Administrator guide

For Cisco TelePresence System Quick Set C20 and Profile 42” using C20
Thank you for choosing Cisco!

Your Cisco product has been designed to give you many years of safe, reliable operation.

This part of the product documentation is aimed at administrators working with the setup of the Quick Set C20 and Profiles using Codec C20.

Our main objective with this Administrator guide is to address your goals and needs. Please let us know how well we succeeded!

May we recommend that you visit the Cisco web site regularly for updated versions of this guide.

The user documentation can be found on http://www.cisco.com/go/telepresence/docs

How to use this guide

The top menu bar and the entries in the Table of contents are all hyperlinks. You can click on them to go to the topic.

Chapter 1

Introduction
This document provides you with the information required to administrate your product at an advanced level.

Products covered in this guide:
- Profile 42" using C20
- Quick Set C20

User documentation
The user documentation for the Cisco TelePresence Codec C Series has several guides suitable for various user groups.

- **Installation guide:**
  How to install the product

- **Getting started guide:**
  Initial configurations required to get the system up and running

- **Administering TC Endpoints on CUCM:**
  Tasks to perform to start using the product with the Cisco Unified Communications Manager (CUCM)

- **Administrator guide (this guide):**
  Information required to administer your product

- **Quick reference guides:**
  How to use the product (remote control and Touch controller)

- **User guides:**
  How to use the product (remote control and Touch controller)

- **Camera user guide:**
  User guide for the PrecisionHD cameras

- **API reference guide:**
  How to use the Application Programmer Interface (API), and reference guide for the command line commands

- **User guide for the TC console application:**
  The free TC Console application provides a graphical interface to the advanced customizable features of the codec.

- **Knowledge base articles**
- **Video conferencing room primer:**
  General guidelines for room design and best practice

- **Video conference room acoustics guidelines:**
  Things to do to improve the perceived audio quality

- **Software release notes**
- **Regulatory compliance and safety information guide**
- **Legal & license information**

Downloading the user documentation
We recommend you visit the Cisco web site regularly for updated versions of the user documentation. Go to:

▶ [http://www.cisco.com/go/telepresence/docs](http://www.cisco.com/go/telepresence/docs)

Guidelines how to find the documentation on the Cisco web site are included in the User documentation on the Cisco web site Appendix.

Software
You can download the software for your product from the Cisco web site. Go to:

We recommend reading the Software Release Notes (TC6), go to:

What’s new in this version

This section provides an overview of the new and changed system settings and new features in the TC6.1 software version.

Software release notes

For a complete overview of the news and changes, we recommend reading the Software Release Notes (TC6).

Software download

For software download go to:
http://www.cisco.com/cisco/software/navigator.html

New features and improvements

Changes in release key policy and software upgrade management

As from software version TC6.1, you do not need to install new release keys; it is sufficient that the video system has a valid release key for an earlier TC software version.

As from TC6.1 software will be available for download only at http://www.cisco.com, and only for users with a valid service contract assigned to a CCO (Cisco online connection) ID.

Password always prompted on Telnet and SSH

When signing into the video system using Telnet or SSH, the password will always be prompted. This applies even when the password is empty (not set).

Support for <p> and <br> tags in messages on screen

For security reasons only <p> and <br> HTML tags are supported in messages on screen (cf. Message Alert and Message Prompt commands). These tags will result in line breaks as normal. No other tags will be interpreted; they will appear as text on the screen.

Diagnostics logging

You can use the Touch controller to enable diagnostics logging of the video system. Diagnostics logging is meant for troubleshooting only, and may lower the system performance while switched on.

G.729 audio codec support in SIP calls

Support for the G.729AB audio codec is added in SIP calls in order to provide better IP phone interoperability. G.729 is not supported in H.323 calls.

Voice mail support and message waiting indication

Endpoints registered to a Cisco Unified Communications Manager (CUCM) can be assigned a voice mail profile. When receiving a Busy or No Answer signal from such an endpoint, the call is forwarded to voice mail.

If you have a Touch controller, you can access the voice mail by tapping the Messages icon. Also a message waiting notification will appear.

Shared lines support in CUCM

When registered to a Cisco Unified Communications Manager (CUCM) the endpoint may be part of a shared line. This means that several devices in the same partition share the same directory number. The different devices sharing the same number receive status from the other appearances on the line.

For example, you can set up a shared line so that many devices share the same number and the first available operator picks up the call (help desk). Assisted call handling, where an administrator manages the calls for an executive (forward, barge in) is another example. Also multiple devices belonging to one person can share the same line, thus allowing him/her to pick up a call on one device and resume it on another (single number reach).

You can find information about how to set up shared lines in the CUCM user documentation (Cisco Unified Communications Manager System Guide).

Ad-hoc conferencing in CUCM

Endpoints registered on Cisco Unified Communications Manager (CUCM) version 8.6.2 or later can invoke an ad-hoc conference. This requires that a conference bridge is added as an MCU on CUCM. Any endpoint can participate in the conference, regardless of where they are registered.

If the number of participants drops to two, the conference will de-escalate to a point to point call.
Support for consultative transfer
Consultative transfer is supported. A consultative transfer is one in which the transferring party speaks with the third party before connecting the caller to the third party.

CTI/JTAPI support (remote expert solution support)
A Cisco Unified Communications Manager (CUCM) exposes call control of endpoints via a Java Telephony API (JTAPI). Cisco’s JTAPI enables custom applications to monitor device availability and control calls remotely. The following features are supported: call, answer, disconnect, hold, resume, blind transfer, consultative transfer and consultative conference.

Endpoints registered to a Cisco Unified Communications Manager (CUCM) 9.0 or later support the Cisco Remote Expert Smart Solution (version 1.8).

Refined Touch user interface
• Missed calls and message waiting indicators; direct access to voice mail
• New dial pad, soft keyboard and improved text selector
• Encryption indicator
• Call duration indicator
• Possibility to enter a release key if a valid release key is missing

System configuration changes
New settings
Network DHCP Request TFTP Server Address
SIP Profile Line
SIP Profile Mailbox
Video CamCtrlPip Call Setup Mode
Video CamCtrlPip Call Setup Duration
Video SelfviewControl Auto Resizing

Settings that are modified
Conference Multipoint Mode
OLD: <Auto/Off/MultiWay>
NEW: <Auto/Off/MultiWay/CUCMMediaResourceGroup>

Video Output HDMI[x] Monitor Role
OLD: <First/Second/Presentation Only>
NEW: <First/Second/Presentation Only/Recorder>
Profile 42” using Codec C20

at a glance

See the installation sheet for your Profile system for instructions on how to install the system.

Codec C20
- Full HD video.
- High resolution data sharing.
- Rich I/O capabilities.

PrecisionHD 1080p camera
Full HD Camera designed for visual communication with:
- 12 x optical zoom.
- Fast and precise pan, tilt and zoom.

Monitor
42” Full HD LCD, 16:9, 1080 x 1920 resolution.

Audio module
Wide band audio module supporting:
- 20 kHz AAC-LD.
- 1 echo canceller.

Audio amplifier
Optimized DNAM for the Profile system, providing crystal clear and natural audio.

Microphones
Two microphones with cables.

Operating devices
- Touch 8” controller.
- Remote control with AAA batteries.

Base options
Floor standing footplate, wheel base, or wall mount on pedestal.
Quick Set C20 at a glance

The Quick Set C20 packs the rich user experience of larger systems into a compact room based solution. Quick Set C20 is a high definition video collaboration system that has options for 1080p30 or 720p60 resolution, while being easy to deploy, simple to manage and intuitive to use. The Quick Set C20 is uniquely positioned to enable small scale deployment of a first time video solution, as well as allowing the enterprise scale an existing video conferencing solution to hundreds of locations throughout the entire organization.

Quick Set C20

The Quick Set C20 includes a Codec C20, PrecisionHD 1080p 4x zoom camera or PrecisionHD 1080p 12x zoom camera, Table Microphone 20, and remote control. Simply add to any HD display and be ready to meet!

Design features

- Transforms a flat panel display into a 1080p high definition meeting space.
- Simple, intuitive connections make setup as easy as connecting a DVD player.
- Quick Set C20 provides up to 1080p30 resolution with a 4x zoom camera, and up to 1080p30 and 720p60 resolution with a 12x zoom camera.
- Standards-compliant 1080p solution — compatible with standards-based video without loss of features.
- Sleek, compact design.

Application features

- Share multimedia and presentations at the touch of a button.
- Basic API available over IP (Telnet or SSH).
- Dual-display option available.
- HD content sharing with 720p and WXGA.

Performance features

- Optimal definition up to 1080p30.
- H.323/SIP up to 6 Mbps.
Chapter 2

Web interface
Starting the web interface

The web interface provides full configuration access to your video conference system.

You can connect from a computer and administer the system remotely.

In this chapter you will find information how to use the web interface for system configuration and maintenance.

We recommend that you use the latest release of one of the major web browser.

1. Connect to the video system

Open a web browser and enter the IP address of the video system in the address bar.

To find the IP address (IPv4 or IPv6), tap Settings on a Touch controller, or navigate to Home > Settings > System information when using a remote control and the on-screen menu.

2. Sign in

Enter the user name and password for your video system and click Sign In.

The system is delivered with a default user named admin with no password (i.e. leave the Password field blank when signing in for the first time).

We strongly recommend that you set a password for the admin user, see the next page.

Signing out

Hover the mouse over your user name and choose Sign out from the drop-down list.
Changing the system password

We strongly recommend that you set a password for any user with ADMIN rights, including the default admin user, to restrict access to system configuration.

You can read more about password protection in the Setting passwords chapter.

1. Open the Change Password dialog

Hover the mouse over your user name, and choose Change password in the drop-down list.

2. Set the new password

Enter your current and new passwords as requested, and click Change password for the change to take effect.

If the password currently is not set, leave the Current password field blank.
The interactive menu

The web interface provides access to tasks and configurations. They are available from the main menu, which appears near the top of the page when you have signed in.

When you hover the mouse over a main menu item, you can navigate to its related sub-pages.

Hover the mouse over a main menu item, the titles of related sub-pages drops down.

Click a sub-page’s title to open it. Only pages that the user has access rights for can be opened; the others are dimmed.

Click Home on the main menu to return to the System Information page.

* You can read more about user administration, user roles and access rights in the User administration section.
System information

The video system’s Home page shows an overview of the basic set-up and status of the system. This includes information like system name and product type, which software version the system runs, its IP address, etc. Also the registration status for the video networks (SIP and H.323) is included, as well as the number/URI to use when making a call to the system.

* The system information shown in the illustration serve as an example. Your system may be different.
Placing a call

You can use the Call Control page of the web interface to initiate a call.

Even if the web interface is used to initiate the call it is the video system (display, microphones and loudspeakers) that is used for the call; it is not the PC running the web interface.

Calling

You can call someone either by choosing a contact name in the Local phone book or Directory, or by typing a complete URI or number in the Search and Dial field. Then click Call in the associated contact card.

Searching the contact lists

Enter one or more characters in the Search or Dial field. Matching entries from both the Local phone book and the Directory will be listed as you type.

Select the entry in the phone book or directory before you click Call.

Calling more than one

A point-to-point video call (a call involving two parties only) may be expanded to include one more participant. This participant can join on audio-only.

Follow the same procedure to call the next conference participant as you did when calling the first participant.

Calling someone

Click a contact name, either in the Local phone book or in the Directory. Then click Call in the contact card.

Alternatively, enter the complete URI or number in the Search and Dial field. Then click the Call button that appears next to the URI or number.

Holding and resuming

Use the button next to the participant’s name to put him on hold.

To resume the call, use the button that appears for the participant on hold.

Ending a call

To disconnect just one participant in a call, click the button for that participant.

Click the End all button to terminate the entire call.
Sharing content

You can connect a presentation source to one of the external inputs of your video system. Most often a PC is used as presentation source, but other options may be available depending on your system setup.

While in a call you can share content with the far end, that is the other participant in the call.

If you are not in a call, the content is shared locally on your display.

1. Choose a Presentation source from the drop-down list.
2. Click Start Presentation.

Stop content sharing:
Click the Stop Presentation button that becomes visible while sharing.
Controlling and monitoring a call

You can control and monitor several call features using the Call Control page.

### Microphone mute
Click the button to mute the microphone. Then the text changes to Microphone: Off. Click again to unmute.

### Volume down

### Volume up

### Call details
If necessary, scroll your browser to see the call details.

### Microphone
Click the button to mute the microphone. Then the text changes to Microphone: Off. Click again to unmute.

### Show/hide call details
Click the arrow to show details about the call. Click the arrow again to hide the information.
Controlling the camera

You can control the camera using the Call Control page.

Click the Camera Control button to open the window where you can pan, tilt and zoom the camera, and apply camera presets.

Choose which camera to control
Click the arrow to open the drop-down list. Then choose the camera you want to control.

Camera presets
If a camera preset is defined it is listed here. Apply the preset by clicking its name.

Pan and tilt
Use the left and right arrows to pan the camera, and the up and down arrows to tilt it.

Zoom
Use + and - to zoom in and out.
Local layout control

You can choose a local layout using the Call Control page. The term layout is used to describe the various ways the videos from the conference participants and a presentation can appear on your screen. Different types of meetings will require different layouts.

1. Click Change Layout.
2. Choose your preferred layout in the window that opens.

You may change the layout while in a call.
Capturing snapshots

The snapshot feature, which is disabled by default, allows snapshots captured by your video system to be displayed on the Call Control page. Captures from your video system’s camera as well as from its presentation channel will be displayed.

This feature might come in handy when administering the video system from a remote location, e.g. to check the camera view.

To use web snapshots you have to sign in with ADMIN credentials.

Enabling the snapshot feature

The snapshot feature is disabled by default. The feature must be enabled using the remote control and on screen menu.

- Go to the Advanced configuration menu, navigate to Video > AllowWebSnapshots and choose On.

Far end snapshots while in a call

While in a call, snapshots of the remote participant’s main camera and presentation channel (far end) will be captured and displayed as shown in the illustration. The snapshots are updated approximately every 20 seconds.

Far end snapshots are captured even if web snapshots are disallowed on the far end video system. Web snapshots are prohibited only for encrypted calls.

Snapshots from your video system

Take live snapshots

While the Live snapshots box is checked, snapshots are captured by your video system (main camera and presentation) approximately every two seconds.
Managing the favorites list

The entries in the favorites list can be accessed from the Touch controller, the on-screen menu (the My contacts folder in the phone book) and the Web interface.

Adding a contact

Click **Add contact** and fill in the form that pops up. Then click **Save** to store the contact in the favorites list.

Editing contact details

Click a contacts name followed by **Edit**. Change the details in the form as appropriate and click **Save**.

Deleting a contact

Click a contacts name followed by **Edit**. Then click **Delete** to remove the entry from the favorites list.

Storing a contact in a folder

Choose the appropriate folder from the drop down list. No folder means that the contact will be stored at the top level.

Adding a contact method

You can store more than one contact method for each contact, e.g. video, telephone and mobile.
Favorite list folders

The entries in the favorites list can be organized in folders.

- Navigate to: Call Control > Favorites Management

**Editing folders**

1. Click **Edit folders**.
2. Click the name of an existing folder to view and edit its details; or click **Add folder** and fill in its details to create a new folder.
3. Click **Save folder** to store the details; or click **Delete folder** to remove the folder and all its contacts and sub-folders.

**Opening a folder**

Click the folder name to open the folder and show its list of contacts.
System configuration

The system settings are grouped in several categories. When you choose a category in the left pane all related settings appear to the right.

Each system setting is further described in the System settings chapter.

* The configuration shown in the illustration serve as an example. Your system may be configured differently.
Changing system settings

All system settings can be changed from the System Configuration page. The value space for a setting is specified either as a drop-down list or with explanatory text following a text input field.

Different settings may require different user credentials. In order to be sure that an administrator is able to change all system settings, the user must possess all user roles.

You can read more about user administration and user roles in the User administration chapter.
Setting the Administrator Settings menu password

When starting up the video conference system for the first time anyone can access the Administrator Settings menu with either the remote control or the Touch controller because the menu password is not set.

⚠️ We strongly recommend that you define a menu password, because the Administrator Settings may severely affect the behavior of the video conference system.

You can read more about password protection in the Setting passwords chapter.

### Changing the menu password

Click **Set/Change Administrator Settings menu password** to open this dialog.

Enter a new password in the text input field and click **Save** to store it.

Use the **Unlock** button to clear the existing password.
System status

The system status is grouped in several categories. When you choose a category in the left column, the related status appears in the window to the right.*

* The status shown in the illustration serve as an example. The status of your system may be different.
Choosing a wallpaper

You can choose from a set of predefined wallpapers to use as background on your display.

If you want the company logo or another custom picture to be displayed on the main display, you may upload and use a custom wallpaper.

If you use the Touch controller: The custom wallpaper applies to only the main display and will not appear on the Touch controller.

### Choosing a wallpaper

Choose a wallpaper from the list.

If you have uploaded a custom wallpaper, it will appear in the list together with the predefined wallpapers.

The chosen wallpaper is highlighted.

### Uploading a custom wallpaper file

Click **Browse**... and locate your custom wallpaper image file.

The file format must be .png and the maximum image size is 1920 x 1200 pixels.

Click **Upload** to save the file to the video system.
Choosing a ringtone

You can choose from a set of predefined ringtones. The chosen ringtone can be played back from this page.

