Software version TC7.3
OCTOBER 2015

Administrator guide
for Cisco TelePresence System Codec C90 and Profile 65” Dual using C90
Thank you for choosing Cisco!

Your Cisco product has been designed to give you many years of safe, reliable operation.

This part of the product documentation is aimed at administrators working with the setup of the Codec C90 and Profiles using Codec C90.

Our main objective with this Administrator guide is to address your goals and needs. Please let us know how well we succeeded!

May we recommend that you visit the Cisco web site regularly for updated versions of this guide.

The user documentation can be found on
► http://www.cisco.com/go/telepresence/docs

How to use this guide

The top menu bar and the entries in the Table of contents are all hyperlinks. You can click on them to go to the topic.

Chapter 1

Introduction
This document provides you with the information required to administrate your product at an advanced level.

Products covered in this guide:
- Profile 65” Dual using C90
- Codec C90

**User documentation**

The user documentation for the Cisco TelePresence Codec C Series includes several guides suitable for various user groups.

- **Installation guide:** How to install the product
- **Getting started guide:** Initial configurations required to get the system up and running
- **Administering TC Endpoints on CUCM:** Tasks to perform to start using the product with the Cisco Unified Communications Manager (CUCM)
- **Administrator guide (this guide):** Information required to administer your product
- **Quick reference guides:** How to use the product (remote control and Touch controller)
- **User guides:** How to use the product (remote control and Touch controller)
- **Camera user guide:** User guide for the PrecisionHD cameras
- **API reference guide:** How to use the Application Programmer Interface (API), and reference guide for the command line commands
- **User guide for the TC console application:** The free TC Console application provides a graphical interface to the advanced customizable features of the codec.
- **Physical interface guide**
- **Knowledge base articles**
- **Video conferencing room primer:** General guidelines for room design and best practice
- **Video conference room acoustics guidelines:** Things to do to improve the perceived audio quality
- **Software release notes**
- **Regulatory compliance and safety information guide**
- **Legal & license information**

**Downloading the user documentation**

We recommend you visit the Cisco web site regularly for updated versions of the user documentation. Go to:

► [http://www.cisco.com/go/telepresence/docs](http://www.cisco.com/go/telepresence/docs)

Guidelines how to find the documentation on the Cisco web site are included in the ► User documentation on the Cisco web site appendix.

**Software**

You can download the software for your product from the Cisco web site. Go to:

We recommend reading the Software Release Notes (TC7), go to:

What’s new in this version

This section provides an overview of the new and changed system settings and new features in the TC7.3 software version.

Software release notes

For a complete overview of new features and changes, we recommend reading the Software Release Notes (TC7). Go to:

Software download

For software download go to:

► http://www.cisco.com/cisco/software/navigator.html

New features and improvements

Local preview of presentation in a call
This allows the user to preview the presentation locally before sharing it with far end. The feature has previously been available for EX systems, and is now available across the portfolio.

Snap to Whiteboard feature
It is possible to configure a set up for a whiteboard scenario when using the SpeakerTrack 60.

When the system detects a person speaking close to a whiteboard, the camera will go to a pre-defined preset covering the whiteboard area as defined by the administrator or installer.

There is a setup wizard for the Snap to Whiteboard feature in the administrator settings on the Touch 10.

TC7.3.0–TC7.3.2: Users are notified when snapshots are taken

Both the on screen display and web interface have warnings when the snapshots feature is enabled. A notification pops up on the on screen display, when a snapshot is taken. On the web interface the administrator is warned that this notice will show up when the feature is enabled.

The system also logs when snapshots are taken, and which IP address the request was initiated from.

It is possible to allow and disallow snapshots remotely, but not to observe the room without the users being notified.

TC7.3.3 and later: Remote Monitoring option key

Due to security reasons, taking snapshots of local and far end video streams from the call control page on the system’s web interface now requires an option key to be installed on the endpoint.

The remote monitoring option key can only be added to systems that are upgraded to TC7.3.3 and above. Remote monitoring is enabled once the option key is added, and the system rebooted. Once this feature is enabled, the only way to disable it is to remove the option key.

This feature does not display warning messages or indicators on the local system that someone is monitoring the room. Please provide adequate notice to users of the system that the system administrator may monitor and control the camera and screen.
System configuration changes

New configurations
Cisco TelePresence System Codec C90 and Profile 65" Dual using C90 Administrator Guide

Cameras Camera [n] AssignedSerialNumber
Cameras Preset TriggerAutoFocus
Cameras SpeakerTrack ConnectorDetection Mode
Cameras SpeakerTrack ConnectorDetection CameraLeft
Cameras SpeakerTrack ConnectorDetection CameraRight
Cameras SpeakerTrack Whiteboard Mode

Configurations that are removed
H323 Profile [1..1] Encryption MinKeySize
Video AllowWebSnapshots (TC7.3.3)

Configurations that are modified
Cameras SpeakerTrack TrackingMode (TC7.3.3)
  OLD: <Default/Fast>
  NEW: <Default/Conservative>
FacilityService Service [1..5] Name
  OLD: <S: 0, 255>
  NEW: <S: 0, 1024>
FacilityService Service [1..5] Number
  OLD: <S: 0, 255>
  NEW: <S: 0, 1024>
Video AllowWebSnapshots (removed in TC7.3.3)
  OLD: <Off/On>, default Off
  NEW: <Off/On/LocalDeviceOnly>, default LocalDeviceOnly
Profile 65” Dual at a glance

Codec C90
- Full HD video
- High resolution data sharing
- Full HD Multisite
- Rich I/O capabilities

PrecisionHD 1080p
Full HD Camera designed for visual communication with:
- 12x optical zoom
- Fast and precise pan, tilt and zoom

Dual monitor 65”
Full HD LCD Display

Audio module
Wide band audio module supporting:
- 20 kHz AAC-LD
- Full echo canceling
- Stereo

Audio amplifier
Optimized DNAM for the Profile system, providing crystal clear and natural audio

Microphones
Four microphones with cables

Operating devices
- Touch 8 controller
- Remote control with 4 × AAA batteries

Base options
Floor standing footplate or wall mount on pedestal
Codec C90 at a glance

The Codec C90 is used in telepresence and collaboration projects, having the ultimate collaboration engine with HD video and audio, tremendous power and the highest level of flexibility for any project.

Design features

- The best, most powerful codec available with the ultimate video and audio quality.
- 2U high, rack mountable, with special rack mounting solution included.
- Professional grade connectors.
- Unmatched quality and flexibility.
- Standards-compliant 1080p solution—compatible with standards-based video without losing features.

Application features

- 1080p30 HD Individual Transcoding embedded Multisite.
- Collaborate on virtually anything with 5 simultaneous video inputs.
- HD Collaboration with 1080p30 or UXGA (UXGA ready and available with future software).
- Limitless integration possibilities.
- Ideal for telepresence and collaboration studios, boardrooms, auditoriums, education and tele-medicine applications.

Performance features

- Optimal Definition up to 1080p.
- H.323/SIP up to 6 Mbps point-to-point up to 10 Mbps total MultiSite bandwidth.
- Connect up to 12 HD sources and 8 microphones directly into the interface.
- Full Duplex Audio with High Quality Stereo Sound.
- Full APIs, see the API Guide for Codec C90.

Integrator package

The integrator package of the Codec C90 comes with the PrecisionHD 1080p camera, two microphones, cables and remote control.
Chapter 2

Web interface
Accessing the web interface

The web interface provides full configuration access to your video conference system.

You can connect from a computer and administer the system remotely.

In this chapter you will find information how to use the web interface for system configuration and maintenance.

We recommend that you use the latest release of one of the major web browsers.

1. Connect to the video system

Open a web browser and enter the IP address of the video system in the address bar.

   How to find the IP address

   Touch controller: Tap the contact information in the upper left corner of the Touch controller and open the Settings menu. Then tap System Information.
   

2. Sign in

Enter the user name and password for your video system and click Sign In.

   The system is delivered with a default user named admin with no password. Leave the Password field blank when signing in for the first time.

   It is mandatory to set a password for the admin user, see the next page.

Signing out

Hover the mouse over the user name and choose Sign out from the drop-down list.
Changing the system password

It is mandatory to set a password for a user with ADMIN rights in order to restrict access to system configuration. This includes the default admin user.

A warning, saying that the system password is not set, is shown on screen until you set a password.

You can read more about passwords in the Setting passwords chapter.

1. Open the Change Password dialog
   Hover the mouse over your name, and choose Change password in the drop-down list.

2. Set the new password
   Enter your current and new passwords as requested, and click Change password for the change to take effect.

   If the password currently is not set, leave the Current password field blank.
The interactive menu

The web interface provides access to tasks and configurations. They are available from the main menu, which appears near the top of the page when you have signed in.

When you hover the mouse over an item in the main menu, you can navigate to its related sub-pages.

Main menu

Hover the mouse over a main menu item in order to see the titles of the related sub-pages.

Click a sub-page’s title to open it. Click the main menu item itself if there are no sub-pages. Only pages that the user has access rights for are shown.

Click Home to return to the System Information page.

Sub-pages

Call Control

Configuration
- System Configuration
- System Status
- Local Contacts Management
- Personalization
- Peripherals
- User Administration
- Sign In Banner
- Startup Scripts
- API
- Security

Diagnoses
- Troubleshooting
- Call History
- Log Files
- User Interface Screenshots

Maintenance
- Software Upgrade
- Option Keys
- Backup and Restore
- System Recovery
- Restart

* You can read more about user administration, user roles and access rights in the User administration section.
System information

The video system’s Home page shows an overview of the basic set-up and status of the system.*

This includes information like system name and product type, which software version the system runs, its IP address, etc. Also the registration status for the video networks (SIP and H.323) is included, as well as the number/URI to use when making a call to the system.

* The system information shown in the illustration serve as an example. Your system may be different.
About snapshots and remote monitoring (TC7.3.3 and later)

Snapshots of local input sources
If the Remote Monitoring option key is installed on the video system, snapshots of the video system’s input sources are displayed on the Call Control page.

Snapshots are displayed both when the video system is idle, and when in a call.

This feature may be used when administering the video system from a remote location, for example to check the camera view and control the camera.

Far end snapshots
If the Remote Monitoring option key is installed on the video system, far end snapshots may also be captured. Whether or not the Remote Monitoring option key is installed on the far end video system, does not make any difference.

Far end snapshots are prohibited during encrypted calls.
About snapshots and remote monitoring (TC7.3.0 to TC7.3.2)

Snapshots of local input sources
If the snapshot feature is enabled on the video system, snapshots of the video system’s input sources are displayed on the Call Control page.

Snapshots are displayed both when the video system is idle, and when in a call.

This feature may be used when administering the video system from a remote location, for example to check the camera view and control the camera.

The users of the video system are notified when the snapshot feature is in use. A notification saying that the administrator is visually monitoring the room is displayed on the main display of the video system.

Far end snapshots
If the snapshot feature is enabled on the video system, far end snapshots may also be captured. Whether or not the snapshot feature is enabled on the far end video system, does not make any difference.

Far end snapshots are prohibited during encrypted calls.

Enable the snapshot feature
By default, the snapshot feature is disabled.

Enable the feature using the web interface or the remote control and on screen menu.

**Web interface:**
- Go to the Configuration tab and select System Configuration
- Navigate to Video > AllowWebSnapshots and choose On.
- Click Save for the change to take effect.

**Remote control and on screen menu:**
- Go to the Advanced configuration menu, navigate to Video > AllowWebSnapshots and choose On.

View snapshots from the input sources
Click in this area to view snapshots from the selected main source or presentation source.

Snapshots of the main or presentation source are displayed for approximately 10 seconds.
Placing a call

You can use the Call Control page to place a call.

It is the video system (display, microphones and loudspeakers) that is used for the call; it is not the PC running the web interface.

Calling

You can call someone either by choosing a contact name in the Local, Directory or Recents lists, or by typing a complete URI or number in the Search or Dial field. Then click Call in the associated contact card.

Searching the contact lists

Enter one or more characters in the Search or Dial field. Matching entries from the Local, Directory and Recents lists will be listed as you type.

Select the correct entry in the list and click Call.

Calling more than one

A point-to-point video call (a call involving two parties only) can be expanded to include one more participant on audio-only.

If your system is using the optional built-in MultiSite feature, up to four participants, yourself included, can join the video call (conference). In addition, one more participant can join on audio-only.

Follow the same procedure to call the next conference participant as you did when calling the first participant.

Calling more than one using a conference bridge (CUCM ad hoc conferencing or MultiWay) is not supported from the web interface, even if it is supported by the video system itself.

Calling someone

Click a contact name, either in the Local, Directory or Recents lists. Then click Call in the contact card.

Alternatively, enter the complete URI or number in the Search and Dial field. Then click the Call button that appears next to the URI or number.

Ending a call

If you want to terminate a call or conference, click End all. Confirm your choice in the dialog that appears.

To disconnect just one participant in a conference, click the button for that participant.

Holding and resuming

Use the button next to the participant’s name to put him on hold.

To resume the call, use the button that is present when a participant is on hold.
Sharing content

You can connect a presentation source to one of the external inputs of your video system. Most often a PC is used as presentation source, but other options may be available depending on your system setup.

While in a call you can share content with the other participant(s) in the call (far end).

If you are not in a call, the content is shared locally on your display.

Navigate to: Call Control

---

Sharing content

1. Choose a Presentation source from the drop-down list.
2. Click Start Presentation.

Stop content sharing:
Click the Stop Presentation button that is present while sharing.

Whether or not snapshots of input sources are shown as illustrated, depends on the software version, configuration, and options installed on the video system. Refer to the About snapshots and remote monitoring sections (TC7.3.3 or newer or TC7.3.0 to TC7.3.2).
Controlling and monitoring a call

You can control and monitor several call features using the Call Control page.

Navigate to: Call Control

Microphone mute

Click the button to mute the microphone. Then the text changes to Microphone: Off.

Click again to unmute.

Volume down

Volume up

Call details

If necessary, scroll your browser to see all call details.

Whether or not snapshots of input sources are shown as illustrated, depends on the software version, configuration, and options installed on the video system. Refer to the About snapshots and remote monitoring sections (► TC7.3.3 or newer or ► TC7.3.0 to TC7.3.2).
Controlling your camera

For software version TC7.3.3 and later:

You can control the camera of the video system (pan, tilt, zoom) from the Call Control page. Only available camera controls will appear.

For software version TC7.3.0 to TC7.3.2:

You can control the camera of the video system (pan, tilt, zoom) from the Call Control page provided that the Video AllowWebSnapshots setting is switched On. Only available camera controls will appear.

If snapshots from the camera are shown on the web interface, a notification will be sent to the users of the video system (shown on the main display) that an administrator is monitoring their video.

Navigate to: Call Control

Click the camera icon to open the camera control window.

1. Use the left and right arrows to pan the camera; the up and down arrows to tilt it; and + and - to zoom in and out.

2. For software versions TC7.3.0 to TC7.3.2, the cursor must be in the image to show the controls.

Whether or not snapshots of input sources are shown as illustrated, depends on the software version, configuration, and options installed on the video system. Refer to the About snapshots and remote monitoring sections (► TC7.3.3 or newer or ► TC7.3.0 to TC7.3.2).
Local layout control

You can choose a local layout using the Call Control page. The term layout is used to describe the various ways the videos from the conference participants and a presentation can appear on the screen. Different types of meetings may require different layouts.

Change the layout

Click Change layout, and choose your preferred layout in the window that opens.

The set of layouts to choose from depends on the system configurations.

You may change the layout while in a call.

Whether or not snapshots of input sources are shown as illustrated, depends on the software version, configuration, and options installed on the video system. Refer to the About snapshots and remote monitoring sections (► TC7.3.3 or newer or ► TC7.3.0 to TC7.3.2).
Controlling the far end camera

While in a call, you can control the remote participant’s camera (far end) provided that:

- The Remote Monitoring option is installed on your video system (software version TC7.3.3 and later).
- The Video AllowWebSnapshots setting is switched On (software versions TC7.3.0 to TC7.3.2).
- Far end camera control (FECC) is enabled on the far end system. Only the available controls will appear.

Navigate to: Call Control

Control the remote participant’s camera

1. Click the camera icon to open the remote camera control window.

2. Use the left and right arrows to pan the camera; the up and down arrows to tilt it; and + and - to zoom in and out.

For software versions TC7.3.0 to TC7.3.2, the cursor must be in the image to show the controls.

Whether or not snapshots of input sources are shown as illustrated, depends on the software version, configuration, and options installed on the video system. Refer to the About snapshots and remote monitoring sections (► TC7.3.3 or newer or ► TC7.3.0 to TC7.3.2).
Accessing call information

A call state indicator is available in the top bar in the web interface. It shows whether the system is in a call or not, and how many calls it is engaged in. You may also be notified about incoming calls.

Call state indicator

The call state indicator is available on all pages except the Call Control page.

The badge indicates the number of active calls. If the system is idle, there is no badge.

Click the indicator to get more details about connected calls.

Call control

Use these buttons to:

- Show call details
- Put the call on hold
- Disconnect the call

Incoming call notification

As default, a notification is given when the system receives a call.

Check this box, if you do not want to receive such notifications.

Opening the Call Control page

Click Open Call Control to go straight to the Call Control page.
**System configuration**

The system settings are grouped in several categories. When you choose a category in the left pane all related settings appear to the right. Each system setting is further described in the ► System settings chapter.

* The configuration shown in the illustration serve as an example. Your system may be configured differently.
Changing system settings

All system settings can be changed from the System Configuration page*. The value space for a setting is specified either in a drop-down list or by text following the input field.

Different settings may require different user credentials. In order to be sure that an administrator is able to change all system settings, an administrator user must possess all user roles.

You can read more about user administration and user roles in the ► User administration chapter.

* The configuration shown in the illustration serve as an example. Your system may be configured differently.
Setting the Administrator Settings menu password

This password restricts access to the Administrator Settings menu that is available on-screen when using the remote control.

When starting up the video conference system for the first time anyone can access these settings, because the menu password is not set.

⚠️ We strongly recommend that you set a menu password, because the administrator settings may severely affect the behavior of the system.

Note that the menu password, as from software version TC7.0, applies only to the on-screen Administrator Settings menu accessed with a TRC5 remote control; it does not apply to the Administrator menu on a Touch controller.

You can read more about password protection in the Setting passwords chapter.

Navigate to: Configuration > System Configuration

Changing the menu password

Click Set/Change Administrator Settings menu password to open this dialog.

Enter the new password in the text input field and click Set to set it.

Click Set without entering a password to leave the Administrator menu unprotected (not recommended).
System status

The system status is grouped in several categories. When you choose a category in the left column, the related status appears in the window to the right.

Navigate to: Configuration > System Status

Searching for status entries

Enter as many letters as needed in the search field. All entries (including the value space) containing these letters will be highlighted.

The system status is structured in categories. Choose a category in order to display the related status information.
Managing the favorites list

The entries in the favorites list can be accessed from the Touch controller, the on-screen menu (the My contacts folder in the phone book) and the Web interface.

Navigating to: Configuration > Local Contacts Management

**Adding a contact**

Click *Add contact* and fill in the form that pops up. Then click *Save* to store the contact in the Favorites list.

**Editing contact details**

Click a contacts name followed by *Edit contact*. Change the details in the form as appropriate and click *Save*.

**Deleting a contact**

Click a contacts name followed by *Edit contact*. Then click *Delete* to remove the entry from the Favorites list.

**Import/Export contacts from file**

Click *Export* to save the Local contacts in a file; and click *Import* to bring in contacts from a file. Note that all current contacts will be discarded when importing new contacts from a file.

**Storing a contact in a folder**

Choose the appropriate folder from the drop down list. No folder means that the contact will be stored at the top level.

**Adding a contact method**

You can store more than one contact method for each contact, e.g. video, telephone and mobile.

*Note that only the first contact method appears in the Favorites list on the Touch controller. All contact methods are available when using the remote control.*
Favorite list folders

The entries in the Favorites list can be organized in folders.

Navigate to: Configuration > Local Contacts Management

Adding a folder
Click Add folder and fill in the form that pops up. Then click Save to create the folder.

Opening a folder
Click the folder name to open the folder and show its list of contacts.

Changing or Deleting a folder
Click Edit folder and update the information in the form that pops up. Then click Save to store the changes.

Click Delete to remove the folder and all its contacts and sub-folders. Confirm your choice in the dialog that pops up.
Choosing a wallpaper

Your video system has a set of predefined wallpapers. The wallpapers may be used as background on the display. If you want the company logo or another custom picture as background on the video display, you may upload and use a custom wallpaper.

Activate/deactivate a wallpaper

Available wallpapers are represented by a miniature. If you have uploaded a custom wallpaper, it will appear in the list. Click the miniature to switch to the corresponding wallpaper. Choose None if you do not want a wallpaper. The chosen option is highlighted.

Upload a custom wallpaper

Click Browse.. and locate your custom wallpaper image file. Click Upload to save the file on the video system. Supported file formats: BMP, GIF, JPEG, PNG. Maximum file size: 4 MByte. The custom wallpaper will be automatically activated once uploaded.

Delete the custom wallpaper

Click the delete symbol to remove the custom wallpaper from the video system. Note that this will remove the image file completely; you have to upload it anew if you want to use it again. You cannot delete a predefined wallpaper.
Choosing a ringtone

You can choose from a set of predefined ringtones. The chosen ringtone can be played back from this page.

The ringtone will be played back on the video system itself, and not through the web interface.

Navigate to: Configuration > Personalization

Changing ringtone

Choose a ringtone from the drop-down list, and click Save to make it the active ringtone.

Playing back the ringtone

Click the play button (► ) to play back the ringtone. Use the stop button (■ ) to end the playback.

Set the ringtone volume

Use the slide bar to adjust the ringtone volume.
Peripherals overview

This page shows an overview of devices that are connected to the video system, like video inputs and outputs, cameras, microphones, ISDN Links and Touch controllers.

The peripherals shown in the illustration serve as examples. Your system may have different peripherals and video input/output configurations.

Manage ISDN Link

If an ISDN Link is paired to the video system it can be managed from this page.

How to configure and use the ISDN Link are described in the ISDN Link documentation on http://www.cisco.com/go/isdnlink-docs
User administration (page 1 of 4)

You can manage your video conference system’s user accounts from this page.

The default user account

The system comes with a default administrator user account with full access rights. The user name is admin and no password is set.

It is mandatory to set a password for the admin user.

Read more about passwords in the Setting passwords chapter.

About user roles

A user account must hold one or a combination of several user roles.

The following three user roles, with non-overlapping rights, exist:

- **ADMIN**: A user holding this role can create new users and change most settings. The user neither can upload audit certificates nor change the security audit settings.
- **USER**: A user holding this role can make calls and search the phone book. The user can modify a few settings, e.g. adjusting the ringtone volume and setting the time and date format.
- **AUDIT**: A user holding this role can change the security audit configurations and upload audit certificates.

An administrator user account with full access rights, like the default admin user, must possess all the three roles.

Navigate to: Configuration > User Administration

<table>
<thead>
<tr>
<th>User</th>
<th>Roles</th>
<th>Status</th>
</tr>
</thead>
<tbody>
<tr>
<td>admin</td>
<td>Admin, Audit, User</td>
<td>Active</td>
</tr>
<tr>
<td>user1</td>
<td>User</td>
<td>Active</td>
</tr>
</tbody>
</table>

Default user account

The system comes with admin as the default user account. This user has full access rights.
User administration (page 2 of 4)

Creating a new user account

Follow these steps in order to create a new user account:

1. Click Add new user...

2. Fill in the Username, Password and PIN code*, and check the appropriate user roles check boxes.
   
   As a default the user has to change the password and PIN code when signing in for the first time.
   
   Do not fill in the Client Certificate DN (Distinguished Name) field unless you want to use certificate login on HTTPS.

3. Set the Status to Active to activate the user.

4. Click Create User to save the changes.
   
   Use the Back button to leave without making any changes.

* The password is used with the web interface and command line interface; the PIN code is used with the TRC5 remote control and on-screen menu when the Video OSD LoginRequired setting is switched On.
User administration (page 3 of 4)

Changing user privileges

Follow these steps in order to change the user privileges:

1. Click the name of an existing user to open the Editing user window.
2. Check the appropriate user roles check boxes, decide if the user has to change the password and PIN code on the next sign in, and fill in the Client Certificate DN field if using certificate login on HTTPS.
3. Click Update User to save the changes.
   Use the Back button to leave without making any changes.

Changing the password or PIN code

Follow these steps in order to change the password or PIN code:

1. Click the name of an existing user to open the Editing user window.
2. Enter the new password or PIN code in the appropriate input fields.
3. Click Change Password or Change PIN to save the change.
   Use the Back button to leave without making any changes.

* The password is used with the web interface and command line interface; the PIN code is used with the remote control and on-screen menu when the Video OSD LoginRequired setting is switched On.
Deactivating a user account
Follow these steps in order to deactivate a user account:

1. Click the name of an existing user to open the Editing user window.
2. Set the Status to Inactive.
3. Click Update User to save the changes.
   Use the Back button to leave without making any changes.

Deleting a user account
Follow these steps in order to delete a user account:

1. Click the name of an existing user to open the Editing user window.
2. Click Delete <user name>... and confirm when prompted.
Adding a sign in banner

If a system administrator wants to provide initial information to all users, he can create a sign in banner. The message will be shown when the user signs in to the web interface and the command line interface.

Navigate to: Configuration > Sign In Banner

Enter the message that you want to present to the user when signing in, and click Save to activate the banner.
Managing startup scripts

You can create one or more startup scripts* that will run every time the video system starts up.

A startup script contains commands (xCommand) and configurations (xConfiguration) that will be executed as part of the start up procedure. A few commands and configurations cannot be placed in a startup script, e.g. xCommand Boot. It is not possible to save a script containing illegal commands and configurations.

Syntax and semantics for xCommand and xConfiguration are explained in the API guide for the product.

If you have more than one startup script, they will run in the order from top to bottom of the list.

* The script name and commands shown in the illustration serve as examples. You may make your own scripts.
Application programming interface

The application programming interface (API) is a tool for integration professionals and developers working with this video system. The API is described in detail in the API guide for the system.

XML files

The XML files are part of the codec’s API. They structure information about the codec in a hierarchy.

- Configuration.xml contains the current system settings (configuration). These settings are controlled from the web interface or from the API (Application Programmer Interface).
- The information in status.xml is constantly updated by the system to reflect system and process changes. The status information is normally monitored from the API.
- Command.xml contains an overview of the commands available to instruct the system to perform an action. The commands are issued from the API.
- Valuespace.xml contains an overview of all the value spaces used in the system settings, status information, and commands.

API commands

Commands (xCommand) and configurations (xConfiguration) can be executed from this web page. Syntax and semantics are explained in the API guide for the product.
Managing the video system’s certificates

Certificate validation may be required when using TLS (Transport Layer Security).

A server or client may require that your video system presents a valid certificate to them before communication can be set up.

The video system’s certificates are text files that verify the authenticity of the system. These certificates may be issued by a certificate authority (CA).

The certificates are listed as shown in the illustration to the right. They can be used for the following services: HTTPS server, SIP, IEEE 802.1X and audit logging.

You can store several certificates on the system, but only one certificate can be used for each service at a time.

If authentication fails, the connection will not be established.

Contact your system administrator to obtain the following file(s):

- Certificate (file format: .PEM)
- Private key, either as a separate file or included in the same file as the certificate (file format: .PEM format)
- Password (required only if the private key is encrypted)

The certificate and the private key will be stored in the same file on the video system.

Adding a certificate

1. Click Browse... and find the Certificate and Private key file(s) on your computer.
2. Fill in the Password if required.
3. Click Add certificate... to store the certificate on your system.

Enabling and disabling certificates

Use the buttons to switch a certificate on or off for the different services.

You can also view a certificate, and delete a certificate using the corresponding buttons.
Managing the list of trusted certificate authorities (page 1 of 2)

Certificate validation may be required when using TLS (Transport Layer Security).

Your video system may be set up to require that a server or client presents its certificate to the video system before communication can be set up.

The certificates are text files that verify the authenticity of the server or client. The certificates must be signed by a trusted certificate authority (CA).

To be able to verify the signature of the certificates, a list of trusted CAs must reside on the video system. The certificates of the CAs are listed as shown in the illustration to the right.

The list must include all CAs needed in order to verify certificates for audit logging, HTTPS, SIP and IEEE 802.1X connections.

If the server cannot be authenticated, the connection will not be established.

Certificate validation may be required when using TLS (Transport Layer Security).

Your video system may be set up to require that a server or client presents its certificate to the video system before communication can be set up.

The certificates are text files that verify the authenticity of the server or client. The certificates must be signed by a trusted certificate authority (CA).

To be able to verify the signature of the certificates, a list of trusted CAs must reside on the video system. The certificates of the CAs are listed as shown in the illustration to the right.

The list must include all CAs needed in order to verify certificates for audit logging, HTTPS, SIP and IEEE 802.1X connections.

If the server cannot be authenticated, the connection will not be established.

The certificate and certificate issuers shown in the illustration serve as examples. Your system will have other certificate(s).
Managing the list of trusted certificate authorities (page 2 of 2)

As from software version TC7.2, the signature of an audit server is verified using the same CA list as other servers/clients.

Setting up secure audit logging

Audit logging records all sign in activity and configuration changes on your video system.

Audit logging is disabled by default, but you can enable it using the Security > Audit > Logging > Mode setting.

In ExternalSecure audit logging mode the video system sends encrypted audit logs to an external audit server (syslog server), which identity must be verified by a signed certificate.

If the audit server cannot be authenticated, the logs will not be sent.

Always upload the list of trusted certificate authorities before enabling secure audit logging.

Enable secure audit logging

i. Go to the System Configuration page and choose the Security category.

ii. Enter the Address of the audit server. If you choose Manual PortAssignment, you must also enter a Port number for the audit server. Click Save for the changes to take effect.

iii. Choose ExternalSecure from the Logging Mode drop-down list. Click Save for the change to take effect.
Managing pre-installed certificates for Edge provisioning

The list of pre-installed certificates that is shown on this page in the web interface*, contains certificates that will be used when the video system is provisioned by Cisco Unified Communications Manager (CUCM) via Expressway (Edge). Only Edge infrastructure certificates will be checked against this list.

If the Edge infrastructure certificate validation fails, the video system will not receive the provisioning and not be registered.

Factory resetting the video system will not delete the list of pre-installed certificates.

Navigate to: Configuration > Security: Preinstalled CAs tab

Managing pre-installed certificates for Edge provisioning

The list of pre-installed certificates that is shown on this page in the web interface*, contains certificates that will be used when the video system is provisioned by Cisco Unified Communications Manager (CUCM) via Expressway (Edge). Only Edge infrastructure certificates will be checked against this list.

If the Edge infrastructure certificate validation fails, the video system will not receive the provisioning and not be registered.

Factory resetting the video system will not delete the list of pre-installed certificates.

Navigate to: Configuration > Security: Preinstalled CAs tab

Managing pre-installed certificates for Edge provisioning

The list of pre-installed certificates that is shown on this page in the web interface*, contains certificates that will be used when the video system is provisioned by Cisco Unified Communications Manager (CUCM) via Expressway (Edge). Only Edge infrastructure certificates will be checked against this list.

If the Edge infrastructure certificate validation fails, the video system will not receive the provisioning and not be registered.

Factory resetting the video system will not delete the list of pre-installed certificates.

Viewing or disabling certificates

You can view a certificate, and disable a certificate using the corresponding buttons.

You can disable all the pre-installed certificates, and use a manually uploaded list of certificates for verification instead. See the Configuration > Security: CAs page how to upload trusted certificates to the video system manually.

* The certificate and certificate issuers shown in the illustration serve as examples. Your system will have other certificate(s).
Setting strong security mode

Strong security mode should be used only when compliance with DoD JITC regulations is required.

⚠️ Read the provided information carefully before setting strong security mode.

Strong security mode sets very strict password requirements, and requires all users to change their password on the next sign in.

