ADMINISTRATOR GUIDE

- MX300
- MX200
Thank you for choosing Cisco!

Your Cisco product has been designed to give you many years of safe, reliable operation.

This part of the product documentation is aimed at administrators working with the setup of the MX200.

Our main objective with this Administrator guide is to address your goals and needs. Please let us know how well we succeeded!

May we recommend that you visit the Cisco web site regularly for updated versions of this guide.

The user documentation can be found on http://www.cisco.com/go/telepresence/docs.

How to use this guide

The top menu bar and the entries in the Table of contents are all hyperlinks. You can click on them to go to the topic.
Chapter 1
Introduction

Any use of actual IP addresses or phone numbers in illustrative content is unintentional and coincidental.

TANDBERG is now a part of Cisco. TANDBERG® is a registered trademark belonging to Tandberg ASA.
This document provides you with the information required to administrate your product at an advanced level.

How to install the product and the initial configurations required are described in the Installation guide and Getting started guide, respectively.

**Products covered in this guide**
- Cisco TelePresence MX300
- Cisco TelePresence MX200

**User documentation**
The user documentation for the Cisco TelePresence systems running the TC software includes several guides suitable for various user groups.
- Video conference room primer
- Video conference room acoustics guidelines
- Installation guides
- Getting started guide for the Cisco TelePresence systems
- Software release notes for the TC software
- User guide for the TelePresence systems (with Touch controller)
- Quick reference guides for the TelePresence systems
- Administrator guides
- Regulatory compliance and safety information guide
- Legal & license information for products using TC software

**Downloading the user documentation**
We recommend you visit the Cisco web site regularly for updated versions of the user documentation.

Go to: [http://www.cisco.com/go/telepresence/docs](http://www.cisco.com/go/telepresence/docs).

Guidelines how to find the documentation on the Cisco web site are included in the *User documentation on the Cisco web site* appendix.

**Software**
You can download the software for your product from the Cisco web site, go to:

**Cisco contacts**
On our web site you will find an overview of the worldwide Cisco contacts.

Go to: [http://www.cisco.com/web/siteassets/contacts](http://www.cisco.com/web/siteassets/contacts)

Corporate Headquarters
Cisco Systems, Inc.
170 West Tasman Dr.
San Jose, CA 95134 USA
What's new in this version

This section provides an overview of the new and changed advanced settings and new features in the TC5.0 software version.

Software release notes
For a complete overview of the news and changes, we recommend reading the Software Release Notes (TC5).

Software download
For software download go to:  ➤ http://www.cisco.com/cisco/software/navigator.html

New features and improvements

Support for native Cisco UCM registration
With TC5 the video systems are able to register to the Cisco Unified Communications Manager (UCM) version 8.6 as a native Cisco device. Supported features are:

• Basic telephony features like call, hold/resume, transfer
• Cisco UCM provisioning
• Cisco UCM phonebook
• Software upgrade

Encrypted calls are not supported.

Support for Cisco TelePresence Multipoint Switch (CTMS)
In TC5 interoperability with CTMS version 1.8 is achieved. The following features are supported:

• Multisite conferences hosted on CTMS
• Unrestricted 720p/1080p conferences (unrestricted 1080p is not available when there is a CTS system in the conference)
• H.264 GDR (Gradual Decoder Refresh)
• Legacy stream (CIF/360p) to WebEX and MXE
• Informational Black Screen Codes

Encryption is not supported. CTMS calls must be SIP only.

Support for One Button To Push (OBTP) meetings
Both the Touch controller and the OSD (On Screen Display) menu will display scheduled OBTP meetings from CTS-MAN (version 1.8 or later) or TelePresence Management Suite (TMS, version 13.1 or later). Supported features are:

• A reminder for scheduled meetings will appear on screen. Press one button to start the meeting
• Press the Meetings button to see a list of all scheduled meetings
• WebEx indication
• Meeting extension if the meeting is booked using CTS-MAN

Web interface enhancements
New call application with support for:

• Making calls and start/stop presentation
• Selecting source for both main source and presentation
• Volume control
• Microphone mute
• Local camera control including preset selection
• Layout control
• Diagnostics information
• Web snapshots of any local source

Cisco Touch enhancements
The user interface has been changed:

• Call rate button. If changed from default, the new call rate is displayed on the button
• Meetings button on the main menu
• Possibility to enable/disable web snapshots.
• Local camera control, including preset selection

New languages supported:
• Finnish
• French
• German
• Japanese
• Russian
• Simplified Chinese
• Swedish

Software upgrade from TMS Agent/Cisco VCS
When using large scale provisioning, the TMS Agent (requires TMS 13.1) now supports software upgrade. The upgrade is initiated from the TMS GUI, but the upgrade itself will be done by the TMS Agent running on a Cisco VCS.
Other enhancements

- Local presentation only mode (the presentation is only displayed locally; it is not sent to the remote sites)
- One more phone call in addition to the number of video calls allowed
- FIPS (The Federal Information Processing Standards) mode is introduced to facilitate FIPS 140-2 certification

Advanced configuration menu changes

**New settings**
- Conference [1..1] Presentation Policy
- Experimental SystemUnit CrashReporting Mode
- Experimental SystemUnit CrashReporting URI
- Experimental CTMSSupport Mode
- Experimental PacketOverloadHandling WhenDetected
- Network [1..1] IEEE8021X TlsVerify
- Network [1..1] IEEE8021X UseClientCertificate
- Network [1..1] IEEE8021X Eap Tls
- Provisioning Connectivity
- UserInterface TouchPanel DefaultPanel
- Video AllowWebSnapshots

**Settings that are removed**
- Experimental Video OSD AlertOnIncomingCall
- Experimental Audio Panning Mode
- Experimental Audio Panning MaxAngle
- Experimental Audio Panning MonitorLeft
- Experimental Audio Panning MonitorRight
- Network VLAN Voice Priority
- Network VLAN Data Mode
- Network VLAN Data VlanId
- Network VLAN Data Priority
- SystemUnit MenuType

**Settings that are modified**

- Network [1..1] VLAN Voice Mode
  - OLD: <Manual/Off>
  - NEW: <Auto/Manual/Off>
- Phonebook Server [1..1] Type
  - OLD: <VCS/TMS/CallWay>
  - NEW: <VCS/TMS/CallWay/CUCM>
- Provisioning Mode
  - OLD: <Off/TMS/VCS/CallWay/Auto>
  - NEW: <Off/TMS/VCS/CallWay/CUCM/Auto>
Cisco TelePresence MX Series at a glance

The Cisco TelePresence® MX Series makes telepresence more accessible to teams everywhere with ready-to-use simplicity and high quality. This highly integrated telepresence system is easy to install, so you can quickly transform any meeting space into a video-enabled team room. Whether you are just getting started with video communications or implementing a large-scale deployment, the Cisco TelePresence MX Series delivers high quality performance in a simple and intuitive way.

Features and benefits

- The systems are easy to install – one piece plus floor stand, table stand (MX200 only), or wall mount brackets (VESA mount).
- The systems are self-configuring with Cisco Unified Communications Manager (UCM), Cisco TelePresence Video Communication Server (VCS), or Cisco Callway provisioning. All you need is to authenticate your endpoint to the network.
- PrecisionHD camera with pan, tilt, and 4x optical zoom helps ensure optimal framing and video clarity.
- Dedicated camera presets provide flexibility and easy viewing for any meeting scenario.
- The 8-inch Touch interface offers simple control.
- Simple one-button-to-push calling integrates with common calendar programs.
- Video resolutions of 1080p30 and 720p60 bring telepresence experience to any meeting room or office.
- The high-quality 42-inch (MX200) and 55-inch (MX300) displays with 1920 x 1080 resolution enable clear images.
- You can easily connect and share your PC content at WXGA and 720p30 resolution and frame rate.
- The systems support H.323 and Session Initiation Protocol (SIP) with bandwidth up to 6 Mbps point-to-point.
- Two front speakers provide superior audio quality.
- The systems are standards-based.
- Capabilities for large conferences and transparent escalation from point-to-point to multipoint calls using the Cisco TelePresence Multiway™ technology.
Cisco TelePresence MX Series at a glance (continued)

**Cisco TelePresence MX Series**

**Administrator Guide**

- **Internal microphone**
- **Precision HD camera**
- **Codec embedded in video unit**
- **Front view**
- **Touch controller**
- **MX200: 1 external microphone (+ 1 optional)**
- **MX300: 2 external microphones**
- **MX200: 42" LCD monitor**
- **MX300: 55" LCD monitor**
- **Loudspeakers**
- **MX200 mounting options**
  - (floor stand, table stand, wall mount)
- **MX300 mounting options**
  - (floor stand, wall mount)
Chapter 2

The web interface
Starting the web interface

The web interface provides full configuration access to your video conference system.

You can connect from a computer and administer the system remotely.

In the following you will find information how to use the web interface for system configuration and maintenance.

1. Connect to the video system

Open a web browser and enter the IP address of the video system in the address bar.

To find the IP address (IPv4 or IPv6), tap More > Settings > System Information on a Touch controller; or navigate to Home > Settings > System Information when using a remote control and the on-screen menu.

2. Sign in

Enter the user name and password for your video system and click Sign In.

The system is delivered with a default user named admin with no password (i.e. leave the Password field blank when signing in for the first time).

NOTE: We strongly recommend that you set a password for the admin user to restrict access to system configuration, see the next page.

Sign out

Click on your user name and select Sign out from the drop down menu.
Changing the system/codec password

You sign in to the web interface with the same user name and password as for the video conference system.

**NOTE:** We strongly recommend that you set a password for the default admin user, and any other users with ADMIN rights, to restrict access to system configuration.

You can read more about password protection in the Password protection section.

1. Click your user name
2. Open the Change Password dialog box
   - Select Change password in the drop down menu.
3. Enter passwords
   - Enter your current and new passwords as requested. If the password currently is not set, leave the Current password field blank.

4. Set the new password
   - Click Change password for the change to take effect.
The interactive menu

The web interface provides access to tasks and configurations grouped in four categories, which are available from the main menu.

The main menu appears near the top of the page when you have signed in.

The sub-pages for the different tasks are described on the following pages.

Menu availability and user roles

A user possesses one or more user roles. Three user roles are defined: ADMIN, AUDIT and USER. Note that the default admin user holds all three roles. ¹

The table below shows which menus are available for users holding the different roles.

<table>
<thead>
<tr>
<th>ADMIN</th>
<th>AUDIT</th>
<th>USER</th>
</tr>
</thead>
</table>

Diagnostics
- System Information ✓ ✓ ✓

Configuration
- Advanced Configuration ✓ ✓
- Wallpaper ✓
- Sign In Banner ✓

Call Control ✓

Maintenance
- Software Upgrade ✓
- Certificate Management ✓
- Audit Certificate ✓
- User Administration ✓
- Restart ✓

Open sub-pages

When you hover the mouse over a main menu item, the titles of related sub-pages appear. ²

Click a sub-page’s title to open it. If there are no related sub-pages, click the main menu item itself.

¹ You can read more about user administration and user roles in the User administration section.

² The illustration lists all the sub-menus. A user not possessing all user roles will only see the sub-set relevant for his type of user.
The system information page
You can find an overview of your video system set-up on the System Information page.

System Information
- **General**
  - System name: MySystem
  - Software version: TC5.0.0
  - Product: Cisco TelePresence MX200
  - Serial number: ABCD12345678
  - IP address: 192.168.1.128
  - MAC address: 01:23:45:67:89:AB
  - Valid release key: Yes
  - Installed options: PremiumResolution

- **H323**
  - Number: 123456
  - ID: firstname.lastname@company.com
  - Gatekeeper: 192.168.1.1
  - Status: Registered

- **SIP**
  - URI: firstname.lastname@company.com
  - Proxy: 192.168.1.1
  - Status: Registered

Login Info
- Last successful login: Sat Oct 1 09:00:00 2011
- Password expires in: Never
- Unsuccessful login attempts since last login: 0

System information
Information about system name, product type, software version, IP address, etc.

Login information
Information about recent login attempts and password expiry.
Log files

The log files are Cisco specific debug files which may be requested by the Cisco support organization if you need technical support.

The current log files are time stamped event log files.

All current log files are archived in a time stamped historical log file each time the system reboots.

Click on a log file and follow the instructions in the dialog box to save or open the file (left or right click depending on your browser).

You can also download all log files as a bundle; click the corresponding link on the web page and follow the instructions.
XML files

The XML files are structured in a hierarchy building up a database of information about the codec.

Click the file names to open the corresponding file.

- Select **configuration.xml** to see an overview of the system settings, which are controlled from the web interface or from the API (Application Programmer Interface).
- The information in **status.xml** is constantly updated by the system to reflect system and process changes. The status information is normally monitored from the API.
- Select **command.xml** to see an overview of the commands available to instruct the system to perform an action. The commands are issued from the API.
- Select **valuespace.xml** to see an overview of all the value spaces used in the system settings, status information, and commands.
Advanced configuration

The system settings are structured in a hierarchy, and you can navigate to each setting. Click a folder to open or close it, and change a value as explained to the right.

Each system setting is further described in the Advanced settings chapter.

Search functionality

When searching for words such as ipstack, H323 or SIP, all settings containing these letters will be highlighted. Folders are opened as required.

Search: Enter as many characters as needed to get the desired result and click the Search button to initiate the search.

Clear: Click the Clear button to remove the highlighting.

Changing system settings

Value space: The value space is specified for each setting, either as a drop down list or with explanatory text following a text input field.

Edit: Enter a new value in the text input field or select a value from the drop down list. Press the ok button to save the new value.
Selecting a wallpaper

You can select between a set of predefined wallpapers as background on your display.

If you want the company logo or a custom picture to be displayed on the main display, you may also upload and use a custom wallpaper.

The custom wallpaper applies to the main display only and will not appear on the Touch controller. When you choose a new predefined wallpaper on the Touch controller, it will replace your custom wallpaper on the main display as well.

1. Click Browse... and locate your custom wallpaper image file. The file format must be .png and the maximum image size is 1920 × 1280 pixels.
2. Click Upload to save the file to the codec. The custom wallpaper is selected automatically upon upload.
Sign in banner

If a system administrator wants to provide initial information to all users, he can create a sign in banner. A sign in banner is a message that is displayed to the user before signing in.

The message will be shown when the user signs in using the web interface or the command line interface.

1. Enter the text message
Enter the text message, which you want to present to the user prior to signing in.

2. Activate the sign in banner
Press *Save Sign In Banner* to activate it.

An active sign in banner
When a sign in banner is active, it is displayed here.
Placing calls
You can use the Call Control page of the web interface to initiate a call.

NOTE: Even if the web interface is used to initiate the call it is the video system (display, microphones and loudspeakers) that is used for the call; not the PC running the web interface.

Calling someone
Enter one or more characters in the address input field until the name you want to call appears in the dynamic search list or, enter the complete name or number. Then click Dial.

Click End all to disconnect the call.

Sharing contents
Select a Presentation Source from the drop down list, and click the Start Presentation button.

Normally a PC is used as presentation source, but other options may be available depending on your system setup.

To stop the content sharing, click the Stop Presentation button that becomes visible while sharing.
Controlling and monitoring a call

You can control and monitor several call features using the Call Control page.

