Thank you for choosing Cisco!
Your Cisco product has been designed to give you many years of safe, reliable operation.
This part of the product documentation is aimed at administrators working with the setup of the Codec C60/C40 and Profiles using Codec C60/C40.
Our main objective with this Administrator guide is to address your goals and needs. Please let us know how well we succeeded!
May we recommend that you visit the Cisco web site regularly for updated versions of this guide.
The user documentation can be found on http://www.cisco.com/go/telepresence/docs

How to use this guide
The top menu bar and the entries in the Table of contents are all hyperlinks. You can click on them to go to the topic.
Appendices

- About monitors when you have a Codec C60
- About monitors when you have a Codec C40
- Connecting the Cisco TelePresence Touch 8" controller
- Advanced customization of video and audio
- Optimal definition profiles
- ClearPath – Packet loss resilience
- Requirement for speaker systems connected to a Cisco TelePresence C Series codec
- DNAM for Profile 42"/52"/55"
- DNAM for Profile 65"
- Factory resetting
- Factory resetting the Touch 8" controller
- Technical specifications
- Supported RFCs
- User documentation on the Cisco web site

Cisco contacts
Chapter 1

Introduction
This document provides you with the information required to administrate your product at an advanced level.

### Products covered in this guide:
- Profile 52” / 55” / 65” using C60
- Profile 52” Dual / 55” Dual using C60
- Profile 42” / 52” / 55” using C40
- Codec C60
- Codec C40

---

## User documentation

The user documentation for the Cisco TelePresence Codec C Series has several guides suitable for various user groups.

- **Installation guides:** How to install the product
- **Getting started guide:** Initial configurations required to get the system up and running
- **Administrating TC Endpoints on CUCM:** Tasks to perform to start using the product with the Cisco Unified Communications Manager (CUCM)
- **Administrator guide (this guide):** Information required to administer your product
- **Quick reference guides:** How to use the product (remote control and Touch controller)
- **User guides:** How to use the product (remote control and Touch controller)
- **Camera user guide:** User guide for the PrecisionHD cameras
- **API reference guide:** How to use the Application Programmer Interface (API), and reference guide for the command line commands
- **User guide for the TC console application:** The free TC Console application provides a graphical interface to the advanced customizable features of the codec.
- **Physical interface guides**
- **Knowledge base articles**
- **Video conferencing room primer:** General guidelines for room design and best practice
- **Video conference room acoustics guidelines:** Things to do to improve the perceived audio quality
- **Software release notes**
- **Regulatory compliance and safety information guide**
- **Legal & license information**

---

## Downloading the user documentation

We recommend you visit the Cisco web site regularly for updated versions of the user documentation.

Go to: [http://www.cisco.com/go/telepresence/docs](http://www.cisco.com/go/telepresence/docs)

Guidelines how to find the documentation on the Cisco web site are included in the [User documentation on the Cisco web site appendix](http://www.cisco.com/go/telepresence/docs).

## Software

You can download the software for your product from the Cisco web site. Go to:

We recommend reading the Software Release Notes (TC6), go to:

What’s new in this version

This section provides an overview of the new and changed system settings and new features in the TC6.0 software version.

New features and improvements

Administrator password not set warning on OSD
If the administrator password is not set, there is an on screen warning in the lower right corner indicating this. The warning disappears when the password is set.

Improved video layout
- Improved local layout control when using the Touch controller
  You can easily choose between the layout options using the Touch controller. Each option is illustrated by an icon reflecting the actual layout.
  You can choose between the predefined layout options as well as any custom layouts that have been created for this TelePresence system (for example created with the TC Console application).
- Picture-in-Picture support
  There is support for showing Picture-in-Picture (PIP), for example showing a full screen presentation with both remote video and self view as PIP.
  The PIPs can be moved to predefined drop zones, typically upper right, upper left, lower right etc. When using a Touch controller you can see the drop zones as you start moving the PIP.
- Changing the video layout on remote sites
  When you are hosting a MultiSite conference, you can change the video layout sent to remote sites.
- Lock Speaker function in MultiSite conferences
  When you are hosting a MultiSite conference, you can use Lock speaker to keep the large picture for the same participant for the entirety of the call (no audio-driven switching between participants).
- Full screen self view
  Full screen self view while in call is supported on dual monitor systems.

Support for Cisco TelePresence ISDN Link
You can pair a TelePresence system with a Cisco TelePresence ISDN Link. As from software versions TC6.0 and IL1.1 automatic pairing mode is supported.

Secure communication in a CUCM environment
As from version TC5 endpoints running TC software can register to a Cisco Unified Communications Manager (CUCM) version 8.6.2 or newer. In TC6.0 this feature is extended to also include secure (encrypted) connections. The encryption indicator is shown on the screen during a call.

This feature requires that security mode is installed and configured on CUCM. Read the Administering TC Endpoints on CUCM 9.0 guide to find how to set up this feature.

Support for SIP URI dialing when registered to CUCM
As from Cisco Unified Communications Manager (CUCM) version 9.0, endpoints registered to CUCM support URI dialing. A URI is an alias for a directory number (DN). A call to the URI behaves as if the call was made directly to the directory number.

URI example: conference_room@company.com. The user name (left side) is case sensitive in CUCM 9.0, while the domain (right side) is not.

Software release notes

For a complete overview of the news and changes, we recommend reading the Software Release Notes (TC6).

Software download

For software download go to: ► http://www.cisco.com/cisco/software/navigator.html
Dynamic bandwidth distribution in MultiSite conferences

You can choose a total bandwidth for your MultiSite conference. The bit rate is divided equally among all the active calls at any time. This means that the individual calls will be up-speeded or down-speeded as appropriate when someone leaves or enters the MultiSite conference, and when a call is put on-hold or resumed.

Support for encrypted Cisco TelePresence Multipoint Switch (CTMS) calls

Video systems running software TC5.0 or later are able to initiate or join non-encrypted multiparty conferences controlled by CTMS version 1.8 or later. Encrypted conferences are supported as from software versions TC6.0 and CTMS 1.9.1.

The TelePresence system must have a secure registration to VCS or CUCM to allow encrypted calls.

1080p60 support

1080p60 is enabled by default on C60 codecs with mainboard revision F and later. If the codec supports 1080p60, it is indicated on the System Information page on the web interface.

Troubleshooting and diagnostics

A new troubleshooting feature is introduced. The TelePresence system runs a set of tests to detect possible problems and provides links on the web interface to resolve the issues.

The Mediatrace diagnostics tool

Mediatrace is a diagnostics tool that discovers the routers and switches (layer 2 and 3 devices) along the path of an IP flow. It collects critical information hop by hop on specific media streams as they traverse the network. Mediatrace should be enabled on each network node you want to collect information from. Because the path of video data packets from the endpoints is traced, troubleshooting is facilitated and network performance can be optimized.

New and improved web interface features

• Local phone book management, for example creating a folder structure, and adding, modifying or deleting contacts.
  
  Note that the web interface’s local phone book mirrors the Favorites list on the Touch controller and the My contacts folder in the OSD phone book.

• Improved interface for uploading certificates and certificate authority lists to the TelePresence system.

• Display of diagnostics information, including links how to resolve pending issues.

• Information about connected peripherals, e.g. Touch controller, cameras and displays.

• Configuration interface for the Cisco TelePresence ISDN Link gateway (only applicable if an ISDN Link gateway is connected to the TelePresence system).

New languages supported on Touch

• Czech
• Dutch
• Hungarian
• Italian
• Korean
• Polish
• Portuguese Brazilian
• Traditional Chinese
• Turkish

Profile 42" using Codec C40 at a glance

See the installation sheet for the Profile 42" for instructions on how to install the system.

Codec C40
- Full HD video
- High resolution data sharing
- Full HD Multisite
- Rich I/O capabilities

PrecisionHD 1080p camera
Full HD Camera designed for visual communication with:
- 12 x optical zoom
- Fast and precise pan, tilt and zoom

Monitor
42" Full HD LCD, 16:9, 1080 x 1920 resolution

Audio module
Wide band audio module supporting:
- 20 kHz AAC-LD
- Full echo canceling
- Stereo

Audio amplifier
Optimized DNAM for the Profile system, providing crystal clear and natural audio

Microphones
2 x Microphones

Operating devices
- Touch 8" controller (for C Series)
- Remote control with AAA batteries

Base options
Floor standing footplate, wheel base, or wall mount on pedestal

See the installation sheet for the Profile 42" for instructions on how to install the system.

Codec C40
- Full HD video
- High resolution data sharing
- Full HD Multisite
- Rich I/O capabilities

PrecisionHD 1080p camera
Full HD Camera designed for visual communication with:
- 12 x optical zoom
- Fast and precise pan, tilt and zoom

Monitor
42" Full HD LCD, 16:9, 1080 x 1920 resolution

Audio module
Wide band audio module supporting:
- 20 kHz AAC-LD
- Full echo canceling
- Stereo

Audio amplifier
Optimized DNAM for the Profile system, providing crystal clear and natural audio

Microphones
2 x Microphones

Operating devices
- Touch 8" controller (for C Series)
- Remote control with AAA batteries

Base options
Floor standing footplate, wheel base, or wall mount on pedestal
Profile 52”/55” at a glance

See the installation sheets for the Profile 52”/55” for instructions on how to install the system.

Codec C60/C40
• Full HD video
• High resolution data sharing
• Full HD Multisite
• Rich I/O capabilities

PrecisionHD 1080p camera
Full HD Camera designed for visual communication with:
• 12 × optical zoom
• Fast and precise pan, tilt and zoom

Monitor
52”/55” Full HD LCD, 16:9, 1080 × 1920 resolution

Audio module
Wide band audio module supporting:
• 20 kHz AAC-LD
• Full echo canceling
• Stereo

Audio amplifier
Optimized DNAM for the Profile system, providing crystal clear and natural audio

Microphones
Three (with C60) / Two (with C40) microphones with cables

Operating devices
• Touch 8” controller
• Remote control with AAA batteries

Base options
Floor standing footplate, wheel base, or wall mount on pedestal

Power cable
Ethernet cable
Mic cable
PC cable

In the bottom module:
• Audio amplifier (DNAM)
• Codec C60/C40

PrecisionHD 1080p camera

Monitor 52”/55” Full HD LCD

Three/two microphones

• (Profiles using Codec C40)
• (Profiles using Codec C60)

Remote control

Touch 8” controller

Floor standing footplate
(Other options: Wheel base or wall mount on pedestal)
Profile 52” Dual / 55” Dual at a glance

See the installation sheets for the Profile 52” Dual / 55” Dual for instructions on how to install the system.

Codec C60
- Full HD video
- High resolution data sharing
- Full HD Multisite
- Rich I/O capabilities

PrecisionHD 1080p camera
Full HD Camera designed for visual communication with:
- 12 x optical zoom
- Fast and precise pan, tilt and zoom

Dual monitor
Dual 52” / Dual 55” Full HD LCD, 16:9, 1080 x 1920 resolution

Audio module
Wide band audio module supporting:
- 20 kHz AAC-LD
- Full echo canceling
- Stereo

Audio amplifier
Optimized DNAM for the Profile system, providing crystal clear and natural audio

Microphones
Four microphones with cables

Operating devices
- Touch 8” controller
- Remote control with AAA batteries

Base options
Floor standing footplate or wall mount on pedestal
Profile 65” at a glance

See the Profile 65” Installation Sheet for instructions of how to assemble the system.

Codec C60
- Full HD video
- High resolution data sharing
- Full HD Multisite
- Rich I/O capabilities

PrecisionHD 1080p camera
Full HD Camera designed for Visual communication with:
- 12 x optical zoom
- Fast and precise pan, tilt and zoom

Monitor 65”
65” Full HD LCD, 16:9, 1080 x 1920 resolution

Audio module
Wide band audio module supporting:
- 20 kHz AAC-LD
- Full echo canceling
- Stereo

Audio amplifier
Optimized DNAM for the Profile system, providing crystal clear and natural audio

Microphones
Three microphones with cables

Operating devices
- Touch 8” controller
- Remote control with AAA batteries

Base options
Floor standing footplate or wall mount on pedestal
Codec C60 at a glance

The Codec C60 is the 1080p HD video collaboration engine. Based upon the same technology as the Codec C90, the C60 delivers Full HD video, HD collaboration and superior audio for natural communication at its finest, delivering unrivaled value.

The C60 is a standards-compliant codec for integration into team meeting rooms, boardrooms and industry projects.

- Full High Definition Video with up to 4 HD sources, and collaboration with optimal definition for the best video quality every time, regardless of environment.
- Highest Quality Audio with flexibility to add up to 4 microphones directly from the codec, and superior, full duplex audio with high quality stereo sound.
- Full APIs.
- Ensure successful, streamlined integration projects with standards-compliant professional connectors.

Integrator package

The integrator package of the Codec C60 comes with the PrecisionHD 1080p camera, microphone and cables.
Codec C40 at a glance

The Codec C40 provides all the power required to transform any conference room to a HD video collaboration room. Designed for any standard HD integration project, the Codec C40 is the ideal solution for everyday video conferencing and collaboration solution. 1080p HD video, and Multisite™ features combine to make the Codec C40 ideal for a variety of applications.

The Codec C40 is ideal for standard meeting rooms, executive offices and team collaboration rooms.

- Full High Definition Video with up to 2 HD sources, and collaboration with optimal definition for the best video quality every time, regardless of environment.
- Highest Quality Audio with flexibility to add up to 2 microphones directly from the codec, and superior, full duplex audio with high quality stereo sound.
- Full APIs.
- Ensure successful, streamlined integration projects with standards-compliant professional connectors.

Integrator package

The integrator package of the Codec C40 comes with the PrecisionHD 1080p camera, microphone and cables.
Chapter 2

Web interface
Starting the web interface

The web interface provides full configuration access to your video conference system.

You can connect from a computer and administer the system remotely.

In this chapter you will find information how to use the web interface for system configuration and maintenance.

Browsers:
- The latest releases of Internet Explorer, Mozilla Firefox, Opera, Chrome or Safari are recommended.
- Major TC6.0 functionality works with Internet Explorer 7.

1. Connect to the video system
Open a web browser and enter the IP address of the video system in the address bar.

To find the IP address (IPv4 or IPv6), tap Settings ( ), on a Touch controller; or navigate to Home > Settings > System information when using a remote control and the on-screen menu.

2. Sign in
Enter the user name and password for your video system and click Sign In.

The system is delivered with a default user named admin with no password (i.e. leave the Password field blank when signing in for the first time).

We strongly recommend that you set a password for the admin user, see the next page.

Signing out
Hover the mouse over your user name and choose Sign out from the drop-down list.
Changing the system password

We strongly recommend that you set a password for any user with ADMIN rights, including the default admin user, to restrict access to system configuration.

You can read more about password protection in the Setting passwords chapter.

1. Open the Change Password dialog

Hover the mouse over your user name, and choose Change password in the drop-down list.

2. Set the new password

Enter your current and new passwords as requested, and click Change password for the change to take effect.

If the password currently is not set, leave the Current password field blank.
The interactive menu

The web interface provides access to tasks and configurations. They are available from the main menu, which appears near the top of the page when you have signed in.

When you hover the mouse over a main menu item, you can navigate to its related sub-pages.

Main menu

Hover the mouse over a main menu item, the titles of related sub-pages drops down.

Click a sub-page’s title to open it. Only pages that the user has access rights for can be opened; the others are dimmed.

Click Home on the main menu to return to the System Information page.

Sub-pages

Call Control
- Call Control
- Local Phone Book

Configuration
- System Configuration
- System Status
- Personalization
- Peripherals
- User Administration
- Sign In Banner
- API
- Security

Diagnostics
- Troubleshooting
- Log Files

Maintenance
- Software Upgrade
- Backup and Restore
- Factory Reset
- Restart

* You can read more about user administration, user roles and access rights in the User administration section.
System information

The video system’s Home page shows an overview of the basic set-up and status of the system.

This includes information like system name and product type, which software version the system runs, its IP address, etc. Also the registration status for the video networks (SIP and H.323) is included, as well as the number/URI to use when making a call to the system.
Placing a call

You can use the Call Control page of the web interface to initiate a call.

Even if the web interface is used to initiate the call it is the video system (display, microphones and loudspeakers) that is used for the call; it is not the PC running the web interface.

Calling

You can call someone either by choosing a contact name in the Local phone book or Directory, or by typing a complete URI or number in the Search and Dial field. Then click Call in the associated contact card.

Searching the contact lists

Enter one or more characters in the Search or Dial field. Matching entries from both the Local phone book and the Directory will be listed as you type.

Select the entry in the phone book or directory before you click Call.

Calling more than one

A point-to-point video call (a call involving two parties only) may be expanded to include more participants.

If your system supports the optional built-in MultiSite feature, up to four participants, yourself included, can join the video call. The call will then become a video conference.

One additional participant can join on audio-only.

Follow the same procedure to call the next conference participant as you did when calling the first participant.

Ending a call

To disconnect just one participant in a call, click the button for that participant.

Click the End all button to terminate the entire call.

Holding and resuming

Use the button next to the participant’s name to put him on hold.

To resume the call, use the button that appears for the participant on hold.
Sharing content

You can connect a presentation source to one of the external inputs of your video system. Most often a PC is used as presentation source, but other options may be available depending on your system setup.

While in a call you can share content with the far end, that is the other participant(s) in the call.

If you are not in a call, the content is shared locally on your display.

1. Choose a Presentation source from the drop-down list.
2. Click Start Presentation.

Stop content sharing:
Click the Stop Presentation button that becomes visible while sharing.
Controlling and monitoring a call

You can control and monitor several call features using the Call Control page.

Microphone mute

Click the button to mute the microphone. Then the text changes to Microphone: Off. Click again to unmute.

Show/hide call details

Click the arrow to show details about the call. Click the arrow again to hide the information.

Volume down

Volume up

Call details

If necessary, scroll your browser to see the call details.
Controlling the camera

You can control the camera using the Call Control page.

Click the Camera Control button to open the window where you can pan, tilt and zoom the camera, and apply camera presets.

Pan and tilt
Use the left and right arrows to pan the camera, and the up and down arrows to tilt it.

Zoom
Use + and - to zoom in and out.
Local layout control

You can choose a local layout using the Call Control page. The term layout is used to describe the various ways the videos from the conference participants and a presentation can appear on your screen. Different types of meetings will require different layouts.

1. Click Change layout.
2. Choose your preferred layout in the window that opens.

You may change the layout while in a call.
Capturing snapshots

The snapshot feature, which is disabled by default, allows snapshots captured by your video system to be displayed on the Call Control page. Captures from your video system’s camera as well as from its presentation channel will be displayed.

This feature might come in handy when administering the video system from a remote location, e.g. to check the camera view.

To use web snapshots you have to sign in with ADMIN credentials.

Enabling the snapshot feature

The snapshot feature is disabled by default. The feature must be enabled using the remote control and on screen menu, or the Touch controller. The Touch controller must be directly connected to the codec’s second Ethernet port.

- Touch controller: Tap Settings ( ) > Administrator Settings > Web Snapshots and choose On.
- Remote control and on screen menu: Go to the Advanced configuration menu, navigate to Video > AllowWebSnapshots and choose On.

Far end snapshots while in a call

While in a call, snapshots of the remote participant’s main camera and presentation channel (far end) will be captured and displayed as shown in the illustration. The snapshots are updated approximately every 20 seconds.

Far end snapshots are captured even if web snapshots are disallowed on the far end video system. Web snapshots are prohibited only for encrypted calls.

Snapshots from your video system

Take live snapshots

While the Live snapshots box is checked, snapshots are captured by your video system (main camera and presentation) approximately every two seconds.
Managing the local phone book

The entries in the local phone book can be accessed from the following interfaces:

- Touch controller: The Favorites list
- On-screen menu: The My contacts folder in the phone book
- Web interface: The local phone book on the call control page

Adding a contact

Click Add contact and fill in the form that pops up. Then click Save to store the contact in the local phone book.

Editing contact details

Click a contacts name followed by Edit. Change the details in the form as appropriate and click Save.

Deleting a contact

Click a contacts name followed by Edit. Then click Delete to remove the entry from the local phone book.

Storing a contact in a folder

Choose the appropriate folder from the drop down list. No folder means that the contact will be stored at the top level.

Adding a contact method

You can store more than one contact method for each contact, e.g. video, telephone and mobile.
Local phone book folders

The entries in the local phone book can be hierarchically organized in folders.

Managing folders

i. Click **Edit folders**.

ii. Click **Add folder** and fill in its details to create a new folder, or click the name of an existing folder to view and edit its details.

iii. Click **Save folder** to store the details; or click **Delete folder** to remove a folder and all its contacts and sub-folders.

Opening a folder

Click the folder name to open the folder and show its list of contacts.
System configuration

The system settings are grouped in several categories. When you choose a category in the left pane all related settings appear to the right.

Each system setting is further described in the System settings chapter.
Changing system settings

All system settings can be changed from the System Configuration page. The value space for a setting is specified either as a drop-down list or with explanatory text following a text input field.

Different settings may require different user credentials. In order to be sure that an administrator is able to change all system settings, the user must possess all user roles.

You can read more about user administration and user roles in the User administration chapter.
Setting the Administrator Settings menu password

When starting up the video conference system for the first time anyone can access the Administrator Settings menu with either the remote control or the Touch controller because the menu password is not set.

⚠️ We strongly recommend that you define a menu password, because the Administrator Settings may severely affect the behavior of the video conference system.

You can read more about password protection in the Setting passwords chapter.

Changing the menu password

Click Set/Change Administrator Settings menu password to open this dialog.

Enter a new password in the text input field and click Save to store it.

Use the Unlock button to clear the existing password.
System status
The system status is grouped in several categories. When you choose a category in the left column, the related status appears in the window to the right.
Choosing a wallpaper

You can choose from a set of predefined wallpapers to use as background on your display.

If you want the company logo or another custom picture to be displayed on the main display, you may upload and use a custom wallpaper.

If you use the Touch controller: The custom wallpaper applies to only the main display and will not appear on the Touch controller.

![Wallpaper selection interface](image)

**Navigate to:** Configuration > Personalization > Wallpaper tab

**Choosing a wallpaper**

Choose a wallpaper from the list.

If you have uploaded a custom wallpaper, it will appear in the list together with the predefined wallpapers.

The chosen wallpaper is highlighted.

**Uploading a custom wallpaper file**

Click **Browse**... and locate your custom wallpaper image file.

The file format must be .png and the maximum image size is 1920 x 1200 pixels.

Click **Upload** to save the file to the video system.
Choosing a ringtone

You can choose from a set of predefined ringtones. The chosen ringtone can be played back from this page.

Even if the web interface is used to initiate the playback it is the video system that plays back the ringtone; it is not the PC running the web interface.

Choosing a ringtone

Choose a ringtone from the drop-down list, and click **Save** to make it the active ringtone.

Playing back a ringtone

Click the play button (►) to play back the ringtone.

Use the stop button (■) to end the playback.

You must save the ringtone before it can be played back.
## Peripherals overview

This page shows an overview of the video input and video output configuration, as well as information about any camera(s), Touch controller or ISDN Link that is connected to your video system.

The illustration to the right is an example; your system may have different peripherals and video input/output configurations.

### Managing ISDN Link

If an ISDN Link is paired to the video system it can be managed from this page.

How to configure and use the ISDN Link are described in the ISDN Link documentation on ► [http://www.cisco.com/go/isdnlink-docs](http://www.cisco.com/go/isdnlink-docs)

User administration

From this page you can manage the user accounts of your video conference system. You can create new user accounts, edit the details of existing users, and delete users.

The default user account

The system comes with a default administrator user account with full access rights. The username is admin and no password is set.

It is highly recommended to set a password for the admin user.

Read more about passwords in the Setting passwords chapter.

About user roles

A user account must hold one or a combination of several user roles.

The following three user roles, with non-overlapping rights, exist:

- **ADMIN**: A user holding this role can create new users and change most settings. The user neither can upload audit certificates nor change the security audit settings.
- **USER**: A user holding this role can make calls and search the phone book. The user can modify a few settings, e.g. adjusting the audio volume and changing the menu language.
- **AUDIT**: A user holding this role can change the security audit configurations and upload audit certificates.

An administrator user account with full access rights, like the default admin user, must possess all the three roles.

Default user account

The system comes with admin as the default user account. This user has full access rights.
User administration, continued

Creating a new user account
Follow these steps in order to create a new user account:

1. Click Add new user...

2. Fill in the Username, Password and PIN code, and check the appropriate user roles check boxes.
   As a default the user has to change the password and PIN code when signing in for the first time.
   Do not fill in the Distinguished Name (DN) Subject field unless you want to use certificate login on https.

3. Set the Status to Active to activate the user.

4. Click Save to save the changes.
User administration, continued

Editing user details
Follow these steps in order to edit an existing user account:

1. Click the name of an existing user to open the Editing user window.
2. Edit the details.
3. Click Save to save the changes or Cancel to go back one step without storing the information.

Deactivating a user account
Follow these steps in order to deactivate a user account:

- Always keep at least one user with ADMIN rights Active.
1. Open the Editing user window by clicking the name of the user.
2. Set the Status to Inactive.
3. Click Save to save the changes.