Navigate to: Configuration > Security: Strong Security Mode tab

Setting strong security mode

Read carefully about the consequences of strong security mode before you continue.

1. If you want to use strong security mode, click Enable strong security mode...
   Confirm your choice in the dialog box that appears.
   The system will restart automatically.

2. Change the password when you are prompted. The new password must meet the strict criteria as described.
   How to change the system password is described in the ► Setting passwords section.

Return to normal mode

When in strong security mode, the system can be restored to normal mode by clicking Disable strong security mode...
   Confirm your choice in the dialog box that appears.
   The system will restart automatically.
Changing the persistency mode

By default, all persistency settings are set to Persistent. This means that configurations, call history, internal logs, local phonebook / favorites list and IP connectivity information are stored as normal. A system restart does not delete information.

As a general rule, we recommend NOT to change the default settings for persistency. But in the case were a new user is not supposed to see or trace back to any kind of logged information from the previous session, Non-persistent mode must be used.

In order to clear/delete information that was stored before changing to Non-persistent mode, you should consider to factory reset the video system.

There is more information about performing a factory reset in the Factory resetting appendix.

When in Non-persistent mode, the following information will be lost/cleared each time the system restarts:

- System Configuration changes that have been made since the last system restart.
- Information about calls that are placed or received since the last system restart (call history).
- Internal log files that has been made since the last system restart.
- Changes that are made to the local contacts / favorites list since the last system restart.
- All IP related information (DHCP) from the last session.

Checking the persistency status

The radio buttons that are active when you open the Security page and go to the Non-persistent Mode tab, shows the current persistency status of the video system.

You can also see the status by checking Security > Persistency on the Configuration > System Status page.

Navigate to: Configuration > Security: Non-persistent Mode tab

Changing the persistency settings

1. Set the persistency settings for the five categories as desired.

2. Click Save and reboot...

   The system will restart. After the restart, behavior according to the new persistency settings will start.

   Note that logs, configurations etc. that was stored before you switch to Non-persistent mode, will not be cleared or deleted.
Deleting trust lists (CUCM only)

The information on this page is only relevant for video systems that are registered to a Cisco Unified Communications Manager (CUCM).

The web interface can be used to delete existing trust lists (CTL and ITL) that are stored on the video system. Normally, you will not delete the old CTL and ITL files, but there are a few cases when you will need to delete them.

The trust lists’ fingerprints and an overview of the certificates in the lists are displayed on the web page. This information can be useful for troubleshooting.

For more information about CUCM and trust lists, read the Administering TC Endpoints on CUCM guide available on the Cisco web site.

Navigate to: Configuration > Security: CUCM tab
Troubleshooting

The troubleshooting page lists the status for some common sources of errors. The list may be different for different products and installations.

Note that critical issues and errors are clearly marked in red color, warnings are yellow.

Navigate to: Diagnostics > Troubleshooting

Run diagnostics
Click Re-run diagnostics to make sure the information in the list is up-to-date.

Leave standby mode
This button is only visible when the system is in standby mode. If in standby mode, click Deactivate standby to wake up the system.

The messages shown in the illustration serve as examples. Your system may show other information.
Downloading log files

The log files are Cisco specific debug files which may be requested by the Cisco support organization if you need technical support.

The current log files are time stamped event log files.

All current log files are archived in a time stamped historical log file each time the system restarts. If the maximum number of historical log files is reached, the oldest one will be overwritten.

Downloading all log files

Click Download logs archive and follow the instructions.

An anonymized call history is included in the log files by default.

Use the drop down list if you want to exclude the call history from the log files, or if you want to include the full call history (non-anonymous caller/callee).

Open/save one log file

Click the file name to open the log file in the web browser; right click to save the file on the computer.

Refresh the list of log files
Starting extended logging

Extended logging mode may be switched on to help diagnose network issues and problems during call setup. While in this mode more information is stored in the log files.

Note that extended logging uses more of your video system's resources, and may cause your video system to underperform. You should only use extended logging mode when troubleshooting an issue.

Navigate to: Diagnostics > Log Files

Log Files

Download log archive

A full archive of the logs on the device is useful for diagnosing problems. This archive includes all current and historical logs, in addition to current system configuration, system status and diagnostics information. Anonymized call history is included.

Extended logging

To help diagnose network issues and problems during call setup, the system can enter a timed extended logging mode. This mode is resource intensive, and populates the existing logs with more detailed information.

The extended logging mode can optionally include a full or partial capture of all network traffic.

Start extended logging

Click Start extended logging.

Extended logging lasts for 10 minutes. You can stop the extended logging before it times out by clicking the Stop extended logging button that appears when extended logging is on.

As default, the network traffic is not captured. Use the drop down menu if you want to include a full or partial capture of the network traffic.
Capturing user interface screenshots

You can capture screenshots both of a Touch controller that is connected to the video system, and of the on-screen display (menus, indicators and messages on the main display).

Navigate to: Diagnostics > User Interface Screenshots

User Interface Screenshots

On this page you can take screenshots of the Touch Panel connected to the TelePresence device and the on screen display (OSD). The screenshots can be useful for creating user manuals, reporting bugs to Cisco, etc. Note that capturing a screenshot may take a while, depending on image resolution and network bandwidth.

<table>
<thead>
<tr>
<th>Screenshot ID</th>
<th>Type</th>
</tr>
</thead>
<tbody>
<tr>
<td>Web_2014-12-15T14:12:36.426Z</td>
<td>OSD</td>
</tr>
<tr>
<td>Web_2014-12-15T14:12:40.691Z</td>
<td>Touchpanel</td>
</tr>
</tbody>
</table>

Capture a screenshot

Click Take screenshot of Touch Panel to capture a screenshot of the Touch controller, or click Take screenshot of OSD to capture a screenshot of the on-screen display.

The screenshot will display in the area below the buttons. Note that it can take up to 30 seconds before the screenshot is ready.

All captured snapshots are included in the list above the buttons. Click the screenshot ID to display the image.

Deleting screenshots

If you want to delete all screenshots, click Remove all.

To delete just one screenshot, click the × button for that screenshot.
Upgrading the system software

This video conference system is using TC software. The version described in this document is TC7.3.

Contact your system administrator if you have questions about the software version.

Software release notes

For a complete overview of the news and changes, we recommend reading the Software Release Notes (TC7).

New software

For software download, go to the Cisco Download Software web page: ► http://www.cisco.com/cisco/software/navigator.html. Then navigate to your product.

The format of the file name is “s52000tc7_3_0.pkg” (each software version has a unique file name).

Release key

You need a valid release key to be able to use the video system. As from version TC6.1, any TC release key will do. For older releases the release key is specific for each main release (e.g. TC4, TC5, TC6).

Normally, you do not need to install the release key yourself. The release key is preserved when you upgrade from an earlier software version, and the release key is pre-installed on new systems. As from TC7.0, it is no longer possible to enter a release key from the web interface.

Navigate to: Maintenance > Software Upgrade

[Software Upgrade]

Release key requirements
Successful downgrade to TC6.3 or lower requires a valid release key.
Current version
TC7.0

Install new software

Selected version
Please select a file

No file selected Browse... Install software

Install new software

Download the appropriate software package from the Cisco Software Download web page (see link to the left) and store it on your local computer. This is a .pkg file.

i. Click Browse... and find the downloaded .pkg file that contains the new software.
ii. Click install software to start the installation process.

The complete installation may take up to 30 minutes. You can follow the progress on the web page. The system restarts automatically after the installation.

You must sign in anew in order to continue working with the web interface after the restart.
Adding option keys

Your video system may or may not have one or more software options installed. In order to activate the optional functionality the corresponding option key must be present on the video system.

Option keys are not deleted when performing a software upgrade or factory reset, so they need to be added only once.

Each video system has unique option keys, for example: 1R000-1-AA7A4A09

Contact your Cisco representative to obtain information about available option keys, and how to get the required key(s).

Navigate to: Maintenance > Option Keys

Add an option key

i. Enter an Option Key in the appropriate text input field.

ii. Click Add option key.

If you want to add more than one option key, repeat these steps for all keys.
Backup and restore

All the system settings, which are available on the System configuration page, can be listed on-screen or stored as a text file.

The text file can be loaded back onto the system, thereby restoring the configuration.

Backing up or showing the current configuration

Click *Preview backup* to display the current settings on-screen.

Click *Take backup* to store the configuration as a text file.

Restoring an earlier configuration

Click *Browse...* and find the file with the configuration you want to restore.

Click *Restore* to reconfigure the system as defined in the file.
Reverting to the previously used software version

If there is a severe problem with the video system, switching to the previously used software version may help solving the problem.

If the system has not been factory reset since the last software upgrade, the previously used software image still resides on the system; you do not have to download the software again.

Reverting to the previously used software version should only be done by a system administrator or in contact with Cisco technical support.

We strongly recommend that you backup your system’s log files and configuration before you swap to the other software image.

Navigate to: Maintenance > System Recovery: Backup tab and Software Recovery Swap tab

Reverting to the previously used software version

1. Backing up log files and system configuration

We recommend that you backup your system’s log files and configuration before you swap to the other software image.

Click Download Logs and Download Configuration Backup and follow the instructions to save the files on your computer.

2. Reverting to the previously used software version

1. Revert to the previously used software version by clicking Switch to software TCx.y.z., where x.y.z indicates the software version.

2. Click Yes to confirm your choice, or Cancel if you have changed your mind.

Wait while the system resets. The system will restart automatically when finished.
Factory reset

If there is a severe problem with the video system, the last resort may be to reset it to its default factory settings. Always consider reverting to the previously used software image before performing a factory reset. In many situations this will recover the system*

A factory reset should only be performed by a system administrator or in contact with Cisco technical support.

When factory resetting the video system the following happens:

- The call logs will be deleted.
- Passwords will be reset to default.
- All system parameters will be reset to default values.
- All files that have been uploaded to the system will be deleted. This includes, but is not limited to, custom wallpapers, certificates and favorites list (My contacts).
- The previous (inactive) software image will be deleted.
- Option keys and release keys will not be affected.

The system restarts automatically after the reset. It is using the same software image as before.

We strongly recommend that you backup your system’s log files and configuration before you perform a factory reset.

⚠️ It is not possible to undo a factory reset.

There is more information about performing a factory reset in the ► Factory resetting appendix.

* Read about software swapping in the ► Reverting to the previously used software version section.

1. Backing up log files and system configuration

We strongly recommend that you backup your system’s log files and configuration before you perform a factory reset; otherwise these data will be lost.

Click Download Logs and Download Configuration Backup and follow the instructions to save the files on your computer.

2. Performing a factory reset

Read the provided information carefully before you click Perform a factory reset....

Click Yes to confirm your choice, or Cancel if you have changed your mind.

Wait while the system resets. The system will restart automatically when finished.
Remote support user

In cases where you need to diagnose problems on the video system you can create a remote support user. The remote support user will be granted read access to the system and will have access to a limited set of commands that can aid troubleshooting.

You will need assistance from Cisco Technical Assistance Center (TAC) to acquire the password for the remote support user.

⚠️ The remote support user should only be enabled for troubleshooting reasons when instructed by Cisco TAC.

Navigate to: Maintenance > System Recovery: Remote Support User tab

System Recovery

In order to recover the system when experiencing a severe issue, a Software Recovery Swap or a Factory Reset can be performed. These recovery methods should only be attempted by a system administrator or in contact with Cisco technical support. The preferred recovery method is to perform a Software Recovery Swap and Factory Reset as last resort.

Backup Software Recovery Swap Factory Reset Remote Support User

In order to diagnose problems on the TelePresence device, you might require extended privileges. This is obtained by creating a remote support user below, and then giving the supplied token toCisco Support. The token will allow them to create a privileged support user on this device. This user will be valid for 7 days.

The system does not have an active remote support user.

Create remote support user

1. Open a case with Cisco TAC.
2. Click Create user.
3. Copy the text in the Token field and send to Cisco TAC.
4. Cisco TAC will generate a password.

The remote support user is valid for seven days, or until it is deleted.

Delete remote support user

Click Delete user.
Restarting the system

The system can be shut down or restarted remotely using the web interface.

Navigate to: Maintenance > Restart

Restarting the system

Click Restart TelePresence device... to restart the system.

It will take a few minutes before the system is ready for use.

Shutting down the system

Click Shutdown TelePresence device... to shut down the system.

The system cannot be turned on again remotely; you must press its power button physically to turn it on.
Chapter 3

System settings
Overview of the system settings

In the following pages you will find a complete list of the system settings which are configured from the System Configuration page on the web interface. The examples show either the default value or an example of a value.

Open a web browser and enter the IP address of the video system; then sign in.

To find the IP address (IPv4 or IPv6), open the Settings menu on the Touch controller and tap System Information; or navigate to Home > Settings > System information when using a remote control and the on-screen menu.

* The Settings menu can be accessed from the drop down window that appears when you tap the contact information in the upper, left corner of the Touch controller.

**Audio settings**

**Audio Input HDMI [3,4] Mode**
Determine if the audio channels on the HDMI input shall be enabled. The HDMI input 3 and 4 have two audio channels.

**Requires user role:** ADMIN

**Value space:** <Off/On>
- **Off:** Disable audio on the HDMI input.
- **On:** Enable audio on the HDMI input.

**Example:** Audio Input HDMI 3 Mode: On

**Audio Input HDMI [3,4] Level**
Define the audio level of the HDMI input connector, in steps of 1 dB.

**Requires user role:** ADMIN

**Value space:** <-24..0>
- **Range:** Select a value between -24 and 0, in steps of 1 dB.

**Example:** Audio Input HDMI 3 Level: 0

**Audio Input HDMI [3,4] VideoAssociation VideoInputSource**
It is possible to associate an audio source with a video source, and further to determine whether to play or mute audio depending on whether the video source is presented or not. By default, audio is not muted.

Use the Audio Input HDMI [n] VideoAssociation VideoInputSource setting to define which video source to associate the audio source with. Use the Audio Input HDMI [n] VideoAssociation MuteOnInactiveVideo setting to define whether to play or mute audio when not presenting the video source.

**Requires user role:** ADMIN

**Value space:** <1/2/3/4/5>
- **Range:** Select one of the video input sources.

**Example:** Audio Input HDMI 3 VideoAssociation VideoInputSource: 1

**Audio Input HDMI [3,4] VideoAssociation MuteOnInactiveVideo**
It is possible to associate an audio source with a video source, and further to determine whether to play or mute audio depending on whether the video source is presented or not. By default, audio is not muted.

Use the Audio Input HDMI [n] VideoAssociation VideoInputSource setting to define which video source to associate the audio source with. Use the Audio Input HDMI [n] VideoAssociation MuteOnInactiveVideo setting to define whether to play or mute audio when not presenting the video source.

**Requires user role:** ADMIN

**Value space:** <Off/On>
- **Off:** The audio source is not associated with a video source. The audio will be played locally and to far end regardless of whether the video source is presented.
- **On:** The audio source is associated with a video source. The audio will be played (locally and to far end) when the associated video source is presented. The audio will be muted when the video source is not presented.

**Example:** Audio Input HDMI 3 VideoAssociation MuteOnInactiveVideo: Off

**Audio Input Line [1..4] Equalizer ID**
Select the audio input line equalizer ID.

**Requires user role:** ADMIN

**Value space:** <1..8>
- **Range:** Select EqualizerID 1 to 8.

**Example:** Audio Input Line 1 Equalizer ID: 1

**Audio Input Line [1..4] Equalizer Mode**
Set the audio input line equalizer mode.

**Requires user role:** ADMIN

**Value space:** <Off/On>
- **Off:** No equalizer.
- **On:** Enable the equalizer for the audio input line.

**Example:** Audio Input Line 1 Equalizer Mode: Off
Audio Input Line [1..4] VideoAssociation VideoInputSource

It is possible to associate an audio source with a video source, and further to determine whether to play or mute audio depending on whether the video source is presented or not. By default, audio is not muted.

Use the Audio Input Line [n] VideoAssociation VideoInputSource setting to define which video source to associate the audio source with. Use the Audio Input Line [n] VideoAssociation MuteOnInactiveVideo setting to define whether to play or mute audio when not presenting the video source.

Requires user role: ADMIN

Value space: <1/2/3/4/5>

Range: Select one of the video input sources.

Example: Audio Input Line 1 VideoAssociation VideoInputSource: 1

Audio Input Line [1..4] VideoAssociation MuteOnInactiveVideo

It is possible to associate an audio source with a video source, and further to determine whether to play or mute audio depending on whether the video source is presented or not. By default, audio is not muted.

Use the Audio Input Line [n] VideoAssociation VideoInputSource setting to define which video source to associate the audio source with. Use the Audio Input Line [n] VideoAssociation MuteOnInactiveVideo setting to define whether to play or mute audio when not presenting the video source.

Requires user role: ADMIN

Value space: <Off/On>

Off: The audio source is not associated with a video source. The audio will be played locally and to far end regardless of whether the video source is presented.

On: The audio source is associated with a video source. The audio will be played (locally and to far end) when the associated video source is presented. The audio will be muted when the video source is not presented.

Example: Audio Input Line 1 VideoAssociation MuteOnInactiveVideo: Off

Audio Input Line [1..4] Channel

Define whether the Audio Line input is a mono signal or part of a multichannel signal.

Requires user role: ADMIN

Value space: <Right/Left/Mono>

Right: The Audio Line input signal is the right channel of a stereo signal.

Left: The Audio Line input signal is the left channel of a stereo signal.

Mono: The Audio Line input signal is a mono signal.

Example: Audio Input 1 Channel: Left

Audio Input Line [1..4] Level

Define the level of the audio source on the line input connector.

See the Audio Level table in the Physical Interface Guide for the codec for a complete overview of the values represented in dB.

Requires user role: ADMIN

Value space: <0..24>

Range: Select a value between 0 to 24, in steps of 1 dB.

Example: Audio Input Line 1 Level: 10

Audio Input Line [1..4] LoopSuppression

The loop suppression functionality detects whether a delayed signal loop is present from an audio line output to an audio line input on the codec. If a loop is detected the unwanted feedback is suppressed.

Only loops between line output 3 and line input 3, and between line output 4 and line input 4 can be suppressed, hence loop suppression is always Off for input lines 1 and 2.

Requires user role: ADMIN

Value space: <Off/On>

Off: Deactivate Loop Suppression.

On: Activate Loop Suppression.

Example: Audio Input Line 3 LoopSuppression: On
Audio Input Line [1..4] Mode

Set the audio input line mode.

Requires user role: ADMIN

Value space: <Off/On>

- Off: Disable the Audio Line input.
- On: Enable the Audio Line input.

Example: Audio Input Line 1 Mode: On

Audio Input Microphone [1..8] EchoControl Mode

The echo canceller continuously adjusts itself to the audio characteristics of the room and compensate for any changes it detects in the audio environment. If the changes in the audio conditions are very significant the echo canceller may take a second or two to re-adjust.

Requires user role: ADMIN

Value space: <Off/On>

- Off: Echo Control should be switched Off if external echo cancellation or playback equipment is used.
- On: Echo Control is normally set to On to prevent the far end from hearing their own audio. Once selected, echo cancellation is active at all times.

Example: Audio Input Microphone 1 EchoControl Mode: On

Audio Input Microphone [1..8] EchoControl NoiseReduction

The system has a built-in noise reduction which reduces constant background noise (for example noise from air-conditioning systems, cooling fans etc.). In addition, a high pass filter (Humfilter) reduces very low frequency noise. Requires the Echo Control Mode to be enabled for the microphone.

Requires user role: ADMIN

Value space: <Off/On>

- Off: Turn off the Noise Reduction.
- On: The Noise Reduction should be enabled in the presence of low frequency noise.

Example: Audio Input Microphone 1 EchoControl NoiseReduction: On

Audio Input Microphone [1..8] Equalizer ID

Select the audio input microphone equalizer ID.

Requires user role: ADMIN

Value space: <1..8>

Range: Select Equalizer ID 1 to 8.

Example: Audio Input Microphone 1 Equalizer ID: 1

Audio Input Microphone [1..8] Equalizer Mode

Set the audio input microphone equalizer mode.

Requires user role: ADMIN

Value space: <Off/On>

- Off: No equalizer.
- On: Enable the equalizer for the audio input microphone.

Example: Audio Input Microphone 1 Equalizer Mode: Off
**Audio Input Microphone [1..8] VideoAssociation MuteOnInactiveVideo**

Enable association of a video source to a microphone audio input.

**Requires user role:** ADMIN

**Value space:** <Off/On>

- **Off:** No video source is associated.
- **On:** A video source is associated, and the audio will be muted if the associated video source is not displayed.

**Example:** Audio Input Microphone 1 VideoAssociation MuteOnInactiveVideo: On

---

**Audio Input Microphone [1..8] VideoAssociation VideoInputSource**

Select the associated video input source.

**Requires user role:** ADMIN

**Value space:** <1/2/3/4/5>

- **Range:** Select one of the video input sources.

**Example:** Audio Input Microphone 1 VideoAssociation VideoInputSource: 1

---

**Audio Input Microphone [1..8] Level**

Define the audio level of the Microphone input connector. See the Audio Level table in the Physical Interface Guide for the codec for a complete overview of the values represented in dB.

**Requires user role:** ADMIN

**Value space:** <0..24>

- **Range:** Select a value between 0 and 24, in steps of 1 dB.

**Example:** Audio Input Microphone 1 Level: 14

---

**Audio Input Microphone [1..8] Mode**

Set the audio input microphone mode.

**Requires user role:** ADMIN

**Value space:** <Off/On>

- **Off:** Disable the microphone connector.
- **On:** Enable the microphone connector.

**Example:** Audio Input Microphone 1 Mode: On

---

**Audio Input Microphone [1..8] Type**

The microphone connectors are intended for electret type microphones. The microphone connector can be set to line or microphone mode.

**Requires user role:** ADMIN

**Value space:** <Microphone/Line>

- **Microphone:** Select Microphone when you have 48 V Phantom voltage and the pre-amplification is On.
- **Line:** Select Line when you have a standard balanced line input. The phantom voltage and pre-amplification is Off.

**Example:** Audio Input Microphone 1 Type: Line

---

**Audio Output HDMI [1,3] Level**

Define the output level of the HDMI output connector, in steps of 1 dB.

**Requires user role:** ADMIN

**Value space:** <-24..0>

- **Range:** Select a value between -24 and 0, in steps of 1 dB.

**Example:** Audio Output HDMI 1 Level: 0
**Audio Output HDMI [1,3] Mode**

Determine if the audio channel on the HDMI output connector shall be enabled.

Requires user role: ADMIN

Value space: <Off/On>

- Off: Disable the audio channel on the HDMI output.
- On: Enable the audio channel on the HDMI output.

Example: Audio Output HDMI 1 Mode: On

**Audio Output Line [1..6] Channel**

Define whether the Audio Line output is a mono signal or part of a multichannel signal.

Requires user role: ADMIN

Value space: <Right/Left/Mono>

- Right: The Audio Line output signal is the right channel of a stereo signal.
- Left: The Audio Line output signal is the left channel of a stereo signal.
- Mono: The Audio Line output signal is a mono signal.

Example: Audio Output Line 1 Channel: left

**Audio Output Line [1..6] Equalizer ID**

Select the audio output line equalizer ID.

Requires user role: ADMIN

Value space: <1..8>

Range: Select EqualizerID 1 to 8.

Example: Audio Output Line 1 Equalizer ID: 1

**Audio Output Line [1..6] Equalizer Mode**

Set the audio output line equalizer mode.

Requires user role: ADMIN

Value space: <Off/On>

- Off: No equalizer.
- On: Enable the equalizer for the audio output line.

Example: Audio Output Line 1 Equalizer Mode: Off

**Audio Output Line [1..6] Level**

Define the audio level on the line output connector.

See the Audio Level table in the Physical Interface Guide for the codec for a complete overview of the menu values represented in dB.

Requires user role: ADMIN

Value space: <-24..0>

Range: Select a value between -24 and 0, in steps of 1 dB.

Example: Audio Output Line 1 Level: -10

**Audio Output Line [1..6] Mode**

Set the audio output line mode.

Requires user role: ADMIN

Value space: <Off/On>

- Off: Disable the Audio Line output.
- On: Enable the Audio Line output.

Example: Audio Output Line 1 Mode: On

**Audio Output Line [1,3] Type**

Determine if the Audio Line output will be analog or digital type output. The digital output on the Cisco TelePresence Profile systems are identified as DNAM (Digital Natural Audio Module).

Requires user role: ADMIN

Value space: <Auto/SPDIF>

- Auto: If a Digital NAM is detected then SPDIF mode will be selected, otherwise analog mode will be selected.
- SPDIF: Set to SPDIF when you want the line output to be in digital mode.

Example: Audio Output Line 1 Type: Auto
Audio Output Line [2,4,5,6] Type

Line output 2, 4, 5, 6 are dedicated analog outputs, hence type can be set to analog only.

Requires user role: ADMIN

Value space: <Analog>
   Analog: Can be set to analog only.

Example: Audio Output Line 2 Type: Analog

Audio Microphones Mute Enabled

Determine whether audio-mute is allowed or not. The default value is True.

Requires user role: ADMIN

Value space: <True/InCallOnly>
   True: Muting of audio is always available.
   InCallOnly: Muting of audio is only available when the device is in a call. When Idle it is not possible to mute the microphone. This is useful when an external telephone service/audio system is connected via the codec and is to be available when the codec is not in a call. When set to InCallOnly this will prevent the audio-system from being muted by mistake.

Example: Audio Microphones Mute Enabled: True

Audio SoundsAndAlerts KeyTones Mode

The system can be configured to make a keyboard click sound effect (key tone) when pressing a key on the remote control, or when typing text or numbers on the Touch controller.

Requires user role: USER

Value space: <Off/On>
   Off: No key tones will be played when you type.
   On: You will hear a key tone when you press a key or type text.

Example: Audio SoundsAndAlerts KeyTones Mode: Off

Audio SoundsAndAlerts RingTone

This setting defines which ringtone to use for incoming calls. You need to enter the exact name of the ringtone. You can find the available ringtones the following ways:

Web interface: On the Configuration > Personalization page.
Touch controller: On the Ringtone & Sound panel of the Settings menu. This panel is either in the open part of the Settings menu, or included in the password protected Administrator menu. The UserInterface UserPreference setting defines which panels will be in the password protected area.
API: Run xCommand Audio SoundsAndAlerts Ringtone.

Requires user role: USER

Value space: <S: 1, 100>
   Format: String with a maximum of 100 characters.

Example: Audio SoundsAndAlerts RingTone: "Sunrise"

Audio SoundsAndAlerts RingVolume

Sets the ring volume for an incoming call.

Requires user role: USER

Value space: <0..100>
   Range: The value goes in steps of 5 from 0 to 100 (from -34.5 dB to 15 dB). Volume 0 = Off.

Example: Audio SoundsAndAlerts RingVolume: 50

Audio DefaultVolume

Set the default speaker volume. The volume returns to this value when you switch on or restart the video system. You can also run the following API command to return to the default value:
   xCommand Audio Volume SetToDefault. Run the xCommand Audio Volume commands, or use the remote control or Touch controller to change the volume while the video system is running.

Requires user role: USER

Value space: <0..100>
   Range: The value must be between 0 and 100. The values from 1 to 100 correspond to the range from -34.5 dB to 15 dB (0.5 dB steps). The value 0 means that the audio is switched off.

Example: Audio DefaultVolume: 50
Audio Volume

Set the speaker volume. This setting is obsoleted by the Audio DefaultVolume setting.

Requires user role: USER

Value space: <0..100>

Range: The value must be between 0 and 100. The values from 1 to 100 correspond to the range from -34.5 dB to 15 dB (0.5 dB steps). The value 0 means that the audio is switched off.

Example: Audio Volume: 50
Cameras settings

Cameras PowerLine Frequency
If your camera supports power line frequency anti-flickering, the camera is able to compensate for any flicker noise from the electrical power supply. You should set this camera configuration based on your power line frequency. If your camera supports auto detection of line frequency, you can select the Auto option in the configuration.

All Cisco Precision cameras support both anti-flickering and auto detection of line frequency. Auto is the default value, so you should change this setting if you have a camera that does not support auto detection.

Requires user role: ADMIN
Value space: <Auto/50Hz/60Hz>
- Auto: Allow the camera to detect the power frequency automatically.
- 50Hz: Use this value when the power line frequency is 50 Hz.
- 60Hz: Use this value when the power line frequency is 60 Hz.

Example: Cameras PowerLine Frequency: Auto

Cameras Preset TriggerAutofocus
The current position (pan and tilt), zoom and focus are stored with a preset. Use this setting to determine if the camera should refocus or use the focus value that is stored with the preset.

Requires user role: ADMIN
Value space: <Auto/Off/On>
- Auto: Whether the camera refocuses or not when selecting a preset, depends on the camera type.
- Off: The focus value that is stored with the preset will be used. The camera will not refocus when selecting a preset.
- On: The camera will refocus when selecting a preset. The focus value that is stored with the preset may be overridden.

Example: Cameras Preset TriggerAutofocus: Auto

Cameras SpeakerTrack Mode
This setting applies only when using a Cisco TelePresence SpeakerTrack 60 camera. The SpeakerTrack 60 camera assembly consists of two cameras and uses an audio tracking technique that finds and captures a close-up of the active speaker. When a change of speaker is detected, the system can switch automatically between the two cameras to always show the best camera view. Refer to the Cameras SpeakerTrack TrackingMode setting for different switching modes.

Requires user role: USER
Value space: <Auto/Off>
- Auto: Speaker tracking is switched on. The cameras in the camera assembly behave as one integrated unit that finds the active speaker and dynamically chooses the best camera view.
- Off: The cameras operate as two individual cameras. Speaker tracking is not used.

Example: Cameras SpeakerTrack Mode: Auto

Cameras SpeakerTrack TrackingMode
This setting applies only when using a Cisco TelePresence SpeakerTrack 60 camera, and when Cameras SpeakerTrack Mode is set to Auto.

The speaker tracking algorithm can react to changes in two modes, one faster than the other. The mode determines when the camera view will change to a new speaker. In software versions TC7.3.0 and TC7.3.1 the Default value is the most conservative mode; the fastest mode is Default in TC7.3.2 and later.

Requires user role: USER
Value space: TC7.3.0 and TC7.3.1: <Default/Fast>; TC7.3.2 and later: <Conservative/Default>
- Default: Normal tracking mode.
- Conservative: The camera view will change to a new speaker later than in Normal mode.
- Fast: The camera view will change to a new speaker faster than in Normal mode.

Example: Cameras SpeakerTrack TrackingMode: Default
Cameras SpeakerTrack ConnectorDetection Mode

This setting applies only when a Cisco TelePresence SpeakerTrack 60 camera is connected to the codec (video system).

Determine whether to automatically detect or manually configure which video input each individual camera is connected to. You should choose manual configuration in situations where the codec does not receive EDID information from the cameras. Typically, this will be when you use HDMI repeaters that do not pass on EDID information.

Requires user role: USER

Value space: <Auto/Manual>

- **Auto**: Automatically detect which video inputs the cameras are connected to.
- **Manual**: Manually define which video inputs the cameras are connected to. Use the Cameras SpeakerTrack ConnectorDetection CameraLeft and Cameras SpeakerTrack ConnectorDetection CameraRight settings.

Example: Cameras SpeakerTrack ConnectorDetection Mode: Auto

Cameras SpeakerTrack ConnectorDetection CameraLeft

This setting applies only when a Cisco TelePresence SpeakerTrack 60 camera is connected to the codec (video system). Furthermore, Cameras SpeakerTrack ConnectorDetection Mode must be set to Manual.

Enter the number of the video input that SpeakerTrack 60’s left camera is connected to. For example, set to 1 if the left camera is connected to video input 1.

Requires user role: USER

Value space: <1..5>

- **Format**: Select a valid video input number.

Example: Cameras SpeakerTrack ConnectorDetection CameraLeft: 1

Cameras SpeakerTrack ConnectorDetection CameraRight

This setting applies only when a Cisco TelePresence SpeakerTrack 60 camera is connected to the codec (video system). Furthermore, Cameras SpeakerTrack ConnectorDetection Mode must be set to Manual.