Adjusting the sound volume

Use + and - on the volume control bar to adjust the sound volume of your system (not the keyboard + and - keys).

Deactivating the microphone

Use the Mute button when you want to deactivate the microphone for privacy reasons.

When the microphone is muted, the button is replaced by an Unmute button. Use this button to re-activate the microphone.

Controlling the camera

First, click the Camera Control button. Then, in the window that opens, use + and - to adjust the zoom and the arrow keys to adjust the camera’s angle.

If a camera preset is defined it is listed to the right. Apply the preset by clicking its name.

Call settings

When you load the Call Control page, the default call bit rate and the default call protocol are shown in the Call bit rate and Call protocol boxes, respectively. If preferred, you can select another bit rate or another protocol from the drop down lists.

You can not change these settings during a call.

Call status

Click Show details to provide information on call rate, encryption, as well as important video and audio parameters.

Hide details removes the information.
Local layout control

You can select a local layout using the Call Control page.

The term layout is used to describe the various ways a video conversation appear on screen. Different types of meetings will require different layouts.

Each layout will typically specify a screen layout well suited when you are not in a meeting or you are in a meeting with one, two or three parties; when the meeting does or does not involve a second video stream for presentations; when the screen aspect ratio is 4:3 or 16:9.

Select a layout

Select your preferred layout in the drop down menu. The layout may also be changed while in a call.
Taking snapshots

Snapshots of what the video system's camera captures can be obtained from the Call Control page, provided that the feature has been enabled on the video system.

This feature might come in handy when administering the video system from a remote location, e.g. to check the camera view.

To use web snapshots you have to sign in with ADMIN credentials.

Enabling the live snapshot feature

**NOTE:** The live snapshot feature is disabled by default.

The live snapshot feature can be enabled using the Touch controller.

- Tap More > Settings > Administrator Settings > Web Snapshots and select On.
Upgrading the system software

From the Upgrade Software page you can initiate software upgrades and add a release key and option keys.

Software versions

This video conference system is using TC software.

NOTE: Contact your system administrator if you have questions about the software version.

Software release notes and upgrade files

For a complete overview of the news and changes, we recommend reading the Software Release Notes (TC5).

Downloading new software

For software download, go to: http://www.cisco.com/cisco/software/navigator.html

Release key

The release key is required to be able to use the released software. A new release key is required for every major software release (e.g. from TC4.x to TC5.x).

Contact your Cisco representative to obtain the release key.

Option keys

Option keys allow for extended functionality of the system. The keys are required to activate the optional functionality. You may have several option keys in your system.

The available options are:

• Premium resolution

Contact your Cisco representative to obtain the option keys.

1. Add the release and option keys

Contact your Cisco representative to obtain the required key(s). If you will add both a release key and one or more option keys, the correct procedure will be:

i. Enter the release key and press Add. Key format: "1TC001-1-0C22E348" (each system will have a unique key).

ii. Enter the option key and press Add. Key format: "1N000-1-AA7A4A09" (each system will have a unique key).

iii. If you have more than one option key, add the remaining keys.

2. Upgrade the software on the codec

i. Before you can start the upgrade you must download the software upgrade file. The file format is “s52000tc5_0_0.pkg” (each software version has a unique file name).

ii. Press Browse... and select the .PKG file.

iii. Press the Upgrade button to start the installation.

iv. Leave the system to allow the installation process to complete. You can follow the progress on this page. When the upgrade is successfully completed a message will appear. The installation process may take up to 30 minutes.
Certificate management
The SSL certificate is a text file which verifies the authenticity of your video conference system. The certificate may be issued by a certificate authority (CA). Other parties can check this certificate before setting up communication with you.

The list of trusted CA certificates is a list containing the SSL certificates of all parties that you want your system to trust.

---

**Uploading the trusted CA certificates list**
To install the trusted CA certificates list, you will need the following:

- Trusted CA list file (.PEM format).

Contact your system administrator to obtain the required file.

1. Press *Browse...* and locate the file with the Trusted CA list (.PEM format).
2. Press *Upload* to upload the certificate list to your system.

---

**Uploading the SSL certificate**
To install the SSL certificate, you will need the following:

- HTTPS certificate (.PEM format)
- Private key (.PEM format)
- Passphrase (optional)

Contact your system administrator to obtain the required files.

1. Press *Browse...* and locate the HTTPS certificate file (.PEM format).
2. Press *Browse...* and locate the Private key file (.PEM format).
3. Enter the *Passphrase*.
4. Press *Upload* to upload the certificate to your system.
The audit certificate list

If you want to use the ExternalSecure audit logging mode, you must upload a list of trusted audit certificates to the video conference system. This list covers all audit servers that your system shall trust.

In the ExternalSecure audit logging mode audit logging information will only be sent to entities holding a valid audit certificate.

**NOTE:** You should always upload the audit certificate list before enabling secure audit logging.

About audit logging

Audit logging records all sign in activity and configuration changes on the system.

Audit logging is disabled by default. You can enable audit logging using the on-screen menu or the web interface.

1. Upload the audit certificate list

To install the audit certificate, you will need:
- Audit list file (.PEM format)

Contact your system administrator to obtain the required file.

i. Press **Browse** and locate the file with the audit list file (.PEM format).

ii. Press **Upload** to upload the certificate to your system.

2. Enable secure audit logging

When you have uploaded the audit certificate list you must enable secure audit logging:

i. Navigate to **Advanced Configuration > Security > Audit > Server** and enter the IP address and Port number of the audit server.

ii. Navigate to **Advanced Configuration > Security > Audit > Logging > Mode** and select ExternalSecure.
User administration

From this page you can manage the user accounts of your video conference system. You can create new user accounts, edit the details of existing users, and delete users.

The default user account

The system comes with a default administrator user account with username admin and no password set. The admin user has full access rights, and it is highly recommended to set a password for this user.

Read more about passwords in the Password protection chapter.

About user roles

A user account must hold one or a combination of several user roles. Three user roles exist, representing different rights:

• ADMIN: A user holding this role can create new users and change all settings, except the security audit settings. He cannot upload audit certificates.
• USER: A user holding this role can make calls and search the phonebook.
• AUDIT: A user holding this role can change the security audit configurations and upload audit certificates.

It is important to note that these three roles have non-overlapping rights.

An administrator user account with full access rights, like the default admin user, must possess all the three roles.

Security mode

You can enable/disable the strong security mode from this page.

Strong security mode sets very strict password requirements, and requires all users to change their password on next sign in.

Software upload from TMS, web snapshots and making calls from the web interface are prohibited in strong security mode.
Creating a new user account

1. Press Create new user.
2. Fill in the Username, Password and PIN code, and select the user role(s) for this user account.
   - As a default the user have to change the password and PIN code when signing in for the first time.
   - Do not fill in the Distinguished Name (DN) Subject field unless you want to use certificate login on https.
3. Set the Status to Active to activate the user.
4. Press Save to save the changes.

Editing user details

1. Select the name of an existing user to open the Editing user window.
2. Edit the details.
3. Press Save to save the changes or Cancel to go back one step without storing the information.

Deactivating a user account

1. Select the name of an existing user to open the Editing user window.
2. Set the Status to Inactive.
3. Press Save to save the changes.

NOTE: Always keep at least one user with ADMIN rights Active.

Deleting a user account

1. Select the name of the user to open the Editing user window.
   ii. Press Delete.

NOTE: Always keep at least one user with ADMIN rights.
Restarting the system

To restart the system, press **Restart now**.

Restarting the system takes a few minutes.
Chapter 3

The advanced settings
Overview of the advanced settings

In the following pages you will find a complete list of the system settings which are configured from the Advanced Configuration page on the web interface.

The examples show either the default value or an example of a value.

Find the IP address of your system
Tap More > Settings on the Touch controller, select System Information and find the IPv4 Address or IPv6 Address of your system.

Open the web interface
Open a web browser and enter your video conference system’s IP address in the address bar; then sign in.

The Audio settings

Audio PreferredOutputConnector
Select the preferred connector for the audio out. When the handset is in use the audio out goes to the handset, and when hung up the audio out goes to the preferred output connector.

Requires user role: ADMIN
Value space: <None/Internal>
  None: The default audio output is the internal speaker.
  Internal: The audio out goes to the internal loudspeaker. NOTE: Requires the "Audio InternalSpeaker Mode" to be enabled.

Example: Audio PreferredOutputConnector: Internal

Audio InternalSpeaker Mode
Set the internal loudspeaker mode.

Requires user role: ADMIN
Value space: <On/Off>
  On: The internal speakers are enabled.
  Off: The internal speakers are disabled.

Example: Audio InternalSpeaker Mode: On

Audio Microphones Mute Enabled
Determine whether audio-mute is allowed or not. The default value is True.

Requires user role: ADMIN
Value space: <True/InCallOnly>
  True: Muting of audio is always available.
  InCallOnly: Muting of audio is only available when the device is in a call. When Idle it is not possible to mute the microphone. This is useful when an external telephone service/audio system is connected via the codec and is to be available when the codec is not in a call. When set to InCallOnly this will prevent the audio-system from being muted by mistake.

Example: Audio Microphones Mute Enabled: True

Audio SoundsAndAlerts KeyTones Mode
Not applicable in this version.

Audio SoundsAndAlerts RingTone
Select the ring tone for incoming calls.

Requires user role: USER
Value space: <Marbles/IceCrystals/Polaris/Alert/Discreet/Fantasy/Jazz/Nordic/Echo/Rhythmic>
  Range: Select a tone from the list of ring tones.

Example: Audio SoundsAndAlerts RingTone: Jazz

Audio SoundsAndAlerts RingVolume
Sets the ring tone volume for an incoming call.

Requires user role: USER
Value space: <0..100>
  Range: The value goes in steps of 5 from 0 to 100 (from -34.5 dB to 15 dB). Value 0 = Off.

Example: Audio SoundsAndAlerts RingVolume: 50

Audio VolumeHandset
Set the volume on the handset.

Requires user role: ADMIN
Value space: <0..100>
  Range: The value goes in steps of 5 from 0 to 100 (from -34.5 dB to 15 dB). Value 0 = Off.

Example: Audio VolumeHandset: 70

Audio VolumeHeadset
Set the volume on the headset.

Requires user role: ADMIN
Value space: <0..100>
  Range: The value goes in steps of 5 from 0 to 100 (from -34.5 dB to 15 dB). Value 0 = Off.

Example: Audio VolumeHeadset: 70

Audio Volume
Set the volume on the loudspeaker.

Requires user role: USER
Value space: <0..100>
  Range: The value goes in steps of 5 from 0 to 100 (from -34.5 dB to 15 dB). Value 0 = Off.

Example: Audio Volume: 70
Cisco TelePresence MX Series
ADMINISTRATOR GUIDE

Table of contents | Introduction | Web interface | Advanced settings | Appendices

The Cameras settings

Cameras PowerLine Frequency
Applies to cameras supporting PowerLine frequency anti-flickering, i.e PrecisionHD 1080p cameras.
Requires user role: ADMIN
Value space: <Auto/50Hz/60Hz>
   Auto: Set to Auto to enable power frequency auto detection in the camera.
   50Hz: Set to 50 Hz.
   60Hz: Set to 60 Hz.
Example: Cameras PowerLine Frequency: Auto

Cameras Camera [1..1] Backlight
The backlight functionality compensates for light shining directly at the camera (usually the sun entering the window) to avoid a too dark image from the room.
Requires user role: ADMIN
Value space: <On/Off>
   On: Turn on the camera backlight.
   Off: Turn off the camera backlight.
Example: Cameras Camera 1 Backlight: Off

Cameras Camera [1..1] Brightness Mode
Set the camera brightness mode.
Requires user role: ADMIN
Value space: <Auto/Manual>
   Auto: The camera brightness is automatically set by the system.
   Manual: Enable manual control of the camera brightness, e.g. the level of the brightness level setting will be used for the camera.
Example: Cameras Camera 1 Brightness Mode: Auto

Cameras Camera [1..1] Brightness Level
Set the brightness level. NOTE: Requires the Camera Brightness Mode to be set to Manual.
Requires user role: ADMIN
Value space: <1..31>
   Range: Select a value from 1 to 31.
Example: Cameras Camera 1 Brightness Level: 1

Cameras Camera [1..1] Flip
Not applicable in this version.

Cameras Camera [1..1] Focus Mode
Set the camera focus mode.
Requires user role: ADMIN
Value space: <Auto/Manual>
   Auto: When set to Auto the focus will be updated throughout the call. When moving the camera, the system will use auto focus for a few seconds to set the right focus of the new camera position. After a few seconds auto focus is turned off to prevent continuous focus adjustments of the camera.
   Manual: Turn the autofocus off and adjust the camera focus manually.
Example: Cameras Camera 1 Focus Mode: Auto

Cameras Camera [1..1] FrameRate
Set the frame rate frequency.
Requires user role: ADMIN
Value space: <60Hz/30Hz>
   60Hz: Set the frame rate to 60 Hz.
   30Hz: Set the frame rate to 30 Hz.
Example: Cameras Camera 1 FrameRate: 30Hz

Cameras Camera [1..1] Gamma Mode
The Gamma Mode setting enables for gamma corrections. Gamma describes the nonlinear relationship between image pixels and monitor brightness.
Requires user role: ADMIN
Value space: <Auto/Manual>
   Auto: Auto is the default and the recommended setting.
   Manual: In severe light conditions, you may switch mode to manual and specify explicitly which gamma table to use by setting the Gamma Level.
Example: Cameras Camera 1 Gamma Mode: Auto

Cameras Camera [1..1] Gamma Level
By setting the Gamma Level you can select which gamma correction table to use. This setting may be useful in difficult lighting conditions, where changes to the brightness setting does not provide satisfactory results. NOTE: Requires the Gamma Mode to be set to Manual.
Requires user role: ADMIN
Value space: <0..7>
   Range: Select a value from 0 to 7.
Example: Cameras Camera 1 Gamma Level: 0

Cameras Camera [1..1] IrSensor
Not applicable in this version.
Cameras Camera [1..1] Mirror
Not applicable in this version.