Deleting a user account
Follow these steps in order to delete a user account:

- Always keep at least one user with ADMIN rights.
1. Open the Editing user window by clicking the name of the user.
2. Click Delete.
Adding a sign in banner

A sign in banner is a message that is displayed to the user when signing in.

If a system administrator wants to provide initial information to all users, he can create a sign in banner. The message will be shown when the user signs in to the web interface or the command line interface.

Navigate to: Configuration > Sign In Banner

Enter the message that you want to present to the user when signing in, and click Save to activate the banner.
Application programming interface

The application programming interface (API) is a tool for integration professionals and developers working with this Cisco product. It is described in detail in the API guide for the product.

XML files

The XML files are part of the codec’s API. They structure information about the codec in a hierarchy.

- **Configuration.xml** contains the current system settings (configuration). These settings are controlled from the web interface or from the API (Application Programmer Interface).
- The information in **status.xml** is constantly updated by the system to reflect system and process changes. The status information is normally monitored from the API.
- **Command.xml** contains an overview of the commands available to instruct the system to perform an action. The commands are issued from the API.
- **Valuespace.xml** contains an overview of all the value spaces used in the system settings, status information, and commands.

API commands

Commands (xCommand) and configurations (xConfiguration) can be executed from this web page. Syntax and semantics are explained in the API guide for the product.
Managing the video system’s certificates

Certificate validation may be required when using TLS (Transport Layer Security).

A server or client may require that your video system presents a valid certificate to them before communication can be set up.

The video system’s certificates are text files that verify the authenticity of the system. These certificates may be issued by a certificate authority (CA).

The certificate are listed as shown in the illustration to the right. They can be used for the following services: HTTPS, SIP and IEEE 802.1X.

You can store several certificates on the system, but only one certificate can be used for each service at a time. If authentication fails, the connection will not be established.

Enabling and disabling certificates

Use the buttons to switch a certificate on or off for the different services.

You can also view a certificate, and delete a certificate using the corresponding buttons.

Adding a certificate

1. Click Add certificate... to open the certificate dialog.
2. Click Browse... and find the Certificate and Private key file(s) on your computer.
3. Fill in the Password if required.
4. Click Add certificate... to store the certificate on your system.

Contact your system administrator to obtain the following file(s):
- Certificate (file format: .PEM)
- Private key, may be included in the same file as the certificate (file format: .PEM format)
- Password (required only if the private key is encrypted)

The certificate and the private key will be stored in the same file on the video system.
Managing the list of trusted certificate authorities

Certificate validation may be required when using TLS (Transport Layer Security).

Your video system may be set up to require that a server or client presents its certificate to the system before communication can be set up.

The certificates are text files that verify the authenticity of the server or client. The certificates must be signed by a trusted certificate authority (CA).

To be able to verify the signature of the certificates, a list of trusted CAs must reside on the video system. The certificates of the CAs are listed as shown in the illustration to the right.

The list must include CAs to verify certificates for as well as HTTPS, SIP and IEEE 802.1X connections.

If the server cannot be authenticated, the connection will not be established.

The certificate and certificate issuers shown in the illustration serve as examples. Your system will have other certificate(s).

To upload a list of certificate authorities:

i. Click Show CAs... to list the existing CA certificates.
ii. Click Add Certificate Authority...
iii. Click Browse... and find the file containing a list of CA certificates (file format: .PEM) on your computer.
iv. Click Add certificate authority... to store the new CA certificate(s) on your system.

Viewing and deleting certificates

You can view a certificate, and delete a certificate using the corresponding buttons.

Contact your system administrator to obtain the CA certificate list (file format: .PEM).
Adding audit certificates

Audit logging records all sign in activity and configuration changes on your video system.

Audit logging is disabled by default, but you can enable it using the Security > Audit > Logging > Mode setting on the on-screen menu or the web interface.

In ExternalSecure audit logging mode the video system sends encrypted audit logs to an external audit server (syslog server), which identity must be verified by a signed certificate.

To be able to verify the signature of the audit server certificates, a list of trusted audit certificate authorities (CAs) must reside on the video system.

If the audit server cannot be authenticated, the logs will not be sent.

Always upload the audit certificate list before enabling secure audit logging.

1. Upload a list of audit server certificates

   - The entries in a new file with CA certificates will overwrite the existing list, that is, any previously stored audit certificates will be lost when you add a new file.
   - Click Add audit server certificate authority...
   - Click Browse... and find the file containing the list of audit CA certificates (.PEM format) on your computer.
   - Click Add audit certificate to store the certificate(s) on your system.

2. Enable secure audit logging

   - Go to the System Configuration page and choose the Security category.
   - Enter the Address and Port number of the audit server. Click Save for the changes to take effect.
   - Choose ExternalSecure from the Logging Mode drop-down list. Click Save for the change to take effect.
Setting strong security mode

Strong security mode should be used only when compliance with DoD JITC regulations is required.

! IMPORTANT Read the warning carefully before setting strong security mode.

Strong security mode sets very strict password requirements, and requires all users to change their password on the next sign in.

Software upload from TMS, web snapshots and calling from the web interface are prohibited in strong security mode.

How to change the system password:
see the ► Setting passwords section.

Setting strong security mode

1. Click Configure strong security mode... and read the warning carefully before continuing.

2. If you want to use strong security mode, check the I understand the risks of strong security mode check box and click Enable strong security mode.

3. Change the password to meet the strict criteria shown in the warning. How to change the system password: see the ► Setting passwords section.

4. Restart the codec for the change to take effect.

Return to normal mode

1. When in strong security mode, the system can be restored to normal mode by clicking Configure strong security mode... followed by Disable strong security mode.

2. Restart the codec for the change to take effect.
Deleting trust lists (CUCM only)

The Cisco Unified Communications Manager (CUCM) and Certification Authority Proxy Function (CAPF) information that is shown on the Security page is only relevant for video systems that are registered to CUCM.

The web interface can be used to delete an existing Certificate Trust List (CTL) that is stored on the video system. Normally, you will not delete the old CTL file, but there are a few cases when you will need to delete it.

For more information about CUCM, CAPF and trust lists, read the Administering TC Endpoints on CUCM guide available on the Cisco web site.
Troubleshooting

The troubleshooting page lists the status for some common sources of errors. The list may be different for different products and installations.

Errors are clearly marked in red color, and warnings are yellow.

Run diagnostics

Click **Re-run diagnostics** to make sure the information in the list is up-to-date.
Downloading log files

The log files are Cisco specific debug files which may be requested by the Cisco support organization if you need technical support.

The current log files are time stamped event log files.

All current log files are archived in a time stamped historical log file each time the system reboots. If the maximum number of historical log files is reached, the oldest one will be overwritten.

Downloading one file

Click the file name and follow the instructions to save or open the file (left or right click depending on your browser).

Downloading all files

Click Download all log files as .tar.gz bundle and follow the instructions.
Upgrading the system software

This video conference system is using TC software. The version described in this document is TC6.0.

Contact your system administrator if you have questions about the software version.

Software release notes

For a complete overview of the news and changes, we recommend reading the Software Release Notes (TC6).

New software

For software download, go to the Cisco Download Software web page:

The file name is something like “s52000tc6_0_0.pkg” (each software version has a unique file name).

Release key and option keys

The release key is required to be able to use the software. A new release key is required for every major software release (e.g. when upgrading from TC5.x or older to TC6.x).

An option key is required to activate optional functionality. You may have several option keys in your system.

The available options are:

- Premium resolution
- MultiSite
- Dual display (only Codec C40)

Contact your Cisco representative to obtain the required release key and option keys.

1. Add the release and option keys

Contact your Cisco representative to obtain the required key(s). Then perform the following steps:

i. Enter the Release key in the appropriate text input field and click Add.

ii. Enter an Option Key in the appropriate text input field and click Add.

If you have more than one option key, repeat step ii for all of them.

Each system has unique keys.

Release key format: "1TC005-1-0C22E348"

Option key format: "1N000-1-AA7A4A09"

2. Install new software

Download the appropriate software package from the Cisco Software Download web page (see link to the left) before you start the software upgrade as described in these steps:

i. Click Browse... and find the .pkg file containing the new software.

ii. Check the Upgrade automatically after upload check box, then click Upload to start the installation process straight away.

Keep the check box unchecked if you want to upload the software now and do the installation later.

The complete installation may take up to 30 minutes. You can follow the progress on the web page. The system reboots automatically after the installation.

You must sign in anew in order to continue working with the web interface after the reboot.
Backup and restore

All the system settings, which are available on the System configuration page, can be listed on-screen or stored as a text file (.tsh).

The .tsh file can be loaded back onto the system, thereby restoring the old configuration.

Backing up or showing the current configuration

Click **Preview backup...** to display the current settings on-screen.

Click **Take backup** to store the configuration as a text file (.tsh).

Restoring an earlier configuration

Click **Browse...** and find the file (.tsh) with the configuration you want to restore.

Click **Restore** to reconfigure the system as defined in the file.
Factory reset

When performing a factory reset the call logs will be deleted and all system parameters will be reset to default values. All files that have been uploaded to the system will be deleted. Release keys and option keys will be preserved.

⚠️ It is not possible to undo a factory reset.

There are more information about performing a factory reset in the ► Factory resetting appendix.

Perform a factory reset

1. Read the provided information carefully before you restore the factory settings by clicking Perform a factory reset.

2. Click Reset to confirm your choice, or Cancel if you have changed your mind.

Wait while the system resets. The system will restart automatically when finished.
Restarting the system

The system can be shut down or restarted remotely using the web interface.

Restarting the system

Click **Restart TelePresence device** to restart the system.

It will take a few minutes before the system is ready for use.

Shutting down the system

Click **Shutdown TelePresence device** to shut down the system.

The system cannot be turned on again remotely; you must press its power button physically to turn it on.
Chapter 3

System settings
Overview of the system settings

In the following pages you will find a complete list of the system settings which are configured from the System Configuration page on the web interface. The examples show either the default value or an example of a value.

Open a web browser and enter the IP address of the video system; then sign in.

Navigate to Home > Settings > System Information using the remote control and on-screen menu, or tap Settings ( ) > System Information on the Touch controller to find the system’s IP address (IPv4 or IPv6).

**Appendices**
Audio settings

Determine if the audio channels on the HDMI input shall be enabled. The HDMI input 2 has two audio channels.

Requires user role: ADMIN
Value space: <Off/On>
   Off: Disable audio on the HDMI input.
   On: Enable audio on the HDMI input.

Example: Audio Input HDMI 2 Mode: On

Audio Input HDMI [2] Level
Define the audio level of the HDMI input connector, in steps of 1 dB. See the Audio Level tables in the Physical Interfaces Guide for the codec for a complete overview of the menu values represented in dB.

Requires user role: ADMIN
Value space: <-24..0>
   Range: Select a value from -24 to 0 dB.

Example: Audio Input HDMI 2 Level: 0

Audio Input HDMI [2] VideoAssociation MuteOnInactiveVideo
Enable association of a video source to an HDMI audio input.

Requires user role: ADMIN
Value space: <Off/On>
   Off: No video source is associated.
   On: A video source is associated, and the audio will be muted if the associated video source is not displayed.

Example: Audio Input HDMI 2 VideoAssociation MuteOnInactiveVideo: Off

Select the associated video input source.

Requires user role: ADMIN
Value space: <1/2/3>
   Range: Select one of the video input sources.

Example: Audio Input HDMI 2 VideoAssociation VideoInputSource: 1

Audio Input Line [1..2] Equalizer ID
Select the audio input line equalizer ID.

Requires user role: ADMIN
Value space: <1..8>
   Range: Select EqualizerID 1 to 8.

Example: Audio Input Line 1 Equalizer ID: 1

Audio Input Line [1..2] Equalizer Mode
Set the audio input line equalizer mode.

Requires user role: ADMIN
Value space: <Off/On>
   Off: No equalizer.
   On: Enable the equalizer for the audio input line.

Example: Audio Input Line 1 Equalizer Mode: Off
Audio Input Line [1..2] VideoAssociation MuteOnInactiveVideo

Enable association of a video source to a Line audio input.

Requires user role: ADMIN

Value space: <Off/On>
    Off: No video source is associated.
    On: A video source is associated, and the audio will be muted if the associated video source is not displayed.

Example: Audio Input Line 1 VideoAssociation MuteOnInactiveVideo: Off

Audio Input Line [1..2] VideoAssociation VideoInputSource

Select the associated video input source.

Requires user role: ADMIN

Value space: <1/2/3>
    Range: Select one of the video input sources.

Example: Audio Input Line 1 VideoAssociation VideoInputSource: 1

Audio Input Line [1..2] Channel

Define whether the Audio Line input is a mono signal or part of a multichannel signal.

Requires user role: ADMIN

Value space: <Right/Left/Mono>
    Right: The Audio Line input signal is the right channel of a stereo signal.
    Left: The Audio Line input signal is the left channel of a stereo signal.
    Mono: The Audio Line input signal is a mono signal.

Example: Audio Input 1 Channel: Left

Audio Input Line [1..2] Level

Define the audio level of the Line input connector, in steps of 1 dB.
See the Audio Level tables in the Physical Interfaces Guide for the codec for a complete overview of the menu values represented in dB.

Requires user role: ADMIN

Value space: <0..24>
    Range: Select a value from 0 to 24 dB.

Example: Audio Input Line 1 Level: 10

Audio Input Line [1..2] LoopSuppression

Codec C40 and C60 currently does not support loop suppression, hence it is always Off.

Requires user role: ADMIN

Value space: <Off>
    Off: Deactivate Loop Suppression.

Example: Audio Input Line 1 LoopSuppression: Off

Audio Input Line [1..2] Mode

Set the audio input line mode.

Requires user role: ADMIN

Value space: <Off/On>
    Off: Disable the Audio Line input.
    On: Enable the Audio Line input.

Example: Audio Input Line 1 Mode: On
Audio Input Microphone [1..2]/[1..4] EchoControl Mode

NOTE: Codec C40 has two microphone connectors. Codec C60 has four microphone connectors.

The echo canceller continuously adjusts itself to the audio characteristics of the room and compensate for any changes it detects in the audio environment. If the changes in the audio conditions are very significant the echo canceller may take a second or two to re-adjust.

Requires user role: ADMIN

Value space: <Off/On>

Off: Echo Control should be switched Off if external echo cancellation or playback equipment is used.

On: Echo Control is normally set to On to prevent the far end from hearing their own audio. Once selected, echo cancellation is active at all times.

Example: Audio Input Microphone 1 EchoControl Mode: On

Audio Input Microphone [1..2]/[1..4] EchoControl NoiseReduction

NOTE: Codec C40 has two microphone connectors. Codec C60 has four microphone connectors.

The system has a built-in noise reduction which reduces constant background noise (for example noise from air-conditioning systems, cooling fans etc.). In addition, a high pass filter (Humfilter) reduces very low frequency noise. NOTE: Requires the Echo Control Mode to be enabled for the microphone.

Requires user role: ADMIN

Value space: <Off/On>

Off: Turn off the Noise Reduction.

On: The Noise Reduction should be enabled in the presence of low frequency noise.

Example: Audio Input Microphone 1 EchoControl NoiseReduction: On

Audio Input Microphone [1..2]/[1..4] EchoControl Dereverberation

NOTE: Codec C40 has two microphone connectors. Codec C60 has four microphone connectors.

The system has built-in signal processing to reduce the effect of room reverberation. NOTE: Requires the Echo Control Mode to be enabled for the microphone.

Requires user role: ADMIN

Value space: <Off/On>

Off: Turn off the dereverberation.

On: Turn on the dereverberation.

Example: Audio Input Microphone 1 EchoControl Dereverberation: On

Audio Input Microphone [1..2]/[1..4] Equalizer ID

NOTE: Codec C40 has two microphone connectors. Codec C60 has four microphone connectors.

Select the audio input microphone equalizer ID.

Requires user role: ADMIN

Value space: <1..8>

Range: Select Equalizer ID 1 to 8.

Example: Audio Input Microphone 1 Equalizer ID: 1

Audio Input Microphone [1..2]/[1..4] Equalizer Mode

NOTE: Codec C40 has two microphone connectors. Codec C60 has four microphone connectors.

Set the audio input microphone equalizer mode.

Requires user role: ADMIN

Value space: <Off/On>

Off: No equalizer.

On: Enable the equalizer for the audio input microphone.

Example: Audio Input Microphone 1 Equalizer Mode: Off
Audio Input Microphone [1..2]/[1..4] VideoAssociation MuteOnInactiveVideo

NOTE: Codec C40 has two microphone connectors. Codec C60 has four microphone connectors.
Enable association of a video source to a microphone audio input.
Requires user role: ADMIN
Value space: <Off/On>
   Off: No video source is associated.
   On: A video source is associated, and the audio will be muted if the associated video source is not displayed.
Example: Audio Input Microphone 1 VideoAssociation MuteOnInactiveVideo: On

Audio Input Microphone [1..2]/[1..4] VideoAssociation VideoInputSource

NOTE: Codec C40 has two microphone connectors. Codec C60 has four microphone connectors.
Select the associated video input source.
Requires user role: ADMIN
Value space: <1/2/3>
   Range: Select one of the video input sources.
Example: Audio Input Microphone 1 VideoAssociation VideoInputSource: 1

Audio Input Microphone [1..2]/[1..4] Level

NOTE: Codec C40 has two microphone connectors. Codec C60 has four microphone connectors.
Define the audio level of the Microphone input connector, in steps of 1 dB.
See the Audio Level tables in the Physical Interfaces Guide for the codec for a complete overview of the values represented in dB.
Requires user role: ADMIN
Value space: <0..24>
   Range: Select a value from 0 to 24 dB.
Example: Audio Input Microphone 1 Level: 15

Audio Input Microphone [1..2]/[1..4] Mode

NOTE: Codec C40 has two microphone connectors. Codec C60 has four microphone connectors.
Set the audio input microphone mode.
Requires user role: ADMIN
Value space: <Off/On>
   Off: Disable the microphone connector.
   On: Enable the microphone connector.
Example: Audio Input Microphone 1 Mode: On

Audio Input Microphone [1..2]/[1..4] Type

NOTE: Codec C40 has two microphone connectors. Codec C60 has four microphone connectors.
The microphone connectors are intended for electret type microphones. The microphone connector can be set to line or microphone mode.
Requires user role: ADMIN
Value space: <Microphone/Line>
   Microphone: Select Microphone when you have 48 V Phantom voltage and the pre-amplification is On.
   Line: Select Line when you have a standard balanced line input. The phantom voltage and pre-amplification is Off.
Example: Audio Input Microphone 1 Type: Line

Audio Output HDMI [1] Level

Define the output level of the HDMI output connector, in steps of 1 dB.
See the Audio Level tables in the Physical Interfaces Guide for the codec for a complete overview of the menu values represented in dB.
Requires user role: ADMIN
Value space: <-24..0>
   Range: Select a value from -24 to 0 dB.
Example: Audio Output HDMI 1 Level: 0
Audio Output HDMI [1] Mode
Determine if the audio channel on the HDMI output connector shall be enabled.

Requires user role: ADMIN

Value space: <Off/On>
  Off: Disable the audio channel on the HDMI output.
  On: Enable the audio channel on the HDMI output.

Example: Audio Output HDMI 1 Mode: On

Audio Output Line [1..2] Channel
Define whether the Audio Line output is a mono signal or part of a multichannel signal.

Requires user role: ADMIN

Value space: <Right/Left/Mono>
  Right: The Audio Line output signal is the right channel of a stereo signal.
  Left: The Audio Line output signal is the left channel of a stereo signal.
  Mono: The Audio Line output signal is a mono signal.

Example: Audio Output Line 1 Channel: left

Audio Output Line [1..2] Equalizer ID
Select the audio output line equalizer ID.

Requires user role: ADMIN

Value space: <1..8>
  Range: Select EqualizerID 1 to 8.

Example: Audio Output Line 1 Equalizer ID: 1

Audio Output Line [1..2] Equalizer Mode
Set the audio output line equalizer mode.

Requires user role: ADMIN

Value space: <Off/On>
  Off: No equalizer.
  On: Enable the equalizer for the audio output line.

Example: Audio Output Line 1 Equalizer Mode: Off

Audio Output Line [1..2] Level
Define the output level of the Audio Output Line connector, in steps of 1 dB.
See the Audio Level tables in the Physical Interfaces Guide for the codec for a complete overview of the menu values represented in dB.

Requires user role: ADMIN

Value space: <-24..0>
  Range: Select a value from -24 to 0 dB.

Example: Audio Output Line 1 Level: -10

Audio Output Line [1..2] Mode
Set the audio output line mode.

Requires user role: ADMIN

Value space: <Off/On>
  Off: Disable the Audio Line output.
  On: Enable the Audio Line output.

Example: Audio Output Line 1 Mode: On

Audio Output Line [1] Type
Determine if the Audio Line output will be analog or digital type output. The digital output on the Cisco TelePresence Profile systems are identified as DNAM (Digital Natural Audio Module).

Requires user role: ADMIN

Value space: <Auto/SPDIF>
  Auto: If a Digital NAM is detected then SPDIF mode will be selected, otherwise analog mode will be selected.
  SPDIF: Set to SPDIF when you want the line output to be in digital mode.

Example: Audio Output Line 1 Type: Auto
**Audio Output Line [2] Type**

Line output 2 is a dedicated analog output, hence type can be set to analog only.

**Requires user role:** ADMIN

**Value space:** <Analog>

Analog: Can be set to analog only.

**Example:** Audio Output Line 2 Type: Analog

---

**Audio Microphones Mute Enabled**

Determine whether audio-mute is allowed or not. The default value is True.

**Requires user role:** ADMIN

**Value space:** <True/InCallOnly>

- **True:** Muting of audio is always available.
- **InCallOnly:** Muting of audio is only available when the device is in a call. When Idle it is not possible to mute the microphone. This is useful when an external telephone service/audio system is connected via the codec and is to be available when the codec is not in a call. When set to InCallOnly this will prevent the audio-system from being muted by mistake.

**Example:** Audio Microphones Mute Enabled: True

---

**Audio SoundsAndAlerts KeyTones Mode**

The system can be configured to make a keyboard click sound effect (key tone) when pressing a key on the remote control, or when typing text or numbers on a Touch controller.

**Requires user role:** USER

**Value space:** <Off/On>

- **Off:** No key tones will be played when you type.
- **On:** You will hear a key tone when you press a key or type text.

**Example:** Audio SoundsAndAlerts KeyTones Mode: Off

---

**Audio SoundsAndAlerts RingTone**

Select the ring tone for incoming calls.

**Requires user role:** USER

**Value space:** <Marbles/IceCrystals/Polaris/Alert/Discreet/Fantasy/Jazz/Nordic/Echo/Rhythmic>

**Example:** Audio SoundsAndAlerts RingTone: Jazz

---

**Audio SoundsAndAlerts RingVolume**

Sets the ring volume for an incoming call.

**Requires user role:** USER

**Value space:** <0..100>

**Range:** The value goes in steps of 5 from 0 to 100 (from -34.5 dB to 15 dB). Volume 0 = Off.

**Example:** Audio SoundsAndAlerts RingVolume: 50

---

**Audio Volume**

Adjust the speaker volume.

**Requires user role:** USER

**Value space:** <0..100>

**Range:** The value must be between 0 and 100. The values from 1 to 100 correspond to the range from -34.5 dB to 15 dB (0.5 dB steps). The value 0 means that the audio is switched off.

