in order to access the Macro editor.
Customization

Remove default buttons from the user interface

In some use cases, you may never use a default button, like Call or Share. Such unused buttons may cause confusion. In these cases, you can remove the unused buttons from the user interface. Custom In-Room Control panels can be exposed still. Removing default buttons while adding custom buttons makes it possible fully to customize the user interface.

For example, you can remove the Call and Share buttons if nobody is going to share content or call from this device. Instead, add custom buttons (In-Room Controls) for the tasks that are going to be performed.

Configurations

Use the following configurations to remove default buttons from the user interface. The configurations are available both from the web interface of the device, and in the API.

- **UserInterface > Features > Call > Start**: Removes the default Call button (including the directory, favorites, and recent calls lists). Also removes the Add participant button while in a call.
- **UserInterface > Features > Share > Start**: Removes the default user interface for sharing and previewing content, both in call and out of call.
- **UserInterface > Features > Call > VideoMute**: Removes the default Turn video off button.
- **UserInterface > Features > Call > HideAll**: Removes all the default buttons. In-Room Control buttons are not removed.
- **UserInterface > Features > Call > End**: Removes the End Call button.
- **UserInterface > Features > Call > MidCallControls**: Removes the Hold, Resume, and Transfer in-call buttons.

The configurations remove only the buttons, not the functionality as such. You can share content using Proximity, even if you have removed the Share button from the user interface.

Further Information

Find more details about how to remove buttons and customize the user interface in the Customization guide. Go to:

► https://www.cisco.com/go/in-room-control-docs
Use of a third-party USB input device

You can use a third-party USB input device to control certain functions on video conferencing device. A Bluetooth remote control (with a USB dongle) and a USB keyboard are examples of such input devices.

This feature is meant to complement the functionality of the Touch 10 or the DX user interfaces, wherever convenient. It is not meant to replace the Touch 10 and DX user interfaces.

Examples of applications:
• In classrooms and during lectures, a small remote control can be used to wake up a video conferencing device from standby mode. Also, it may be convenient to use a remote control to select which input source to present.
• Controlling the camera view (pan, tilt, and zoom) in situations where you are not allowed to use the Touch 10. For example, in operating rooms in a hospital.

Functional Overview
Pressing a button on the USB input device, generates an event in the API. Macros or third-party control devices can listen for such events, and respond to them. This behavior is similar to the behavior of In-Room Control buttons. It is also possible to listen for the events using webhooks, directly in an SSH session.

There isn’t a library of actions readily available to select actions from. You must define and implement the actions to be taken as response to the events yourself. For example:
• Increase the volume of the video conferencing device when the Volume Up key is pressed.
• Put the video conferencing device in standby mode when the Sleep key is pressed.

Configurations, Events, and Status
The support for third-party USB input devices is disabled by default. Enable it explicitly by setting the Peripherals > InputDevice > Mode to On.

Pressing and releasing a button generates a Pressed and a Released event:
*e UserInterface InputDevice Key Action Key: <name of the key>*
*e UserInterface InputDevice Key Action Code: <id of the key>*
*e UserInterface InputDevice Key Action Type: Pressed**
    ...
*e UserInterface InputDevice Key Action Code: <id of the key>*
*e UserInterface InputDevice Key Action Type: Released** end

To listen for events, you must register feedback from the InputDevice events:
xFeedback Register /event/UserInterface/InputDevice ** end

When the video conferencing device detects the third-party input device, the input device is listed in the video conferencing device’s UserInterface > Peripherals > ConnectedDevice status. The input device may be reported as multiple devices.
The HTTP(S) request feature makes it possible to send arbitrary HTTP(S) requests from a video conferencing device to an HTTP(S) server. Furthermore, the device receives the response that the server sends back. The device supports the **Post**, **Put**, **Patch**, **Get**, and **Delete** methods.

By using macros, you can send data to an HTTP(S) server whenever you want. You can choose what data to send, and structure them as you like. By doing it this way, you can adapt the data to an already established service.

**Security measures:**
- The HTTP(S) request feature is disabled by default. A system administrator must explicitly enable the feature by setting `HttpClient > Mode` to `On`.
- The system administrator can prevent the use of HTTP by setting `HttpClient > AllowHTTP` to `False`.
- The system administrator can specify a list of HTTP(S) servers that the device is allowed to send data to.
- The number of concurrent HTTP(S) requests is limited.