Choosing a ringtone

Choose a ringtone from the drop-down list, and click Save to make it the active ringtone.

Playing back a ringtone

Click the play button (▶) to play back the ringtone.

Use the stop button (■) to end the playback.

You must save the ringtone before it can be played back.
**Peripherals overview**

This page shows an overview of the video input and video output configuration, as well as information about any camera(s), Touch controller or ISDN Link that is connected to your video system.

**Managing ISDN Link**

If an ISDN Link is paired to the video system it can be managed from this page.

How to configure and use the ISDN Link are described in the ISDN Link documentation on [► http://www.cisco.com/go/isdnlink-docs](http://www.cisco.com/go/isdnlink-docs)

User administration

From this page you can manage the user accounts of your video conference system. You can create new user accounts, edit the details of existing users, and delete users.

The default user account

The system comes with a default administrator user account with full access rights. The username is admin and no password is set.

It is highly recommended to set a password for the admin user.

Read more about passwords in the Setting passwords chapter.

About user roles

A user account must hold one or a combination of several user roles.

The following three user roles, with non-overlapping rights, exist:

• ADMIN: A user holding this role can create new users and change most settings. The user neither can upload audit certificates nor change the security audit settings.
• USER: A user holding this role can make calls and search the phone book. The user can modify a few settings, e.g. adjusting the audio volume and changing the menu language.
• AUDIT: A user holding this role can change the security audit configurations and upload audit certificates.

An administrator user account with full access rights, like the default admin user, must possess all the three roles.
User administration, continued

Creating a new user account

Follow these steps in order to create a new user account:

1. Click Add new user...

2. Fill in the Username, Password and PIN code*, and check the appropriate user roles check boxes.
   - As a default the user has to change the password and PIN code when signing in for the first time.
   - Do not fill in the Distinguished Name (DN) Subject field unless you want to use certificate login on https.

3. Set the Status to Active to activate the user.

4. Click Create User to save the changes.
   - Use the Back button to leave without making any changes.

* The password is used with the web interface and command line interface.

The PIN code is used with the on-screen menu.
User administration, continued

Changing user privileges
Follow these steps in order to change the user privileges:

1. Click the name of an existing user to open the Editing user window.
2. Check the appropriate user roles check boxes, decide if the user has to change the password and PIN code on the next sign in, and fill in the Distinguished Name (DN) Subject field if using certificate login on https.
3. Click Update User to save the changes.
   Use the Back button to leave without making any changes.

Changing the password or PIN code
Follow these steps in order to change the password or PIN code:

1. Click the name of an existing user to open the Editing user window.
2. Enter the new password or PIN code in the appropriate input fields.
3. Click Change Password or Change PIN to save the change.
   Use the Back button to leave without making any changes.
User administration, continued

Deactivating a user account
Follow these steps in order to deactivate a user account:

Always keep at least one user with ADMIN rights Active.

1. Click the name of an existing user to open the Editing user window.
2. Set the Status to Inactive.
3. Click Update User to save the changes.
   Use the Back button to leave without making any changes.

Deleting a user account
Follow these steps in order to delete a user account:

Always keep at least one user with ADMIN rights.

1. Click the name of an existing user to open the Editing user window.
2. Click Delete user... and confirm when prompted.
Adding a sign in banner

A sign in banner is a message that is displayed to the user when signing in.

If a system administrator wants to provide initial information to all users, he can create a sign in banner. The message will be shown when the user signs in to the web interface or the command line interface.

Navigate to: Configuration > Sign In Banner

Enter the message that you want to present to the user when signing in, and click Save to activate the banner.
Application programming interface

The application programming interface (API) is a tool for integration professionals and developers working with this Cisco product. It is described in detail in the API guide for the product.

XML files

The XML files are part of the codec’s API. They structure information about the codec in a hierarchy.

- **Configuration.xml** contains the current system settings (configuration). These settings are controlled from the web interface or from the API (Application Programmer Interface).
- The information in **status.xml** is constantly updated by the system to reflect system and process changes. The status information is normally monitored from the API.
- **Command.xml** contains an overview of the commands available to instruct the system to perform an action. The commands are issued from the API.
- **Valuespace.xml** contains an overview of all the value spaces used in the system settings, status information, and commands.

API commands

Commands (xCommand) and configurations (xConfiguration) can be executed from this web page. Syntax and semantics are explained in the API guide for the product.
Managing the video system’s certificates

Certificate validation may be required when using TLS (Transport Layer Security).

A server or client may require that your video system presents a valid certificate to them before communication can be set up.

The video system’s certificates are text files that verify the authenticity of the system. These certificates may be issued by a certificate authority (CA).

The certificate are listed as shown in the illustration to the right. They can be used for the following services: HTTPS, SIP and IEEE 802.1X.

You can store several certificates on the system, but only one certificate can be used for each service at a time.

If authentication fails, the connection will not be established.

Enabling and disabling certificates

Use the buttons to switch a certificate on or off for the different services.

You can also view a certificate, and delete a certificate using the corresponding buttons.

Adding a certificate

1. Click Add certificate... to open the certificate dialog.
2. Click Browse... and find the Certificate and Private key file(s) on your computer.
3. Fill in the Password if required.
4. Click the blue Add certificate... button to store the certificate on your system.

Contact your system administrator to obtain the following file(s):

- Certificate (file format: .PEM)
- Private key, may be included in the same file as the certificate (file format: .PEM format)
- Password (required only if the private key is encrypted)

The certificate and the private key will be stored in the same file on the video system.
Managing the list of trusted certificate authorities

Certificate validation may be required when using TLS (Transport Layer Security).

Your video system may be set up to require that a server or client presents its certificate to the system before communication can be set up.

The certificates are text files that verify the authenticity of the server or client. The certificates must be signed by a trusted certificate authority (CA).

To be able to verify the signature of the certificates, a list of trusted CAs must reside on the video system. The certificates of the CAs are listed as shown in the illustration to the right.

The list must include CAs to verify certificates for as well HTTPS, SIP and IEEE 802.1X connections.

If the server cannot be authenticated, the connection will not be established.

Uploading a list of certificate authorities

The entries in a new file with CA certificates will be appended to the existing list, that is, the previously stored certificates will not be deleted.

i. Click Show CAs... to list the existing CA certificates.
ii. Click Add Certificate Authority...
iii. Click Browse... and find the file containing a list of CA certificates (file format: .PEM) on your computer.
iv. Click the blue Add certificate authority... button to store the new CA certificate(s) on your system.

Viewing and deleting certificates

You can view a certificate, and delete a certificate using the corresponding buttons.

Contact your system administrator to obtain the CA certificate list (file format: .PEM).

* The certificate and certificate issuers shown in the illustration serve as examples. Your system will have other certificate(s).
Adding audit certificates

Audit logging records all sign in activity and configuration changes on your video system.

Audit logging is disabled by default, but you can enable it using the Security > Audit > Logging > Mode setting on the on-screen menu or the web interface.

In ExternalSecure audit logging mode the video system sends encrypted audit logs to an external audit server (syslog server), which identity must be verified by a signed certificate.

To be able to verify the signature of the audit server certificates, a list of trusted audit certificate authorities (CAs) must reside on the video system.

If the audit server cannot be authenticated, the logs will not be sent.

Always upload the audit certificate list before enabling secure audit logging.

1. Upload a list of audit server certificates

   The entries in a new file with CA certificates will overwrite the existing list, that is, any previously stored audit certificates will be lost when you add a new file.

   i. Click Add audit server certificate authority...
   ii. Click Browse... and find the file containing the list of audit CA certificates (.PEM format) on your computer.
   iii. Click Add audit certificate to store the certificate(s) on your system.

   Contact your system administrator to obtain the Audit CA list (file format: .PEM).

2. Enable secure audit logging

   i. Go to the System Configuration page and choose the Security category.
   ii. Enter the Address and Port number of the audit server. Click Save for the changes to take effect.
   iii. Choose ExternalSecure from the Logging Mode drop-down list. Click Save for the change to take effect.
Setting strong security mode

Strong security mode should be used only when compliance with DoD JITC regulations is required.

⚠️ Read the warning carefully before setting strong security mode.

Strong security mode sets very strict password requirements, and requires all users to change their password on the next sign in.

Software upload from TMS, web snapshots and calling from the web interface are prohibited in strong security mode.

Setting strong security mode

1. Click Configure strong security mode... and read the warning carefully before continuing.

2. If you want to use strong security mode, check the I understand the risks of strong security mode check box and click Enable strong security mode.

3. Change the password to meet the strict criteria shown in the warning. How to change the system password: see the ► Setting passwords section.

4. Restart the codec for the change to take effect.

Return to normal mode

1. When in strong security mode, the system can be restored to normal mode by clicking Configure strong security mode... followed by Disable strong security mode.

2. Restart the codec for the change to take effect.
Deleting trust lists (CUCM only)

The Cisco Unified Communications Manager (CUCM) and Certification Authority Proxy Function (CAPF) information that is shown on the Security page is only relevant for video systems that are registered to CUCM.

The web interface can be used to delete an existing Certificate Trust List (CTL) that is stored on the video system. Normally, you will not delete the old CTL file, but there are a few cases when you will need to delete it.

For more information about CUCM, CAPF and trust lists, read the Administering TC Endpoints on CUCM guide available on the Cisco web site.
Troubleshooting

The troubleshooting page lists the status for some common sources of errors. The list may be different for different products and installations.*

Note that errors are clearly marked in red color; warnings are yellow.

* The messages shown in the illustration serve as examples. Your system may show other information.
Downloading log files

The log files are Cisco specific debug files which may be requested by the Cisco support organization if you need technical support.

The current log files are time stamped event log files. All current log files are archived in a time stamped historical log file each time the system reboots. If the maximum number of historical log files is reached, the oldest one will be overwritten.

Open a log file

Click the file name to open the log file in the web browser.

The log files shown in the illustration serve as examples. Your system may have other files.
Upgrading the system software

This video conference system is using TC software. The version described in this document is TC6.1.

Contact your system administrator if you have questions about the software version.

Software release notes

For a complete overview of the news and changes, we recommend reading the Software Release Notes (TC6).

New software

For software download, go to the Cisco Download Software web page: http://www.cisco.com/cisco/software/navigator.html. Then navigate to your product.

The file name is something like “s52000tc6_1_0.pkg” (each software version has a unique file name).

Release key and option keys

You need a valid release key to be able to use the TC software. As from version TC6.1, any TC release key will do. For older releases the release key is specific for each main release (e.g. TC4, TC5, TC6). If you want to downgrade the software to TC6.0 or older, take care to have the correct key. An option key is required to activate optional functionality. You may have several option keys in your system.

The available options are:
- Premium resolution
- High definition
- Dual display

Adding release and option keys

If you already have a valid release key and the proper option keys installed on your system, you can skip this point and continue with the software installation.

If you do not have the required key(s), contact your Cisco representative to obtain them. Then perform the following steps:

i. Enter the Release key in the appropriate text input field and click Add.

ii. Enter an Option Key in the appropriate text input field and click Add.

If you have more than one option key, repeat step ii for all of them.

Installing new software

Download the appropriate software package from the Cisco Software Download web page (see link to the left) and store it on your local computer. This is a .pkg file.

i. Click Browse… and find the downloaded .pkg file that contains the new software.

ii. Check the Upgrade automatically after upload check box, then click Upload to start the installation process straight away.

Keep the check box unchecked if you want to upload the software now and do the installation later.

The complete installation may take up to 30 minutes. You can follow the progress on the web page. The system reboots automatically after the installation.

You must sign in anew in order to continue working with the web interface after the reboot.
Backup and restore

All the system settings, which are available on the System configuration page, can be listed on-screen or stored as a text file (.tsh).

The .tsh file can be loaded back onto the system, thereby restoring the old configuration.

Backing up or showing the current configuration

Click Preview backup to display the current settings on-screen.

Click Take backup to store the configuration as a text file (.tsh).

Restoring an earlier configuration

Click Browse... and find the file (.tsh) with the configuration you want to restore.

Click Restore to reconfigure the system as defined in the file.
Factory reset

When performing a factory reset the call logs will be deleted and all system parameters will be reset to default values. All files that have been uploaded to the system will be deleted. Release keys and option keys will be preserved.

⚠️ It is not possible to undo a factory reset.

There are more information about performing a factory reset in the ► Factory resetting appendix.

### Perform a factory reset

1. Read the provided information carefully before you restore the factory settings by clicking Perform a factory reset....
2. Click Reset to confirm your choice, or Cancel if you have changed your mind.

   Wait while the system resets. The system will restart automatically when finished.

We recommend that you backup your system's log files and configuration before you perform a factory reset; otherwise these data will be lost.

Click the Download Logs and Download Configuration Backup buttons and follow the instructions to save the files on your computer.
Restarting the system

The system can be shut down or restarted remotely using the web interface.

Restarting the system

Click **Restart TelePresence device...** to restart the system.

It will take a few minutes before the system is ready for use.

Shutting down the system

Click **Shutdown TelePresence device...** to shut down the system.

The system cannot be turned on again remotely; you must press its power button physically to turn it on.
Chapter 3

System settings
Overview of the system settings

In the following pages you will find a complete list of the system settings which are configured from the System Configuration page on the web interface. The examples show either the default value or an example of a value.

Open a web browser and enter the IP address of the video system; then sign in.

Navigate to Home > Settings > System Information using the remote control and on-screen menu, or tap Settings (X) > System Information on the Touch controller to find the system’s IP address (IPv4 or IPv6).

Experimental settings
Audio settings

Audio Microphones Mute Enabled
Determine whether audio-mute is allowed or not. The default value is True.

Requires user role: ADMIN

Value space: <True/InCallOnly>
  True: Muting of audio is always available.
  InCallOnly: Muting of audio is only available when the device is in a call. When Idle it is not possible to mute the microphone. This is useful when an external telephone service/audio system is connected via the codec and is to be available when the codec is not in a call. When set to InCallOnly this will prevent the audio-system from being muted by mistake.

Example: Audio Microphones Mute Enabled: True

Audio SoundsAndAlerts KeyTones Mode
The system can be configured to make a keyboard click sound effect (key tone) when pressing a key on the remote control, or when typing text or numbers on a Touch controller.

Requires user role: USER

Value space: <Off/On>
  Off: No key tones will be played when you type.
  On: You will hear a key tone when you press a key or type text.

Example: Audio SoundsAndAlerts KeyTones Mode: Off

Audio SoundsAndAlerts RingTone
Select the ring tone for incoming calls.

Requires user role: USER

Value space: <Marbles/IceCrystals/Polaris/Alert/Discreet/Fantasy/Jazz/Nordic/Echo/Rhythmic>
  Range: Select a tone from the list of ring tones.

Example: Audio SoundsAndAlerts RingTone: Jazz

Audio SoundsAndAlerts RingVolume
Sets the ring volume for an incoming call.

Requires user role: USER

Value space: <0..100>
  Range: The value goes in steps of 5 from 0 to 100 (from -34.5 dB to 15 dB). Volume 0 = Off.

Example: Audio SoundsAndAlerts RingVolume: 50

Audio Volume
Adjust the speaker volume.

Requires user role: USER

Value space: <0..100>
  Range: The value must be between 0 and 100. The values from 1 to 100 correspond to the range from -34.5 dB to 15 dB (0.5 dB steps). The value 0 means that the audio is switched off.

Example: Audio Volume: 70
Cameras settings

Cameras PowerLine Frequency
Applies to cameras supporting PowerLine frequency anti-flickering, i.e. PrecisionHD 1080p cameras.
Requires user role: ADMIN
Value space: <50Hz/60Hz>

- 50Hz: Set to 50 Hz.
- 60Hz: Set to 60 Hz.

Example: Cameras PowerLine Frequency: 50Hz

Cameras Camera [1..1] Backlight
This configuration turns backlight compensation on or off. Backlight compensation is useful when there is much light behind the persons in the room. Without compensation the persons will easily appear very dark to the far end.
Requires user role: ADMIN
Value space: <Off/On>

- Off: Turn off the camera backlight compensation.
- On: Turn on the camera backlight compensation.

Example: Cameras Camera 1 Backlight: Off

Cameras Camera [1..1] Brightness Mode
Set the camera brightness mode.
Requires user role: ADMIN
Value space: <Auto/Manual>

- Auto: The camera brightness is automatically set by the system.
- Manual: Enable manual control of the camera brightness. The brightness level is set using the Cameras Camera Brightness Level setting.

Example: Cameras Camera 1 Brightness Mode: Auto

Cameras Camera [1..1] Brightness Level
Set the brightness level. NOTE: Requires the Camera Brightness Mode to be set to Manual.
Requires user role: ADMIN
Value space: <1..31>

Range: Select a value from 1 to 31.

Example: Cameras Camera 1 Brightness Level: 1

Cameras Camera [1..1] Flip
With Flip mode (vertical flip) you can flip the image upside down.
Requires user role: ADMIN
Value space: <Auto/Off/On>

- Auto: When the camera is placed upside down the image is automatically flipped upside down. This setting will only take effect for a camera that automatically detects which way it is mounted.
- Off: Display the video on screen the normal way.
- On: When enabled the video on screen is flipped. This setting is used when a camera is mounted upside down, but cannot automatically detect which way it is mounted.