**Example:** Audio Volume: 70
Cameras settings

Cameras PowerLine Frequency
Applies to cameras supporting PowerLine frequency anti-flickering, i.e. PrecisionHD 1080p cameras.
Requires user role: ADMIN
Value space: <50Hz/60Hz>
  50Hz: Set to 50 Hz.
  60Hz: Set to 60 Hz.
Example: Cameras PowerLine Frequency: 50Hz

Cameras Camera [1..7] Backlight
This configuration turns backlight compensation on or off. Backlight compensation is useful when there is much light behind the persons in the room. Without compensation the persons will easily appear very dark to the far end.
Requires user role: ADMIN
Value space: <Off/On>
  Off: Turn off the camera backlight compensation.
  On: Turn on the camera backlight compensation.
Example: Cameras Camera 1 Backlight: Off

Cameras Camera [1..7] Brightness Mode
Set the camera brightness mode.
Requires user role: ADMIN
Value space: <Auto/Manual>
  Auto: The camera brightness is automatically set by the system.
  Manual: Enable manual control of the camera brightness. The brightness level is set using the Cameras Camera Brightness Level setting.
Example: Cameras Camera 1 Brightness Mode: Auto

Cameras Camera [1..7] Brightness Level
Set the brightness level. NOTE: Requires the Camera Brightness Mode to be set to Manual.
Requires user role: ADMIN
Value space: <1..31>
  Range: Select a value from 1 to 31.
Example: Cameras Camera 1 Brightness Level: 1

Cameras Camera [1..7] Flip
With Flip mode (vertical flip) you can flip the image upside down.
Requires user role: ADMIN
Value space: <Auto/Off/On>
  Auto: When the camera is placed upside down the image is automatically flipped upside down. This setting will only take effect for a camera that automatically detects which way it is mounted.
  Off: Display the video on screen the normal way.
  On: When enabled the video on screen is flipped. This setting is used when a camera is mounted upside down, but cannot automatically detect which way it is mounted.
Example: Cameras Camera 1 Flip: Off

Cameras Camera [1..7] Focus Mode
Set the camera focus mode.
Requires user role: ADMIN
Value space: <Auto/Manual>
  Auto: The camera will auto focus once a call is connected, as well as after moving the camera (pan, tilt, zoom). The system will use auto focus only for a few seconds to set the right focus; then auto focus is turned off to prevent continuous focus adjustments of the camera.
  Manual: Turn the autofocus off and adjust the camera focus manually.
Example: Cameras Camera 1 Focus Mode: Auto
Cameras Camera [1..7] Gamma Mode
Applies to cameras which support gamma mode. The Gamma Mode setting enables for gamma corrections. Gamma describes the nonlinear relationship between image pixels and monitor brightness. The Cisco TelePresence PrecisionHD 720p camera supports gamma mode. The PrecisionHD 1080p camera does not support gamma mode.
Requires user role: ADMIN
Value space: <Auto/Manual>
  Auto: Auto is the default and the recommended setting.
  Manual: In severe light conditions, you may switch mode to manual and specify explicitly which gamma table to use by setting the Gamma Level.
Example: Cameras Camera 1 Gamma Mode: Auto

Cameras Camera [1..7] Gamma Level
By setting the Gamma Level you can select which gamma correction table to use. This setting may be useful in difficult lighting conditions, where changes to the brightness setting does not provide satisfactory results. NOTE: Requires the Gamma Mode to be set to Manual.
Requires user role: ADMIN
Value space: <0..7>
  Range: Select a value from 0 to 7.
Example: Cameras Camera 1 Gamma Level: 0

Cameras Camera [1..7] IrSensor
The IR sensor LED is located in the front of the camera and flickers when the IR sensor is activated from the remote control. Both the Codec C Series and PrecisionHD camera have IR sensors, and only one of them needs to be enabled at the time.
Requires user role: ADMIN
Value space: <Off/On>
  Off: Disable the IR sensor on the camera.
  On: Enable the IR sensor on the camera.
Example: Cameras Camera 1 IrSensor: On

Cameras Camera [1..7] Mirror
With Mirror mode (horizontal flip) you can mirror the image on screen.
Requires user role: ADMIN
Value space: <Auto/Off/On>
  Auto: When the camera is placed upside down the image is automatically mirrored. Use this setting with cameras that can be mounted upside down, and that can auto detect that the camera is mounted upside down.
  Off: See the self view in normal mode, that is the experience of self view is as seeing yourself as other people see you.
  On: See the self view in mirror mode, that is the self view is reversed and the experience of self view is as seeing yourself in a mirror.
Example: Cameras Camera 1 Mirror: Off

Cameras Camera [1..7] Whitebalance Mode
Set the camera whitebalance mode.
Requires user role: ADMIN
Value space: <Auto/Manual>
  Auto: The camera will continuously adjust the whitebalance depending on the camera view.
  Manual: Enables manual control of the camera whitebalance. The whitebalance level is set using the Cameras Camera Whitebalance Level setting.
Example: Cameras Camera 1 Whitebalance Mode: Auto

Cameras Camera [1..7] Whitebalance Level
Set the whitebalance level. NOTE: Requires the Camera Whitebalance Mode to be set to manual.
Requires user role: ADMIN
Value space: <1..16>
  Range: Select a value from 1 to 16.
Example: Cameras Camera 1 Whitebalance Level: 1
Cameras Camera [1..7] DHCP

Applies to cameras which support DHCP (for example the Cisco TelePresence PrecisionHD 1080p 12X camera). The camera must be connected to a LAN. When set, the command enables support for SW upgrade of daisy chained cameras. It will enable the camera’s DHCP function and force start of MAC and IP address retrieval. Remember to reset the DHCP when the camera is no longer connected to a LAN.

Requires user role: ADMIN

Value space: <Off/On>

- **Off**: Disable DHCP in the camera. NOTE: This setting should be applied when the camera is not connected to a LAN.
- **On**: Enable DHCP in the camera. The camera is automatically re-booted. After re-boot the DHCP is started and the IP address will be retrieved. Run the command "xStatus Camera" for result.

**Example**: Cameras Camera 1 DHCP: Off
Conference settings

Conference [1..1] AutoAnswer Mode
Set the auto answer mode.

Requires user role: ADMIN

Value space: <Off/On>
- **Off**: An incoming call must be answered manually by pressing the OK key or the green Call key on the remote control, or by tapping the Accept key on the Touch controller.
- **On**: Enable auto answer to let the system automatically answer all incoming calls.

Example: Conference 1 AutoAnswer Mode: Off

Conference [1..1] AutoAnswer Mute
Determine if the microphone shall be muted when an incoming call is automatically answered.

NOTE: Requires that AutoAnswer Mode is switched on.

Requires user role: ADMIN

Value space: <Off/On>
- **Off**: The incoming call will not be muted.
- **On**: The incoming call will be muted when automatically answered.

Example: Conference 1 AutoAnswer Mute: Off

Conference [1..1] AutoAnswer Delay
Define how long (in seconds) an incoming call has to wait before it is answered automatically by the system. NOTE: Requires that AutoAnswer Mode is switched on.

Requires user role: ADMIN

Value space: <0..50>
- **Range**: Select a value from 0 to 50 seconds.

Example: Conference 1 AutoAnswer Delay: 0

Conference [1..1] MicUnmuteOnDisconnect Mode
Determine if the microphones shall be unmuted automatically when all calls are disconnected. In a meeting room or other shared resources this may be done to prepare the system for the next user.

Requires user role: ADMIN

Value space: <Off/On>
- **Off**: If muted during a call, let the microphones remain muted after the call is disconnected.
- **On**: Unmute the microphones after the call is disconnected.

Example: Conference 1 MicUnmuteOnDisconnect Mode: On

Conference [1..1] DoNotDisturb Mode
Determine if there should be an alert on incoming calls.

Requires user role: USER

Value space: <Off/On/Timed>
- **Off**: The incoming calls will come through as normal.
- **On**: All incoming calls will be rejected and they will be registered as missed calls. The calling side will receive a busy signal. A message telling that Do Not Disturb is switched on will display on the Touch controller or main display. The calls received while in Do Not Disturb mode will be shown as missed calls.
- **Timed**: Select this option only if using the API to switch Do Not Disturb mode on and off (xCommand Conference DoNotDisturb Activate and xCommand Conference DoNotDisturb Deactivate).

Example: Conference 1 DoNotDisturb Mode: Off
Conference [1..1] DoNotDisturb DefaultTimeout

This setting determines the default duration of a Do Not Disturb session, i.e. the period when incoming calls are rejected and registered as missed calls. The session can be terminated earlier by using the user interface (remote control or Touch controller) or the Conference DoNotDisturb Mode setting. The default value is 60 minutes.

Requires user role: ADMIN
Value space: <0..1440>
  Range: Select the number of minutes (between 0 and 1440, i.e. 24 hours) before the Do Not Disturb session times out automatically.

Example: Conference 1 DoNotDisturb DefaultTimeout: 60

Conference [1..1] FarEndControl Mode

Lets you decide if the remote side (far end) should be allowed to select your video sources and control your local camera (pan, tilt, zoom).

Requires user role: ADMIN
Value space: <Off/On>
  Off: The far end is not allowed to select your video sources or to control your local camera (pan, tilt, zoom).
  On: Allows the far end to be able to select your video sources and control your local camera (pan, tilt, zoom). You will still be able to control your camera and select your video sources as normal.

Example: Conference 1 FarEndControl Mode: On

Conference [1..1] FarEndControl SignalCapability

Set the far end control (H.224) signal capability mode.

Requires user role: ADMIN
Value space: <Off/On>
  Off: Disable the far end control signal capability.
  On: Enable the far end control signal capability.

Example: Conference 1 FarEndControl SignalCapability: On

Conference [1..1] Encryption Mode

Set the conference encryption mode. A padlock with the text “Encryption On” or “Encryption Off” displays on screen for a few seconds when the conference starts.

Requires user role: ADMIN
Value space: <Off/On/BestEffort>
  Off: The system will not use encryption.
  On: The system will only allow calls that are encrypted.
  BestEffort: The system will use encryption whenever possible.
    > In Point to point calls: If the far end system supports encryption (AES-128), the call will be encrypted. If not, the call will proceed without encryption.
    > In MultiSite calls: In order to have encrypted MultiSite conferences, all sites must support encryption. If not, the conference will be unencrypted.

Example: Conference 1 Encryption Mode: BestEffort

Conference [1..1] DefaultCall Protocol

Set the Default Call Protocol to be used when placing calls from the system.

Requires user role: ADMIN
Value space: <H323/Sip/H320>
  H323: H323 ensures that calls are set up as H.323 calls.
  Sip: Sip ensures that calls are set up as SIP calls.
  H320: H320 ensures that calls are set up as H.320 calls (only applicable if connected to a Cisco TelePresence ISDN Link gateway).

Example: Conference 1 DefaultCall Protocol: H323

Conference [1..1] DefaultCall Rate

Set the Default Call Rate to be used when placing calls from the system.

Requires user role: ADMIN
Value space: <64..6000>
  Range: Select a value between 64 and 6000 kbps.

Example: Conference 1 DefaultCall Rate: 768
Conference [1..1] MaxTransmitCallRate

Specify the maximum transmit bit rate to be used when placing or receiving calls. Note that this is the maximum bit rate for each individual call; use the Conference MaxTotalTransmitCallRate setting to set the aggregated maximum for all simultaneous active calls.

Requires user role: ADMIN
Value space: <64..6000>
  Range: Select a value between 64 and 6000 kbps.

Example: Conference 1 MaxTransmitCallRate: 6000

Conference [1..1] MaxReceiveCallRate

Specify the maximum receive bit rate to be used when placing or receiving calls. Note that this is the maximum bit rate for each individual call; use the Conference MaxTotalReceiveCallRate setting to set the aggregated maximum for all simultaneous active calls.

Requires user role: ADMIN
Value space: <64..6000>
  Range: Select a value between 64 and 6000 kbps.

Example: Conference 1 MaxReceiveCallRate: 6000

Conference [1..1] MaxTotalTransmitCallRate

This configuration applies when using a video system's built-in MultiSite feature (optional) to host a multipoint video conference.

Specify the maximum overall transmit bit rate allowed. The bit rate will be divided fairly among all active calls at any time. This means that the individual calls will be up-speeded or down-speeded as appropriate when someone leaves or enters a multipoint conference, or when a call is put on hold (suspended) or resumed.

The maximum transmit bit rate for each individual call is defined in the Conference MaxTransmitCallRate setting.

Requires user role: ADMIN
Value space: <64..10000>
  Range: Select a value between 64 and 10000.

Example: Conference 1 MaxTotalTransmitCallRate: 9000

Conference [1..1] MaxTotalReceiveCallRate

This configuration applies when using a video system's built-in MultiSite feature (optional) to host a multipoint video conference.

Specify the maximum overall receive bit rate allowed. The bit rate will be divided fairly among all active calls at any time. This means that the individual calls will be up-speeded or down-speeded as appropriate when someone leaves or enters a multipoint conference, or when a call is put on hold (suspended) or resumed.

The maximum receive bit rate for each individual call is defined in the Conference MaxReceiveCallRate setting.

Requires user role: ADMIN
Value space: <64..10000>
  Range: Select a value between 64 and 10000.

Example: Conference 1 MaxTotalReceiveCallRate: 9000

Conference [1..1] VideoBandwidth Mode

Set the conference video bandwidth mode.

Requires user role: ADMIN
Value space: <Dynamic/Static>
  Dynamic: The available transmit bandwidth for the video channels are distributed among the currently active channels. If there is no presentation, the main video channels will use the bandwidth of the presentation channel.
  Static: The available transmit bandwidth is assigned to each video channel, even if it is not active.

Example: Conference 1 VideoBandwidth Mode: Dynamic

Conference [1..1] VideoBandwidth MainChannel Weight

The available transmit video bandwidth is distributed on the main channel and presentation channel according to *MainChannel Weight* and *PresentationChannel Weight*. If the main channel weight is 2 and the presentation channel weight is 1, then the main channel will use twice as much bandwidth as the presentation channel.

Requires user role: ADMIN
Value space: <1..10>
  Range: 1 to 10.

Example: Conference 1 VideoBandwidth MainChannel Weight: 5
Conference [1..1] VideoBandwidth PresentationChannel Weight
The available transmit video bandwidth is distributed on the main channel and presentation channel according to "MainChannel Weight" and "PresentationChannel Weight". If the main channel weight is 2 and the presentation channel weight is 1, then the main channel will use twice as much bandwidth as the presentation channel.

Requires user role: ADMIN

Value space: <1..10>
Range: 1 to 10.

Example: Conference 1 VideoBandwidth PresentationChannel Weight: 5

Conference [1..1] PacketLossResilience Mode
Set the packetloss resilience mode. This configuration will only take effect for calls initiated after the configuration is set.

Requires user role: ADMIN

Value space: <Off/On>
  Off: Disable the packetloss resilience.
  On: Enable the packetloss resilience.

Example: Conference 1 PacketLossResilience Mode: On

Conference [1..1] Presentation Policy
Control how the presentation service is to be performed.

Requires user role: ADMIN

Value space: <LocalRemote/LocalOnly>
  LocalRemote: The presentation will be shown locally and sent to remote side.
  LocalOnly: The presentation will only be shown locally.

Example: Conference 1 Presentation Policy: LocalRemote

Conference [1..1] Presentation RelayQuality
This configuration applies to video systems that are using the built-in MultiSite feature (optional) to host a multipoint video conference. When a remote user shares a presentation, the video system (codec) will transcode the presentation and send it to the other participants in the multipoint conference. The RelayQuality setting specifies whether to give priority to high frame rate or to high resolution for the presentation source.

Requires user role: ADMIN

Value space: <Motion/Sharpness>
  Motion: Gives the highest possible frame rate. Used when there is a need for higher frame rates, typically when there is a lot of motion in the picture.
  Sharpness: Gives the highest possible resolution. Used when you want the highest quality of detailed images and graphics.

Example: Conference 1 Presentation RelayQuality: Sharpness

Conference [1..1] Presentation OnPlacedOnHold
Define whether or not to continue sharing a presentation after the remote site has put you on hold.

Requires user role: ADMIN

Value space: <Stop/NoAction>
  Stop: The video system stops the presentation sharing when the remote site puts you on hold. The presentation will not continue when the call is resumed.
  NoAction: The video system will not stop the presentation sharing when put on hold. The presentation will not be shared while you are on hold, but it will continue automatically when the call is resumed.

Example: Conference 1 Presentation OnPlacedOnHold: NoAction
Conference [1..1] Multipoint Mode

Define how the video system handles multipoint video conferences. Basically there are two ways: The video system can use its built-in MultiSite feature (optional), or it can rely on the MultiWay network solution. MultiWay requires that your video network includes an external Multipoint control unit (MCU). The MultiSite feature allows up to four participants (yourself included) plus one additional audio call. An External MCU may let you set up conferences with many participants.

Requires user role: ADMIN

Value space: <Auto/Off/MultiSite/MultiWay>

Auto: If a MultiWay address is specified in the NetworkServices Multiway Address setting, MultiWay takes priority over MultiSite. If neither MultiWay nor MultiSite is available, the multipoint mode is set to Off automatically.

Off: Multipoint conferences are not allowed.

MultiSite: Use MultiSite for multipoint conferences. If MultiSite is chosen when the MultiSite feature is not available, the Multipoint Mode will be set to Off.

MultiWay: Use MultiWay for multipoint conferences. The Multipoint Mode will be set to Off automatically if the MultiWay service is unavailable, for example when a server address is not specified in the NetworkServices MultiWay Address setting.

Example: Conference 1 Multipoint Mode: Auto

Conference [1..1] IncomingMultisiteCall Mode

Select whether or not to allow incoming calls when already in a call/conference.

Requires user role: ADMIN

Value space: <Allow/Deny>

Allow: You will be notified when someone calls you while you are already in a call. You can accept the incoming call or not. The ongoing call may be put on hold while answering the incoming call; or you may merge the calls (requires MultiSite or MultiWay support).

Deny: An incoming call will be rejected if you are already in a call. You will not be notified about the incoming call. However, the call will appear as a missed call in the call history list.

Example: Conference 1 IncomingMultisiteCall Mode: Allow
FacilityService settings

FacilityService Service [1..5] Type
Up to five different facility services can be supported simultaneously. With this setting you can select what kind of services they are.

A facility service is not available unless both the FacilityService Service Name and the FacilityService Service Number settings are properly set.

Only FacilityService Service 1 with Type Helpdesk is available on the Touch controller. Facility services are not available when using the remote control and on-screen menu.

Requires user role: ADMIN

Value space: <Other/Concierge/Helpdesk/Emergency/Security/Catering/Transportation>

Other: Select this option for services not covered by the other options.
Concierge: Select this option for concierge services.
Helpdesk: Select this option for helpdesk services.
Emergency: Select this option for emergency services.
Security: Select this option for security services.
Catering: Select this option for catering services.
Transportation: Select this option for transportation services.

Example: FacilityService Service 1 Type: Helpdesk

FacilityService Service [1..5] Name
Set the name of each facility service. Up to five different facility services are supported.

A facility service is not available unless both the FacilityService Service Name and the FacilityService Service Number settings are properly set.

Only FacilityService Service 1 is available on the Touch controller, and its Name is used on the facility service call button. Facility services are not available when using the remote control and on-screen menu.

Requires user role: ADMIN

Value space: <S: 0, 255>

Format: String with a maximum of 255 characters.

Example: FacilityService Service 1 Name: ""

FacilityService Service [1..5] CallType
Set the call type for each facility service. Up to five different facility services are supported.

A facility service is not available unless both the FacilityService Service Name and the FacilityService Service Number settings are properly set.

Only FacilityService Service 1 is available on the Touch controller. Facility services are not available when using the remote control and on-screen menu.

Requires user role: ADMIN

Value space: <Video/Audio>

Video: Select this option for video calls.
Audio: Select this option for audio calls.

Example: FacilityService Service 1 CallType: Video
GPIO settings

GPIO Pin [1..4] Mode

NOTE: This command is not supported on Codec C40.

The four GPIO pins are configured individually. The state can be retrieved by "xStatus GPIO Pin [1..4] State". The default pin state is High (+12 V). When activated as output, they are set to 0 V. To activate them as input, they must be pulled down to 0 V.

Requires user role: ADMIN

Value space: <InputNoAction/OutputManualState/OutputInCall/OutputMicrophonesMuted/OutputPresentationOn/OutputAllCallsEncrypted/OutputStandbyActive/InputMuteMicrophones>

- **InputNoAction**: The pin state can be set, but no operation is performed.
- **OutputManualState**: The pin state can be set by "xCommand GPIO ManualState Set PinX: <High/Low>" (to +12 V or 0 V, respectively).
- **OutputInCall**: The pin is activated when in call, deactivated when not in call.
- **OutputMicrophonesMuted**: The pin is activated when microphones are muted, deactivated when not muted.
- **OutputPresentationOn**: The pin is activated when presentation is active, deactivated when presentation is not active.
- **OutputAllCallsEncrypted**: The pin is activated when all calls are encrypted, deactivated when one or more calls are not encrypted.
- **OutputStandbyActive**: The pin is activated when the system is in standby mode, deactivated when no longer in standby.
- **InputMuteMicrophones**: When the pin is activated (0 V), the microphones will be muted. When deactivated (+ 12 V), the microphones are unmuted.

Example: GPIO Pin 1 Mode: InputNoAction
H323 settings

H323 NAT Mode
The firewall traversal technology creates a secure path through the firewall barrier, and enables
proper exchange of audio/video data when connected to an external video conferencing
system (when the IP traffic goes through a NAT router). NOTE: NAT does not work in
conjunction with gatekeepers.

Requires user role: ADMIN

Value space: <Auto/Off/On>

Auto: The system will determine if the “NAT Address” or the real IP-address should be used
in signalling. This is done to make it possible to place calls to endpoints on the LAN as well
as endpoints on the WAN.

Off: The system will signal the real IP Address.

On: The system will signal the configured “NAT Address” instead of its own IP-address in
Q.931 and H.245. The NAT Server Address will be shown in the startup-menu as: “My IP
Address: 10.0.0.1”.

Example: H323 NAT Mode: Off

H323 NAT Address
Enter the external/global IP-address to the router with NAT support. Packets sent to the router
will then be routed to the system.

In the router, the following ports must be routed to the system's IP-address:
* Port 1720
* Port 5555-5574
* Port 2326-2485

Requires user role: ADMIN

Value space: <S: 0, 64>

Format: String with a maximum of 64 characters.

Example: H323 NAT Address: **

H323 Profile [1..1] Authentication Mode
Set the authenticatin mode for the H.323 profile.

Requires user role: ADMIN

Value space: <Off/On>

Off: If the H.323 Gatekeeper Authentication Mode is set to Off the system will not try to
authenticate itself to a H.323 Gatekeeper, but will still try a normal registration.

On: If the H.323 Gatekeeper Authentication Mode is set to On and a H.323 Gatekeeper
indicates that it requires authentication, the system will try to authenticate itself to the
gatekeeper. NOTE: Requires the Authentication LoginName and Authentication Password to
be defined on both the codec and the Gatekeeper.

Example: H323 Profile 1 Authentication Mode: Off

H323 Profile [1..1] Authentication LoginName

The system sends the Authentication Login Name and the Authentication Password to a H.323
Gatekeeper for authentication. The authentication is a one way authentication from the codec
to the H.323 Gatekeeper, i.e. the system is authenticated to the gatekeeper. If the H.323
Gatekeeper indicates that no authentication is required, the system will still try to register.
NOTE: Requires the H.323 Gatekeeper Authentication Mode to be enabled.

Requires user role: ADMIN

Value space: <S: 0, 50>

Format: String with a maximum of 50 characters.

Example: H323 Profile 1 Authentication LoginName: **
H323 Profile [1..1] Authentication Password

The system sends the Authentication Login Name and the Authentication Password to a H.323 Gatekeeper for authentication. The authentication is a one way authentication from the codec to the H.323 Gatekeeper, i.e. the system is authenticated to the gatekeeper. If the H.323 Gatekeeper indicates that no authentication is required, the system will still try to register.

NOTE: Requires the H.323 Gatekeeper Authentication Mode to be enabled.

Requires user role: ADMIN

Value space: <S: 0, 50>

Format: String with a maximum of 50 characters.

Example: H323 Profile 1 Authentication Password: ""

H323 Profile [1..1] CallSetup Mode

The H.323 Call Setup Mode defines whether to use a Gatekeeper or Direct calling when establishing H323 calls.

NOTE: Direct H.323 calls can be made even though the H.323 Call Setup Mode is set to Gatekeeper.

Requires user role: ADMIN

Value space: <Direct/Gatekeeper>

Direct: An IP-address must be used when dialing in order to make the H323 call.

Gatekeeper: The system will use a Gatekeeper to make a H.323 call. When selecting this option the H323 Profile Gatekeeper Address and H323 Profile Gatekeeper Discovery settings must also be configured.

Example: H323 Profile 1 CallSetup Mode: Gatekeeper

H323 Profile [1..1] Gatekeeper Discovery

Determine how the system shall register to a H.323 Gatekeeper.

Requires user role: ADMIN

Value space: <Manual/Auto>

Manual: The system will use a specific Gatekeeper identified by the Gatekeeper’s IP-address.

Auto: The system will automatically try to register to any available Gatekeeper. If a Gatekeeper responds to the request sent from the codec within 30 seconds this specific Gatekeeper will be used. This requires that the Gatekeeper is in auto discovery mode as well. If no Gatekeeper responds, the system will not use a Gatekeeper for making H.323 calls and hence an IP-address must be specified manually.

Example: H323 Profile 1 Gatekeeper Discovery: Manual

H323 Profile [1..1] Gatekeeper Address

Enter the IP address of the Gatekeeper. NOTE: Requires the H.323 Call Setup Mode to be set to Gatekeeper and the Gatekeeper Discovery to be set to Manual.

Requires user role: ADMIN

Value space: <S: 0, 255>

Format: Only the valid IP address format is accepted. An IP address that contains letters (192.a.2.0) or unvalid IP addresses (192.0.1234.0) will be rejected.

Example: H323 Profile 1 Gatekeeper Address: "192.0.2.0"

H323 Profile [1..1] H323Alias E164

The H.323 Alias E.164 defines the address of the system, according to the numbering plan implemented in the H.323 Gatekeeper. The E.164 alias is equivalent to a telephone number, sometimes combined with access codes.

Requires user role: ADMIN

Value space: <S: 0, 30>

Format: Compact string with a maximum of 30 characters. Valid characters are 0-9, * and #.

Example: H323 Profile 1 H323Alias E164: "90550092"
H323 Profile [1..1] H323Alias ID

Lets you specify the H.323 Alias ID which is used to address the system on a H.323 Gatekeeper and will be displayed in the call lists. Example: "firstname.lastname@company.com", "My H.323 Alias ID"

Requires user role: ADMIN

Value space: <S: 0, 49>

Format: String with a maximum of 49 characters.

Example: H323 Profile 1 H323Alias ID: "firstname.lastname@company.com"

H323 Profile [1..1] PortAllocation

The H.323 Port Allocation setting affects the H.245 port numbers used for H.323 call signalling.