**List of Allowed HTTP(S) servers**

The system administrator can use these commands to set up and maintain a list of up to ten allowed HTTP(S) servers (hosts):
- `xCommand HttpClient Allow Hostname Add
Expression: <Regular expression that matches the host name or IP address of the HTTP(S) server>
- `xCommand HttpClient Allow Hostname Clear
- `xCommand HttpClient Allow Hostname List
- `xCommand HttpClient Allow Hostname Remove Id: <id of an entry in the list>

If the list is not empty, you can send HTTP(S) requests only to the servers in the list. If the list is empty, you can send the requests to any HTTP(S) server.

The check against the list of allowed servers is performed both when using insecure (HTTP) and secure (HTTPS) transfer of data.

**HTTPS without certificate validation**

When sending requests over HTTPS, the video conferencing device checks the certificate of the HTTPS server by default. If the HTTPS server certificate is not found to be valid, you get an error message. The device doesn't send any data to that server.

We recommend using HTTPS with certificate validation. If certificate validation is not possible, the system administrator can set `HttpClient > AllowInsecureHTTPS` to `On`. This allows the use of HTTPS without validating the certificate of the server.

**Sending HTTP(S) requests**

Once the HTTP(S) request feature is enabled, you can use the following commands to send requests to an HTTP(S) server:

```
xCommand HttpClient <Method> [AllowInsecureHTTPS: <True/False>] [Header: <Header text>] [ResponseSizeLimit: <Maximum response size>] [ResultBody: <None/PlainText/Base64>] [Timeout: <Timeout period>] Url: <URL to send the request to>
```

where `<Method>` is either `Post`, `Put`, `Patch`, `Get`, or `Delete`.

The `Post`, `Put`, and `Patch` commands are multiline commands. Read the API guide to find out how to use multiline commands, and also to find a detailed description of the command parameters.

**Further information**

Find more information about HTTP(S) Post requests in the Customization guide. Go to:

> https://www.cisco.com/go/in-room-control-docs
Manage startup scripts

Sign in to the web interface and navigate to Integration > Startup Scripts.

List of startup scripts
You can create one or more startup scripts.
A green dot appears next to an active startup script; a red ring appears next to an inactive startup script.
If you have more than one startup script, they will run in the order from top to bottom of the list.

Create a startup script
1. Click Create new...
2. Enter a name for the startup script in the title input field.
3. Enter the commands (xConfiguration or xCommand) in the command input area. Start each command on a new line.
4. Click Save.
5. Click On to activate the startup script.

If you want to use an existing script as a starting point for editing, select that script and click Copy.

Run a startup script immediately
1. Select the startup script from the list.
2. Click Run.
Both active and inactive startup scripts can be run immediately.

Activate or deactivate a startup script
1. Select the startup script from the list.
2. Click On to activate, or Off to deactivate a script.
Active startup scripts will run every time the device starts up.

Delete a startup script
1. Select the startup script from the list.
2. Click Delete.

About startup scripts
A startup script contains commands (xCommand) and configurations (xConfiguration) that will be executed as part of the start up procedure.
A few commands and configurations cannot be placed in a startup script, for example xCommand SystemUnit Boot. It is not possible to save a script that contains illegal commands and configurations.
Syntax and semantics for xCommand and xConfiguration are explained in the API guide for the product.
Access the device’s XML files

Sign in to the web interface and navigate to Integration > Developer API.

The XML files are part of the device’s API. They structure information about the device in a hierarchy.

- Configuration.xml contains the current device settings (configuration). These settings are controlled from the web interface or from the API (Application Programmer Interface).
- The information in status.xml is constantly updated by the device to reflect system and process changes. The status information is monitored from the web interface or from the API.
- Command.xml contains an overview of the commands available to instruct the device to perform an action. The commands are issued from the API.
- Valuespace.xml contains an overview of all the value spaces of device settings, status information, and commands.

Open an XML file

Click the file name to open the XML file.

About the API

The application programming interface (API) is a tool for integration professionals and developers working with the device. The API is described in detail in the API guide for the device.
Execute API commands and configurations from the web interface

Sign in to the web interface and navigate to Integration > Developer API.