Enter the number of the video input that SpeakerTrack 60’s right camera is connected to. For example, set to 2 if the right camera is connected to video input 2.

Requires user role: USER

Value space: <1..5>

- **Format**: Select a valid video input number.

Example: Cameras SpeakerTrack ConnectorDetection CameraRight: 2

Cameras SpeakerTrack Whiteboard Mode

This setting applies only when a Cisco TelePresence SpeakerTrack 60 camera is connected to the codec.

Determine whether to enable the Snap to Whiteboard feature or not. The Snap to Whiteboard feature relies on a speaker track camera. When a presenter is standing next to the whiteboard, the camera will capture both the presenter and the whiteboard if the Snap to Whiteboard feature is enabled. If the feature is disabled, only the presenter will be captured.

The Snap to Whiteboard feature is set up from the Touch controller. The feature is not available if you control your codec with a remote control.

Requires user role: ADMIN

Value space: <Off/On>

- **Off**: The Snap to Whiteboard feature is disabled.
- **On**: The Snap to Whiteboard feature is enabled.

Example: Cameras SpeakerTrack Whiteboard Mode: Off
Cameras Camera [1..7] AssignedSerialNumber
The camera ID is the number n in Camera [n]. By default, the camera ID is assigned automatically to a camera. If EDID information is not passed on from the camera to the codec, the camera ID is not persistent after a reboot. This means that a camera may get a new camera ID when the codec (video system) is restarted.
You should use the Cameras Camera AssignedSerialNumber setting to cater for configurations where the codec does not receive EDID information from multiple cameras. This setting allows you to manually assign a camera ID to a camera by associating the camera ID with the camera’s serial number. The setting is persistent until the codec is factory reset.
Typical situations where the codec does not receive EDID information are: when you connect a Cisco TelePresence 60 camera using 3G-SDI; when you connect a Cisco TelePresence 40 (Cisco PrecisionHD 1080p4xS2) camera; when you use an HDMI repeater that does not pass on EDID information.
The default value is an empty string.
Requires user role: USER
Value space: <S: 0, 20>
Format: The camera's serial number. String with a maximum of 20 characters.
Example: Cameras Camera 1 AssignedSerialNumber: "FTT0123456F"

Cameras Camera [1..7] Backlight
This configuration turns backlight compensation on or off. Backlight compensation is useful when there is much light behind the persons in the room. Without compensation the persons will easily appear very dark to the far end.
Requires user role: ADMIN
Value space: <Off/On>
   Off: Turn off the camera backlight compensation.
   On: Turn on the camera backlight compensation.
Example: Cameras Camera 1 Backlight: Off

Cameras Camera [1..7] Brightness Mode
Set the camera brightness mode.
Requires user role: ADMIN
Value space: <Auto/Manual>
   Auto: The camera brightness is automatically set by the system.
   Manual: Enable manual control of the camera brightness. The brightness level is set using the Cameras Camera Brightness Level setting.
Example: Cameras Camera 1 Brightness Mode: Auto

Cameras Camera [1..7] Brightness Level
Set the brightness level. Requires the Camera Brightness Mode to be set to Manual.
Requires user role: ADMIN
Value space: <1..31>
Range: Select a value between 1 and 31.
Example: Cameras Camera 1 Brightness Level: 20

Cameras Camera [1..7] Flip
With Flip mode (vertical flip) you can flip the image upside down. Flipping applies both to the self-view and the video that is transmitted to the far end.
Requires user role: USER
Value space: <Auto/Off/On>
   Auto: If the camera detects that it is mounted upside down, the image is automatically flipped. If the camera cannot auto-detect whether it is mounted upside down or not, the image is not changed.
   Off: Display the image on screen the normal way.
   On: Display the image flipped upside down. This setting is used when a camera is mounted upside down, but cannot automatically detect which way it is mounted.
Example: Cameras Camera 1 Flip: Auto
Cameras Camera [1..7] Focus Mode
Set the camera focus mode.

Requires user role: ADMIN

Value space: <Auto/Manual>

Auto: The camera will auto focus once a call is connected, as well as after moving the camera (pan, tilt, zoom). The system will use auto focus only for a few seconds to set the right focus; then auto focus is turned off to prevent continuous focus adjustments of the camera.

Manual: Turn the autofocus off and adjust the camera focus manually.

Example: Cameras Camera 1 Focus Mode: Auto

Cameras Camera [1..7] Gamma Mode
This setting enables gamma corrections, and applies only to cameras which support gamma mode. Gamma describes the nonlinear relationship between image pixels and monitor brightness. The Cisco TelePresence PrecisionHD 720p camera supports gamma mode. The PrecisionHD 1080p camera does not support gamma mode.

Requires user role: ADMIN

Value space: <Auto/Manual>

Auto: Auto is the default and the recommended setting.

Manual: In manual mode the gamma value is changed with the gamma level setting, ref: Cameras Camera [1..n] Gamma Level.

Example: Cameras Camera 1 Gamma Mode: Auto

Cameras Camera [1..7] Gamma Level
By setting the Gamma Level you can select which gamma correction table to use. This setting may be useful in difficult lighting conditions, where changes to the brightness setting does not provide satisfactory results. Requires the Gamma Mode to be set to Manual.

Requires user role: ADMIN

Value space: <0..7>

Range: Select a value between 0 and 7.

Example: Cameras Camera 1 Gamma Level: 0

Cameras Camera [1..7] IrSensor
A Precision camera has an IR sensor that is used when you operate the codec with a remote control. The IR sensor is located at the camera front, and the LED flickers when the IR sensor is activated by the remote control. Both the codec (refer to the SystemUnit IrSensor setting) and a Precision camera have an IR sensor, and only one of them needs to be enabled at the time.

Requires user role: ADMIN

Value space: <Off/On>

Off: Disable the IR sensor of the camera.

On: Enable the IR sensor of the camera.

Example: Cameras Camera 1 IrSensor: On

Cameras Camera [1..7] Mirror
With Mirror mode (horizontal flip) you can mirror the image on screen. Mirroring applies both to the self-view and the video that is transmitted to the far end.

Requires user role: ADMIN

Value space: <Auto/Off/On>

Auto: If the camera detects that it is mounted upside down, the image is automatically mirrored. If the camera cannot auto-detect whether it is mounted upside down or not, the image is not changed.

Off: Display the image as other people see you.

On: Display the image as you see yourself in a mirror.

Example: Cameras Camera 1 Mirror: Auto
Cameras Camera [1..7] MotorMoveDetection

This setting applies only when using a Cisco TelePresence PrecisionHD 1080p12x camera. If adjusting the camera position by hand you can configure whether the camera should keep its new position or return to the preset or position it had before.

**Requires user role:** ADMIN

**Value space:** <Off/On>

*Off:* When the camera position is adjusted manually the camera will keep this position until adjusted again. WARNING: If moving the camera by hand, the camera will not register the new pan and tilt values since there is no position feedback. This will result in wrong pan and tilt values when recalling the camera presets subsequently.

*On:* When the camera position is adjusted manually, or the camera detects that the motors have moved, it will first re-initialize (i.e. go to default position) then return to the preset/position it had before the camera was adjusted.

**Example:** Cameras Camera 1 MotorMoveDetection: Off

Cameras Camera [1..7] Whitebalance Mode

Set the camera white balance mode.

**Requires user role:** ADMIN

**Value space:** <Auto/Manual>

*Auto:* The camera will continuously adjust the white balance depending on the camera view.

*Manual:* Enables manual control of the camera white balance. The white balance level is set using the Cameras Camera Whitebalance Level setting.

**Example:** Cameras Camera 1 Whitebalance Mode: Auto

Cameras Camera [1..7] Whitebalance Level

Set the white balance level. Requires the Camera Whitebalance Mode to be set to manual.

**Requires user role:** ADMIN

**Value space:** <1..16>

*Range:* Select a value between 1 and 16.

**Example:** Cameras Camera 1 Whitebalance Level: 1

Cameras Camera [1..7] DHCP

Applies to cameras which support DHCP over LAN. When set, the command enables support for software upgrade of daisy chained cameras.

**Requires user role:** ADMIN

**Value space:** <Off/On>

*Off:* When the camera is not connected to a LAN, set to Off to disable DHCP.

*On:* Set to On to enable DHCP for the camera. The camera is automatically re-booted, and after re-boot the camera's DHCP function will force start of MAC and IP address retrieval. To see the result, you can run the following API command: "xStatus Camera". When the camera no longer is connected to a LAN, set to Off.

**Example:** Cameras Camera 1 DHCP: Off
Conference settings

Conference [1..1] ActiveControl Mode
Active control is a feature that allows conference participants to administer a conference on Cisco TelePresence Server using the video system’s interfaces (not available from the TRC5 remote control and on-screen display). Each user can see the participant list, change video layout, disconnect participants, etc. from the interface. The active control feature is enabled by default, provided that it is supported by the infrastructure (Cisco Unified Communications Manager (CUCM) version 9.1.2 or newer, Cisco TelePresence Video Communication Server (VCS) version X8.1 or newer). Change this setting if you want to disable the active control features.

Requires user role: ADMIN
Value space: <Auto/Off>
  Auto: Active control is enabled when supported by the infrastructure.
  Off: Active control is disabled.

Example: Conference ActiveControl Mode: Auto

Conference [1..1] CallProtocolIPStack
Select if the system should enable IPv4, IPv6, or dual IP stack on the call protocol (SIP, H323).

Requires user role: ADMIN
Value space: <Dual/IPv4/IPv6>
  Dual: Enables both IPv4 and IPv6 for the call protocol.
  IPv4: When set to IPv4, the call protocol will use IPv4.
  IPv6: When set to IPv6, the call protocol will use IPv6.

Example: Conference 1 CallProtocolIPStack: Dual

Conference [1..1] AutoAnswer Mode
Set the auto answer mode. Use the Conference AutoAnswer Delay setting if you want the system to wait a number of seconds before answering the call, and use the Conference AutoAnswer Mute setting if you want your microphone to be muted when the call is answered.

Requires user role: ADMIN
Value space: <Off/On>
  Off: You must answer incoming calls manually by pressing the OK key or the green Call key on the remote control, or by tapping Answer on the Touch controller.
  On: The system automatically answers incoming calls, except if you are already in a call. You must always answer or decline incoming calls manually when you are already engaged in a call.

Example: Conference 1 AutoAnswer Mode: Off

Conference [1..1] AutoAnswer Mute
Determine if the microphone shall be muted when an incoming call is automatically answered. Requires that AutoAnswer Mode is switched on.

Requires user role: ADMIN
Value space: <Off/On>
  Off: The incoming call will not be muted.
  On: The incoming call will be muted when automatically answered.

Example: Conference 1 AutoAnswer Mute: Off

Conference [1..1] AutoAnswer Delay
Define how long (in seconds) an incoming call has to wait before it is answered automatically by the system. Requires that AutoAnswer Mode is switched on.

Requires user role: ADMIN
Value space: <0..50>
  Range: Select a value between 0 and 50 seconds.

Example: Conference 1 AutoAnswer Delay: 0
Conference [1..1] MicUnmuteOnDisconnect Mode
Determine if the microphones shall be unmuted automatically when all calls are disconnected. In a meeting room or other shared resources this may be done to prepare the system for the next user.

**Requires user role:** ADMIN

**Value space:** <Off/On>

- **Off:** If muted during a call, let the microphones remain muted after the call is disconnected.
- **On:** Unmute the microphones after the call is disconnected.

**Example:** Conference 1 MicUnmuteOnDisconnect Mode: On

Conference [1..1] DoNotDisturb Mode
Determine whether to allow incoming calls.

**Requires user role:** USER

**Value space:** <Off/On/Timed>

- **Off:** The incoming calls will come through as normal.
- **On:** All incoming calls will be rejected and they will be registered as missed calls. The calling side will receive a busy signal. A message telling that Do Not Disturb is switched on will display on the Touch controller or main display. NOTE: This setting is not recommended as all calls will be rejected until the setting is manually turned off. The recommended option is Timed.
- **Timed:** When set to timed (default), the system will revert back and allow incoming calls after the specified timeout, defined by the setting: Conference DoNotDisturb DefaultTimeout.

**Example:** Conference 1 DoNotDisturb Mode: Timed

Conference [1..1] DoNotDisturb DefaultTimeout
This setting determines the default duration of a Do Not Disturb session, i.e. the period when incoming calls are rejected and registered as missed calls. The session can be terminated earlier by using the user interface (remote control or Touch controller) or the Conference DoNotDisturb Mode setting. The default value is 60 minutes.

**Requires user role:** ADMIN

**Value space:** <0..1440>

- **Range:** Select the number of minutes (between 0 and 1440, i.e. 24 hours) before the Do Not Disturb session times out automatically.

**Example:** Conference 1 DoNotDisturb DefaultTimeout: 60

Conference [1..1] FarEndControl Mode
Lets you decide if the remote side (far end) should be allowed to select your video sources and control your local camera (pan, tilt, zoom).

**Requires user role:** ADMIN

**Value space:** <Off/On>

- **Off:** The far end is not allowed to select your video sources or to control your local camera (pan, tilt, zoom).
- **On:** Allows the far end to be able to select your video sources and control your local camera (pan, tilt, zoom). You will still be able to control your camera and select your video sources as normal.

**Example:** Conference 1 FarEndControl Mode: On

Conference [1..1] FarEndControl SignalCapability
Set the far end control (H.224) signal capability mode.

**Requires user role:** ADMIN

**Value space:** <Off/On>

- **Off:** Disable the far end control signal capability.
- **On:** Enable the far end control signal capability.

**Example:** Conference 1 FarEndControl SignalCapability: On
Conference [1..1] Encryption Mode

Define the conference encryption mode. A padlock with the text "Encryption On" or "Encryption Off" displays on screen for a few seconds when the conference starts.

NOTE: If the TC-NC software (no crypto) is installed on the video system, the encryption mode is always Off.

Requires user role: ADMIN

Value space: <Off/On/BestEffort>

Off: The system will not use encryption.
On: The system will only allow calls that are encrypted.
BestEffort: The system will use encryption whenever possible.

> In Point to point calls: If the far end system supports encryption (AES-128), the call will be encrypted. If not, the call will proceed without encryption.
> In MultiSite calls: In order to have encrypted MultiSite conferences, all sites must support encryption. If not, the conference will be unencrypted.

Example: Conference 1 Encryption Mode: BestEffort

Conference [1..1] DefaultCall Protocol

Set the Default Call Protocol to be used when placing calls from the system.

Requires user role: ADMIN

Value space: <Auto/H323/Sip/H320>

Auto: Enables auto-selection of the call protocol based on which protocols are available. If multiple protocols are available, the order of priority is: 1) SIP; 2) H323; 3) H320. If the system cannot register, or the call protocol is not enabled, the auto-selection chooses H323.
H323: All calls are set up as H.323 calls.
Sip: All calls are set up as SIP calls.
H320: All calls are set up as H.320 calls (only applicable if connected to a Cisco TelePresence ISDN Link gateway).

Example: Conference 1 DefaultCall Protocol: Auto

Conference [1..1] DefaultCall Rate

Set the Default Call Rate to be used when placing calls from the system.

Requires user role: ADMIN

Value space: <64..6000>

Range: Select a value between 64 and 6000 kbps.

Example: Conference 1 DefaultCall Rate: 1920

Conference [1..1] MaxTransmitCallRate

Specify the maximum transmit bit rate to be used when placing or receiving calls. Note that this is the maximum bit rate for each individual call; use the Conference MaxTotalTransmitCallRate setting to set the aggregated maximum for all simultaneous active calls.

Requires user role: ADMIN

Value space: <64..6000>

Range: Select a value between 64 and 6000 kbps.

Example: Conference 1 MaxTransmitCallRate: 6000

Conference [1..1] MaxReceiveCallRate

Specify the maximum receive bit rate to be used when placing or receiving calls. Note that this is the maximum bit rate for each individual call; use the Conference MaxTotalReceiveCallRate setting to set the aggregated maximum for all simultaneous active calls.

Requires user role: ADMIN

Value space: <64..6000>

Range: Select a value between 64 and 6000 kbps.

Example: Conference 1 MaxReceiveCallRate: 6000
Conference [1..1] MaxTotalTransmitCallRate

This configuration applies when using a video system's built-in MultiSite feature (optional) to host a multipoint video conference.

Specify the maximum overall transmit bit rate allowed. The bit rate will be divided fairly among all active calls at any time. This means that the individual calls will be up-speeded or down-speeded as appropriate when someone leaves or enters a multipoint conference, or when a call is put on hold (suspended) or resumed.

The maximum transmit bit rate for each individual call is defined in the Conference MaxTransmitCallRate setting.

Requires user role: ADMIN

Value space: <64..10000>

Range: Select a value between 64 and 10000.

Example: Conference 1 MaxTotalTransmitCallRate: 10000

Conference [1..1] MaxTotalReceiveCallRate

This configuration applies when using a video system's built-in MultiSite feature (optional) to host a multipoint video conference.

Specify the maximum overall receive bit rate allowed. The bit rate will be divided fairly among all active calls at any time. This means that the individual calls will be up-speeded or down-speeded as appropriate when someone leaves or enters a multipoint conference, or when a call is put on hold (suspended) or resumed.

The maximum receive bit rate for each individual call is defined in the Conference MaxReceiveCallRate setting.

Requires user role: ADMIN

Value space: <64..10000>

Range: Select a value between 64 and 10000.

Example: Conference 1 MaxTotalReceiveCallRate: 10000

Conference [1..1] VideoBandwidth Mode

Set the conference video bandwidth mode.

Requires user role: ADMIN

Value space: <Dynamic/Static>

Dynamic: The available transmit bandwidth for the video channels are distributed among the currently active channels. If there is no presentation, the main video channels will use the bandwidth of the presentation channel.

Static: The available transmit bandwidth is assigned to each video channel, even if it is not active.

Example: Conference 1 VideoBandwidth Mode: Dynamic

Conference [1..1] VideoBandwidth MainChannel Weight

The available transmit video bandwidth is distributed on the main channel and presentation channel according to "MainChannel Weight" and "PresentationChannel Weight". If the main channel weight is 2 and the presentation channel weight is 1, then the main channel will use twice as much bandwidth as the presentation channel.

Requires user role: ADMIN

Value space: <1..10>

Range: 1 to 10.

Example: Conference 1 VideoBandwidth MainChannel Weight: 5

Conference [1..1] VideoBandwidth PresentationChannel Weight

The available transmit video bandwidth is distributed on the main channel and presentation channel according to "MainChannel Weight" and "PresentationChannel Weight". If the main channel weight is 2 and the presentation channel weight is 1, then the main channel will use twice as much bandwidth as the presentation channel.

Requires user role: ADMIN

Value space: <1..10>

Range: 1 to 10.

Example: Conference 1 VideoBandwidth PresentationChannel Weight: 5
Conference [1..1] Presentation RelayQuality

This configuration applies to video systems that are using the built-in MultiSite feature (optional) to host a multipoint video conference. When a remote user shares a presentation, the video system (codec) will transcode the presentation and send it to the other participants in the multipoint conference. The RelayQuality setting specifies whether to give priority to high frame rate or high resolution for the presentation source.

Requires user role: ADMIN

Value space: <Motion/Sharpness>

- **Motion**: Gives the highest possible frame rate. Used when there is a need for higher frame rates, typically when there is a lot of motion in the picture.
- **Sharpness**: Gives the highest possible resolution. Used when you want the highest quality of detailed images and graphics.

Example: Conference 1 Presentation RelayQuality: Sharpness

Conference [1..1] Presentation OnPlacedOnHold

Define whether or not to continue sharing a presentation after the remote site has put you on hold.

Requires user role: ADMIN

Value space: <Stop/NoAction>

- **Stop**: The video system stops the presentation sharing when the remote site puts you on hold. The presentation will not continue when the call is resumed.
- **NoAction**: The video system will not stop the presentation sharing when put on hold. The presentation will not be shared while you are on hold, but it will continue automatically when the call is resumed.

Example: Conference 1 Presentation OnPlacedOnHold: NoAction

Conference [1..1] Multipoint Mode

Define how the video system handles multiparty video conferences.

If registered to a Cisco TelePresence Video Communication Server (VCS), the video system can either use its own built-in MultiSite feature, or it can rely on the MultiWay network solution. MultiWay requires that the video network includes a multipoint control unit (MCU).

If registered to a Cisco Unified Communications Manager (CUCM) version 8.6.2 or newer, the video system can use either the CUCM conference bridge, or the video system’s own built-in MultiSite feature. Which one to use is set-up by CUCM.

Both MultiWay and the CUCM conference bridge allows you to set up conferences with many participants. The built-in MultiSite allows up to four participants (yourself included) plus one additional audio call.

Note that the built-in MultiSite is optional and may not be available on all video systems.

Requires user role: ADMIN

Value space: <Auto/Off/MultiSite/MultiWay/CUCMMediaResourceGroupList>

- **Auto**: The multipoint method available will be choosen automatically; if none are available the Multipoint Mode will automatically be set to Off. If both MultiWay and MultiSite are available, the MultiWay service takes priority over the built-in MultiSite.
- **Off**: Multiparty conferences are not allowed.
- **MultiSite**: Multiparty conferences are set up using the built-in MultiSite feature. If MultiSite is chosen when the MultiSite feature is not available, the Multipoint Mode will automatically be set to Off.
- **MultiWay**: Multiparty conferences are set up using the MultiWay service. If MultiWay is chosen when the MultiWay service is not available, the Multipoint Mode will automatically be set to Off. This may occur when the NetworkServices MultiWay Address setting is empty or not properly set.
- **CUCMMediaResourceGroupList**: Multiparty conferences (ad hoc conferences) are hosted by the CUCM configured conference bridge. This setting is provisioned by CUCM in a CUCM environment and should never be set manually by the user.

Example: Conference 1 Multipoint Mode: Auto
Conference [1..1] IncomingMultisiteCall Mode

Select whether or not to allow incoming calls when already in a call/conference.

Requires user role: ADMIN

Value space: <Allow/Deny>

  Allow: You will be notified when someone calls you while you are already in a call. You can accept the incoming call or not. The ongoing call may be put on hold while answering the incoming call; or you may merge the calls (requires MultiSite or MultiWay support).

  Deny: An incoming call will be rejected if you are already in a call. You will not be notified about the incoming call. However, the call will appear as a missed call in the call history list.

Example: Conference 1 IncomingMultisiteCall Mode: Allow
FacilityService settings

FacilityService Service [1..5] Type
Up to five different facility services can be supported simultaneously. With this setting you can select what kind of services they are. A facility service is not available unless both the FacilityService Service Name and the FacilityService Service Number settings are properly set. Only FacilityService Service 1 with Type Helpdesk is available on the Touch controller; the other options are available for system integrators using the API (Application Programming Interface) command set. Facility services are not available when using the remote control and on-screen menu.

Requires user role: ADMIN
Value space: <Other/Concierge/Helpdesk/Emergency/Security/Catering/Transportation>

- Other: Select this option for services not covered by the other options.
- Concierge: Select this option for concierge services.
- Helpdesk: Select this option for helpdesk services.
- Emergency: Select this option for emergency services.
- Security: Select this option for security services.
- Catering: Select this option for catering services.
- Transportation: Select this option for transportation services.

Example: FacilityService Service 1 Type: Helpdesk

FacilityService Service [1..5] Name
Enter the name of the facility service. Up to five different facility services are supported. A facility service is not available unless both the FacilityService Service Name and the FacilityService Service Number settings are properly set. Only FacilityService Service 1 is available on the Touch controller; the other services are available for system integrators using the API (Application Programming Interface) command set. The facility services are not available when using the remote control and on-screen menu.

Requires user role: ADMIN
Value space: <S: 0, 1024>

Format: String with a maximum of 1024 characters.

Example: FacilityService Service 1 Name: ""

FacilityService Service [1..5] Number
Enter the number (URI or phone number) of the facility service. Up to five different facility services are supported. A facility service is not available unless both the FacilityService Service Name and the FacilityService Service Number settings are properly set. Only FacilityService Service 1 is available on the Touch controller; the other options are available for system integrators using the API (Application Programming Interface) command set. The facility services are not available when using the remote control and on-screen menu.

Requires user role: ADMIN
Value space: <S: 0, 1024>

Example: FacilityService Service 1 Number: ""

FacilityService Service [1..5] CallType
Set the call type for each facility service. Up to five different facility services are supported. A facility service is not available unless both the FacilityService Service Name and the FacilityService Service Number settings are properly set. Only FacilityService Service 1 is available on the Touch controller; the other options are available for system integrators using the API (Application Programming Interface) command set. Facility services are not available when using the remote control and on-screen menu.

Requires user role: ADMIN
Value space: <Video/Audio>

- Video: Select this option for video calls.
- Audio: Select this option for audio calls.

Example: FacilityService Service 1 CallType: Video
GPIO settings

GPIO Pin [1..4] Mode

The four GPIO pins are configured individually. The state can be retrieved by "xStatus GPIO Pin [1..4] State". The default pin state is High (+12 V). When activated as output, they are set to 0 V. To activate them as input, they must be pulled down to 0 V.

Requires user role: ADMIN

Value space: <InputNoAction/OutputManualState/OutputInCall/OutputMicrophonesMuted/
OutputPresentationOn/OutputAllCallsEncrypted/OutputStandbyActive/InputMuteMicrophones>

- InputNoAction: The pin state can be set, but no operation is performed.
- OutputManualState: The pin state can be set by "xCommand GPIO ManualState Set PinX: <High/Low>" (to +12 V or 0 V, respectively).
- OutputInCall: The pin is activated when in call, deactivated when not in call.
- OutputMicrophonesMuted: The pin is activated when microphones are muted, deactivated when not muted.
- OutputPresentationOn: The pin is activated when presentation is active, deactivated when presentation is not active.
- OutputAllCallsEncrypted: The pin is activated when all calls are encrypted, deactivated when one or more calls are not encrypted.
- OutputStandbyActive: The pin is activated when the system is in standby mode, deactivated when no longer in standby.
- InputMuteMicrophones: When the pin is activated (0 V), the microphones will be muted. When deactivated (+12 V), the microphones are unmuted.

Example: GPIO Pin 1 Mode: InputNoAction
**H323 settings**

**H323 NAT Mode**

The firewall traversal technology creates a secure path through the firewall barrier, and enables proper exchange of audio/video data when connected to an external video conferencing system (when the IP traffic goes through a NAT router). NOTE: NAT does not work in conjunction with gatekeepers.

**Requires user role:** ADMIN

**Value space:** <Auto/Off/On>

- **Auto:** The system will determine if the H323 NAT Address or the real IP address should be used in signaling. This makes it possible to place calls to endpoints on the LAN as well as endpoints on the WAN. If the H323 NAT Address is wrong or not set, the real IP address will be used.
- **Off:** The system will signal the real IP address.
- **On:** The system will signal the configured H323 NAT Address instead of its real IP address in Q.931 and H.245. The NAT Server Address will be shown in the startup-menu as: "My IP Address: 10.0.2.1". If the H323 NAT Address is wrong or not set, H.323 calls cannot be set up.

**Example:** H323 NAT Mode: Off

**H323 NAT Address**

Enter the external/global IP address to the router with NAT support. Packets sent to the router will then be routed to the system. Note that NAT cannot be used when registered to a gatekeeper.

In the router, the following ports must be routed to the system’s IP address:

- * Port 1720
- * Port 5555–6555
- * Port 2326–2487

**Requires user role:** ADMIN

**Value space:** <S: 0, 64>

**Format:** A valid IPv4 address or IPv6 address.

**Example:** H323 NAT Address: **
H323 Profile [1..1] Authentication Password

The system sends the Authentication Login Name and the Authentication Password to a H.323 Gatekeeper for authentication. The authentication is a one way authentication from the codec to the H.323 Gatekeeper, i.e. the system is authenticated to the gatekeeper. If the H.323 Gatekeeper indicates that no authentication is required, the system will still try to register. Requires the H.323 Gatekeeper Authentication Mode to be enabled.

Requires user role: ADMIN

Value space: <S: 0, 50>

Format: String with a maximum of 50 characters.

Example: H323 Profile 1 Authentication Password: ""

H323 Profile [1..1] CallSetup Mode

The H.323 Call Setup Mode defines whether to use a Gatekeeper or Direct calling when establishing H323 calls.

NOTE: Direct H.323 calls can be made even though the H.323 Call Setup Mode is set to Gatekeeper.

Requires user role: ADMIN

Value space: <Direct/Gatekeeper>

Direct: An IP address must be used when dialing in order to make the H323 call.

Gatekeeper: The system will use a Gatekeeper to make a H.323 call. When selecting this option the H323 Profile Gatekeeper Address and H323 Profile Gatekeeper Discovery settings must also be configured.

Example: H323 Profile 1 CallSetup Mode: Gatekeeper

H323 Profile [1..1] Encryption KeySize

Define the minimum or maximum key size for the Diffie-Hellman key exchange method, which is used when establishing the Advanced Encryption Standard (AES) encryption key.

Requires user role: ADMIN

Value space: <Min1024bit/Max1024bit/Min2048bit>

Min1024bit: The minimum size is 1024 bit.

Max1024bit: The maximum size is 1024 bit.

Min2048bit: The minimum size is 2048 bit.

Example: H323 Profile 1 Encryption MinKeySize: Max1024bit

H323 Profile [1..1] Gatekeeper Discovery

Determine how the system shall register to a H.323 Gatekeeper.

Requires user role: ADMIN

Value space: <Manual/Auto>

Manual: The system will use a specific Gatekeeper identified by the Gatekeeper’s IP address.

Auto: The system will automatically try to register to any available Gatekeeper. If a Gatekeeper responds to the request sent from the codec within 30 seconds this specific Gatekeeper will be used. This requires that the Gatekeeper is in auto discovery mode as well. If no Gatekeeper responds, the system will not use a Gatekeeper for making H.323 calls and hence an IP address must be specified manually.

Example: H323 Profile 1 Gatekeeper Discovery: Manual

H323 Profile [1..1] Gatekeeper Address

Enter the IP address of the Gatekeeper. Requires the H.323 Call Setup Mode to be set to Gatekeeper and the Gatekeeper Discovery to be set to Manual.

Requires user role: ADMIN

Value space: <S: 0, 255>

Format: A valid IPv4 address, IPv6 address or DNS name.

Example: H323 Profile 1 Gatekeeper Address: "192.0.2.0"

H323 Profile [1..1] H323Alias E164

The H.323 Alias E.164 defines the address of the system, according to the numbering plan implemented in the H.323 Gatekeeper. The E.164 alias is equivalent to a telephone number, sometimes combined with access codes.

Requires user role: ADMIN

Value space: <S: 0, 30>

Format: Compact string with a maximum of 30 characters. Valid characters are 0-9, * and #.

Example: H323 Profile 1 H323Alias E164: "90550092"
H323 Profile [1..1] H323Alias ID

Lets you specify the H.323 Alias ID which is used to address the system on a H.323 Gatekeeper and will be displayed in the call lists. Example: "firstname.lastname@company.com", "My H.323 Alias ID"

Requires user role: ADMIN

Value space: <S: 0, 49>

Format: String with a maximum of 49 characters.

Example: H323 Profile 1 H323Alias ID: "firstname.lastname@company.com"

H323 Profile [1..1] PortAllocation

The H.323 Port Allocation setting affects the H.245 port numbers used for H.323 call signaling.

Requires user role: ADMIN

Value space: <Dynamic/Static>

Dynamic: The system will allocate which ports to use when opening a TCP connection. The reason for doing this is to avoid using the same ports for subsequent calls, as some firewalls consider this as a sign of attack. When Dynamic is selected, the H.323 ports used are from 11000 to 20999. Once 20999 is reached they restart again at 11000. The ports are automatically selected by the system within the given range. Firewall administrators should not try to deduce which ports are used when, as the allocation schema within the mentioned range may change without any further notice.