Example: Cameras Camera 1 Flip: Off

Cameras Camera [1..1] Focus Mode
Set the camera focus mode.
Requires user role: ADMIN
Value space: <Auto/Manual>

- Auto: The camera will auto focus once a call is connected, as well as after moving the camera (pan, tilt, zoom). The system will use auto focus only for a few seconds to set the right focus; then auto focus is turned off to prevent continuous focus adjustments of the camera.
- Manual: Turn the autofocus off and adjust the camera focus manually.

Example: Cameras Camera 1 Focus Mode: Auto
Cameras Camera [1..1] Gamma Mode
Applies to cameras which support gamma mode. The Gamma Mode setting enables for gamma corrections. Gamma describes the nonlinear relationship between image pixels and monitor brightness. The Cisco TelePresence PrecisionHD 720p camera supports gamma mode. The PrecisionHD 1080p camera does not support gamma mode.

Requires user role: ADMIN

Value space: <Auto/Manual>
- **Auto**: Auto is the default and the recommended setting.
- **Manual**: In severe light conditions, you may switch mode to manual and specify explicitly which gamma table to use by setting the Gamma Level.

Example: Cameras Camera 1 Gamma Mode: Auto

Cameras Camera [1..1] Gamma Level
By setting the Gamma Level you can select which gamma correction table to use. This setting may be useful in difficult lighting conditions, where changes to the brightness setting does not provide satisfactory results. NOTE: Requires the Gamma Mode to be set to Manual.

Requires user role: ADMIN

Value space: <0..7>
- **Range**: Select a value from 0 to 7.

Example: Cameras Camera 1 Gamma Level: 0

Cameras Camera [1..1] IrSensor
The IR sensor LED is located in the front of the camera and flickers when the IR sensor is activated from the remote control. Both the Codec C Series and PrecisionHD camera have IR sensors, and only one of them needs to be enabled at the time.

Requires user role: ADMIN

Value space: <Off/On>
- **Off**: Disable the IR sensor on the camera.
- **On**: Enable the IR sensor on the camera.

Example: Cameras Camera 1 IrSensor: On

Cameras Camera [1..1] Mirror
With Mirror mode (horizontal flip) you can mirror the image on screen.

Requires user role: ADMIN

Value space: <Auto/Off/On>
- **Auto**: When the camera is placed upside down the image is automatically mirrored. Use this setting with cameras that can be mounted upside down, and that can auto detect that the camera is mounted upside down.
- **Off**: See the self view in normal mode, that is the experience of self view is as seeing yourself as other people see you.
- **On**: See the self view in mirror mode, that is the self view is reversed and the experience of self view is as seeing yourself in a mirror.

Example: Cameras Camera 1 Mirror: Off

Cameras Camera [1..1] Whitebalance Mode
Set the camera whitebalance mode.

Requires user role: ADMIN

Value space: <Auto/Manual>
- **Auto**: The camera will continuously adjust the whitebalance depending on the camera view.
- **Manual**: Enables manual control of the camera whitebalance. The whitebalance level is set using the Cameras Camera Whitebalance Level setting.

Example: Cameras Camera 1 Whitebalance Mode: Auto

Cameras Camera [1..1] Whitebalance Level
Set the whitebalance level. NOTE: Requires the Camera Whitebalance Mode to be set to manual.

Requires user role: ADMIN

Value space: <1..16>
- **Range**: Select a value from 1 to 16.

Example: Cameras Camera 1 Whitebalance Level: 1
Cameras Camera [1..1] DHCP

Applies to cameras which support DHCP (for example the Cisco TelePresence PrecisionHD 1080p 12X camera). The camera must be connected to a LAN. When set, the command enables support for SW upgrade of daisy chained cameras. It will enable the camera's DHCP function and force start of MAC and IP address retrieval. Remember to reset the DHCP when the camera is no longer connected to a LAN.

Requires user role: ADMIN

Value space: <Off/On>

- Off: Disable DHCP in the camera. NOTE: This setting should be applied when the camera is not connected to a LAN.
- On: Enable DHCP in the camera. The camera is automatically re-booted. After re-boot the DHCP is started and the IP address will be retrieved. Run the command "xStatus Camera" for result.

Example: Cameras Camera 1 DHCP: Off
Conference settings

Conference [1..1] AutoAnswer Mode
Set the auto answer mode.

Requires user role: ADMIN

Value space: <Off/On>

Off: An incoming call must be answered manually by pressing the OK key or the green Call key on the remote control, or by tapping the Accept key on the Touch controller.

On: Enable auto answer to let the system automatically answer all incoming calls.

Example: Conference 1 AutoAnswer Mode: Off

Conference [1..1] AutoAnswer Mute
Determine if the microphone shall be muted when an incoming call is automatically answered. NOTE: Requires that AutoAnswer Mode is switched on.

Requires user role: ADMIN

Value space: <Off/On>

Off: The incoming call will not be muted.

On: The incoming call will be muted when automatically answered.

Example: Conference 1 AutoAnswer Mute: Off

Conference [1..1] AutoAnswer Delay
Define how long (in seconds) an incoming call has to wait before it is answered automatically by the system. NOTE: Requires that AutoAnswer Mode is switched on.

Requires user role: ADMIN

Value space: <0..50>

Range: Select a value from 0 to 50 seconds.

Example: Conference 1 AutoAnswer Delay: 0

Conference [1..1] MicUnmuteOnDisconnect Mode
Determine if the microphones shall be unmuted automatically when all calls are disconnected. In a meeting room or other shared resources this may be done to prepare the system for the next user.

Requires user role: ADMIN

Value space: <Off/On>

Off: If muted during a call, let the microphones remain muted after the call is disconnected.

On: Unmute the microphones after the call is disconnected.

Example: Conference 1 MicUnmuteOnDisconnect Mode: On

Conference [1..1] DoNotDisturb Mode
Determine if there should be an alert on incoming calls.

Requires user role: USER

Value space: <Off/On/Timed>

Off: The incoming calls will come through as normal.

On: All incoming calls will be rejected and they will be registered as missed calls. The calling side will receive a busy signal. A message telling that Do Not Disturb is switched on will display on the Touch controller or main display. The calls received while in Do Not Disturb mode will be shown as missed calls.

Timed: Select this option only if using the API to switch Do Not Disturb mode on and off (xCommand Conference DoNotDisturb Activate and xCommand Conference DoNotDisturb Deactivate).

Example: Conference 1 DoNotDisturb Mode: Off
Conference [1..1] DoNotDisturb DefaultTimeout

This setting determines the default duration of a Do Not Disturb session, i.e. the period when incoming calls are rejected and registered as missed calls. The session can be terminated earlier by using the user interface (remote control or Touch controller) or the Conference DoNotDisturb Mode setting. The default value is 60 minutes.

Requires user role: ADMIN

Value space: <0..1440>

Range: Select the number of minutes (between 0 and 1440, i.e. 24 hours) before the Do Not Disturb session times out automatically.

Example: Conference 1 DoNotDisturb DefaultTimeout: 60

Conference [1..1] FarEndControl Mode

Lets you decide if the remote side (far end) should be allowed to select your video sources and control your local camera (pan, tilt, zoom).

Requires user role: ADMIN

Value space: <Off/On>

Off: The far end is not allowed to select your video sources or to control your local camera (pan, tilt, zoom).

On: Allows the far end to be able to select your video sources and control your local camera (pan, tilt, zoom). You will still be able to control your camera and select your video sources as normal.

Example: Conference 1 FarEndControl Mode: On

Conference [1..1] FarEndControl SignalCapability

Set the far end control (H.224) signal capability mode.

Requires user role: ADMIN

Value space: <Off/On>

Off: Disable the far end control signal capability.

On: Enable the far end control signal capability.

Example: Conference 1 FarEndControl SignalCapability: On

Conference [1..1] Encryption Mode

Set the conference encryption mode. A padlock with the text “Encryption On” or “Encryption Off” displays on screen for a few seconds when the conference starts.

Requires user role: ADMIN

Value space: <Off/On/BestEffort>

Off: The system will not use encryption.

On: The system will only allow calls that are encrypted.

BestEffort: The system will use encryption whenever possible.

> In Point to point calls: If the far end system supports encryption (AES-128), the call will be encrypted. If not, the call will proceed without encryption.

> In MultiSite calls: In order to have encrypted MultiSite conferences, all sites must support encryption. If not, the conference will be unencrypted.

Example: Conference 1 Encryption Mode: BestEffort

Conference [1..1] DefaultCall Protocol

Set the Default Call Protocol to be used when placing calls from the system.

Requires user role: ADMIN

Value space: <H323/Sip/H320>

H323: H323 ensures that calls are set up as H.323 calls.

Sip: Sip ensures that calls are set up as SIP calls.

H320: H320 ensures that calls are set up as H.320 calls (only applicable if connected to a Cisco TelePresence ISDN Link gateway).

Example: Conference 1 DefaultCall Protocol: H323

Conference [1..1] DefaultCall Rate

Set the Default Call Rate to be used when placing calls from the system.

Requires user role: ADMIN

Value space: <64..6000>

Range: Select a value between 64 and 6000 kbps.

Example: Conference 1 DefaultCall Rate: 768
Conference [1..1] MaxTransmitCallRate

Specify the maximum transmit bit rate to be used when placing or receiving calls. Note that this is the maximum bit rate for each individual call; use the Conference MaxTotalTransmitCallRate setting to set the aggregated maximum for all simultaneous active calls.

Requires user role: ADMIN

Value space: <64..6000>

Range: Select a value between 64 and 6000 kbps.

Example: Conference 1 MaxTransmitCallRate: 6000

Conference [1..1] MaxReceiveCallRate

Specify the maximum receive bit rate to be used when placing or receiving calls. Note that this is the maximum bit rate for each individual call; use the Conference MaxTotalReceiveCallRate setting to set the aggregated maximum for all simultaneous active calls.

Requires user role: ADMIN

Value space: <64..6000>

Range: Select a value between 64 and 6000 kbps.

Example: Conference 1 MaxReceiveCallRate: 6000

Conference [1..1] MaxTotalTransmitCallRate

This configuration applies when using a video system's built-in MultiSite feature (optional) to host a multipoint video conference.

Specify the maximum overall transmit bit rate allowed. The bit rate will be divided fairly among all active calls at any time. This means that the individual calls will be up-speeded or down-speeded as appropriate when someone leaves or enters a multipoint conference, or when a call is put on hold (suspended) or resumed.

The maximum transmit bit rate for each individual call is defined in the Conference MaxTransmitCallRate setting.

Requires user role: ADMIN

Value space: <64..10000>

Range: Select a value between 64 and 10000.

Example: Conference 1 MaxTotalTransmitCallRate: 9000

Conference [1..1] MaxTotalReceiveCallRate

This configuration applies when using a video system's built-in MultiSite feature (optional) to host a multipoint video conference.

Specify the maximum overall receive bit rate allowed. The bit rate will be divided fairly among all active calls at any time. This means that the individual calls will be up-speeded or down-speeded as appropriate when someone leaves or enters a multipoint conference, or when a call is put on hold (suspended) or resumed.

The maximum receive bit rate for each individual call is defined in the Conference MaxReceiveCallRate setting.

Requires user role: ADMIN

Value space: <64..10000>

Range: Select a value between 64 and 10000.

Example: Conference 1 MaxTotalReceiveCallRate: 9000

Conference [1..1] VideoBandwidth Mode

Set the conference video bandwidth mode.

Requires user role: ADMIN

Value space: <Dynamic/Static>

Dynamic: The available transmit bandwidth for the video channels are distributed among the currently active channels. If there is no presentation, the main video channels will use the bandwidth of the presentation channel.

Static: The available transmit bandwidth is assigned to each video channel, even if it is not active.

Example: Conference 1 VideoBandwidth Mode: Dynamic

Conference [1..1] VideoBandwidth MainChannel Weight

The available transmit video bandwidth is distributed on the main channel and presentation channel according to "MainChannel Weight" and "PresentationChannel Weight". If the main channel weight is 2 and the presentation channel weight is 1, then the main channel will use twice as much bandwidth as the presentation channel.

Requires user role: ADMIN

Value space: <1..10>

Range: 1 to 10.

Example: Conference 1 VideoBandwidth MainChannel Weight: 5
Conference [1..1] VideoBandwidth PresentationChannel Weight

The available transmit video bandwidth is distributed on the main channel and presentation channel according to "MainChannel Weight" and "PresentationChannel Weight". If the main channel weight is 2 and the presentation channel weight is 1, then the main channel will use twice as much bandwidth as the presentation channel.

Requires user role: ADMIN
Value space: <1..10>
Range: 1 to 10.

Example: Conference 1 VideoBandwidth PresentationChannel Weight: 5

Conference [1..1] PacketLossResilience Mode

Set the packetloss resilience mode. This configuration will only take effect for calls initiated after the configuration is set.

Requires user role: ADMIN
Value space: <Off/On>
Off: Disable the packetloss resilience.
On: Enable the packetloss resilience.

Example: Conference 1 PacketLossResilience Mode: On

Conference [1..1] Presentation Policy

Control how the presentation service is to be performed.

Requires user role: ADMIN
Value space: <LocalRemote/LocalOnly>
LocalRemote: The presentation will be shown locally and sent to remote side.
LocalOnly: The presentation will only be shown locally.

Example: Conference 1 Presentation Policy: LocalRemote

Conference [1..1] Presentation RelayQuality

Not applicable in this version.

Conference [1..1] Presentation OnPlacedOnHold

Define whether or not to continue sharing a presentation after the remote site has put you on hold.

Requires user role: ADMIN
Value space: <Stop/NoAction>
Stop: The video system stops the presentation sharing when the remote site puts you on hold. The presentation will not continue when the call is resumed.
NoAction: The video system will not stop the presentation sharing when put on hold. The presentation will not be shared while you are on hold, but it will continue automatically when the call is resumed.

Example: Conference 1 Presentation OnPlacedOnHold: NoAction

Conference [1..1] Multipoint Mode

Define how the video system handles multiparty video conferences.

If registered to a Cisco TelePresence Video Communication Server (VCS), the video system can use the MultiWay network solution. MultiWay requires that the video network includes a multipoint control unit (MCU). If registered to a Cisco Unified Communications Manager (CUCM), the video system can use the CUCM conference bridge. Both Multiway and the CUCM conference bridge allows you to set up conferences with many participants.

Requires user role: ADMIN
Value space: <Auto/Off/MultiWay/CUCMMediaResourceGroupList>
Auto: If the MultiWay service is available, MultiWay is used for multiparty conferences. If the service is not available, Multipoint Mode is set to Off automatically.
Off: Multiparty conferences are not allowed.
MultiWay: Multiparty conferences are set up using MultiWay. The Multipoint Mode will be set to Off automatically if the MultiWay service is unavailable, for example when a server address is not specified in the NetworkServices MultiWay Address setting.
CUCMMediaResourceGroupList: Multiparty conferences (ad hoc conferences) will be hosted by the CUCM configured conference bridge. This setting is provisioned by CUCM in a CUCM environment and should never be set manually by the user.

Example: Conference 1 Multipoint Mode: Auto
Conference [1..1] IncomingMultisiteCall Mode

Select whether or not to allow incoming calls when already in a call/conference.

Requires user role: ADMIN

Value space: <Allow/Deny>

- **Allow:** You will be notified when someone calls you while you are already in a call. You can accept the incoming call or not. The ongoing call may be put on hold while answering the incoming call; or you may merge the calls (requires MultiSite or MultiWay support).

- **Deny:** An incoming call will be rejected if you are already in a call. You will not be notified about the incoming call. However, the call will appear as a missed call in the call history list.

Example: Conference 1 IncomingMultisiteCall Mode: Allow
FacilityService settings

FacilityService Service [1..5] Type
Up to five different facility services can be supported simultaneously. With this setting you can select what kind of services they are.
A facility service is not available unless both the FacilityService Service Name and the FacilityService Service Number settings are properly set.
Only FacilityService Service 1 with Type Helpdesk is available on the Touch controller. Facility services are not available when using the remote control and on-screen menu.

Requires user role: ADMIN

Value space: <Other/Concierge/Helpdesk/Emergency/Security/Catering/Transportation>
  Other: Select this option for services not covered by the other options.
  Concierge: Select this option for concierge services.
  Helpdesk: Select this option for helpdesk services.
  Emergency: Select this option for emergency services.
  Security: Select this option for security services.
  Catering: Select this option for catering services.
  Transportation: Select this option for transportation services.

Example: FacilityService Service 1 Type: Helpdesk

FacilityService Service [1..5] Name
Set the name of each facility service. Up to five different facility services are supported.
A facility service is not available unless both the FacilityService Service Name and the FacilityService Service Number settings are properly set.
Only FacilityService Service 1 is available on the Touch controller, and its Name is used on the facility service call button. Facility services are not available when using the remote control and on-screen menu.

Requires user role: ADMIN

Value space: <S: 0, 255>
  Format: String with a maximum of 255 characters.

Example: FacilityService Service 1 Name: ""

FacilityService Service [1..5] CallType
Set the call type for each facility service. Up to five different facility services are supported.
A facility service is not available unless both the FacilityService Service Name and the FacilityService Service Number settings are properly set.
Only FacilityService Service 1 is available on the Touch controller. Facility services are not available when using the remote control and on-screen menu.

Requires user role: ADMIN

Value space: <Video/Audio>
  Video: Select this option for video calls.
  Audio: Select this option for audio calls.