Cameras Camera [1..1] Whitebalance Mode
Set the camera whitebalance mode.
Requires user role: ADMIN
Value space: <Auto/Manual>
  Auto: The camera will continuously adjust the whitebalance depending on the camera view.
  Manual: Enables manual control of the camera whitebalance, e.g. the level of the whitebalance level setting will be used for the camera.
Example: Cameras Camera 1 Whitebalance Mode: Auto

Cameras Camera [1..1] Whitebalance Level
Set the whitebalance level. NOTE: Requires the Camera Whitebalance Mode to be set to manual.
Requires user role: ADMIN
Value space: <1..16>
  Range: Select a value from 1 to 16.
Example: Cameras Camera 1 Whitebalance Level: 1

The Conference settings

Conference [1..1] TelephonyPrefix
Enter the prefix to be used for telephony calls.
Requires user role: ADMIN
Value space: <S: 0, 80>
  Format: String with a maximum of 80 characters.
Example: Conference 1 TelephonyPrefix: "520"

Conference [1..1] AutoAnswer Mode
Set the AutoAnswer mode.
Requires user role: ADMIN
Value space: <On/Off>
  On: Enable AutoAnswer to let the system automatically answer all incoming calls.
  Off: The incoming calls must be answered manually by pressing the green Accept key on the touch controller.
Example: Conference 1 AutoAnswer Mode: Off

Conference [1..1] AutoAnswer Mute
Determine if the microphone shall be muted when an incoming call is automatically answered. NOTE: Requires the AutoAnswer Mode to be enabled.
Requires user role: ADMIN
Value space: <On/Off>
  On: The incoming call will be muted when automatically answered.
  Off: The incoming call will not be muted.
Example: Conference 1 AutoAnswer Mute: Off

Conference [1..1] AutoAnswer Delay
Define how long (in seconds) an incoming call has to wait before it is answered automatically by the system. NOTE: Requires the AutoAnswer Mode to be enabled.
Requires user role: ADMIN
Value space: <0..50>
  Range: Select a value from 0 to 50 seconds.
Example: Conference 1 AutoAnswer Delay: 0
Conference [1..1] MicUnmuteOnDisconnect Mode
Determine if the microphones shall be unmuted automatically when all calls are disconnected. In a meeting room or other shared resources this could be done to prepare the system for the next user.

Requires user role: ADMIN

Value space: <On/Off>
- On: Un-mute the microphones after the call is disconnected.
- Off: If muted, let the microphones remain muted after the call is disconnected.

Example: Conference 1 MicUnmuteOnDisconnect Mode: On

Conference [1..1] DoNotDisturb Mode
Determine if there should be an alert on incoming calls.

Requires user role: USER

Value space: <On/Off>
- On: All incoming calls will be rejected, with no alert. The calling side will receive a busy signal when trying to call the codec. A message will display on screen, telling that Do not disturb is turned on, together with an option to turn off the Do not disturb. When turning off the Do not disturb mode you will see a list of the calls that have been rejected.
- Off: The incoming calls will be alerted.

Example: DoNotDisturb Mode: Off

Conference [1..1] FarEndControl Mode
Lets you decide if the remote side (far end) should be allowed to select your video sources and control your local camera (pan, tilt, zoom).

Requires user role: ADMIN

Value space: <On/Off>
- On: Allows the far end to be able to select your video sources and control your local camera (pan, tilt, zoom). You will still be able to control your camera and select your video sources as normal.
- Off: The far end is not allowed to select your video sources or to control your local camera (pan, tilt, zoom).

Example: Conference 1 FarEndControl Mode: On

Conference [1..1] FarEndControl SignalCapability
Set the far end control (H.224) signal capability mode.

Requires user role: ADMIN

Value space: <On/Off>
- On: Enable the far end control signal capability.
- Off: Disable the far end control signal capability.

Example: Conference 1 FarEndControl SignalCapability: On

Conference [1..1] Encryption Mode
Set the conference encryption mode. A padlock with the text "Encryption On" or "Encryption Off" displays on screen for a few seconds when the conference starts.

Requires user role: ADMIN

Value space: <BestEffort/On/Off>
- BestEffort: The system will use encryption whenever possible.
  - In Point to point calls: If the far end system supports encryption (AES-128), the call will be encrypted. If not, the call will proceed without encryption.
  - In MultiSite calls: In order to have encrypted MultiSite conferences, all sites must support encryption. If not, the conference will be unencrypted.
- On: The system will only allow calls that are encrypted.
- Off: The system will not use encryption.

Example: Conference 1 Encryption Mode: BestEffort

Conference [1..1] DefaultCall Protocol
Set the Default Call Protocol to be used when placing calls from the system.

Requires user role: ADMIN

Value space: <H323/Sip>
- H.323: Select H.323 to ensure that calls are set up as H.323 calls.
- Sip: Select SIP to ensure that calls are set up as SIP calls.

Example: Conference 1 DefaultCall Protocol: H323

Conference [1..1] DefaultCall Rate
Set the Default Call Rate to be used when placing or receiving calls.

Requires user role: ADMIN

Value space: <64..6000>
- Range: Select a value between 64 and 6000 kbps

Example: Conference 1 DefaultCall Rate: 768

Conference [1..1] MaxTransmitCallRate
Specify the maximum transmit call rate to be used when placing or receiving calls.

Requires user role: ADMIN

Value space: <64..6000>
- Range: Select a value between 64 and 6000 kbps

Example: Conference 1 MaxTransmitCallRate: 6000
Conference [1..1] MaxReceiveCallRate
Specify the maximum receive call rate to be used when placing or receiving calls.

Requires user role: ADMIN
Value space: <64..6000>
  Range: Select a value between 64 and 6000 kbps.
Example: Conference 1 MaxReceiveCallRate: 6000

Conference [1..1] VideoBandwidth Mode
Set the conference video bandwidth mode.

Requires user role: ADMIN
Value space: <Dynamic/Static>
  Dynamic: The available transmit bandwidth for the video channels are distributed among the currently active channels. If there is no presentation, the main video channels will use the bandwidth of the presentation channel.
  Static: The available transmit bandwidth is assigned to each video channel, even if it is not active.
Example: Conference 1 VideoBandwidth Mode: Dynamic

Conference [1..1] VideoBandwidth MainChannel Weight
The available transmit video bandwidth is distributed on the main channel and presentation channel according to "MainChannel Weight" and "PresentationChannel Weight". If the main channel weight is 2 and the presentation channel weight is 1, then the main channel will use twice as much bandwidth as the presentation channel.

Requires user role: ADMIN
Value space: <1..10>
  Range: 1 to 10.
Example: Conference 1 VideoBandwidth MainChannel Weight: 5

Conference [1..1] VideoBandwidth PresentationChannel Weight
The available transmit video bandwidth is distributed on the main channel and presentation channel according to "MainChannel Weight" and "PresentationChannel Weight". If the main channel weight is 2 and the presentation channel weight is 1, then the main channel will use twice as much bandwidth as the presentation channel.

Requires user role: ADMIN
Value space: <1..10>
  Range: 1 to 10.
Example: Conference 1 VideoBandwidth PresentationChannel Weight: 5

Conference [1..1] PacketLossResilience Mode
Set the packetloss resilience mode. This configuration will only take effect for calls initiated after the configuration is set.

Requires user role: ADMIN
Value space: <On/Off>
  On: Enable the packetloss resilience.
  Off: Disable the packetloss resilience.
Example: Conference 1 PacketLossResilience Mode: On

Conference [1..1] Presentation Policy
Control how the presentation service is to be performed.

Requires user role: ADMIN
Value space: <LocalRemote(LocalOnly>
  LocalRemote: The presentation will be shown locally and sent to remote side.
  LocalOnly: The presentation will only be shown locally.
Example: Conference 1 Presentation Policy: LocalRemote

Conference [1..1] IncomingMultisiteCall Mode
Set the incoming Multisite call mode. The MultiSite feature allows participants from more than two locations to join a meeting – by video and/or telephone.

Requires user role: ADMIN
Value space: <Allow/Deny>
  Allow: Accept incoming calls to an already active call/conference. The incoming call will be added to the MCU conference.
  Deny: The system will not accept incoming calls when you are in a call. The calling side will receive a busy signal.
Example: Conference 1 IncomingMultisiteCall Mode: Allow
The H323 settings

H323 NAT Mode
The firewall traversal technology creates a secure path through the firewall barrier, and enables proper exchange of audio/video data when connected to an external video conferencing system (when the IP traffic goes through a NAT router). NOTE: NAT does not work in conjunction with gatekeepers.

Requires user role: ADMIN

Value space: <Auto/On/Off>
- Auto: The system will determine if the "NAT Address" or the real IP-address should be used within signalling. This is done to make it possible to place calls to endpoints on the LAN as well as endpoints on the WAN.
- On: The system will signal the configured "NAT Address" in place of its own IP-address within Q.931 and H.245. The NAT Server Address will be shown in the startup-menu as: "My IP Address: 10.0.2.1".
- Off: The system will signal the real IP Address.

Example: H323 NAT Mode: Off

H323 NAT Address
Enter the external/global IP-address to the router with NAT support. Packets sent to the router will then be routed to the system.

In the router, the following ports must be routed to the system's IP-address:
* Port 1720
* Port 5555–5574
* Port 2326–2485

Requires user role: ADMIN

Value space: <S: 0, 64>
- Format: String with a maximum of 64 characters.

Example: H323 NAT Address: ""
**H323 Profile [1..1] CallSetup Mode**

The H.323 Call Setup Mode defines whether to use a Gatekeeper or Direct calling when establishing H323 calls.

**NOTE:** Direct H.323 calls can be made even though the H.323 Call Setup Mode is set to Gatekeeper.

**Requires user role:** ADMIN

**Value space:** <Direct/Gatekeeper>
- **Direct:** An IP-address must be used when dialling in order to make the H323 call.
- **Gatekeeper:** The system will use a Gatekeeper to make a H.323 call. When selecting this option the H323 Profile Gatekeeper Address and H323 Profile Gatekeeper Discovery settings must also be configured.

**Example:** H323 Profile 1 CallSetup Mode: Gatekeeper

**H323 Profile [1..1] Gatekeeper Discovery**

Determine how the system shall register to a H.323 Gatekeeper.

**Requires user role:** ADMIN

**Value space:** <Manual/Auto>
- **Manual:** The system will use a specific Gatekeeper identified by the Gatekeeper's IP-address.
- **Auto:** The system will automatically try to register to any available Gatekeeper. If a Gatekeeper responds to the request sent from the codec within 30 seconds this specific Gatekeeper will be used. This requires that the Gatekeeper is in auto discovery mode as well. If no Gatekeeper responds, the system will not use a Gatekeeper for making H.323 calls and hence an IP-address must be specified manually.

**Example:** H323 Profile 1 Gatekeeper Discovery: Manual

**H323 Profile [1..1] Gatekeeper Address**

Enter the IP address of the Gatekeeper. **NOTE:** Requires the H.323 Call Setup Mode to be set to Gatekeeper and the Gatekeeper Discovery to be set to Manual.

**Requires user role:** ADMIN

**Value space:** <S: 0, 255>
- **Format:** Only the valid IP address format is accepted. An IP address that contains letters (192.a.2.0) or invalid IP addresses (192.0.1234.0) will be rejected.

**Example:** H323 Profile 1 Gatekeeper Address: "192.0.2.0"

**H323 Profile [1..1] H323Alias E164**

The H.323 Alias E.164 defines the address of the system, according to the numbering plan implemented in the H.323 Gatekeeper. The E.164 alias is equivalent to a telephone number, sometimes combined with access codes.

**Requires user role:** ADMIN

**Value space:** <S: 0, 30>
- **Format:** Compact string with a maximum of 30 characters. Valid characters are 0-9, *, and #.

**Example:** H323 Profile 1 H323Alias E164: "90550092"

**H323 Profile [1..1] H323Alias ID**

Lets you specify the H.323 Alias ID which is used to address the system on a H.323 Gatekeeper and will be displayed in the call lists. Example: "firstname.surname@company.com", "My H.323 Alias ID"

**Requires user role:** ADMIN

**Value space:** <S: 0, 49>
- **Format:** String with a maximum of 49 characters

**Example:** H323 Profile 1 H323Alias ID: "firstname.surname@company.com"

**H323 Profile [1..1] PortAllocation**

The H.323 Port Allocation setting affects the H.245 port numbers used for H.323 call signalling.

**Requires user role:** ADMIN

**Value space:** <Dynamic/Static>
- **Dynamic:** The system will allocate which ports to use when opening a TCP connection. The reason for doing this is to avoid using the same ports for subsequent calls, as some firewalls consider this as a sign of attack. When Dynamic is selected, the H.323 ports used are from 11000 to 20999. Once 20999 is reached they restart again at 11000. For RTP and RTCP media data, the system is using UDP ports in the range 2326 to 2487. Each media channel is using two adjacent ports, ie 2330 and 2331 for RTP and RTCP respectively. The ports are automatically selected by the system within the given range. Firewall administrators should not try to deduce which ports are used when, as the allocation schema within the mentioned range may change without any further notice.
- **Static:** When set to Static the ports are given within a static predefined range [5555-6555].

**Example:** H323 Profile 1 PortAllocation: Dynamic
The Network settings

**Network [1..1] Assignment**
Define whether to use DHCP or Static IPv4 assignment.
**Requires user role:** ADMIN
**Value space:** <Static/DHCP>
- **Static:** Set the network assignment to Static and configure the static IPv4 settings (IP Address, SubnetMask and Gateway).
- **DHCP:** The system addresses are automatically assigned by the DHCP server.
**Example:** Network 1 Assignment: DHCP

**Network [1..1] DNS Domain Name**
DNS Domain Name is the default domain name suffix which is added to unqualified names.
**Example:** If the DNS Domain Name is "company.com" and the name to lookup is "MyVideoSystem", this will result in the DNS lookup "MyVideoSystem.company.com".
**Requires user role:** ADMIN
**Value space:** <S: 0, 64>
- **Format:** String with a maximum of 64 characters.
**Example:** Network 1 DNS Domain Name: ""

**Network [1..1] DNS Server [1..5] Address**
Define the network addresses for DNS servers. Up to 5 addresses may be specified. If the network addresses are unknown, contact your administrator or Internet Service Provider.
**Requires user role:** ADMIN
**Value space:** <S: 0, 64>
- **Format:** String with a maximum of 64 characters.
**Example:** Network 1 DNS Server 1 Address: ""

**Network [1..1] IPStack**
Select which internet protocols the system will support.
**Requires user role:** ADMIN
**Value space:** <IPv4/IPv6>
- **IPv4:** IP version 4 is supported.
- **IPv6:** IP version 6 is supported. The IPv4 settings (IP Address, IP Subnet Mask and Gateway) will be disabled.
**Example:** Network 1 IPStack: IPv4

**Network [1..1] IPv4 Address**
Enter the static IPv4 network address for the system. Only applicable if the Network Assignment is set to Static.
**Requires user role:** ADMIN
**Value space:** <S: 0, 64>
- **Format:** Only the valid IP address format is accepted. An IP address that contains letters (192.a.2.0) or invalid IP address (192.0.1234.0) will be rejected.
**Example:** Network 1 IPv4 Address: "192.0.2.0"

**Network [1..1] IPv4 Gateway**
Define the IPv4 network gateway. Only applicable if the Network Assignment is set to Static.
**Requires user role:** ADMIN
**Value space:** <S: 0, 64>
- **Format:** Compact string with a maximum of 64 characters.
**Example:** Network 1 IPv4 Gateway: "192.0.2.0"

**Network [1..1] IPv4 SubnetMask**
Define the IPv4 network subnet mask. Only applicable if the Network Assignment is set to Static.
**Requires user role:** ADMIN
**Value space:** <S: 0, 64>
- **Format:** Compact string with a maximum of 64 characters.
**Example:** Network 1 IPv4 SubnetMask: "255.255.255.0"

**Network [1..1] IPv6 Address**
Enter the static IPv6 network address for the system. Only applicable if the Network IPv6 Assignment is set to Static.
**Requires user role:** ADMIN
**Value space:** <S: 0, 64>
- **Format:** The IPv6 address of host name.
**Example:** Network 1 IPv6 Address: "ffff:ffff:ffff:ffff:ffff:ffff:ffff:ff"
## Network [1..1] IPv6 Gateway

Define the IPv6 network gateway address. Only applicable if the Network IPv6 Assignment is set to Static.