Commands (xCommand) and configurations (xConfiguration) can be executed from the web interface. Syntax and semantics are explained in the API guide for the device.

Execute API commands and configurations

1. Enter a command (xCommand or xConfiguration), or a sequence of commands, in the text area.
2. Click Execute to issue the command(s).

About the API

The application programming interface (API) is a tool for integration professionals and developers working with the device. The API is described in detail in the API guide for the device.
The main network port

The main network port - Network port 1 - is always reserved for the connection to LAN. This applies to all video conferencing devices.

Depending on the device, Network port 1 is marked with the number 1, the network symbol ( ), or both.

Auxiliary network ports

Some video conferencing devices have more than one network port. The additional ports can be used for peripheral devices like cameras, Touch 10, third-party control systems, and more.

A device that is connected to such a network port gets a local IP address from the codec, and therefore is not part of the corporate network. It is not possible for packets to traverse the codec between the main network port (LAN) and the auxiliary network ports (link-local).

- A Cisco peripheral device is assigned a dynamic IP address in the range (DHCP): 169.254.1.41 to 169.254.1.240
- A non-Cisco device is assigned the dynamic IP address (DHCP): 169.254.1.30
  
  **NOTE:** Only one non-Cisco device can get a dynamic IP address at a time.

- A non-Cisco device can be assigned a static IP address in the range: 169.254.1.241 to 169.254.1.254

This method can also be used to connect to the codec with SSH. In this case you can use the IP address 169.254.1.1.

Power over Ethernet (PoE)

Some of the auxiliary network ports provide Power over Ethernet (PoE). These ports can power peripherals like the Touch 10 controller.

* These products have a separate PoE injector that is connected to one of the auxiliary network ports. The PoE injector is used for the Touch 10 controller.
Serial interface

Use the micro USB connector for direct communication with the device. You need a micro USB to USB cable. If the computer doesn’t auto-install a serial port driver, you need to install a serial port driver on the computer manually.

Use a terminal emulator (SSH client) to connect to the serial interface. For the most common computer types (PC, MAC) and operating systems, PuTTY or Tera Term will work.

The serial connection can be used without an IP-address, DNS, or a network.

Parameters:
- Baud rate: 115200 bps
- Data bits: 8
- Parity: None
- Stop bit: 1
- Hardware flow control: Off

Device settings

Serial communication is enabled by default. Use the following configuration to change the behavior:

```
SerialPort > Mode
```

For security reasons, you are asked to sign in before using the serial interface. Use the following setting to change the behavior:

```
SerialPort > LoginRequired
```

If your device is provisioned by CUCM, the serial port settings should be configured from CUCM.

[Diagram of serial interface connection and device settings]
Open TCP Ports

The web server within the codec prohibit or restrict the use of nonsecure or unnecessary ports, protocols, modules, and/or services. Some ports are open or closed by default.

TCP 22: SSH
You can close the port by setting SSH mode to Off.
NetowrkServices SSH Mode: Off/On

TCP 80: HTTP
You can close the port by setting HTTP mode to Off or HTTPS.
NetworkServices HTTP Mode: HTTP+HTTPS/HTTPS/Off

TCP 443: HTTPS
You can close the port by setting HTTP mode to Off.
NetworkServices HTTP Mode: HTTP+HTTPS/HTTPS/Off

TCP 5060/5061: SIP listen ports
The SIP listen ports are open by default. The SIP listen ports are disabled by the Cisco UCM (Unified Communication Manager).
You can close the ports by setting the SIP listen ports to Off.
SIP ListenPort: Off/On
HTTPFeedback address from TMS

When a device is added to Cisco TelePresence Management Suite (TMS), it is automatically configured to send information (events) back to TMS. The device receives the address, that these events should be sent to, from TMS (HTTPFeedback address). If this address is absent or misconfigured, the device cannot send events to TMS.

Missing response to events

If the device does not receive a response to an event, it will retry sending it to the HTTPFeedback address up to 6 times at increasing intervals.

If the device does not receive a response to any of the retries, the endpoint tries to send a message to the HTTPFeedback address every ten minutes. The HTTPFeedback status will indicate that it has failed, and there is a diagnostic message indicating the type of failure.

While retrying to send messages, there will be a loss of Call Detail Records (CDR) on TMS.