Example: FacilityService Service 1 CallType: Video
**H323 settings**

**H323 NAT Mode**
The firewall traversal technology creates a secure path through the firewall barrier, and enables proper exchange of audio/video data when connected to an external video conferencing system (when the IP traffic goes through a NAT router). NOTE: NAT does not work in conjunction with gatekeepers.

**Requires user role:** ADMIN

**Value space:** <Auto/Off/On>

- **Auto:** The system will determine if the H323 NAT Address or the real IP address should be used in signaling. This makes it possible to place calls to endpoints on the LAN as well as endpoints on the WAN. If the H323 NAT Address is wrong or not set, the real IP address will be used.
- **Off:** The system will signal the real IP address.
- **On:** The system will signal the configured H323 NAT Address instead of its real IP address in Q.931 and H.245. The NAT Server Address will be shown in the startup-menu as: "My IP Address: 10.0.2.1". If the H323 NAT Address is wrong or not set, H.323 calls cannot be set up.

**Example:** H323 NAT Mode: Off

**H323 NAT Address**
Enter the external/global IP address to the router with NAT support. Packets sent to the router will then be routed to the system. Note that NAT cannot be used when registered to a gatekeeper.

In the router, the following ports must be routed to the system's IP address:

* Port 1720
* Port 5555-6555
* Port 2326-2487

**Requires user role:** ADMIN

**Value space:** <S: 0, 64>

**Format:** A valid IPv4 address or IPv6 address.

**Example:** H323 NAT Address: **

**H323 Profile [1..1] Authentication Mode**
Set the authenticating mode for the H.323 profile.

**Requires user role:** ADMIN

**Value space:** <Off/On>

- **Off:** If the H.323 Gatekeeper Authentication Mode is set to Off the system will not try to authenticate itself to a H.323 Gatekeeper, but will still try a normal registration.
- **On:** If the H.323 Gatekeeper Authentication Mode is set to On and a H.323 Gatekeeper indicates that it requires authentication, the system will try to authenticate itself to the gatekeeper. NOTE: Requires the Authentication LoginName and Authentication Password to be defined on both the codec and the Gatekeeper.

**Example:** H323 Profile 1 Authentication Mode: Off

**H323 Profile [1..1] Authentication LoginName**
The system sends the Authentication Login Name and the Authentication Password to a H.323 Gatekeeper for authentication. The authentication is a one way authentication from the codec to the H.323 Gatekeeper, i.e. the system is authenticated to the gatekeeper. If the H.323 Gatekeeper indicates that no authentication is required, the system will still try to register.

NOTE: Requires the H.323 Gatekeeper Authentication Mode to be enabled.

**Requires user role:** ADMIN

**Value space:** <S: 0, 50>

**Format:** String with a maximum of 50 characters.

**Example:** H323 Profile 1 Authentication LoginName: **
H323 Profile [1..1] Authentication Password

The system sends the Authentication Login Name and the Authentication Password to a H.323 Gatekeeper for authentication. The authentication is a one way authentication from the codec to the H.323 Gatekeeper, i.e. the system is authenticated to the gatekeeper. If the H.323 Gatekeeper indicates that no authentication is required, the system will still try to register.

NOTE: Requires the H.323 Gatekeeper Authentication Mode to be enabled.

Requires user role: ADMIN

Value space: <S: 0, 50>

Format: String with a maximum of 50 characters.

Example: H323 Profile 1 Authentication Password: ""

H323 Profile [1..1] CallSetup Mode

The H.323 Call Setup Mode defines whether to use a Gatekeeper or Direct calling when establishing H.323 calls.

NOTE: Direct H.323 calls can be made even though the H.323 Call Setup Mode is set to Gatekeeper.

Requires user role: ADMIN

Value space: <Direct/Gatekeeper>

Direct: An IP address must be used when dialing in order to make the H323 call.

Gatekeeper: The system will use a Gatekeeper to make a H.323 call. When selecting this option the H323 Profile Gatekeeper Address and H323 Profile Gatekeeper Discovery settings must also be configured.

Example: H323 Profile 1 CallSetup Mode: Gatekeeper

H323 Profile [1..1] Gatekeeper Discovery

Determine how the system shall register to a H.323 Gatekeeper.

Requires user role: ADMIN

Value space: <Manual/Auto>

Manual: The system will use a specific Gatekeeper identified by the Gatekeeper's IP address.

Auto: The system will automatically try to register to any available Gatekeeper. If a Gatekeeper responds to the request sent from the codec within 30 seconds this specific Gatekeeper will be used. This requires that the Gatekeeper is in auto discovery mode as well. If no Gatekeeper responds, the system will not use a Gatekeeper for making H.323 calls and hence an IP address must be specified manually.

Example: H323 Profile 1 Gatekeeper Discovery: Manual

H323 Profile [1..1] Gatekeeper Address

Enter the IP address of the Gatekeeper. NOTE: Requires the H.323 Call Setup Mode to be set to Gatekeeper and the Gatekeeper Discovery to be set to Manual.

Requires user role: ADMIN

Value space: <S: 0, 255>

Format: A valid IPv4 address, IPv6 address or DNS name.

Example: H323 Profile 1 Gatekeeper Address: "192.0.2.0"

H323 Profile [1..1] H323Alias E164

The H.323 Alias E.164 defines the address of the system, according to the numbering plan implemented in the H.323 Gatekeeper. The E.164 alias is equivalent to a telephone number, sometimes combined with access codes.

Requires user role: ADMIN

Value space: <S: 0, 30>

Format: Compact string with a maximum of 30 characters. Valid characters are 0-9, *, and #.

Example: H323 Profile 1 H323Alias E164: "90550092"

H323 Profile [1..1] H323Alias ID

Lets you specify the H.323 Alias ID which is used to address the system on a H.323 Gatekeeper and will be displayed in the call lists. Example: "firstname.lastname@company.com", "My H.323 Alias ID"

Requires user role: ADMIN

Value space: <S: 0, 49>

Format: String with a maximum of 49 characters.

Example: H323 Profile 1 H323Alias ID: "firstname.lastname@company.com"
H323 Profile [1..1] PortAllocation

The H.323 Port Allocation setting affects the H.245 port numbers used for H.323 call signalling.

Requires user role: ADMIN

Value space: <Dynamic/Static>

Dynamic: The system will allocate which ports to use when opening a TCP connection. The reason for doing this is to avoid using the same ports for subsequent calls, as some firewalls consider this as a sign of attack. When Dynamic is selected, the H.323 ports used are from 11000 to 20999. Once 20999 is reached they restart again at 11000. For RTP and RTCP media data, the system is using UDP ports in the range 2326 to 2487. Each media channel is using two adjacent ports, i.e., 2330 and 2331 for RTP and RTCP respectively. The ports are automatically selected by the system within the given range. Firewall administrators should not try to deduce which ports are used when, as the allocation schema within the mentioned range may change without any further notice.

Static: When set to Static the ports are given within a static predefined range [5555–6555].

Example: H323 Profile 1 PortAllocation: Dynamic
Network settings

Network [1..1] IPStack
Select which internet protocols the system will support.
NOTE: Restart the system after changing this setting.
Requires user role: ADMIN
Value space: <IPv4/IPv6>
  IPv4: IP version 4 is used for the SIP and H323 calls.
  IPv6: IP version 6 is used for the SIP and H323 calls.
Example: Network 1 IPStack: IPv4

Network [1..1] Assignment
Define how the system will obtain its IPv4 address, subnet mask and gateway address. This setting only applies to systems on IPv4 networks.
Requires user role: ADMIN
Value space: <Static/DHCP>
  Static: The addresses must be configured manually using the Network IPv4 Address, Network IPv4 Gateway and Network IPv4 SubnetMask settings (static addresses).
  DHCP: The system addresses are automatically assigned by the DHCP server.
Example: Network 1 Assignment: DHCP

Network [1..1] IPv4 Address
Enter the static IPv4 network address for the system. This setting is only applicable when Network Assignment is set to Static.
Requires user role: ADMIN
Value space: <S: 0, 64>
  Format: A valid IPv4 address.
Example: Network 1 IPv4 Address: "192.0.2.0"

Network [1..1] IPv4 Gateway
Define the IPv4 network gateway. This setting is only applicable when the Network Assignment is set to Static.
Requires user role: ADMIN
Value space: <S: 0, 64>
  Format: A valid IPv4 address.
Example: Network 1 IPv4 Gateway: "192.0.2.0"

Network [1..1] IPv4 SubnetMask
Define the IPv4 network subnet mask. This setting is only applicable when the Network Assignment is set to Static.
Requires user role: ADMIN
Value space: <S: 0, 64>
  Format: The valid IPv4 address format.
Example: Network 1 IPv4 SubnetMask: "255.255.255.0"
Network [1..1] IPv6 Assignment

Define how the system will obtain its IPv6 address and the default gateway address. This setting only applies to systems on IPv6 networks.

Requires user role: ADMIN

Value space: <Static/DHCPv6/Autoconf>

- Static: The codec and gateway IP addresses must be configured manually using the Network IPv6 Address and Network IPv6 Gateway settings. The options, for example NTP and DNS server addresses, must either be set manually or obtained from a DHCPv6 server. The Network IPv6 DHCPOptions setting determines which method to use.
- DHCPv6: All IPv6 addresses, including options, will be obtained from a DHCPv6 server. See RFC 3315 for a detailed description. The Network IPv6 DHCPOptions setting will be ignored.
- Autoconf: Enable IPv6 stateless autoconfiguration of the IPv6 network interface. See RFC 4862 for a detailed description. The options, for example NTP and DNS server addresses, must either be set manually or obtained from a DHCPv6 server. The Network IPv6 DHCPOptions setting determines which method to use.

Example: Network 1 IPv6 Assignment: Autoconf

Network [1..1] IPv6 Address

Enter the static IPv6 network address for the system. This setting is only applicable when the Network IPv6 Assignment is set to Static.

Requires user role: ADMIN

Value space: <S: 0, 64>

Format: A valid IPv6 address.

Network [1..1] IPv6 Gateway

Define the IPv6 network gateway address. This setting is only applicable when the Network IPv6 Assignment is set to Static.

Requires user role: ADMIN

Value space: <S: 0, 64>

Format: A valid IPv6 address.

Network [1..1] IPv6 DHCPOptions

Retrieve a set of DHCP options, for example NTP and DNS server addresses, from a DHCPv6 server.

Requires user role: ADMIN

Value space: <Off/On>

- Off: Disable the retrieval of DHCP options from a DHCPv6 server.
- On: Enable the retrieval of a selected set of DHCP options from a DHCPv6 server.

Example: Network 1 IPv6 DHCPOptions: On

Network [1..1] DHCP RequestTFTPServerAddress

This setting is used only for video systems that are registered to a Cisco Unified Communications Manager (CUCM).

The setting determines whether the endpoint should ask the DHCP server for DHCP option 150, so that it can discover the address of the TFTP server (provisioning server) automatically.

If this setting is Off or the DHCP server does not support option 150, the TFTP server address must be set manually using the Provisioning ExternalManager Address setting.

Note: If the Network VLAN Voice Mode setting is Auto and the Cisco Discovery Protocol (CDP) assigns an ID to the voice VLAN, then a request for option 150 will always be sent. That is, the Network DHCP RequestTFTPServerAddress setting will be ignored.

Requires user role: ADMIN

Value space: <Off/On>

- Off: The video system will not send a request for DHCP option 150 and the address of the TFTP server must be set manually. See the note above for any exception to this rule.
- On: The video system will send a request for option 150 to the DHCP server so that it can automatically discover the address of the TFTP server.

Example: Network 1 DHCP RequestTFTPServerAddress: Off
**Network [1..1] DNS Domain Name**

DNS Domain Name is the default domain name suffix which is added to unqualified names. Example: if the DNS Domain Name is "company.com" and the name to lookup is "MyVideoSystem", this will result in the DNS lookup "MyVideoSystem.company.com".

Requires user role: ADMIN

Value space: <S: 0, 64>

Format: String with a maximum of 64 characters.

Example: Network 1 DNS Domain Name: ""

**Network [1..1] DNS Server [1..3] Address**

Define the network addresses for DNS servers. Up to 3 addresses may be specified. If the network addresses are unknown, contact your administrator or Internet Service Provider.

Requires user role: ADMIN

Value space: <S: 0, 64>

Format: A valid IPv4 address or IPv6 address.

Example: Network 1 DNS Server 1 Address: ""

**Network [1..1] QoS Mode**

The QoS (Quality of Service) is a method which handles the priority of audio, video and data in the network. The QoS settings must be supported by the infrastructure. Diffserv (Differentiated Services) is a computer networking architecture that specifies a simple, scalable and coarse-grained mechanism for classifying, managing network traffic and providing QoS priorities on modern IP networks.

Requires user role: ADMIN

Value space: <Off/Diffserv>

Off: No QoS method is used.

Diffserv: When you set the QoS Mode to Diffserv, the Network QoS Diffserv Audio, Network QoS Diffserv Video, Network QoS Diffserv Data, Network QoS Diffserv Signalling, Network QoS Diffserv ICMPv6 and Network QoS Diffserv NTP settings are used to prioritize packets.

Example: Network 1 QoS Mode: Diffserv

**Network [1..1] QoS Diffserv Audio**

Note: This setting will only take effect if Network QoS Mode is set to Diffserv.

Define which priority Audio packets should have in the IP network. The priority for the packets ranges from 0 to 63 - the higher the number, the higher the priority. The recommended class for Audio is CS4, which equals the decimal value 32. If in doubt, contact your network administrator.

The priority set here might be overridden when packets are leaving the network controlled by the local network administrator.

Requires user role: ADMIN

Value space: <0..63>

Range: Select a value between 0 to 63 - the higher the number, the higher the priority. The default value is 0 (best effort).

Example: Network 1 QoS Diffserv Audio: 0

**Network [1..1] QoS Diffserv Video**

Note: This setting will only take effect if Network QoS Mode is set to Diffserv.

Define which priority Video packets should have in the IP network. The packets on the presentation channel (shared content) are also in the Video packet category.

The priority for the packets ranges from 0 to 63 - the higher the number, the higher the priority. The recommended class for Video is CS4, which equals the decimal value 32. If in doubt, contact your network administrator.

The priority set here might be overridden when packets are leaving the network controlled by the local network administrator.

Requires user role: ADMIN

Value space: <0..63>

Range: Select a value between 0 to 63 - the higher the number, the higher the priority. The default value is 0 (best effort).

Example: Network 1 QoS Diffserv Video: 0
Network [1..1] QoS Diffserv Data

Note: This setting will only take effect if Network QoS Mode is set to Diffserv.
Define which priority Data packets should have in the IP network.
The priority for the packets ranges from 0 to 63 - the higher the number, the higher the priority.
The recommended value for Data is 0, which means best effort. If in doubt, contact your network administrator.
The priority set here might be overridden when packets are leaving the network controlled by the local network administrator.

Requires user role: ADMIN

Value space: <0..63>

Range: Select a value between 0 to 63 - the higher the number, the higher the priority. The default value is 0 (best effort).

Example: Network 1 QoS Diffserv Data: 0

Network [1..1] QoS Diffserv Signalling

Note: This setting will only take effect if Network QoS Mode is set to Diffserv.
Define which priority Signalling packets that are deemed critical (time-sensitive) for the real-time operation should have in the IP network.
The priority for the packets ranges from 0 to 63 - the higher the number, the higher the priority. The recommended class for Signalling is CS3, which equals the decimal value 24. If in doubt, contact your network administrator.
The priority set here might be overridden when packets are leaving the network controlled by the local network administrator.

Requires user role: ADMIN

Value space: <0..63>

Range: Select a value between 0 to 63 - the higher the number, the higher the priority. The default value is 0 (best effort).

Example: Network 1 QoS Diffserv Signalling: 0

Network [1..1] QoS Diffserv ICMPv6

Note: This setting will only take effect if Network QoS Mode is set to Diffserv.
Define which priority ICMPv6 packets should have in the IP network.
The priority for the packets ranges from 0 to 63 - the higher the number, the higher the priority. The recommended value for ICMPv6 is 0, which means best effort. If in doubt, contact your network administrator.
The priority set here might be overridden when packets are leaving the network controlled by the local network administrator.

Requires user role: ADMIN

Value space: <0..63>

Range: Select a value between 0 to 63 - the higher the number, the higher the priority. The default value is 0 (best effort).

Example: Network 1 QoS Diffserv ICMPv6: 0

Network [1..1] QoS Diffserv NTP

Note: This setting will only take effect if Network QoS Mode is set to Diffserv.
Define which priority NTP packets should have in the IP network.
The priority for the packets ranges from 0 to 63 - the higher the number, the higher the priority. The recommended value for NTP is 0, which means best effort. If in doubt, contact your network administrator.
The priority set here might be overridden when packets are leaving the network controlled by the local network administrator.

Requires user role: ADMIN

Value space: <0..63>

Range: Select a value between 0 to 63 - the higher the number, the higher the priority. The default value is 0 (best effort).

Example: Network 1 QoS Diffserv NTP: 0
Network [1..1] IEEE8021X Mode

The system can be connected to an IEEE 802.1X LAN network, with a port-based network access control that is used to provide authenticated network access for Ethernet networks.

Requires user role: ADMIN

Value space: <Off/On>

- Off: The 802.1X authentication is disabled (default).
- On: The 802.1X authentication is enabled.