**Requires user role:** ADMIN

**Value space:** \(<S: 0, 64>\)

- **Format:** The IPv6 address of host name.

**Example:** Network 1 IPv6 Gateway: 
```
```

## Network [1..1] IPv6 Assignment

Define whether to use Autoconf or Static IPv6 assignment.

**Requires user role:** ADMIN

**Value space:** \(<\text{Static/Autoconf}>\)

- **Static:** Set the network assignment to Static and configure the static IPv6 settings (IP Address and Gateway).
- **Autoconf:** Enable IPv6 stateless autoconfiguration of the IPv6 network interface. See RFC4862 for a detailed description.

**Example:** Network 1 IPv6 Assignment: Autoconf

## Network [1..1] IPv6 DHCPOptions

Retrieves a set of DHCP options from a DHCPv6 server.

**Requires user role:** ADMIN

**Value space:** \(<\text{On/Off}>\)

- **On:** Enable the retrieval of a selected set of DHCP options from a DHCPv6 server.
- **Off:** Set to Off when IPv6 Assignment is set to Static.

**Example:** Network 1 IPv6 Gateway: On

## Network [1..1] QoS Mode

The QoS (Quality of Service) is a method which handles the priority of audio, video and data in the network. The QoS settings must be supported by the infrastructure. Diffserv (Differentiated Services) is a computer networking architecture that specifies a simple, scalable and coarse-grained mechanism for classifying, managing network traffic and providing QoS priorities on modern IP networks.

**Requires user role:** ADMIN

**Value space:** \(<\text{Off/Diffserv}>\)

- **Off:** No QoS method is used.
- **Diffserv:** When you set the QoS Mode to Diffserv you must configure the Diffserv sub menu settings (Audio, Data, Signalling and Video).

**Example:** Network 1 QoS Mode: diffserv

## Network [1..1] QoS Diffserv Audio

The Diffserv Audio defines which priority Audio packets should have in an IP network. Enter a priority, which ranges from 0 to 63 for the packets. The higher the number, the higher the priority. These priorities might be overridden when packets are leaving the network controlled by the local network administrator. **NOTE:** Requires the Network QoS Mode to be set to Diffserv.

**Requires user role:** ADMIN

**Value space:** \(<0..63>\)

- **Audio:** A recommended value is Diffserv Code Point (DSCP) AF41, which equals the value 34. If in doubt, contact your network administrator.
- **Range:** Select a value from 0 to 63.

**Example:** Network 1 QoS Diffserv Audio: 0

## Network [1..1] QoS Diffserv Data

The Diffserv Data defines which priority Data packets should have in an IP network. Enter a priority, which ranges from 0 to 63 for the packets. The higher the number, the higher the priority. These priorities might be overridden when packets are leaving the network controlled by the local network administrator. **NOTE:** Requires the Network QoS Mode to be set to Diffserv.

**Requires user role:** ADMIN

**Value space:** \(<0..63>\)

- **Data:** A recommended value is Diffserv Code Point (DSCP) AF23, which equals the value 22. If in doubt, contact your network administrator.
- **Range:** Select a value from 0 to 63.

**Example:** Network 1 QoS Diffserv Data: 0

## Network [1..1] QoS Diffserv Signalling

The Diffserv Signalling defines which priority Signalling packets should have in an IP network. Enter a priority, which ranges from 0 to 63 for the packets. The higher the number, the higher the priority. These priorities might be overridden when packets are leaving the network controlled by the local network administrator. **NOTE:** Requires the Network QoS Mode to be set to Diffserv.

**Requires user role:** ADMIN

**Value space:** \(<0..63>\)

- **Signalling:** A recommended value is Diffserv Code Point (DSCP) AF31, which equals the value 26. If in doubt, contact your network administrator.
- **Range:** Select a value from 0 to 63.

**Example:** Network 1 QoS Diffserv Signalling: 0
The Diffserv Video defines which priority Video packets should have in an IP network. Enter a priority, which ranges from 0 to 63 for the packets. The higher the number, the higher the priority. These priorities might be overridden when packets are leaving the network controlled by the local network administrator. NOTE: Requires the Network QoS Mode to be set to Diffserv.

**Requires user role:** ADMIN  
**Value space:** \langle 0..63 \rangle  
**Video:** A recommended value is Diffserv Code Point (DSCP) AF41, which equals the value 34. If in doubt, contact your network administrator.  
**Range:** Select a value from 0 to 63.

**Example:** Network 1 QoS Diffserv Video: 0

**Network [1..1] IEEE8021X Mode**

The system can be connected to an IEEE 802.1X LAN network, with a port-based network access control that is used to provide authenticated network access for Ethernet networks.

**Requires user role:** ADMIN  
**Value space:** \langle On/Off \rangle  
**On:** The 802.1X authentication is enabled.  
**Off:** The 802.1X authentication is disabled (default).

**Example:** Network 1 IEEE8021X Mode: Off

**Network [1..1] IEEE8021X TlsVerify**

Verification of the server-side certificate of an IEEE802.1x connection against the certificates in the local CA-list when TLS is used. The CA-list must be uploaded to the video system / codec. This setting takes effect only when Network [1..1] IEEE8021X Eap Tls is enabled (On).

**Requires user role:** ADMIN  
**Value space:** \langle Off/On \rangle  
**Off:** When set to Off, TLS connections are allowed without verifying the server-side X.509 certificate against the local CA-list. This should typically be selected if no CA-list has been uploaded to the codec.  
**On:** When set to On, the server-side X.509 certificate will be validated against the local CA-list for all TLS connections. Only servers with a valid certificate will be allowed.

**Example:** xConfiguration Network 1 IEEE8021X TlsVerify: Off

**Network [1..1] IEEE8021X UseClientCertificate**

Authentication using a private key/certificate pair during an IEEE802.1x connection. The authentication X.509 certificate must be uploaded to the video system / codec.

**Requires user role:** ADMIN  
**Value space:** \langle Off/On \rangle  
**Off:** When set to Off client-side authentication is not used (only server-side).  
**On:** When set to On the client (codec) will perform a mutual authentication TLS handshake with the server.

**Example:** Network 1 IEEE8021X UseClientCertificate: Off

**Network [1..1] IEEE8021X Identity**

The 802.1X Identity is the user name needed for 802.1X authentication.

**Requires user role:** ADMIN  
**Value space:** \langle S: 0, 64 \rangle  
**Format:** String with a maximum of 64 characters.

**Example:** Network 1 IEEE8021X Identity: ""

**Network [1..1] IEEE8021X Password**

The 802.1X Password is the password needed for 802.1X authentication.

**Requires user role:** ADMIN  
**Value space:** \langle S: 0, 32 \rangle  
**Format:** String with a maximum of 32 characters.

**Example:** Network 1 IEEE8021X Password: "***"

**Network [1..1] IEEE8021X AnonymousIdentity**

The 802.1X Anonymous ID string is to be used as unencrypted identity with EAP (Extensible Authentication Protocol) types that support different tunneled identity, like EAP-PEAP and EAP-TTLS. If set, the anonymous ID will be used for the initial (unencrypted) EAP Identity Request.

**Requires user role:** ADMIN  
**Value space:** \langle S: 0, 64 \rangle  
**Format:** String with a maximum of 64 characters.

**Example:** Network 1 IEEE8021X AnonymousIdentity: ""
Network [1..1] IEEE8021X Eap Md5
Set the Md5 (Message-Digest Algorithm 5) mode. This is a Challenge Handshake Authentication Protocol that relies on a shared secret. Md5 is a Weak security.
Requires user role: ADMIN
Value space: <On/off>
  On: The EAP-MD5 protocol is enabled (default).
  Off: The EAP-MD5 protocol is disabled.
Example: Network 1 IEEE8021X Eap Md5: On

Network [1..1] IEEE8021X Eap Ttls
Set the TTLS (Tunneled Transport Layer Security) mode. Authenticates LAN clients without the need for client certificates. Developed by Funk Software and Certicom. Usually supported by Agere Systems, Proxim and Avaya.
Requires user role: ADMIN
Value space: <On/off>
  On: The EAP-TTLS protocol is enabled (default).
  Off: The EAP-TTLS protocol is disabled.
Example: Network 1 IEEE8021X Eap Ttls: On

Network [1..1] IEEE8021X Eap Tls
Enable or disable the use of EAP-TLS (Transport Layer Security) for IEEE802.1x connections. The EAP-TLS protocol, defined in RFC5216, is considered one of the most secure EAP standards. LAN clients are authenticated using client certificates.
Requires user role: ADMIN
Value space: <Off/On>
  Off: The EAP-TLS protocol is disabled.
  On: The EAP-TLS protocol is enabled (default).
Example: Network 1 IEEE8021X Eap Tls: On

Network [1..1] IEEE8021X Eap Peap
Set the Peap (Protected Extensible Authentication Protocol) mode. Authenticates LAN clients without the need for client certificates. Developed by Microsoft, Cisco and RSA Security.
Requires user role: ADMIN
Value space: <On/off>
  On: The EAP-PEAP protocol is enabled (default).
  Off: The EAP-PEAP protocol is disabled.
Example: Network 1 IEEE8021X Eap Peap: On

Network [1..1] MTU
Set the Ethernet MTU (Maximum Transmission Unit).
Requires user role: ADMIN
Value space: <576..1500>
  Range: Select a value from 576 to 1500 bytes.
Example: Network 1 MTU: 1500

Network [1..1] Speed
Set the Ethernet link speed.
Requires user role: ADMIN
Value space: <Auto/10half/10full/100half/100full/1000full>
  Auto: Autonegotiate link speed.
  10half: Force link to 10 Mbps half-duplex.
  10full: Force link to 10 Mbps full-duplex.
  100half: Force link to 100 Mbps half-duplex.
  100full: Force link to 100 Mbps full-duplex.
  1000full: Force link to 1 Gbps full-duplex.
Example: Network 1 Speed: Auto

Network [1..1] TrafficControl Mode
Set the network traffic control mode to decide how to control the video packets transmission speed.
Requires user role: ADMIN
Value space: <On/Off>
  On: Transmit video packets at maximum 20 Mbps. Can be used to smooth out bursts in the outgoing network traffic.
  Off: Transmit video packets at link speed.
Example: Network 1 TrafficControl: On

Network [1..1] RemoteAccess Allow
Filter IP addresses for access to ssh/telnet/HTTP/HTTPS.
Requires user role: ADMIN
Value space: <S: 0, 255>
  Format: String with a maximum of 255 characters, comma separated IP addresses or IP range.
Example: Network 1 RemoteAccess Allow: "192.168.1.231, 192.168.1.182"
The NetworkServices settings

NetworkServices Multiway Address
The Multiway address must be equal to the Conference Factory Alias, as configured on the Video Communication Server. The Multiway™ conferencing enables video endpoint users to introduce a 3rd party into an existing call.

Multiway™ can be used in the following situations:
1) When you want to add someone else in to your existing call.
2) When you are called by a 3rd party while already in a call and you want to include that person in the call.

Requirements: The Codec C20 must be running TC3.0 (or later), Codec C90/C60/C40 must be running TC4.0 (or later), EX90/EX60/MX200/MX300 must be running TC4.2 (or later), Video Communication Server (VCS) version X5 (or later) and Codian MCU version 3.1 (or later).
Endpoints invited to join the Multiway™ conference must support the H.323 routeToMC facility message if in an H.323 call, or SIP REFER message if in a SIP call.

Requires user role: ADMIN
Value space: <S: 0, 255>
Format: String with a maximum of 255 characters.
Example: NetworkServices Multiway Address: "h323:multiway@company.com"

NetworkServices Multiway Protocol
Determine the protocol to be used for Multiway calls. NOTE: Requires a restart of the codec.

Requires user role: ADMIN
Value space: <Auto/H323/Sip>
Auto: The system will select the protocol for Multiway calls.
H323: The H323 protocol will be used for Multiway calls.
Sip: The SIP protocol will be used for Multiway calls.
Example: NetworkServices Multiway Protocol: Auto

NetworkServices H323 Mode
Determine whether the system should be able to place and receive H.323 calls or not. NOTE: Requires a restart of the codec.

Requires user role: ADMIN
Value space: <On/Off>
On: Enable the possibility to place and receive H.323 calls (default).
Off: Disable the possibility to place and receive H.323 calls.
Example: NetworkServices H323 Mode: On

Network [1..1] VLAN Voice Mode
Set the VLAN voice mode.
Requires user role: ADMIN
Value space: <Auto/Manual/Off>
Auto: The Cisco Discovery Protocol (CDP), if available, assigns an id to the voice VLAN. If CDP is not available, VLAN is not enabled. The VLAN Voice Mode automatically will be set to Auto when the GUI is used to set the Provisioning Mode to CUCM.
Manual: The VLAN id is set manually using the Network VLAN Voice VlanId setting. If CDP is available, the manually set value will be overruled by the value assigned by CDP.
Off: VLAN is not enabled.
Example: Network 1 VLAN Voice Mode: Off

Network [1..1] VLAN Voice VlanId
Set the VLAN voice ID. This setting will only take effect if VLAN Voice Mode is set to Manual.
Requires user role: ADMIN
Value space: <1..4094>
Range: Select a value from 1 to 4094.
Example: Network 1 VLAN Voice VlanId: 1

NetworkServices H323 Mode
Determine whether the system should be able to place and receive H.323 calls or not. NOTE: Requires a restart of the codec.

Requires user role: ADMIN
Value space: <On/Off>
On: Enable the possibility to place and receive H.323 calls (default).
Off: Disable the possibility to place and receive H.323 calls.
Example: NetworkServices H323 Mode: On
Cisco TelePresence MX Series
ADMINISTRATOR GUIDE

Table of contents | Introduction | Web interface | Advanced settings | Appendices

NetworkServices HTTP Mode
Set the HTTP mode to enable/disable access to the system through a web browser. The web interface is used for system management, call management such as call transfer, diagnostics and software uploads.

Requires user role: ADMIN
Value space: <On/Off>
   - On: The HTTP protocol is enabled.
   - Off: The HTTP protocol is disabled.
Example: NetworkServices HTTP Mode: On

NetworkServices HTTPS Mode
HTTPS is a web protocol that encrypts and decrypts user page requests as well as the pages that are returned by the web server.

Requires user role: ADMIN
Value space: <On/Off>
   - On: The HTTPS protocol is enabled.
   - Off: The HTTPS protocol is disabled.
Example: NetworkServices HTTPS Mode: On

NetworkServices HTTPS VerifyServerCertificate
When the system connects to an external HTTPS server (like a phonebook server or an external manager), this server will present a certificate to the system to identify itself.

Requires user role: ADMIN
Value space: <On/Off>
   - On: Requires the system to verify that the server certificate is signed by a trusted Certificate Authority (CA). This requires that a list of trusted CAs are uploaded to the system in advance.
   - Off: Do not verify server certificates.
Example: NetworkServices HTTPS VerifyServerCertificate: Off

NetworkServices HTTPS VerifyClientCertificate
When the system connects to a HTTPS client (like a web browser), the client can be asked to present a certificate to the system to identify itself.