Static: When set to Static the ports are given within a static predefined range [5555-6555].

Example: H323 Profile 1 PortAllocation: Dynamic
Logging settings

Logging Mode
Not applicable in this version.
Network settings

Network [1..1] IPStack
Select if the system should use IPv4, IPv6, or dual IP stack, on the network interface. NOTE: After changing this setting you may have to wait up to 30 seconds before it takes effect.

Requires user role: ADMIN

Value space: <Dual/IPv4/IPv6>
- **Dual**: When set to Dual, the network interface can operate on both IP versions at the same time, and can have both an IPv4 and an IPv6 address at the same time.
- **IPv4**: When set to IPv4, the system will use IPv4 on the network interface.
- **IPv6**: When set to IPv6, the system will use IPv6 on the network interface.

Example: Network 1 IPStack: Dual

Network [1..1] IPv4 Assignment
Define how the system will obtain its IPv4 address, subnet mask and gateway address. This setting only applies to systems on IPv4 networks.

Requires user role: ADMIN

Value space: <Static/DHCP>
- **Static**: The addresses must be configured manually using the Network IPv4 Address, Network IPv4 Gateway and Network IPv4 SubnetMask settings (static addresses).
- **DHCP**: The system addresses are automatically assigned by the DHCP server.

Example: Network 1 IPv4 Assignment: DHCP

Network [1..1] IPv4 Address
Enter the static IPv4 network address for the system. This setting is only applicable when Network Assignment is set to Static.

Requires user role: ADMIN

Value space: <S: 0, 64>
- **Format**: A valid IPv4 address.

Example: Network 1 IPv4 Address: "192.0.2.2"

Network [1..1] IPv4 Gateway
Define the IPv4 network gateway. This setting is only applicable when the Network Assignment is set to Static.

Requires user role: ADMIN

Value space: <S: 0, 64>
- **Format**: A valid IPv4 address.

Example: Network 1 IPv4 Gateway: "192.0.2.1"

Network [1..1] IPv4 SubnetMask
Define the IPv4 network subnet mask. This setting is only applicable when the Network Assignment is set to Static.

Requires user role: ADMIN

Value space: <S: 0, 64>
- **Format**: The valid IPv4 address format.

Example: Network 1 IPv4 SubnetMask: "255.255.255.0"

Network [1..1] IPv6 Assignment
Define how the system will obtain its IPv6 address and the default gateway address. This setting only applies to systems on IPv6 networks.

Requires user role: ADMIN

Value space: <Static/DHCPv6/Autoconf>
- **Static**: The codec and gateway IP addresses must be configured manually using the Network IPv6 Address and Network IPv6 Gateway settings. The options, for example NTP and DNS server addresses, must either be set manually or obtained from a DHCPv6 server. The Network IPv6 DHCPOptions setting determines which method to use.
- **DHCPv6**: All IPv6 addresses, including options, will be obtained from a DHCPv6 server. See RFC 3315 for a detailed description. The Network IPv6 DHCPOptions setting will be ignored.
- **Autoconf**: Enable IPv6 stateless autoconfiguration of the IPv6 network interface. See RFC 4862 for a detailed description. The options, for example NTP and DNS server addresses, must either be set manually or obtained from a DHCPv6 server. The Network IPv6 DHCPOptions setting determines which method to use.

Example: Network 1 IPv6 Assignment: Autoconf
Network [1..1] IPv6 Address
Enter the static IPv6 network address for the system. This setting is only applicable when the Network IPv6 Assignment is set to Static.

Requires user role: ADMIN
Value space: <S: 0, 64>
Format: A valid IPv6 address.

Example: Network 1 IPv6 Address: "2001:0DB8:0000:0000:0000:0000:0000:0002"

Network [1..1] IPv6 Gateway
Define the IPv6 network gateway address. This setting is only applicable when the Network IPv6 Assignment is set to Static.

Requires user role: ADMIN
Value space: <S: 0, 64>
Format: A valid IPv6 address.

Example: Network 1 IPv6 Gateway: "2001:0DB8:0000:0000:0000:0000:0000:0001"

Network [1..1] IPv6 DHCPOptions
Retrieve a set of DHCP options, for example NTP and DNS server addresses, from a DHCPv6 server.

Requires user role: ADMIN
Value space: <Off/On>

Off: Disable the retrieval of DHCP options from a DHCPv6 server.
On: Enable the retrieval of a selected set of DHCP options from a DHCPv6 server.

Example: Network 1 IPv6 DHCPOptions: On

Network [1..1] DHCP RequestTFTPServerAddress
This setting is used only for video systems that are registered to a Cisco Unified Communications Manager (CUCM).

The setting determines whether the endpoint should ask the DHCP server for DHCP option 150, so that it can discover the address of the TFTP server (provisioning server) automatically.

If this setting is Off or the DHCP server does not support option 150, the TFTP server address must be set manually using the Provisioning ExternalManager Address setting.

If the Network VLAN Voice Mode setting is Auto and the Cisco Discovery Protocol (CDP) assigns an ID to the voice VLAN, then a request for option 150 will always be sent. That is, the Network DHCP RequestTFTPServerAddress setting will be ignored.

Requires user role: ADMIN
Value space: <Off/On>

Off: The video system will not send a request for DHCP option 150 and the address of the TFTP server must be set manually. See the note above for any exception to this rule.
On: The video system will send a request for option 150 to the DHCP server so that it can automatically discover the address of the TFTP server.

Example: Network 1 DHCP RequestTFTPServerAddress: On

Network [1..1] DNS Domain Name
DNS Domain Name is the default domain name suffix which is added to unqualified names.

Example: If the DNS Domain Name is "company.com" and the name to lookup is "MyVideoSystem", this will result in the DNS lookup "MyVideoSystem.company.com".

Requires user role: ADMIN
Value space: <S: 0, 64>
Format: String with a maximum of 64 characters.

Example: Network 1 DNS Domain Name: ""

Network [1..1] DNS Server [1..3] Address
Define the network addresses for DNS servers. Up to 3 addresses may be specified. If the network addresses are unknown, contact your administrator or Internet Service Provider.

Requires user role: ADMIN
Value space: <S: 0, 64>
Format: A valid IPv4 address or IPv6 address.

Example: Network 1 DNS Server 1 Address: ""
Network [1..1] QoS Mode

The QoS (Quality of Service) is a method which handles the priority of audio, video and data in the network. The QoS settings must be supported by the infrastructure. Diffserv (Differentiated Services) is a computer networking architecture that specifies a simple, scalable and coarse-grained mechanism for classifying, managing network traffic and providing QoS priorities on modern IP networks.

Requires user role: ADMIN

Value space: <Off/Diffserv>
- Off: No QoS method is used.
- Diffserv: When you set the QoS Mode to Diffserv, the Network QoS Diffserv Audio, Network QoS Diffserv Video, Network QoS Diffserv Data, Network QoS Diffserv Signalling, Network QoS Diffserv ICMPv6 and Network QoS Diffserv NTP settings are used to prioritize packets.

Example: Network 1 QoS Mode: Diffserv

Network [1..1] QoS Diffserv Audio

This setting will only take effect if Network QoS Mode is set to Diffserv.
Define which priority Audio packets should have in the IP network.
The priority for the packets ranges from 0 to 63 - the higher the number, the higher the priority. The recommended class for Audio is CS4, which equals the decimal value 32. If in doubt, contact your network administrator.
The priority set here might be overridden when packets are leaving the network controlled by the local network administrator.

Requires user role: ADMIN

Value space: <0..63>
- Range: Select a value between 0 to 63 - the higher the number, the higher the priority. The default value is 0 (best effort).

Example: Network 1 QoS Diffserv Audio: 0

Network [1..1] QoS Diffserv Video

This setting will only take effect if Network QoS Mode is set to Diffserv.
Define which priority Video packets should have in the IP network. The packets on the presentation channel (shared content) are also in the Video packet category. The priority for the packets ranges from 0 to 63 - the higher the number, the higher the priority. The recommended class for Video is CS4, which equals the decimal value 32. If in doubt, contact your network administrator.
The priority set here might be overridden when packets are leaving the network controlled by the local network administrator.

Requires user role: ADMIN

Value space: <0..63>
- Range: Select a value between 0 to 63 - the higher the number, the higher the priority. The default value is 0 (best effort).

Example: Network 1 QoS Diffserv Video: 0

Network [1..1] QoS Diffserv Data

This setting will only take effect if Network QoS Mode is set to Diffserv.
Define which priority Data packets should have in the IP network.
The priority for the packets ranges from 0 to 63 - the higher the number, the higher the priority. The recommended value for Data is 0, which means best effort. If in doubt, contact your network administrator.
The priority set here might be overridden when packets are leaving the network controlled by the local network administrator.

Requires user role: ADMIN

Value space: <0..63>
- Range: Select a value between 0 to 63 - the higher the number, the higher the priority. The default value is 0 (best effort).

Example: Network 1 QoS Diffserv Data: 0
Network [1..1] QoS Diffserv Signalling
This setting will only take effect if Network QoS Mode is set to Diffserv.
Define which priority Signalling packets that are deemed critical (time-sensitive) for the real-time operation should have in the IP network.
The priority for the packets ranges from 0 to 63 - the higher the number, the higher the priority.
The recommended class for Signalling is CS3, which equals the decimal value 24. If in doubt, contact your network administrator.
The priority set here might be overridden when packets are leaving the network controlled by the local network administrator.
Requires user role: ADMIN
Value space: <0..63>
Range: Select a value between 0 to 63 - the higher the number, the higher the priority. The default value is 0 (best effort).
Example: Network 1 QoS Diffserv Signalling: 0

Network [1..1] QoS Diffserv ICMPv6
This setting will only take effect if Network QoS Mode is set to Diffserv.
Define which priority ICMPv6 packets should have in the IP network.
The priority for the packets ranges from 0 to 63 - the higher the number, the higher the priority.
The recommended value for ICMPv6 is 0, which means best effort. If in doubt, contact your network administrator.
The priority set here might be overridden when packets are leaving the network controlled by the local network administrator.
Requires user role: ADMIN
Value space: <0..63>
Range: Select a value between 0 to 63 - the higher the number, the higher the priority. The default value is 0 (best effort).
Example: Network 1 QoS Diffserv ICMPv6: 0

Network [1..1] QoS Diffserv NTP
This setting will only take effect if Network QoS Mode is set to Diffserv.
Define which priority NTP packets should have in the IP network.
The priority for the packets ranges from 0 to 63 - the higher the number, the higher the priority.
The recommended value for NTP is 0, which means best effort. If in doubt, contact your network administrator.
The priority set here might be overridden when packets are leaving the network controlled by the local network administrator.
Requires user role: ADMIN
Value space: <0..63>
Range: Select a value between 0 to 63 - the higher the number, the higher the priority. The default value is 0 (best effort).
Example: Network 1 QoS Diffserv NTP: 0

Network [1..1] IEEE8021X Mode
The system can be connected to an IEEE 802.1X LAN network, with a port-based network access control that is used to provide authenticated network access for Ethernet networks.
Requires user role: ADMIN
Value space: <Off/On>
Off: The 802.1X authentication is disabled (default).
On: The 802.1X authentication is enabled.
Example: Network 1 IEEE8021X Mode: Off
Network [1..1] IEEE8021X TlsVerify

Verification of the server-side certificate of an IEEE802.1x connection against the certificates in the local CA-list when TLS is used. The CA-list must be uploaded to the video system. This can be done from the web interface.

This setting takes effect only when Network [1..1] IEEE8021X Eap Tls is enabled (On).

Requires user role: ADMIN

Value space: <Off/On>

Off: When set to Off, TLS connections are allowed without verifying the server-side X.509 certificate against the local CA-list. This should typically be selected if no CA-list has been uploaded to the codec.

On: When set to On, the server-side X.509 certificate will be validated against the local CA-list for all TLS connections. Only servers with a valid certificate will be allowed.

Example: Network 1 IEEE8021X TlsVerify: Off

Network [1..1] IEEE8021X UseClientCertificate

Authentication using a private key/certificate pair during an IEEE802.1x connection. The authentication X.509 certificate must be uploaded to the video system. This can be done from the web interface.

Requires user role: ADMIN

Value space: <Off/On>

Off: When set to Off client-side authentication is not used (only server-side).

On: When set to On the client (video system) will perform a mutual authentication TLS handshake with the server.

Example: Network 1 IEEE8021X UseClientCertificate: Off

Network [1..1] IEEE8021X Identity

The 802.1X Identity is the user name needed for 802.1X authentication.

Requires user role: ADMIN

Value space: <S: 0, 64>

Format: String with a maximum of 64 characters.

Example: Network 1 IEEE8021X Identity: ""

Network [1..1] IEEE8021X Password

The 802.1X Password is the password needed for 802.1X authentication.

Requires user role: ADMIN

Value space: <S: 0, 32>

Format: String with a maximum of 32 characters.

Example: Network 1 IEEE8021X Password: ""

Network [1..1] IEEE8021X AnonymousIdentity

The 802.1X Anonymous ID string is to be used as unencrypted identity with EAP (Extensible Authentication Protocol) types that support different tunneled identity, like EAP-PEAP and EAP-TTLS. If set, the anonymous ID will be used for the initial (unencrypted) EAP Identity Request.

Requires user role: ADMIN

Value space: <S: 0, 64>

Format: String with a maximum of 64 characters.

Example: Network 1 IEEE8021X AnonymousIdentity: ""

Network [1..1] IEEE8021X Eap Md5

Set the Md5 (Message-Digest Algorithm 5) mode. This is a Challenge Handshake Authentication Protocol that relies on a shared secret. Md5 is a Weak security.

Requires user role: ADMIN

Value space: <Off/On>

Off: The EAP-MD5 protocol is disabled.

On: The EAP-MD5 protocol is enabled (default).

Example: Network 1 IEEE8021X Eap Md5: On
Network [1..1] IEEE8021X Eap Ttls
Set the TTLS (Tunneled Transport Layer Security) mode. Authenticates LAN clients without the need for client certificates. Developed by Funk Software and Certicom. Usually supported by Agere Systems, Proxim and Avaya.

Requires user role: ADMIN
Value space: <Off/On>
   Off: The EAP-TTLS protocol is disabled.
   On: The EAP-TTLS protocol is enabled (default).

Example: Network 1 IEEE8021X Eap Ttls: On

Network [1..1] IEEE8021X Eap Tls
Enable or disable the use of EAP-TLS (Transport Layer Security) for IEEE802.1x connections. The EAP-TLS protocol, defined in RFC 5216, is considered one of the most secure EAP standards. LAN clients are authenticated using client certificates.

Requires user role: ADMIN
Value space: <Off/On>
   Off: The EAP-TLS protocol is disabled.
   On: The EAP-TLS protocol is enabled (default).

Example: Network 1 IEEE8021X Eap Tls: On

Network [1..1] IEEE8021X Eap Peap
Set the Peap (Protected Extensible Authentication Protocol) mode. Authenticates LAN clients without the need for client certificates. Developed by Microsoft, Cisco and RSA Security.

Requires user role: ADMIN
Value space: <Off/On>
   Off: The EAP-PEAP protocol is disabled.
   On: The EAP-PEAP protocol is enabled (default).

Example: Network 1 IEEE8021X Eap Peap: On

Network [1..1] MTU
Set the Ethernet MTU (Maximum Transmission Unit).

Requires user role: ADMIN
Value space: <Off/On>
   Range: Select a value between 576 and 1500 bytes.

Example: Network 1 MTU: 1500

Network [1..1] Speed
Set the Ethernet link speed.

Requires user role: ADMIN
Value space: <Auto/10half/10full/100half/100full/1000full>
   Auto: Autonegotiate link speed.
   10half: Force link to 10 Mbps half-duplex.
   10full: Force link to 10 Mbps full-duplex.
   100half: Force link to 100 Mbps half-duplex.
   100full: Force link to 100 Mbps full-duplex.
   1000full: Force link to 1 Gbps full-duplex.

Example: Network 1 Speed: Auto

Network [1..1] TrafficControl Mode
Set the network traffic control mode to decide how to control the video packets transmission speed.

Requires user role: ADMIN
Value space: <Off/On>
   Off: Transmit video packets at link speed.
   On: Transmit video packets at maximum 20 Mbps. Can be used to smooth out bursts in the outgoing network traffic.

Example: Network 1 TrafficControl: On
Network [1..1] RemoteAccess Allow
Define which IP addresses (IPv4/IPv6) are allowed for remote access to the codec from SSH/Telnet/HTTP/HTTPS. Multiple IP addresses are separated by a white space.
A network mask (IP range) is specified by <ip address>/N, where N is 1-32 for IPv4, and N is 1-128 for IPv6. The /N is a common indication of a network mask where the first N bits are set. Thus 192.168.0.0/24 would match any address starting with 192.168.0, since these are the first 24 bits in the address.

Requires user role: ADMIN
Value space: <S: 0, 255>
Format: String with a maximum of 255 characters.
Example: Network 1 RemoteAccess Allow: "10.11.2.3 192.168.0.0/24 2001:0db8:0000:0000:0000:ff00:0042:8329 2001:db8:abcd:0012::0/64"

Network [1..1] VLAN Voice Mode
Set the VLAN voice mode. The VLAN Voice Mode will be set to Auto automatically if you have Cisco UCM (Cisco Unified Communications Manager) as provisioning infrastructure. Note that Auto mode will NOT work if the NetworkServices CDP Mode setting is Off.

Requires user role: ADMIN
Value space: <Auto/Manual/Off>
Auto: The Cisco Discovery Protocol (CDP), if available, assigns an id to the voice VLAN. If CDP is not available, VLAN is not enabled.
Manual: The VLAN ID is set manually using the Network VLAN Voice VlanId setting. If CDP is available, the manually set value will be overruled by the value assigned by CDP.
Off: VLAN is not enabled.

Example: Network 1 VLAN Voice Mode: Auto

Network [1..1] VLAN Voice VlanId
Set the VLAN voice ID. This setting will only take effect if VLAN Voice Mode is set to Manual.

Requires user role: ADMIN
Value space: <1..4094>
Range: Select a value between 1 and 4094.

Example: Network 1 VLAN Voice VlanId: 1
NetworkServices settings

NetworkServices CDP Mode
Enable or disable the CDP (Cisco Discovery Protocol) daemon. Enabling CDP will make the endpoint report certain statistics and device identifiers to a CDP-enabled switch. If CDP is disabled, the Network VLAN Voice Mode: Auto setting will not work.

Requires user role: ADMIN
Value space: <Off/On>
  Off: The CDP daemon is disabled.
  On: The CDP daemon is enabled.

Example: NetworkServices CDP Mode: On

NetworkServices H323 Mode
Determine whether the system should be able to place and receive H.323 calls or not.

Requires user role: ADMIN
Value space: <Off/On>
  Off: Disable the possibility to place and receive H.323 calls.
  On: Enable the possibility to place and receive H.323 calls (default).

Example: NetworkServices H323 Mode: On

NetworkServices HTTP Mode
Set the HTTP mode to enable/disable access to the system through a web browser. The web interface is used for system management, call management such as call transfer, diagnostics and software uploads.

Requires user role: ADMIN
Value space: <Off/On>
  Off: The HTTP protocol is disabled. This is the factory setting.
  On: The HTTP protocol is enabled.

Example: NetworkServices HTTP Mode: On

NetworkServices SIP Mode
Determine whether the system should be able to place and receive SIP calls or not.

Requires user role: ADMIN
Value space: <Off/On>
  Off: Disable the possibility to place and receive SIP calls.
  On: Enable the possibility to place and receive SIP calls (default).

Example: NetworkServices SIP Mode: On

NetworkServices Telnet Mode
Telnet is a network protocol used on the Internet or Local Area Network (LAN) connections.

Requires user role: ADMIN
Value space: <Off/On>
  Off: The Telnet protocol is disabled. This is the factory setting.
  On: The Telnet protocol is enabled.

Example: NetworkServices Telnet Mode: Off

NetworkServices WelcomeText
Choose which information the user should see when logging on to the codec through Telnet/SSH.

Requires user role: ADMIN
Value space: <Off/On>
  Off: The welcome text is: Login successful
  On: The welcome text is: Welcome to <system name>; Software version; Software release date; Login successful.

Example: NetworkServices WelcomeText: On
NetworkServices XMLAPI Mode
Enable or disable the video system's XML API. For security reasons this may be disabled. Disabling the XML API will limit the remote manageability with for example TMS, which no longer will be able to connect to the video system.

Requires user role: ADMIN
Value space: <Off/On>
- Off: The XML API is disabled.
- On: The XML API is enabled (default).

Example: NetworkServices XMLAPI Mode: On

NetworkServices MultiWay Address
The MultiWay address must be equal to the Conference Factory Alias, as configured on the Video Communication Server. The MultiWay™ conferencing enables video endpoint users to introduce a 3rd party into an existing call. MultiWay™ can be used in the following situations:
1) When you want to add someone else in to your existing call.
2) When you are called by a 3rd party while already in a call and you want to include that person in the call.

Requirements: Video Communication Server (VCS) version X5 (or later) and Codian MCU version 3.1 (or later). Video systems invited to join the MultiWay™ conference must support the H.323 routeToMC facility message if in an H.323 call, or SIP REFER message if in a SIP call.

Requires user role: ADMIN
Value space: <S: 0, 255>
Format: String with a maximum of 255 characters (a valid dial URI).

Example: NetworkServices MultiWay Address: "h323:multiway@company.com"

NetworkServices MultiWay Protocol
Determine the protocol to be used for MultiWay calls.

Requires user role: ADMIN
Value space: <Auto/H323/Sip>
- Auto: The system will select the protocol for MultiWay calls.
- H323: The H323 protocol will be used for MultiWay calls.
- Sip: The SIP protocol will be used for MultiWay calls.

Example: NetworkServices MultiWay Protocol: Auto

NetworkServices HTTPS Mode
HTTPS is a web protocol that encrypts and decrypts user page requests as well as the pages that are returned by the web server.

Requires user role: ADMIN
Value space: <Off/On>
- Off: The HTTPS protocol is disabled.
- On: The HTTPS protocol is enabled.

Example: NetworkServices HTTPS Mode: On

NetworkServices HTTPS VerifyServerCertificate
When the video system connects to an external HTTPS server (like a phone book server or an external manager), this server will present a certificate to the video system to identify itself.

Requires user role: ADMIN
Value space: <Off/On>
- Off: Do not verify server certificates.
- On: Requires the system to verify that the server certificate is signed by a trusted Certificate Authority (CA). This requires that a list of trusted CAs are uploaded to the system in advance.

Example: NetworkServices HTTPS VerifyServerCertificate: Off

NetworkServices HTTPS VerifyClientCertificate
When the video system connects to a HTTPS client (like a web browser), the client can be asked to present a certificate to the video system to identify itself.

Requires user role: ADMIN
Value space: <Off/On>
- Off: Do not verify client certificates.
- On: Requires the client to present a certificate that is signed by a trusted Certificate Authority (CA). This requires that a list of trusted CAs are uploaded to the system in advance.

Example: NetworkServices HTTPS VerifyClientCertificate: Off
NetworkServices HTTPS OCSP Mode

Define the support for OCSP (Online Certificate Status Protocol) responder services. The OCSP feature allows users to enable OCSP instead of certificate revocation lists (CRLs) to check the certificate status.

For any outgoing HTTPS connection, the OCSP responder is queried of the status. If the corresponding certificate has been revoked, then the HTTPS connection will not be used.

Requires user role: ADMIN

Value space: <Off/On>

- Off: Disable OCSP support.
- On: Enable OCSP support.

Example: NetworkServices HTTPS OCSP Mode: Off

NetworkServices HTTPS OCSP URL

Specify the URL of the OCSP responder (server) that will be used to check the certificate status.

Requires user role: ADMIN

Value space: <S: 0, 255>

Format: String with a maximum of 255 characters.

Example: NetworkServices HTTPS OCSP URL: "http://ocspserver.company.com:81"

NetworkServices Medianet Metadata

Switch On or Off the capability to tag media flows with metadata related to the Cisco Medianet deployment.

Requires user role: ADMIN

Value space: <Off/On>

- Off: Media flows will not be tagged with such metadata.
- On: Media flows will be tagged with such metadata.

Example: NetworkServices Medianet Metadata: Off

NetworkServices NTP Mode

The Network Time Protocol (NTP) is used to synchronize the system's time and date to a reference time server. The time server will be queried regularly for time updates.

Requires user role: ADMIN

Value space: <Auto/Manual/Off>

- Auto: The system will use an NTP server for time reference. As default, the server address will be obtained from the network's DHCP server. If a DHCP server is not used, or if the DHCP server does not provide an NTP server address, the NTP server address that is specified in the NetworkServices NTP Address setting will be used.
- Manual: The system will use the NTP server that is specified in the NetworkServices NTP Address setting for time reference.
- Off: The system will not use an NTP server. The Network Services NTP Address setting will be ignored.

Example: NetworkServices NTP Mode: Auto

NetworkServices NTP Address

The address of the NTP server that will be used when NetworkServices NTP Mode is set to Manual, and when NetworkServices NTP Mode is set to Auto and no address is supplied by a DHCP server.

Requires user role: ADMIN

Value space: <S: 0, 64>

Format: A valid IPv4 address, IPv6 address or DNS name.

Example: NetworkServices NTP Address: "0.tandberg.pool.ntp.org"
NetworkServices SNMP Mode

SNMP (Simple Network Management Protocol) is used in network management systems to monitor network-attached devices (routers, servers, switches, projectors, etc) for conditions that warrant administrative attention. SNMP exposes management data in the form of variables on the managed systems, which describe the system configuration. These variables can then be queried (set to ReadOnly) and sometimes set (set to ReadWrite) by managing applications.

Requires user role: ADMIN

Value space: <Off/ReadOnly/ReadWrite>
- Off: Disable the SNMP network service.
- ReadOnly: Enable the SNMP network service for queries only.
- ReadWrite: Enable the SNMP network service for both queries and commands.

Example: NetworkServices SNMP Mode: ReadOnly

NetworkServices SNMP Host [1..3] Address

Enter the address of up to three SNMP Managers. The system's SNMP Agent (in the codec) responds to requests from SNMP Managers (a PC program etc.), for example about system location and system contact. SNMP traps are not supported.

Requires user role: ADMIN

Value space: <S: 0, 64>
- Format: A valid IPv4 address, IPv6 address or DNS name.

Example: NetworkServices SNMP Host 1 Address: ""

NetworkServices SNMP CommunityName

Enter the name of the Network Services SNMP Community. SNMP Community names are used to authenticate SNMP requests. SNMP requests must have a password (case sensitive) in order to receive a response from the SNMP Agent in the codec. The default password is "public". If you have the Cisco TelePresence Management Suite (TMS) you must make sure the same SNMP Community is configured there too. NOTE: The SNMP Community password is case sensitive.

Requires user role: ADMIN

Value space: <S: 0, 50>
- Format: String with a maximum of 50 characters.

Example: NetworkServices SNMP CommunityName: "public"

NetworkServices SNMP SystemContact

Enter the name of the Network Services SNMP System Contact.

Requires user role: ADMIN

Value space: <S: 0, 50>
- Format: String with a maximum of 50 characters.

Example: NetworkServices SNMP SystemContact: ""

NetworkServices SNMP SystemLocation

Enter the name of the Network Services SNMP System Location.

Requires user role: ADMIN

Value space: <S: 0, 50>
- Format: String with a maximum of 50 characters.

Example: NetworkServices SNMP SystemLocation: ""

NetworkServices SSH Mode

SSH (or Secure Shell) protocol can provide secure encrypted communication between the codec and your local computer.

Requires user role: ADMIN

Value space: <Off/On>
- Off: The SSH protocol is disabled.
- On: The SSH protocol is enabled.

Example: NetworkServices SSH Mode: On

NetworkServices SSH AllowPublicKey

Secure Shell (SSH) public key authentication can be used to access the codec.

Requires user role: ADMIN

Value space: <Off/On>
- Off: The SSH public key is not allowed.
- On: The SSH public key is allowed.

Example: NetworkServices SSH AllowPublicKey: On
NetworkServices CTMS Mode

This setting determines whether or not to allow multiparty conferences controlled by a Cisco TelePresence Multipoint Switch (CTMS).

Video systems are able to initiate or join non-encrypted multiparty conferences controlled by CTMS version 1.8 or later. Encrypted conferences are supported as from software versions CTMS 1.9.1. Encryption is addressed in the NetworkServices CTMS Encryption setting.

Requires user role: ADMIN

Value space: <Off/On>

- Off: Multiparty conferencing via CTMS is prohibited.
- On: Multiparty conferencing via CTMS is allowed.

Example: NetworkServices CTMS Mode: On

NetworkServices CTMS Encryption

This setting indicates whether or not the video system supports encryption when participating in a multiparty meeting controlled by a Cisco TelePresence Multipoint Switch (CTMS).

CTMS allows three security settings for meetings: non-secure (not encrypted), best effort (encrypted if all participants support encryption, otherwise not encrypted) and secure (always encrypted).

Requires user role: ADMIN

Value space: <Off/BestEffort>

- Off: The video system does not allow encryption and therefore cannot participate in a secure CTMS meeting (encrypted). When participating in a best effort CTMS meeting, the meeting will be downgraded to non-secure (not encrypted).
- BestEffort: The video system can negotiate encryption parameters with CTMS and participate in a secure CTMS meeting (encrypted). Do not use this value if the CTMS version is older than 1.9.1.

Example: NetworkServices CTMS Encryption: Off

NetworkServices UPnP Mode

Fully disable UPnP (Universal Plug and Play), or enable UPnP for a short time period after the video system has been switched on or restarted.

The default operation is that UPnP is enabled when you switch on or restart the video system. Then UPnP is automatically disabled after the timeout period that is defined in the NetworkServices UPnP Timeout setting.

When UPnP is enabled, the video system advertises its presence on the network. The advertisement permits a Touch controller to discover video systems automatically, and you do not need to manually enter the video system’s IP address in order to pair the Touch controller.

Requires user role: ADMIN

Value space: <Off/On>

- Off: UPnP is disabled. The video system does not advertise its presence, and you have to enter the video system’s IP address manually in order to pair a Touch controller to the video system.
- On: UPnP is enabled. The video system advertises its presence until the timeout period expires.

Example: NetworkServices UPnP Mode: On

NetworkServices UPnP Timeout

Define for how many seconds UPnP shall stay enabled after the video system is switched on or restarted. The NetworkServices UPnP Mode setting must be On for this setting to take any effect.

Requires user role: ADMIN

Value space: <0..3600>

- Range: Select a value between 0 and 3600 seconds.

Example: NetworkServices UPnP Timeout: 600
Peripherals settings

Peripherals Profile TouchPanels

Set the number of touch panels that are expected to be connected to the video system. This information is used by the video system’s diagnostics service. If the number of connected touch panels does not match this setting, the diagnostics service will report it as an inconsistency. Note that only one Cisco Touch controller is supported in this version.

Requires user role: ADMIN

Value space: <NotSet/Minimum1/0/1/2/3/4/5>

- NotSet: No touch panel check is performed.
- Minimum1: At least one touch panel should be connected to the video system.
- 0-5: This number of Touch controllers should be connected to the video system.

Example: Peripherals Profile TouchPanels: NotSet
Phonebook settings

Phonebook Server [1..1] ID
Enter a name for the external phone book.

Requires user role: ADMIN
Value space: <S: 0, 64>
   Format: String with a maximum of 64 characters.
Example: Phonebook Server 1 ID: """

Phonebook Server [1..1] Type
Select the phonebook server type.

Requires user role: ADMIN
Value space: <VCS/TMS/Callway/CUCM>
   VCS: Select VCS if the phonebook is located on the Cisco TelePresence Video Communication Server.
   TMS: Select TMS if the phonebook is located on the Cisco TelePresence Management Suite server.
   Callway: Select Callway if the phonebook is to be provided by the WebEx TelePresence subscription service (formerly called CallWay). Contact your WebEx TelePresence provider for more information.
   CUCM: Select CUCM if the phonebook is located on the Cisco Unified Communications Manager.
Example: Phonebook Server 1 Type: TMS

Phonebook Server [1..1] URL
Enter the address (URL) to the external phone book server.