Get a new HTTPFeedback address from TMS

In order to get a new address to send events to, you must restart the device and wait for the next management address push from TMS (scheduled or triggered by the TMS administrator).
Register a device to the Cisco Webex cloud service

You can register a device to Cisco Webex remotely from the web interface instead of using the on-screen setup assistant.

To register a device, you need to create an activation code on Control Hub first. To learn how to create an activation code, see ▶ Create a Place and Add Services for a Cisco Webex Room Device or a Cisco Webex Board.

From the web interface, you can only register a device that is not currently registered to a service.

**NOTE:** All local users and any customizations that have been created for this device will be deactivated.

1. Sign in to the web interface, and click **Click here to register to Webex** on the Home screen.
   This link is only available if the device is not registered to a service already.

2. A pop-up appears and you can enter the activation code you have created on Control Hub.
   Format:
   • xxxx-xxxx-xxxx-xxxx, or
   • xxxxxxxxxxxxxxxxxxx

3. After registration, you must setup the time zone and language settings from the on-screen setup assistant. If the wizard times out, default settings will be applied.

---

### Limitations

Some of the available configurations only apply to on-premises registered devices. They don’t apply to Webex registered devices. In the API guide’s **Supported Commands Matrix**, these items are marked with “On-prem only”.

Among the non-applicable configurations, are those related to H.323, H.320, SIP, NTP, CUCM, LDAP, Proximity, and Far End Camera Control.

---

In order to place calls with this video system, it needs to be registered to a call service.

**Click here to register to Webex**.
Supported RFCs

The RFC (Request for Comments) series contains technical and organizational documents about the Internet, including the technical specifications and policy documents produced by the Internet Engineering Task Force (IETF).

CE software supports a range of RFCs, including the following:

- RFC 2782 DNS RR for specifying the location of services (DNS SRV)
- RFC 3261 SIP: Session Initiation Protocol
- RFC 3263 Locating SIP Servers
- RFC 3361 DHCP Option for SIP Servers
- RFC 3550 RTP: A Transport Protocol for Real-Time Applications
- RFC 3711 The Secure Real-time Transport Protocol (SRTP)
- RFC 4091 The Alternative Network Address Types (ANAT) Semantics for the Session Description Protocol (SDP) Grouping Framework
- RFC 4092 Usage of the Session Description Protocol (SDP) Alternative Network Address Types (ANAT) Semantics in the Session Initiation Protocol (SIP)
- RFC 4582 The Binary Floor Control Protocol
draft-ietf-bfcpbis-rfc4582bis-00 Revision of the Binary Floor Control Protocol (BFCP) for use over an unreliable transport
- RFC 4733 RTP Payload for DTMF Digits, Telephony Tones and Telephony Signals
- RFC 5245 Interactive Connectivity Establishment (ICE): A Protocol for Network Address Translator (NAT) Traversal for Offer/Answer Protocols
- RFC 5589: SIP Call Control Transfer
- RFC 5766Traversal Using Relays around NAT (TURN): Relay Extensions to Session Traversal Utilities for NAT (STUN)
## Technical specification (page 1 of 2)

### SOFTWARE COMPATIBILITY
- Collaboration Endpoint Software Version 8.2 or later

### PRODUCT DELIVERED WITH:
- DX80 or DX70 system with integrated HD camera and microphone
- Network cable
- HDMI/USB cable (DX80 only)
- Power adapter and regional power cable

### INTEGRATED HD CAMERA
- -5° to 70° from the display
- 63° horizontal field of view
- 38° vertical field of view
- Resolution: 1080p30
- F 2.2
- Instant focus based on face detection
- Privacy shutter

### USER INTERFACE
- On-screen graphical user interface

### LANGUAGE SUPPORT (depends on software version)
- Arabic, Catalan, Chinese-Simplified, Chinese-Traditional, Czech, Danish, Dutch, English, English-UK, Finnish, French, French–Canadian, German, Hebrew, Hungarian, Italian, Japanese, Korean, Norwegian, Polish, Portuguese, Portuguese-Brazilian, Russian, Spanish, Spanish-Latin, Swedish, Turkish

### SYSTEM MANAGEMENT
- Total management through embedded SNMP, Telnet, SSH, XML, and SOAP
- Remote software upload using web server, HTTP, and HTTPS
- On-screen menu system