Requires user role: ADMIN
Value space: <On/Off>
   - On: Requires the client to present a certificate that is signed by a trusted Certificate Authority (CA). This requires that a list of trusted CAs are uploaded to the system in advance.
   - Off: Do not verify client certificates.
Example: NetworkServices HTTPS VerifyClientCertificate: Off

NetworkServices HTTPS OCSP Mode
Define the support for OCSP (Online Certificate Status Protocol) responder services. The OCSP feature allows users to enable OCSP instead of certificate revocation lists (CRLs) to check certificate status.

Requires user role: ADMIN
Value space: <On/Off>
   - On: Enable OCSP support.
   - Off: Disable OCSP support.
Example: NetworkServices HTTPS OCSP Mode: Off

NetworkServices HTTPS OCSP URL
Specify the URL of an OCSP server.

Requires user role: ADMIN
Value space: <S: 0, 255>
   Format: String with a maximum of 255 characters.
Example: NetworkServices HTTPS OCSP URL: "http://ocspserver.company.com:81"

NetworkServices NTP Mode
The Network Time Protocol (NTP) is used to synchronize the time of the system to a reference time server. The time server will subsequently be queried every 24th hour for time updates. The time will be displayed on the top of the screen. The system will use the time to timestamp messages transmitted to Gatekeepers or Border Controllers requiring H.235 authentication. The system will use the time to timestamp messages transmitted to Gatekeepers or Border Controllers that requires H.235 authentication. It is also used for timestamping Placed Calls, Missed Calls and Received Calls.

Requires user role: ADMIN
Value space: <Off/Auto/Manual>
   - Off: The system will not use an NTP server.
   - Auto: The system will use the NTP server, by which address is supplied from the DHCP server in the network. If no DHCP server is used, or the DHCP server does not provide the system with a NTP server address, the system will use the static defined NTP server address specified by the user.
   - Manual: The system will always use the static defined NTP server address specified by the user.
Example: NetworkServices NTP Mode: Manual
NetworkServices NTP Address

Enter the NTP Address to define the network time protocol server address. This address will be used if NTP Mode is set to Manual, or if set to Auto and no address is supplied by a DHCP server.

Requires user role: ADMIN

Value space: \<S: 0, 64>  
Format: String with a maximum of 64 characters.

Example: NetworkServices NTP Address: "1.ntp.tandberg.com"

NetworkServices SIP Mode

Determine whether the system should be able to place and receive SIP calls or not. NOTE: Requires a restart of the codec.

Requires user role: ADMIN

Value space: \<On/Off>  
On: Enable the possibility to place and receive SIP calls (default).  
Off: Disable the possibility to place and receive SIP calls.

Example: NetworkServices SIP Mode: On

NetworkServices SNMP Mode

SNMP (Simple Network Management Protocol) is used in network management systems to monitor network-attached devices (routers, servers, switches, projectors, etc) for conditions that warrant administrative attention. SNMP exposes management data in the form of variables on the managed systems, which describe the system configuration. These variables can then be queried (set to ReadOnly) and sometimes set (set to ReadWrite) by managing applications.

Requires user role: ADMIN

Value space: \<Off/ReadOnly/ReadWrite>  
Off: Disable the SNMP network service.  
ReadOnly: Enable the SNMP network service for queries only.  
ReadWrite: Enable the SNMP network service for both queries and commands.

Example: NetworkServices SNMP Mode: ReadWrite

NetworkServices SNMP Host [1..3] Address

Enter the address of up to three SNMP Managers.  
The system's SNMP Agent (in the codec) responds to requests from SNMP Managers (a PC program etc.), e.g. about system location and system contact. SNMP traps are not supported.

Requires user role: ADMIN

Value space: \<S: 0, 64>  
Format: String with a maximum of 64 characters.

Example: NetworkServices SNMP Host 1 Address: ""

NetworkServices SNMP CommunityName

Enter the name of the Network Services SNMP Community. SNMP Community names are used to authenticate SNMP requests. SNMP requests must have a password (case sensitive) in order to receive a response from the SNMP Agent in the codec. The default password is "public". If you have the Cisco TelePresence Management Suite (TMS) you must make sure the same SNMP Community is configured there too. NOTE: The SNMP Community password is case sensitive.

Requires user role: ADMIN

Value space: \<S: 0, 50>  
Format: String with a maximum of 50 characters.

Example: NetworkServices SNMP CommunityName: "public"

NetworkServices SNMP SystemContact

Enter the name of the Network Services SNMP System Contact.

Requires user role: ADMIN

Value space: \<S: 0, 50>  
Format: String with a maximum of 50 characters.

Example: NetworkServices SNMP SystemContact: ""

NetworkServices SNMP SystemLocation

Enter the name of the Network Services SNMP System Location.

Requires user role: ADMIN

Value space: \<S: 0, 50>  
Format: String with a maximum of 50 characters.

Example: NetworkServices SNMP SystemLocation: ""

NetworkServices SSH Mode

SSH (or Secure Shell) protocol can provide secure encrypted communication between the codec and your local computer.

Requires user role: ADMIN

Value space: \<On/Off>  
On: The SSH protocol is enabled.  
Off: The SSH protocol is disabled.

Example: NetworkServices SSH Mode: On
The Phonebook settings

**Phonebook Server [1..1] ID**
Enter a name for the external phonebook.

*Requires user role: ADMIN*

*Value space: <S: 0, 64>*

*Format: String with a maximum of 64 characters.*

*Example: Phonebook Server 1 ID: ""*

**Phonebook Server [1..1] Type**
Select the phonebook server type.

*Requires user role: ADMIN*

*Value space: <VCS/TMS/Callway/CUCM>*

- **VCS:** Select VCS if the phonebook is located on the Cisco TelePresence Video Communication Server.
- **TMS:** Select TMS if the phonebook is located on the Cisco TelePresence Management Suite server.
- **Callway:** Select Callway if the phonebook is to be provided by the Callway subscription service. Contact your Callway provider for more information.
- **CUCM:** Select CUCM if the phonebook is located on the Cisco Unified Communications Manager.

*Example: Phonebook Server 1 Type: TMS*

**Phonebook Server [1..1] URL**
Enter the address (URL) to the external phonebook server.

*Requires user role: ADMIN*

*Value space: <S: 0, 255>*

*Format: String with a maximum of 255 characters.*

---

**NetworkServices SSH AllowPublicKey**
Secure Shell (SSH) public key authentication can be used to access the codec.

*Requires user role: ADMIN*

*Value space: <On/Off>*

- **On:** The SSH public key is allowed.
- **Off:** The SSH public key is not allowed.

*Example: NetworkServices SSH AllowPublicKey: On*

**NetworkServices Telnet Mode**
Telnet is a network protocol used on the Internet or Local Area Network (LAN) connections.

*Requires user role: ADMIN*

*Value space: <On/Off>*

- **On:** The Telnet protocol is enabled.
- **Off:** The Telnet protocol is disabled. This is the factory setting.

*Example: NetworkServices Telnet Mode: Off*
The Provisioning settings

Provisioning Connectivity
This setting controls how the device discovers whether it should request an internal or external configuration from the provisioning server.

Requires user role: ADMIN
Value space: <Internal/External/Auto>
  Internal: Request internal configuration.
  External: Request external configuration.
  Auto: Automatically discover using NAPTR queries whether internal or external configurations should be requested. If the NAPTR responses have the "e" flag, external configurations will be requested. Otherwise internal configurations will be requested.

Example: Provisioning Connectivity: Auto

Provisioning Mode
It is possible to configure the codec (video system) using a provisioning system / an external manager. This allows video conferencing network administrators to manage many video systems simultaneously.

With this setting you choose which type of provisioning system to use. Provisioning can also be switched off. Contact your provisioning system provider/representative for more information.

Requires user role: ADMIN
Value space: <Off/TMS/VCS/CallWay/CUCM/Auto>
  Off: The video system will not be configured by a provisioning system.
  TMS: The video system will be configured using TMS (Cisco TelePresence Management System).
  VCS: The video system will be configured using VCS (Cisco TelePresence Video Communication Server).
  CallWay: The video system will be configured using Callway (subscription service).
  CUCM: The video system will be configured using CUCM (Cisco Unified Communications Manager).
  Auto: The provisioning server will automatically be selected by the video system.

Example: Provisioning Mode: TMS

Provisioning Password
This is the password part of the credentials used to authenticate the video system with the provisioning server. This setting must be used when required by the provisioning server. If Provisioning Mode is Callway, enter the activation code.

Requires user role: ADMIN
Value space: <S: 0, 64>
  Format: String with a maximum of 64 characters.

Example: Provisioning Password: ""

Provisioning HttpMethod
Select the HTTP method to be used for the provisioning.

Requires user role: ADMIN
Value space: <GET/POST>
  GET: Select GET when the provisioning server supports GET.
  POST: Select POST when the provisioning server supports POST.

Example: Provisioning HttpMethod: POST

Provisioning ExternalManager Address
Enter the IP Address or DNS name of the external manager / provisioning system.
If an External Manager Address (and Path) is configured, the system will send a message to this address when starting up. When receiving this message the external manager / provisioning system can return configurations/commands to the unit as a result.
When using CUCM or TMS provisioning, the DHCP server can be set up to provide the external manager address automatically (DHCP Option 242 for TMS, and DHCP Option 150 for CUCM). An address set in the Provisioning ExternalManager Address setting will override the address provided by DHCP.

Requires user role: ADMIN
Value space: <S: 0, 64>
  Format: A valid IP address format or DNS name; a compact string with a maximum of 64 characters.

Example: Provisioning ExternalManager Address: ""

Provisioning LoginName
This is the user name part of the credentials used to authenticate the video system with the provisioning server. This setting must be used when required by the provisioning server. If Provisioning Mode is Callway, enter the video number.

Requires user role: ADMIN
Value space: <S: 0, 80>
  Format: String with a maximum of 80 characters.

Example: Provisioning LoginName: ""
Provisioning ExternalManager Protocol
Determine whether to use secure management or not.

Requires user role: ADMIN
Value space: HTTP/HTTPS
  HTTP: Set to HTTP to disable secure management. Requires HTTP to be enabled in the xConfiguration NetworkServices HTTP Mode setting.
  HTTPS: Set to HTTPS to enable secure management. Requires HTTPS to be enabled in the xConfiguration NetworkServices HTTPS Mode setting.
Example: Provisioning ExternalManager Protocol: HTTP

Provisioning ExternalManager Path
Set the Path to the external manager / provisioning system. This setting is required when several management services reside on the same server, i.e. share the same External Manager address.

Requires user role: ADMIN
Value space: <S: 0, 255>
  Format: String with a maximum of 255 characters.
Example: Provisioning ExternalManager Path: "tms/public/external/management/SystemManagementService.asmx"

Provisioning ExternalManager Domain
Enter the SIP domain for the VCS provisioning server.

Requires user role: ADMIN
Value space: <S: 0, 64>
  Format: String with a maximum of 64 characters.
Example: Provisioning ExternalManager Domain: "any.domain.com"

The RTP settings

RTP Ports Range Start
Specify the first port in the range of RTP ports. See also the "H323 Profile [1..1] PortAllocation" command.

Requires user role: USER
Value space: <1024..65502>
  Range: Select a value from 1024 to 65502.
Example: RTP Ports Range Start: 2326

RTP Ports Range Stop
Specify the last RTP port in the range. See also the "H323 Profile [1..1] PortAllocation" command.

Requires user role: USER
Value space: <1056..65535>
  Range: Select a value from 1056 to 65535.
Example: RTP Ports Range Stop: 2486
The Security settings

Security Audit Server Address
Enter the external/global IP-address to the audit syslog server. IPv6 is not supported.
NOTE: Requires a restart of the system for any change to take effect.
Requires user role: AUDIT
Value space: <S: 0, 64>
  Format: String with a maximum of 64 characters.
Example: Security Audit Server Address: ""

Security Audit Server Port
Enter the port of the syslog server that the system shall send its audit logs to. The default port is 514.
NOTE: Requires a restart of the system for any change to take effect.
Requires user role: AUDIT
Value space: <0..65535>
  Range: Select a value from 0 to 65535.
Example: Security Audit Server Port: 514

Security Audit OnError Action
Describes what actions will be taken if connection to the syslog server is lost. This setting is only relevant if Security Audit Logging Mode is set to ExternalSecure.
NOTE: Requires a restart of the system for any change to take effect.
Requires user role: AUDIT
Value space: <Halt/Ignore>
  Halt: If a halt condition is detected the unit is rebooted and only the auditor is allowed to operate the unit until the halt condition has passed. When the halt condition has passed the audit logs are re-spoiled to the external server. Halt conditions are: A network breach (no physical link), no external syslog server running (or wrong server address or port), TLS authentication failed (if in use), local backup (re-spoiling) log full.
  Ignore: The system will continue its normal operation, and rotate internal logs when full. When connection is restored it will again send its audit logs to the syslog server.
Example: Security Audit OnError Action: Ignore

Security Audit Logging Mode
Describes where the audit logs are recorded or transmitted.
NOTE: Requires a restart of the system for any change to take effect.
Requires user role: AUDIT
Value space: <Off/Internal/External/ExternalSecure>
  Off: No audit logging is performed.
  Internal: The system records the audit logs to internal logs, and rotates logs when they are full.
  External: The system sends the audit logs to an external audit syslog server. The external server must support TCP.
  ExternalSecure: The system sends encrypted audit logs to an external audit server that is verified by a certificate in the Audit CA list. The Audit CA list file must be uploaded to the codec using the web interface. The common_name parameter of a certificate in the CA list must match the IP address of the syslog server.
Example: Security Audit Logging Mode: Off

Security Session ShowLastLogon
When logging in to the system using SSH or Telnet you will see the UserId, time and date of the last session that did a successful login.
Requires user role: ADMIN
Value space: <Off/On>
  On: Set to On to enable the possibility to show information about the last session.
  Off: Set to Off to disable the possibility to show information about the last session.
Example: Security Session ShowLastLogon: Off

Security Session InactivityTimeout
Determines how long the system will accept inactivity from the user before he is automatically logged out.
Requires user role: ADMIN
Value space: <0..10000>
  Range: Select a value from 0 to 10000 seconds. 0 means that inactivity will not enforce automatically logout.
Example: Security Session InactivityTimeout: 0
The SerialPort settings

SerialPort Mode
Set the COM 1 serial port to be enabled/disabled.
Requires user role: ADMIN
Value space: <On/off>
  On: Enable the COM 1 serial port.
  Off: Disable the COM 1 serial port.
Example: SerialPort Mode: On

SerialPort BaudRate
Specify the baud rate (data transmission rate, bits per second) for the COM 1 port on the codec.
The default value is 38400.
Connection parameters for the COM port: Data bits: 8; Parity: None; Stop bits: 1; Flow control: None.
Requires user role: ADMIN
Value space: <9600/19200/38400/57600/115200>
  Range: Select a baud rate from the baud rates listed (bps).
Example: SerialPort BaudRate: 38400

SerialPort LoginRequired
Determine if login shall be required when connecting to the COM 1 port at the codec.
Requires user role: ADMIN
Value space: <On/off>
  On: Login is required when connecting to the codec through COM 1 port.
  Off: The user can access the codec through COM 1 port without any login.
Example: SerialPort LoginRequired: On

The SIP settings

SIP Profile [1..1] URI
The SIP URI or number is used to address the system. This is the URI that is registered and used
by the SIP services to route inbound calls to the system. A Uniform Resource Identifier (URI) is a
compact string of characters used to identify or name a resource.
Requires user role: ADMIN
Value space: <S: 0, 255>
  Format: Compact string with a maximum of 255 characters.
Example: SIP Profile 1 URI: "sip:firstname.lastname@company.com"

SIP Profile [1..1] DisplayName
When configured the incoming call will report the DisplayName instead of the SIP URI.
Requires user role: ADMIN
Value space: <S: 0, 255>
  Format: String with a maximum of 255 characters.
Example: SIP Profile 1 DisplayName: ""

SIP Profile [1..1] Authentication [1..1] LoginName
This is the user name part of the credentials used to authenticate towards the SIP proxy.
Requires user role: ADMIN
Value space: <S: 0, 128>
  Format: String with a maximum of 128 characters.
Example: SIP Profile 1 Authentication 1 LoginName: ""

SIP Profile [1..1] Authentication [1..1] Password
This is the password part of the credentials used to authenticate towards the SIP proxy.
Requires user role: ADMIN
Value space: <S: 0, 128>
  Format: String with a maximum of 128 characters.
Example: SIP Profile 1 Authentication 1 Password:
SIP Profile [1..1] DefaultTransport
Select the transport protocol to be used over the LAN.