Requires user role: ADMIN

Value space: <Dynamic/Static>

Dynamic: The system will allocate which ports to use when opening a TCP connection. The reason for doing this is to avoid using the same ports for subsequent calls, as some firewalls consider this as a sign of attack. When Dynamic is selected, the H.323 ports used are from 11000 to 20999. Once 20999 is reached they restart again at 11000. For RTP and RTCP media data, the system is using UDP ports in the range 2326 to 2487. Each media channel is using two adjacent ports, i.e. 2330 and 2331 for RTP and RTCP respectively. The ports are automatically selected by the system within the given range. Firewall administrators should not try to deduce which ports are used when, as the allocation schema within the mentioned range may change without any further notice.

Static: When set to Static the ports are given within a static predefined range [5555-6555].

Example: H323 Profile 1 PortAllocation: Dynamic
# Network settings

## Network [1..1] IPStack
Select which internet protocols the system will support.

**Note:** Restart the system after changing this setting.

**Requires user role:** ADMIN  
**Value space:** &lt;IPv4/IPv6&gt;  
- **IPv4:** IP version 4 is used for the SIP and H323 calls.  
- **IPv6:** IP version 6 is used for the SIP and H323 calls.

**Example:** Network 1 IPStack: IPv4

## Network [1..1] Assignment
Define how the system will obtain its IPv4 address, subnet mask and gateway address. This setting only applies to systems on IPv4 networks.

**Requires user role:** ADMIN  
**Value space:** &lt;Static/DHCP&gt;  
- **Static:** The addresses must be configured manually using the Network IPv4 Address, Network IPv4 Gateway and Network IPv4 SubnetMask settings (static addresses).  
- **DHCP:** The system addresses are automatically assigned by the DHCP server.

**Example:** Network 1 Assignment: DHCP

## Network [1..1] IPv4 Address
Enter the static IPv4 network address for the system. This setting is only applicable when Network Assignment is set to Static.

**Requires user role:** ADMIN  
**Value space:** &lt;S: 0, 64&gt;  
- **Format:** Only the valid IPv4 address format is accepted.

**Example:** Network 1 IPv4 Address: "192.0.2.0"

## Network [1..1] IPv4 Gateway
Define the IPv4 network gateway. This setting is only applicable when the Network Assignment is set to Static.

**Requires user role:** ADMIN  
**Value space:** &lt;S: 0, 64&gt;  
- **Format:** Only the valid IPv4 address format is accepted.

**Example:** Network 1 IPv4 Gateway: "192.0.2.0"

## Network [1..1] IPv6 Assignment
Define how the system will obtain its IPv6 address and the default gateway address. This setting only applies to systems on IPv6 networks.

**Requires user role:** ADMIN  
**Value space:** &lt;Static/DHCPv6/Autoconf&gt;  
- **Static:** The codec and gateway IP-addresses must be configured manually using the Network IPv6 Address and Network IPv6 Gateway settings. The options, for example NTP and DNS server addresses, must either be set manually or obtained from a DHCPv6 server. The Network IPv6 DHCPOptions setting determines which method to use.  
- **DHCPv6:** All IPv6 addresses, including options, will be obtained from a DHCPv6 server. See RFC3315 for a detailed description. The Network IPv6 DHCPOptions setting will be ignored.  
- **Autoconf:** Enable IPv6 stateless autoconfiguration of the IPv6 network interface. See RFC4862 for a detailed description. The options, for example NTP and DNS server addresses, must either be set manually or obtained from a DHCPv6 server. The Network IPv6 DHCPOptions setting determines which method to use.

**Example:** Network 1 IPv6 Assignment: Autoconf

## Network [1..1] IPv6 SubnetMask
Define the IPv6 network subnet mask. This setting is only applicable when the Network Assignment is set to Static.

**Requires user role:** ADMIN  
**Value space:** &lt;S: 0, 64&gt;  
- **Format:** Only the valid IPv6 address format is accepted.

**Example:** Network 1 IPv6 SubnetMask: "255.255.255.0"
Network [1..1] IPv6 Address
Enter the static IPv6 network address for the system. This setting is only applicable when the Network IPv6 Assignment is set to Static.

Requires user role: ADMIN
Value space: <S: 0, 64>
Format: Only the valid IPv6 address format is accepted.

Network [1..1] IPv6 Gateway
Define the IPv6 network gateway address. This setting is only applicable when the Network IPv6 Assignment is set to Static.

Requires user role: ADMIN
Value space: <S: 0, 64>
Format: Only the valid IPv6 address format is accepted.

Network [1..1] IPv6 DHCPOptions
Retrieve a set of DHCP options, for example NTP and DNS server addresses, from a DHCPv6 server.

Requires user role: ADMIN
Value space: <Off/On>

Off: Disable the retrieval of DHCP options from a DHCPv6 server.
On: Enable the retrieval of a selected set of DHCP options from a DHCPv6 server.

Example: Network 1 IPv6 DHCPOptions: On

Network [1..1] DNS Domain Name
DNS Domain Name is the default domain name suffix which is added to unqualified names. Example: If the DNS Domain Name is "company.com" and the name to lookup is "MyVideoSystem", this will result in the DNS lookup "MyVideoSystem.company.com".

Requires user role: ADMIN
Value space: <S: 0, 64>

Format: String with a maximum of 64 characters.

Example: Network 1 DNS Domain Name: ""

Network [1..1] DNS Server [1..3] Address
Define the network addresses for DNS servers. Up to 3 addresses may be specified. If the network addresses are unknown, contact your administrator or Internet Service Provider.

Requires user role: ADMIN
Value space: <S: 0, 64>

Format: String with a maximum of 64 characters.

Example: Network 1 DNS Server 1 Address: ""

Network [1..1] QoS Mode
The QoS (Quality of Service) is a method which handles the priority of audio, video and data in the network. The QoS settings must be supported by the infrastructure. Diffserv (Differentiated Services) is a computer networking architecture that specifies a simple, scalable and coarse-grained mechanism for classifying, managing network traffic and providing QoS priorities on modern IP networks.

Requires user role: ADMIN
Value space: <Off/Diffserv>

Off: No QoS method is used.
Diffserv: When you set the QoS Mode to Diffserv, the Network QoS Diffserv Audio, Network QoS Diffserv Video, Network QoS Diffserv Data, Network QoS Diffserv Signalling, Network QoS Diffserv ICMPv6 and Network QoS Diffserv NTP settings are used to prioritize packets.

Example: Network 1 QoS Mode: Diffserv
Network [1..1] QoS Diffserv Audio

Note: This setting will only take effect if Network QoS Mode is set to Diffserv.
Define which priority Audio packets should have in the IP network.
The priority for the packets ranges from 0 to 63 – the higher the number, the higher the priority.
The recommended class for Audio is CS4, which equals the decimal value 32. If in doubt, contact your network administrator.
The priority set here might be overridden when packets are leaving the network controlled by the local network administrator.
Requires user role: ADMIN
Value space: <0..63>
  Range: Select a value between 0 to 63 – the higher the number, the higher the priority. The default value is 0 (best effort).
Example: Network 1 QoS Diffserv Audio: 0

Network [1..1] QoS Diffserv Video

Note: This setting will only take effect if Network QoS Mode is set to Diffserv.
Define which priority Video packets should have in the IP network. The packets on the presentation channel (shared content) are also in the Video packet category.
The priority for the packets ranges from 0 to 63 – the higher the number, the higher the priority.
The recommended class for Video is CS4, which equals the decimal value 32. If in doubt, contact your network administrator.
The priority set here might be overridden when packets are leaving the network controlled by the local network administrator.
Requires user role: ADMIN
Value space: <0..63>
  Range: Select a value between 0 to 63 – the higher the number, the higher the priority. The default value is 0 (best effort).
Example: Network 1 QoS Diffserv Video: 0

Network [1..1] QoS Diffserv Data

Note: This setting will only take effect if Network QoS Mode is set to Diffserv.
Define which priority Data packets should have in the IP network.
The priority for the packets ranges from 0 to 63 – the higher the number, the higher the priority.
The recommended value for Data is 0, which means best effort. If in doubt, contact your network administrator.
The priority set here might be overridden when packets are leaving the network controlled by the local network administrator.
Requires user role: ADMIN
Value space: <0..63>
  Range: Select a value between 0 to 63 – the higher the number, the higher the priority. The default value is 0 (best effort).
Example: Network 1 QoS Diffserv Data: 0

Network [1..1] QoS Diffserv Signalling

Note: This setting will only take effect if Network QoS Mode is set to Diffserv.
Define which priority Signalling packets that are deemed critical (time-sensitive) for the real-time operation should have in the IP network.
The priority for the packets ranges from 0 to 63 – the higher the number, the higher the priority.
The recommended class for Signalling is CS3, which equals the decimal value 24. If in doubt, contact your network administrator.
The priority set here might be overridden when packets are leaving the network controlled by the local network administrator.
Requires user role: ADMIN
Value space: <0..63>
  Range: Select a value between 0 to 63 – the higher the number, the higher the priority. The default value is 0 (best effort).
Example: Network 1 QoS Diffserv Signalling: 0
Network [1..1] QoS Diffserv ICMPv6

Note: This setting will only take effect if Network QoS Mode is set to Diffserv.

Define which priority ICMPv6 packets should have in the IP network.

The priority for the packets ranges from 0 to 63 - the higher the number, the higher the priority. The recommended value for ICMPv6 is 0, which means best effort. If in doubt, contact your network administrator.

The priority set here might be overridden when packets are leaving the network controlled by the local network administrator.

Requires user role: ADMIN

Value space: <0..63>

Range: Select a value between 0 to 63 - the higher the number, the higher the priority. The default value is 0 (best effort).

Example: Network 1 QoS Diffserv ICMPv6: 0

Network [1..1] QoS Diffserv NTP

Note: This setting will only take effect if Network QoS Mode is set to Diffserv.

Define which priority NTP packets should have in the IP network.

The priority for the packets ranges from 0 to 63 - the higher the number, the higher the priority. The recommended value for NTP is 0, which means best effort. If in doubt, contact your network administrator.

The priority set here might be overridden when packets are leaving the network controlled by the local network administrator.

Requires user role: ADMIN

Value space: <0..63>

Range: Select a value between 0 to 63 - the higher the number, the higher the priority. The default value is 0 (best effort).

Example: Network 1 QoS Diffserv NTP: 0

Network [1..1] IEEE8021X Mode

The system can be connected to an IEEE 802.1X LAN network, with a port-based network access control that is used to provide authenticated network access for Ethernet networks.

Requires user role: ADMIN

Value space: <Off/On>

Off: The 802.1X authentication is disabled (default).

On: The 802.1X authentication is enabled.

Example: Network 1 IEEE8021X Mode: Off

Network [1..1] IEEE8021X TlsVerify

Verification of the server-side certificate of an IEEE802.1x connection against the certificates in the local CA-list when TLS is used. The CA-list must be uploaded to the video system.

This setting takes effect only when Network [1..1] IEEE8021X Eap Tls is enabled (On).

Requires user role: ADMIN

Value space: <Off/On>

Off: When set to Off, TLS connections are allowed without verifying the server-side X.509 certificate against the local CA-list. This should typically be selected if no CA-list has been uploaded to the codec.

On: When set to On, the server-side X.509 certificate will be validated against the local CA-list for all TLS connections. Only servers with a valid certificate will be allowed.

Example: xConfiguration Network 1 IEEE8021X TlsVerify: Off

Network [1..1] IEEE8021X UseClientCertificate

Authentication using a private key/certificate pair during an IEEE802.1x connection. The authentication X.509 certificate must be uploaded to the video system.

Requires user role: ADMIN

Value space: <Off/On>

Off: When set to Off client-side authentication is not used (only server-side).

On: When set to On the client (video system) will perform a mutual authentication TLS handshake with the server.

Example: Network 1 IEEE8021X UseClientCertificate: Off
Network [1..1] IEEE8021X Identity

The 802.1X Identity is the user name needed for 802.1X authentication.

Requires user role: ADMIN

Value space: <S: 0, 64>

Format: String with a maximum of 64 characters.

Example: Network 1 IEEE8021X Identity: ""

Network [1..1] IEEE8021X Password

The 802.1X Password is the password needed for 802.1X authentication.

Requires user role: ADMIN

Value space: <S: 0, 32>

Format: String with a maximum of 32 characters.

Example: Network 1 IEEE8021X Password: ""

Network [1..1] IEEE8021X AnonymousIdentity

The 802.1X Anonymous ID string is to be used as unencrypted identity with EAP (Extensible Authentication Protocol) types that support different tunneled identity, like EAP-PEAP and EAP-TTLS. If set, the anonymous ID will be used for the initial (unencrypted) EAP Identity Request.

Requires user role: ADMIN

Value space: <S: 0, 64>

Format: String with a maximum of 64 characters.

Example: Network 1 IEEE8021X AnonymousIdentity: ""

Network [1..1] IEEE8021X Eap Md5

Set the Md5 (Message-Digest Algorithm 5) mode. This is a Challenge Handshake Authentication Protocol that relies on a shared secret. Md5 is a Weak security.

Requires user role: ADMIN

Value space: <Off/On>

Off: The EAP-MD5 protocol is disabled.
On: The EAP-MD5 protocol is enabled (default).

Example: Network 1 IEEE8021X Eap Md5: On

Network [1..1] IEEE8021X Eap Ttls

Set the TTLS (Tunneled Transport Layer Security) mode. Authenticates LAN clients without the need for client certificates. Developed by Funk Software and Ceritcom. Usually supported by Agere Systems, Proxim and Avaya.

Requires user role: ADMIN

Value space: <Off/On>

Off: The EAP-TTLS protocol is disabled.
On: The EAP-TTLS protocol is enabled (default).

Example: Network 1 IEEE8021X Eap Ttls: On

Network [1..1] IEEE8021X Eap Tls

Enable or disable the use of EAP-TLS (Transport Layer Security) for IEEE802.1x connections. The EAP-TLS protocol, defined in RFC5216, is considered one of the most secure EAP standards. LAN clients are authenticated using client certificates.

Requires user role: ADMIN

Value space: <Off/On>

Off: The EAP-TLS protocol is disabled.
On: The EAP-TLS protocol is enabled (default).

Example: Network 1 IEEE8021X Eap Tls: On

Network [1..1] IEEE8021X Eap Peap

Set the Peap (Protected Extensible Authentication Protocol) mode. Authenticates LAN clients without the need for client certificates. Developed by Microsoft, Cisco and RSA Security.

Requires user role: ADMIN

Value space: <Off/On>

Off: The EAP-PEAP protocol is disabled.
On: The EAP-PEAP protocol is enabled (default).

Example: Network 1 IEEE8021X Eap Peap: On
Network [1..1] MTU
Set the Ethernet MTU (Maximum Transmission Unit).

Requires user role: ADMIN

Value space: <576..1500>
  Range: Select a value from 576 to 1500 bytes.

Example: Network 1 MTU: 1500

Network [1..1] Speed
Set the Ethernet link speed.

NOTE: If running older software versions than TC6.0, restart the system for any change to this setting to take effect.

Requires user role: ADMIN

Value space: <Auto/10half/10full/100half/100full/1000full>
  Auto: Autonegotiate link speed.
  10half: Force link to 10 Mbps half-duplex.
  10full: Force link to 10 Mbps full-duplex.
  100half: Force link to 100 Mbps half-duplex.
  100full: Force link to 100 Mbps full-duplex.
  1000full: Force link to 1 Gbps full-duplex.

Example: Network 1 Speed: Auto

Network [1..1] TrafficControl Mode
Set the network traffic control mode to decide how to control the video packets transmission speed.

Requires user role: ADMIN

Value space: <Off/On>
  Off: Transmit video packets at link speed.
  On: Transmit video packets at maximum 20 Mbps. Can be used to smooth out bursts in the outgoing network traffic.

Example: Network 1 TrafficControl: On

Network [1..1] RemoteAccess Allow
Filter IP addresses for access to ssh/telnet/HTTP/HTTPS.

Requires user role: ADMIN

Value space: <S: 0, 255>
  Format: String with a maximum of 255 characters, comma separated IP addresses or IP range.

Example: Network 1 RemoteAccess Allow: "192.168.1.231, 192.168.1.182"

Network [1..1] VLAN Voice Mode
Set the VLAN voice mode. The VLAN Voice Mode will be set to Auto automatically if you choose Cisco UCM (Cisco Unified Communications Manager) as provisioning infrastructure via the Provisioning Wizard on the Touch controller.

Requires user role: ADMIN

Value space: <Auto/Manual/Off>
  Auto: The Cisco Discovery Protocol (CDP), if available, assigns an id to the voice VLAN. If CDP is not available, VLAN is not enabled.
  Manual: The VLAN ID is set manually using the Network VLAN Voice VlanId setting. If CDP is available, the manually set value will be overruled by the value assigned by CDP.
  Off: VLAN is not enabled.

Example: Network 1 VLAN Voice Mode: Off

Network [1..1] VLAN Voice VlanId
Set the VLAN voice ID. This setting will only take effect if VLAN Voice Mode is set to Manual.

Requires user role: ADMIN

Value space: <1..4094>
  Range: Select a value from 1 to 4094.

Example: Network 1 VLAN Voice VlanId: 1
NetworkPort settings

Define if the network port 2 shall be enabled for direct pairing with a Cisco TelePresence Touch controller.

NOTE: Restart the system for any change to this setting to take effect.

Requires user role: ADMIN

Value space: <Inactive/DirectPairing>
- Inactive: Set the NetworkPort 2 to Inactive when no device is connected.
- DirectPairing: Set the NetworkPort 2 to DirectPairing when you have a Cisco TelePresence Touch controller connected to the port. This will enable for direct pairing between the Touch controller and the codec.

Example: NetworkPort 2 Mode: Inactive
NetworkServices settings

NetworkServices XMLAPI Mode
Enable or disable the video system's XML API. For security reasons this may be disabled. Disabling the XML API will limit the remote manageability with for example TMS, which no longer will be able to connect to the video system.

Requires user role: ADMIN
Value space: <Off/On>
Off: The XML API is disabled.
On: The XML API is enabled (default).
Example: NetworkServices XMLAPI Mode: On

NetworkServices MultiWay Address
The MultiWay address must be equal to the Conference Factory Alias, as configured on the Video Communication Server. The Multiway™ conferencing enables video endpoint users to introduce a 3rd party into an existing call.

Multiway™ can be used in the following situations:
1) When you want to add someone else in to your existing call.
2) When you are called by a 3rd party while already in a call and you want to include that person in the call.

Requirements: The Codec C60/C40 must run software version TC4.0 (or later), Video Communication Server (VCS) version X5 (or later) and Codian MCU version 3.1 (or later). Video systems invited to join the Multiway™ conference must support the H.323 routeToMC facility message if in an H.323 call, or SIP REFER message if in a SIP call.

Requires user role: ADMIN
Value space: <S: 0, 255>
Format: String with a maximum of 255 characters.
Example: NetworkServices MultiWay Address: "h323:multiway@company.com"

NetworkServices MultiWay Protocol
Determine the protocol to be used for MultiWay calls.

Requires user role: ADMIN
Value space: <Auto/H323/Sip>
Auto: The system will select the protocol for MultiWay calls.
H323: The H323 protocol will be used for MultiWay calls.
Sip: The SIP protocol will be used for MultiWay calls.
Example: NetworkServices MultiWay Protocol: Auto

NetworkServices H323 Mode
Determine whether the system should be able to place and receive H.323 calls or not.

Requires user role: ADMIN
Value space: <Off/On>
Off: Disable the possibility to place and receive H.323 calls.
On: Enable the possibility to place and receive H.323 calls (default).
Example: NetworkServices H323 Mode: On

NetworkServices HTTP Mode
Set the HTTP mode to enable/disable access to the system through a web browser. The web interface is used for system management, call management such as call transfer, diagnostics and software uploads.
NOTE: Restart the system for any change to this setting to take effect.

Requires user role: ADMIN
Value space: <Off/On>
Off: The HTTP protocol is disabled.
On: The HTTP protocol is enabled.
Example: NetworkServices HTTP Mode: On
NetworkServices HTTPS Mode
HTTPS is a web protocol that encrypts and decrypts user page requests as well as the pages that are returned by the web server.
NOTE: Restart the system for any change to this setting to take effect.
Requires user role: ADMIN
Value space: <Off/On>
   Off: The HTTPS protocol is disabled.
   On: The HTTPS protocol is enabled.
Example: NetworkServices HTTPS Mode: On

NetworkServices HTTPS VerifyServerCertificate
When the video system connects to an external HTTPS server (like a phone book server or an external manager), this server will present a certificate to the video system to identify itself.
Requires user role: ADMIN
Value space: <Off/On>
   Off: Do not verify server certificates.
   On: Requires the system to verify that the server certificate is signed by a trusted Certificate Authority (CA). This requires that a list of trusted CAs are uploaded to the system in advance.
Example: NetworkServices HTTPS VerifyServerCertificate: Off

NetworkServices HTTPS VerifyClientCertificate
When the video system connects to a HTTPS client (like a web browser), the client can be asked to present a certificate to the video system to identify itself.
Requires user role: ADMIN
Value space: <Off/On>
   Off: Do not verify client certificates.
   On: Requires the client to present a certificate that is signed by a trusted Certificate Authority (CA). This requires that a list of trusted CAs are uploaded to the system in advance.
Example: NetworkServices HTTPS VerifyClientCertificate: Off

NetworkServices HTTPS OCSP Mode
Define the support for OCSP (Online Certificate Status Protocol) responder services. The OCSP feature allows users to enable OCSP instead of certificate revocation lists (CRLs) to check the certificate status.
For any outgoing HTTPS connection, the OCSP responder is queried of the status. If the corresponding certificate has been revoked, then the HTTPS connection will not be used.
Requires user role: ADMIN
Value space: <Off/On>
   Off: Disable OCSP support.
   On: Enable OCSP support.
Example: NetworkServices HTTPS OCSP Mode: Off

NetworkServices HTTPS OCSP URL
Specify the URL of the OCSP responder (server) that will be used to check the certificate status.
Requires user role: ADMIN
Value space: <S: 0, 255>
   Format: String with a maximum of 255 characters.
Example: NetworkServices HTTPS OCSP URL: "http://ocspserver.company.com:81"
NetworkServices NTP Mode

The Network Time Protocol (NTP) is used to synchronize the time of the system to a reference time server. The time server will subsequently be queried every 24th hour for time updates. The time will be displayed on the top of the screen. The system will use the time to timestamp messages transmitted to Gatekeepers or Border Controllers requiring H.235 authentication. It is also used for timestamping Placed Calls, Missed Calls and Received Calls.

Requires user role: ADMIN

Value space: <Auto/Off/Manual>

Auto: The system will use the NTP server, by which address is supplied from the DHCP server in the network. If no DHCP server is used, or the DHCP server does not provide the system with a NTP server address, the system will use the static defined NTP server address specified by the user.

Off: The system will not use an NTP server.

Manual: The system will always use the static defined NTP server address specified by the user.

Example: NetworkServices NTP Mode: Manual

NetworkServices NTP Address

Enter the NTP Address to define the network time protocol server address. This address will be used if NTP Mode is set to Manual, or if set to Auto and no address is supplied by a DHCP server.

Requires user role: ADMIN

Value space: <S: 0, 64>

Format: String with a maximum of 64 characters.

Example: NetworkServices NTP Address: "1.ntp.tandberg.com"

NetworkServices SIP Mode

Determine whether the system should be able to place and receive SIP calls or not.

Requires user role: ADMIN

Value space: <Off/On>

Off: Disable the possibility to place and receive SIP calls.

On: Enable the possibility to place and receive SIP calls (default).

Example: NetworkServices SIP Mode: On

NetworkServices SNMP Mode

SNMP (Simple Network Management Protocol) is used in network management systems to monitor network-attached devices (routers, servers, switches, projectors, etc) for conditions that warrant administrative attention. SNMP exposes management data in the form of variables on the managed systems, which describe the system configuration. These variables can then be queried (set to ReadOnly) and sometimes set (set to ReadWrite) by managing applications.

Requires user role: ADMIN

Value space: <Off/ReadOnly/ReadWrite>

Off: Disable the SNMP network service.

ReadOnly: Enable the SNMP network service for queries only.

ReadWrite: Enable the SNMP network service for both queries and commands.

Example: NetworkServices SNMP Mode: ReadWrite

NetworkServices SNMP Host [1..3] Address

Enter the address of up to three SNMP Managers. The system's SNMP Agent (in the codec) responds to requests from SNMP Managers (a PC program etc.), for example about system location and system contact. SNMP traps are not supported.

Requires user role: ADMIN

Value space: <S: 0, 64>

Format: String with a maximum of 64 characters.

Example: NetworkServices SNMP Host 1 Address: ""

NetworkServices SNMP CommunityName

Enter the name of the Network Services SNMP Community. SNMP Community names are used to authenticate SNMP requests. SNMP requests must have a password (case sensitive) in order to receive a response from the SNMP Agent in the codec. The default password is "public". If you have the Cisco TelePresence Management Suite (TMS) you must make sure the same SNMP Community is configured there too. NOTE: The SNMP Community password is case sensitive.

Requires user role: ADMIN

Value space: <S: 0, 50>

Format: String with a maximum of 50 characters.