Requires user role: ADMIN
Value space: <S: 0, 255>
   Format: String with a maximum of 255 characters.
Provisioning settings

Provisioning Connectivity
This setting controls how the device discovers whether it should request an internal or external configuration from the provisioning server.

Requires user role: ADMIN

Value space: <Internal/External/Auto>
- Internal: Request internal configuration.
- External: Request external configuration.
- Auto: Automatically discover using NAPTR queries whether internal or external configurations should be requested. If the NAPTR responses have the "e" flag, external configurations will be requested. Otherwise internal configurations will be requested.

Example: Provisioning Connectivity: Auto

Provisioning Mode
It is possible to configure a video system using a provisioning system (external manager). This allows video conferencing network administrators to manage many video systems simultaneously. With this setting you choose which type of provisioning system to use. Provisioning can also be switched off. Contact your provisioning system provider/representative for more information.

Requires user role: ADMIN

Value space: <Off/TMS/VCS/CallWay/CUCM/Auto/Edge>
- Off: The video system will not be configured by a provisioning system.
- Auto: The provisioning server will automatically be selected by the video system.
- TMS: The video system will be configured using TMS (Cisco TelePresence Management System).
- VCS: The video system will be configured using VCS (Cisco TelePresence Video Communication Server).
- Callway: The video system will be configured using the WebEx TelePresence subscription service (formerly named Callway).
- CUCM: The video system will be configured using CUCM (Cisco Unified Communications Manager).
- Edge: The system will connect to CUCM via the Collaboration Edge infrastructure.

Example: Provisioning Mode: Auto

Provisioning LoginName
This is the user name part of the credentials used to authenticate the video system with the provisioning server. This setting must be used when required by the provisioning server. If Provisioning Mode is Callway (WebEx TelePresence), enter the video number.

Requires user role: ADMIN

Value space: <S: 0, 80>
Format: String with a maximum of 80 characters.

Example: Provisioning LoginName: ""

Provisioning Password
This is the password part of the credentials used to authenticate the video system with the provisioning server. This setting must be used when required by the provisioning server. If Provisioning Mode is Callway (WebEx TelePresence), enter the activation code.

Requires user role: ADMIN

Value space: <S: 0, 64>
Format: String with a maximum of 64 characters.

Example: Provisioning Password: ""

Provisioning HttpMethod
Select the HTTP method to be used for the provisioning.

Requires user role: ADMIN

Value space: <GET/POST>
- GET: Select GET when the provisioning server supports GET.
- POST: Select POST when the provisioning server supports POST.

Example: Provisioning HttpMethod: POST
Provisioning ExternalManager Address

Enter the IP Address or DNS name of the external manager / provisioning system.
If an External Manager Address (and Path) is configured, the system will send a message to this address when starting up. When receiving this message the external manager / provisioning system can return configurations/commands to the unit as a result.
When using CUCM or TMS provisioning, the DHCP server can be set up to provide the external manager address automatically (DHCP Option 242 for TMS, and DHCP Option 150 for CUCM). An address set in the Provisioning ExternalManager Address setting will override the address provided by DHCP.

Requires user role: ADMIN

Value space: <S: 0, 64>

Format: A valid IPv4 address, IPv6 address or DNS name.

Example: Provisioning ExternalManager Address: ""
RTP settings

RTP Ports Range Start

Specify the first port in the range of RTP ports.

As default, the system is using the UDP ports in the range 2326 to 2487 for RTP and RTCP media data. Each media channel is using two adjacent ports for RTP and RTCP. The default number of ports required in the UDP port range is based on the number of simultaneous calls that the endpoint is capable of.

NOTE: Restart the system for any change to this setting to take effect.

Requires user role: ADMIN

Value space: <1024..65438>
  Range: Select a value between 1024 and 65438.

Example: RTP Ports Range Start: 2326

RTP Ports Range Stop

Specify the last RTP port in the range.

As default, the system is using the UDP ports in the range 2326 to 2487 for RTP and RTCP media data. Each media channel is using two adjacent ports for RTP and RTCP. The default number of ports required in the UDP port range is based on the number of simultaneous calls that the endpoint is capable of.

NOTE: Restart the system for any change to this setting to take effect.

Requires user role: ADMIN

Value space: <1120..65535>
  Range: Select a value between 1120 and 65535.

Example: RTP Ports Range Stop: 2486
Security settings

Security Audit Logging Mode
Determine where to record or transmit the audit logs. The audit logs are sent to a syslog server. When using the External/ExternalSecure modes and setting the port assignment to manual in the Security Audit Server Port Assignment setting, you must also enter the address and port number for the audit server in the Security Audit Server Address and Security Audit Server Port settings.

Requires user role: AUDIT
Value space: <Off/Internal/External/ExternalSecure>
- Off: No audit logging is performed.
- Internal: The system records the audit logs to internal logs, and rotates logs when they are full.
- External: The system sends the audit logs to an external syslog server. The syslog server must support UDP.
- ExternalSecure: The system sends encrypted audit logs to an external syslog server that is verified by a certificate in the Audit CA list. The Audit CA list file must be uploaded to the codec using the web interface. The common_name parameter of a certificate in the CA list must match the IP address of the syslog server, and the secure TCP server must be set up to listen for secure (TLS) TCP Syslog messages.

Example: Security Audit Logging Mode: Off

Security Audit OnError Action
Determine what happens when the connection to the syslog server is lost. This setting is only relevant when Security Audit Logging Mode is set to ExternalSecure.

Requires user role: AUDIT
Value space: <Halt/Ignore>
- Halt: If a halt condition is detected the system codec is rebooted and only the auditor is allowed to operate the unit until the halt condition has passed. When the halt condition has passed the audit logs are re-spooled to the syslog server. Halt conditions are: A network breach (no physical link), no syslog server running (or incorrect address or port to the syslog server), TLS authentication failed (if in use), local backup (re-spooling) log full.
- Ignore: The system will continue its normal operation, and rotate internal logs when full. When the connection is restored it will again send its audit logs to the syslog server.

Example: Security Audit OnError Action: Ignore

Security Audit Server Address
The audit logs are sent to a syslog server. Enter the IP address of the syslog server. Only valid IPv4 or IPv6 address formats are accepted. Host names are not supported. This setting is only relevant when Security Audit Logging Mode is set to External or ExternalSecure.

Requires user role: AUDIT
Value space: <S: 0, 64>
Format: A valid IPv4 address or IPv6 address
Example: Security Audit Server Address: ""

Security Audit Server Port
The audit logs are sent to a syslog server. Enter the port of the syslog server that the system shall send its audit logs to. This setting is only relevant when Security Audit Port Assignment is set to Manual.

Requires user role: AUDIT
Value space: <0..65535>
Range: Select a value between 0 to 65535.
Example: Security Audit Server Port: 514

Security Audit Server Port Assignment
The audit logs are sent to a syslog server. You can define how the port number of the external syslog server will be assigned. This setting is only relevant when Security Audit Logging Mode is set to External or ExternalSecure. To see which port number is used you can check the Security Audit Server Port status. Navigate to Configuration > System status on the web interface or; if on a command line interface, run the command xStatus Security Audit Server Port.

Requires user role: AUDIT
Value space: <Auto/Manual>
- Auto: Will use UDP port number 514 when the Security Audit Logging Mode is set to External. Will use TCP port number 6514 when the Security Audit Logging Mode is set to ExternalSecure.
- Manual: Will use the port value defined in the Security Audit Server Port setting.

Example: Security Audit Server Port Assignment: Auto
Security Session ShowLastLogon

When logging in to the system using SSH or Telnet you will see the UserId, time and date of the last session that did a successful login.

Requires user role: ADMIN

Value space: <Off/On>
  
  On: Show information about the last session.
  
  Off: Do not show information about the last session.

Example: Security Session ShowLastLogon: Off

Security Session InactivityTimeout

Determine how long the system will accept inactivity from the user before he is automatically logged out.

Requires user role: ADMIN

Value space: <0..10000>
  
  Range: Select a value between 1 and 10000 seconds; or select 0 when inactivity should not enforce automatic logout.

Example: Security Session InactivityTimeout: 0
SerialPort settings

SerialPort Mode
Enable/disable the serial port (COM port).

Requires user role: ADMIN

Value space: <Off/On>
- Off: Disable the serial port.
- On: Enable the serial port.

Example: SerialPort Mode: On

SerialPort BaudRate
Specify the baud rate (data transmission rate, bits per second) for the serial port. The default value is 38400.
Other connection parameters for the serial port are: Data bits: 8; Parity: None; Stop bits: 1; Flow control: None.

Requires user role: ADMIN

Value space: <9600/19200/38400/57600/115200>
- Range: Select a baud rate from the baud rates listed (bps).

Example: SerialPort BaudRate: 38400

SerialPort LoginRequired
Determine if login shall be required when connecting to the serial port.

Requires user role: ADMIN

Value space: <Off/On>
- Off: The user can access the codec via the serial port without any login.
- On: Login is required when connecting to the codec via the serial port.

Example: SerialPort LoginRequired: On
SIP settings

SIP ANAT
ANAT (Alternative Network Address Types) enables media negotiation for multiple addresses and address types, as specified in RFC 4091.

Requires user role: ADMIN

Value space: <Off/On>
  Off: Disable ANAT.
  On: Enable ANAT.

Example: SIP ANAT: Off

SIP AuthenticateTransferError
Not applicable in this version.

SIP ListenPort
Turn on or off the listening for incoming connections on the SIP TCP/UDP ports. If turned off, the endpoint will only be reachable through the SIP registrar (CUCM or VCS). It is recommended to leave this setting at its default value.

Requires user role: ADMIN

Value space: <Off/On>
  Off: Listening for incoming connections on the SIP TCP/UDP ports is turned off.
  On: Listening for incoming connections on the SIP TCP/UDP ports is turned on.

Example: SIP ListenPort: On

SIP PreferredIPMedia
Define the preferred IP version for sending and receiving media (audio, video, data). Only applicable when both Network IPStack and Conference CallProtocolIPStack are set to Dual, and the network does not have a mechanism for choosing the preferred IP version.

Requires user role: ADMIN

Value space: <IPv4/IPv6>
  IPv4: The preferred IP version for media is IPv4.
  IPv6: The preferred IP version for media is IPv6.

Example: SIP PreferredIPMedia: IPv4

SIP PreferredIPSignaling
Define the preferred IP version for signaling (audio, video, data). Only applicable when both Network IPStack and Conference CallProtocolIPStack are set to Dual, and the network does not have a mechanism for choosing the preferred IP version. It also determines the priority of the A/AAAA lookups in DNS, so that the preferred IP version is used for registration.

Requires user role: ADMIN

Value space: <IPv4/IPv6>
  IPv4: The preferred IP version for signaling is IPv4.

Example: SIP PreferredIPSignaling: IPv4

SIP OCSP Mode
Not applicable in this version.

SIP OCSP DefaultResponder
Not applicable in this version.
SIP Profile [1..1] Ice Mode
ICE (Interactive Connectivity Establishment, RFC 5245) is a NAT traversal solution that the endpoints can use to discover the optimized media path. Thus the shortest route for audio and video is always secured between the endpoints. NOTE: ICE is not supported when registered to CUCM (Cisco Unified Communication Manager).

Requires user role: ADMIN
Value space: <Auto/Off/On>
- Auto: When set to Auto, ICE will be enabled if a turn server is provided, otherwise ICE will be disabled.
- Off: Set to Off to disable ICE.
- On: Set to On to enable ICE.

Example: SIP Profile 1 Ice Mode: Auto

SIP Profile [1..1] Ice DefaultCandidate
This is the default IP address that the endpoint will receive media on until ICE has reached a conclusion about which media route to use (up to the first 5 seconds of a call).

Requires user role: ADMIN
Value space: <Host/Rflx/Relay>
- Host: The endpoint will receive media on its own IP address.
- Rflx: The endpoint will receive media on its public IP address as seen by the TURN server.
- Relay: The endpoint will receive media on the IP address and port allocated on the TURN server, and is used as a fallback until ICE has concluded.

Example: SIP Profile 1 Ice DefaultCandidate: Host

SIP Profile [1..1] Turn DiscoverMode
Set the discover mode to enable/disable the application to search for available Turn servers in DNS. Before making calls, the system will test if port allocation is possible.

Requires user role: ADMIN
Value space: <Off/On>
- Off: Set to Off to disable discovery mode.
- On: When set to On, the system will search for available Turn servers in DNS, and before making calls the system will test if port allocation is possible.

Example: SIP Profile Turn DiscoverMode: On

SIP Profile [1..1] Turn BandwidthProbe
Not applicable in this version.

SIP Profile [1..1] Turn DropRflx
DropRflx will make the endpoint force media through the Turn relay, unless the remote endpoint is on the same network.

Requires user role: ADMIN
Value space: <Off/On>
- Off: Disable DropRflx.
- On: The system will force media through the Turn relay when the remote endpoint is on another network.

Example: SIP Profile Turn DropRflx: Off

SIP Profile [1..1] Turn Server
This is the address of the TURN (Traversal Using Relay NAT) server that the endpoints will use. It is used as a media relay fallback and it is also used to discover the endpoint's own public IP address.

Requires user role: ADMIN
Value space: <S: 0, 255>
Format: The preferred format is DNS SRV record (e.g. _turn._udp.<domain>), or it can be a valid IPv4 or IPv6 address.

Example: SIP Profile 1 Turn Server: "_turn._udp.example.com"

SIP Profile [1..1] Turn UserName
The user name needed for accessing the TURN server.

Requires user role: ADMIN
Value space: <S: 0, 128>
Format: String with a maximum of 128 characters.

Example: SIP Profile 1 Turn UserName: ""
SIP Profile [1..1] Turn Password
The password needed for accessing the TURN server.
Requires user role: ADMIN
Value space: <S: 0, 128>
Format: String with a maximum of 128 characters.
Example: SIP Profile 1 Turn Password: ""

SIP Profile [1..1] URI
The SIP URI (Uniform Resource Identifier) is the address that is used to identify the video system. The URI is registered and used by the SIP services to route inbound calls to the system. The SIP URI syntax is defined in RFC 3261.
Requires user role: ADMIN
Value space: <S: 0, 255>
Format: String with maximum 255 characters and compliant with the SIP URI syntax.
Example: SIP Profile 1 URI: "sip:firstname.lastname@company.com"

SIP Profile [1..1] DisplayName
When configured the incoming call will report the DisplayName instead of the SIP URI.
Requires user role: ADMIN
Value space: <S: 0, 255>
Format: String with a maximum of 255 characters.
Example: SIP Profile 1 DisplayName: ""

SIP Profile [1..1] Authentication [1..1] LoginName
This is the user name part of the credentials used to authenticate towards the SIP proxy.
Requires user role: ADMIN
Value space: <S: 0, 128>
Format: String with a maximum of 128 characters.
Example: SIP Profile 1 Authentication 1 LoginName: ""

SIP Profile [1..1] Authentication [1..1] Password
This is the password part of the credentials used to authenticate towards the SIP proxy.
Requires user role: ADMIN
Value space: <S: 0, 128>
Format: String with a maximum of 128 characters.
Example: SIP Profile 1 Authentication 1 Password: ""

SIP Profile [1..1] DefaultTransport
Select the transport protocol to be used over the LAN.
Requires user role: ADMIN
Value space: <TCP/UDP/Tls/Auto>
TCP: The system will always use TCP as the default transport method.
UDP: The system will always use UDP as the default transport method.
Tls: The system will always use TLS as the default transport method. For TLS connections a SIP CA-list can be uploaded to the video system. If no such CA-list is available on the system then anonymous Diffie Hellman will be used.
Auto: The system will try to connect using transport protocols in the following order: TLS, TCP, UDP.
Example: SIP Profile 1 DefaultTransport: Auto

SIP Profile [1..1] TlsVerify
For TLS connections a SIP CA-list can be uploaded to the video system. This can be done from the web interface.
Requires user role: ADMIN
Value space: <Off/On>
Off: Set to Off to allow TLS connections without verifying them. The TLS connections are allowed to be set up without verifying the x.509 certificate received from the server against the local CA-list. This should typically be selected if no SIP CA-list has been uploaded.
On: Set to On to verify TLS connections. Only TLS connections to servers, whose x.509 certificate is validated against the CA-list, will be allowed.
Example: SIP Profile 1 TlsVerify: Off
SIP Profile [1..1] Outbound
Turn on or off the client initiated connections mechanism for firewall traversal, connection reuse and redundancy. The current version supports RFC 5626.
Requires user role: ADMIN
Value space: <Off/On>
Off: Connect to the single proxy configured first in Proxy Address list.
On: Set up multiple outbound connections to servers in the Proxy Address list. A random proxy is selected from the list for each SIP outbound request.
Example: SIP Profile 1 Outbound: Off

SIP Profile [1..1] Proxy [1..4] Address
The Proxy Address is the manually configured address for the outbound proxy. The default port is 5060 for TCP and UDP but another one can be provided.
If SIP Profile Outbound is enabled, multiple proxies can be addressed.
Requires user role: ADMIN
Value space: <S: 0, 255>
Format: If SIP Profile Outbound is enabled, use a fully qualified domain name. If SIP Profile Outbound is disabled, you can also use a valid IPv4 address or IPv6 address.
Example: SIP Profile 1 Proxy 1 Address: 

SIP Profile [1..1] Proxy [1..4] Discovery
Select if the SIP Proxy address is to be obtained manually or by using Dynamic Host Configuration Protocol (DHCP).
Requires user role: ADMIN
Value space: <Auto/Manual>
Auto: When Auto is selected, the SIP Proxy address is obtained using Dynamic Host Configuration Protocol (DHCP).
Manual: When Manual is selected, the manually configured SIP Proxy address will be used.
Example: SIP Profile 1 Proxy 1 Discovery: Manual

SIP Profile [1..1] Type
Enables SIP extensions and special behavior for a vendor or provider.
NOTE: The SIP types Alcatel, Avaya, Microsoft, and Nortel are no longer supported from software version TC6.3.
Requires user role: ADMIN
Value space: <Standard/Cisco>
Standard: Use this when registering to standard SIP Proxy (tested with Cisco TelePresence VCS and Broadsoft)
Cisco: Use this when registering to Cisco Unified Communication Manager.
Example: SIP Profile 1 Type: Standard

SIP Profile [1..1] Mailbox
When registered to a Cisco Unified Communications Manager (CUCM) you may be offered the option of having a private voice mailbox. Enter the number (address) of the mailbox in this setting, or leave the string empty if you do not have a voice mailbox.
Requires user role: ADMIN
Value space: <S: 0, 255>
Format: String with a maximum of 255 characters.
Example: SIP Profile 1 Mailbox: "12345678"

SIP Profile [1..1] Line
When registered to a Cisco Unified Communications Manager (CUCM) the endpoint may be part of a shared line. This means that several devices share the same directory number. The different devices sharing the same number receive status from the other appearances on the line as defined in RFC 4235.
Note that shared lines are set up by CUCM, not by the endpoint. Therefore do not change this setting manually; CUCM pushes this information to the endpoint when required.
Requires user role: ADMIN
Value space: <Private/Shared>
Shared: The system is part of a shared line and is therefore sharing its directory number with other devices.
Private: This system is not part of a shared line (default).
Example: SIP Profile 1 Line: Private
Standby settings

Standby Control
Determine whether the system should go into standby mode or not.

Requires user role: ADMIN

Value space: <Off/On>

Off: The system will not enter standby mode.
On: Enter standby mode when the Standby Delay has timed out. Requires the Standby Delay to be set to an appropriate value.

Example: Standby Control: On

Standby Delay
Define how long (in minutes) the system shall be in idle mode before it goes into standby mode. Requires the Standby Control to be enabled.

Requires user role: ADMIN

Value space: <1..480>

Range: Select a value between 1 and 480 minutes.

Example: Standby Delay: 10

Standby BootAction
Define the camera position after a restart of the codec.

Requires user role: ADMIN

Value space: <None/Preset1/Preset2/Preset3/Preset4/Preset5/Preset6/Preset7/Preset8/Preset9/Preset10/Preset11/Preset12/Preset13/Preset14/Preset15/RestoreCameraPosition/DefaultCameraPosition>

None: No action.
Preset1 to Preset15: When leaving standby the camera position will be set to the position defined by the selected preset.
RestoreCameraPosition: When leaving standby the camera position will be set to the position it had before entering standby.
DefaultCameraPosition: When leaving standby the camera position will be set to the factory default position.

Example: Standby BootAction: DefaultCameraPosition

Standby StandbyAction
Define the camera position when going into standby mode.

Requires user role: ADMIN

Value space: <None/PrivacyPosition>

None: No action.
PrivacyPosition: Turns the camera to a sideways position for privacy.

Example: Standby StandbyAction: PrivacyPosition

Standby WakeupAction
Define the camera position when leaving standby mode.

Requires user role: ADMIN

Value space: <None/Preset1/Preset2/Preset3/Preset4/Preset5/Preset6/Preset7/Preset8/Preset9/Preset10/Preset11/Preset12/Preset13/Preset14/Preset15/RestoreCameraPosition/DefaultCameraPosition>

None: No action.
Preset1 to Preset15: When leaving standby the camera position will be set to the position defined by the selected preset.
RestoreCameraPosition: When leaving standby the camera position will be set to the position it had before entering standby.
DefaultCameraPosition: When leaving standby the camera position will be set to the factory default position.

Example: Standby WakeupAction: RestoreCameraPosition
SystemUnit settings

**SystemUnit Name**
Define the system name. The system name will be sent as the hostname in a DHCP request and when the codec is acting as an SNMP Agent.

**Requires user role:** ADMIN

**Value space:** <S: 0, 50>

**Format:** String with a maximum of 50 characters.

**Example:** SystemUnit Name: "Meeting Room"

**SystemUnit MenuLanguage**
Select the language to be used in the menus on screen, or on the Touch controller. All languages are not supported on both user interfaces. The default language is English.

**Requires user role:** USER

**Value space:** <English/ChineseSimplified/ChineseTraditional/Catalan/Czech/Danish/Dutch/Finnish/French/German/Hungarian/Italian/Japanese/Korean/Norwegian/Polish/Portuguese/Brazilian/Russian/Spanish/Swedish/Turkish/Arabic/Hebrew>

**Example:** SystemUnit MenuLanguage: English

**SystemUnit CallLogging Mode**
Set the call logging mode for calls that are received or placed by the system. The call logs may then be viewed via the web interface or using the xCommand CallHistory Get command.

**Requires user role:** ADMIN

**Value space:** <Off/On>

**Off:** Disable logging.

**On:** Enable logging.

**Example:** SystemUnit CallLogging Mode: On

**SystemUnit ContactInfo Type**
Choose which type of contact information to show in the status field in the upper left corner of the main display and Touch controller. The information can also be read with the command xStatus SystemUnit ContactInfo.

**Requires user role:** ADMIN

**Value space:** <Auto/None/IPv4/IPv6/H323Id/E164Alias/H320Number/SipUri/SystemName/DisplayName>

**Auto:** Show the address which another system can dial to reach this system. The address depends on the default call protocol and system registration.

**None:** Do not show any contact information in the status field.

**IPv4:** Show the IPv4 address as contact information.

**IPv6:** Show the IPv6 address as contact information.

**H323Id:** Show the H.323 ID as contact information (see the H323 Profile [1..1] H323Alias ID setting).

**E164Alias:** Show the H.323 E164 Alias as contact information (see the H323 Profile [1..1] H323Alias E164 setting).

**H320Number:** Show the H.320 number as contact information (only applicable if connected to a Cisco TelePresence ISDN Link gateway).

**SipUri:** Show the SIP URI as contact information (see the SIP Profile [1..1] URI setting).

**SystemName:** Show the system name as contact information (see the SystemUnit Name setting).

**DisplayName:** Show the display name as contact information (see the SIP Profile [1..1] DisplayName setting).

**Example:** SystemUnit ContactInfo Type: Auto
SystemUnit IrSensor

Both the code and a Precision camera have an IR sensor, and only one of them needs to be enabled at the time. The IR sensor LED is located on the front of the codec and the camera and flickers when an IR signal is received from the remote control.

Requires user role: ADMIN

Value space: <Auto/Off/On>

- **Auto**: The IR sensor of the codec is disabled whenever the IR sensor of the camera is enabled. The IR sensor of the codec is enabled only if the IR sensor of the camera is disabled.
- **Off**: Disable the IR sensor of the codec.
- **On**: Enable the IR sensor of the codec.

**Example**: SystemUnit IrSensor: Auto
Time settings

**Time TimeFormat**

Set the time format.

**Requires user role:** USER

**Value space:** <24H/12H>

- **24H:** Set the time format to 24 hours.
- **12H:** Set the time format to 12 hours (AM/PM).

**Example:** Time TimeFormat: 24H

**Time DateFormat**

Set the date format.

**Requires user role:** USER

**Value space:** <DD_MM_YY/MM_DD_YY/YY_MM_DD>

- **DD_MM_YY:** The date January 30th 2010 will be displayed: 30.01.10
- **MM_DD_YY:** The date January 30th 2010 will be displayed: 01.30.10
- **YY_MM_DD:** The date January 30th 2010 will be displayed: 10.01.30

**Example:** Time DateFormat: DD_MM_YY

**Time Zone**

This has been replaced with the Time OlsonZone setting as of software version TC7.2.
Time OlsonZone

Set the time zone for the geographical location of the video system. The information in the value space is from the tz database, also called the IANA Time Zone Database.

Requires user role: USER

Value space: <Africa/Abidjan, Africa/Accra, Africa/Addis_Ababa, Africa/Algiers, Africa/Asmara, Africa/Asmera, Africa/Bamako, Africa/Bangui, Africa/Banjul, Africa/Bissau, Africa/Blantyre, Range: Select a time zone from the list.

Example: Time OlsonZone: Etc/UTC
UserInterface settings

UserInterface TouchPanel DefaultPanel

Define what (contact list, meeting list, or dial pad) the Touch controller will display on wake up.

Requires user role: USER

Value space: <None/LastUsed/ContactList/MeetingList/Dialpad>

None: None of the below options will appear as default on the Touch controller.

LastUsed: The last used (contact list, meeting list, or dial pad) will appear as default on the Touch controller.

ContactList: The contact list (favorites, directory and history) will appear as default on the Touch controller.

MeetingList: The list of scheduled meetings will appear as default on the Touch controller.

DialPad: The dial pad will appear as default on the Touch controller.

Example: UserInterface TouchPanel DefaultPanel: None

UserInterface UserPreferences

Some user preferences (ringtone, volume, language, date and time, etc) can be made available from the Settings menu, or from the Settings > Administrator menu on the Touch controller. Accessing the Administrator menus requires that the user has admin privileges.

Requires user role: ADMIN

Value space: <Off/On>

Off: The user preferences are available from the Settings > Administrator menu on the Touch controller, for users with admin privileges.

On: The user preferences are available from the Settings menu on the Touch controller.

Example: UserInterface UserPreferences: On
## Video settings

### Video AllowWebSnapshots

Note: This setting is only available in TC7.3.0 to TC7.3.2.
Allow or disallow snapshots being taken of the local input sources, remote sites and presentation channel. If snapshots are allowed, the snapshots may be captured both when idle and in a call.

When snapshots are taken from a remote device, e.g. the web interface, a notification appears on the video system's screens to alert the users that remote monitoring is in operation.

**Requires user role:** ADMIN

**Value space:** <Off/On/LocalDeviceOnly>
- **Off:** It is not possible to capture snapshots.
- **On:** Snapshots can be captured and displayed anywhere, e.g. on the web interface.
- **LocalDeviceOnly:** Snapshots can only be captured and displayed on devices running the experimental Cisco Proximity feature. The devices must be in the same room as the video system. It will not be possible to take and see snapshots on the web interface or by using 3rd party integrations.

**Example:** Video AllowWebSnapshots: LocalDeviceOnly

### Video CamCtrlPip CallSetup Mode

This setting is used to switch on self-view for a short while when setting up a call. The Video CamCtrlPip CallSetup Duration setting determines for how long it remains on. This applies when self-view in general is switched off.

**Requires user role:** ADMIN

**Value space:** <Off/On>
- **Off:** self-view is not shown automatically during call setup.
- **On:** self-view is shown automatically during call setup.

**Example:** Video CamCtrlPip CallSetup Mode: On

### Video CamCtrlPip CallSetup Duration

This setting only has an effect when the Video CamCtrlPip CallSetup Mode setting is switched On. In this case, the number of seconds set here determines for how long self-view is shown before it is automatically switched off.

**Requires user role:** ADMIN

**Value space:** <1..60>

**Range:** Choose for how long self-view remains on. The valid range is between 1 and 60 seconds.

**Example:** Video CamCtrlPip CallSetup Duration: 10

### Video DefaultPresentationSource

Define which video input source shall be used as the default presentation source when you press the Presentation key on the remote control. If using the Touch controller this setting has no effect. The Video Input Source n Connector setting defines which input connector to use for input source n, also see the Video Input Matrix table at the back of the codec and the description of the Video Input Matrix in the Codec C90 Physical Interface guide.

**Requires user role:** USER

**Value space:** <1/2/3/4/5>

**Range:** Select the video source to be used as the presentation source.

**Example:** Video DefaultPresentationSource: 3
Video Input DVI [3,5] RGBQuantizationRange

All devices with DVI inputs should follow the rules for RGB video quantization range defined in CEA-861. Unfortunately some devices do not follow the standard and this configuration may be used to override the settings to get a perfect image with any source. The default value is set to Full because most DVI sources expects full quantization range.

**Requires user role:** ADMIN

**Value space:** <Auto/Full/Limited>

- **Auto:** RGB quantization range is automatically selected based on video format according to CEA-861-E. CE video formats will use limited quantization range levels. IT video formats will use full quantization range levels.
- **Full:** Full quantization range. The R, G, B quantization range includes all code values (0 - 255). This is defined in CEA-861-E.
- **Limited:** Limited Quantization Range. R, G, B quantization range that excludes some code values at the extremes (16 - 235). This is defined in CEA-861-E.

**Example:** Video Input 1 DVI 3 RGBQuantizationRange: Full

Video Input DVI [3,5] Type

The official DVI standard supports both digital and analog signals. In most cases the default AutoDetect setting can detect whether the signal is analog RGB or digital. However, in some rare cases when DVI-I cables are used (these cables can carry both the analog and digital signals) the auto detection fails. This setting makes it possible to override the AutoDetect and select the correct DVI video input. This setting should also be used if the video input is an analog component (YPbPr) type signal. This is used by some cameras (Sony EVI-HD1) and DVD/Blu-ray players. Since it is not possible to auto detect the difference between AnalogRGB and AnalogYPbPr, the AnalogYPbPr setting must be selected.

**Requires user role:** ADMIN

**Value space:** <AutoDetect/Digital/AnalogRGB/AnalogYPbPr>

- **AutoDetect:** Set to AutoDetect to automatically detect if the signal is analog RGB or digital.
- **Digital:** Set to Digital to force the DVI video input to Digital when using DVI-I cables with both analog and digital pins and AutoDetect fails.
- **AnalogRGB:** Set to AnalogRGB to force the DVI video input to AnalogRGB when using DVI-I cables with both analog and digital pins and AutoDetect fails.
- **AnalogYPbPr:** Set to AnalogYPbPr to force the DVI video input to AnalogYPbPr, as the component (YPbPr) signal cannot be auto detected.

**Example:** Video Input DVI 3 Type: AutoDetect

Video Input HDMI [1..4] RGBQuantizationRange

All devices with HDMI inputs should follow the rules for RGB video quantization range defined in CEA-861. Unfortunately some devices do not follow the standard and this configuration may be used to override the settings to get a perfect image with any source.