### DIRECTORY SERVICES
- Support for local directories (Favorites)
- Corporate directory (through Cisco Unified Communications Manager and Cisco TelePresence Management Suite)
- Server directory supporting LDAP and H.350 (requires Cisco TelePresence Management Suite)
- Call history with received, placed and missed calls with date and time

### POWER
- Rated: 60W maximum
- Low-power standby mode

### OPERATING TEMPERATURE AND HUMIDITY
- Ambient temperature: 0°C to 40°C (32°F to 99°F)
- Relative humidity (RH): 10 to 90%

### STORAGE AND TRANSPORT TEMPERATURE
- -20°C to 60°C (-4°F to 140°F) at RH 10–90%
- Ambient temperature: 0°C to 40°C (noncondensing)

### DX80 SYSTEM DIMENSIONS
- Width: 22.2 in. (56.5 cm)
- Height: 20.2 in. (51.2 cm)
- Depth: 3.5 in. (8.9 cm)
- Weight: 15.65 lb (7.1 kg)

### DX70 SYSTEM DIMENSIONS
- Width: 13.91 in. (35.31 cm)
- Height: 14.84 in. (37.71 cm)
- Depth: 2.45 in. (6.23 cm)
- Weight: 7.5 lb (3.4 kg)

### VIDEO STANDARDS
- H.263
- H.263+
- H.264
- AVC (H.264/MPEG-4 Part 10 Advanced Video Coding)

### VIDEO INPUT
One maximum 1920 x 1080 @ 60 fps (HD1080p60), including:
- 640 x 480
- 720 x 480
- 800 x 600
- 1024 x 768
- 1280 x 720
- 1366 x 768
- 1920 x 1080

Extended Display Identification Data (EDID)

### VIDEO OUTPUT
One HDMI output: (reserved for future use)
Supports format:
- 1920 x 1080 @ 60fps (1080p60)

### BANDWIDTH
- Up to 3Mbps

### MINIMUM BANDWIDTH FOR RESOLUTION AND FRAME RATE
- 720p30 from 768kbps
- 1080p30 from 1472kbps

### FIREWALL TRAVERSAL
- Cisco TelePresence Expressway technology

### LIVE VIDEO RESOLUTIONS (ENCODE/DECODE)
Supports encode/decode video formats up to maximum 1920 x 1080 @ 60fps (HD1080p30), including:
- 176 x 144 @ 30 fps (QCIF) (decode only)
- 352 x 288 @ 30 fps (CIF)
- 512 x 288 @ 30 fps (w288p)
- 576 x 448 @ 30 fps (448p)
- 640 x 480 @ 30 fps (VGA)
- 704 x 576 @ 30 fps (4CIF)
- 768 x 488 @ 30 fps (448p)
- 800 x 600 @ 30 fps (SVGA)
- 1024 x 768 @ 30 fps (w576p)
- 1024 x 768 @ 30 fps (XGA)
- 1280 x 720 @ 30 fps (HD720p)
- 1280 x 768 @ 30 fps (WXGA)
- 1280 x 1024 @ 30 fps (WXGA+)
- 1440 x 900 @ 30 fps (WXGA+)
- 1680 x 1050 @ 30 fps (WSXGA+)
- 1920 x 1080 @ 30 fps (HD1080p)

### AUDIO STANDARDS
- 64kbps AAC-LD
- OPUS
- G.722
- G.722.1
- G.711mu
- G.711a
- G.729AB

### AUDIO FEATURES
- Up to 48 kHz sampling rate
- High quality 20 kHz audio
- Acoustic echo cancellers
- Automatic gain control
- Automatic noise reduction
- Active lip synchronization

### AUDIO INPUTS
- Integrated microphone array
- One HDMI audio-in

---

* HDMI version 1.3
Technical specification (page 2 of 2)

AUDI0 OUTPUTS
- One line out, mini-jack (DX70)
- One HDMI (digital main audio)

DUAL STREAM
- H.239 dual stream (H.323)
- BFCP dual stream (SIP)
- Support for resolutions up to 1920×1080 at 15 fps

MULTIPOINT SUPPORT
- Cisco Ad-Hoc Conferencing (requires Cisco Unified Communications Manager (CUCM), and Cisco Meeting Server (CMS) or Cisco TelePresence Server with Cisco TelePresence Conductor)