Example: Network 1 IEEE8021X Mode: Off

Network [1..1] IEEE8021X TlsVerify

Verification of the server-side certificate of an IEEE802.1x connection against the certificates in the local CA-list when TLS is used. The CA-list must be uploaded to the video system. This setting takes effect only when Network [1..1] IEEE8021X Eap Tls is enabled (On).

Requires user role: ADMIN

Value space: <Off/On>

- Off: When set to Off, TLS connections are allowed without verifying the server-side X.509 certificate against the local CA-list. This should typically be selected if no CA-list has been uploaded to the codec.
- On: When set to On, the server-side X.509 certificate will be validated against the local CA-list for all TLS connections. Only servers with a valid certificate will be allowed.

Example: xConfiguration Network 1 IEEE8021X TlsVerify: Off

Network [1..1] IEEE8021X UseClientCertificate

Authentication using a private key/certificate pair during an IEEE802.1x connection. The authentication X.509 certificate must be uploaded to the video system.

Requires user role: ADMIN

Value space: <Off/On>

- Off: When set to Off client-side authentication is not used (only server-side).
- On: When set to On the client (video system) will perform a mutual authentication TLS handshake with the server.

Example: Network 1 IEEE8021X UseClientCertificate: Off

Network [1..1] IEEE8021X Identity

The 802.1X Identity is the user name needed for 802.1X authentication.

Requires user role: ADMIN

Value space: <S: 0, 64>

- Format: String with a maximum of 64 characters.

Example: Network 1 IEEE8021X Identity: ""
Network [1..1] IEEE8021X Eap Ttls
Set the TTLS (Tunneled Transport Layer Security) mode. Authenticates LAN clients without the need for client certificates. Developed by Funk Software and Certicom. Usually supported by Agere Systems, Proxim and Avaya.

Requires user role: ADMIN
Value space: <Off/On>
   Off: The EAP-TTLS protocol is disabled.
   On: The EAP-TTLS protocol is enabled (default).

Example: Network 1 IEEE8021X Eap Ttls: On

Network [1..1] IEEE8021X Eap Tls
Enable or disable the use of EAP-TLS (Transport Layer Security) for IEEE802.1x connections. The EAP-TLS protocol, defined in RFC 5216, is considered one of the most secure EAP standards. LAN clients are authenticated using client certificates.

Requires user role: ADMIN
Value space: <Off/On>
   Off: The EAP-TLS protocol is disabled.
   On: The EAP-TLS protocol is enabled (default).

Example: Network 1 IEEE8021X Eap Tls: On

Network [1..1] IEEE8021X Eap Peap
Set the Peap (Protected Extensible Authentication Protocol) mode. Authenticates LAN clients without the need for client certificates. Developed by Microsoft, Cisco and RSA Security.

Requires user role: ADMIN
Value space: <Off/On>
   Off: The EAP-PEAP protocol is disabled.
   On: The EAP-PEAP protocol is enabled (default).

Example: Network 1 IEEE8021X Eap Peap: On

Network [1..1] MTU
Set the Ethernet MTU (Maximum Transmission Unit).

Requires user role: ADMIN
Value space: <Off/On>
   Range: Select a value from 576 to 1500 bytes.

Example: Network 1 MTU: 1500

Network [1..1] Speed
Set the Ethernet link speed.
NOTE: If running older software versions than TC6.0, restart the system for any change to this setting to take effect.

Requires user role: ADMIN
Value space: <Auto/10half/10full/100half/100full/1000full>
   Auto: Autonegotiate link speed.
   10half: Force link to 10 Mbps half-duplex.
   10full: Force link to 10 Mbps full-duplex.
   100half: Force link to 100 Mbps half-duplex.
   100full: Force link to 100 Mbps full-duplex.
   1000full: Force link to 1 Gbps full-duplex.

Example: Network 1 Speed: Auto

Network [1..1] TrafficControl Mode
Set the network traffic control mode to decide how to control the video packets transmission speed.

Requires user role: ADMIN
Value space: <Off/On>
   Off: Transmit video packets at link speed.
   On: Transmit video packets at maximum 20 Mbps. Can be used to smooth out bursts in the outgoing network traffic.

Example: Network 1 TrafficControl: On
Network [1..1] RemoteAccess Allow
Filter IP addresses for access to ssh/telnet/HTTP/HTTPS.

Requires user role: ADMIN

Value space: <S: 0, 255>
- Format: String with a maximum of 255 characters, comma separated IP addresses or IP range.

Example: Network 1 RemoteAccess Allow: "192.168.1.231, 192.168.1.182"

Network [1..1] VLAN Voice Mode
Set the VLAN voice mode. The VLAN Voice Mode will be set to Auto automatically if you choose Cisco UCM (Cisco Unified Communications Manager) as provisioning infrastructure via the Provisioning Wizard on the Touch controller.

Requires user role: ADMIN

Value space: <Auto/Manual/Off>
- Auto: The Cisco Discovery Protocol (CDP), if available, assigns an id to the voice VLAN. If CDP is not available, VLAN is not enabled.
- Manual: The VLAN ID is set manually using the Network VLAN Voice VlanId setting. If CDP is available, the manually set value will be overruled by the value assigned by CDP.
- Off: VLAN is not enabled.

Example: Network 1 VLAN Voice Mode: Off

Network [1..1] VLAN Voice VlanId
Set the VLAN voice ID. This setting will only take effect if VLAN Voice Mode is set to Manual.

Requires user role: ADMIN

Value space: <1..4094>
- Range: Select a value from 1 to 4094.

Example: Network 1 VLAN Voice VlanId: 1
NetworkServices settings

NetworkServices XMLAPI Mode
Enable or disable the video system's XML API. For security reasons this may be disabled. Disabling the XML API will limit the remote manageability with for example TMS, which no longer will be able to connect to the video system.

Requires user role: ADMIN
Value space: <Off/On>
  Off: The XML API is disabled.
  On: The XML API is enabled (default).

Example: NetworkServices XMLAPI Mode: On

NetworkServices MultiWay Address
The MultiWay address must be equal to the Conference Factory Alias, as configured on the Video Communication Server. The Multiway™ conferencing enables video endpoint users to introduce a 3rd party into an existing call.

Multiway™ can be used in the following situations:
1) When you want to add someone else in to your existing call.
2) When you are called by a 3rd party while already in a call and you want to include that person in the call.

Requirements: The Codec C20 must run software version TC3.0 (or later), Video Communication Server (VCS) version X5 (or later) and Codian MCU version 3.1 (or later). Video systems invited to join the Multiway™ conference must support the H.323 routeToMC facility message if in an H.323 call, or SIP REFER message if in a SIP call.

Requires user role: ADMIN
Value space: <S: 0, 255>
  Format: String with a maximum of 255 characters (a valid dial URI).

Example: NetworkServices MultiWay Address: "h323:multiway@company.com"

NetworkServices MultiWay Protocol
Determine the protocol to be used for MultiWay calls.

Requires user role: ADMIN
Value space: <Auto/H323/Sip>
  Auto: The system will select the protocol for MultiWay calls.
  H323: The H323 protocol will be used for MultiWay calls.
  Sip: The SIP protocol will be used for MultiWay calls.

Example: NetworkServices MultiWay Protocol: Auto

NetworkServices H323 Mode
Determine whether the system should be able to place and receive H.323 calls or not.

Requires user role: ADMIN
Value space: <Off/On>
  Off: Disable the possibility to place and receive H.323 calls.
  On: Enable the possibility to place and receive H.323 calls (default).

Example: NetworkServices H323 Mode: On

NetworkServices HTTP Mode
Set the HTTP mode to enable/disable access to the system through a web browser. The web interface is used for system management, call management such as call transfer, diagnostics and software uploads.

NOTE: Restart the system for any change to this setting to take effect.

Requires user role: ADMIN
Value space: <Off/On>
  Off: The HTTP protocol is disabled.
  On: The HTTP protocol is enabled.

Example: NetworkServices HTTP Mode: On
NetworkServices HTTPS Mode
HTTPS is a web protocol that encrypts and decrypts user page requests as well as the pages that are returned by the web server.

NOTE: Restart the system for any change to this setting to take effect.

**Requires user role:** ADMIN

**Value space:** <Off/On>

- **Off:** The HTTPS protocol is disabled.
- **On:** The HTTPS protocol is enabled.

**Example:** NetworkServices HTTPS Mode: On

NetworkServices HTTPS VerifyServerCertificate
When the video system connects to an external HTTPS server (like a phone book server or an external manager), this server will present a certificate to the video system to identify itself.

**Requires user role:** ADMIN

**Value space:** <Off/On>

- **Off:** Do not verify server certificates.
- **On:** Requires the system to verify that the server certificate is signed by a trusted Certificate Authority (CA). This requires that a list of trusted CAs are uploaded to the system in advance.

**Example:** NetworkServices HTTPS VerifyServerCertificate: Off

NetworkServices HTTPS VerifyClientCertificate
When the video system connects to a HTTPS client (like a web browser), the client can be asked to present a certificate to the video system to identify itself.

**Requires user role:** ADMIN

**Value space:** <Off/On>

- **Off:** Do not verify client certificates.
- **On:** Requires the client to present a certificate that is signed by a trusted Certificate Authority (CA). This requires that a list of trusted CAs are uploaded to the system in advance.

**Example:** NetworkServices HTTPS VerifyClientCertificate: Off

NetworkServices HTTPS OCSP Mode
Define the support for OCSP (Online Certificate Status Protocol) responder services. The OCSP feature allows users to enable OCSP instead of certificate revocation lists (CRLs) to check the certificate status.

For any outgoing HTTPS connection, the OCSP responder is queried of the status. If the corresponding certificate has been revoked, then the HTTPS connection will not be used.

**Requires user role:** ADMIN

**Value space:** <Off/On>

- **Off:** Disable OCSP support.
- **On:** Enable OCSP support.

**Example:** NetworkServices HTTPS OCSP Mode: Off

NetworkServices HTTPS OCSP URL
Specify the URL of the OCSP responder (server) that will be used to check the certificate status.

**Requires user role:** ADMIN

**Value space:** <S: 0, 255>

**Format:** String with a maximum of 255 characters.

**Example:** NetworkServices HTTPS OCSP URL: "http://ocspserver.company.com:81"
NetworkServices NTP Mode

The Network Time Protocol (NTP) is used to synchronize the time of the system to a reference time server. The time server will subsequently be queried every 24th hour for time updates. The time will be displayed on the top of the screen. The system will use the time to timestamp messages transmitted to Gatekeepers or Border Controllers requiring H.235 authentication. The system will use the time to timestamp messages transmitted to Gatekeepers or Border Controllers that requires H.235 authentication. It is also used for timestamping Placed Calls, Missed Calls and Received Calls.

Requires user role: ADMIN

Value space: <Auto/Off/Manual>

Auto: The system will use the NTP server, by which address is supplied from the DHCP server in the network. If no DHCP server is used, or the DHCP server does not provide the system with a NTP server address, the system will use the static defined NTP server address specified by the user.

Off: The system will not use an NTP server.

Manual: The system will always use the static defined NTP server address specified by the user.

Example: NetworkServices NTP Mode: Manual

NetworkServices NTP Address

Enter the NTP Address to define the network time protocol server address. This address will be used if NTP Mode is set to Manual, or if set to Auto and no address is supplied by a DHCP server.

Requires user role: ADMIN

Value space: <S: 0, 64>

Format: A valid IPv4 address, IPv6 address or DNS name.

Example: NetworkServices NTP Address: "1.ntp.tandberg.com"

NetworkServices SIP Mode

Determine whether the system should be able to place and receive SIP calls or not.

Requires user role: ADMIN

Value space: <Off/On>

Off: Disable the possibility to place and receive SIP calls.

On: Enable the possibility to place and receive SIP calls (default).

Example: NetworkServices SIP Mode: On

NetworkServices SNMP Mode

SNMP (Simple Network Management Protocol) is used in network management systems to monitor network-attached devices (routers, servers, switches, projectors, etc) for conditions that warrant administrative attention. SNMP exposes management data in the form of variables on the managed systems, which describe the system configuration. These variables can then be queried (set to ReadOnly) and sometimes set (set to ReadWrite) by managing applications.

Requires user role: ADMIN

Value space: <Off/ReadOnly/ReadWrite>

Off: Disable the SNMP network service.

ReadOnly: Enable the SNMP network service for queries only.

ReadWrite: Enable the SNMP network service for both queries and commands.

Example: NetworkServices SNMP Mode: ReadWrite

NetworkServices SNMP Host [1..3] Address

Enter the address of up to three SNMP Managers. The system's SNMP Agent (in the codec) responds to requests from SNMP Managers (a PC program etc.), for example about system location and system contact. SNMP traps are not supported.

Requires user role: ADMIN

Value space: <S: 0, 64>

Format: A valid IPv4 address, IPv6 address or DNS name.

Example: NetworkServices SNMP Host 1 Address: ""

NetworkServices SNMP CommunityName

Enter the name of the Network Services SNMP Community. SNMP Community names are used to authenticate SNMP requests. SNMP requests must have a password (case sensitive) in order to receive a response from the SNMP Agent in the codec. The default password is "public". If you have the Cisco TelePresence Management Suite (TMS) you must make sure the same SNMP Community is configured there too. NOTE: The SNMP Community password is case sensitive.

Requires user role: ADMIN

Value space: <S: 0, 50>

Format: String with a maximum of 50 characters.

Example: NetworkServices SNMP CommunityName: "public"
NetworkServices SNMP SystemContact
Enter the name of the Network Services SNMP System Contact.

Requires user role: ADMIN

Value space: <S: 0, 50>
  Format: String with a maximum of 50 characters.

Example: NetworkServices SNMP SystemContact: ""

NetworkServices SNMP SystemLocation
Enter the name of the Network Services SNMP System Location.

Requires user role: ADMIN

Value space: <S: 0, 50>
  Format: String with a maximum of 50 characters.

Example: NetworkServices SNMP SystemLocation: ""

NetworkServices SSH Mode
SSH (or Secure Shell) protocol can provide secure encrypted communication between the codec and your local computer.

Requires user role: ADMIN

Value space: <Off/On>
  Off: The SSH protocol is disabled. This is the factory setting.
  On: The SSH protocol is enabled.

Example: NetworkServices SSH Mode: On

NetworkServices SSH AllowPublicKey
Secure Shell (SSH) public key authentication can be used to access the codec.

Requires user role: ADMIN

Value space: <Off/On>
  Off: The SSH public key is not allowed.
  On: The SSH public key is allowed.

Example: NetworkServices SSH AllowPublicKey: On

NetworkServices Telnet Mode
Telnet is a network protocol used on the Internet or Local Area Network (LAN) connections.

Requires user role: ADMIN

Value space: <Off/On>
  Off: The Telnet protocol is disabled. This is the factory setting.
  On: The Telnet protocol is enabled.

Example: NetworkServices Telnet Mode: Off

NetworkServices CTMS Mode
This setting determines whether or not to allow multiparty conferences controlled by a Cisco TelePresence Multipoint Switch (CTMS).

Video systems running software TC5.0 or later are able to initiate or join non-encrypted multiparty conferences controlled by CTMS version 1.8 or later. Encrypted conferences are supported as from software versions TC6.0 and CTMS 1.9.1. Encryption is addressed in the NetworkServices CTMS Encryption setting.

Requires user role: ADMIN

Value space: <Off/On>
  Off: Multiparty conferencing via CTMS is prohibited.
  On: Multiparty conferencing via CTMS is allowed.

Example: NetworkServices CTMS Mode: On
NetworkServices CTMS Encryption

This setting indicates whether or not the video system supports encryption when participating in a multiparty meeting controlled by a Cisco TelePresence Multipoint Switch (CTMS).

CTMS allows three security settings for meetings: non-secure (not encrypted), best effort (encrypted if all participants support encryption, otherwise not encrypted) and secure (always encrypted).

Requires user role: ADMIN

Value space: <Off/BestEffort>

- **Off**: The video system does not allow encryption and therefore cannot participate in a secure CTMS meeting (encrypted). When participating in a best effort CTMS meeting, the meeting will be downgraded to non-secure (not encrypted).

- **BestEffort**: The video system can negotiate encryption parameters with CTMS and participate in a secure CTMS meeting (encrypted). Do not use this value if the CTMS version is older than 1.9.1.

**Example**: NetworkServices CTMS Encryption: Off
Phonebook settings

Phonebook Server [1..1] ID
Enter a name for the external phone book.

Requires user role: ADMIN
Value space: <S: 0, 64>
  Format: String with a maximum of 64 characters.
Example: Phonebook Server 1 ID: ""

Phonebook Server [1..1] Type
Select the phonebook server type.

Requires user role: ADMIN
Value space: <VCS/TMS/Callway/CUCM>
  VCS: Select VCS if the phonebook is located on the Cisco TelePresence Video Communication Server.
  TMS: Select TMS if the phonebook is located on the Cisco TelePresence Management Suite server.
  Callway: Select Callway if the phonebook is to be provided by the WebEx TelePresence subscription service (formerly called CallWay). Contact your WebEx TelePresence provider for more information.
  CUCM: Select CUCM if the phonebook is located on the Cisco Unified Communications Manager.

Example: Phonebook Server 1 Type: TMS

Phonebook Server [1..1] URL
Enter the address (URL) to the external phone book server.