**Requires user role:** ADMIN

**Value space:**<Auto/Full/Limited>

- **Auto:** RGB quantization range is automatically selected based on the RGB Quantization Range bits (Q0, Q1) in the AVI infoframe. If no AVI infoframe is available, RGB quantization range is selected based on video format according to CEA-861-E.
- **Full:** Full quantization range. The R, G, B quantization range includes all code values (0 - 255). This is defined in CEA-861-E.
- **Limited:** Limited Quantization Range. R, G, B quantization range that excludes some code values at the extremes (16 - 235). This is defined in CEA-861-E.

**Example:** Video Input 1 HDMI 1 RGBQuantizationRange: Auto

Video Input Source [1..5] Name

Enter a name for the video input source.

**Requires user role:** ADMIN

**Value space:** <S: 0, 50>

**Format:** String with a maximum of 50 characters.

**Example:** Video Input Source 1 Name: ""

Video Input Source [1] Connector

Select which video input connector to be active on video input source 1.

**Requires user role:** ADMIN

**Value space:** <HDMI/HDSDI/YPbPr>

- **HDMI:** Select HDMI when you want to use the HDMI 1 as input source 1.
- **HDSDI:** Select HD-SDI when you want to use the HD-SDI 1 as input source 1.
- **YPbPr:** Select YPbPr when you want to use the YPbPr 1 (Component) as input source 1. Connect to the first row of Y, Pb and Pr connectors.

**Example:** Video Input Source 1 Connector: HDMI
Video Input Source [2] Connector

Select which video input connector to be active on video input source 2.

Requires user role: ADMIN

Value space: <HDMI/HDSDI/YPbPr>
- HDMI: Select HDMI when you want to use the HDMI 2 as input source 2.
- HDSDI: Select HD-SDI when you want to use the HD-SDI 2 as input source 2.
- YPbPr: Select YPbPr when you want to use the YPbPr 2 (Component) as input source 2. Connect to the second row of Y, Pb and Pr connectors.

Example: Video Input Source 2 Connector: HDMI

Video Input Source [3] Connector

Select which video input connector to be active on video input source 3.

Requires user role: ADMIN

Value space: <HDMI/HDSDI/DVI>
- DVI: Select DVI when you want to use the DVI-I 3 as input source 3.
- HDMI: Select HDMI when you want to use the HDMI 3 as input source 3.
- HDSDI: Select HDSDI when you want to use the HD-SDI 3 as input source 3.

Example: Video Input Source 3 Connector: DVI

Select which video input connector to be active on video input source 4.

Requires user role: ADMIN

Value space: <HDMI/HDSDI>
- HDMI: Select HDMI when you want to use the HDMI 4 as input source 4.
- HDSDI: Select HD-SDI when you want to use the HD-SDI 4 as input source 4.

Example: Video Input Source 4 Connector: HDMI

Video Input Source [5] Connector

Select which video input connector to be active on video input source 5.

Requires user role: ADMIN

Value space: <DVI/Composite/YC>
- DVI: Select DVI-I when you want to use the DVI-I 5 as input source 5.
- Composite: Select Composite when you want to use Composite as input source 5.
- YC: Select YC when you want to use the S-Video (YC) as input source 5. Connect to the two connectors marked Y/Comp and C.

Example: Video Input Source 5 Connector: DVI

Video Input Source [1..5] Type

Set which type of input source is connected to the video input.

Requires user role: ADMIN

Value space: <other/camera/PC/DVD/document_camera/whiteboard>
- other: Use this when none of the below options match.
- camera: Use this when a camera is connected to the video input.
- PC: Use this when a computer is connected to the video input.
- DVD: Use this when a DVD player is connected to the video input.
- document_camera: Use this when a document camera is connected to the video input.
- whiteboard: Use this when a whiteboard camera is connected to the video input.

Example: Video Input Source 1 Type: camera
Video Input Source [1..5] PresentationSelection

Define how the video system will behave when a presentation source is connected to the video input. In general, any input source can be used as a presentation source; normally, the main camera (self-view) will not be used as a presentation source.

If the video system is in standby mode, it will wake up when you connect a presentation source. Note that sharing the presentation with the far end always requires additional action (tap Start Presenting on the Touch controller, or press the Presentation key on the remote control).

Requires user role: ADMIN

Value space: <Manual/Automatic/OnConnect/Hidden>

Manual: In manual mode (default value), the contents of the input source will not be presented on the screen until you select it. Use either the remote control or the Touch controller to choose which input source to present.

Automatic: In automatic mode, the content on the input source will be presented on screen automatically. If more than one source is set to Automatic, the last connected source will be used. If any content was active (presented) when the call was disconnected, the content will still be displayed locally.

OnConnect: When in on-connect mode, the content on the input source will be presented on screen when a cable is connected. Otherwise, the behavior is like when in manual mode.

Hidden: In hidden mode, the contents of the input source do not appear in the graphical user interface.

Example: Video Input Source 1 PresentationSelection: Manual

Video Input Source [1..5] Visibility

Define the visibility of the video input source in the menus on the user interface.

Requires user role: ADMIN

Value space: <Never/Always/IfSignal>

Never: Set to Never when the input source is not expected to be used as a presentation source.

Always: When set to Always, the menu selection for the video input source will always be visible on the graphical user interface.

IfSignal: When set to IfSignal, the menu selection for the video input source will only be visible when a presentation source is connected to the video input.

Example: Video Input Source 1 Visibility: IfSignal

Video Input Source [1..5] CameraControl Mode

Select whether or not to enable camera control for the selected video input source when the video input is active.

Requires user role: ADMIN

Value space: <Off/On>

Off: Disable camera control.

On: Enable camera control.

Example: Video Input Source 1 CameraControl Mode: On

Video Input Source [1..5] CameraControl CameraId

Select the ID of the camera in the Visca chain that is connected to this camera source. The CameraId setting represents the camera's position in the Visca chain.

Requires user role: ADMIN

Value space: <1/2/3/4/5/6/7>

Range: Select the ID of the camera in the Visca chain.

Example: Video Input Source 1 CameraControl CameraId: 1
Video Input Source [1..5] OptimalDefinition Profile

The Video Input Source Quality setting must be set to Motion for the optimal definition settings to take any effect.

The optimal definition profile should reflect the lighting conditions in your room and the quality of the video input (camera); the better the lighting conditions and video input, the higher the profile. Then, in good lighting conditions, the video encoder will provide better quality (higher resolution or frame rate) for a given call rate.

Generally, we recommend using the Normal or Medium profiles. However, when the lighting conditions are good, the High profile can be set in order to increase the resolution for a given call rate.

Some typical resolutions used for different optimal definition profiles, call rates and transmit frame rates are shown in the table below. It is assumed that dual video is not used. The resolution must be supported by both the calling and called systems.

Use the Video Input Source OptimalDefinition Threshold60fps setting to decide when to use the 60 fps frame rate.

<table>
<thead>
<tr>
<th>Frame rate</th>
<th>Optimal Definition Profile</th>
<th>Call rate</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
<td>256 kbps</td>
</tr>
<tr>
<td>30 fps</td>
<td>Normal</td>
<td>512 * 288</td>
</tr>
<tr>
<td></td>
<td>Medium</td>
<td>640 * 360</td>
</tr>
<tr>
<td></td>
<td>High</td>
<td>768 * 448</td>
</tr>
<tr>
<td>60 fps</td>
<td>Normal</td>
<td>512 * 288</td>
</tr>
<tr>
<td></td>
<td>Medium</td>
<td>512 * 288</td>
</tr>
<tr>
<td></td>
<td>High</td>
<td>512 * 288</td>
</tr>
</tbody>
</table>

* The resolution will be 1280 x 720 for older codecs without 1080p60 support.

Value space: <Normal/Medium/High>

Requires user role: ADMIN

Example: Video Input Source 1 OptimalDefinition Profile: Normal

Video Input Source [1..5] OptimalDefinition Threshold60fps

For each video input, this setting tells the system the lowest resolution where it should transmit 60fps. So for all resolutions lower than this, the maximum transmitted frame rate would be 30fps, while above this resolution 60fps would also be possible, if the available bandwidth is adequate.

Requires user role: ADMIN

Value space: <512_288/768_448/1024_576/1280_720/1920_1080/never>

Example: Video Input Source 1 OptimalDefinition Threshold60fps: 1280_720

Video Input Source [1..5] Quality

When encoding and transmitting video there will be a trade-off between high resolution and high frame rate. For some video sources it is more important to transmit high frame rate than high resolution and vice versa. The Quality setting specifies whether to give priority to high frame rate or to high resolution for a given source.

Requires user role: ADMIN

Value space: <Motion/Sharpness>

Motion: Gives the highest possible frame rate. Used when there is a need for higher frame rates, typically when a large number of participants are present or when there is a lot of motion in the picture.

Sharpness: Gives the highest possible resolution. Used when you want the highest quality of detailed images and graphics.

Example: Video Input Source 1 Quality: Motion
Video MainVideoSource

Define which video input source shall be used as the main video source.

Requires user role: USER

Value space: <1/2/3/4/5>

Range: Select the source to be used as the main video source.

Example: Video MainVideoSource: 1

Video Layout DisableDisconnectedLocalOutputs

Determine whether or not the built-in layout engine shall set layouts on local outputs that have no monitor connected.

Requires user role: ADMIN

Value space: <Off/On>

Off: The built-in layout engine sets layout on all local outputs, also the ones not having any monitor connected.

On: The built-in layout engine does only set layout on local outputs having a monitor connected.

Example: Video Layout DisableDisconnectedLocalOutputs: Off

Video Layout LocalLayoutFamily

Select which video layout family to use locally.

Requires user role: ADMIN

Value space: <Auto/FullScreen/Equal/PresentationSmallSpeaker/PresentationLargeSpeaker/Prominent/Overlay/Single>

Auto: The default layout family, as given by the layout database, will be used as the local layout. For more information about the layout database, see the xCommand Video Layout LoadDb command.

FullScreen: The FullScreen layout family will be used as the local layout. It means that the active speaker or presentation will be shown in full screen. Using this value is not recommended as from TC6.0.

Equal: The Equal layout family will be used as the local layout. All videos have equal size, as long as there is space enough on the screen(s).

PresentationSmallSpeaker: The PresentationSmallSpeaker layout family will be used as the local layout. Using this value is not recommended as from TC6.0.

PresentationLargeSpeaker: The PresentationLargeSpeaker layout family will be used as the local layout. Using this value is not recommended as from TC6.0.

Prominent: The Prominent layout family will be used as the local layout. The active speaker, or the presentation if present, will be a large picture, while the other participants will be small pictures. Transitions between active speakers are voice switched.

Overlay: The Overlay layout family will be used as the local layout. The active speaker, or the presentation if present, will be shown in full screen, while the other participants will be small pictures-in-picture (PiP). Transitions between active speakers are voice switched.

Single: The active speaker, or the presentation if present, will be shown in full screen. The other participants are not shown. Transitions between active speakers are voice switched.

Example: Video Layout LocalLayoutFamily: Auto

Video Layout PresentationDefault View

Determine how the presentation will show on screen when you start sharing a presentation.

Requires user role: ADMIN

Value space: <Default/Minimized/Maximized>

Default: The presentation is a part of the layout.

Minimized: The presentation starts up in PIP mode.

Maximized: The presentation starts up in full screen mode.

Example: Video Layout PresentationDefault View: Default
Video Layout RemoteLayoutFamily

Select which video layout family to be used for the remote participants.

Requires user role: ADMIN

Value space: <Auto/FullScreen/Equal/PresentationSmallSpeaker/PresentationLargeSpeaker/Prominent/Overlay/Single>

- Auto: The default layout family, as given by the local layout database, will be used as the remote layout. For more information about the layout database, see the command: xCommand Video Layout LoadDb.
- FullScreen: The FullScreen layout family will be used as the remote layout. It means that the active speaker or presentation will be shown in full screen. Using this value is not recommended as from TC6.0.
- Equal: The Equal layout family will be used as the remote layout. All videos have equal size, as long as there is space enough on the screen.
- PresentationSmallSpeaker: The PresentationSmallSpeaker layout family will be used as the remote layout. Using this value is not recommended as from TC6.0.
- PresentationLargeSpeaker: The PresentationLargeSpeaker layout family will be used as the remote layout. Using this value is not recommended as from TC6.0.
- Prominent: The Prominent layout family will be used as the remote layout. The active speaker, or the presentation if present, will be a large picture, while the other participants will be small pictures. Transitions between active speakers are voice switched.
- Overlay: The Overlay layout family will be used as the remote layout. The active speaker, or the presentation if present, will be shown in full screen, while the other participants will be small pictures-in-picture (PiP). Transitions between active speakers are voice switched.
- Single: The active speaker, or the presentation if present, will be shown in full screen. The other participants are not shown. Transitions between active speakers are voice switched.

Example: Video Layout RemoteLayoutFamily: Auto

Video Layout ScaleToFrame

Define what to do if the aspect ratio of a video input source doesn’t match the aspect ratio of the corresponding image frame in a composition. For example if you have a 4:3 input source (like XGA) to be displayed on a 16:9 output (like HD720).

Requires user role: ADMIN

Value space: <Manual/MaintainAspectRatio/StretchToFit>

- Manual: If the difference in aspect ratio between the video input source and the target image frame is less than the Video Layout ScaleToFrameThreshold setting (in percent), the image is stretched to fit. If not, the system will maintain the original aspect ratio.
- MaintainAspectRatio: Maintain the aspect ratio of the input source, and fill in black in the rest of the frame (letter boxing or pillar boxing).
- StretchToFit: Stretch (horizontally or vertically) the input source to fit into the image frame.

NOTE: The general limitation is that you cannot upscale in one direction and at the same time downscale in the other direction. In such situations the codec will apply letterboxing.

Example: Video Layout ScaleToFrame: MaintainAspectRatio

Video Layout ScaleToFrameThreshold

Only applicable if the Video Layout ScaleToFrame setting is set to manual. If the difference in aspect ratio between the video input source and the target image frame is less than the ScaleToFrameThreshold setting (in percent), the image is stretched to fit. If not, the system will maintain the original aspect ratio.

Requires user role: ADMIN

Value space: <0..100>

Range: Select a value between 0 and 100 percent.

Example: Video Layout ScaleToFrameThreshold: 5

Video Layout Scaling

Define how the system shall adjust the aspect ratio for images or frames when there is a difference between the image and the frame it is to be placed in.

Requires user role: ADMIN

Value space: <Off/On>

- Off: No adjustment of the aspect ratio.
- On: Let the system automatically adjust aspect ratio.

Example: Video Layout Scaling: On
Video PIP ActiveSpeaker DefaultValue Position

Determine the position on screen of the active speaker picture-in-picture (PiP). The setting only takes effect when using a video layout where the active speaker is a PiP, i.e. the Overlay layout, or possibly a Custom layout (see the Video Layout LocalLayoutFamily setting). The setting takes effect from the next call onwards; if changed during a call, it will have no effect on the current call.

Requires user role: ADMIN

Value space: <Current/UpperLeft/UpperCenter/UpperRight/CenterLeft/CenterRight/LowerLeft/LowerRight>

- **Current**: The position of the active speaker PiP will be kept unchanged when leaving a call.
- **UpperLeft**: The active speaker PiP will appear in the upper left corner of the screen.
- **UpperCenter**: The active speaker PiP will appear in the upper center position.
- **UpperRight**: The active speaker PiP will appear in the upper right corner of the screen.
- **CenterLeft**: The active speaker PiP will appear in the center left position.
- **CentreRight**: The active speaker PiP will appear in the center right position.
- **LowerLeft**: The active speaker PiP will appear in the lower left corner of the screen.
- **LowerRight**: The active speaker PiP will appear in the lower right corner of the screen.

Example: Video PIP ActiveSpeaker DefaultValue Position: Current

Video PIP Presentation DefaultValue Position

Determine the position on screen of the presentation picture-in-picture (PiP). The setting only takes effect when the presentation is explicitly minimized to a PiP, for example using the remote control or the Touch controller. The setting takes effect from the next call onwards; if changed during a call, it will have no effect on the current call.

Requires user role: ADMIN

Value space: <Current/UpperLeft/UpperCenter/UpperRight/CenterLeft/CenterRight/LowerLeft/LowerRight>

- **Current**: The position of the presentation PiP will be kept unchanged when leaving a call.
- **UpperLeft**: The presentation PiP will appear in the upper left corner of the screen.
- **UpperCenter**: The presentation PiP will appear in the upper center position.
- **UpperRight**: The presentation PiP will appear in the upper right corner of the screen.
- **CenterLeft**: The presentation PiP will appear in the center left position.
- **CentreRight**: The presentation PiP will appear in the center right position.
- **LowerLeft**: The presentation PiP will appear in the lower left corner of the screen.
- **LowerRight**: The presentation PiP will appear in the lower right corner of the screen.

Example: Video PIP Presentation DefaultValue Position: Current

Video Selfview

Determine if the main video source (self-view) shall be displayed on screen. This setting is obsoleted by the Video SelfviewDefault Mode setting.

Requires user role: USER

Value space: <Off/On>

- **Off**: Do not display self-view on screen.
- **On**: Display self-view on screen.

Example: Video Selfview: On

Video SelfviewPosition

Select where the small self-view PiP (Picture-in-Picture) will appear on screen. This setting is obsoleted by the Video SelfviewDefault PiPPosition setting.

Requires user role: ADMIN

Value space: <UpperLeft/UpperCenter/UpperRight/CenterLeft/CenterRight/LowerLeft/LowerRight>

- **UpperLeft**: The self-view PiP will appear in the upper left corner of the screen.
- **UpperCenter**: The self-view PiP will appear in the upper center of the screen.
- **UpperRight**: The self-view PiP will appear in the upper right corner of the screen.
- **CenterLeft**: The self-view PiP will appear on the left side of the screen, in center.
- **CentreRight**: The self-view PiP will appear on the right side of the screen, in center.
- **LowerLeft**: The self-view PiP will appear in the lower left corner of the screen.
- **LowerRight**: The self-view PiP will appear in the lower right corner of the screen.

Example: Video SelfviewPosition: CenterRight
**Video SelfviewDefault Mode**

Determine if the main video source (self-view) shall be displayed on screen after a call. The position and size of the self-view window is determined by the Video SelfviewDefault PIPPosition and the Video SelfviewDefault FullscreenMode settings respectively.

**Requires user role:** ADMIN

**Value space:** <Off/Current/On>

- **Off:** self-view is switched off when leaving a call.
- **Current:** self-view is left as is, i.e. if it was on during the call, it remains on after the call; if it was off during the call, it remains off after the call.
- **On:** self-view is switched on when leaving a call.

**Example:** Video SelfviewDefault Mode: Current

**Video SelfviewDefault FullscreenMode**

Determine if the main video source (self-view) shall be shown in full screen or as a small picture-in-picture (PiP) after a call. The setting only takes effect when self-view is switched on (see the Video SelfviewDefault Mode setting).

**Requires user role:** ADMIN

**Value space:** <Off/Current/On>

- **Off:** self-view will be shown as a PiP.
- **Current:** The size of the self-view picture will be kept unchanged when leaving a call, i.e. if it was a PiP during the call, it remains a PiP after the call; if it was fullscreen during the call, it remains fullscreen after the call.
- **On:** The self-view picture will be shown in full screen.

**Example:** Video SelfviewDefault FullscreenMode: Current

**Video SelfviewDefault PIPPosition**

Determine the position on screen of the small self-view picture-in-picture (PiP) after a call. The setting only takes effect when self-view is switched on (see the Video SelfviewDefault Mode setting) and fullscreen view is switched off (see the Video SelfviewDefault FullscreenMode setting).

**Requires user role:** ADMIN

**Value space:** <Current/UpperLeft/UpperCenter/UpperRight/CenterLeft/CenterRight/LowerLeft/LowerRight>

- **Current:** The position of the self-view PiP will be kept unchanged when leaving a call.
- **UpperLeft:** The self-view PiP will appear in the upper left corner of the screen.
- **UpperCenter:** The self-view PiP will appear in the upper center position.
- **UpperRight:** The self-view PiP will appear in the upper right corner of the screen.
- **CenterLeft:** The self-view PiP will appear in the center left position.
- **CenterRight:** The self-view PiP will appear in the center right position.
- **LowerLeft:** The self-view PiP will appear in the lower left corner of the screen.
- **LowerRight:** The self-view PiP will appear in the lower right corner of the screen.

**Example:** Video SelfviewDefault PIPPosition: Current
Video SelfviewDefault OnMonitorRole

Determine which monitor/output to display the main video source (self-view) on after a call. The value reflects the monitor roles set for the different outputs in the Video Output HDMI/DVI/Composite MonitorRole settings.

The setting applies both when self-view is displayed in full screen, and when it is displayed as picture-in-picture (PiP), but only if the Video Monitors setting is set to Dual or Quadruple.

Requires user role: ADMIN

Value space: <First/Second/Third/Fourth/Current>

First: The self-view picture will be shown on outputs with the Video Output HDMI/DVI/Composite MonitorRole set to First.
Second: The self-view picture will be shown on outputs with the Video Output HDMI/DVI/Composite MonitorRole set to Second.
Third: The self-view picture will be shown on outputs with the Video Output HDMI/DVI/Composite MonitorRole set to Third.
Fourth: The self-view picture will be shown on outputs with the Video Output HDMI/DVI/Composite MonitorRole set to Fourth.
Current: When leaving a call, the self-view picture will be kept on the same output as it was during the call.

Example: Video SelfviewDefault OnMonitorRole: Current

Video Monitors

A role is assigned to each monitor using the Video Output HDMI [n] MonitorRole, Video Output DVI [n] MonitorRole and Video Output Composite [n] MonitorRole settings. The monitor role decides which layout (call participants and presentation) will appear on the monitor that is connected to this output. Monitors with the same monitor role will get the same layout; monitors with different monitor roles will have different layouts.

The monitor layout mode that is set in the Video Monitors setting should reflect the number of different layouts you want in your room setup. Note that some monitors can be reserved for presentations.

Requires user role: ADMIN

Value space: <Auto/Single/Dual/DualPresentationOnly/TriplePresentationOnly/Triple/Quadruple>

Auto: The number of monitors connected to the codec is automatically detected, and the layout is distributed on the monitors according to the MonitorRole settings.
Single: The same layout is shown on all monitors.
Dual: The layout is distributed on monitors with monitor role First and Second. If a presentation is part of the layout, all participants in the call are shown on monitors with monitor role First, and the presentation is shown on monitors with monitor role Second.
DualPresentationOnly: All participants in the call are shown on monitors with monitor role First. If a presentation is part of the layout, the presentation is shown on monitors with monitor role Second.
Triple: The layout is distributed on monitors with monitor role First, Second and Third. If a presentation is part of the layout, all participants in the call are shown on monitors with monitor role First and Second, and the presentation is shown on monitors with monitor role Third.
TriplePresentationOnly: All participants in the call are distributed on monitors with monitor role First and Second. If a presentation is part of the layout, the presentation is shown on monitors with monitor role Third.
Quadruple: The layout is distributed on monitors with monitor role First, Second, Third and Fourth. If a presentation is part of the layout, all participants in the call are shown on monitors with monitor role First, Second and Third, and the presentation is shown on the monitor with monitor role Fourth.

Example: Video Monitors: Single
Video OSD Mode

The OSD (On Screen Display) is where you find the menus, dialogs, icons and indicators, and the navigation is done with a remote control. Define which icons and information to be displayed on screen.

Requires user role: ADMIN

Value space: <Off/On>

Off: Hide the on-screen menus, icons and indicators.

On: Display the on-screen menus, icons and indicators.

Example: Video OSD Mode: On

Video OSD WallpaperSelection

In cases where you want to prevent users from easily changing the wallpaper setting from the Settings menu, the wallpaper setting can be made available from within the Administrator Settings menu. The administrator settings can be password protected. The OSD (On Screen Display) is where you find the menus, dialogs, icons and indicators, and the navigation is done with a remote control.

Requires user role: ADMIN

Value space: <Off/On>

Off: The wallpaper setting will be available from within the Video settings in the Administrator Settings.

On: The Wallpaper menu will be available from the Settings menu.

Example: Video OSD WallpaperSelection: On

Video OSD LanguageSelection

In cases where you want to prevent users from easily changing the language settings from the Settings menu, the language settings can be made available from within the Administrator Settings menu. The administrator settings can be password protected. The OSD (On Screen Display) is where you find the menus, dialogs, icons and indicators, and the navigation is done with a remote control.

Requires user role: ADMIN

Value space: <Off/On>

Off: The language settings will be available from within the SystemUnit settings in the Administrator Settings.

On: The Language menu will be available from the Settings menu.

Example: Video OSD LanguageSelection: On

Video OSD MenuStartupMode

Configure the state of the on-screen menus after a video system / codec boot.

Requires user role: ADMIN

Value space: <Closed/Home>

Closed: The on-screen menu will NOT expand automatically. This setting is recommended for 3rd party integrations that need full control of what is shown on the OSD.

Home: The on-screen menu will show the home menu expanded.

Example: Video OSD MenuStartupMode: Home

Video OSD VirtualKeyboard

Determine whether or not the virtual keyboard will automatically show on screen when text is to be entered in an input field. The OSD (On Screen Display) is where you find the menus, dialogs, icons and indicators, and the navigation is done with a remote control.

Requires user role: ADMIN

Value space: <UserSelectable/AlwaysOn>

UserSelectable: The user has to press a softbutton to open or close the virtual keyboard.

AlwaysOn: The virtual keyboard is automatically shown on screen as long as text can be entered in an input field.

Example: Video OSD VirtualKeyboard: UserSelectable
**Video OSD EncryptionIndicator**

Define for how long the encryption indicator (a padlock) will be shown on screen. The setting applies to both encrypted and non-encrypted calls, i.e. both to secure and non-secure conferences. The icon for encrypted calls is a locked padlock, and the icon for non-encrypted calls is a crossed out locked padlock.

**Requires user role:** ADMIN

**Value space:** <Auto/AlwaysOn/AlwaysOff>

- **Auto:** If the Conference Encryption Mode setting is set to BestEffort and the call is encrypted, the encryption indicator is shown during the first seconds of a call. If the Conference Encryption Mode setting is set to BestEffort and the call is non-encrypted, the crossed out encryption indicator is shown during the entire call. If the Conference Encryption Mode setting is NOT set to BestEffort, the encryption indicator is not shown at all.
- **AlwaysOn:** The encryption indicator is displayed on screen during the entire call. This applies to both encrypted and non-encrypted calls for all Conference Encryption Mode settings.
- **AlwaysOff:** The encryption indicator is never displayed on screen. This applies to both encrypted and non-encrypted calls for all Conference Encryption Mode settings.

**Example:** Video OSD EncryptionIndicator: Auto

**Video OSD MissedCallsNotification**

Define if there should be a missed calls notification on screen. The setting only applies when the video system is operated by a remote control and the on-screen menu. When using the Touch controller the notification dialog box will appear on the Touch controller, and not on the OSD.

**Requires user role:** ADMIN

**Value space:** <Off/On>

- **Off:** The OSD will NOT show any indication that there have been any missed calls. This setting is recommended for 3rd party integrations that need full control of what is shown on the OSD.
- **On:** The OSD will show a notification of missed calls.

**Example:** Video OSD MissedCallsNotifications: On

**Video OSD AutoSelectPresentationSource**

Determine if the presentation source should be automatically selected.

**Requires user role:** ADMIN

**Value space:** <Off/On>

- **Off:** Disable automatic selection of the presentation source.
- **On:** Enable automatic selection of the presentation source.

**Example:** Video OSD AutoSelectPresentationSource: Off

**Video OSD CallSettingsSelection**

In cases where you want to prevent users from easily changing the call settings from the Settings menu, the call settings can be made available from within the Administrator Settings menu. The administrator settings can be password protected. The OSD (On Screen Display) is where you find the menus, dialogs, icons and indicators, and the navigation is done with a remote control.

**Requires user role:** ADMIN

**Value space:** <Off/On>

- **Off:** The call settings will be available from within the Conference settings in the Administrator Settings.
- **On:** The Call Settings menu will be available from the Settings menu.

**Example:** Video OSD CallSettingsSelection: Off

**Video OSD TodaysBookings**

This setting can be used to display the system’s bookings for today on the main on-screen menu. This requires that the system is bookable by an external booking system, like for example the Cisco TelePresence Management Suite (TMS).

**Requires user role:** ADMIN

**Value space:** <Off/On>

- **Off:** Do not display today’s bookings.
- **On:** Displays information about this system’s bookings on screen.

**Example:** Video OSD TodaysBookings: Off
Video OSD MyContactsExpanded

Set how the local contacts will be displayed in the phone book dialog on screen. The OSD (On Screen Display) is where you find the menus, dialogs, icons and indicators, and the navigation is done with a remote control.

Requires user role: ADMIN

Value space: <Off/On>

Off: The local contacts will be placed in a separate folder called MyContacts in the phonebook dialog.

On: The local contacts in the phone book will be shown in the top level of the phonebook dialog.

Example: Video OSD MyContactsExpanded: Off

Video OSD Output

Define on which monitor the on-screen menus, information and icons should be displayed. The OSD (On Screen Display) is where you find the menus, dialogs, icons and indicators, and the navigation is done with a remote control.

Requires user role: ADMIN

Value space: <Auto/1/2/3/4>

Auto: The system will detect when a monitor is connected to the video output, and send the OSD to the first monitor you connect. If you have a multi-monitor setup, and all monitors are connected before switching on the system, the OSD will be sent to the video output with the lowest numbering, starting on Video OSD Output 1. If the OSD does not show on the desired monitor, disconnect all monitors and reconnect the monitors.

Range 1-4: If you want the OSD to be sent to one specific output, select 1 for HDMI 1 output, select 2 for DVI-I 2 output, select 3 for HDMI 3 output, or select 4 for DVI-I 4 output. Make sure you connect a monitor to the corresponding video output connector.

Example: Video OSD Output: Auto

Video OSD InputMethod InputLanguage

The codec can be enabled for Cyrillic input characters in the menus on screen. Requires that Video OSD InputMethod Cyrillic is set to On.

Requires user role: ADMIN

Value space: <Latin/Cyrillic>

Latin: Latin characters can be entered when using the remote control (default).

Cyrillic: Cyrillic characters can be entered using the remote control. Requires a Cisco TelePresence Remote Control with Cyrillic fonts.

Example: Video OSD InputMethod InputLanguage: Latin

Video OSD InputMethod Cyrillic

Set the Cyrillic mode for the menu input language in the menus on screen.

Requires user role: ADMIN

Value space: <Off/On>

Off: Cyrillic mode is NOT available as a menu input language in the menus on screen.

On: Cyrillic mode is available as a menu input language in the menus on screen. This will enable the setting Video OSD InputMethod InputLanguage.

Example: Video OSD InputMethod Cyrillic: Off

Video OSD LoginRequired

Determine if the system should require the user to login before accessing the menus on screen. If enabled, the user must enter his username and his PIN code. After the user has logged in he can only execute to the configurations changes and commands allowed by his role. The OSD (On Screen Display) is where you find the menus, dialogs, icons and indicators, and the navigation is done with a remote control.

NOTE: The PIN code must be set before enabling this setting, this is done from a web interface. Login to the system from a web browser, navigate to Configuration > User Administration, select the user and add the PIN code.

Requires user role: ADMIN

Value space: <Off/On>

Off: No login to the menus on screen (OSD) is required.

On: The user must log in to access the menus on screen (OSD).

Example: Video OSD LoginRequired: Off
Video Output HDMI [1,3] Location HorizontalOffset

HorizontalOffset and VerticalOffset settings are associated with each video output. These settings are used to signal the relative position of the displays that are connected to these outputs.

HorizontalOffset = 0 and VerticalOffset = 0 indicates that the display is positioned in center, both horizontally and vertically. A negative horizontal offset indicates that the monitor is left of center, and a positive horizontal offset indicates that the monitor is right of center. A negative vertical offset indicates that the monitor is below center, and a positive vertical offset indicates that the monitor is above center. The magnitude of the offset indicates how far the display is from center (relative to other displays).