Example: NetworkServices SNMP CommunityName: "public"
NetworkServices SNMP SystemContact
Enter the name of the Network Services SNMP System Contact.
Requires user role: ADMIN
Value space: <S: 0, 50>
  Format: String with a maximum of 50 characters.
Example: NetworkServices SNMP SystemContact: ""  

NetworkServices SNMP SystemLocation
Enter the name of the Network Services SNMP System Location.
Requires user role: ADMIN
Value space: <S: 0, 50>
  Format: String with a maximum of 50 characters.
Example: NetworkServices SNMP SystemLocation: ""  

NetworkServices SSH Mode
SSH (or Secure Shell) protocol can provide secure encrypted communication between the codec and your local computer.
Requires user role: ADMIN
Value space: <Off/On>
  Off: The SSH protocol is disabled.
  On: The SSH protocol is enabled.
Example: NetworkServices SSH Mode: On

NetworkServices SSH AllowPublicKey
Secure Shell (SSH) public key authentication can be used to access the codec.
Requires user role: ADMIN
Value space: <Off/On>
  Off: The SSH public key is not allowed.
  On: The SSH public key is allowed.
Example: NetworkServices SSH AllowPublicKey: On

NetworkServices Telnet Mode
Telnet is a network protocol used on the Internet or Local Area Network (LAN) connections.
Requires user role: ADMIN
Value space: <Off/On>
  Off: The Telnet protocol is disabled. This is the factory setting.
  On: The Telnet protocol is enabled.
Example: NetworkServices Telnet Mode: Off

NetworkServices CTMS Mode
This setting determines whether or not to allow multiparty conferences controlled by a Cisco TelePresence Multipoint Switch (CTMS).
Video systems running software TC5.0 or later are able to initiate or join non-encrypted multiparty conferences controlled by CTMS version 1.8 or later. Encrypted conferences are supported as from software versions TC6.0 and CTMS 1.9.1. Encryption is addressed in the NetworkServices CTMS Encryption setting.
Requires user role: ADMIN
Value space: <Off/On>
  Off: Multiparty conferencing via CTMS is prohibited.
  On: Multiparty conferencing via CTMS is allowed.
Example: NetworkServices CTMS Mode: On
NetworkServices CTMS Encryption

This setting indicates whether or not the video system supports encryption when participating in a multiparty meeting controlled by a Cisco TelePresence Multipoint Switch (CTMS).

CTMS allows three security settings for meetings: non-secure (not encrypted), best effort (encrypted if all participants support encryption, otherwise not encrypted) and secure (always encrypted).

Requires user role: ADMIN

Value space: <Off/BestEffort>

- Off: The video system does not allow encryption and therefore cannot participate in a secure CTMS meeting (encrypted). When participating in a best effort CTMS meeting, the meeting will be downgraded to non-secure (not encrypted).

- BestEffort: The video system can negotiate encryption parameters with CTMS and participate in a secure CTMS meeting (encrypted). Do not use this value if the CTMS version is older than 1.9.1.

Example: NetworkServices CTMS Encryption: Off
Phonebook settings

Phonebook Server [1..1] ID
Enter a name for the external phone book.

Requires user role: ADMIN
Value space: <S: 0, 64>
  Format: String with a maximum of 64 characters.
Example: Phonebook Server 1 ID: ""

Phonebook Server [1..1] Type
Select the phonebook server type.

Requires user role: ADMIN
Value space: <VCS/TMS/Callway/CUCM>

  VCS: Select VCS if the phonebook is located on the Cisco TelePresence Video Communication Server.
  TMS: Select TMS if the phonebook is located on the Cisco TelePresence Management Suite server.
  Callway: Select Callway if the phonebook is to be provided by the WebEx TelePresence subscription service (formerly called CallWay). Contact your WebEx TelePresence provider for more information.
  CUCM: Select CUCM if the phonebook is located on the Cisco Unified Communications Manager.

Example: Phonebook Server 1 Type: TMS

Phonebook Server [1..1] URL
Enter the address (URL) to the external phone book server.

Requires user role: ADMIN
Value space: <S: 0, 255>
  Format: String with a maximum of 255 characters.
Provisioning settings

Provisioning Connectivity
This setting controls how the device discovers whether it should request an internal or external configuration from the provisioning server.

Requires user role: ADMIN

Value space: <Internal/External/Auto>
- **Internal**: Request internal configuration.
- **External**: Request external configuration.
- **Auto**: Automatically discover using NAPTR queries whether internal or external configurations should be requested. If the NAPTR responses have the "e" flag, external configurations will be requested. Otherwise internal configurations will be requested.

Example: Provisioning Connectivity: Auto

Provisioning Mode
It is possible to configure a video system using a provisioning system (external manager). This allows video conferencing network administrators to manage many video systems simultaneously.

With this setting you choose which type of provisioning system to use. Provisioning can also be switched off. Contact your provisioning system provider/representative for more information.

Requires user role: ADMIN

Value space: <Off/TMS/VCS/CallWay/CUCM/Auto>
- **Off**: The video system will not be configured by a provisioning system.
- **TMS**: The video system will be configured using TMS (Cisco TelePresence Management System).
- **VCS**: Not applicable in this version.
- **Callway**: The video system will be configured using the WebEx TelePresence subscription service (formerly called Callway).
- **CUCM**: The video system will be configured using CUCM (Cisco Unified Communications Manager).
- **Auto**: The provisioning server will automatically be selected by the video system.

Example: Provisioning Mode: TMS

Provisioning LoginName
This is the user name part of the credentials used to authenticate the video system with the provisioning server. This setting must be used when required by the provisioning server. If Provisioning Mode is Callway (WebEx TelePresence), enter the video number.

Requires user role: ADMIN

Value space: <S: 0, 80>

Format: String with a maximum of 80 characters.

Example: Provisioning LoginName: ""

Provisioning Password
This is the password part of the credentials used to authenticate the video system with the provisioning server. This setting must be used when required by the provisioning server. If Provisioning Mode is Callway (WebEx TelePresence), enter the activation code.

Requires user role: ADMIN

Value space: <S: 0, 64>

Format: String with a maximum of 64 characters.

Example: Provisioning Password: ""

Provisioning HttpMethod
Select the HTTP method to be used for the provisioning.

Requires user role: ADMIN

Value space: <GET/POST>
- **GET**: Select GET when the provisioning server supports GET.
- **POST**: Select POST when the provisioning server supports POST.

Example: Provisioning HttpMethod: POST
Provisioning ExternalManager Address

Enter the IP Address or DNS name of the external manager / provisioning system. If an External Manager Address (and Path) is configured, the system will send a message to this address when starting up. When receiving this message the external manager / provisioning system can return configurations/commands to the unit as a result. When using CUCM or TMS provisioning, the DHCP server can be set up to provide the external manager address automatically (DHCP Option 242 for TMS, and DHCP Option 150 for CUCM). An address set in the Provisioning ExternalManager Address setting will override the address provided by DHCP.

Requires user role: ADMIN

Value space: <S: 0, 64>

Format: A valid IP address format or DNS name; a compact string with a maximum of 64 characters.

Example: Provisioning ExternalManager Address: ""

Provisioning ExternalManager Domain

Enter the SIP domain for the VCS provisioning server.

Requires user role: ADMIN

Value space: <S: 0, 64>

Format: String with a maximum of 64 characters.

Example: Provisioning ExternalManager Domain: "any.domain.com"

Provisioning ExternalManager Protocol

Determine whether to use secure management or not.

Requires user role: ADMIN

Value space: <HTTP/HTTPS>

HTTP: Set to HTTP to disable secure management. Requires HTTP to be enabled in the NetworkServices HTTP Mode setting.

HTTPS: Set to HTTPS to enable secure management. Requires HTTPS to be enabled in the NetworkServices HTTPS Mode setting.

Example: Provisioning ExternalManager Protocol: HTTP

Provisioning ExternalManager Path

Set the Path to the external manager / provisioning system. This setting is required when several management services reside on the same server, i.e. share the same External Manager address.

Requires user role: ADMIN

Value space: <S: 0, 255>

Format: String with a maximum of 255 characters.

Example: Provisioning ExternalManager Path: "tms/public/external/management/SystemManagementService.asmx"
RTP settings

RTP Ports Range Start
Specify the first port in the range of RTP ports. Also see the H323 Profile [1..1] PortAllocation setting.
NOTE: Restart the system for any change to this setting to take effect.

Requires user role: ADMIN
Value space: <1024..65502>
  Range: Select a value from 1024 to 65502.
Example: RTP Ports Range Start: 2326

RTP Ports Range Stop
Specify the last RTP port in the range. Also see the H323 Profile [1..1] PortAllocation setting.
NOTE: Restart the system for any change to this setting to take effect.

Requires user role: ADMIN
Value space: <1056..65535>
  Range: Select a value from 1056 to 65535.
Example: RTP Ports Range Stop: 2486
Security settings

Security Audit Logging Mode
Determine where to record or transmit the audit logs. When using the External or ExternalSecure modes, you also must enter the address and port number for the audit server in the Security Audit Server Address and Security Audit Server Port settings.
NOTE: Restart the system for any change to this setting to take effect.

Requires user role: AUDIT

Value space: <Off/Internal/External/ExternalSecure>
  Off: No audit logging is performed.
  Internal: The system records the audit logs to internal logs, and rotates logs when they are full.
  External: The system sends the audit logs to an external audit server (syslog server). The audit server must support TCP.
  ExternalSecure: The system sends encrypted audit logs to an external audit server (syslog server) that is verified by a certificate in the Audit CA list. The Audit CA list file must be uploaded to the codec using the web interface. The common_name parameter of a certificate in the CA list must match the IP address of the audit server.

Example: Security Audit Logging Mode: Off

Security Audit Server Address
Enter the IP-address of the audit server. Only valid IPv4 or IPv6 address formats are accepted. Host names are not supported. This setting is only relevant when Security Audit Logging Mode is set to External or ExternalSecure.
NOTE: Restart the system for any change to this setting to take effect.

Requires user role: AUDIT

Value space: <S: 0, 64>
  Format: Valid IPv4 or IPv6 address formats.

Example: Security Audit Server Address: **

Security Audit Server Port
Enter the port of the audit server that the system shall send its audit logs to. The default port is 514. This setting is only relevant when Security Audit Logging Mode is set to External or ExternalSecure.
NOTE: Restart the system for any change to this setting to take effect.

Requires user role: AUDIT

Value space: <0..65535>
  Range: Select a value from 0 to 65535.

Example: Security Audit Server Port: 514

Security Audit OnError Action
Determine what happens when the connection to the audit server is lost. This setting is only relevant when Security Audit Logging Mode is set to ExternalSecure.
NOTE: Restart the system for any change to this setting to take effect.

Requires user role: AUDIT

Value space: <Halt/Ignore>
  Halt: If a halt condition is detected the system is rebooted and only the auditor is allowed to operate the unit until the halt condition has passed. When the halt condition has passed the audit logs are re-spooled to the audit server. Halt conditions are: A network breach (no physical link), no audit server running (or wrong audit server address or port), TLS authentication failed (if in use), local backup (re-spooling) log full.
  Ignore: The system will continue its normal operation, and rotate internal logs when full. When the connection is restored it will again send its audit logs to the audit server.

Example: Security Audit OnError Action: Ignore
Security Session ShowLastLogon

When logging in to the system using SSH or Telnet you will see the UserId, time and date of the last session that did a successful login.

Requires user role: ADMIN

Value space: <Off/On>

- On: Show information about the last session.
- Off: Do not show information about the last session.

Example: Security Session ShowLastLogon: Off

Security Session InactivityTimeout

Determine how long the system will accept inactivity from the user before he is automatically logged out.

Requires user role: ADMIN

Value space: <0..10000>

- Range: Select a value between 1 and 10000 seconds; or select 0 when inactivity should not enforce automatic logout.

Example: Security Session InactivityTimeout: 0
SerialPort settings

SerialPort Mode
Enable/disable the serial port (COM port).

Requires user role: ADMIN

Value space: <Off/On>
- Off: Disable the serial port.
- On: Enable the serial port.

Example: SerialPort Mode: On

SerialPort BaudRate
Specify the baud rate (data transmission rate, bits per second) for the serial port. The default value is 38400.

Other connection parameters for the serial port are: Data bits: 8; Parity: None; Stop bits: 1; Flow control: None.

Requires user role: ADMIN

Value space: <9600/19200/38400/57600/115200>
- Range: Select a baud rate from the baud rates listed (bps).

Example: SerialPort BaudRate: 38400

SerialPort LoginRequired
Determine if login shall be required when connecting to the serial port.

Requires user role: ADMIN

Value space: <Off/On>
- Off: The user can access the codec via the serial port without any login.
- On: Login is required when connecting to the codec via the serial port.

Example: SerialPort LoginRequired: On
SIP settings

SIP ListenPort
Turn on or off the listening for incoming connections on the SIP TCP/UDP ports. If turned off the endpoint must be registered with a SIP registrar to be reachable.

Requires user role: ADMIN

Value space: <On/Off>
  On: Listening for incoming connections on the SIP TCP/UDP ports is turned on.
  Off: Listening for incoming connections on the SIP TCP/UDP ports is turned off.

Example: SIP ListenPort: On

SIP Profile [1..1] URI
The SIP URI or number is used to address the system. This is the URI that is registered and used by the SIP services to route inbound calls to the system. A Uniform Resource Identifier (URI) is a compact string of characters used to identify or name a resource.

Requires user role: ADMIN

Value space: <S: 0, 255>
Format: Compact string with a maximum of 255 characters.

Example: SIP Profile 1 URI: "sip:firstname.lastname@company.com"

SIP Profile [1..1] DisplayName
When configured the incoming call will report the DisplayName instead of the SIP URI.

Requires user role: ADMIN

Value space: <S: 0, 255>
Format: String with a maximum of 255 characters.

Example: SIP Profile 1 DisplayName: ""

SIP Profile [1..1] Authentication [1..1] LoginName
This is the user name part of the credentials used to authenticate towards the SIP proxy.

Requires user role: ADMIN

Value space: <S: 0, 128>
Format: String with a maximum of 128 characters.

Example: SIP Profile 1 Authentication 1 LoginName: ""

SIP Profile [1..1] Authentication [1..1] Password
This is the password part of the credentials used to authenticate towards the SIP proxy.

Requires user role: ADMIN

Value space: <S: 0, 128>
Format: String with a maximum of 128 characters.

Example: SIP Profile 1 Authentication 1 Password: ""

SIP Profile [1..1] DefaultTransport
Select the transport protocol to be used over the LAN.

Requires user role: ADMIN

Value space: <TCP/UDP/Tls/Auto>
  TCP: The system will always use TCP as the default transport method.
  UDP: The system will always use UDP as the default transport method.
  Tls: The system will always use TLS as the default transport method. For TLS connections a SIP CA-list can be uploaded to the video system. If no such CA-list is available on the system then anonymous Diffie Hellman will be used.
  Auto: The system will try to connect using transport protocols in the following order: TLS, TCP, UDP.

Example: SIP Profile 1 DefaultTransport: Auto
SIP Profile [1..1] TlsVerify

For TLS connections a SIP CA-list can be uploaded to the video system.

**Requires user role:** ADMIN

**Value space:** <Off/On>
- **Off:** Set to Off to allow TLS connections without verifying them. The TLS connections are allowed to be set up without verifying the x.509 certificate received from the server against the local CA-list. This should typically be selected if no SIP CA-list has been uploaded.
- **On:** Set to On to verify TLS connections. Only TLS connections to servers, whose x.509 certificate is validated against the CA-list, will be allowed.

**Example:** SIP Profile 1 TlsVerify: Off

SIP Profile [1..1] Outbound

**Requires user role:** ADMIN

**Value space:** <Off/On>
- **Off:** Connect to the single proxy configured first in Proxy Address list.
- **On:** Set up multiple outbound connections to servers in the Proxy Address list.

**Example:** SIP Profile 1 Outbound: Off

SIP Profile [1..1] Proxy [1..4] Address

The Proxy Address is the manually configured address for the outbound proxy. It is possible to use a fully qualified domain name, or an IP address. The default port is 5060 for TCP and UDP but another one can be provided. If Outbound is enabled, multiple proxies can be addressed.

**Requires user role:** ADMIN

**Value space:** <S: 0, 255>
- **Format:** Compact string with a maximum of 255 characters. An IP address that contains letters (192.a.2.0) or unvalid IP addresses (192.0.1234.0) will be rejected.

**Example:** SIP Profile 1 Proxy 1 Address: ""

SIP Profile [1..1] Proxy [1..4] Discovery

Select if the SIP Proxy address is to be obtained manually or by using Dynamic Host Configuration Protocol (DHCP).

**Requires user role:** ADMIN

**Value space:** <Auto/Manual>
- **Auto:** When Auto is selected, the SIP Proxy address is obtained using Dynamic Host Configuration Protocol (DHCP).
- **Manual:** When Manual is selected, the manually configured SIP Proxy address will be used.

**Example:** SIP Profile 1 Proxy 1 Discovery: Manual

SIP Profile [1..1] Type

Enables SIP extensions and special behaviour for a vendor or provider.

**Requires user role:** ADMIN

**Value space:** <Standard/Alcatel/Avaya/Cisco/Microsoft/Nortel>
- **Standard:** To be used when registering to standard SIP Proxy (tested with Cisco TelePresence VCS and Broadsoft)
- **Alcatel:** To be used when registering to Alcatel-Lucent OmniPCX Enterprise. NOTE: This mode is not fully supported.
- **Avaya:** To be used when registering to Avaya Communication Manager. NOTE: This mode is not fully supported.
- **Cisco:** To be used when registering to Cisco Unified Communication Manager.
- **Microsoft:** To be used when registering to Microsoft LCS or OCS. NOTE: This mode is not fully supported.
- **Nortel:** To be used when registering to Nortel MCS 5100 or MCS 5200 PBX. NOTE: This mode is not fully supported.

**Example:** SIP Profile 1 Type: Standard
Standby settings

Standby Control
Determine whether the system should go into standby mode or not.
Requires user role: ADMIN
Value space: <Off/On>
  Off: The system will not enter standby mode.
  On: Enter standby mode when the Standby Delay has timed out. NOTE: Requires the Standby Delay to be set to an appropriate value.
Example: Standby Control: On

Standby Delay
Define how long (in minutes) the system shall be in idle mode before it goes into standby mode.
NOTE: Requires the Standby Control to be enabled.
Requires user role: ADMIN
Value space: <1..480>
  Range: Select a value from 1 to 480 minutes.
Example: Standby Delay: 10

Standby BootAction
Define the camera position after a restart of the codec.
Requires user role: ADMIN
Value space: <None/Preset1/Preset2/Preset3/Preset4/Preset5/Preset6/Preset7/Preset8/Preset9/Preset10/Preset11/Preset12/Preset13/Preset14/Preset15/RestoreCameraPosition/DefaultCameraPosition>
  None: No action.
  Preset1 to Preset15: When leaving standby the camera position will be set to the position defined by the selected preset.
  RestoreCameraPosition: When leaving standby the camera position will be set to the position it had before entering standby.
  DefaultCameraPosition: When leaving standby the camera position will be set to the factory default position.
Example: Standby BootAction: DefaultCameraPosition

Standby StandbyAction
Define the camera position when going into standby mode.
Requires user role: ADMIN
Value space: <None/PrivacyPosition>
  None: No action.
  PrivacyPosition: Turns the camera to a sideways position for privacy.
Example: Standby StandbyAction: PrivacyPosition

Standby WakeupAction
Define the camera position when leaving standby mode.
Requires user role: ADMIN
Value space: <None/Preset1/Preset2/Preset3/Preset4/Preset5/Preset6/Preset7/Preset8/Preset9/Preset10/Preset11/Preset12/Preset13/Preset14/Preset15/RestoreCameraPosition/DefaultCameraPosition>
  None: No action.
  Preset1 to Preset15: When leaving standby the camera position will be set to the position defined by the selected preset.
  RestoreCameraPosition: When leaving standby the camera position will be set to the position it had before entering standby.
  DefaultCameraPosition: When leaving standby the camera position will be set to the factory default position.
Example: Standby WakeupAction: RestoreCameraPosition
SystemUnit settings

SystemUnit Name
Enter a System Name to define a name of the system unit. If the H.323 Alias ID is configured on the system then this ID will be used instead of the system name. The system name will be displayed:
1) When the codec is acting as an SNMP Agent.
2) Towards a DHCP server.

Requires user role: ADMIN
Value space: <S: 0, 50>
Format: String with a maximum of 50 characters.
Example: SystemUnit Name: "Meeting Room"

SystemUnit MenuLanguage
Select the language to be used in the menus on screen or on the Touch controller.

Requires user role: USER
Value space: <English/ChineseSimplified/ChineseTraditional/Czech/Danish/Dutch/Finnish/French/German/Hungarian/Italian/Japanese/Korean/Norwegian/Polish/PortugueseBrazilian/Russian/Spanish/SpanishLatin/Swedish/Turkish>
Example: SystemUnit MenuLanguage: English

SystemUnit ContactInfo Type
Choose which type of contact information to show in the status field in the upper left corner of the main display and Touch controller. The information can also be read with the command xStatus SystemUnit ContactInfo.

Requires user role: ADMIN
Value space: <Auto/None/IPv4/IPv6/H323Id/E164Alias/H320Number/SipUri/SystemName/DisplayName>
- Auto: Show the address which another system can dial to reach this system. The address depends on the default call protocol and system registration.
- None: Do not show any contact information in the status field.
- IPv4: Show the IPv4 address as contact information.
- IPv6: Show the IPv6 address as contact information.
- H323Id: Show the H.323 ID as contact information (see the H323 Profile [1..1] H323Alias ID setting).
- E164Alias: Show the H.323 E164 Alias as contact information (see the H323 Profile [1..1] H323Alias E164 setting).
- H320Number: Show the H.320 number as contact information (only applicable if connected to a Cisco TelePresence ISDN Link gateway).
- SipUri: Show the SIP URI as contact information (see the SIP Profile [1..1] URI setting).
- SystemName: Show the system name as contact information (see the SystemUnit Name setting).
- DisplayName: Show the display name as contact information (see the SIP Profile [1..1] DisplayName setting).

Example: SystemUnit ContactInfo Type: Auto

SystemUnit CallLogging Mode
Set the call logging mode for calls that are received or placed by the system. The call logs may then be viewed via the web interface or using the xHistory command.

Requires user role: ADMIN
Value space: <Off/On>
- Off: Disable logging.
- On: Enable logging.

Example: SystemUnit CallLogging Mode: On
SystemUnit IrSensor

Both the Codec C Series and PrecisionHD camera have IR sensors, and only one of them needs to be enabled at the time. The IR sensor LED is located on the front of the codec and the camera and flickers when an IR signal is received from the remote control.

**Requires user role:** ADMIN

**Value space:** <Auto/Off/On>

- **Auto:** The system will automatically disable the IR sensor on the codec if the IR sensor at camera is enabled. Otherwise, the IR sensor on the codec will be enabled.
- **Off:** Disable the IR sensor on the codec.
- **On:** Enable the IR sensor on the codec.

**Example:** SystemUnit IrSensor: Auto
**Time settings**

**Time Zone**

Set the time zone where the system is located, using Windows time zone description format.

Requires user role: USER

**Value space:** <GMT-12:00 (International Date Line West)/GMT-11:00 (Midway Island, Samoa)/GMT-10:00 (Hawaii)/GMT-09:00 (Alaska)/GMT-08:00 (Pacific Time (US & Canada); Tijuana)/GMT-07:00 (Arizona)/GMT-07:00 (Mountain Time (US & Canada))/GMT-07:00 (Chihuahua, La Paz, Mazatlan)/GMT-06:00 (Central America)/GMT-06:00 (Saskatchewan)/GMT-06:00 (Guadalajara, Mexico City, Monterrey)/GMT-06:00 (Central Time (US & Canada))/GMT-05:00 (Indiana (East))/GMT-05:00 (Bogota, Lima, Quito)/GMT-05:00 (Eastern Time (US & Canada))/GMT-04:30 (Caracas)/GMT-04:00 (La Paz)/GMT-04:00 (Santiago)/GMT-04:00 (Atlantic Time (Canada))/GMT-03:30 (Newfoundland)/GMT-03:00 (Buenos Aires, Georgetown)/GMT-03:00 (Greenland)/GMT-02:00 (Mid-Atlantic)/GMT-02:00 (Cape Verde Is.)/GMT-01:00 (Azores)/GMT (Casablanca, Monrovia)/GMT (Coordinated Universal Time)/GMT (Greenwich Mean Time : Dublin, Edinburgh, Lisbon, London)/GMT+01:00 (West Central Africa)/GMT+01:00 (Amsterdam, Berlin, Bern, Rome, Stockholm, Vienna)/GMT+01:00 (Brussels, Copenhagen, Madrid, Paris)/GMT+01:00 (Belgrade, Bratislava, Budapest, Ljubljana, Prague)/GMT+02:00 (Harare, Pretoria)/GMT+02:00 (Jerusalem)/GMT+02:00 (Athens, Istanbul, Minsk)/GMT+02:00 (Helsinki, Kyiv, Riga, Sofia, Tallinn, Vilnius)/GMT+02:00 (Cairo)/GMT+02:00 (Bucharest)/GMT+03:00 (Nairobi)/GMT+03:00 (Kuwait, Riyadh)/GMT+03:00 (Moscow, St. Petersburg, Volgograd)/GMT+03:00 (Baghdad)/GMT+03:00 (Tehran)/GMT+04:00 (Abu Dhabi, Muscat)/GMT+04:00 (Baku, Tbilisi, Yerevan)/GMT+04:30 (Kabul)/GMT+05:00 (Islamabad, Karachi, Tashkent)/GMT+05:00 (Ekaterinburg)/GMT+05:30 (Chennai, Kolkata, Mumbai, New Delhi)/GMT+05:45 (Kathmandu)/GMT+06:00 (Sri Jayawardenepura)/GMT+06:00 (Astana, Dhaka)/GMT+06:00 (Aimaty, Novosibirsk)/GMT+06:30 (Rangoon)/GMT+07:00 (Bangkok, Hanoi, Jakarta)/GMT+07:00 (Krasnoyarsk)/GMT+08:00 (Perth)/GMT+08:00 (Taipei)/GMT+08:00 (Kuala Lumpur, Singapore)/GMT+08:00 (Beijing, Chongqing, Hong Kong, Urumqi)/GMT+08:00 (Irkutsk, Ulaan Batar)/GMT+09:00 (Osaka, Sapporo, Tokyo)/GMT+09:00 (Seoul)/GMT+09:00 (Yakutsk)/GMT+09:30 (Darwin)/GMT+09:30 (Adelaide)/GMT+10:00 (Guam, Port Moresby)/GMT+10:00 (Brisbane)/GMT+10:00 (Vladivostok)/GMT+10:00 (Hobart)/GMT+10:00 (Canberra, Melbourne, Sydney)/GMT+11:00 (Magadan, Solomon Is., New Caledonia)/GMT+12:00 (Fiji, Kamchatka, Marshall Is.)/GMT+12:00 (Auckland, Wellington)/GMT+13:00 (Nuku alofa)>

**Range:** Select a time zone from the list time zones. If using a command line interface, watch up for typos.

**Example:** Time Zone: "GMT (Greenwich Mean Time : Dublin, Edinburgh, Lisbon, London)"

---

**Time TimeFormat**

Set the time format.