Requires user role: ADMIN
Value space: <S: 0, 255>
  Format: String with a maximum of 255 characters.
Provisioning settings

Provisioning Connectivity

This setting controls how the device discovers whether it should request an internal or external configuration from the provisioning server.

Requires user role: ADMIN

Value space: <Internal/External/Auto>

Internal: Request internal configuration.
External: Request external configuration.
Auto: Automatically discover using NAPTR queries whether internal or external configurations should be requested. If the NAPTR responses have the "e" flag, external configurations will be requested. Otherwise internal configurations will be requested.

Example: Provisioning Connectivity: Auto

Provisioning Mode

It is possible to configure a video system using a provisioning system (external manager). This allows video conferencing network administrators to manage many video systems simultaneously.

With this setting you choose which type of provisioning system to use. Provisioning can also be switched off. Contact your provisioning system provider/representative for more information.

Requires user role: ADMIN

Value space: <Off/TMS/VCS/CallWay/CUCM/Auto>

Off: The video system will not be configured by a provisioning system.
TMS: The video system will be configured using TMS (Cisco TelePresence Management System).
VCS: Not applicable in this version.
Callway: The video system will be configured using the WebEx TelePresence subscription service (formerly called Callway).
CUCM: The video system will be configured using CUCM (Cisco Unified Communications Manager).
Auto: The provisioning server will automatically be selected by the video system.

Example: Provisioning Mode: TMS

Provisioning LoginName

This is the user name part of the credentials used to authenticate the video system with the provisioning server. This setting must be used when required by the provisioning server. If Provisioning Mode is Callway (WebEx TelePresence), enter the video number.

Requires user role: ADMIN

Value space: <S: 0, 80>

Format: String with a maximum of 80 characters.

Example: Provisioning LoginName: ""

Provisioning Password

This is the password part of the credentials used to authenticate the video system with the provisioning server. This setting must be used when required by the provisioning server. If Provisioning Mode is Callway (WebEx TelePresence), enter the activation code.

Requires user role: ADMIN

Value space: <S: 0, 64>

Format: String with a maximum of 64 characters.

Example: Provisioning Password: ""

Provisioning HttpMethod

Select the HTTP method to be used for the provisioning.

Requires user role: ADMIN

Value space: <GET/POST>

GET: Select GET when the provisioning server supports GET.
POST: Select POST when the provisioning server supports POST.

Example: Provisioning HttpMethod: POST
Provisioning ExternalManager Address

Enter the IP Address or DNS name of the external manager / provisioning system. If an External Manager Address (and Path) is configured, the system will send a message to this address when starting up. When receiving this message the external manager / provisioning system can return configurations/commands to the unit as a result. When using CUCM or TMS provisioning, the DHCP server can be set up to provide the external manager address automatically (DHCP Option 242 for TMS, and DHCP Option 150 for CUCM). An address set in the Provisioning ExternalManager Address setting will override the address provided by DHCP.

Requires user role: ADMIN

Value space: <S: 0, 64>

Format: A valid IPv4 address, IPv6 address or DNS name.

Example: Provisioning ExternalManager Address: ""

Provisioning ExternalManager Protocol

Determine whether to use secure management or not.

Requires user role: ADMIN

Value space: <HTTP/HTTPS>

HTTP: Set to HTTP to disable secure management. Requires HTTP to be enabled in the NetworkServices HTTP Mode setting.

HTTPS: Set to HTTPS to enable secure management. Requires HTTPS to be enabled in the NetworkServices HTTPS Mode setting.

Example: Provisioning ExternalManager Protocol: HTTP

Provisioning ExternalManager Path

Set the Path to the external manager / provisioning system. This setting is required when several management services reside on the same server, i.e. share the same External Manager address.

Requires user role: ADMIN

Value space: <S: 0, 255>

Format: String with a maximum of 255 characters.

Example: Provisioning ExternalManager Path: "tms/public/external/management/SystemManagementService.asmx"
RTP settings

RTP Ports Range Start

Specify the first port in the range of RTP ports. Also see the H323 Profile [1..1] PortAllocation setting.

NOTE: Restart the system for any change to this setting to take effect.

Requires user role: ADMIN

Value space: <1024..65502>

Range: Select a value from 1024 to 65502.

Example: RTP Ports Range Start: 2326

RTP Ports Range Stop

Specify the last RTP port in the range. Also see the H323 Profile [1..1] PortAllocation setting.

NOTE: Restart the system for any change to this setting to take effect.

Requires user role: ADMIN

Value space: <1056..65535>

Range: Select a value from 1056 to 65535.

Example: RTP Ports Range Stop: 2486
Security settings

Security Audit Logging Mode

Determine where to record or transmit the audit logs. When using the External or ExternalSecure modes, you also must enter the address and port number for the audit server in the Security Audit Server Address and Security Audit Server Port settings.

NOTE: Restart the system for any change to this setting to take effect.

Requires user role: AUDIT

Value space: <Off/Internal/External/ExternalSecure>

- **Off**: No audit logging is performed.
- **Internal**: The system records the audit logs to internal logs, and rotates logs when they are full.
- **External**: The system sends the audit logs to an external audit server (syslog server). The audit server must support TCP.
- **ExternalSecure**: The system sends encrypted audit logs to an external audit server (syslog server) that is verified by a certificate in the Audit CA list. The Audit CA list file must be uploaded to the codec using the web interface. The common_name parameter of a certificate in the CA list must match the IP address of the audit server.

Example: Security Audit Logging Mode: Off

Security Audit Server Address

Enter the IP address of the audit server. Only valid IPv4 or IPv6 address formats are accepted. Host names are not supported. This setting is only relevant when Security Audit Logging Mode is set to External or ExternalSecure.

NOTE: Restart the system for any change to this setting to take effect.

Requires user role: AUDIT

Value space: <S: 0, 64>

- **Format**: A valid IPv4 address or IPv6 address.

Example: Security Audit Server Address: **

Security Audit Server Port

Enter the port of the audit server that the system shall send its audit logs to. The default port is 514. This setting is only relevant when Security Audit Logging Mode is set to External or ExternalSecure.

NOTE: Restart the system for any change to this setting to take effect.

Requires user role: AUDIT

Value space: <0..65535>

- **Range**: Select a value from 0 to 65535.

Example: Security Audit Server Port: 514

Security Audit OnError Action

Determine what happens when the connection to the audit server is lost. This setting is only relevant when Security Audit Logging Mode is set to ExternalSecure.

NOTE: Restart the system for any change to this setting to take effect.

Requires user role: AUDIT

Value space: <Halt/Ignore>

- **Halt**: If a halt condition is detected the system is rebooted and only the auditor is allowed to operate the unit until the halt condition has passed. When the halt condition has passed the audit logs are re-spooled to the audit server. Halt conditions are: A network breach (no physical link), no audit server running (or wrong audit server address or port), TLS authentication failed (if in use), local backup (re-spooling) log full.
- **Ignore**: The system will continue its normal operation, and rotate internal logs when full. When the connection is restored it will again send its audit logs to the audit server.

Example: Security Audit OnError Action: Ignore
Security Session ShowLastLogon
When logging in to the system using SSH or Telnet you will see the UserId, time and date of the last session that did a successful login.

Requires user role: ADMIN

Value space: <Off/On>
  On: Show information about the last session.
  Off: Do not show information about the last session.

Example: Security Session ShowLastLogon: Off

Security Session InactivityTimeout
Determine how long the system will accept inactivity from the user before he is automatically logged out.

Requires user role: ADMIN

Value space: <0..10000>
  Range: Select a value between 1 and 10000 seconds; or select 0 when inactivity should not enforce automatic logout.

Example: Security Session InactivityTimeout: 0
SerialPort settings

**SerialPort Mode**
Enable/disable the serial port (connection via Camera port with Y-cable).

**Requires user role:** ADMIN

**Value space:** <Off/On>
- Off: Disable the serial port.
- On: Enable the serial port.

**Example:** SerialPort Mode: On

**SerialPort BaudRate**
Specify the baud rate (data transmission rate, bits per second) for the serial port. The default value is 38400.

Other connection parameters for the serial port are: Data bits: 8; Parity: None; Stop bits: 1; Flow control: None.

**Requires user role:** ADMIN

**Value space:** <9600/19200/38400/57600/115200>
- Range: Select a baud rate from the baud rates listed (bps).

**Example:** SerialPort BaudRate: 38400

**SerialPort LoginRequired**
Determine if login shall be required when connecting to the serial port.

**Requires user role:** ADMIN

**Value space:** <Off/On>
- Off: The user can access the codec via the serial port without any login.
- On: Login is required when connecting to the codec via the serial port.

**Example:** SerialPort LoginRequired: On
SIP settings

SIP Profile [1..1] URI
The SIP URI or number is used to address the system. This is the URI that is registered and used by the SIP services to route inbound calls to the system. A Uniform Resource Identifier (URI) is a compact string of characters used to identify or name a resource.

Requires user role: ADMIN
Value space: <S: 0, 255>
Example: SIP Profile 1 URI: "sip:firstname.lastname@company.com"

SIP Profile [1..1] DisplayName
When configured the incoming call will report the Displayname instead of the SIP URI.

Requires user role: ADMIN
Value space: <S: 0, 255>
Example: SIP Profile 1 DisplayName: ""

SIP Profile [1..1] Authentication [1..1] LoginName
This is the user name part of the credentials used to authenticate towards the SIP proxy.

Requires user role: ADMIN
Value space: <S: 0, 128>
Example: SIP Profile 1 Authentication 1 LoginName: ""

SIP Profile [1..1] Authentication [1..1] Password
This is the password part of the credentials used to authenticate towards the SIP proxy.

Requires user role: ADMIN
Value space: <S: 0, 128>
Example: SIP Profile 1 Authentication 1 Password: ""

SIP Profile [1..1] DefaultTransport
Select the transport protocol to be used over the LAN.

Requires user role: ADMIN
Value space: <TCP/UDP/Tls/Auto>
TCP: The system will always use TCP as the default transport method.
UDP: The system will always use UDP as the default transport method.
Tls: The system will always use TLS as the default transport method. For TLS connections a SIP CA-list can be uploaded to the video system. If no such CA-list is available on the system then anonymous Diffie Hellman will be used.
Auto: The system will try to connect using transport protocols in the following order: TLS, TCP, UDP.
Example: SIP Profile 1 DefaultTransport: Auto

SIP Profile [1..1] TlsVerify
For TLS connections a SIP CA-list can be uploaded to the video system.

Requires user role: ADMIN
Value space: <Off/On>
Off: Set to Off to allow TLS connections without verifying them. The TLS connections are allowed to be set up without verifying the x.509 certificate received from the server against the local CA-list. This should typically be selected if no SIP CA-list has been uploaded.
On: Set to On to verify TLS connections. Only TLS connections to servers, whose x.509 certificate is validated against the CA-list, will be allowed.
Example: SIP Profile 1 TlsVerify: Off
SIP Profile [1..1] Outbound

Turn on or off the client initiated connections mechanism for firewall traversal, connection reuse and redundancy. The current version supports RFC 5626.

Requires user role: ADMIN

Value space: <Off/On>

Off: Connect to the single proxy configured first in Proxy Address list.
On: Set up multiple outbound connections to servers in the Proxy Address list.

Example: SIP Profile 1 Outbound: Off

SIP Profile [1..1] Proxy [1..4] Address

The Proxy Address is the manually configured address for the outbound proxy. It is possible to use a fully qualified domain name, or an IP address. The default port is 5060 for TCP and UDP but another one can be provided. If SIP Profile Outbound is enabled, multiple proxies can be addressed.

Requires user role: ADMIN

Value space: <S: 0, 255>

Format: A valid IPv4 address, IPv6 address or DNS name.

Example: SIP Profile 1 Proxy 1 Address: ""

SIP Profile [1..1] Proxy [1..4] Discovery

Select if the SIP Proxy address is to be obtained manually or by using Dynamic Host Configuration Protocol (DHCP).

Requires user role: ADMIN

Value space: <Auto/Manual>

Auto: When Auto is selected, the SIP Proxy address is obtained using Dynamic Host Configuration Protocol (DHCP).
Manual: When Manual is selected, the manually configured SIP Proxy address will be used.

Example: SIP Profile 1 Proxy 1 Discovery: Manual

SIP Profile [1..1] Type

Enables SIP extensions and special behaviour for a vendor or provider.

Requires user role: ADMIN

Value space: <Standard/Alcatel/Avaya/Cisco/Microsoft/Nortel>

Standard: To be used when registering to standard SIP Proxy (tested with Cisco TelePresence VCS and Broadsoft)
Alcatel: To be used when registering to Alcatel-Lucent OmniPCX Enterprise. NOTE: This mode is not fully supported.
Avaya: To be used when registering to Avaya Communication Manager. NOTE: This mode is not fully supported.
Cisco: To be used when registering to Cisco Unified Communication Manager.
Microsoft: To be used when registering to Microsoft LCS or OCS. NOTE: This mode is not fully supported.
Nortel: To be used when registering to Nortel MCS 5100 or MCS 5200 PBX. NOTE: This mode is not fully supported.

Example: SIP Profile 1 Type: Standard

SIP Profile [1..1] Mailbox

When registered to a Cisco Unified Communications Manager (CUCM) you may be offered the option of having a private voice mailbox. Enter the number (address) of the mailbox in this setting, or leave the string empty if you do not have a voice mailbox.

Requires user role: ADMIN

Value space: <S: 0, 255>

Format: String with a maximum of 255 characters.

Example: SIP Profile 1 Mailbox: "12345678"
SIP Profile [1..1] Line

When registered to a Cisco Unified Communications Manager (CUCM) the endpoint may be part of a shared line. This means that several devices share the same directory number. The different devices sharing the same number receive status from the other appearances on the line as defined in RFC 4235.

Note that shared lines are set up by CUCM, not by the endpoint. Therefore do not change this setting manually; CUCM pushes this information to the endpoint when required.

Requires user role: ADMIN

Value space: <Private/Shared>
- Shared: The system is part of a shared line and is therefore sharing its directory number with other devices.
- Private: This system is not part of a shared line (default).

Example: SIP Profile 1 Line: Private

SIP ListenPort

Turn on or off the listening for incoming connections on the SIP TCP/UDP ports. If turned off, the endpoint will only be reachable through the SIP registrar (CUCM or VCS). It is recommended to leave this setting at its default value.

Requires user role: ADMIN

Value space: <On/Off>
- On: Listening for incoming connections on the SIP TCP/UDP ports is turned on.
- Off: Listening for incoming connections on the SIP TCP/UDP ports is turned off.

Example: SIP ListenPort: On
Standby settings

Standby Control

Determine whether the system should go into standby mode or not.

Requires user role: ADMIN

Value space: <Off/On>

Off: The system will not enter standby mode.

On: Enter standby mode when the Standby Delay has timed out. NOTE: Requires the Standby Delay to be set to an appropriate value.

Example: Standby Control: On

Standby Delay

Define how long (in minutes) the system shall be in idle mode before it goes into standby mode. NOTE: Requires the Standby Control to be enabled.

Requires user role: ADMIN

Value space: <1..480>

Range: Select a value from 1 to 480 minutes.

Example: Standby Delay: 10

Standby BootAction

Define the camera position after a restart of the codec.

Requires user role: ADMIN

Value space: <None/Preset1/Preset2/Preset3/Preset4/Preset5/Preset6/Preset7/Preset8/Preset9/Preset10/Preset11/Preset12/Preset13/Preset14/Preset15/RestoreCameraPosition/DefaultCameraPosition>

None: No action.

Preset1 to Preset15: When leaving standby the camera position will be set to the position defined by the selected preset.

RestoreCameraPosition: When leaving standby the camera position will be set to the position it had before entering standby.

DefaultCameraPosition: When leaving standby the camera position will be set to the factory default position.

Example: Standby BootAction: DefaultCameraPosition

Standby StandbyAction

Define the camera position when going into standby mode.

Requires user role: ADMIN

Value space: <None/PrivacyPosition>

None: No action.

PrivacyPosition: Turns the camera to a sideways position for privacy.

Example: Standby StandbyAction: PrivacyPosition

Standby WakeupAction

Define the camera position when leaving standby mode.

Requires user role: ADMIN

Value space: <None/Preset1/Preset2/Preset3/Preset4/Preset5/Preset6/Preset7/Preset8/Preset9/Preset10/Preset11/Preset12/Preset13/Preset14/Preset15/RestoreCameraPosition/DefaultCameraPosition>

None: No action.

Preset1 to Preset15: When leaving standby the camera position will be set to the position defined by the selected preset.

RestoreCameraPosition: When leaving standby the camera position will be set to the position it had before entering standby.

DefaultCameraPosition: When leaving standby the camera position will be set to the factory default position.

Example: Standby WakeupAction: RestoreCameraPosition
**SystemUnit settings**

**SystemUnit Name**

Enter a System Name to define a name of the system unit. If the H.323 Alias ID is configured on the system then this ID will be used instead of the system name. The system name will be displayed:

1) When the codec is acting as an SNMP Agent.
2) Towards a DHCP server.

**Requires user role**: ADMIN

**Value space**: <S: 0, 50>

**Format**: String with a maximum of 50 characters.

**Example**: SystemUnit Name: "Meeting Room"

**SystemUnit MenuLanguage**

Select the language to be used in the menus on screen or on the Touch controller.