Requires user role: ADMIN

Value space: <UDP/TCP/Tls/Auto>
- UDP: The system will always use UDP as the default transport method.
- TCP: The system will always use TCP as the default transport method.
- Tls: The system will always use TLS as the default transport method. For TLS connections a SIP CA-list can be uploaded to the video system. If no such CA-list is available on the system then anonymous Diffie Hellman will be used.
- Auto: The system will try to connect using transport protocols in the following order: TLS, TCP, UDP.

Example: SIP Profile 1 DefaultTransport: Auto

SIP Profile [1..1] TlsVerify
For TLS connections a SIP CA-list can be uploaded to the video system.

Requires user role: ADMIN

Value space: <On/Off>
- On: Set to On to verify TLS connections. Only TLS connections to servers, whose x.509 certificate is validated against the CA-list, will be allowed.
- Off: Set to Off to allow TLS connections without verifying them. The TLS connections are allowed to be set up without verifying the x.509 certificate received from the server against the local CA-list. This should typically be selected if no SIP CA-list has been uploaded.

Example: SIP Profile 1 TlsVerify: Off

SIP Profile [1..1] Outbound

Requires user role: ADMIN

Value space: <On/Off>
- On: Set up multiple outbound connections to servers in the Proxy Address list.
- Off: Connect to the single proxy configured first in Proxy Address list.

Example: SIP Profile 1 Outbound: Off

SIP Profile [1..1] Proxy [1..4] Address
The Proxy Address is the manually configured address for the outbound proxy. It is possible to use a fully qualified domain name, or an IP address. The default port is 5060 for TCP and UDP but another one can be provided. If Outbound is enabled, multiple proxies can be addressed.

Requires user role: ADMIN

Value space: <S: 0, 255>
Format: Compact string with a maximum of 255 characters. An IP address that contains letters (192.a.2.0) or invalid IP addresses (192.0.1234.0) will be rejected.

Example: SIP Profile 1 Proxy 1 Address: ""

SIP Profile [1..1] Proxy [1..4] Discovery
Select if the SIP Proxy address is to be obtained manually or by using Dynamic Host Configuration Protocol (DHCP).

Requires user role: ADMIN

Value space: <Auto/Manual>
- Auto: When Auto is selected, the SIP Proxy address is obtained using Dynamic Host Configuration Protocol (DHCP).
- Manual: When Manual is selected, the manually configured SIP Proxy address will be used.

Example: SIP Profile 1 Proxy 1 Discovery: Manual

SIP Profile [1..1] Type
Enables SIP extensions and special behaviour for a vendor or provider.

Requires user role: ADMIN

Value space: <Standard/Alcatel/Avaya/Cisco/Microsoft/Nortel>
- Standard: To be used when registering to standard SIP Proxy (tested with Cisco TelePresence VCS and Broadsoft)
- Alcatel: To be used when registering to Alcatel-Lucent OmniPCX Enterprise. NOTE: This mode is not fully supported.
- Avaya: To be used when registering to Avaya Communication Manager. NOTE: This mode is not fully supported.
- Cisco: To be used when registering to Cisco Unified Communication Manager.
- Microsoft: To be used when registering to Microsoft LCS or OCS. NOTE: This mode is not fully supported.
- Nortel: To be used when registering to Nortel MCS 5100 or MCS 5200 PBX. NOTE: This mode is not fully supported.

Example: SIP Profile 1 Type: Standard
The Standby settings

**Standby Control**
Determine whether the system should go into standby mode or not.
**Requires user role:** ADMIN
**Value space:** <On/Off>
- **On:** Enter standby mode when the Standby Delay has timed out. NOTE: Requires the Standby Delay to be set to an appropriate value.
- **Off:** The system will not enter standby mode.
**Example:** Standby Control: On

**Standby Delay**
Define how long (in minutes) the system shall be in idle mode before it goes into standby mode. NOTE: Requires the Standby Control to be enabled.
**Requires user role:** ADMIN
**Value space:** <1..480>
- **Range:** Select a value from 1 to 480 minutes.
**Example:** Standby Delay: 10

**Standby BootAction**
Define the camera position after a restart of the codec.
**Requires user role:** ADMIN
**Value space:** <None/Preset1/Preset2/Preset3/Preset4/Preset5/Preset6/Preset7/Preset8/Preset9/Preset10/Preset11/Preset12/Preset13/Preset14/Preset15/RestoreCameraPosition/DefaultCameraPosition>
- **None:** No action.
- **Preset1 to Preset15:** When leaving standby the camera position will be set to the position defined by the selected preset.
- **RestoreCameraPosition:** When leaving standby the camera position will be set to the position it had before entering standby.
- **DefaultCameraPosition:** When leaving standby the camera position will be set to the factory default position.
**Example:** Standby BootAction: DefaultCameraPosition

**Standby StandbyAction**
Define the camera position when going into standby mode.
**Requires user role:** ADMIN
**Value space:** <None/PrivacyPosition>
- **None:** No action.
- **PrivacyPosition:** Turns the camera to a sideways position for privacy.
**Example:** Standby StandbyAction: PrivacyPosition

**Standby WakeupAction**
Define the camera position when leaving standby mode.
**Requires user role:** ADMIN
**Value space:** <None/Preset1/Preset2/Preset3/Preset4/Preset5/Preset6/Preset7/Preset8/Preset9/Preset10/Preset11/Preset12/Preset13/Preset14/Preset15/RestoreCameraPosition/DefaultCameraPosition>
- **None:** No action.
- **Preset1 to Preset15:** When leaving standby the camera position will be set to the position defined by the selected preset.
- **RestoreCameraPosition:** When leaving standby the camera position will be set to the position it had before entering standby.
- **DefaultCameraPosition:** When leaving standby the camera position will be set to the factory default position.
**Example:** Standby WakeupAction: RestoreCameraPosition
The SystemUnit settings

SystemUnit Name
Enter a System Name to define a name of the system unit. If the H.323 Alias ID is configured on the system then this ID will be used instead of the system name. The system name will be displayed:
1) When the codec is acting as an SNMP Agent.
2) Towards a DHCP server.
Requires user role: ADMIN
Value space: <S: 0, 50>
   Format: String with a maximum of 50 characters.
Example: SystemUnit Name: "Meeting Room"

SystemUnit MenuLanguage
Select the language to be used in the menus on screen.
Requires user role: USER
Value space: <English/ChineseSimplified/Finnish/French/German/Japanese/Russian/Swedish>
Example: SystemUnit MenuLanguage: English

SystemUnit ContactInfo Type
Not applicable in this version.

SystemUnit Type
Select whether the video system is for personal use or to be used in a multiuser environment. It is highly recommended not to use the default setting.
Requires user role: ADMIN
Value space: <Personal/Shared>
   Personal: Set to Personal when the system is for personal use.
   Shared: Set to Shared when the system is used in a multiuser environment.
Example: SystemUnit Type: Personal

SystemUnit CallLogging Mode
Set the call logging mode for calls that are received or placed by the system. The call logs may then be viewed via the web interface or using the xHistory command.
Requires user role: ADMIN
Value space: <On/Off>
   On: Enable logging.
   Off: Disable logging.
Example: SystemUnit CallLogging Mode: On

SystemUnit IrSensor
Not applicable in this version.
The Time settings

Time Zone
Set the time zone where the system is located, using Windows time zone description format.

Requires user role: USER

Value space: <GMT-12:00 (International Date Line West)/GMT-11:00 (Midway Island, Samoa)/GMT-10:00 (Hawaii)/GMT-09:00 (Alaska)/GMT-08:00 (Pacific Time (US & Canada); Tijuana)/GMT-07:00 (Arizona)/GMT-07:00 (Mountain Time (US & Canada))/GMT-07:00 (Chihuahua, La Paz, Mazatlan)/GMT-06:00 (Central America)/GMT-06:00 (Saskatchewan)/GMT-06:00 (Guadalajara, Mexico City, Monterrey)/GMT-06:00 (Central Time (US & Canada))/GMT-05:00 (Indiana (East))/GMT-05:00 (Bogota, Lima, Quito)/GMT-05:00 (Eastern Time (US & Canada))/GMT-04:30 (Caracas)/GMT-04:00 (La Paz)/GMT-04:00 (Santiago)/GMT-04:00 (Atlantic Time (Canada))/GMT-03:30 (Newfoundland)/GMT-03:00 (Buenos Aires, Georgetown)/GMT-03:00 (Greenland)/GMT-03:00 (Brasilia)/GMT-02:00 (Mid-Atlantic)/GMT-01:00 (Cape Verde Is.)/GMT-01:00 (Azores)/GMT (Casablanca, Monrovia)/GMT (Coordinated Universal Time)/GMT (Greenwich Mean Time : Dublin, Edinburgh, Lisbon, London)/GMT+01:00 (West Central Africa)/GMT+01:00 (Amsterdam, Berlin, Bern, Rome, Stockholm, Vienna)/GMT+01:00 (Brussels, Copenhagen, Madrid, Paris)/GMT+01:00 (Sarajevo, Skopje, Warsaw, Zagreb)/GMT+01:00 (Belgrade, Bratislava, Budapest, Ljubljana, Prague)/GMT+02:00 (Harare, Pretoria)/GMT+02:00 (Jerusalem)/GMT+02:00 (Athens, Istanbul, Minsk)/GMT+02:00 (Helsinki, Kyiv, Riga, Sofia, Tallinn, Vilnius)/GMT+02:00 (Cairo)/GMT+02:00 (Bucharest)/GMT+03:00 (Nairobi)/GMT+03:00 (Kuwait, Riyadh)/GMT+03:00 (Moscow, St. Petersburg, Volgograd)/GMT+03:00 (Baghdad)/GMT+03:30 (Tehran)/GMT+04:00 (Abu Dhabi, Muscat)/GMT+04:00 (Baku, Tbilisi, Yerevan)/GMT+04:30 (Kabul)/GMT+05:00 (Islamabad, Karachi, Tashkent)/GMT+05:00 (Ekaterinburg)/GMT+05:30 (Chennai, Kolkata, Mumbai, New Delhi)/GMT+05:45 (Kathmandu)/GMT+06:00 (Sri Jayawardenepura)/GMT+06:00 (Astrana, Dhaka)/GMT+06:00 (Almaty, Novosibirsk)/GMT+06:30 (Rangoon)/GMT+07:00 (Bangkok, Hanoi, Jakarta)/GMT+07:00 (Krasnoyarsk)/GMT+08:00 (Perth)/GMT+08:00 (Taipei)/GMT+08:00 (Kuala Lumpur, Singapore)/GMT+08:00 (Beijing, Chongqing, Hong Kong, Urumqi)/GMT+08:00 (Ulaan Bataar)/GMT+09:00 (Osaka, Sapporo, Tokyo)/GMT+09:00 (Seoul)/GMT+09:00 (Yakutsk)/GMT+09:30 (Darwin)/GMT+09:30 (Adelaide)/GMT+10:00 (Guam, Port Moresby)/GMT+10:00 (Brisbane)/GMT+10:00 (Vladivostok)/GMT+10:00 (Hobart)/GMT+10:00 (Canberra, Melbourne, Sydney)/GMT+11:00 (Magadan, Solomon Is., New Caledonia)/GMT+12:00 (Fiji, Kamchatka, Marshall Is.)/GMT+12:00 (Auckland, Wellington)/GMT+13:00 (Nuku alofa)

Range: Select a time zone from the list time zones. If using a command line interface; watch up for typos.

Example: Time Zone: "GMT (Greenwich Mean Time : Dublin, Edinburgh, Lisbon, London)"

Time TimeFormat
Set the time format.

Requires user role: USER

Value space: <24H/12H>

24H: Set the time format to 24 hours.
12H: Set the time format to 12 hours (AM/PM).

Example: Time TimeFormat: 24H

Time DateFormat
Set the date format.

Requires user role: USER

Value space: <DD_MM_YY/MM_DD_YY/YY_MM_DD>

DD_MM_YY: The date January 30th 2010 will be displayed: 30.01.10
MM_DD_YY: The date January 30th 2010 will be displayed: 01.30.10
YY_MM_DD: The date January 30th 2010 will be displayed: 10.01.30

Example: Time DateFormat: DD_MM_YY
The User Interface settings

**User Interface** **TouchPanel DefaultPanel**
Select whether to display the list of contacts or the list of scheduled meetings on the Touch panel as default.

**Requires user role:** USER

**Value space:** <ContactList/MeetingList>
- **ContactList:** The contact list (favorites, directory and history) will appear as default on the Touch panel.
- **MeetingList:** The list of scheduled meetings will appear as default on the Touch panel.

**Example:** UserInterface TouchPanel DefaultPanel: ContactList

---

The Video settings

**Video Input Source [1..2] Name**
Enter a name for the video input source.

**Requires user role:** ADMIN

**Value space:** <S: 0, 50>
- **Format:** String with a maximum of 50 characters.

**Example:** Video Input Source 1 Name: ""

**Video Input Source [1] Connector**
Select which video input connector to be active on video input source 1.

**Requires user role:** ADMIN

**Value space:** <DVI>
- **DVI:** Select DVI when you want to use the DVI as input source 1.

**Example:** Video Input Source 1 Connector: DVI

**Video Input Source [2] Connector**
Select which video input connector to be active on video input source 2.

**Requires user role:** ADMIN

**Value space:** <CAMERA>
- **CAMERA:** Select CAMERA when you want to use the camera as input source 2.

**Example:** Video Input Source 2 Connector: CAMERA

**Video Input Source [1..2] Type**
Set which type of input source is connected to the video input.

**Requires user role:** ADMIN

**Value space:** <other/camera/PC/DVD/document_camera>
- **Other:** Select Other when some other type of equipment is connected to the selected video input.
- **Camera:** Select Camera when you have a camera connected to the selected video input.
- **PC:** Select PC when you have a PC connected to the selected video input.
- **DVD:** Select DVD when you have a DVD player connected to the selected video input.
- **Document_Camera:** Select Document_Camera when you have a document camera connected to the selected video input.