Requires user role: USER

**Value space:** <24H/12H>

- **24H:** Set the time format to 24 hours.
- **12H:** Set the time format to 12 hours (AM/PM).

**Example:** Time TimeFormat: 24H

---

**Time DateFormat**

Set the date format.

Requires user role: USER

**Value space:** <DD_MM_YY/MM_DD_YY/YY_MM_DD>

- **DD_MM_YY:** The date January 30th 2010 will be displayed: 30.01.10
- **MM_DD_YY:** The date January 30th 2010 will be displayed: 01.30.10
- **YY_MM_DD:** The date January 30th 2010 will be displayed: 10.01.30

**Example:** Time DateFormat: DD_MM_YY
User Interface settings

User Interface TouchPanel DefaultPanel

Select whether to display the list of contacts, the list of scheduled meetings, or a dial pad on the Touch controller as default.

Requires user role: USER

Value space: <ContactList/MeetingList/Dialpad>

- **ContactList**: The contact list (favorites, directory and history) will appear as default on the Touch controller.
- **MeetingList**: The list of scheduled meetings will appear as default on the Touch controller.
- **Dialpad**: A dial pad will appear as default on the Touch controller.

Example: User Interface TouchPanel DefaultPanel: ContactList
**Video settings**

**Video Input Source [1..3] Name**
Enter a name for the video input source.

Requires user role: ADMIN

Value space: \<S: 0, 50\>

Format: String with a maximum of 50 characters.

Example: Video Input Source 1 Name: ""

**Video Input Source [1] Connector**
Select which video input connector to be active on video input source 1.

Requires user role: ADMIN

Value space: \<HDMI>\n
HDMI: Select HDMI when you want to use the HDMI 1 as input source 1.

Example: Video Input Source 1 Connector: HDMI

**Video Input Source [2] Connector**
NOTE: Codec C40 has one DVI input (DVI-I 3). Codec C60 has two DVI inputs (DVI-I 2 and 3).
Select which video input connector to be active on video input source 2.

Requires user role: ADMIN

Value space: \<HDMI/DVI>\n
HDMI: Select HDMI when you want to use the HDMI 2 as input source 2.
DVI: Select DVI-I when you want to use the DVI-I 2 as input source 2.

Example: Video Input Source 2 Connector: HDMI

**Video Input Source [3] Connector**
NOTE: Codec C40 has one DVI input (DVI-I 3). Codec C60 has two DVI inputs (DVI-I 2 and 3).
Select which video input connector to be active on video input source 3.

Requires user role: ADMIN

Value space: \<DVI/Composite/YC>\n
DVI: Select DVI-I when you want to use the DVI-I 3 as input source 3.
Composite: Select Composite when you want to use the Composite as input source 3.
YC: Select YC when you want to use the S-Video (YC) as input source 3. Connect to the two connectors marked Y/Comp and C.

Example: Video Input Source 3 Connector: DVI

**Video Input Source [1..3] Type**
Set which type of input source is connected to the video input.

Requires user role: ADMIN

Value space: \<other/camera/PC/DVD/document_camera>\n
Other: Select Other when some other type of equipment is connected to the selected video input.
Camera: Select Camera when you have a camera connected to the selected video input.
PC: Select PC when you have a PC connected to the selected video input.
DVD: Select DVD when you have a DVD player connected to the selected video input.
Document_Camera: Select Document_Camera when you have a document camera connected to the selected video input.

Example: Video Input Source 1 Type: PC
**Video Input Source [1..3] PresentationSelection**

In general, any input source can be used as a presentation source; normally, the main camera (self view) will not be used as a presentation source.

This setting is used to define whether to display the presentation source on the local video system’s display automatically or not. To share the presentation with the far end always requires additional action (Tap Start Presenting on the Touch controller or the Presentation key on the remote control).

The default values for all input sources are Manual.

**Requires user role:** ADMIN

**Value space:** <Manual/Automatic/Hidden>

- **Manual:** The content on the input source will not be presented on the local video system's display before you select it. Use either the remote control or the Touch controller to choose which input source to present.

- **Automatic:** Any content on the input source will be presented on the local video system's display automatically. If there is active content on more than one input source (which is set to Automatic) the most recent one will be used.

- **Hidden:** The input source is not expected to be used as a presentation source.

**Example:** Video Input Source 1 PresentationSelection: Manual

---

**Video Input Source [1..3] CameraControl Mode**

Select whether or not to enable camera control for the selected video input source when the video input is active.

**Requires user role:** ADMIN

**Value space:** <Off/On>

- **Off:** Disable camera control.

- **On:** Enable camera control.

**Example:** Video Input Source 1 CameraControl Mode: On

---

**Video Input Source [1..3] CameraControl CameraId**

Select the ID of the camera in the Visca chain that is connected to this camera source. The CameraId setting represents the camera's position in the Visca chain.

**Requires user role:** ADMIN

**Value space:** <1/2/3/4/5/6/7>

- **Range:** Select the ID of the camera in the Visca chain.

**Example:** Video Input Source 1 CameraControl CameraId: 1

---

**Video Input Source [1..3] OptimalDefinition Profile**

The Video Input Source Quality setting must be set to Motion for the optimal definition settings to take any effect.

The optimal definition profile should reflect the lighting conditions in your room and the quality of the video input (camera): the better the lighting conditions and video input, the higher the profile. Then, in good lighting conditions, the video encoder will provide better quality (higher resolution or frame rate) for a given call rate.

Generally, we recommend using the Normal or Medium profiles. However, when the lighting conditions are good, the High profile can be set in order to increase the resolution for a given call rate.

Some typical resolutions used for different optimal definition profiles, call rates and transmit frame rates are shown in the table below. It is assumed that dual video is not used. The resolution must be supported by both the calling and called systems.

Use the Video Input Source OptimalDefinition Threshold60fps setting to decide when to use the 60 fps frame rate.

<table>
<thead>
<tr>
<th>Frame rate</th>
<th>Optimal Definition Profile</th>
<th>Call rate</th>
</tr>
</thead>
<tbody>
<tr>
<td>30 fps</td>
<td>Normal</td>
<td>256 kbps</td>
</tr>
<tr>
<td></td>
<td></td>
<td>768 kbps</td>
</tr>
<tr>
<td></td>
<td></td>
<td>1152 kbps</td>
</tr>
<tr>
<td></td>
<td></td>
<td>1472 kbps</td>
</tr>
<tr>
<td></td>
<td></td>
<td>2560 kbps</td>
</tr>
<tr>
<td></td>
<td></td>
<td>4 Mbps</td>
</tr>
<tr>
<td></td>
<td></td>
<td>6 Mbps</td>
</tr>
<tr>
<td>60 fps</td>
<td>Normal</td>
<td>512 x 288</td>
</tr>
<tr>
<td></td>
<td></td>
<td>1024 x 576</td>
</tr>
<tr>
<td></td>
<td></td>
<td>1280 x 720</td>
</tr>
<tr>
<td></td>
<td></td>
<td>1280 x 720</td>
</tr>
<tr>
<td></td>
<td></td>
<td>1920 x 1080</td>
</tr>
<tr>
<td></td>
<td></td>
<td>1920 x 1080</td>
</tr>
</tbody>
</table>

* The resolution will be 1920 x 1080 for 1080p60 capable C60 codecs (main board rev F and later).

**Requires user role:** ADMIN

**Value space:** <Normal/Medium/High>

- **Normal:** Use this profile for a normally to poorly lit environment. Resolutions will be set rather conservative.

- **Medium:** Requires good and stable lighting conditions and a good quality video input. For some call rates this leads to higher resolution.

- **High:** Requires nearly optimal video conferencing lighting conditions and a good quality video input in order to achieve a good overall experience. Rather high resolutions will be used.

**Example:** Video Input Source 1 OptimalDefinition Profile: Normal
Video Input Source [1..3] OptimalDefinition Threshold 60fps

For each video input, this setting tells the system the lowest resolution where it should transmit 60fps. So for all resolutions lower than this, the maximum transmitted framerate would be 30fps, while above this resolution 60fps would also be possible, if the available bandwidth is adequate.

Requires user role: ADMIN

Value space: <512_288/768_448/1024_576/1280_720/1920_1080/Never>

- 512_288: Set the threshold to 512x288.
- 768_448: Set the threshold to 768x448.
- 1024_576: Set the threshold to 1024x576.
- 1280_720: Set the threshold to 1280x720.
- 1920_1080: Set the threshold to 1920x1080.
- Never: Do not set a threshold for transmitting 60fps.

Example: Video Input Source 1 OptimalDefinition Threshold 60fps: 1280_720

Video Input Source [1..3] Quality

When encoding and transmitting video there will be a trade-off between high resolution and high framerate. For some video sources it is more important to transmit high framerate than high resolution and vice versa. The Quality setting specifies whether to give priority to high framerate or to high resolution for a given source.

Requires user role: ADMIN

Value space: <Motion/Sharpness>

- Motion: Gives the highest possible framerate. Used when there is a need for higher frame rates, typically when a large number of participants are present or when there is a lot of motion in the picture.
- Sharpness: Gives the highest possible resolution. Used when you want the highest quality of detailed images and graphics.

Example: Video Input Source 1 Quality: Motion

Video Main Video Source

Define which video input source shall be used as the main video source.

Requires user role: USER

Value space: <1/2/3>

Range: Select the source to be used as the main video source.

Example: Video Main Video Source: 1

Video Default Presentation Source

Define which video input source shall be used as the default presentation source when you press the Presentation key on the remote control. If using a Touch controller this setting has no effect. The Video Input Source n Connector setting defines which input connector to use for input source n.

Requires user role: USER

Value space: <Motion/Sharpness>

- Motion: Gives the highest possible framerate. Used when there is a need for higher frame rates, typically when a large number of participants are present or when there is a lot of motion in the picture.
- Sharpness: Gives the highest possible resolution. Used when you want the highest quality of detailed images and graphics.

Example: Video Default Presentation Source: 3

Video Input HDMI [1..2] RGB Quantization Range

All devices with HDMI inputs should follow the rules for RGB video quantization range defined in CEA-861. Unfortunately some devices do not follow the standard and this configuration may be used to override the settings to get a perfect image with any source.

Requires user role: ADMIN

Value space: <Auto/Full/Limited>

- Auto: RGB quantization range is automatically selected based on the RGB Quantization Range bits (Q0, Q1) in the AVI infoframe. If no AVI infoframe is available, RGB quantization range is selected based on video format according to CEA-861-E.
- Full: Full quantization range. The R, G, B quantization range includes all code values (0 - 255). This is defined in CEA-861-E.
- Limited: Limited Quantization Range. R, G, B quantization range that excludes some code values at the extremes (16 - 235). This is defined in CEA-861-E.

Example: Video Input 1 HDMI 1 RGB Quantization Range: Auto
Video Input DVI [3]/[2,3] RGBQuantizationRange

NOTE: Codec C40 has one DVI input (DVI-I 3). Codec C60 has two DVI inputs (DVI-I 2 and 3). All devices with DVI inputs should follow the rules for RGB video quantization range defined in CEA-861. Unfortunately some devices do not follow the standard and this configuration may be used to override the settings to get a perfect image with any source. The default value is set to Full because most DVI sources expects full quantization range.

Requires user role: ADMIN

Value space: <Auto/Full/Limited>
- Auto: RGB quantization range is automatically selected based on video format according to CEA-861-E. CE video formats will use limited quantization range levels. IT video formats will use full quantization range levels.
- Full: Full quantization range. The R, G, B quantization range includes all code values (0 - 255). This is defined in CEA-861-E.
- Limited: Limited Quantization Range. R, G, B quantization range that excludes some code values at the extremes (16 - 235). This is defined in CEA-861-E.

Example: Video Input 1 DVI 3 RGBQuantizationRange: Full

Video Input DVI [3]/[2,3] Type

NOTE: Codec C40 has one DVI input (DVI-I 3). Codec C60 has two DVI inputs (DVI-I 2 and 3). The official DVI standard supports both digital and analog signals. In most cases the default AutoDetect setting can detect whether the signal is analog RGB or digital. However, in some rare cases when DVI-I cables are used (these cables can carry both the analog and digital signals) the auto detection fails. This setting makes it possible to override the AutoDetect and select the correct DVI video input.

This setting should also be used if the video input is an analog component (YPbPr) type signal. This is used by some cameras (Sony EVI-HD1) and DVD/Blu-ray players. Since it is not possible to auto detect the difference between AnalogRGB and AnalogYPbPr, the AnalogYPbPr setting must be selected.

Requires user role: ADMIN

Value space: <AutoDetect/Digital/AnalogRGB/AnalogYPbPr>
- AutoDetect: Set to AutoDetect to automatically detect if the signal is analog RGB or digital.
- Digital: Set to Digital to force the DVI video input to Digital when using DVI-I cables with both analog and digital pins and AutoDetect fails.
- AnalogRGB: Set to AnalogRGB to force the DVI video input to AnalogRGB when using DVI-I cables with both analog and digital pins and AutoDetect fails.
- AnalogYPbPr: Set to AnalogYPbPr to force the DVI video input to AnalogYPbPr, as the component (YPbPr) signal cannot be auto detected.

Example: Video Input DVI 3 Type: AutoDetect

Video Layout Scaling

Define how the system shall adjust the aspect ratio for images or frames when there is a difference between the image and the frame it is to be placed in.

Requires user role: ADMIN

Value space: <Off/On>
- Off: No adjustment of the aspect ratio.
- On: Let the system automatically adjust aspect ratio.

Example: Video Layout Scaling: On
Video Layout ScaleToFrame

Define what to do if the aspect ratio of a video input source doesn’t match the aspect ratio of the corresponding image frame in a composition. For example if you have a 4:3 input source (like XGA) to be displayed on a 16:9 output (like HD720).

Requires user role: ADMIN

Value space: <Manual/MaintainAspectRatio/StretchToFit>

- Manual: If the difference in aspect ratio between the video input source and the target image frame is less than the Video Layout ScaleToFrameThreshold setting (in percent), the image is stretched to fit. If not, the system will maintain the original aspect ratio.
- MaintainAspectRatio: Maintain the aspect ratio of the input source, and fill in black in the rest of the frame (letter boxing or pillar boxing).
- StretchToFit: Stretch (horizontally or vertically) the input source to fit into the image frame.

NOTE: The general limitation is that you cannot upscale in one direction and at the same time downscale in the other direction. In such situations the codec will apply letterboxing.

Example: Video Layout ScaleToFrame: MaintainAspectRatio

Video Layout ScaleToFrameThreshold

Only applicable if the Video Layout ScaleToFrame setting is set to manual. If the difference in aspect ratio between the video input source and the target image frame is less than the ScaleToFrameThreshold setting (in percent), the image is stretched to fit. If not, the system will maintain the original aspect ratio.

Requires user role: ADMIN

Value space: <0..100>

Range: Select a value from 0 to 100 percent.

Example: Video Layout ScaleToFrameThreshold: 5

Video Selfview

Determine if the main video source (self view) shall be displayed on screen. This setting is obsoleted by the Video SelfviewDefault Mode setting as from TC6.0.

Requires user role: USER

Value space: <Off/On>

- Off: Do not display self view on screen.
- On: Display self view on screen.

Example: Video Selfview: On

Video SelfviewPosition

Select where the small self view PiP (Picture-in-Picture) will appear on screen.

This setting is obsoleted by the Video SelfviewDefault PiPPosition setting as from TC6.0.

Requires user role: ADMIN

Value space: <UpperLeft/UpperCenter/UpperRight/CenterLeft/CenterRight/LowerLeft/LowerRight>

- UpperLeft: The self view PiP will appear in the upper left corner of the screen.
- UpperCenter: The self view PiP will appear in the upper center of the screen.
- UpperRight: The self view PiP will appear in the upper right corner of the screen.
- CenterLeft: The self view PiP will appear on the left side of the screen, in center.
- CenterRight: The self view PiP will appear on the right side of the screen, in center.
- LowerLeft: The self view PiP will appear in the lower left corner of the screen.
- LowerRight: The self view PiP will appear in the lower right corner of the screen.

Example: Video SelfviewPosition: LowerRight

Video SelfviewDefault Mode

Determine if the main video source (self view) shall be displayed on screen after a call. The position and size of the self view window is determined by the Video SelfviewDefault PiPPosition and the Video Selfview FullscreenMode settings respectively.

This setting obsoletes the Video Selfview setting as from TC6.0.

Requires user role: ADMIN

Value space: <Off/Current/On>

- Off: Self view is switched off when leaving a call.
- Current: Self view is left as is, i.e. if it was on during the call, it remains on after the call; if it was off during the call, it remains off after the call.
- On: Self view is switched on when leaving a call.

Example: Video SelfviewDefault Mode: Current
Video SelfviewDefault FullscreenMode
Determine if the main video source (self view) shall be shown in full screen or as a small picture-in-picture (PiP) after a call. The setting only takes effect when self view is switched on (see the Video SelfviewDefault Mode setting).

Requires user role: ADMIN
Value space: <Off/Current/On>
- Off: Self view will be shown as a PiP.
- Current: The size of the self view picture will be kept unchanged when leaving a call, i.e. if it was a PiP during the call, it remains a PiP after the call; if it was full screen during the call, it remains full screen after the call.
- On: The self view picture will be shown in fullscreen.

Example: Video SelfviewDefault FullscreenMode: Current

Video SelfviewDefault PIPPosition
Determine the position on screen of the small self view picture-in-picture (PiP) after a call. The setting only takes effect when self view is switched on (see the Video SelfviewDefault Mode setting) and full screen view is switched off (see the Video SelfviewDefault FullscreenMode setting).
This setting obsoletes the Video SelfviewPosition setting as from TC6.0.

Requires user role: ADMIN
Value space: <Current/UpperLeft/UpperCenter/UpperRight/CenterLeft/CenterRight/LowerLeft/LowerRight>
- Current: The position of the self view PiP will be kept unchanged when leaving a call.
- UpperLeft: The self view PiP will appear in the upper left corner of the screen.
- UpperCenter: The self view PiP will appear in the upper center position.
- UpperRight: The self view PiP will appear in the upper right corner of the screen.
- CenterLeft: The self view PiP will appear in the center left position.
- CentreRight: The self view PiP will appear in the center right position.
- LowerLeft: The self view PiP will appear in the lower left corner of the screen.
- LowerRight: The self view PiP will appear in the lower right corner of the screen.

Example: Video SelfviewDefault PIPPosition: Current

Video SelfviewDefault OnMonitorRole
Determine which monitor/output to display the main video source (self view) on after a call. The value reflects the monitor roles set for the different outputs in the Video Output HDMI/DVI/Composite MonitorRole settings.
The setting applies both when self view is displayed in full screen, and when it is displayed as picture-in-picture (PiP), but only if the Video Monitors setting is set to Dual.

Requires user role: ADMIN
Value space: <First/Second/Current>
- First: The self view picture will be shown on outputs with the Video Output HDMI/DVI/Composite MonitorRole set to First.
- Second: The self view picture will be shown on outputs with the Video Output HDMI/DVI/Composite MonitorRole set to Second.
- Current: When leaving the call, the self view picture will be kept on the same output as during the call.

Example: Video SelfviewDefault OnMonitorRole: Current

Video PIP ActiveSpeaker DefaultValue Position
Determine the position on screen of the active speaker picture-in-picture (PiP). The setting only takes effect when using a video layout where the active speaker is a PiP, i.e. the Overlay layout, or possibly a Custom layout (see the Video Layout LocalLayoutFamily setting). The setting takes effect from the next call onwards; if changed during a call, it will have no effect on the current call.

Requires user role: ADMIN
Value space: <Current/UpperLeft/UpperCenter/UpperRight/CenterLeft/CenterRight/LowerLeft/LowerRight>
- Current: The position of the active speaker PiP will be kept unchanged when leaving a call.
- UpperLeft: The active speaker PiP will appear in the upper left corner of the screen.
- UpperCenter: The active speaker PiP will appear in the upper center corner of the screen.
- UpperRight: The active speaker PiP will appear in the upper right corner of the screen.
- CenterLeft: The active speaker PiP will appear in the center left position.
- CentreRight: The active speaker PiP will appear in the center right position.
- LowerLeft: The active speaker PiP will appear in the lower left corner of the screen.
- LowerRight: The active speaker PiP will appear in the lower right corner of the screen.

Example: Video PIP ActiveSpeaker DefaultValue Position: Current
Video PIP Presentation DefaultValue Position

Determine the position on screen of the presentation picture-in-picture (PiP). The setting only takes effect when the presentation is explicitly minimized to a PiP, for example using the remote control or the Touch controller. The setting takes effect from the next call onwards; if changed during a call, it will have no effect on the current call.

**Requires user role:** ADMIN

**Value space:** <Current/UpperLeft/UpperCenter/UpperRight/CenterLeft/CenterRight/LowerLeft/LowerRight>

- **Current:** The position of the presentation PiP will be kept unchanged when leaving a call.
- **UpperLeft:** The presentation PiP will appear in the upper left corner of the screen.
- **UpperCenter:** The presentation PiP will appear in the upper center position.
- **UpperRight:** The presentation PiP will appear in the upper right corner of the screen.
- **CenterLeft:** The presentation PiP will appear in the center left position.
- **CentreRight:** The presentation PiP will appear in the center right position.
- **LowerLeft:** The presentation PiP will appear in the lower left corner of the screen.
- **LowerRight:** The presentation PiP will appear in the lower right corner of the screen.

**Example:** Video PIP Presentation DefaultValue Position: Current

Video Layout LocalLayoutFamily

Select which video layout family to use locally.

**Requires user role:** ADMIN

**Value space:** <Auto/FullScreen/Equal/PresentationSmallSpeaker/PresentationLargeSpeaker/Prominent/Overlay/Single>

- **Auto:** The default layout family, as given by the layout database, will be used as the local layout. For more information about the layout database, see the xCommand Video Layout LoadDb command.
- **FullScreen:** The FullScreen layout family will be used as the local layout. It means that the active speaker or presentation will be shown in full screen. Using this value is not recommended as from TC6.0.
- **Equal:** The Equal layout family will be used as the local layout. All videos have equal size, as long as there is space enough on the screen.
- **PresentationSmallSpeaker:** The PresentationSmallSpeaker layout family will be used as the local layout. Using this value is not recommended as from TC6.0.
- **PresentationLargeSpeaker:** The PresentationLargeSpeaker layout family will be used as the local layout. Using this value is not recommended as from TC6.0.
- **Prominent:** The Prominent layout family will be used as the local layout. The active speaker, or the presentation if present, will be a large picture, while the other participants will be small pictures. Transitions between active speakers are voice switched.
- **Overlay:** The Overlay layout family will be used as the local layout. The active speaker, or the presentation if present, will be shown in full screen, while the other participants will be small pictures-in-picture (PiP). Transitions between active speakers are voice switched.
- **Single:** The active speaker, or the presentation if present, will be shown in full screen. The other participants are not shown. Transitions between active speakers are voice switched.

**Example:** Video Layout LocalLayoutFamily: Auto
**Video Layout RemoteLayoutFamily**

Select which video layout family to be used for the remote participants.

**Requires user role:** ADMIN

**Value space:** <Auto/FullScreen/Equal/PresentationSmallSpeaker/PresentationLargeSpeaker/Prominent/Overlay/Single>

- **Auto:** The default layout family, as given by the local layout database, will be used as the remote layout. For more information about the layout database, see the command: xCommand Video Layout LoadDb.

