VESA Monitor Power Management

Refer to previous pages for pin-out scheme.
Audio inputs
Unused, but connected audio inputs should be set to Off to avoid unwanted audio/noise.

Microphone/Line In 1–2 (XLR)
2 x Balanced XLR sockets, audio input 1–2.
Main connector: The Microphone/Line In 1 is the main connector for the microphone.
All four microphone inputs are for balanced electret microphones, 48V phantom powered via XLR connectors.
The phantom powering of all four XLR sockets can be individually switched off. The input will then be a balanced line level input.
All Microphone/Line In 1–2 are equipped with acoustic echo canceller.
Use Microphone/Line In 1–2 to connect to an external microphone amplifier or an external mixer.
Default configuration: In default configuration, all Microphone/Line In inputs are enabled and configured as microphones.

Line In 1–2 (RCA)
2 x RCA sockets, audio input 1–2
Audio Line In 1–2 are used when connecting to PC and to external playback devices, such as VCR’s or DVD players.
Main connectors: The Line In 1 is the main connector to a PC.
Stereo. For systems with stereo I/O the audio inputs can be configured in stereo pairs:
- Connect the left channel to Line In 1
- Connect the right channel to Line In 2
Default configuration for Line In 1–2: In the default configuration Line In 1 and 2 are configured as stereo inputs for external playback devices, such as a PC.
Audio HDMI in-/output

HDMI In 2
1 x HDMI connector with audio input.
Typical use: Use HDMI In 2 (2–8 channels) to connect to external playback devices as DVD players. Each input support up to two channels at 48kHz sampling rate.
Unused, but connected audio inputs should be set to Off to avoid unwanted audio/noise.

HDMI Out 1
1 x HDMI connector, audio out 1
Use HDMI Out 1 to connect to a flat screen with speakers. HDMI 1 will provide stereo audio speaker signals at 48kHz.
Main connector: The HDMI output 1 is the main connector to the monitor.
HDMI 1: Audio from far end and PC.
Audio outputs

**Line Out 1–2 (RCA)**

2 x RCA sockets, audio output 1–2

Can be configured as two stereo pairs.

Main connector: Line Out 1 (left) and Line Out 2 (right) are the main connectors to the local loudspeaker system.

The local loudspeaker system may or may not include the DNAM (Digital Natural Audio Module).

Default configuration: Line Out 1–2. In default configuration, Line Out 1 and 2 are configured as stereo speakers.

if a DNAM is present or SPDIF\(^*\) is active on Line Out 1, then Line Out 1 provides a digital stereo speaker signal and Line Out 2 is not active.

---

**What is a Line output**

A Line output consists of all signals from the local side and all signals from the far end side.

---

**Left channel**

The Left channel consists of all the Left channel and Mono signals.

---

**What is a Speaker output**

A Speaker output consists of all signals from the local side, except microphones, and all signals from the far end side.

---

**Right channel**

The Right channel consists of all the Right channel and Mono signals.

COM port and Camera Control port

COM port
1 x COM (RS–232) data port for codec control and configuration through API commands.

Camera Control port
1 x Camera Control (RS–232) port for power and camera control (pan, tilt, zoom) using the VISCA™ protocol.

- Main connector: The main camera is connected to the Camera Control port.
- Power. Pin No. 4 on the Camera Control port provides 12V DC/1 A to the main camera.
- If more than one camera is connected, only the first camera is powered from the codec. The additional cameras must be daisy chained by using a serial cable, and each will need an external power supply.

Additional cameras. For information about additional cameras, see the PrecisionHD Camera User Guide which is found on our web site, go to: http://www.cisco.com/go/telepresence/docs