**Requires user role**: USER

**Value space**: <English/ChineseSimplified/ChineseTraditional/Czech/Danish/Dutch/Finnish/French/German/Hungarian/Italian/Japanese/Korean/Norwegian/Polish/PortugueseBrazilian/Russian/Spanish/SpanishLatin/Swedish/Turkish>

**Example**: SystemUnit MenuLanguage: English

**SystemUnit ContactInfo Type**

Choose which type of contact information to show in the status field in the upper left corner of the main display and Touch controller. The information can also be read with the command xStatus SystemUnit ContactInfo.

**Requires user role**: ADMIN

**Value space**: <Auto/None/IPv4/IPv6/H323Id/E164Alias/H320Number/SipUri/SystemName/DisplayName>

**Auto**: Show the address which another system can dial to reach this system. The address depends on the default call protocol and system registration.

**None**: Do not show any contact information in the status field.

**IPv4**: Show the IPv4 address as contact information.

**IPv6**: Show the IPv6 address as contact information.

**H323Id**: Show the H.323 ID as contact information (see the H323 Profile [1..1] H323Alias ID setting).

**E164Alias**: Show the H.323 E164 Alias as contact information (see the H323 Profile [1..1] H323Alias E164 setting).

**H320Number**: Show the H.320 number as contact information (only applicable if connected to a Cisco TelePresence ISDN Link gateway).

**SipUri**: Show the SIP URI as contact information (see the SIP Profile [1..1] URI setting).

**SystemName**: Show the system name as contact information (see the SystemUnit Name setting).

**DisplayName**: Show the display name as contact information (see the SIP Profile [1..1] DisplayName setting).

**Example**: SystemUnit ContactInfo Type: Auto

**SystemUnit CallLogging Mode**

Set the call logging mode for calls that are received or placed by the system. The call logs may then be viewed via the web interface or using the xHistory command.

**Requires user role**: ADMIN

**Value space**: <Off/On>

**Off**: Disable logging.

**On**: Enable logging.

**Example**: SystemUnit CallLogging Mode: On
SystemUnit IrSensor

Both the Codec C Series and PrecisionHD camera have IR sensors, and only one of them needs to be enabled at the time. The IR sensor LED is located on the front of the codec and the camera and flickers when an IR signal is received from the remote control.

Requires user role: ADMIN

Value space: <Auto/Off/On>

- **Auto**: The system will automatically disable the IR sensor on the codec if the IR sensor at camera is enabled. Otherwise, the IR sensor on the codec will be enabled.
- **Off**: Disable the IR sensor on the codec.
- **On**: Enable the IR sensor on the codec.

Example: SystemUnit IrSensor: Auto
Time settings

Time Zone
Set the time zone where the system is located, using Windows time zone description format.

Requires user role: USER

Value space: <GMT-12:00 (International Date Line West))/GMT-11:00 (Alaska)/GMT-10:00 (Hawaii)/GMT-09:00 (Pacific Time (US & Canada)); Tijuana)/ GMT-08:00 (Mountain Time (US & Canada))/GMT-07:00 (Chihuahua, La Paz, Mazatlan)/GMT-06:00 (Central America)/GMT-06:00 (Saskatchewan)/GMT-06:00 (Guadalajara, Mexico City, Monterrey)/GMT-06:00 (Central Time (US & Canada))/GMT-05:00 (Indiana (East))/GMT-05:00 (Bogota, Lima, Quito)/GMT-04:00 (Eastern Time (US & Canada))/GMT-04:00 (Caracas)/GMT-04:00 (La Paz)/GMT-04:00 (Santiago)/GMT-04:00 (Atlantic Time (Canada))/GMT-03:30 (Newfoundland)/GMT-03:00 (Buenos Aires, Georgetown)/GMT-03:00 (Greenland)/GMT-03:00 (Brasilia)/GMT-02:00 (Mid-Atlantic)/GMT-02:00 (Cape Verde Is.)/ GMT-01:00 (Azores)/GMT (Casablanca, Monrovia)/GMT (Coordinated Universal Time)/GMT (Greenwich Mean Time : Dublin, Edinburgh, Lisbon, London)/GMT+01:00 (West Central Africa)/ GMT+01:00 (Amsterdam, Berlin, Bern, Rome, Stockholm, Vienna)/GMT+01:00 (Brussels, Copenhagen, Madrid, Paris)/GMT+01:00 (Barcelona, Madrid, Berlin, Rome, Stockholm, Vienna)/GMT+01:00 (Belgrade, Bratislava, Budapest, Ljubljana, Prague)/GMT+02:00 (Harare, Pretoria)/GMT+02:00 (Jerusalem)/GMT+02:00 (Athens, Istanbul, Minsk)/GMT+02:00 (Helsinki, Kyiv, Riga, Sofia, Tallinn, Vilnius)/GMT+02:00 (Cairo)/GMT+02:00 (Bucharest)/GMT+03:00 (Nairobi)/GMT+03:00 (Kuwait, Riyadh)/GMT+03:00 (Moscow, St. Petersburg, Volgograd)/GMT+03:00 (Baghdad)/ GMT+03:00 (Tehran)/GMT+04:00 (Dubai, Muscat)/GMT+04:00 (Baku, Tbilisi, Yerevan)/ GMT+04:30 (Kabul)/GMT+05:00 (Islamabad, Karachi, Tashkent)/GMT+05:00 (Ekaterinburg)/ GMT+05:30 (Chennai, Kolkata, Mumbai, New Delhi)/GMT+05:45 (Kathmandu)/GMT+06:00 (Sri Jayawardenepura)/GMT+06:00 (Aqtuba)/GMT+06:00 (Afmady, Novosibirsk)/GMT+06:30 (Rangoon)/GMT+07:00 (Bangkok, Hanoi, Jakarta)/GMT+07:00 (Krasnoyarsk)/GMT+08:00 (Perth)/ GMT+08:00 (Taipei)/GMT+08:00 (Kuala Lumpur, Singapore)/GMT+08:00 (Beijing, Chongqing, Hong Kong, Urumqi)/GMT+09:00 (Ulaan Batar)/GMT+09:00 (Osaka, Sapporo, Tokyo)/ GMT+09:00 (Seoul)/GMT+09:00 (Yakutsk)/GMT+09:30 (Darwin)/GMT+09:30 (Adelaide)/ GMT+10:00 (Guam, Port Moresby)/GMT+10:00 (Brisbane)/GMT+10:00 (Vladivostok)/GMT+10:00 (Hobart)/GMT+10:00 (Canberra, Melbourne, Sydney)/GMT+11:00 (Magadan, Solomon Is., New Caledonia)/GMT+12:00 (Fi, Kamchatka, Marshall Is.)/GMT+12:00 (Auckland, Wellington)/ GMT+13:00 (Nuku alofa)

Range: Select a time zone from the list time zones. If using a command line interface; watch for typos.

Example: Time Zone: "GMT (Greenwich Mean Time : Dublin, Edinburgh, Lisbon, London)"

Time TimeFormat
Set the time format.

Requires user role: USER

Value space: <24H/12H>

24H: Set the time format to 24 hours.
12H: Set the time format to 12 hours (AM/PM).

Example: Time TimeFormat: 24H

Time DateFormat
Set the date format.

Requires user role: USER

Value space: <DD_MM_YY/MM_DD_YY/YY_MM_DD>

DD_MM_YY: The date January 30th 2010 will be displayed: 30.01.10
MM_DD_YY: The date January 30th 2010 will be displayed: 01.30.10
YY_MM_DD: The date January 30th 2010 will be displayed: 10.01.30

Example: Time DateFormat: DD _ MM _ YY
UserInterface settings

UserInterface TouchPanel DefaultPanel
Select whether to display the list of contacts, the list of scheduled meetings, or a dial pad on the Touch controller as default.

Requires user role: USER

Value space: <ContactList/MeetingList/Dialpad>
  - **ContactList**: The contact list (favorites, directory and history) will appear as default on the Touch controller.
  - **MeetingList**: The list of scheduled meetings will appear as default on the Touch controller.
  - **Dialpad**: A dial pad will appear as default on the Touch controller.

Example: UserInterface TouchPanel DefaultPanel: ContactList
Video settings

**Video Input Source [1..2] Name**
Enter a name for the video input source.

**Requires user role:** ADMIN

**Value space:** <S: 0, 50>

- **Format:** String with a maximum of 50 characters.

**Example:** Video Input Source 1 Name: ""

**Video Input Source [1] Connector**
Select which video input connector to be active on video input source 1.

**Requires user role:** ADMIN

**Value space:** <HDMI>

- **HDMI:** Select HDMI when you want to use the HDMI as input source 1.

**Example:** Video Input Source 1 Connector: HDMI

**Video Input Source [2] Connector**
Select which video input connector to be active on video input source 2.

**Requires user role:** ADMIN

**Value space:** <DVI>

- **DVI:** Select DVI-I when you want to use the DVI-I 2 as input source 2.

**Example:** Video Input Source 2 Connector: DVI

**Video Input Source [1..2] Type**
Set which type of input source is connected to the video input.

**Requires user role:** ADMIN

**Value space:** <other/camera/PC/DVD/document_camera>

- **Other:** Select Other when some other type of equipment is connected to the selected video input.
- **Camera:** Select Camera when you have a camera connected to the selected video input.
- **PC:** Select PC when you have a PC connected to the selected video input.
- **DVD:** Select DVD when you have a DVD player connected to the selected video input.
- **Document_Camera:** Select Document_Camera when you have a document camera connected to the selected video input.

**Example:** Video Input Source 1 Type: PC

**Video Input Source [1..2] PresentationSelection**
In general, any input source can be used as a presentation source; normally, the main camera (self view) will not be used as a presentation source. This setting is used to define whether to display the presentation source on the local video system’s display automatically or not. To share the presentation with the far end always requires additional action (tap Start Presenting on the Touch controller or the Presentation key on the remote control).

The default values for all input sources are Manual.

**Requires user role:** ADMIN

**Value space:** <Manual/Automatic/Hidden>

- **Manual:** The content on the input source will not be presented on the local video system’s display before you select it. Use either the remote control or the Touch controller to choose which input source to present.
- **Automatic:** Any content on the input source will be presented on the local video system’s display automatically. If there is active content on more than one input source (which is set to Automatic) the most recent one will be used.
- **Hidden:** The input source is not expected to be used as a presentation source.

**Example:** Video Input Source 1 PresentationSelection: Manual
Video Input Source [1..2] CameraControl Mode
Select whether or not to enable camera control for the selected video input source when the
video input is active.
Requires user role: ADMIN
Value space: <Off/On>
Off: Disable camera control.
On: Enable camera control.
Example: Video Input Source 1 CameraControl Mode: On

Video Input Source [1..2] CameraControl CameraId
Indicates the ID of the camera. This value is fixed in this product.
Value space: <1>
Range: Indicates the ID of the camera.

Video Input Source [1..2] OptimalDefinition Profile
The Video Input Source Quality setting must be set to Motion for the optimal definition settings
to take any effect.
The optimal definition profile should reflect the lighting conditions in your room and the quality
of the video input (camera); the better the lighting conditions and video input, the higher the profile.
Then, in good lighting conditions, the video encoder will provide better quality (higher
resolution or frame rate) for a given call rate.
Generally, we recommend using the Normal or Medium profiles. However, when the lighting
conditions are good, the High profile can be set in order to increase the resolution for a given
call rate.
Some typical resolutions used for different optimal definition profiles, call rates and transmit
frame rates are shown in the table below. It is assumed that dual video is not used. The
resolution must be supported by both the calling and called systems.
Use the Video Input Source OptimalDefinition Threshold60fps setting to decide when to use the
60 fps frame rate.
Requires user role: ADMIN
Value space: <Normal/Medium/High>
Normal: Use this profile for a normally to poorly lit environment. Resolutions will be set rather
conservative.
Medium: Requires good and stable lighting conditions and a good quality video input. For
some call rates this leads to higher resolution.
High: Requires nearly optimal video conferencing lighting conditions and a good quality video
input in order to achieve a good overall experience. Rather high resolutions will be used.
Example: Video Input Source 1 OptimalDefinition Profile: Normal
Video Input Source [1..2] OptimalDefinition Threshold 60fps

For each video input, this setting tells the system the lowest resolution where it should transmit 60fps. So for all resolutions lower than this, the maximum transmitted framerate would be 30fps, while above this resolution 60fps would also be possible, if the available bandwidth is adequate.

Requires user role: ADMIN

Value space: \(<512_288/768_448/1024_576/1280_720/1920_1080/\text{Never}>\)

- 512_288: Set the threshold to 512x288.
- 768_448: Set the threshold to 768x448.
- 1024_576: Set the threshold to 1024x576.
- 1280_720: Set the threshold to 1280x720.
- 1920_1080: Set the threshold to 1920x1080.
- Never: Do not set a threshold for transmitting 60fps.

Example: Video Input Source 1 OptimalDefinition Threshold 60fps: 1280_720

Video Input Source [1..2] Quality

When encoding and transmitting video there will be a trade-off between high resolution and high framerate. For some video sources it is more important to transmit high framerate than high resolution and vice versa. The Quality setting specifies whether to give priority to high frame rate or to high resolution for a given source.

Requires user role: ADMIN

Value space: \(<\text{Motion}/\text{Sharpness}>\)

- Motion: Gives the highest possible framerate. Used when there is a need for higher frame rates, typically when a large number of participants are present or when there is a lot of motion in the picture.
- Sharpness: Gives the highest possible resolution. Used when you want the highest quality of detailed images and graphics.

Example: Video Input Source 1 Quality: Motion

Video MainVideoSource

Define which video input source shall be used as the main video source. The video input source is configured with the "Video Input Source [1..n] Connector" setting.

Requires user role: USER

Value space: \(<1/2>\)

Range: Select the source to be used as the main video source.

Example: Video MainVideoSource: 1

Video DefaultPresentationSource

Define which video input source shall be used as the default presentation source when you press the Presentation key on the remote control. If using a Touch controller this setting has no effect. The Video Input Source n Connector setting defines which input connector to use for input source n.

Requires user role: USER

Value space: \(<1/2>\)

Range: Select the video source to be used as the presentation source.

Example: Video DefaultPresentationSource: 2

Video Input HDMI [1..1] RGBQuantizationRange

All devices with HDMI inputs should follow the rules for RGB video quantization range defined in CEA-861. Unfortunately some devices do not follow the standard and this configuration may be used to override the settings to get a perfect image with any source.

Requires user role: ADMIN

Value space: \(<\text{Auto}/\text{Full}/\text{Limited}>\)

- Auto: RGB quantization range is automatically selected based on the RGB Quantization Range bits (Q0, Q1) in the AVI infoframe. If no AVI infoframe is available, RGB quantization range is selected based on video format according to CEA-861-E.
- Full: Full quantization range. The R, G, B quantization range includes all code values (0 - 255). This is defined in CEA-861-E.
- Limited: Limited Quantization Range. R, G, B quantization range that excludes some code values at the extremes (16 - 235). This is defined in CEA-861-E.

Example: Video Input 1 HDMI 1 RGBQuantizationRange: Auto
Video Input DVI [2] RGBQuantizationRange

All devices with DVI inputs should follow the rules for RGB video quantization range defined in CEA-861. Unfortunately some devices do not follow the standard and this configuration may be used to override the settings to get a perfect image with any source. The default value is set to Full because most DVI sources expects full quantization range.

Requires user role: ADMIN

Value space: <Auto/Full/Limited>

- **Auto**: RGB quantization range is automatically selected based on video format according to CEA-861-E. CE video formats will use limited quantization range levels. IT video formats will use full quantization range levels.
- **Full**: Full quantization range. The R, G, B quantization range includes all code values (0 – 255). This is defined in CEA-861-E.
- **Limited**: Limited Quantization Range. R, G, B quantization range that excludes some code values at the extremes (16 – 235). This is defined in CEA-861-E.

Example: Video Input 1 DVI 2 RGBQuantizationRange: Full

Video Input DVI [2] Type

The official DVI standard supports both digital and analog signals. In most cases the default AutoDetect setting can detect whether the signal is analog RGB or digital. However, in some rare cases when DVI-I cables are used (these cables can carry both the analog and digital signals) the auto detection fails. This setting makes it possible to override the AutoDetect and select the correct DVI video input.

Requires user role: ADMIN

Value space: <AutoDetect/Digital/AnalogRGB>

- **AutoDetect**: Set to AutoDetect to automatically detect if the signal is analog RGB or digital.
- **Digital**: Set to Digital to force the DVI video input to Digital when using DVI-I cables with both analog and digital pins and AutoDetect fails.
- **AnalogRGB**: Set to AnalogRGB to force the DVI video input to AnalogRGB when using DVI-I cables with both analog and digital pins and AutoDetect fails.

Example: Video Input DVI 2 Type: AutoDetect

Video Layout Scaling

Define how the system shall adjust the aspect ratio for images or frames when there is a difference between the image and the frame it is to be placed in.

Requires user role: ADMIN

Value space: <Off/On>

- **Off**: No adjustment of the aspect ratio.
- **On**: Let the system automatically adjust aspect ratio.

Example: Video Layout Scaling: On

Video Layout ScaleToFit

Define what to do if the aspect ratio of a video input source doesn't match the aspect ratio of the corresponding image frame in a composition. For example if you have a 4:3 input source (like XGA) to be displayed on a 16:9 output (like HD720).