PROTOCOLS
- SIP and H.323

EMBEDDED ENCRYPTION
- SIP and H.323 point-to-point
- Standards-based: H.235v3 and Advanced Encryption Standard (AES)
- Automatic key generation and exchange
- Supported in dual stream

IP NETWORK FEATURES
- DNS lookup for service configuration
- Differentiated Services (QoS)
- IP adaptive bandwidth management (including flow control)
- Auto-gatekeeper discovery
- Dynamic playout and lip-sync buffering
- H.245 dual-tone multifrequency (DTMF) tones in H.323

H.323
- Date and time support via NTP
- Packet loss based downspeeding
- URI dialing
- TCP/IP
- DHCP
- IEEE 802.1x network authentication
- IEEE 802.1q Virtual LAN
- IEEE 802.1p QoS and class of service
- Cisco ClearPath

IPv6 NETWORK SUPPORT
- Dual stack IPv4 and IPv6 for H.323 and SIP
- Dual stack IPv4 and IPv6 for DHCP, SSH, HTTP, HTTPS, DNS, DiffServ
- Support for static IP address assignment, stateless autoconfiguration and DHCPv6

SUPPORTED INFRASTRUCTURE
- Cisco Unified Communications Manager 8.6.2 and later
- Cisco TelePresence Video Communication Server (Cisco VCS)

SECURITY FEATURES
- Management using web interface (HTTPS/HTTP) and SSH
- Password protected IP administration
- Password protected administration menu
- Disable IP services
- Network settings protection

NETWORK INTERFACES
- Internal 2-port Cisco Ethernet switch (RJ-45)
- 10/100/1000BASE-T (only auto-negotiation)
- Wi-Fi: IEEE 802.11a/b/g/n, 2.4GHz, 5GHz
- Bluetooth 4.0 LE

OTHER INTERFACES
- Three USB ports
- One MicroSD card slot for future use
- One Micro USB port for maintenance

APPROVALS AND COMPLIANCE
- Directive 2014/35/EU (Low-Voltage Directive)
- Directive 2014/30/EU (EMC Directive) – Class A
- Directive 2011/65/EU (RoHS)
- Directive 2002/96/EC (WEEE)
- NRTL approved (Product Safety)
- FCC CFR 47 Part 15B (EMC) – Class B
- FCC Listed (Radio Equipment)

Please check the Product Approval Status Database at http://www.ciscofax.com for approval documents per country.

Boards:
► https://www.cisco.com/go/board-docs

In general, you can find user documentation for all Cisco Collaboration endpoints at ► https://www.cisco.com/go/telepresence/docs

The documents are organized in the following categories – some documents are not available for all products:

Install and Upgrade > Install and Upgrade Guides
- Installation guides: How to install the product
- Getting started guide: Initial configurations required to get the device up and running
- RCSI guide: Regulatory compliance and safety information

Maintain and Operate > Maintain and Operate Guides
- Getting started guide: Initial configurations required to get the device up and running
- Administrator guide: Information required to administer your product
- Deployment guide for TelePresence endpoints on CUCM: Tasks to perform to start using the device with the Cisco Unified Communications Manager (CUCM)
- Spare parts overview, Spare parts replacement guides, Cable schemas: Useful information when replacing spare parts

Maintain and Operate > End-User Guides
- User guides: How to use the product
- Quick reference guides: How to use the product
- Physical interface guide: Details about the codec’s physical interface, including the connector panel and LEDs

Reference Guides > Command references
- API reference guides: Reference guide for the Application Programmer Interface (API)

Reference Guides > Technical References
- CAD drawings: 2D CAD drawings with dimensions.

Configure > Configuration Guides
- Customization guide: How to customize the user interface, how to use the device’s API to program in-room controls, making macros, configure advanced audio set-ups using the Audio Console, and other customizations.

Design > Design Guides
- Video conferencing room guidelines: General guidelines for room design and best practice
- Video conferencing room guidelines: Things to do to improve the perceived audio quality

Software Downloads, Release and General Information > Licensing Information
- Open source documentation: Licenses and notices for open source software used in this product

Software Downloads, Release and General Information > Release Notes
- Software release notes