Example: You have three displays side by side, with the left and right displays at equal distance from center. Then the following settings will apply: HorizontalOffset = 0 for the center display, HorizontalOffset = -1 for the left display, and HorizontalOffset = 1 for the right display.

Example: You have two displays, one in center and one below. Then the following settings will apply: VerticalOffset = 0 for the center display, Vertical Offset = -1 for the lower display.

The default values for the different outputs are:

- Video Output HDMI [1] Location: HorizontalOffset = -2, VerticalOffset = 0
- Video Output DVI [2] Location: HorizontalOffset = -1, VerticalOffset = 0
- Video Output HDMI [3] Location: HorizontalOffset = 0, VerticalOffset = 0
- Video Output DVI [4] Location: HorizontalOffset = 1, VerticalOffset = 0
- Video Output Composite [5] Location: HorizontalOffset = 2, VerticalOffset = 0

Requires user role: ADMIN

Value space: <-100..100>

Range: The value must be between -100 and 100.

Example: Video Output HDMI 1 Location HorizontalOffset: -2

---

Video Output HDMI [1,3] Location VerticalOffset

HorizontalOffset and VerticalOffset settings are associated with each video output. These settings are used to signal the relative position of the displays that are connected to these outputs.

HorizontalOffset = 0 and VerticalOffset = 0 indicates that the display is positioned in center, both horizontally and vertically. A negative horizontal offset indicates that the monitor is left of center, and a positive horizontal offset indicates that the monitor is right of center. A negative vertical offset indicates that the monitor is below center, and a positive vertical offset indicates that the monitor is above center. The magnitude of the offset indicates how far the display is from center (relative to other displays).

Example: You have three displays side by side, with the left and right displays at equal distance from center. Then the following settings will apply: HorizontalOffset = 0 for the center display, HorizontalOffset = -1 for the left display, and HorizontalOffset = 1 for the right display.

Example: You have two displays, one in center and one below. Then the following settings will apply: VerticalOffset = 0 for the center display, Vertical Offset = -1 for the lower display.

The default values for the different outputs are:

- Video Output HDMI [1] Location: HorizontalOffset = -2, VerticalOffset = 0
- Video Output DVI [2] Location: HorizontalOffset = -1, VerticalOffset = 0
- Video Output HDMI [3] Location: HorizontalOffset = 0, VerticalOffset = 0
- Video Output DVI [4] Location: HorizontalOffset = 1, VerticalOffset = 0
- Video Output Composite [5] Location: HorizontalOffset = 2, VerticalOffset = 0

Requires user role: ADMIN

Value space: <-100..100>

Range: The value must be between -100 and 100.

Example: Video Output HDMI 1 Location Vertical Offset: 0
Video Output HDMI [1,3] RGBQuantizationRange

Devices connected to an HDMI output should follow the rules for RGB video quantization range defined in CEA-861. Unfortunately some devices do not follow the standard and this configuration may be used to override the settings to get a perfect image with any display. The default value is set to Full because most HDMI displays expects full quantization range.

Requires user role: ADMIN

Value space: <Auto/Full/Limited>

Auto: RGB quantization range is automatically selected based on the RGB Quantization Range bits (Q0, Q1) in the AVI infoframe. If no AVI infoframe is available, RGB quantization range is selected based on video format according to CEA-861-E.

Full: Full quantization range. The R, G, B quantization range includes all code values (0 - 255). This is defined in CEA-861-E.

Limited: Limited Quantization Range. R, G, B quantization range that excludes some code values at the extremes (16 - 235). This is defined in CEA-861-E.

Example: Video Output HDMI 1 RGBQuantizationRange: Full

Video Output HDMI [1,3] CEC Mode

The HDMI outputs support Consumer Electronics Control (CEC). When this setting is Off (default is Off), the system will use CEC to set the monitor in standby when the system itself enters standby. Likewise the system will wake up the monitor when the system itself wakes up from standby. For this to happen, the monitor that is connected to the output must be CEC compatible and CEC must be configured on the monitor.

Note that the different manufacturers uses different marketing names for CEC, for example Anynet+ (Samsung); Aquos Link (Sharp); BRAVIA Sync (Sony); HDMI-CEC (Hitachi); Kuro Link (Pioneer); CE-Link and Regza Link (Toshiba); RIHD (Onkyo); HDAVI Control, EZ-Sync, VIERA Link (Panasonic); EasyLink (Philips); and NetCommand for HDMI (Mitsubishi).

Requires user role: ADMIN

Value space: <Off/On>

Off: Disable CEC control.
On: Enable CEC control.

Example: Video Output HDMI 1 CEC Mode: Off

Video Output HDMI [1,3] MonitorRole

The monitor role describes which video streams will be shown on the monitor connected to this video output connector. Together the Video Monitors setting and the MonitorRole settings for all outputs define which layout (video streams) will be shown on each monitor.

Requires user role: ADMIN

Value space: <Auto/First/Second/PresentationOnly/Third/Fourth/Recorder>

Auto: The system will detect when a monitor is connected, and a monitor role (First, Second, Third, Fourth) that corresponds with the Video Monitors setting will be assigned automatically.

First/Second/Third/Fourth: Define the role of the monitor in a multi-monitor setup. In a single-monitor setup, there is no difference between First, Second, Third and Fourth.

PresentationOnly: Show the presentation video stream if active, and nothing else. Monitors/outputs with this monitor role are disregarded by the Video Monitors setting.

Recorder: Show all participants, including the local main video (self-view). If active, also show the presentation. Monitors/outputs with this monitor role are disregarded by the Video Monitors setting.

Example: Video Output HDMI 1 MonitorRole: First

Video Output HDMI [1,3] OverscanLevel

Some monitors may not present the entire image that they receive. This means that the outer parts of the image that is sent from the video system may be cut off when displayed on the monitor.

Use this setting to instruct the video system not to use the outer part of the available frame. This part might be cut off by the monitor. Both the video and messages on screen will be scaled in this case.

Requires user role: ADMIN

Value space: <None/Medium/High>

None: The video system will use all of the output resolution.
Medium: The video system will not use the outer 3% of the output resolution.
High: The video system will not use the outer 6% of the output resolution.

Example: Video Output HDMI 1 OverscanLevel: None
Video Output HDMI [1,3] Resolution

Set the resolution and refresh rate for the monitor that is connected to the HDMI output.

Requires user role: ADMIN

Value space: <Auto/640_480_60/800_600_60/1024_768_60/1280_1024_60/1280_720_50/1280_720_60/1920_1080_50/1920_1080_60/1280_768_60/1360_768_60/1366_768_60/1600_1200_60/1680_1050_60/1920_1200_60>

Example: Video Output HDMI 1 Resolution: Auto

Video Output DVI [2,4] Location HorizontalOffset

HorizontalOffset and VerticalOffset settings are associated with each video output. These settings are used to signal the relative position of the displays that are connected to these outputs.

HorizontalOffset = 0 and VerticalOffset = 0 indicates that the display is positioned in center, both horizontally and vertically. A negative horizontal offset indicates that the monitor is left of center, and a positive horizontal offset indicates that the monitor is right of center. A negative vertical offset indicates that the monitor is below center, and a positive vertical offset indicates that the monitor is above center. The magnitude of the offset indicates how far the display is from center (relative to other displays).

Example: You have three displays side by side, with the left and right displays at equal distance from center. Then the following settings will apply: HorizontalOffset = 0 for the center display, HorizontalOffset = -1 for the left display, and HorizontalOffset = 1 for the right display.

Example: You have two displays, one in center and one below. Then the following settings will apply: VerticalOffset = 0 for the center display, VerticalOffset = -1 for the lower display.

The default values for the different outputs are:

- Video Output HDMI [1]: HorizontalOffset = -2, VerticalOffset = 0
- Video Output DVI [2]: HorizontalOffset = -1, VerticalOffset = 0
- Video Output HDMI [3]: HorizontalOffset = 0, VerticalOffset = 0
- Video Output DVI [4]: HorizontalOffset = 1, VerticalOffset = 0
- Video Output Composite [5]: HorizontalOffset = 2, VerticalOffset = 0

Requires user role: ADMIN

Value space: <-100..100>

Range: The value must be between -100 and 100.

Example: Video Output DVI 2 Location HorizontalOffset: -1
Video Output DVI [2,4] Location VerticalOffset

HorizontalOffset and VerticalOffset settings are associated with each video output. These settings are used to signal the relative position of the displays that are connected to these outputs.

HorizontalOffset = 0 and VerticalOffset = 0 indicates that the display is positioned in center, both horizontally and vertically. A negative horizontal offset indicates that the monitor is left of center, and a positive horizontal offset indicates that the monitor is right of center. A negative vertical offset indicates that the monitor is below center, and a positive vertical offset indicates that the monitor is above center. The magnitude of the offset indicates how far the display is from center (relative to other displays).

Example: You have three displays side by side, with the left and right displays at equal distance from center. Then the following settings will apply: HorizontalOffset = 0 for the center display, HorizontalOffset = -1 for the left display, and HorizontalOffset = 1 for the right display.

Example: You have two displays, one in center and one below. Then the following settings will apply: VerticalOffset = 0 for the center display, VerticalOffset = -1 for the lower display.

The default values for the different outputs are:

- Video Output HDMI [1] Location: HorizontalOffset = -2, VerticalOffset = 0
- Video Output DVI [2] Location: HorizontalOffset = -1, VerticalOffset = 0
- Video Output HDMI [3] Location: HorizontalOffset = 0, VerticalOffset = 0
- Video Output DVI [4] Location: HorizontalOffset = 1, VerticalOffset = 0
- Video Output Composite [5] Location: HorizontalOffset = 2, VerticalOffset = 0

Requires user role: ADMIN

Value space: <-100..100>

Range: The value must be between -100 and 100.

Example: Video Output DVI 2 Location Vertical Offset: 0

Video Output DVI [2,4] RGBQuantizationRange

Devices connected to a DVI output should follow the rules for RGB video quantization range defined in CEA-861. Unfortunately some devices do not follow the standard and this configuration may be used to override the settings to get a perfect image with any display. The default value is set to Full because most DVI displays expects full quantization range.

Requires user role: ADMIN

Value space: <Auto/Full/Limited>

Auto: RGB quantization range is automatically selected based on video format according to CEA-861-E. CE video formats will use limited quantization range levels. IT video formats will use full quantization range levels.

Full: Full quantization range. The R, G, B quantization range includes all code values (0 - 255). This is defined in CEA-861-E.

Limited: Limited Quantization Range. R, G, B quantization range that excludes some code values at the extremes (16 - 235). This is defined in CEA-861-E.

Example: Video Output DVI 2 RGBQuantizationRange: Full

Video Output DVI [2,4] MonitorRole

The monitor role describes which video streams will be shown on the monitor connected to this video output connector. Together the Video Monitors setting and the MonitorRole settings for all outputs define which layout (video streams) will be shown on each monitor.

Requires user role: ADMIN

Value space: <Auto/First/Second/PresentationOnly/Third/Fourth/Recorder>

Auto: The system will detect when a monitor is connected, and a monitor role (First, Second, Third, Forth) that corresponds with the Video Monitors setting will be assigned automatically.

First/Second/Third/Fourth: Define the role of the monitor in a multi-monitor setup. In a single-monitor setup, there is no difference between First, Second, Third and Fourth.

PresentationOnly: Show presentation video stream if active, and nothing else. Monitors/outputs with this monitor role are disregarded by the Video Monitors setting.

Recorder: Show all participants, including the local main video (self-view). If active, also show the presentation. Monitors/outputs with this monitor role are disregarded by the Video Monitors setting.

Example: Video Output DVI 2 MonitorRole: Second
Video Output DVI [2,4] OverscanLevel

Some monitors may not present the entire image that they receive. This means that the outer parts of the image that is sent from the video system may be cut off when displayed on the monitor.

Use this setting to instruct the video system not to use the outer part of the available frame. This part might be cut off by the monitor. Both the video and messages on screen will be scaled in this case.

Requires user role: ADMIN

Value space: <None/Medium/High>

- **None**: The video system will use all of the output resolution.
- **Medium**: The video system will not use the outer 3% of the output resolution.
- **High**: The video system will not use the outer 6% of the output resolution.

**Example**: Video Output DVI 2 OverscanLevel: None

Video Output DVI [2,4] Resolution

Set the resolution and refresh rate for the monitor that is connected to the DVI-I output.

Requires user role: ADMIN

Value space: <Auto/640_480_60/800_600_60/1024_768_60/1280_1024_60/1280_720_50/1280_720_60/1920_1080_50/1920_1080_60/1280_768_60/1360_768_60/1366_768_60/1600_1200_60/1680_1050_60/1920_1200_60>

- **Auto**: The system will automatically try to set the optimal resolution based on negotiation with the connected monitor.
- **640_480_60**: The resolution is 640 x 480, and the refresh rate is 60 Hz.
- **800_600_60**: The resolution is 800 x 600, and the refresh rate is 60 Hz.
- **1024_768_60**: The resolution is 1024 x 768, and the refresh rate is 60 Hz.
- **1280_1024_60**: The resolution is 1280 x 1024, and the refresh rate is 60 Hz.
- **1280_720_50**: The resolution is 1280 x 720, and the refresh rate is 50 Hz.
- **1280_720_60**: The resolution is 1280 x 720, and the refresh rate is 60 Hz.
- **1920_1080_50**: The resolution is 1920 x 1080, and the refresh rate is 50 Hz.
- **1920_1080_60**: The resolution is 1920 x 1080, and the refresh rate is 60 Hz.
- **1280_768_60**: The resolution is 1280 x 768, and the refresh rate is 60 Hz.
- **1360_768_60**: The resolution is 1360 x 768, and the refresh rate is 60 Hz.
- **1366_768_60**: The resolution is 1366 x 768, and the refresh rate is 60 Hz.
- **1600_1200_60**: The resolution is 1600 x 1200, and the refresh rate is 60 Hz.
- **1680_1050_60**: The resolution is 1680 x 1050, and the refresh rate is 60 Hz.
- **1920_1200_60**: The resolution is 1920 x 1200, and the refresh rate is 60 Hz.

**Example**: Video Output DVI 2 Resolution: Auto
Video Output Composite [5] Location HorizontalOffset

HorizontalOffset and VerticalOffset settings are associated with each video output. These settings are used to signal the relative position of the displays that are connected to these outputs.

HorizontalOffset = 0 and VerticalOffset = 0 indicates that the display is positioned in center, both horizontally and vertically. A negative horizontal offset indicates that the monitor is left of center, and a positive horizontal offset indicates that the monitor is right of center. A negative vertical offset indicates that the monitor is below center, and a positive vertical offset indicates that the monitor is above center. The magnitude of the offset indicates how far the display is from center (relative to other displays).

Example: You have three displays side by side, with the left and right displays at equal distance from center. Then the following settings will apply: HorizontalOffset = 0 for the center display, HorizontalOffset = -1 for the left display, and HorizontalOffset = 1 for the right display.

Example: You have two displays, one in center and one below. Then the following settings will apply: VerticalOffset = 0 for the center display, VerticalOffset = -1 for the lower display.

The default values for the different outputs are:

- Video Output HDMI [1] Location: HorizontalOffset = -2, VerticalOffset = 0
- Video Output DVI [2] Location: HorizontalOffset = -1, VerticalOffset = 0
- Video Output HDMI [3] Location: HorizontalOffset = 0, VerticalOffset = 0
- Video Output DVI [4] Location: HorizontalOffset = 1, VerticalOffset = 0
- Video Output Composite [5] Location: HorizontalOffset = 2, VerticalOffset = 0

Requires user role: ADMIN

Value space: <-100..100>

Range: The value must be between -100 and 100.

Example: Video Output Composite 5 Location HorizontalOffset: 2

Video Output Composite [5] Location VerticalOffset

HorizontalOffset and VerticalOffset settings are associated with each video output. These settings are used to signal the relative position of the displays that are connected to these outputs.

HorizontalOffset = 0 and VerticalOffset = 0 indicates that the display is positioned in center, both horizontally and vertically. A negative horizontal offset indicates that the monitor is left of center, and a positive horizontal offset indicates that the monitor is right of center. A negative vertical offset indicates that the monitor is below center, and a positive vertical offset indicates that the monitor is above center. The magnitude of the offset indicates how far the display is from center (relative to other displays).

Example: You have three displays side by side, with the left and right displays at equal distance from center. Then the following settings will apply: HorizontalOffset = 0 for the center display, HorizontalOffset = -1 for the left display, and HorizontalOffset = 1 for the right display.

Example: You have two displays, one in center and one below. Then the following settings will apply: VerticalOffset = 0 for the center display, VerticalOffset = -1 for the lower display.

The default values for the different outputs are:

- Video Output HDMI [1] Location: HorizontalOffset = -2, VerticalOffset = 0
- Video Output DVI [2] Location: HorizontalOffset = -1, VerticalOffset = 0
- Video Output HDMI [3] Location: HorizontalOffset = 0, VerticalOffset = 0
- Video Output DVI [4] Location: HorizontalOffset = 1, VerticalOffset = 0
- Video Output Composite [5] Location: HorizontalOffset = 2, VerticalOffset = 0

Requires user role: ADMIN

Value space: <-100..100>

Range: The value must be between -100 and 100.

Example: Video Output Composite 5 Location Vertical Offset: 0

The monitor role describes which video streams will be shown on the monitor connected to this video output connector. Together the Video Monitors setting and the MonitorRole settings for all outputs define which layout (video streams) will be shown on each monitor.

Requires user role: ADMIN

Value space: <Auto/First/Second/PresentationOnly/Third/Fourth/Recorder>

- **Auto:** The system will detect when a monitor is connected, and a monitor role (First, Second, Third, Forth) that corresponds with the Video Monitors setting will be assigned automatically.
- **First/Second/Third/Fourth:** Define the role of the monitor in a multi-monitor setup. In a single-monitor setup, there is no difference between First, Second, Third and Fourth.
- **PresentationOnly:** Show presentation video stream if active, and nothing else. Monitors/outputs with this monitor role are disregarded by the Video Monitors setting.
- **Recorder:** Show one fullscreen image. Show presentation video stream if active; otherwise, show active speaker. Monitors/outputs with this monitor role are disregarded by the Video Monitors setting.

Example: Video Output Composite 5 MonitorRole: First

Video Output Composite [5] OverscanLevel

Some monitors may not present the entire image that they receive. This means that the outer parts of the image that is sent from the video system may be cut off when displayed on the monitor.

Use this setting to instruct the video system not to use the outer part of the available frame. This part might be cut off by the monitor. Both the video and messages on screen will be scaled in this case.

Requires user role: ADMIN

Value space: <None/Medium/High>

- **None:** The video system will use all of the output resolution.
- **Medium:** The video system will not use the outer 3% of the output resolution.
- **High:** The video system will not use the outer 6% of the output resolution.

Example: Video Output Composite 5 OverscanLevel: None

Video Output Composite [5] Resolution

Select the preferred resolution for the monitor connected to the video output Composite connector. This will force the resolution on the monitor.

Requires user role: ADMIN

Value space: <PAL/NTSC>

Range: PAL, NTSC

Example: Video Output Composite 5 Resolution: NTSC

Video Wallpaper

Select a background image (wallpaper) for the video screen when idle. You may upload a custom wallpaper to the video system using the web interface. The following file formats are supported: BMP, GIF, JPEG, PNG. The maximum file size is 2 MByte.

Requires user role: USER

Value space: <None/Custom/Growing/Summersky/Waves/Blue>

- **None:** There is no background image on the screen, i.e. the background is black.
- **Custom:** Use the custom wallpaper as background image on the screen. If no custom wallpaper is uploaded to the system, the setting will revert to the default value.
- **Growing, Summersky, Waves, Blue:** The chosen background image is shown on the screen.

Example: Video Wallpaper: Summersky
Experimental settings

The Experimental settings are for testing only and should not be used unless agreed with Cisco. These settings are not documented and WILL change in later releases.
Chapter 4

Setting passwords
Setting the system password

The system password protects the video system. You have to sign in to be able to use the web and command line interfaces, and to get access to the Administrator settings from a Touch 8 controller.

The admin user

The video system is delivered with a default user account with full credentials. The user name is admin, and initially, no password is set for the default user.

⚠️ It is mandatory to set a password for the admin user in order to restrict access to system configuration. Also set a password for any other user with similar credentials.

Make sure to keep a copy of the password in a safe place. You have to factory reset the unit if you have forgotten the password.

A warning, saying that the system password is not set, is shown on screen until a password is set for the admin user.

About access to administrator settings when using a remote control and the on-screen menu

Note that the on-screen Administrator Settings menu that is available when using a remote control, is NOT protected by the system password; you have to set a menu password (see next page).

Other user accounts

You can create as many user accounts as you like for your video system.

You can read more about how to create and manage user accounts in the ► User administration section.

Changing your own system password

Perform the following steps to change the system password.

If a password is currently not set, use a blank Current password; to remove a password, leave the New password fields blank.

1. Sign in to the web interface with your user name and current password.
2. Click your user name in the upper right corner and choose Change password in the drop down menu.
3. Enter the Current password, the New password, and repeat the new password in the appropriate input fields.
4. The password format is a string with 0–64 characters.
5. Click Change password.

Changing another user’s system password

If you have administrator access rights, you can change all users’ passwords by performing the following steps:

1. Sign in to the web interface with your user name and password.
2. Go to the Configuration tab and select User Administration.
3. Choose the appropriate user from the list.
4. Enter a new password and PIN code.
5. Click Save.
Setting the menu password

The menu password protects the Administrator Settings menu that is available on-screen when using the remote control.

When starting up the video conference system for the first time anyone can access these settings, because the menu password is not set.

⚠️ We strongly recommend that you set a menu password, because the administrator settings may severely affect the behavior of the system.

Note that the menu password, as from software version TC7.0, applies only to the on-screen Administrator Settings menu; it does not apply to the Administrator menu on the Touch 8 controller.

Setting the menu password from the web interface

1. Sign in to the web interface with your user name and current password.
2. Go to Configuration > System Configuration.
3. Click Set/Change Administrator Settings menu password to open the menu password dialog.
4. Enter the password in the input field.
5. Click Save to set/change the password.

Use the remote control and on-screen menu, or the Touch controller to find the IP address (IPv4 or IPv6).

Remote control and on-screen menu: Navigate to Home > Settings > System information.

Touch controller: Tap the upper, left corner of the Touch controller to open the drop down window. Then tap Settings > System Information.

Setting the menu password using the remote control

1. In the on screen menu, go to Home > Settings > Administrator settings > Set menu password.
2. The password should be a string with 0–255 characters. To deactivate the password leave the password input field empty.
3. Enter the menu password in the input field. The password you enter is hidden; each character is replaced with a star (*).
4. Select Save to save the changes, or Cancel to leave without saving.
5. Press Home (↑) to exit.
Appendices
Cisco VCS provisioning

When using Cisco VCS (Video Communication Server) provisioning, a template containing all the settings that can be provisioned must be uploaded to Cisco TMS (TelePresence Management System). This is called the Cisco TMS provisioning configuration template.

All the system settings for your video system are included in this template. All settings except SystemUnit Name and SIP Profile [1..1] URI can be automatically provisioned to the video system.

The settings are described in the System settings chapter in this guide. Examples showing either the default value or an example value are included.

Downloading the provisioning configuration template

You can download the templates for the Profile series here:

You can download the templates for the C series here:

For each software release there is one provisioning configuration template (XML file) for each video system model. Take care to use the correct file.

Read the Cisco TMS Provisioning Deployment Guide to find how to upload the file to Cisco TMS, and how to set the desired values for the parameters to be provisioned. If not set by Cisco TMS, the default values will be used.
About monitors

Connecting the main monitor
The main monitor can be connected to any of the video outputs HDMI 1 (the default connector for the main monitor), HDMI 3 (the default connector for the second monitor), DVI-I 2 or DVI-I 4.

The codec will read the native resolution of the monitor and output this if possible. Typically this will give the best possible picture for the connected monitor. If auto fails, you will have to select the resolution manually using the Video > Output > HDMI n > Resolution and Video > Output > DVI n > Resolution settings.

Connecting to HDMI 1
When connecting the main monitor to HDMI 1 the menu, icons and other information on screen (OSD – on screen display) will be displayed on the monitor automatically. This is because HDMI 1 is the default video output of the codec.

Connecting to DVI-I 2, DVI-I 4, HDMI 3
When connecting the main monitor to the DVI-I 2, DVI-I 4 or HDMI 3 output, the menus, icons and other information are not automatically displayed on screen. You must move the OSD to the chosen output.

Moving the OSD
You can move the OSD using the remote control or the web interface.

Remote control
Check which connector the main monitor is connected to, and run the following key sequence on the remote control.

- Disconnect * # * # 0 x #
  - x=1 (HDMI 1)
  - x=2 (DVI-I 2)
  - x=3 (HDMI 3)
  - x=4 (DVI-I 4)

Example: Setting DVI-I 2 as the OSD output.

- – * # – * # – 0 – 2 – #

Web interface
Open the System Configuration page. Go to Video > OSD > Output and choose the video output connector for the main monitor.

Dual monitors
When you want to run a dual monitor setup, connect the main monitor to video output HDMI 1 and the second monitor to video output HDMI 3 on the codec.

Dual monitor configuration
To distribute the layout on the two monitors, go to Advanced configuration (menu on screen) or open the System Configuration page (web interface). Then go to Video > Monitors and choose Dual.
Connecting the Touch 8 controller

The Cisco TelePresence Touch 8 controller is an alternative to the remote control and on-screen menus.

When Touch 8 is connected to the codec, the remote control cannot be used. You have to disconnect (unpair) Touch 8 in order to use the remote control.

Connecting Touch 8

There are two options how to connect Touch 8 to the codec. In both cases the connection is via the provided power adapter, as illustrated above.

A. Connect Touch 8 to the codec via LAN.

The codec’s NetworkServices > SSH > Mode setting must be turned On to enable this mode of operation.

The process of associating Touch 8 to the codec is called pairing. The codec is advertising that it is available for pairing only for a short period of time after it is switched on (refer to the NetworkServices > UPnP settings).

We recommend that the Touch 8 and video system is kept on the same subnet.

B. Connect Touch 8 directly to the codec’s second Ethernet port.

Touch controller set-up

Once the Touch controller is connected to power, the set-up procedure begins. Follow the instructions on screen.

If you have connected the unit to the codec via LAN, you have to choose which codec to pair with. If the codec is not in the list of available codecs displayed on the Touch controller, you can choose a codec manually by entering its IP address.

If the Touch controller needs software upgrade, new software will be downloaded from the codec and installed on the unit automatically as part of the set-up procedure. The Touch controller restarts after the upgrade.

You can verify that the Touch controller is successfully paired to the codec by checking that the codec address is displayed in the top banner.

If you want more details on Touch installation, please read the Cisco TelePresence Touch 8 inch Installation Guide, which is available on the Cisco website.

---

1. Power over Ethernet (PoE) must be disabled on the Ethernet switch, because the inline power adapter does not support PoE input from the Ethernet switch.

2. You will find this setting in the Advanced Configuration on-screen menu (remote control) or in the System Configuration page on the web interface.
Connecting the SpeakerTrack 60 camera

Cisco TelePresence SpeakerTrack 60 should be used only when you control the codec with a Touch 8 user interface, or with an external control device using the API. SpeakerTrack 60 cannot be used with the TRC5 remote control.

Cisco TelePresence SpeakerTrack 60 uses two cameras working together with a built-in microphone array. The system can track and show the person speaking automatically.

Configuration

Use the Cameras SpeakerTrack Mode setting to enable (Auto) or disable (Off) the speaker tracking functionality.

If set to Off speaker tracking cannot be used; if set to Auto you can use the user interface (Touch 8) to switch the speaker tracking on or off at any time.

Tracking mode

If you want the tracking algorithm to react faster to detected changes, you should change the Cameras SpeakerTrack TrackingMode from Default to Fast.

Then the camera view will change to a new speaker faster.

This can also be done from the Administrator Settings menu on the Touch user interface. Tap Tracking, and set Tracking Mode to NORMAL or FAST.

Power

100-240 VAC, 50/60 Hz

Always use the provided power cable and adapter (12V DC, minimum 6.5A).

* You may have more than one device that must be connected to Ethernet port 2 on the codec. If so, insert a network switch between these devices and Ethernet port 2.

The camera surface may be hot when the camera is in operation.
**Setting up the Snap to Whiteboard feature**

**Introduction**

The Snap to Whiteboard feature is supported by Cisco TelePresence SpeakerTrack 60 cameras. Tracking should be switched on.

A speaker track camera can track the person talking automatically, and normally the camera will cover just the talking person.

When the Snap to Whiteboard feature is activated and the talking person is standing by the whiteboard, the camera will go to a pre-defined preset. This preset should be defined by the system administrator to cover the whiteboard area and the person next to it.

The Snap to Whiteboard feature is not supported by codecs that are controlled by the TRC 5 remote control.

**Preparations**

**Whiteboard position**

The whiteboard should be placed across the room from the camera, as shown in the illustration.

When configuring the feature, you need to know the accurate distance between the camera and the whiteboard.

**Microphones**

Do not mute the microphones when configuring the Snap to Whiteboard feature.

The speaker track functionality is disabled when the microphones are muted.

**Speaker position and whiteboard area**

The whiteboard area is the area you want the camera to cover when a person is standing by the whiteboard making a presentation. The sound tracking area is from half the whiteboard area and up.

Thus, the person presenting on the whiteboard should stand upright close to the whiteboard. He or she cannot move about in the room.
Setting up the Snap to Whiteboard feature (page 2 of 3)

Define the whiteboard area

Use the wizard on the Touch 10 user interface to define the whiteboard area.

1. Tap the contact information in the upper left corner of the Touch 10 and open the Settings menu. Then tap Administrator.

2. Log in with administrator credentials to open the Administrator Settings menu.

3. Tap Tracking.

4. Tap Configure Snap to Whiteboard or Reconfigure Snap to Whiteboard (depends whether you configure the feature for the first time or not) to start the wizard.

5. Follow the instructions in the wizard – use the back button, if you have to redo a step:
   - Set the distance between the camera and the whiteboard. Slide the circle to the correct distance on the ruler.
   - Position the camera (pan, tilt, zoom) to cover the whiteboard area. Leave some space on both sides for the person that will be talking.

Troubleshooting

If the camera does not move to the whiteboard area preset when there is a talking person close to the whiteboard, check the following and redo the required steps in the wizard:

- Make sure the whiteboard is placed across the room from the camera.
- The distance between camera and whiteboard must be measured accurately.
- Make sure the microphones are not muted. The speaker track functionality, hence also the Snap to Whiteboard feature, is disabled when the microphones are muted.
- The talking person by the whiteboard must stand close to the whiteboard, within the area that is defined for the whiteboard area preset. Furthermore the person must stand upright, so that the sound comes from the upper half of the whiteboard area.
Setting up the Snap to Whiteboard feature  (page 3 of 3)

Switch the Snap to Whiteboard feature on or off

1. Tap the contact information in the upper left corner of the Touch 10 and open the Settings menu. Then tap Administrator.

2. Log in with administrator credentials to open the Administrator Settings menu.

3. Tap Tracking.

4. When Snap to Whiteboard is set to ON the camera will capture both the presenter and the whiteboard when the person talking is close to the whiteboard. Choose OFF if you want only the person to be captured.

Alternatively, use the Cameras SpeakerTrack Whiteboard Mode setting in the web interface to switch the Snap to Whiteboard feature on or off.

Note that the Snap to Whiteboard feature only can be used when speaker tracking is switched on.
Advanced customization of video and audio

The codec supports full customization of the audio routing and video layouts/templates allowing support for advanced meeting room setups and integrations.