**Example:** Video Input Source 1 Type: PC
Video Input Source [1..2] CameraControl Mode
Set the camera control mode for the camera associated with the video source.
Requires user role: ADMIN
Value space: <On/Off>
  On: Enable camera control.
  Off: Disable camera control.
Example: Video Input Source 1 CameraControl Mode: On

Video Input Source [1..2] CameraControl CameraId
Select the ID of the camera in the Visca chain that is connected to this camera source. The CameraId setting represents the camera’s position in the Visca chain.
Requires user role: ADMIN
Value space: <1>
  Range: Set the ID of the camera.
Example: Video Input Source 1 CameraControl CameraId: 1

Video Input Source [1..2] OptimalDefinition Profile
Adjust how rapidly the system will increase the transmitted resolution when increasing the bandwidth. NOTE: Requires that the Video Input Source Quality is set to Motion.
Normal: Use this setting for normal to poorly lit environment. If the source is a camera with 1920x1080p60, the system will transmit 1920x720p60 at about 2.2Mb/sec and above with this setting set to normal.
Medium: Requires better than normal and consistent lighting and good quality video inputs. If the source is a camera with 1920x1080p60, the system will transmit 1920x720p60 at about 1.4Mb/sec and above with this setting set to medium.
High: Requires good lighting conditions for a good overall experience and good quality video inputs. If the source is a camera with 1920x1080p60, the system will transmit 1920x720p60 at about 1.1Mb/sec and above with this setting set to high.
Requires user role: ADMIN
Value space: <Normal/Medium/High>
Ref: Table 1 and Table 2.
Example: Video Input Source 1 OptimalDefinition Profile: Normal

### Table 1: Optimal definition for systems supporting 1080p

<table>
<thead>
<tr>
<th>Resolution</th>
<th>Normal</th>
<th>Medium</th>
<th>High</th>

<td>1920 kbit/s</td>
<td>1152 kbit/s</td>
</tr>
</tbody>
</table>

Video Input Source [1..2] OptimalDefinition Threshold60fps
For each video input, this setting tells the system the lowest resolution where it should transmit 60fps. So for all resolutions lower than this, the maximum transmitted framerate would be 30fps, while above this resolution 60fps would also be possible, if the available bandwidth is adequate.
Requires user role: ADMIN
Value space: <512_288/768_448/1024_576/1280_720/Never>
  512_288: Set the threshold to 512x288.
  768_448: Set the threshold to 768x448.
  1024_576: Set the threshold to 1024x576.
  1280_720: Set the threshold to 1280x720.
  Never: Do not set a threshold for transmitting 60fps.
Example: Video Input Source 1 OptimalDefinition Threshold60fps: 1280_720
Video Input Source [1..2] Quality

When encoding and transmitting video there will be a tradeoff between high resolution and high framerate. For some video sources it is more important to transmit high framerate than high resolution and vice versa. The Quality setting specifies whether to give priority to high frame rate or to high resolution for a given source.

Requires user role: ADMIN

Value space: <Motion/Sharpness>
- Motion: Gives the highest possible framerate. Used when there is a need for higher frame rates, typically when a large number of participants are present or when there is a lot of motion in the picture.
- Sharpness: Gives the highest possible resolution. Used when you want the highest quality of detailed images and graphics.

Example: Video Input Source 1 Quality: Motion

Video DefaultPresentationSource

Define which video input source shall be used as the default presentation source (when you tap Presentation followed by Present on the touch controller). The input source is configured to a video input connector.

Requires user role: USER

Value space: <1..2>
- Range: Select the video source to be used as the presentation source.

Example: Video DefaultPresentationSource: 2

Video Input DVI [1] Type

The official DVI standard supports both digital and analog signals. In most cases the default AutoDetect setting can detect whether the signal is analog RGB or digital. However, in some rare cases when DVI-I cables are used (these cables can carry both the analog and digital signals) the auto detection fails. This setting makes it possible to override the AutoDetect and select the correct DVI video input.

Requires user role: ADMIN

Value space: <AutoDetect/Digital/AnalogRGB/AnalogYPbPr>
- AutoDetect: Set to AutoDetect to automatically detect if the signal is analog RGB or digital. However, in some rare cases when DVI-I cables are used (these cables can carry both the analog and digital signals) the auto detection fails. This setting makes it possible to override the AutoDetect and select the correct DVI video input.
- Digital: Set to Digital to force the DVI video input to Digital when using DVI-I cables with both analog and digital pins and AutoDetect fails.
- AnalogRGB: Set to AnalogRGB to force the DVI video input to AnalogRGB when using DVI-I cables with both analog and digital pins and AutoDetect fails.
- AnalogYPbPr: Set to AnalogYPbPr to force the DVI video input to AnalogYPbPr, as the component (YPbPr) signal cannot be auto detected.

Example: Video Input DVI 1 Type: AutoDetect

Video ControlPanel Brightness

Set the brightness level for the touch screen.

Requires user role: ADMIN

Value space: <S: 0, 100>
- Range: Select a value from 0 to 100.

Example: Video ControlPanel Brightness: 100

Video Layout Scaling

Define how the system shall adjust the aspect ratio for images or frames when there is a difference between the image and the frame it is to be placed in.

Requires user role: ADMIN

Value space: <On/Off>
- On: Let the system automatically adjust aspect ratio.
- Off: No adjustment of the aspect ratio.

Example: Video Layout Scaling: On

Video Layout ScaleToFrame

Define what to do if the aspect ratio of a video input source doesn’t match the aspect ratio of the corresponding image frame in a composition. For example if you have a 4:3 input source (like XGA) to be displayed on a 16:9 output (like HD720).

Requires user role: ADMIN

Value space: <Manual/MaintainAspectRatio/StretchToFit>
- Manual: If the difference in aspect ratio between the video input source and the target image frame is less than the ScaleToFrameThreshold configuration (in percent), the image is stretched to fit. If not, the system will maintain the original aspect ratio.
- MaintainAspectRatio: Will maintain the aspect ratio of the input source, and fill in black in the rest of the frame (letter boxing or pillar boxing).
- StretchToFit: Will stretch (horizontally or vertically) the input source to fit into the image frame.

NOTE: The general limitation is that you cannot upscale in one direction and at the same time downscale in the other direction. In such situations the codec will apply letterboxing.

Example: Video Layout ScaleToFrame: MaintainAspectRatio

Video Layout ScaleToFrameThreshold

Only applicable if the ScaleToFrame configuration is set to manual. If the difference in aspect ratio between the video input source and the target image frame is less than the ScaleToFrameThreshold configuration (in percent), the image is stretched to fit. If not, the system will maintain the original aspect ratio.

Requires user role: ADMIN

Value space: <0..100>
- Range: Select a value from 0 to 100 percent.

Example: Video Layout ScaleToFrameThreshold: 5
Video Layout LocalLayoutFamily
Select which video layout family to be used locally.
Requires user role: ADMIN
Value space: <Auto/FullScreen/Equal/PresentationSmallSpeaker/
PresentationLargeSpeaker>
  Auto: The default layout family, as given by the layout database, will be used as the local
layout. For more information about the layout database, see the command: xCommand Video
Layout LoadDb.
  FullScreen: The FullScreen layout family will be used as the local layout.
  Equal: The Equal layout family will be used as the local layout.
  PresentationSmallSpeaker: The PresentationSmallSpeaker layout family will be used as the
local layout.
  PresentationLargeSpeaker: The PresentationLargeSpeaker layout family will be used as the
local layout.
Example: Video Layout LocalLayoutFamily: Auto

Video Layout RemoteLayoutFamily
Select which video layout family to be used for the remote participants.
Requires user role: ADMIN
Value space: <Auto/FullScreen/Equal/PresentationSmallSpeaker/
PresentationLargeSpeaker>
  Auto: The default layout family, as given by the local layout database, will be used as
the remote layout. For more information about the layout database, see the command: xCommand Video
Layout LoadDb.
  FullScreen: The FullScreen layout family will be used as the remote layout.
  Equal: The Equal layout family will be used as the remote layout.
  PresentationSmallSpeaker: The PresentationSmallSpeaker layout family will be used as the
remote layout.
  PresentationLargeSpeaker: The PresentationLargeSpeaker layout family will be used as the
remote layout.
Example: Video Layout RemoteLayoutFamily: Auto

Video MainVideoSource
Define which video input source shall be used as the main video source. The video input source
is configured with the "Video Input Source [1..2] Connector" setting.
Requires user role: USER
Value space: <1..2>
  Range: Select the source to be used as the main video source.
Example: Video MainVideoSource: 1

Video Monitors
Set the monitor layout mode.
Requires user role: ADMIN
Value space: <Single/Dual/DualPresentationOnly>
  Single: The same layout is shown on all monitors.
  Dual: The layout is distributed on two monitors.
  DualPresentationOnly: All participants in the call will be shown on the first monitor, while the
presentation (if any) will be shown on the second monitor.
Example: Video Monitors: Single

Video OSD Mode
Not applicable in this version.

Video OSD AutoSelectPresentationSource
Not applicable in this version.

Video OSD TodaysBookings
Not applicable in this version.

Video OSD MyContactsExpanded
Not applicable in this version.

Video OSD Output
Not applicable in this version.

Video OSD InputMethod InputLanguage
Not applicable in this version.

Video OSD InputMethod Cyrillic
Not applicable in this version.

Video OSD LoginRequired
Not applicable in this version.
Video AllowWebSnapshots
Allow or disallow that snapshots captured by the video input main source can be displayed in the web interface Call Control page.
NOTE: This feature is disabled by default, and must be enabled from the Touch controller.

Requires user role: ADMIN
Value space: <On/Off>
  On: If set to on, a web snapshot can be generated and displayed on the web interface.
  Off: The generation of web snapshots is not allowed.

Example: Video AllowWebSnapshots: Off

Video Output LCD [1] Resolution
Set the screen resolution.

Requires user role: ADMIN
Value space: <1920_1080_60>
  Range: The screen resolution is 1920 x 1080 Hz.

Example: Video Output LCD 1 Resolution: 1920_1080_60

Video Output LCD [1] MonitorRole
Set the LCD monitor role.
It is highly recommended to use the default setting. NOTE: The settings made here will be overruled by the touch controller.

Requires user role: ADMIN
Value space: <First/Second/PresentationOnly/InternalSetup>
  First: Show main video stream.
  Second: Show presentation video stream if active, or other participants.
  PresentationOnly: Show presentation video stream if active, and nothing else.
  InternalSetup: Internal setup from the touch controller will be used.

Example: Video Output LCD 1 MonitorRole: InternalSetup

Video Output LCD [1] Brightness
Set the brightness level for the monitor.

Requires user role: ADMIN
Value space: <S: 0, 100>
  Range: Select a value from 0 to 100.

Example: Video Output LCD 1 Brightness: 50

Video Output LCD [1] Red
Set the Red color level for the monitor.

Requires user role: ADMIN
Value space: <S: 0, 100>
  Range: Select a value from 0 to 100.

Example: Video Output LCD 1 Red: 50

Video Output LCD [1] Green
Set the Green color level for the monitor.

Requires user role: ADMIN
Value space: <S: 0, 100>
  Range: Select a value from 0 to 100.

Example: Video Output LCD 1 Green: 50

Video Output LCD [1] Blue
Set the Blue color level for the monitor.

Requires user role: ADMIN
Value space: <S: 0, 100>
  Range: Select a value from 0 to 100.

Example: Video Output LCD 1 Blue: 50

Determine the role of the internal monitor and select where to show the video stream and presentation.
It is highly recommended to use the default setting.

Requires user role: ADMIN
Value space: <First/Second/PresentationOnly>
  First: Show the main video stream.
  Second: Show presentation video stream if active, or other participants.
  PresentationOnly: Show presentation video stream if active, and nothing else.

Example: Video Output Internal 2: First

Video Selfview
Determine if the main video source (selfview) shall be displayed on screen.

Requires user role: USER
Value space: <on/off>
  On: Display selfview on screen.
  Off: Do not display selfview on screen.

Example: Video Selfview: On
Video Wallpaper

Determine which background picture to show on the touch screen and main screen when idle. It is recommended to use Wallpaper01 to Wallpaper12.

**Requires user role:** USER

**Value space:** <None/Growing/Summersky/Custom/Wallpaper01/Wallpaper02/Wallpaper03/Wallpaper04/Wallpaper05/Wallpaper06/Wallpaper07/Wallpaper08/Wallpaper09/Wallpaper10/Wallpaper11/Wallpaper12>

Wallpaper01 to Wallpaper12: Select one of the predefined wallpapers to be displayed on the main screen and touch screen. The wallpaper will be shown on both screens.

None: No wallpaper will be displayed on the main screen. **NOTE:** When you change the wallpaper on the touch screen, it will also set the wallpaper for the main screen.

Summersky, Growing: Select one of the predefined wallpapers to be displayed on the main screen. It will not be displayed on the touch screen. **NOTE:** When you change the wallpaper on the touch screen, it will also change the wallpaper for the main screen.

Custom: The custom wallpaper will only show on the main screen, not the touch screen. It must be uploaded to the codec from the web interface before selecting Custom. The maximum supported resolution is 1920x1280.

1) **On the video system:** Find the IP address of the codec. Open the menu on screen and go to Home > Settings > System information to find the IP Address.
2) **On your computer:** Open a web browser and enter the IP address of the codec. Select "Wallpaper" from the menu, browse for the file, and press the "Upload" button.
3) **On the web interface:** Log in and go to Advanced Configuration > Video > Wallpaper and select Custom. Give it a few seconds to display the new picture. If the picture does not show, toggle once between "None*" and "Custom*" wallpaper to make the change take effect. **NOTE:** When you change the wallpaper on the touch screen, it will also change the wallpaper for the main screen.

**Example:** Video Wallpaper: Wallpaper01

---

**The Experimental settings**

The Experimental settings are beta preview features and can be used 'as is'. They are not fully documented.

**NOTE:** The Experimental settings are likely to change without further notice.

**Experimental CapsetFilter**

**NOTE:** This Experimental command can be used 'as is' and will not be further documented. The Experimental settings WILL change.

**Requires user role:** ADMIN

**Value space:** <S: 0, 100>

**Example:** Experimental CapsetFilter: ""

**Experimental CapsetReduction**

**NOTE:** This Experimental command can be used 'as is' and will not be further documented. The Experimental settings WILL change.

**Requires user role:** ADMIN

**Value space:** <Auto/Reduced>

**Example:** Experimental CapsetReduction: Auto

**Experimental Conference [1..1] PacketLossResilience ForwardErrorCorrection**

**NOTE:** This Experimental command can be used 'as is' and will not be further documented. The Experimental settings WILL change.

Will enable ForwardErrorCorrection (RFC5109) mechanism as part of the PacketLossResilience mechanism. Default value is On.