- **FullScreen:** The FullScreen layout family will be used as the remote layout. It means that the active speaker or presentation will be shown in full screen. Using this value is not recommended as from TC6.0.

- **Equal:** The Equal layout family will be used as the remote layout. All videos have equal size, as long as there is space enough on the screen.

- **PresentationSmallSpeaker:** The PresentationSmallSpeaker layout family will be used as the remote layout. Using this value is not recommended as from TC6.0.

- **PresentationLargeSpeaker:** The PresentationLargeSpeaker layout family will be used as the remote layout. Using this value is not recommended as from TC6.0.

- **Prominent:** The Prominent layout family will be used as the remote layout. The active speaker, or the presentation if present, will be a large picture, while the other participants will be small pictures. Transitions between active speakers are voice switched.

- **Overlay:** The Overlay layout family will be used as the remote layout. The active speaker, or the presentation if present, will be shown in full screen, while the other participants will be small pictures-in-picture (PiP). Transitions between active speakers are voice switched.

- **Single:** The active speaker, or the presentation if present, will be shown in full screen. The other participants are not shown. Transitions between active speakers are voice switched.

**Example:** Video Layout RemoteLayoutFamily: Auto

**Video Monitors**

Set the monitor layout mode.

**Requires user role:** ADMIN

**Value space:** <Single/Dual/DualPresentationOnly>

- **Single:** The same layout is shown on all monitors.

- **Dual:** The layout is distributed on two monitors.

- **DualPresentationOnly:** All participants in the call will be shown on the first monitor, while the presentation (if any) will be shown on the second monitor.

**Example:** Video Monitors: Single

**Video OSD Mode**

The Video OSD (On Screen Display) Mode lets you define if information and icons should be displayed on screen.

**Requires user role:** ADMIN

**Value space:** <Off/On>

- **Off:** Hide the on screen menus, icons and indicators.

- **On:** Display the on screen menus, icons and indicators.

**Example:** Video OSD Mode: On

**Video OSD MenuStartupMode**

Configures the state of the OSD (On Screen Display) menu after a video system / codec boot. The setting only applies when the video system is operated by a remote control and the on-screen menu.

**Requires user role:** ADMIN

**Value space:** <Closed/Home>

- **Closed:** The OSD menu will NOT expand automatically. This setting is recommended for 3rd party integrations that need full control of what is shown on the OSD.

- **Home:** The OSD menu will show the home menu expanded.

**Example:** Video OSD MenyStartUpMode: Home

**Video OSD VirtualKeyboard**

Determine whether or not the virtual keyboard will automatically show on screen when text is to be entered in an input field. The setting only applies when the video system is operated by a remote control and the on-screen menu.

**Requires user role:** ADMIN

**Value space:** <UserSelectable/AlwaysOn>

- **UserSelectable:** The user has to press a softbutton to open or close the virtual keyboard.

- **AlwaysOn:** The virtual keyboard is automatically shown on screen as long as text can be entered in an input field.

**Example:** Video OSD VirtualKeyboard: UserSelectable
Video OSD EncryptionIndicator

Define for how long the encryption indicator (a padlock) will be shown on screen. The setting applies to both encrypted and non-encrypted calls, i.e. both to secure and non-secure conferences. The icon for encrypted calls is a locked padlock, and the icon for non-encrypted calls is a crossed out locked padlock.

Requires user role: ADMIN

Value space: <Auto/AlwaysOn/AlwaysOff>

Auto: If the Conference Encryption Mode setting is set to BestEffort and the call is encrypted, the encryption indicator is shown during the first seconds of a call. If the Conference Encryption Mode setting is set to BestEffort and the call is non-encrypted, the crossed out encryption indicator is shown during the entire call. If the Conference Encryption Mode setting is NOT set to BestEffort, the encryption indicator is not shown at all.

AlwaysOn: The encryption indicator is displayed on screen during the entire call. This applies to both encrypted and non-encrypted calls for all Conference Encryption Mode settings.

AlwaysOff: The encryption indicator is never displayed on screen. This applies to both encrypted and non-encrypted calls for all Conference Encryption Mode settings.

Example: Video OSD EncryptionIndicator: Auto

Video OSD MissedCallsNotification

Determine whether or not the OSD (On Screen Display) shall display a missed calls notification dialog box if there have been incoming calls that have not been answered. The setting only applies when the video system is operated by a remote control and the on-screen menu. When using a Touch controller the notification dialog box will appear on the Touch display, and not on the OSD.

Requires user role: ADMIN

Value space: <Off/On>

Off: The OSD will NOT show any indication that there have been any missed calls. This setting is recommended for 3rd party integrations that need full control of what is shown on the OSD.

On: The OSD will show a notification of missed calls.

Example: Video OSD MissedCallsNotifications: On

Video OSD AutoSelectPresentationSource

Determine if the presentation source should be automatically selected.

Requires user role: ADMIN

Value space: <Off/On>

Off: Disable automatic selection of the presentation source.

On: Enable automatic selection of the presentation source.

Example: Video OSD AutoSelectPresentationSource: Off

Video OSD TodaysBookings

This setting can be used to display the system’s bookings for today on the main OSD menu. This requires that the system is bookable by an external booking system, like Cisco TelePresence Management Suite (TMS).

Requires user role: ADMIN

Value space: <Off/On>

Off: Do not display todays bookings.

On: Displays information about this systems bookings on screen.

Example: Video OSD TodaysBookings: Off

Video OSD MyContactsExpanded

Set how the local contacts will be displayed in the phone book dialog in the OSD (On Screen Display).

Requires user role: ADMIN

Value space: <Off/On>

Off: The local contacts will be placed in a separate folder called MyContacts in the phonebook dialog.

On: The local contacts in the phone book will be shown in the top level of the phonebook dialog.

Example: Video OSD MyContactsExpanded: Off
Video OSD Output

The Video OSD (On Screen Display) Output lets you define which monitor should display the on screen menus, information and icons. By default the OSD is sent to the monitor connected to the Video OSD Output 1. If you cannot see the OSD on screen, then you must re-configure the OSD Output. You can do this by entering a key sequence on the remote control, from the web interface, or by a command line interface.

Using the remote control: Press the Disconnect key followed by: * # * # 0 x # (where x is output 1 to 2).

Using the web interface: Open a web browser and enter the IP address of the codec. Open the Advanced Configuration menu and navigate to Video OSD Output and select the video output.

Using a command line interface: Open a command line interface and connect to the codec (if in doubt of how to do this, see the API Guide for the codec). Enter the command: xConfiguration Video OSD Output [1..2] (select the OSD Output)

Requires user role: ADMIN

Value space: <1/2>

Range: Select 1 for HDMI 1 output, or select 2 for DVI-I 2 output.

Example: Video OSD Output: 1

Video OSD InputMethod InputLanguage

The codec can be enabled for Cyrillic input characters in the menus on screen. NOTE: Requires that xConfiguration Video OSD inputMethod Cyrillic is set to On.

Requires user role: ADMIN

Value space: <Latin/Cyrillic>

Latin: Latin characters can be entered when using the remote control (default).
Cyrillic: Cyrillic characters can be entered using the remote control. NOTE: Requires a Cisco TelePresence Remote Control with Cyrillic fonts.

Example: Video OSD InputMethod InputLanguage: Latin

Video OSD InputMethod Cyrillic

Set the Cyrillic mode for the menu input language in the menus on screen.

Requires user role: ADMIN

Value space: <Off/On>

Off: Cyrillic mode is NOT available as a menu input language in the menus on screen.
On: Cyrillic mode is available as a menu input language in the menus on screen. This will enable the setting Video OSD InputMethod InputLanguage.

Example: Video OSD InputMethod Cyrillic: Off

Video OSD LoginRequired

Determine if the system should require the user to login before accessing the On Screen Display (OSD). If enabled, the user must enter his username and his PIN. After the user has logged in he can only execute to the configurations changes and commands allowed by his Role.

Requires user role: ADMIN

Value space: <Off/On>

Off: No login to the OSD is required.
On: The user must log in to access the On Screen Display (OSD).

Example: Video OSD LoginRequired: Off

Video AllowWebSnapshots

Allow or disallow snapshots being taken of the local input sources, remote sites and presentation channel. If allowed, the web interface Call Control page will show snapshots both when idle and in a call.

NOTE: This feature is disabled by default, and must be enabled from the On Screen Display (OSD), from a directly connected Touch controller, or via the codec's serial port (COM).

Requires user role: ADMIN

Value space: <Off/On>

Off: Capturing web snapshots is not allowed.
On: Web snapshots can be captured and displayed on the web interface.

Example: Video AllowWebSnapshots: Off
Video Output HDMI [1] RGBQuantizationRange

All devices with HDMI outputs should follow the rules for RGB video quantization range defined in CEA-861. Unfortunately some devices do not follow the standard and this configuration may be used to override the settings to get a perfect image with any display. The default value is set to Full because most HDMI displays expects full quantization range.

Requires user role: ADMIN

Value space: <Auto/Full/Limited>

- **Auto:** RGB quantization range is automatically selected based on the RGB Quantization Range bits (Q0, Q1) in the AVI infoframe. If no AVI infoframe is available, RGB quantization range is selected based on video format according to CEA-861-E.
- **Full:** Full quantization range. The R, G, B quantization range includes all code values (0 – 255). This is defined in CEA-861-E.
- **Limited:** Limited Quantization Range. R, G, B quantization range that excludes some code values at the extremes (16 – 235). This is defined in CEA-861-E.

Example: Video Output HDMI 1 RGBQuantizationRange: Full

Video Output HDMI [1] CEC Mode

The HDMI outputs support Consumer Electronics Control (CEC). When set to on (default is off), and the monitor connected to the HDMI output is CEC compatible and CEC is configured, the system will use CEC to set the monitor in standby when the system enters standby. Likewise the system will wake up the monitor when the system wakes up from standby. Please note that the different manufacturers uses different marketing names for CEC, for example Anynet+ (Samsung); Aquos Link (Sharp); BRAVIA Sync (Sony); HDMI-CEC (Hitachi); Kuro Link (Pioneer); CE-Link and Regza Link (Toshiba); RIHD (Onkyo); HDAVI Control, EZ-Sync, VIERA Link (Panasonic); EasyLink (Philips); and NetCommand for HDMI (Mitsubishi).

Requires user role: ADMIN

Value space: <Off/On>

- **Off:** Disable CEC control.
- **On:** Enable CEC control.

Example: Video Output HDMI 1 CEC Mode: Off

Video Output HDMI [1] MonitorRole

The HDMI monitor role describes what video stream will be shown on the monitor connected to the video output HDMI connector. Applicable only if the "Video > Monitors" configuration is set to dual.

Requires user role: ADMIN

Value space: <First/Second/PresentationOnly>

- **First:** Show main video stream.
- **Second:** Show presentation video stream if active, or other participants.
- **PresentationOnly:** Show presentation video stream if active, and nothing else.

Example: Video Output HDMI 1 MonitorRole: First

Video Output HDMI [1] OverscanLevel

Some TVs or other monitors may not display the whole image sent out on the systems video output, but cuts the outer parts of the image. In this case this setting can be used to let the system not use the outer parts of video resolution. Both the video and the OSD menu will be scaled in this case.

Requires user role: ADMIN

Value space: <Medium/High/None>

- **Medium:** The system will not use the outer 3% of the output resolution.
- **High:** The system will not use the outer 6% of the output resolution
- **None:** The system will use all of the output resolution.

Example: Video Output HDMI 1 OverscanLevel: None
**Video Output HDMI [1] Resolution**

Select the preferred resolution for the monitor connected to the video output HDMI connector. This will force the resolution on the monitor.

**Requires user role:** ADMIN

**Value space:** `<Auto/640_480_60/800_600_60/1024_768_60/1280_1024_60/1280_720_50/1280_720_60/1920_1080_50/1920_1080_60/1280_768_60/1360_768_60/1366_768_60/1600_1200_60/1680_1050_60/1920_1200_60>`

- **Auto:** The system will automatically try to set the optimal resolution based on negotiation with the connected monitor.
- **Range:** The system will force the resolution on the monitor.

**Example:** Video Output HDMI 1 Resolution: Auto

---

**Video Output DVI [2] RGBQuantizationRange**

All devices with DVI outputs should follow the rules for RGB video quantization range defined in CEA-861. Unfortunately some devices do not follow the standard and this configuration may be used to override the settings to get a perfect image with any display. The default value is set to Full because most DVI displays expects full quantization range.

**Requires user role:** ADMIN

**Value space:** `<Auto/Full/Limited>`

- **Auto:** RGB quantization range is automatically selected based on video format according to CEA-861-E. CE video formats will use limited quantization range levels. IT video formats will use full quantization range levels.
- **Full:** Full quantization range. The R, G, B quantization range includes all code values (0 – 255). This is defined in CEA-861-E.
- **Limited:** Limited Quantization Range. R, G, B quantization range that excludes some code values at the extremes (16 – 235). This is defined in CEA-861-E.

**Example:** Video Output DVI 2 RGBQuantizationRange: Full

---

The DVI monitor role describes what video stream will be shown on the monitor connected to the video output DVI-I connector. Applicable only if the "Video > Monitors" configuration is set to dual.

**Requires user role:** ADMIN

**Value space:** `<First/Second/PresentationOnly>`

- **First:** Show main video stream.
- **Second:** Show presentation video stream if active, or other participants.
- **PresentationOnly:** Show presentation video stream if active, and nothing else.

**Example:** Video Output DVI 2 MonitorRole: Second

---

**Video Output DVI [2] OverscanLevel**

Some TVs or other monitors may not display the whole image sent out on the systems video output, but cuts the outer parts of the image. In this case this setting can be used to let the system not use the outer parts of video resolution. Both the video and the OSD menu will be scaled in this case.

**Requires user role:** ADMIN

**Value space:** `<Medium/High/None>`

- **Medium:** The system will not use the outer 3% of the output resolution.
- **High:** The system will not use the outer 6% of the output resolution.
- **None:** The system will use all of the output resolution.

**Example:** Video Output DVI 2 OverscanLevel: None
Video Output DVI [2] Resolution
Select the preferred resolution for the monitor connected to the video output DVI-I connector. This will force the resolution on the monitor.

Requires user role: ADMIN

Value space: <Auto/640_480/60/800_600/60/1024_768_60/1280_1024_60/1280_720_50/1280_720_60/1920_1080_50/1920_1080_60/1280_768_60/1360_768_60/1366_768_60/1600_1200_60/1680_1050_60/1920_1200_60>

Auto: The system will automatically try to set the optimal resolution based on negotiation with the connected monitor.

Range: 640x480@60p, 800x600@60p, 1024x768@60p, 1280x1024@60p, 1280x720@50p, 1280x720@60p, 1920x1080@50p, 1920x1080@60p, 1280x768@60p, 1360x768@60p, 1366x768@60p, 1600x1200@60p, 1680x1050@60p, 1920x1200@60p

Example: Video Output DVI 2 Resolution: Auto

NOTE: This command is not supported on Codec C40.
The Composite monitor role describes what video stream will be shown on the monitor connected to the video output Composite connector. Applicable only if the monitor configuration is set to dual.

Requires user role: ADMIN

Value space: <First/Second/PresentationOnly>

First: Show main video stream.
Second: Show presentation video stream if active, or other participants.
PresentationOnly: Show presentation video stream if active, and nothing else.

Example: Video Output Composite 3 MonitorRole: First

Video Output Composite [3] OverscanLevel
NOTE: This command is not supported on Codec C40.
Some TVs or other monitors may not display the whole image sent out on the systems video output, but cuts the outer parts of the image. In this case this setting can be used to let the system not use the outer parts of video resolution. Both the video and the OSD menu will be scaled in this case.

Requires user role: ADMIN

Value space: <Medium/High/None>

Medium: The system will not use the outer 3% of the output resolution.
High: The system will not use the outer 6% of the output resolution.
None: The system will use all of the output resolution.

Example: Video Output Composite 3 OverscanLevel: None

Video Output Composite [3] Resolution
NOTE: This command is not supported on Codec C40.
Select the preferred resolution for the monitor connected to the video output Composite connector. This will force the resolution on the monitor.

Requires user role: ADMIN

Value space: <PAL/NTSC>

Range: PAL, NTSC

Example: Video Output Composite 3 Resolution: NTSC

Video Wallpaper
Select a background image (wallpaper) for the video screen when idle.

Requires user role: USER

Value space: <None/Custom/Growing/Summersky/Waves>

None: There is no background image on the screen, i.e. the background is black.
Custom: Use the custom wallpaper that is stored on the system as background image on the screen. As default, there is no custom wallpaper stored and the background will be black. You can upload a custom wallpaper to the system using the web interface. The maximum supported resolution is 1920x1200.
Summersky, Growing, Waves: The chosen background image is shown on the screen.

Example: Video Wallpaper: Summersky
Experimental settings

The Experimental settings are for testing only and should not be used unless agreed with Cisco. These settings are not documented and WILL change in later releases.
Chapter 4

Setting passwords
Setting the system password

You need to sign in to be able to use the web and command line interfaces of your system.

The video system is delivered with a default user account with full credentials. The user name is admin, and initially, no password is set for the default user.

We strongly recommend that you set a password for the admin user, and to any other user with similar credentials, to restrict access to system configuration.

Make sure to keep a copy of the password in a safe place. You have to factory reset the unit if you have forgotten the password.

Other user accounts

You can create as many user accounts as you like for your video system.

You can read more about how to create and manage user accounts in the User administration section.

Changing your own system password

Perform the following steps to change the system password.

If a password is currently not set, use a blank Current password; to remove a password, leave the New password fields blank.

- Sign in to the web interface with your user name and current password.
- Click your user name in the upper right corner and choose Change password in the drop down menu.
- Enter the Current password, the New password, and repeat the new password in the appropriate input fields.
- The password format is a string with 0–64 characters.
- Click Change password.

Changing another user’s system password

If you have administrator access rights, you can change all users’ passwords by performing the following steps:

- Sign in to the web interface with your user name and password.
- Go to the Maintenance tab and select User Administration.
- Choose the appropriate user from the list.
- Enter a new password and PIN code.
- Click Save.
Setting the menu password

When starting up the video conference system for the first time anyone can access the Administrator Settings menu with either the remote control or the Touch controller because the menu password is not set.

We strongly recommend that you set a menu password, because the administrator settings may severely affect the behavior of the system.

You should use the web interface or remote control to set the menu password; the Touch controller cannot be used.

Setting the menu password from the web interface

1. Sign in to the web interface with your user name and current password.
2. Go to Configuration > System Configuration.
3. Click Set/Change Administrator Settings menu password to open the menu password dialog.
4. Enter the password in the input field.
5. Click Save to set/change the password.

To find the system’s IP address tap Settings ( ) > System Information on the Touch controller, or navigate to Home > Settings > System Information using the remote control and on-screen menu.

Setting the menu password using the remote control

1. In the on screen menu, go to Home > Settings > Administrator settings > Set menu password.
   The password format is a string with 0–255 characters. To deactivate the password leave the password input field empty.
2. Enter the menu password in the input field. The password you enter is hidden; each character is replaced with a star (*).
   On the remote control, press the # key to toggle between lower or upper case characters and numbers: abc/ABC/123.
3. Select Save to save the changes, or Cancel to leave without saving.
4. Press Home ( ) to exit.
Setting a root password

You can protect the file system of your video system by setting a password for the root user.

The root user is disabled by default. You have to use the command line interface to enable the root user and set a root password.

Activate the root user and set the password

Perform the following steps to activate the root user and set a password for it:

1. Connect to the system through the network or its serial data port (if available) and open a command line interface (SSH or Telnet).
2. Sign in to the system with user name and password. The user needs ADMIN rights.
3. Type the following command:
   ```bash
   systemtools rootsettings on <password>
   ```

   The root password is not the same as the system (admin) password.
Appendices
About monitors when you have a Codec C60

Connecting the main monitor

The main monitor can be connected to video output HDMI 1 (the default connector for the main monitor) or DVI-I 2. The codec will read the native resolution of the monitor and output this if possible. Typically this will give the best possible picture for the connected monitor. If auto fails, you will have to select the resolution manually using the Video > Output > HDMI 1 > Resolution and Video > Output > DVI 2 > Resolution settings.

Connecting to HDMI 1

When connecting the main monitor to HDMI 1 the menu, icons and other information on screen (OSD - on screen display) will be displayed on the monitor automatically. This is because HDMI 1 is the default video output of the codec.

Connecting to DVI-I 2

When connecting the main monitor to the DVI–I 2 output, the menus, icons and other information are not automatically displayed on screen. You must move the OSD to the chosen output.

Moving the OSD

You can move the OSD using the remote control or the web interface.

Remote control

Check which connector the main monitor is connected to, and run the following key sequence on the remote control.

- Disconnect * # * # 0 x #
- x=1 (HDMI 1)  x=2 (DVI–I 2)

Example: Setting DVI-I 2 as the OSD output.

Web interface

Open the System Configuration page. Go to Video > OSD > Output and choose the video output connector for the main monitor.

Dual monitors

When you want to run a dual monitor setup, connect the main monitor to video output HDMI 1 and the second monitor to video output DVI-I 2 on the codec.

Dual monitor configuration

To distribute the layout on the two monitors, go to Advanced configuration (menu on screen) or open the System Configuration page (web interface). Then go to Video > Monitors and choose Dual.
About monitors when you have a Codec C40

Connecting the main monitor

The main monitor can be connected to video output HDMI 1 (the default connector for the main monitor) or DVI-I 2. The codec will read the native resolution of the monitor and output this if possible. Typically this will give the best possible picture for the connected monitor. If auto fails, you will have to select the resolution manually using the Video > Output > HDMI 1 > Resolution and Video > Output > DVI 2 > Resolution settings.

Connecting to HDMI 1

When connecting the main monitor to HDMI 1 the menu, icons and other information on screen (OSD – on screen display) will be displayed on the monitor automatically. This is because HDMI 1 is the default video output of the codec.

Connecting to DVI-I 2

When connecting the main monitor to the DVI-I 2 output, the menus, icons and other information are not automatically displayed on screen. You must move the OSD to the chosen output.

Moving the OSD

You can move the OSD using the remote control or the web interface.

Remote control

Check which connector the main monitor is connected to, and run the following key sequence on the remote control.

- Disconnect * # # 0 x #
- x=1 (HDMI 1) x=2 (DVI-I 2)

Example: Setting DVI-I 2 as the OSD output.

Web interface

Open the System Configuration page. Go to Video > OSD > Output and choose the video output connector for the main monitor.

Dual monitors

When you want to run a dual monitor setup, connect the main monitor to video output HDMI 1 and the second monitor to video output DVI-I 2 on the codec.

Dual monitor configuration

To distribute the layout on the two monitors, go to Advanced configuration (menu on screen) or open the System Configuration page (web interface). Then go to Video > Monitors and choose Dual.
Connecting the Cisco TelePresence Touch 8" controller

The Cisco TelePresence Touch 8" controller is an alternative to the remote control and on-screen menus.

A C Series codec running software version TC4.1 or later can be controlled using the Touch controller.

You cannot use both the remote control and the Touch controller at the same time. When a Touch controller is connected to the codec, the remote control cannot be used.

Disconnect (unpair) the Touch controller if you want to use the remote control.

Connecting the Touch controller

There are two options how to connect the Touch controller to the codec. In both cases the connection is via the provided power adapter, as illustrated above.

A. Connecting the Touch controller to the codec via LAN.

To enable this mode of operation make sure that the NetworkServices > SSH > Mode setting is turned On.

The process of associating the Touch controller to the codec is called pairing. The codec is signalling that it is available for pairing for 30 minutes after it is switched on.

We recommend that the Touch controller and video system is kept on the same subnet.

B. Connecting the Touch controller directly to the codec’s second Ethernet connector.

To enable this mode of operation use the remote control and navigate to Home > Settings > Administrator settings > Pairing > Direct pairing and choose On. Alternatively, set the NetworkPort 2 > Mode setting to DirectPairing.

Restart the codec for the change to take effect.

Touch controller set-up

Once the Touch controller is connected to power, the set-up procedure begins. Follow the instructions on screen.

If you have connected the unit to the codec via LAN, you have to choose which codec to pair with. If the codec is not in the list of available codecs displayed on the Touch controller, you can choose a codec manually by entering its IP address.

If the Touch controller needs software upgrade, new software will be downloaded from the codec and installed on the unit automatically as part of the set-up procedure. The Touch controller restarts after the upgrade.

You can verify that the Touch controller is successfully paired to the codec by checking that the codec address is displayed in the top banner.

If you want more details on Touch installation, please read the Cisco TelePresence Touch 8 inch Installation Guide, which is available on the Cisco web site.
Advanced customization of video and audio

The codec supports full customization of the audio routing and video layouts/templates allowing support for advanced meeting room setups and integrations.

The TC Console application, which is a free software tool that runs on PC/Mac, provides a graphical interface to the advanced customizable features of the codec. TC Console includes the following modules:

Video compositor
- Modify the default video compositing behavior of the codec
- Add new layouts
- Change the automatically chosen layout
- Control what video sources are shown where and when

Audio console
- Configure the audio system of the codec.
- Change the default mixing, routing and equalizers
- Set various input and output connector properties

GPIO
- Change the behavior of the GPIO, i.e. what the codec should do when pins go high/low

For more details about the functionality, see the user guide included in the TC Console application itself or download the TC Console user guide from http://www.cisco.com/go/cseries-docs

How to obtain the TC Console application
Download the TC Console application for free from the Cisco Developer Network (CDN) web site. Go to: http://developer.cisco.com/web/telepresence-developer
Optimal definition profiles

Under ideal lighting conditions the bandwidth (call rate) requirements can be substantially reduced.