The TC Console application, which is a free software tool that runs on PC/Mac, provides a graphical interface to the advanced customizable features of the codec. TC Console includes the following modules:

Video compositor
- Modify the default video compositing behavior of the codec
- Add new layouts
- Change the automatically chosen layout
- Control what video sources are shown where and when

Audio console
- Configure the audio system of the codec.
- Change the default mixing, routing and equalizers
- Set various input and output connector properties

GPIO
- Change the behavior of the GPIO, i.e. what the codec should do when pins go high/low

For more details about the functionality, see the user guide included in the TC Console application itself or download the TC Console user guide from http://www.cisco.com/go/cseries-docs

How to obtain the TC Console application

Download the TC Console application for free from the Cisco DevNet web site. Go to: http://developer.cisco.com/web/telepresence-developer
Optimal definition profiles

Under ideal lighting conditions the bandwidth (call rate) requirements can be substantially reduced.

The optimal definition profile should reflect the lighting conditions in your room and the quality of the video input (camera); the better the lighting conditions and video input, the higher the profile. Then, in good lighting conditions, the video encoder will provide better quality (higher resolution or frame rate) for a given call rate.

In general, we recommend the optimal definition profile set to Normal. However, if lighting conditions are good we recommend that you test the endpoint on the various Optimal Definition Profile settings before deciding on a profile.

Go to System Configuration on the web interface and navigate to Video > Input > Source [1..n] > OptimalDefinition > Profile to choose the preferred optimal definition profile.

You can set a resolution threshold to determine when to allow sending video at 60 fps. For all resolutions lower than this threshold, the maximum transmitted frame rate will be 30 fps; for higher resolutions, 60 fps will be possible if the available bandwidth is adequate.

Go to System Configuration on the web interface and navigate to Video > Input > Source [1..n] > OptimalDefinition > Threshold60fps to set the threshold.

The video input quality settings must be set to Motion for the optimal definition settings to take any effect. With the video input quality set to Sharpness, the endpoint will transmit the highest resolution possible, regardless of frame rate.

Go to System Configuration on the web interface and navigate to Video > Input > Source [1..n] > Quality to set the video quality parameter to Motion.

You can read more about the video settings in the ► System settings chapter.

Typical resolutions used for different optimal definition profiles, call rates and frame rates

<table>

* The resolution will be 1280×720 for older codecs without 1080p60 support.
Packet loss resilience - ClearPath

ClearPath introduces several mechanisms for advanced packet loss resilience. These mechanisms increase the experienced quality when you use your video system in an error prone environment.

ClearPath is a Cisco proprietary protocol. All endpoints running TC software support ClearPath.

If the involved endpoints and infrastructure elements support ClearPath, all packet loss resilience mechanisms are used in point-to-point connections. Only some of the mechanisms are supported when using the optional built-in MultiSite feature.
Requirement for speaker systems connected to a C Series codec

Cisco has put in a lot of effort to minimize the camera to screen delay on our TelePresence endpoints.

New consumer TVs are usually equipped with “Motion Flow” or similar technology to insert new video frames between standard frames to create smoother images. This processing takes time and to maintain lip synchronization, the TV will delay the audio so that the audio and video arrives at the same time.

The echo canceller in the Cisco endpoints can handle such delay up to 30 ms. Many consumer TVs are not made for real-time video communication and may introduce more than 30 ms of delay.

If you use such a TV together with a C Series codec it is recommended that you turn off “Motion Flow”, “Natural Motion” or any other video processing that introduces additional delay.

Some consumer TVs also support advanced audio processing like “Virtual Surround” effects and “Dynamic Compression” to improve the TV experience. Such processing will make any acoustic echo canceller malfunction and should hence be switched off.

Some monitors are equipped with a setting called ‘Game Mode’. This mode is specifically designed to help reduce the response time and will usually help to reduce the delay.
The video input matrix

The video input matrix is found at the rear side of the codec and illustrates the combinations in which the video inputs can be connected.

About the matrix

Only one video input source from each row can be active at any time. The basic setup connectors are marked in **bold**.

The numbers in the left column represents the Video Input Sources 1–5. The main connectors, which are used in basic setup, are marked in orange color.

The Comp. 5 and S-Video (YC) 5 inputs uses the same physical connectors and can not be connected at the same time.

Configuring the video inputs

Go to Advanced configuration (menu on screen) or open the System Configuration page (web interface) to configure the video inputs.

Navigate to **Video > Input > Source [1–5]** and configure the five video input sources.

- **Name**: "" (enter a name, and save)
- **Connector**: <HDMI/HD-SDI/DVI/YC/Composite/YPrPb>
  (each input source’s value space is a subset of this)
- **Quality**: <Motion/Sharpness>

Navigate to **Video > MainVideoSource** and **Video > DefaultPresentationSource** to set the main video source and the default presentation source for the system. The values <1..5> represents the corresponding video input source [1–5].

Default configurations

- Video Input Source 1 Name: "Main Camera"
- Video Input Source 2 Name: "Secondary Camera"
- Video Input Source 3 Name: "PC"
- Video Input Source 4 Name: "DVD"
- Video Input Source 5 Name: "Document Camera"
- Video Input Source 1 Connector: HDMI
- Video Input Source 2 Connector: HDMI
- Video Input Source 3 Connector: DVI
- Video Input Source 4 Connector: HDMI
- Video Input Source 5 Connector: DVI
- Video Input Source 1 Quality: Motion
- Video Input Source 2 Quality: Motion
- Video Input Source 3 Quality: Sharpness
- Video Input Source 4 Quality: Motion
- Video Input Source 5 Quality: Sharpness
- Video MainVideoSource: 1 (which is the main camera)
- Video DefaultPresentationSource: 3 (which is the PC)
DNAM for Profile 65”

The DNAM (Digital Natural Audio Module) is built on two specially designed and separate modules: the amplifier and the loudspeaker cabinet.

The DNAM loudspeaker

3-way center loudspeaker system
- Frequency range 50 Hz – 20 kHz
- 2 × 100 mm low- and midrange loudspeakers, 8 ohm nominal, reference quality (SEAS Excel series)
- 1 × 25 mm dome tweeter, 6 ohm nominal, excellent quality
- Digitally filtered audio signals received from DNAM amplifier
- Long time max power 70 watt on all loudspeakers
- Enclosed MDF loudspeaker cabinet

2-way integrated stereo loudspeaker
Each side has:
- 1 × 100 mm low- and midrange loudspeaker, 8 ohm nominal, reference quality (SEAS Excel series)
- 1 × 25 mm dome tweeter, 6 ohm nominal, excellent quality
- Passive crossover filter
- Frequency range 70 Hz – 20 kHz
- Long time max power 70 watt
- Enclosed MDF loudspeaker cabinet

The DNAM amplifier
- 5 × 50 watt continuous average output power
- Full frequency range for audio (20 Hz – 20 kHz)
- Digital signal processing and filtering on all channels for best audio detail clarity
- Digital crossover filtering on center channels
- In/out:
  - Audio In: SPDIF (stereo) or Analog (mono) using the same connector
  - Audio Loop Out: line out directly from the input; always analog even with SPDIF in
  - Audio Stereo Out: male XLR, common GND configuration
  - Loudspeaker Out: female D-SUB 15-pin
- Fuse 2 A 250 V slow, 5 × 20 mm, Littelfuse type 215002

Always use this type of fuse. Using a different type may lead to serious hardware malfunction.

Spare fuses
The Profile system is delivered with two spare DNAM fuses in the column.
Take care not to damage the fuse and fuse holder when replacing a fuse.
- Push the fuse holder slightly inwards and turn counter-clockwise to release the fuse.
- When reinserting the fuse and fuse holder, push slightly inwards and turn the holder carefully clockwise until it locks in place.
It is not possible to undo a factory reset.

You should always backup the log files and the current configuration before you factory reset a system. Open the web interface, sign in, and follow these steps:

- Navigate to Maintenance > System Recovery and choose the Backup tab.
- Click Download Logs and Download Configuration Backup and follow the instructions to save the files on your computer.

Using the serial interface

You have to connect to the video system’s COM port with a serial cable. The serial port is enabled as a default, but it may have been disabled.

The connection parameters for the COM port are as follows:

- Data bits: 8
- Parity: None
- Stop bits: 1
- Flow control: None
- Baud rate: The default value is 38400 bps, but it may have been changed

You can read more about the system’s serial port settings in the System settings chapter.

1. Login as admin (administrator rights).
2. Issue the following command:
   ```bash
   xCommand SystemUnit FactoryReset Confirm: Yes
   ```
   You will see the following text:
   ```bash
   *r FactoryResetResult: ***end
   0K
   ```
   The system will revert to the default factory settings and automatically restart. This will take a few minutes.
   The system confirms the factory reset by displaying a notification on the main screen when up and running again. The notification disappears after approximately 10 seconds.

* The Settings menu can be accessed from the drop down window that appears when you tap the contact information in the upper, left corner of the Touch controller.

If there is a severe problem with the video system, resetting it to its default factory settings should be the last resort.

Always consider reverting to the previously used software version before performing a factory reset. In many situations this will recover the system. Note that both the current and the previous software images reside on the system. Read about software swapping in the Reverting to the previously used software version section.

We recommend that you use either a Touch controller or the web interface to factory reset the system. If these interfaces are not available, you can connect to the system’s standard serial interface and issue a factory reset command.

The remote control and on-screen menu do not give access to factory reset.

When factory resetting the video system the following happens:

- The call logs will be deleted.
- Passwords will be reset to default.
- All system parameters will be reset to default values.
- All files that have been uploaded to the system will be deleted. This includes, but is not limited to, custom backgrounds, certificates, and the favorites list (My contacts).
- The previous (inactive) software image will be deleted.
- Release keys and option keys will not be affected.

The system restarts automatically after the reset. It is using the same software image as before.

Factory resetting the codec

User interface: Touch

1. Tap gently on the Touch screen if the unit is in sleep mode.
2. Open the Settings menu and navigate to Administrator > Reset. You have to log in with an administrator user name and password to access the Administrator menu.
3. Tap the Factory Reset button.
   - The system reverts to the default factory settings and restarts automatically. This will take a few minutes.
   - The system confirms the factory reset by displaying a notification on the main screen when up and running again. The notification disappears after approximately 10 seconds.

User interface: Web

Open the Settings menu and tap System Information on the Touch controller, or navigate to Home > Settings > System information using the remote control, to find the system’s IP address (IPv4 or IPv6).

1. Open a web browser and enter the IP address of the video system in the address bar.
3. Read the provided information carefully before you click Perform a factory reset...
4. Click the red Yes button to confirm that you want to perform a factory reset.
   - The system reverts to the default factory settings and restarts automatically. This will take a few minutes.
   - The system confirms the factory reset by displaying a notification on the main screen when up and running again. The notification disappears after approximately 10 seconds.

Using the serial interface

You have to connect to the video system’s COM port with a serial cable. The serial port is enabled as a default, but it may have been disabled.

The connection parameters for the COM port are as follows:

- Data bits: 8
- Parity: None
- Stop bits: 1
- Flow control: None
- Baud rate: The default value is 38400 bps, but it may have been changed

You can read more about the system's serial port settings in the System settings chapter.

1. Login as admin (administrator rights).
2. Issue the following command:
   ```bash
   xCommand SystemUnit FactoryReset Confirm: Yes
   ```
   You will see the following text:
   ```bash
   *r FactoryResetResult: ***end
   0K
   ```
   The system will revert to the default factory settings and automatically restart. This will take a few minutes.
   The system confirms the factory reset by displaying a notification on the main screen when up and running again. The notification disappears after approximately 10 seconds.

* The Settings menu can be accessed from the drop down window that appears when you tap the contact information in the upper, left corner of the Touch controller.
Factory resetting the Touch 8 controller

You can reset the Touch 8 controller to its default factory settings using the New message indicator and the Mute button.

When factory resetting Touch 8 the logs are cleared, and the configuration and pairing information are lost.

Touch 8 restarts after the reset and must receive a new configuration from the video system.

- If Touch 8 is directly connected to the video system it receives the configuration automatically.
- If it is connected via LAN it receives the new configuration as soon as it is successfully paired to the video system.

It is not possible to undo a factory reset.

1. Locate the New message indicator and Mute buttons. The New message indicator is a bit hard to see, but it is the button with the exclamation mark on it.

2. Press and hold the New message indicator until it lights up (approximately 10 seconds).

3. Press the Mute button twice. The Touch controller automatically reverts to the default factory settings and restarts.
Technical specifications for Codec C90

UNIT DELIVERED COMPLETE WITH:
- Video conferencing codec, wireless remote control, rack mounting rails, LAN cable, power cable

BANDWIDTH
- H.323/SIP up to 6 Mbps point-to-point

FIREWALL TRAVERSAL
- Cisco TelePresence Expressway technology
- H.460.18, H.460.19 firewall traversal
- SIP ICE (Interactive Connectivity Establishment)

VIDEO STANDARDS
- H.264
- H.263+
- H.263
- H.261

VIDEO INPUTS (13 INPUTS)

Four HDMI inputs (version 1.3); supported formats:
- 1920 x 1080@60 Hz (1080p60)
- 1920 x 1080@25 Hz (1080p25)
- 1280 x 720@60 Hz (720p60)
- 1280 x 720@50 Hz (720p50)
- 1280 x 720@30 Hz (720p30)
- 1280 x 720@25 Hz (720p25)

Two DVI-I inputs; supported formats:
- Analog (VGA):
  - 1920 x 1080@60 Hz (1080p60)
  - 1280 x 720@60 Hz (720p60)
  - 1280 x 1024@60, 75 Hz (SXGA)
  - 1280 x 960@60 Hz
  - 1024 x 768@60, 70, 75, 85 Hz (XGA)
  - 1920 x 1200@60 Hz (WUXGA)
  - 1680 x 1050@60 Hz (WSXGA+)
  - 1440 x 900@60 Hz (WXGA+)
  - 1280 x 800@60 Hz (WXGA)

Analog (YPbPr):
- 1920 x 1080@60 Hz (1080p60)
- 1280 x 1024@60, 75 Hz (SXGA)
- 1024 x 768@60, 70, 75, 85 Hz (XGA)
- 1920 x 1200@60 Hz (WUXGA)
- 1680 x 1050@60 Hz (WSXGA+)
- 1440 x 900@60 Hz (WXGA+)
- 1280 x 800@60 Hz (WXGA)

Digital (DVI-D):
- Same as HDMI, ref. above.

Two YPbPr inputs (BNC connectors); supported formats:
- Same as DVI-I, Analog (YPbPr), ref. above.

1 x S-Video/Composite input (BNC connector):
- PAL/NTSC

Extended Display Identification Data (EDID)

VIDEO OUTPUTS (5 OUTPUTS)

Two HDMI outputs (version 1.3), two DVI-I outputs; supported formats:
- 1920 x 1080@60 Hz (1080p60)
- 1280 x 720@60 Hz (720p60)
- 1600 x 1200@60 Hz (UXGA)
- 1280 x 1024@60 Hz (SXGA)
- 1024 x 768@60 Hz (XGA)
- 800 x 600@60 Hz (SVGA)
- 640 x 480@60 Hz (VGA)
- 1920 x 1200@60 Hz (WUXGA)
- 1360 x 768@60 Hz
- 1366 x 768@60 Hz
- 1280 x 768@60 Hz (WXGA)

One composite output (BNC connector), supported formats:
- PAL/NTSC
- VESA Monitor Power Management
- Extended Display Identification Data (EDID)

LIVE VIDEO RESOLUTIONS (ENCODE/DECODE)
- 176 x 144@30 fps (QCIF)
- 352 x 288@30 fps (CIF)
- 512 x 288@30 fps (w288p)
- 576 x 448@30 fps (w448p)
- 720p60 from 1152 kbps*
- 720@60 fps (720p60)*
- 576@60 fps (w576p60)*
- 448@60 fps (w448p60)*
- 288@60 fps (w288p60)*
- 256@60 fps (w256p60)*
- 128@60 fps (w128p60)*

R equires option

AUDIO STANDARDS
- G.711
- G.722.1
- G.722
- G.728
- G.729AB
- 64 kbps and 128 kbps AAC-LD, mono and stereo

AUDIO FEATURES
- CD quality 20kHz mono and stereo
- Eight separate acoustic echo cancellers
- 8-port audio mixer
- Automatic gain control (AGC)
- Automatic noise reduction
- Active lip synchronization

AUDIO INPUTS (14 INPUTS)
- Eight microphones, 48V phantom powered, XLR connector, each with separate echo cancellers and noise reduction; all microphones can be set for balanced line level
- Two RCA/Phono inputs, line level: Stereo PC input
- Two RCA/Phono inputs, line level: Stereo auxiliary/ DVD input
- Two HDMI inputs, digital: Stereo PC/DVD inputs

AUDIO OUTPUTS (8 OUTPUTS)
- Two XLR outputs, balanced line level, stereo main audio
- Two RCA/Phono outputs, line level, stereo main audio, configurable to SD/HD
- Two RCA/Phono outputs, line level, stereo to recording device
- One HDMI output, digital, stereo main audio
- One HDMI output, digital, stereo to recording device

---

* Requires option
**DUAL STREAM**
- H.239 (H.323) dual stream
- BFSCP (SIP) dual stream
- Available in MultiSite from any site
- Support for resolutions up to 1080p30/WUXGA

**MULTIPLEX SUPPORT**
- Four-way embedded SIP/H.323 MultiPoint, ref. MultiSite
- Cisco TelePresence Multiway support (requires Cisco TelePresence Video Communication Server [Cisco VCS] and Cisco TelePresence MCU)
- Ability to natively join multipoint conferences hosted on Cisco Telepresence MultiPoint Switch (CTMS)

**MULTISITE FEATURES**
- Four-way SIP/H.323 MultiSite; resolution up to 1080p30
- Full individual audio and video transcoding
- Individual layouts in multisite continuous presence (takes out selfview)
- H.323/SIP/ VoIP in the same conference
- Support for Presentation (H.239/BFCP) from any participant at resolutions up to 1080p30/WUXGA
- Best Impression (automatic continuous presence layouts)
- H.264, encryption, dual stream from any site
- IP Downspeeding
- Dial in and dial out
- Additional telephone call (no license required)
- Conference rates up to 10 Mbps

**PROTOCOLS**
- H.323 and SIP (dual call stack support)
- ISDN (requires Cisco TelePresence ISDN Link)

**EMBEDDED ENCRYPTION**
- H.323/SIP point-to-point and multipoint calls
- Standards-based: H.235v3 and Advanced Encryption Standard (AES)
- Automatic key generation and exchange
- Supported in Dual Stream and MultiSite

**IP NETWORK FEATURES**
- DNS lookup for service configuration
- Differentiated Services (QoS)
- IP adaptive bandwidth management (including flow control)
- Auto gatekeeper discovery
- Dynamic playout and lip-sync buffering
- H.245 DTMF tones in H.323
- Date and time support via NTP
- Packet loss based downsampling
- URI Dialing
- TCP/IP
- DHCP
- 802.1x Network authentication
- 802.1Q VLAN
- 802.1p QoS and class of service
- ClearPath
- Mediatrace and Metadata

**IPV6 NETWORK SUPPORT**
- Dual-stack IPv4 and IPv6 for DHCP, SSH, HTTP, HTTPS, DNS, DiffServ
- Support for static IP address assignment, stateless autoconfiguration and DHCPv6

**CISCO UNIFIED COMMUNICATIONS MANAGER**
(requires Cisco UCM version 8.6 or later)
- Native registration with Cisco Unified Communications Manager
- Basic Cisco Unified Communications Manager provisioning
- Firmware upgrade from Cisco Unified Communications Manager
- Cisco Discovery Protocol and DHCP option 150 support
- Basic telephony features such as hold, resume, transfer, and corporate directory lookup

**SECURITY FEATURES**
- Management through HTTPS and SSH
- IP administration password
- Menu administration password
- Disable IP services
- Network settings protection

**NETWORK INTERFACES**
- One LAN/Ethernet (RJ-45) 10/100/1000 Mbit
- One LAN/Ethernet (RJ-45) interface to be used for the touch user interface device only

**OTHER INTERFACES**
- USB host for future usage
- USB device for future usage
- GPIO – General purpose input/output

**SYSTEM MANAGEMENT**
- Support for the Cisco TelePresence Management Suite (Cisco TMS)
- Total management through embedded SNMP, Telnet, SSH, XML, SOAP
- Remote software upload through web server, SCP, HTTP, HTTPS
- One RS-232 local control and diagnostics
- Remote control and on-screen menu system

**DIRECTORY SERVICES**
- Support for local directories (My Contacts)
- Corporate directory
- Unlimited entries using server directory supporting LDAP and H.350 (requires Cisco TMS)
- Unlimited number for corporate directory (through Cisco TMS)
- Received calls with date and time
- Placed calls with date and time
- Missed calls with date and time

**PRECISIONHD CAMERA (1080P)**
- 1/3” CMOS
- 12 x zoom
- +15°/-25° tilt, +/- 90° pan
- 43.5° vertical field of view
- 72° horizontal field of view
- Focus distance 0.3m-infinity
- 1920 x 1080 pixels progressive @ 60fps
- Focus distance 0.3m-infinity
- Other formats supported (configurable through dip-switch):
  - 1920 x 1080@60 Hz (HDMI only)
  - 1920 x 1080@50 Hz (HDMI only)
  - 1920 x 1080@30 Hz
  - 1920 x 1080@25 Hz
  - 1280 x 720@60 Hz
  - 1280 x 720@50 Hz
  - 1280 x 720@30 Hz
  - 1280 x 720@25 Hz
- Automatic or manual focus/brightness/whitebalance
- Far-end camera control
- Daisy-chain support (Visca protocol camera)
- Dual HDMI and HD-SDI output
- Upside-down mounting with automatic flipping of picture

**POWER**
- Auto-sensing power supply
- 100-240 VAC, 60/50 Hz
- Power consumption under normal operating conditions as defined in IEC 60950-1: 112 W

**OPERATING TEMPERATURE AND HUMIDITY**
- 0° C to 35° C (32° F to 95° F) ambient temperature
- 10% to 90% relative humidity (RH)

**STORAGE AND TRANSPORT TEMPERATURE**
- -20° C to 60° C (-4° F to 140° F) at RH 10–90%
- Non-condensing

**DIMENSIONS**
- Length: 17.36 in. / 44.1 cm
- Height: 3.67 in. / 9.3 cm
- Depth: 11.8 in. / 30 cm
- Weight: 11.22 lbs / 5.1 kg

APPROVALS

EU/EEC
- Directive 2006/95/EC (Low Voltage Directive)
  - Standard EN60950-1
  - Standard EN55022, Class A
  - Standard EN55024
  - Standard EN61000-3-2/3-3
- Directive 2011/65/EU (RoHS)
Warning: This is a class A product. In a domestic environment this product may cause radio interference in which case the user may be required to take adequate measures.

USA
- Approved according to UL60950-1
- Complies with FCC15B Class A
Note: This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference in which case the user will be required to correct the interference at his own expense.

Canada
- Approved according to CAN/CSA C22.2 No. 60950-1
- This Class A digital apparatus complies with Canadian ICES-003
- Cet appareil numérique de la classe A est conforme à la norme NMB-003 du Canada

MTBF PRODUCT RELIABILITY/MTBF
The predicted reliability is expressed in the expected random Mean Time Between Failures (MTBF) for the electronic components based on the Power On Hours:
Power On Hours (POH) > 69 000 hours
Useful Life Cycle > 6 years
ISO 9001 certificate is available upon request
**Technical specifications for Profile 65” Dual**

**UNIT DELIVERED COMPLETE WITH:**
Full HD LCD Display, Codec C90, PrecisionHD Camera (1080p), Touch 8 user interface device, remote control, microphones, Digital Audio Module, integrated speakers and cabling

July 2014
Supported RFCs

The RFC (Request for Comments) series contains technical and organizational documents about the Internet, including the technical specifications and policy documents produced by the Internet Engineering Task Force (IETF).

Current RFCs and drafts supported

- RFC 2190 RTP Payload Format for H.263 Video Streams
- RFC 2460 Internet protocol, version 6 (IPv6) specification
- RFC 2617 Digest Authentication
- RFC 2782 DNS RR for specifying the location of services (DNS SRV)
- RFC 2976 The SIP INFO Method
- RFC 3016 RTP Payload Format for MPEG-4 Audio/Visual Streams
- RFC 3261 SIP: Session Initiation Protocol
- RFC 3262 Reliability of Provisional Responses in SIP
- RFC 3263 Locating SIP Servers
- RFC 3264 An Offer/Answer Model with SDP
- RFC 3311 UPDATE method
- RFC 3361 DHCP Option for SIP Servers
- RFC 3388 Grouping of Media Lines in the Session Description Protocol (SDP)
- RFC 3420 Internet Media Type message/sipfrag
- RFC 3515 Refer method
- RFC 3550 RTP: A Transport Protocol for Real-Time Applications
- RFC 3551 RTP Profile for Audio and Video Conferences with Minimal Control
- RFC 3581 Symmetric Response Routing
- RFC 3605 RTCP attribute in SDP
- RFC 3711 The Secure Real-time Transport Protocol (SRTP)
- RFC 3840 Indicating User Agent Capabilities in SIP
- RFC 3890 A Transport Independent Bandwidth Modifier for SDP
- RFC 3891 The SIP “Replaces” Header
- RFC 3892 Referred-By Mechanism
- RFC 3960 Early Media
- RFC 3986 Uniform Resource Identifier (URI): Generic Syntax
- RFC 4028 Session Timers in SIP
- RFC 4091 The Alternative Network Address Types (ANAT) Semantics for the Session Description Protocol (SDP) Grouping Framework
- RFC 4092 Usage of the Session Description Protocol (SDP) Alternative Network Address Types (ANAT) Semantics in the Session Initiation Protocol (SIP)
- RFC 4145 TCP-Based Media Transport in the SDP
- RFC 4235 An INVITE-Initiated Dialog Event Package for the Session Initiation Protocol (SIP)
- RFC 4566 SDP: Session Description Protocol
- RFC 4568 SDP: Security Descriptions for Media Streams
- RFC 4574 The Session Description Protocol (SDP) Label Attribute
- RFC 4582 The Binary Floor Control Protocol draft-ietf-bfcpsbis-rfc4582bis-00 Revision of the Binary Floor Control Protocol (BFCP) for use over an unreliable transport
- RFC 4583 Session Description Protocol (SDP) Format for Binary Floor Control Protocol (BFCP) Streams draft-ietf-bfcpsbis-rfc4583bis-00 Session Description Protocol (SDP) Format for Binary Floor Control Protocol (BFCP) Streams
- RFC 4585 Extended RTP Profile for RTCP-Based Feedback
- RFC 4587 RTP Payload Format for H.261 Video Streams
- RFC 4629 RTP Payload Format for ITU-T Rec. H.263 Video
- RFC 4733 RTP Payload for DTMF Digits, Telephony Tones and Telephony Signals
- RFC 4796 The SDP Content Attribute
- RFC 4862 IPv6 stateless address autoconfiguration
- RFC 5104 Codec Control Messages in the RTP Audio-Visual Profile with Feedback (AVPF)
- RFC 5168 XML Schema for Media Control
- RFC 5245 Interactive Connectivity Establishment (ICE): A Protocol for Network Address Translator (NAT) Traversal for Offer/Answer Protocols
- RFC 5389 Session Traversal Utilities for NAT (STUN)
- RFC 5577 RTP Payload Format for ITU-T Recommendation G.722.1
- RFC 5589: SIP Call Control Transfer
- RFC 5626 Managing Client-Initiated Connections in the Session Initiation Protocol (SIP)
- RFC 5766 Traversal Using Relays around NAT (TURN): Relay Extensions to Session Traversal Utilities for NAT (STUN)
- RFC 5768 Indicating Support for Interactive Connectivity Establishment (ICE) in the Session Initiation Protocol (SIP)
- RFC 6156 Traversal Using Relays around NAT (TURN) Extension for IPv6
- RFC 6184 RTP Payload Format for H.264 Video
User documentation on the Cisco web site

In general, user documentation for the Cisco TelePresence products is available here:

► http://www.cisco.com/go/telepresence/docs

You have to choose your product category in the right pane until you find your product. Follow one of these paths:

TelePresence Integration Solutions >
Cisco TelePresence Integrator C Series

Collaboration Room Endpoints >
Cisco TelePresence Profile Series

Alternatively, you can use the following short-links to find the documentation:

► http://www.cisco.com/go/cseries-docs
► http://www.cisco.com/go/profile-docs

The documents are organized in the following categories:

**Installation guides:**
Install and Upgrade > Install and Upgrade Guides

**Getting started guide:**
Install and Upgrade > Install and Upgrade Guides
Maintain and Operate > Maintain and Operate Guides

**Administrator guides:**
Maintain and Operate > Maintain and Operate Guides

**User guides and Quick reference guides:**
Maintain and Operate > End-User Guides

**API reference guides:**
Reference Guides / Command references

**Knowledge base articles and frequently asked questions:**
Troubleshoot and Alerts > Troubleshooting Guides

**Physical interface guides:**
Maintain and Operate | End-User Guides

**CAD drawings:**
Reference Guides > Technical References

**TC Console user guide:**
Configure > Configuration Guides

**Video conferencing room guidelines:**
Design > Design Guides

**Software licensing information:**
Software Downloads, Release and General Information > Licensing Information

**Regulatory compliance and safety information:**
Install and Upgrade > Install and Upgrade Guides

**Software release notes:**
Software Downloads, Release and General Information > Release Notes
Intellectual property rights

THE SPECIFICATIONS AND INFORMATION REGARDING THE PRODUCTS IN THIS MANUAL ARE SUBJECT TO CHANGE WITHOUT NOTICE. ALL STATEMENTS, INFORMATION, AND RECOMMENDATIONS IN THIS MANUAL ARE BELIEVED TO BE ACCURATE BUT ARE PRESENTED WITHOUT WARRANTY OF ANY KIND, EXPRESS OR IMPLIED. USERS MUST TAKE FULL RESPONSIBILITY FOR THEIR APPLICATION OF ANY PRODUCTS.

THE SOFTWARE LICENSE AND LIMITED WARRANTY FOR THE ACCOMPANYING PRODUCT ARE SET FORTH IN THE INFORMATION PACKET THAT SHIPPED WITH THE PRODUCT AND ARE INCORPORATED HEREIN BY THIS REFERENCE. IF YOU ARE UNABLE TO LOCATE THE SOFTWARE LICENSE OR LIMITED WARRANTY, CONTACT YOUR CISCO REPRESENTATIVE FOR A COPY.

The Cisco implementation of TCP header compression is an adaptation of a program developed by the University of California, Berkeley (UCB) as part of UCB’s public domain version of the UNIX operating system. All rights reserved. Copyright © 1981, Regents of the University of California.

NOTWITHSTANDING ANY OTHER WARRANTY HEREIN, ALL DOCUMENT FILES AND SOFTWARE OF THESE SUPPLIERS ARE PROVIDED “AS IS” WITH ALL FAULTS. CISCO AND THE ABOVE-NAMED SUPPLIERS DISCLAIM ALL WARRANTIES, EXPRESSED OR IMPLIED, INCLUDING, WITHOUT LIMITATION, THOSE OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE AND NONINFRINGEMENT OR ARISING FROM A COURSE OF DEALING, USAGE, OR TRADE PRACTICE.

IN NO EVENT SHALL CISCO OR ITS SUPPLIERS BE LIABLE FOR ANY INDIRECT, SPECIAL, CONSEQUENTIAL, OR INCIDENTAL DAMAGES, INCLUDING, WITHOUT LIMITATION, LOST PROFITS OR LOSS OR DAMAGE TO DATA ARISING OUT OF THE USE OR INABILITY TO USE THIS MANUAL, EVEN IF CISCO OR ITS SUPPLIERS HAVE BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

Any Internet Protocol (IP) addresses and phone numbers used in this document are not intended to be actual addresses and phone numbers. Any examples, command display output, network topology diagrams, and other figures included in the document are shown for illustrative purposes only. Any use of actual IP addresses or phone numbers in illustrative content is unintentional and coincidental.

All printed copies and duplicate soft copies are considered uncontrolled copies and the original on-line version should be referred to for latest version.

Cisco has more than 200 offices worldwide. Addresses, phone numbers, and fax numbers are listed on the Cisco website at www.cisco.com/go/offices.