On: Forward error correction will be used as part of the PacketLossResilience mechanism.
Off: Forward error correction will NOT be used as part of the PacketLossResilience mechanism.

**Requires user role:** ADMIN

**Value space:** <On/Off>

**Example:** Experimental Conference 1 PacketLossResilience ForwardErrorCorrection: On
Experimental Conference [1..1] PacketLossResilience RateAdaption
NOTE: This Experimental command can be used 'as is' and will not be further documented. The Experimental settings WILL change.
Will use the a RateAdaption algorithm adapted to the PacketLossResilience mechanism. Default value is On.

Requires user role: ADMIN
Value space: <On/Off>
  On: RateAdaption will be used as part of the PacketLossResilience mechanism.
  Off: RateAdaption will NOT be used as part of the PacketLossResilience mechanism.

Example: Experimental Conference 1 PacketLossResilience RateAdaption: On

Experimental Conference [1..1] ReceiverBasedDownspeeding
NOTE: This Experimental command can be used 'as is' and will not be further documented. The Experimental settings WILL change.

Requires user role: ADMIN
Value space: <On/Off>

Example: Experimental Conference 1 ReceiverBasedDownspeeding: Off

Experimental NetworkServices UPnP Mode
NOTE: This Experimental command can be used 'as is' and will not be further documented. The Experimental settings WILL change.

Requires user role: ADMIN
Value space: <On/Off>

Example: Experimental NetworkServices UPnP Mode: Off

Experimental NetworkServices UPnP Timeout
NOTE: This Experimental command can be used 'as is' and will not be further documented. The Experimental settings WILL change.

Requires user role: ADMIN
Value space: <0..3600>

Example: Experimental NetworkServices UPnP Timeout: 0

Experimental CTMSSupport Mode
NOTE: This Experimental command can be used 'as is' and will not be further documented. The Experimental settings WILL change.
This configuration tells whether CTMS (Cisco TelePresence Multipoint Switch) is supported or not.

Requires user role: ADMIN
Value space: <Off/On>
  Off: CTMS is not supported.
  On: CTMS is supported.

Example: Experimental CTMSSupport Mode: On

Experimental PacketOverloadHandling WhenDetected
NOTE: This Experimental command can be used 'as is' and will not be further documented. The Experimental settings WILL change.

Requires user role: ADMIN
Value space: <Off/CallRate2256/CallRate768/ReduceTo576p/ReduceTo360p/Unencrypted/Disconnect>

Example: Experimental PacketOverloadHandling WhenDetected: Off

Experimental SystemUnit MenuType
NOTE: This Experimental command can be used 'as is' and will not be further documented. The Experimental settings WILL change.

Requires user role: ADMIN
Value space: <Indicators/Full>

Example: Experimental SystemUnit MenuType: Full

Experimental SystemUnit SoftwareUpgrade RequireAuthentication
NOTE: This Experimental command can be used 'as is' and will not be further documented. The Experimental settings WILL change.

Requires user role: ADMIN
Value space: <On/Off>

Example: Experimental SystemUnit SoftwareUpgrade RequireAuthentication: Off
Experimental SystemUnit CrashReporting Mode
NOTE: This Experimental command can be used ‘as is’ and will not be further documented. The Experimental settings WILL change.

Requires user role: ADMIN
Value space: <Off/On>
Example: Experimental SystemUnit CrashReporting Mode: Off

Experimental SystemUnit CrashReporting URI
NOTE: This Experimental command can be used ‘as is’ and will not be further documented. The Experimental settings WILL change.

Requires user role: ADMIN
Value space: <S: 0, 255>
Example: Experimental SystemUnit CrashReporting URI: ""
Appendices
Setting the system password

You need a username and password to sign in to the web and command line interfaces of your system. The video conference system is delivered with a default user account with username admin and no password set. This user has full access rights to the system.

**NOTE:** We strongly recommend that you set a password for the admin user to restrict access to system configuration.

Make sure to keep a copy of the password in a safe place. You have to contact your Cisco representative if you have forgotten the password.

Changing your system password

Perform the following steps to change the system password.

If a password is currently not set, use a blank Current password, to remove a password, leave the New password fields blank.

1. Sign in to the web interface with your username and current password.
2. Click your username in the upper right corner and select Change password in the drop down menu.
3. Enter the Current password, the New password, and repeat the new password in the appropriate input fields. The password format is a string with 0–64 characters.
4. Click Change password.

Changing another user’s system password

Read more about creating more user accounts in the User management section.

If you have ADMIN rights, you can change all users’ passwords by performing the following steps:

1. Sign in to the web interface with your username and password.
2. Go to the Maintenance tab and select User Administration.
3. Select the appropriate user from the list.
4. Enter a new password and PIN code.
5. Click Save.

Setting the Administrator settings menu password

When starting up the system for the first time the Administrator Settings menu password is not set.

**NOTE:** We strongly recommend that you define a password to protect the Administrator Settings menu on the Touch controller, since these settings affect the behavior of the video conference system.

You need to use a command line interface to set the Administrator Settings menu password; you neither can use the Touch controller nor the web interface.

**Setting the Administrator settings menu password**

1. Connect to the system through the network or the serial data port, using a command line interface (SSH or Telnet).
2. Type the following command:
   
   ```
   xCommand SystemUnit MenuPassword Set Password: <password>
   ```
   
   The password format is a string with 0–255 characters.

Setting a root password

You can also protect the file system of your video system by setting a password for the root user. The root user is disabled by default. You have to use the command line interface to enable the root user and set a root password.

**Setting a root password**

Perform the following steps to activate the root user and set a password for it:

1. Connect to the system through the network or the serial data port, using a command line interface (SSH or Telnet).
2. Sign in to the system with username and password. The user needs ADMIN rights.
3. Type the following command:
   
   ```
   systemtools rootsettings on <password>
   ```
   
   **NOTE:** The root password is not the same as the system (admin) password.
Cisco VCS provisioning

When using Cisco VCS (Video Communication Server) provisioning, a template containing all the settings that can be provisioned must be uploaded to Cisco TMS (TelePresence Management System). This is called the Cisco TMS provisioning configuration template.

All the Advanced Settings for your video system are included in this template. All settings except SystemUnit Name and SIP Profile[1..1] URI can be automatically provisioned to the video system.

The settings are described in the Advanced settings chapter in this guide. Examples showing either the default value or an example value are included.

Download the provisioning configuration template

You can download the templates here:

For each software release there is one provisioning configuration template for every video system model. Take care to download the correct file.

Read the Cisco TMS Provisioning Deployment Guide to find how to upload the file to Cisco TMS, and how to set the desired values for the parameters to be provisioned. If not set by Cisco TMS, the default values will be used.
Optimal definition profiles

Under ideal lighting conditions the bandwidth requirements can be substantially reduced with the optimal definitions profiles.

Generally, we recommend the Optimal Definition set at Normal.

If lighting conditions are good we recommend that you test the endpoint on the various Optimal Definition settings before deciding on a profile.

Go to Advanced Configuration on the web interface and navigate to Video > Input > Source [1..n] > OptimalDefinition > Profile and select the optimal definition profile.

You can set a resolution threshold below which the maximum frame rate will be 30 fps.

Go to Advanced Configuration on the web interface and navigate to Video > Input > Source [1..n] > OptimalDefinition > Threshold60fps and select a threshold.

The video input quality settings must be set to Motion for the Optimal Definition to work. With the video input quality set to Sharpness, the endpoint will transmit the highest resolution possible, regardless of frame rate.

Go to Advanced Configuration on the web interface and navigate to Video > Input > Source [1..n] > Quality and set the video quality parameter.

You can read more about the video settings in the Advanced settings chapter.

ClearPath – Packet loss resilience

ClearPath introduces advanced packet loss resilience mechanisms that increase the experienced quality when you use your video system in an error prone environment.

To configure ClearPath select Advanced Configuration on the web interface and navigate to Conference 1 > PacketLossResilience > Mode. Select Off to disable ClearPath and select On to enable ClearPath.

We recommend that you keep ClearPath enabled on your video system.
Technical specification for MX300/MX200

PRODUCT SPECIFICATION

Product compatibility
Fully compatible with standards-compliant telepresence and video systems

Software compatibility
MX200: Cisco TelePresence Software Version TC4.2 or later
MX300: Cisco TelePresence Software Version TC5.0 or later

Components
Fully integrated unit including:
- Codec
- Display
- Camera
- Integrated microphone and loudspeakers

Cisco TelePresence Table Mic 20 microphone (MX200 comes standard with one microphone; MX300 comes standard with two microphones)

Cables: VGA-to-DVI-I cable, 3.5 mm jack audio cable, LAN cable, and power cable

Display
- LCD monitor: 42” (MX200), 55” (MX300)
- Resolution: 1920 x 1200 (16:9)
- Contrast ratio: 2500:1
- Viewing angle: 178°
- Brightness: 550 cd/m²

PC and second-source video input
DVI-I

Supported PC input resolutions
SVGA (800 x 600) to 1080p (1920 x 1080)

Camera
- PrecisionHD camera: 1080p 4x zoom
- Resolutions: 1080p30 and 720p60
- Auto-focus
- Wide-angle 72-degree horizontal field of view
- 4x optical zoom
- Pan +/-100 degrees
- Tilt +/-25 degrees

Audio system
- Integrated full-range speaker and woofer
- Integrated full-range microphone
- Bluetooth-ready
- Support for two Cisco TelePresence Table Mic 20 microphones
- RCA PC audio input
- RCA audio output

User interface
Cisco TelePresence Touch
- Eight-inch projected capacitive touch screen
- Resolution: 800 x 480

Language support
- English
- Finnish
- French
- German
- Japanese
- Russian
- Simplified Chinese
- Swedish

Physical dimensions
MX200 with floor stand:
- Height: 1429 mm / 56.3 in.
- Width: 1026 mm / 40.4 in.
- Depth: 602 mm / 23.7 in.
- Weight: 40.2 kg / 89 lb

MX200 with table stand:
- Height: 781 mm / 30.7 in.
- Width: 1026 mm / 40.4 in.
- Depth: 259 mm / 10.2 in.
- Weight: 31.5 kg / 69 lb

MX200 with wall mount:
- Height: 757 mm / 29.8 in.
- Width: 1026 mm / 40.4 in.
- Depth: 169 mm / 6.7 in.
- Weight: 30 kg / 66 lb

MX300 with floor stand:
- Height: 1523 mm / 60.0 in.
- Width: 1280 mm / 50.4 in.
- Depth: 671 mm / 26.4 in.
- Weight: 51.3 kg / 113 lb

MX300 with wall mount:
- Height: 942 mm / 37.1 in.
- Width: 1280 mm / 50.4 in.
- Depth: 217 mm / 8.5 in.
- Weight: 34.4 kg / 76 lb

Power
- Autosensing power supply
- 100-240 VAC, 50/60 Hz
- 75 watts maximum

Temperature range
Operating temperature and humidity:
- Ambient temperature: 32 to 95°F (0 to 35°C)
- Relative humidity (RH): 10 to 90%
- Storage and transport temperature at RH 10-90% (noncondensing): -4 to 140°F (-20 to 60°C)

Approvals and compliance
EU/EEC
- Directive 2006/95/EC (Low Voltage Directive)
  - Standard EN 60950-1
  - Standard EN 55022, Class A
  - Standard EN 55024
  - Standard EN 61000-3-2/-3-3
- Warning: This is a class A product. In a domestic environment this product may cause radio interference in which case the user may be required to take adequate measures.

USA
- Approved according to UL 60950-1
- Complies with FCC15B Class A
  - Note: This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference in which case the user will be required to correct the interference at his own expense.

Canada
- Approved according to CAN/CSA C22.2 No. 60950-1
- This Class A digital apparatus complies with Canadian ICES-003.
  - Cet appareil numérique de la classe A est conforme à la norme NMB-003 du Canada

* Requires premium resolution option

**Audio standards**
- G.711
- G.722
- G.722.1
- 64/128 kbps MPEG-4 AAC-LD
- AAC-LD stereo

**Audio features**
- CD-quality 20 kHz stereo
- Acoustic echo canceling
- Automatic gain control
- Automatic noise reduction
- Active lip synchronization

**Dual stream**
- H.239 (H.323) dual stream
- BFCP (SIP) dual stream
- Support for resolutions up to 720p30 in both main stream and dual stream simultaneously

**NETWORK, SECURITY AND MANAGEMENT SPECIFICATIONS**

**Protocols**
- H.323
- SIP

**Network interfaces**
- One LAN or Ethernet (RJ-45)
  - 10/100/1000 Mbps for LAN
- H.245 dual-tone multifrequency (DTMF) tones in H.323
- Date and time support with Network Time Protocol (NTP)

**Other interfaces**
- Bluetooth for future applications
- RJ-45 for maintenance

**Audio features**
- CD-quality 20 kHz stereo
- Acoustic echo canceling
- Automatic gain control
- Automatic noise reduction
- Active lip synchronization

**IPv6 network support**
- Single call stack support for both H323 and SIP
- Dual-stack IPv4 and IPv6 for DHCP, SSH, HTTP, HTTPS, DNS, DiffServ
- Support for both static and autoconfiguration (stateless address autoconfiguration)

**Embedded encryption**
- H.323 and SIP point-to-point
- Standards-based: H.235v3 and Advanced Encryption Standard (AES)
- Automatic key generation and exchange
- Support in dual stream

**Security features**
- Management through Secure HTTP (HTTPS) and Secure Shell (SSH) Protocol
- IP administration password
- Menu administration password
- Disable IP services
- Network settings protection

**Mulitpoint support**
- Cisco TelePresence Multiway support (requires Cisco TelePresence Video Communication Server [Cisco VCS] and Cisco TelePresence MCU)
- Ability to natively join multipoint conferences hosted on Cisco Telepresence Multipoint Switch (CTMS)

**Cisco unified communications manager**
- Native registration with Cisco Unified Communications Manager
- Basic Cisco Unified Communications Manager provisioning
- Firmware upgrade from Cisco Unified Communications Manager
- Cisco Discovery Protocol and DHCP option 150 support
- Basic telephony features such as hold, resume, transfer, and corporate directory lookup

**Firewall traversal**
- Cisco TelePresence Expressway technology
- H.460.18 and H.460.19 firewall traversal
System management
- Support for the Cisco TelePresence Management Suite (Cisco TMS)
- Total management through embedded Simple Network Management Protocol (SNMP), Telnet, SSH, XML, and Simple Object Access Protocol (SOAP)
- Remote software upload: Through web server, Secure Copy Protocol, HTTP, and HTTPS

Directory services
- Support for local directories (My Contacts)
- Corporate directory
- Unlimited entries using server directory supporting Lightweight Directory Access Protocol (LDAP) and H.350
- Unlimited number for corporate directory (available with Cisco TelePresence Management Suite)
- Local directory: 200 numbers
- Received calls with date and time
- Placed calls with date and time
- Missed calls with date and time
User documentation on the Cisco web site

User documentation for Cisco TelePresence products can be found on http://www.cisco.com/go/telepresence/docs.

Depending on which product you have got, select the following in the right pane:

**MX Series:**