The optimal definition profile should reflect the lighting conditions in your room and the quality of the video input (camera); the better the lighting conditions and video input, the higher the profile. Then, in good lighting conditions, the video encoder will provide better quality (higher resolution or frame rate) for a given call rate.

In general, we recommend the optimal definition profile set to Normal. However, if lighting conditions are good we recommend that you test the endpoint on the various Optimal Definition Profile settings before deciding on a profile.

Go to System Configuration on the web interface and navigate to Video > Input > Source [1..n] > OptimalDefinition > Profile to choose the preferred optimal definition profile.

You can set a resolution threshold to determine when to allow sending video at 60 fps. For all resolutions lower than this threshold, the maximum transmitted frame rate will be 30 fps; for higher resolutions, 60 fps will be possible if the available bandwidth is adequate.

Go to System Configuration on the web interface and navigate to Video > Input > Source [1..n] > OptimalDefinition > Threshold60fps to set the threshold.

The video input quality settings must be set to Motion for the optimal definition settings to take any effect. With the video input quality set to Sharpness, the endpoint will transmit the highest resolution possible, regardless of frame rate.

Go to System Configuration on the web interface and navigate to Video > Input > Source [1..n] > Quality to set the video quality parameter to Motion.

You can read more about the video settings in the System settings chapter.

High
Typically used in dedicated video conferencing rooms. Requires very good lighting conditions and a good quality video input to achieve a good overall experience.
Under ideal conditions the bandwidth requirements can be reduced by up to 50% compared to Normal.

Medium
Typically used in rooms with good and stable lighting conditions and a good quality video input.
The bandwidth requirements can be reduced by up to 25% compared to Normal.

Normal
This setting is typically used in office environments where the room is normally to poorly lit.

</table>

* The resolution will be 1920 × 1080 for 1080p60 capable C60 codecs (main board rev F and later).
ClearPath – Packet loss resilience

ClearPath introduces advanced packet loss resilience mechanisms that increase the experienced quality when you use your video system in an error prone environment.

We recommend that you keep ClearPath enabled on your video system.

Go to Advanced configuration (menu on screen) or open the System Configuration page (web interface):

- Navigate to Conference 1 > PacketLossResilience > Mode

Choose Off to disable ClearPath and On to enable ClearPath.
Requirement for speaker systems connected to a Cisco TelePresence C Series codec

Cisco has put in a lot of effort to minimize the camera to screen delay on our TelePresence endpoints.

New consumer TVs are usually equipped with “Motion Flow” or similar technology to insert new video frames between standard frames to create smoother images. This processing takes time and to maintain lip synchronization, the TV will delay the audio so that the audio and video arrives at the same time.

The echo canceller in the Cisco endpoints can handle such delay up to 30ms. Many consumer TVs are not made for real time video communication and may introduce more than 30ms of delay.

If you use such a TV together with a C Series codec it is recommended that you turn off “Motion Flow”, “Natural Motion” or any other video processing that introduces additional delay.

Some consumer TVs also support advanced audio processing like “Virtual Surround” effects and “Dynamic Compression” to improve the TV experience. Such processing will make any acoustic echo canceller malfunction and should hence be switched off.

Some monitors are equipped with a setting called ‘Game Mode’. This mode is specifically designed to help reduce the response time and will usually help to reduce the delay.
DNAM for Profile 42”/52”/55”

The DNAM (Digital Natural Audio Module) is built on two specially designed and separate modules: the amplifier and the loudspeaker cabinet.

The DNAM loudspeaker

3-way center loudspeaker system

- Frequency range 50Hz - 20kHz
- 2 x 100mm low- and midrange loudspeaker 8ohm nominal, excellent quality (SEAS Prestige series)
- 1 x 25mm dome tweeter, 6ohm nominal, excellent quality
- Digitally filtered audio signals received from DNAM amplifier
- Long time max power 70 watt on all loudspeakers
- Enclosed MDF loudspeaker cabinet

Integrated stereo loudspeaker

Each side has:

- 1 x 90mm fullrange loudspeaker, 8ohm nominal, excellent quality
- Frequency range 70Hz - 20kHz
- Enclosed MDF loudspeaker cabinet

The DNAM amplifier

- 5 x 50 watt continuous average output power
- Full frequency range for audio (20Hz – 20kHz)
- Digital signal processing and filtering on all channels for best audio detail clarity
- Digital crossover filtering on center channels
- In/out:
  - Audio In: SPDIF (stereo) or Analog (mono) using the same connector
  - Audio Loop Out: line out directly from the input; always analog even with SPDIF in
  - Audio Differential In: female XLR, pinout: 1 - GND, 2 - Signal (+), 3 - Signal (-)
  - Audio Stereo Out: male XLR, common GND configuration
  - Loudspeaker Out: female D-SUB 15-pin
- Fuse 2A 250V slow, 5 x 20mm, Littelfuse type 215002.
  - Always use this type of fuse. Using a different type may lead to serious hardware malfunction.

Spare fuses

The Profile system is delivered with two spare DNAM fuses in the column.

Take care not to damage the fuse and fuse holder when replacing a fuse.

- Push the fuse holder slightly inwards and turn counter-clockwise to release the fuse.
- When reinserting the fuse and fuse holder, push slightly inwards and turn the holder carefully clockwise until it locks in place.

Some DNAM amplifier models are delivered without XLR connectors, and with a different RCA connector placement.
The DNAM (Digital Natural Audio Module) is built on two specially designed and separate modules: the amplifier and the loudspeaker cabinet.

**The DNAM loudspeaker**

### 3-way center loudspeaker system
- Frequency range 50 Hz – 20 kHz
- 2 × 100 mm low- and midrange loudspeakers, 8 ohm nominal, reference quality (SEAS Excel series)
- 1 × 25 mm dome tweeter, 6 ohm nominal, excellent quality
- Digitally filtered audio signals received from DNAM amplifier
- Long time max power 70 watt on all loudspeakers
- Enclosed MDF loudspeaker cabinet

### 2-way integrated stereo loudspeaker
Each side has:
- 1 × 100 mm low- and midrange loudspeaker, 8 ohm nominal, reference quality (SEAS Excel series)
- 1 × 25 mm dome tweeter, 6 ohm nominal, excellent quality
- Passive crossover filter
- Frequency range 70 Hz – 20 kHz
- Long time max power 70 watt
- Enclosed MDF loudspeaker cabinet

**The DNAM amplifier**

- 5 × 50 watt continuous average output power
- Full frequency range for audio (20 Hz – 20 kHz)
- Digital signal processing and filtering on all channels for best audio detail clarity
- Digital crossover filtering on center channels
- In/out:
  - Audio In: SPDIF (stereo) or Analog (mono) using the same connector
  - Audio Loop Out: line out directly from the input; always analog even with SPDIF in
  - Audio Stereo Out: male XLR, common GND configuration
  - Loudspeaker Out: female D-SUB 15-pin
- Fuse 2A 250V slow, 5 × 20 mm, Littelfuse type 215002

Always use this type of fuse. Using a different type may lead to serious hardware malfunction.

### Spare fuses
The Profile system is delivered with two spare DNAM fuses in the column.

Take care not to damage the fuse and fuse holder when replacing a fuse.
- Push the fuse holder slightly inwards and turn counter-clockwise to release the fuse.
- When reinserting the fuse and fuse holder, push slightly inwards and turn the holder carefully clockwise until it locks in place.
Factory resetting

If you have to reset your video system to its default factory settings, we recommend that you use either a Touch controller or the web interface. If neither of these methods are available, you can connect to the system's standard serial interface and issue a factory reset command.

The remote control and on-screen menu do not give access to factory reset.

When factory resetting the video system the following happens:

- The call logs will be deleted.
- Passwords will be reset to default.
- All system parameters will be reset to default values.
- All files that have been uploaded to the system will be deleted. This includes, but is not limited to, custom backgrounds, certificates and the local phone book.
- Release keys and option keys will not be affected.
- The system restarts automatically after the reset.

It is not possible to undo a factory reset.

1. Tap gently on the Touch screen if the unit is in sleep mode.
2. Navigate to Settings ( ) > Administrator Settings > Reset.
3. Tap the Factory Reset button.
   The system reverts to the default factory settings and restarts automatically. This will take a few minutes.

   The system confirms the factory reset by displaying a notification on the main screen when up and running again. The notification disappears after approximately 10 seconds.

4. If you are sure you want to perform a factory reset, click the red Reset button.
   The system reverts to the default factory settings and restarts automatically. This will take a few minutes.

   The system confirms the factory reset by displaying a notification on the main screen when up and running again. The notification disappears after approximately 10 seconds.

If you want to backup your current configuration before you factory reset the unit, open a web browser and follow these steps:

- Enter the IP address of the video system in the address bar and sign in.
- Navigate to Maintenance > Backup and Restore.
- Click Take backup and follow the instructions to save the file on your computer.

Serial interface

You have to connect to the video system’s COM port with a serial cable. The serial port is enabled as a default, but it may have been disabled.

The connection parameters for the COM port are as follows:

- Data bits: 8
- Parity: None
- Stop bits: 1
- Flow control: None
- Baud rate: The default value is 38400 bps, but it may have been changed

You can read more about the system's serial port settings in the System settings chapter.

1. Login as admin (administrator rights).
2. Issue the following command:
   xCommand SystemUnit FactoryReset Confirm: Yes
   You will see the following text:
   *r FactoryResetResult:
   **end
   OK
   The system will revert to the default factory settings and automatically restart. This will take a few minutes.

   The system confirms the factory reset by displaying a notification on the main screen when up and running again. The notification disappears after approximately 10 seconds.
Factory resetting the Touch 8” controller

You must use the New message indicator and Mute buttons to reset the Touch 8” controller to its default factory settings.

When factory resetting the Touch controller the logs will be cleared, and the configuration and pairing information are lost.

The Touch controller restarts after the reset and must receive a new configuration from the video system.

- If the Touch controller is directly connected to the video system it receives the configuration automatically.
- If it is connected via LAN it receives the new configuration as soon as it is successfully paired to the video system.

⚠️ It is not possible to undo a factory reset.

1. Locate the New message indicator and Mute buttons.

   The New message indicator is a bit hard to see, but it is the button with the exclamation mark on it.

2. Press and hold the New message indicator until it lights up (approximately 10 seconds).

3. Press the Mute button twice.

   The Touch controller automatically reverts to the default factory settings and restarts.
Technical specifications

Codec C60/C40

UNIT DELIVERED COMPLETE WITH:
- Video conferencing codec, wireless remote control, rack mounting rails (C60), rack mounting ears (C40), LAN cable, power cable

BANDWIDTH
- H.323/320 up to 6 Mbps point-to-point

FIREWALL TRAVERSAL
- Cisco TelePresence Expressway technology
- H.460.18, H.460.19 firewall traversal

VIDEO STANDARDS
- H.261, H.263, H.263+, H.264

VIDEO FEATURES
- Native 16:9 widescreen
- Advanced screen layouts
- Intelligent video management
- Local auto layout
- 7 embedded individual video composites – 1 for every output and 1 for every encoder (C60 only)

VIDEO INPUTS (5 INPUTS (C60) / 4 INPUTS (C40))

Two HDMI inputs; supported formats:
- 1920 x 1080@60 Hz (1080p60)
- 1080 x 1080@60 Hz (1080p60)
- 1080 x 720@50 Hz (720p50)
- 720 x 480@60 Hz (480p60)
- 640 x 480@60 Hz (480p60)
- 1600 x 1200@50 Hz (UXGA)
- 1280 x 1024@60 Hz (SXGA+)
- 1024 x 768@60 Hz (WXGA+)
- 800 x 600@60 Hz (SVGA)
- 640 x 480@60 Hz (480p60)

Digital (DVI-D):
- Same as HDMI, refer above.

One S-video/Composite input (BNC-connector):
- PAL/NTSC
- Extended Display Identification Data (EDID)

VIDEO OUTPUTS (3 OUTPUTS (C60) / 2 OUTPUTS (C40))

One HDMI output, one DVI-I output; supported formats:
- 1920 x 1080@60 Hz (1080p60)
- 1280 x 1024@60 Hz (720p60)
- 1080 x 720@50 Hz (720p50)
- 720 x 480@60 Hz (480p60)
- 640 x 480@60 Hz (480p60)

Digital (DVI-D):
- Same as HDMI, refer above.

One S-video/Composite input (BNC-connector):
- PAL/NTSC
- Extended Display Identification Data (EDID)

LIVE VIDEO RESOLUTIONS (ENCODE/DECODE)
- 176 x 144@30 fps (QCIF)
- 352 x 288@30 fps (CIF)
- 512 x 384@30 fps (w288p)
- 576 x 448@30 fps (448p)
- 720 x 576@30 fps (w448p)
- 704 x 576@30 fps (4CIF)
- 1024 x 576@30 fps (w720p)
- 1280 x 720@30 fps (720p30)
- 1920 x 1080@30 fps (1080p30)
- 640 x 480@30 fps (VGA)
- 800 x 600@30 fps (SVGA)
- 1280 x 720@30 fps (1080p30)
- 1024 x 768@30 fps (720p30)
- 1280 x 720@30 fps (720p60)
- 1920 x 1080@30 fps (1080p30)
- 1440 x 1080@30 fps (UXGA)
- 1920 x 1200@30 fps (UXGA)
- 1600 x 1050@30 fps (WSXGA+)
- 1280 x 960@30 fps (WXGA+)
- 1024 x 768@30 fps (WXGA+)
- 800 x 600@30 fps (SVGA)
- 640 x 480@30 fps (480p60)

CD-quality 20

AUDIO STANDARDS
- G.711, G.722, G.722.1, 64 kbps and 128 kbps MPEG AAC-LD, AAC-LD stereo

AUDIO FEATURES
- CD-quality 20kHz mono and stereo
- Four (C60) / Two (C40) separate acoustic echo cancellers
- 4-port (C60) / 2-port (C40) audio mixer
- Automatic Gain Control (AGC)
- Automatic noise reduction
- Active lip synchronization

AUDIO INPUTS (7 INPUTS (C60), 5 INPUTS (C40))

- Four microphones (C60) / two microphones (C40), 48V phantom powered, XLR connector, each with separate echo cancellers and noise reduction; all microphones can be set for balanced line level
- Two RCA/Phono inputs, line level: Stereo PC input, configurable to two RCA/Phono inputs, line level: Mono auxiliary/DVD input
- One HDMI input, digital, stereo PC/DVD inputs

AUDIO OUTPUTS (3 OUTPUTS)

- Two RCA/Phono outputs, line level, stereo main audio, configurable to S/PDIF or two RCA/Phono outputs, line level, mono to recording device
- One HDMI output, digital, stereo main audio

DUAL STREAM
- H.261 (H.233) dual stream
- BFCP (SIP) dual stream
- Support for resolutions up to 1080p30/WUXGA (C60) / WXGA30 (C40), independent of main stream resolution

* Requires option
** Multiview window compositing not supported on the dual stream
*** Not supported on 4 x zoom camera
MULTIPoint SUPPORT
- Four-way embedded SIP/H.323 MultiPoint, reference MultiSite
- Cisco TelePresence Multiway support (requires Cisco TelePresence Video Communication Server [Cisco UCS] and Cisco TelePresence MCU)
- Ability to natively join multipoint conferences hosted on Cisco Telepresence Multipoint Switch (CTMS)

MULTIsITE FEATURES*
(embedded multipoint switch)
- Four-way SIP/H.323 MultiSite. Resolution up to 720p30 (C60) / w672x30 (C40)
- Full individual audio and video transcoding
- Individual layouts in multisite continuous presence (may take a few seconds)
- Support for Presentation (H.239/BFCP) from any participant at resolutions up to WXGA@30 (C60) / WSVG@30 (C40)
- Best Impression (automatic continuous presence layouts)
- H.264, encryption, and dual stream from any site
- Dial-in and dial out
- Additional telephone call (no license required)
- Conference rates up to 10 Mbps

PROTOCOLS
- H.323
- SIP

EMBEDDED ENCRYPTION
- H.323/SIP point-to-point
- Standards-based: H.235 v3 and Advanced Encryption Standard (AES)
- Automatic key generation and exchange
- Supported in Dual Stream

IP NETWORK FEATURES
- DNS lookup for service configuration
- Differentiated Services (QoS)
- IP adaptive bandwidth management (including flow control)
- Auto gatekeeper discovery
- Dynamic layout and lip-sync buffering
- H.245 DTMF tones in H.323
- Date and time support via NTP
- Packet loss based downspeeding
- URI + FQDN
- TCP/IP
- DHCP
- 802.1x Virtual LAN
- 802.1x QoS and class of service
- ClearPath

IPV6 NETWORK SUPPORT
- Single call stack support for both H323 and SIP
- Dual-stack IPv4 and IPv6 for DHCP, SSH, HTTP, HTTPS, DNS, DiffServ
- Support for both static and autoconfiguration (stateless address autoconfiguration)

CISCO UNIFIED COMMUNICATIONS MANAGER
(requires Cisco UCM version 8.6 or later)
- Native registration with Cisco Unified Communications Manager
- Basic Cisco Unified Communications Manager provisioning
- Firmware upgrade from Cisco Unified Communications Manager
- Cisco Discovery Protocol and DHCP option 150 support
- Basic telephony features such as hold, resume, transfer, and corporate directory lookup

SECURITY FEATURES
- Management through HTTPS and SSH
- IP administration password
- Menu administration password
- Disable IP services
- Network settings protection

NETWORK INTERFACES
- One LAN/Ethernet (RJ-45) 10/100/1000 Mbit
- One LAN/Ethernet (RJ-45) interface to be used for the Cisco TelePresence Touch for C-series user interface device only

OTHER INTERFACES
- USB host for future usage (C60 only)
- USB device for future usage
- GPIO – General purpose input/output (C60 only)

PRECISIONHD 1080P CAMERA
- 1/3” CMOS
- 12 x zoom (C60)
- 12 x zoom / 4 x zoom (C40)
- +15/-25° tilt, +/- 90° pan
- 43.5° vertical field of view
- 72° horizontal field of view
- Focus distance 0.3m–infinity
- 1920 x 1080 pixels progressive @ 60fps (12 x zoom version)
- 1920 x 1080 pixels progressive @ 30fps (4 x zoom version)
- Other formats supported (configured through dip-switch):
  - 1920 x 1080@60 Hz (HDMI only)**
  - 1920 x 1080@50 Hz (HDMI only)**
  - 1920 x 1080@30 Hz
  - 1920 x 1080@25 Hz
  - 1280 x 720@60 Hz***
  - 1280 x 720@50 Hz***
  - 1280 x 720@30 Hz
  - 1280 x 720@25 Hz
  - Automatic or manual focus/brightness/white balance
  - Far-end camera control
  - Daisy-chain support (Visca protocol camera)***
  - Dual HDMI and HD-SDI outputs
  - Upside-down mounting with automatic flipping of picture

SYSTEM MANAGEMENT
- Support for the Cisco TelePresence Management Suite (Cisco TMS)
- Total management through embedded SNMP, Telnet, SSH, XML, SOAP
- Remote software upload through web server, SCP, HTTP, HTTPS
- One RS-232 for local control and diagnostics
- Remote control and on-screen menu system

DIRECTORY SERVICES
- Support for local directories (My Contacts)
- Corporate directory
- Unlimited entries using server directory supporting LDAP and H.350 (requires Cisco TMS)
- Unlimited number for corporate directory (through Cisco TMS)
- Received calls with date and time
- Placed calls with date and time
- Missed calls with date and time

POWER
- Auto-sensing power supply
- 100–120V/200–240V AC, 60/50 Hz
- 175 watts max for codec and main camera

OPERATING TEMPERATURE AND HUMIDITY
- 0° C to 35° C (32° F to 95° F) ambient temperature
- 10% to 90% relative humidity (RH)

STORAGE AND TRANSPORT TEMPERATURE
- -20° C to 60° C (-4° F to 140° F) at RH 10–90% (non-condensing)

DIMENSIONS
- Length: 17.4 in. / 44.2 cm
- Height: 1.7 in. / 4.4 cm
- Depth: 10.9 in. / 27.8 cm
- Weight: 8.8 lbs / 4 kg

* Requires option
** Multimonitor compositor not supported on the dual stream
*** Not supported on 4 x zoom camera
APPROVALS

EU/EEC
- Directive 2006/95/EC (Low Voltage Directive)
  - Standard EN60950-1, 2nd ed.
  - Standard EN55022, Class A
  - Standard EN55024
  - Standard EN61000-3-2/-3-3

Warning: This is a class A product. In a domestic environment this product may cause radio interference in which case the user may be required to take adequate measures.

USA
- Approved according to UL60950-1 2nd ed.
- Complies with FCC15B Class A

Note: This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference in which case the user will be required to correct the interference at his own expense.

Canada
- Approved according to CAN/ CSA-C22.2 No. 60950-1
- This Class A digital apparatus complies with Canadian ICES-003.
- Cet appareil numérique de la classe A est conforme à la norme NMB-003 du Canada.

MTBF PRODUCT RELIABILITY/MTBF
The predicted reliability is expressed in the expected random Mean Time Between Failures (MTBF) for the electronic components based on the Power On Hours:
Power On Hours (POH) > 69 000 hours
Useful Life Cycle > 6 years

ISO 9001 certificate is available upon request
Profile 52”/55” using C60

UNIT DELIVERED COMPLETE WITH:
- Full HD LCD display, Codec C60, Touch 8” user interface device, remote control, PrecisionHD Camera (1080p), microphone (3x with single screen, 4x with dual screen), Digital Audio Module, integrated speakers and integrated cabling.
- Choice of installation configuration: floor stand, wheel base or wall mount on pedestal.
- Choice of screen size and configuration.

Monitor available with:
- 52”/55” Full HD LCD, 16:9, 1080 x 1920 resolution

Base available with:
- Floor standing footplate
- Wheel base (not available on 52” Dual / 55” Dual)
- Wall mount on pedestal

Cisco TelePresence System Codec C40/C60 and Profiles using C40/60

Administrator Guide

Profile 42”/52”/55” using C40

UNIT DELIVERED COMPLETE WITH:
• Full HD LCD display, Codec C40, Touch 8” user interface device, remote control, PrecisionHD Camera (1080p), microphones (2x), Digital Audio Module, integrated speakers and integrated cabling.
• Choice of installation configuration: floor stand, wheel base or wall mount on pedestal.

MONITOR available with:
• 42” Full HD LCD, 16:9, 1080 x 1920 resolution
• 52” Full HD LCD, 16:9, 1080 x 1920 resolution
• 55” Full HD LCD, 16:9, 1080 x 1920 resolution

BASE available with:
• Floor standing footplate
• Wheel base
• Wall mount on pedestal

POWER
Profile 42”
• Auto-sensing power supply
• 100-120/200-240 VAC, 60/50Hz, 6A max
• 175W max for codec and main camera
• Maximum power rating complete system 365W

Profile 52”
• Auto-sensing power supply
• 100-120/200-240 VAC, 60/50Hz, 6A max
• 175W max for codec and main camera
• Maximum power rating complete system 526W

Profile 55”
• Auto-sensing power supply
• 100-120/200-240 VAC, 60/50Hz, 4.5A max
• 175W max for codec and main camera
• Maximum power rating complete system, 350 W
• The display complies with ENERGY STAR requirements

OPERATING TEMPERATURE AND HUMIDITY
• 0° C to 35° C (32° F to 95° F) ambient temperature
• 10% to 90% relative humidity (RH)

User documentation on the Cisco web site

In general, user documentation for the Cisco TelePresence products is available here:

► http://www.cisco.com/go/telepresence/docs

You have to choose your product category in the right pane until you find your product. For the C Series, this is the path you have to follow:

TelePresence >
TelePresence Solutions Platform >
TelePresence Integrator Products >
Cisco TelePresence Integrator C Series >

Alternatively, you can use the following short-link to find the documentation for the C Series:

► http://www.cisco.com/go/cseries-docs

The documents are organized in the following categories:

Installation guides:
Install and Upgrade > Install and Upgrade Guides

Getting started guide:
Install and Upgrade > Install and Upgrade Guides
Maintain and Operate > Maintain and Operate Guides

Administrator guides:
Maintain and Operate > Maintain and Operate Guides

User guides and Quick reference guides:
Maintain and Operate > End-User Guides

API reference guides:
Reference Guides | Command references

Knowledge base articles and frequently asked questions:
Troubleshoot and Alerts > Troubleshooting Guides

Physical interface guides:
Maintain and Operate > End-User Guides

CAD drawings:
Reference Guides > Technical References

TC Console user guide:
Configure > Configuration Guides

Video conferencing room guidelines:
Design > Design Guides

Software licensing information:
Software Downloads, Release and General Information > Licensing Information

Regulatory compliance and safety information:
Install and Upgrade > Install and Upgrade Guides

Software release notes:
Software Downloads, Release and General Information > Release Notes
Intellectual property rights