Requires user role: ADMIN

Value space: <Manual/MaintainAspectRatio/StretchToFit>

- **Manual**: If the difference in aspect ratio between the video input source and the target image frame is less than the Video Layout ScaleToFitThreshold setting (in percent), the image is stretched to fit. If not, the system will maintain the original aspect ratio.
- **MaintainAspectRatio**: Maintain the aspect ratio of the input source, and fill in black in the rest of the frame (letter boxing or pillar boxing).
- **StretchToFit**: Stretch (horizontally or vertically) the input source to fit into the image frame.

NOTE: The general limitation is that you cannot upscale in one direction and at the same time downscale in the other direction. In such situations the codec will apply letterboxing.

Example: Video Layout ScaleToFit: MaintainAspectRatio

Video Layout ScaleToFitThreshold

Only applicable if the Video Layout ScaleToFit setting is set to manual. If the difference in aspect ratio between the video input source and the target image frame is less than the ScaleToFitThreshold setting (in percent), the image is stretched to fit. If not, the system will maintain the original aspect ratio.

Requires user role: ADMIN

Value space: <0..100>

- **Range**: Select a value from 0 to 100 percent.

Example: Video Layout ScaleToFitThreshold: 5
Video Selfview

Determine if the main video source (self view) shall be displayed on screen.
This setting is obsoleted by the Video SelfviewDefault Mode setting as from TC6.0.

Requires user role: USER

Value space: <Off/On>
  Off: Do not display self view on screen.
  On: Display self view on screen.

Example: Video Selfview: On

Video SelfviewPosition

Select where the small self view PiP (Picture-in-Picture) will appear on screen.
This setting is obsoleted by the Video SelfviewDefault PiPPosition setting as from TC6.0.

Requires user role: ADMIN

Value space: <UpperLeft/UpperCenter/UpperRight/CenterLeft/CenterRight/LowerLeft/LowerRight>
  UpperLeft: The self view PiP will appear in the upper left corner of the screen.
  UpperCenter: The self view PiP will appear in the upper center of the screen.
  UpperRight: The self view PiP will appear in the upper right corner of the screen.
  CenterLeft: The self view PiP will appear on the left side of the screen, in center.
  CenterRight: The self view PiP will appear on the right side of the screen, in center.
  LowerLeft: The self view PiP will appear in the lower left corner of the screen.
  LowerRight: The self view PiP will appear in the lower right corner of the screen.

Example: Video SelfviewPosition: LowerRight

Video SelfviewControl AutoResizing

The size of the self view frame can be configured to automatically change according to the following rules. The size is reduced from full screen to PiP (picture-in-picture) when there is a change in a frame that overlaps with the self view frame. The size is increased from PiP to full screen when nothing else is displayed on the monitor. The last rule does not apply to monitors with MonitorRole set to First.

Requires user role: ADMIN

Value space: <Off/On>
  Off: Self view will not be automatically resized.
  On: Self view is automatically resized as described above.

Example: Video SelfviewControl AutoResizing: On

Video SelfviewDefault Mode

Determine if the main video source (self view) shall be displayed on screen after a call. The position and size of the self view window is determined by the Video SelfviewDefault PiPPosition and the Video Selfview FullscreenMode settings respectively. This setting obsoletes the Video Selfview setting as from TC6.0.

Requires user role: ADMIN

Value space: <Off/Current/On>
  Off: Self view is switched off when leaving a call.
  Current: Self view is left as is, i.e. if it was on during the call, it remains on after the call; if it was off during the call, it remains off after the call.
  On: Self view is switched on when leaving a call.

Example: Video SelfviewDefault Mode: Current
**Video SelfviewDefault FullscreenMode**

Determine if the main video source (self view) shall be shown in full screen or as a small picture-in-picture (PiP) after a call. The setting only takes effect when self view is switched on (see the Video SelfviewDefault Mode setting).

**Requires user role:** ADMIN

**Value space:** `<Off/Current/On>`

- **Off:** Self view will be shown as a PiP.
- **Current:** The size of the self view picture will be kept unchanged when leaving a call, i.e. if it was a PiP during the call, it remains a PiP after the call; if it was full-screen during the call, it remains full-screen after the call.
- **On:** The self view picture will be shown in fullscreen.

**Example:** `Video SelfviewDefault FullscreenMode: Current`

**Video SelfviewDefault PIPPosition**

Determine the position on screen of the small self view picture-in-picture (PiP) after a call. The setting only takes effect when self view is switched on (see the Video SelfviewDefault Mode setting) and full screen view is switched off (see the Video SelfviewDefault FullscreenMode setting).

This setting obsoletes the Video SelfviewPosition setting as from TC6.0.

**Requires user role:** ADMIN

**Value space:** `<Current/UpperLeft/UpperCenter/UpperRight/CenterLeft/CenterRight/LowerLeft/LowerRight>`

- **Current:** The position of the self view PiP will be kept unchanged when leaving a call.
- **UpperLeft:** The self view PiP will appear in the upper left corner of the screen.
- **UpperCenter:** The self view PiP will appear in the upper center position.
- **UpperRight:** The self view PiP will appear in the upper right corner of the screen.
- **CenterLeft:** The self view PiP will appear in the center left position.
- **CentreRight:** The self view PiP will appear in the center right position.
- **LowerLeft:** The self view PiP will appear in the lower left corner of the screen.
- **LowerRight:** The self view PiP will appear in the lower right corner of the screen.

**Example:** `Video SelfviewDefault PIPPosition: Current`

**Video SelfviewDefault OnMonitorRole**

Determine which monitor/output to display the main video source (self view) on after a call. The value reflects the monitor roles set for the different outputs in the Video Output HDMI MonitorRole settings.

The setting applies both when self view is displayed in full screen, and when it is displayed as picture-in-picture (PiP), but only if the Video Monitors setting is set to Dual.

**Requires user role:** ADMIN

**Value space:** `<First/Second/Current>`

- **First:** The self view picture will be shown on outputs with the Video Output HDMI MonitorRole set to First.
- **Second:** The self view picture will be shown on outputs with the Video Output HDMI MonitorRole set to Second.
- **Current:** When leaving the call, the self view picture will be kept on the same output as during the call.

**Example:** `Video SelfviewDefault OnMonitorRole: Current`

**Video CamCtrlPip CallSetup Mode**

This setting is used to switch on self view for a short while when setting up a call. The Video CamCtrlPip CallSetup Duration setting determines for how long it remains on. This applies when self view in general is switched off.

**Requires user role:** ADMIN

**Value space:** `<Off/On>`

- **Off:** Self view is not shown automatically during call setup.
- **On:** Self view is shown automatically during call setup.

**Example:** `Video CamCtrlPip CallSetup Mode: Off`

**Video CamCtrlPip CallSetup Duration**

This setting only has an effect when the Video CamCtrlPip CallSetup Mode setting is switched On. In this case, the number of seconds set here determines for how long self view is shown before it is automatically switched off.

**Requires user role:** ADMIN

**Value space:** `<1..60>`

- **Range:** Choose for how long self view remains on. The valid range is between 1 and 60 seconds.

**Example:** `Video CamCtrlPip CallSetup Duration: 10`
Video PIP ActiveSpeaker DefaultValue Position

Determine the position on screen of the active speaker picture-in-picture (PiP). The setting only takes effect when using a video layout where the active speaker is a PiP, i.e. the Overlay layout, or possibly a Custom layout (see the Video Layout LocalLayoutFamily setting). The setting takes effect from the next call onwards; if changed during a call, it will have no effect on the current call.

Requires user role: ADMIN

Value space: <Current/UpperLeft/UpperCenter/UpperRight/CenterLeft/CenterRight/LowerLeft/LowerRight>

Current: The position of the active speaker PiP will be kept unchanged when leaving a call.
UpperLeft: The active speaker PiP will appear in the upper left corner of the screen.
UpperCenter: The active speaker PiP will appear in the upper center position.
UpperRight: The active speaker PiP will appear in the upper right corner of the screen.
CenterLeft: The active speaker PiP will appear in the center left position.
CentreRight: The active speaker PiP will appear in the center right position.
LowerLeft: The active speaker PiP will appear in the lower left corner of the screen.
LowerRight: The active speaker PiP will appear in the lower right corner of the screen.

Example: Video PIP ActiveSpeaker DefaultValue Position: Current

Video PIP Presentation DefaultValue Position

Determine the position on screen of the presentation picture-in-picture (PiP). The setting only takes effect when the presentation is explicitly minimized to a PiP, for example using the remote control or the Touch controller. The setting takes effect from the next call onwards; if changed during a call, it will have no effect on the current call.

Requires user role: ADMIN

Value space: <Current/UpperLeft/UpperCenter/UpperRight/CenterLeft/CenterRight/LowerLeft/LowerRight>

Current: The position of the presentation PiP will be kept unchanged when leaving a call.
UpperLeft: The presentation PiP will appear in the upper left corner of the screen.
UpperCenter: The presentation PiP will appear in the upper center position.
UpperRight: The presentation PiP will appear in the upper right corner of the screen.
CenterLeft: The presentation PiP will appear in the center left position.
CentreRight: The presentation PiP will appear in the center right position.
LowerLeft: The presentation PiP will appear in the lower left corner of the screen.
LowerRight: The presentation PiP will appear in the lower right corner of the screen.

Example: Video PIP Presentation DefaultValue Position: Current

Video Layout LocalLayoutFamily

Select which video layout family to use locally.

Requires user role: ADMIN

Value space: <Auto/FullScreen/Equal/PresentationSmallSpeaker/PresentationLargeSpeaker/Prominent/Overlay/Single>

Auto: The default layout family, as given by the layout database, will be used as the local layout. For more information about the layout database, see the xCommand Video Layout LoadDb command.
FullScreen: The FullScreen layout family will be used as the local layout. It means that the active speaker or presentation will be shown in full screen. Using this value is not recommended as from TC6.0.
Equal: The Equal layout family will be used as the local layout. All videos have equal size, as long as there is space enough on the screen(s).
PresentationSmallSpeaker: The PresentationSmallSpeaker layout family will be used as the local layout. Using this value is not recommended as from TC6.0.
PresentationLargeSpeaker: The PresentationLargeSpeaker layout family will be used as the local layout. Using this value is not recommended as from TC6.0.
Prominent: The Prominent layout family will be used as the local layout. The active speaker, or the presentation if present, will be a large picture, while the other participants will be small pictures. Transitions between active speakers are voice switched.
Overlay: The Overlay layout family will be used as the local layout. The active speaker, or the presentation if present, will be shown in full screen, while the other participants will be small pictures-in-picture (PiP). Transitions between active speakers are voice switched.
Single: The active speaker, or the presentation if present, will be shown in full screen. The other participants are not shown. Transitions between active speakers are voice switched.

Example: Video Layout LocalLayoutFamily: Auto
**Video Layout RemoteLayoutFamily**

Select which video layout family to be used for the remote participants.

**Requires user role:** ADMIN

**Value space:** <Auto/FullScreen/Equal/PresentationSmallSpeaker/PresentationLargeSpeaker/Prominent/Overlay/Single>

- **Auto:** The default layout family, as given by the local layout database, will be used as the remote layout. For more information about the layout database, see the command: `xCommand Video Layout LoadDb`.
- **FullScreen:** The FullScreen layout family will be used as the remote layout. It means that the active speaker or presentation will be shown in full screen. Using this value is not recommended as from TC6.0.
- **Equal:** The Equal layout family will be used as the remote layout. All videos have equal size, as long as there is space enough on the screen.
- **PresentationSmallSpeaker:** The PresentationSmallSpeaker layout family will be used as the remote layout. Using this value is not recommended as from TC6.0.
- **PresentationLargeSpeaker:** The PresentationLargeSpeaker layout family will be used as the remote layout. Using this value is not recommended as from TC6.0.
- **Prominent:** The Prominent layout family will be used as the remote layout. The active speaker, or the presentation if present, will be a large picture, while the other participants will be small pictures. Transitions between active speakers are voice switched.
- **Overlay:** The Overlay layout family will be used as the remote layout. The active speaker, or the presentation if present, will be shown in full screen, while the other participants will be small pictures-in-picture (PiP). Transitions between active speakers are voice switched.
- **Single:** The active speaker, or the presentation if present, will be shown in full screen. The other participants are not shown. Transitions between active speakers are voice switched.

**Example:** Video Layout RemoteLayoutFamily: Auto

---

**Video Monitors**

Set the monitor layout mode.

**Requires user role:** ADMIN

**Value space:** <Single/Dual/DualPresentationOnly>

- **Single:** The same layout is shown on all monitors.
- **Dual:** All participants in the call is shown on the first monitor, while the presentation (if any) is shown on the second monitor. Self view can also be displayed on the second monitor, depending on the Video SelfViewDefault OnMonitorRole setting.
- **DualPresentationOnly:** All participants in the call will be shown on the first monitor, while the presentation (if any) will be shown on the second monitor.

**Example:** Video Monitors: Single

---

**Video OSD Mode**

The Video OSD (On Screen Display) Mode lets you define if information and icons should be displayed on screen.

**Requires user role:** ADMIN

**Value space:** <Off/On/Disabled>

- **Off:** Hide the on screen menus, icons and indicators.
- **On:** Display the on screen menus, icons and indicators.
- **Disabled:** When set to disabled, the C20 can use the additional resources usually used by the GUI to do 1080p30 at the same time as sharing a presentation. The C20 must then be controlled by a Cisco TelePresence Touch or an external control panel as the GUI will be disabled.

**Example:** Video OSD Mode: On

---

**Video OSD MenuStartupMode**

Configures the state of the OSD (On Screen Display) menu after a video system / codec boot. The setting only applies when the video system is operated by a remote control and the on-screen menu.

**Requires user role:** ADMIN

**Value space:** <Closed/Home>

- **Closed:** The OSD menu will NOT expand automatically. This setting is recommended for 3rd party integrations that need full control of what is shown on the OSD.
- **Home:** The OSD menu will show the home menu expanded.

**Example:** Video OSD MenuStartUpMode: Home
Video OSD VirtualKeyboard

Determine whether or not the virtual keyboard will automatically show on screen when text is to be entered in an input field. The setting only applies when the video system is operated by a remote control and the on-screen menu.

Requires user role: ADMIN

Value space: <UserSelectable/AlwaysOn>

UserSelectable: The user has to press a softbutton to open or close the virtual keyboard.
AlwaysOn: The virtual keyboard is automatically shown on screen as long as text can be entered in an input field.

Example: Video OSD VirtualKeyboard: UserSelectable

Video OSD EncryptionIndicator

Define for how long the encryption indicator (a padlock) will be shown on screen. The setting applies to both encrypted and non-encrypted calls, i.e. both to secure and non-secure conferences. The icon for encrypted calls is a locked padlock, and the icon for non-encrypted calls is a crossed out locked padlock.

Requires user role: ADMIN

Value space: <Auto/AlwaysOn/AlwaysOff>

Auto: If the Conference Encryption Mode setting is set to BestEffort and the call is encrypted, the encryption indicator is shown during the first seconds of a call. If the Conference Encryption Mode setting is set to BestEffort and the call is non-encrypted, the crossed out encryption indicator is shown during the entire call. If the Conference Encryption Mode setting is NOT set to BestEffort, the encryption indicator is not shown at all.
AlwaysOn: The encryption indicator is displayed on screen during the entire call. This applies to both encrypted and non-encrypted calls for all Conference Encryption Mode settings.
AlwaysOff: The encryption indicator is never displayed on screen. This applies to both encrypted and non-encrypted calls for all Conference Encryption Mode settings.

Example: Video OSD EncryptionIndicator: Auto

Video OSD MissedCallsNotification

Determine whether or not the OSD (On Screen Display) shall display a missed calls notification dialog box if there have been incoming calls that have not been answered. The setting only applies when the video system is operated by a remote control and the on-screen menu. When using a Touch controller the notification dialog box will appear on the Touch display, and not on the OSD.

Requires user role: ADMIN

Value space: <Off/On>

Off: The OSD will NOT show any indication that there have been any missed calls. This setting is recommended for 3rd party integrations that need full control of what is shown on the OSD.
On: The OSD will show a notification of missed calls.

Example: Video OSD MissedCallsNotifications: On

Video OSD AutoSelectPresentationSource

Determine if the presentation source should be automatically selected.

Requires user role: ADMIN

Value space: <Off/On>

Off: Disable automatic selection of the presentation source.
On: Enable automatic selection of the presentation source.

Example: Video OSD AutoSelectPresentationSource: Off

Video OSD TodaysBookings

This setting can be used to display the system’s bookings for today on the main OSD menu. This requires that the system is bookable by an external booking system, like Cisco TelePresence Management Suite (TMS).

Requires user role: ADMIN

Value space: <Off/On>

Off: Do not display todays bookings.
On: Displays information about this systems bookings on screen.

Example: Video OSD TodaysBookings: Off
**Video OSD MyContactsExpanded**

Set how the local contacts will be displayed in the phonebook dialog in the OSD (On Screen Display).

**Requires user role:** ADMIN

**Value space:** <Off/On>

- **Off:** The local contacts will be placed in a separate folder called MyContacts in the phonebook dialog.
- **On:** The local contacts in the phonebook will be shown in the top level of the phonebook dialog.

**Example:** Video OSD MyContactsExpanded: Off

**Video OSD Output**

The Video OSD (On Screen Display) Output lets you define which monitor should display the on-screen menus, information, and icons. By default, the OSD is sent to the monitor connected to the Video OSD Output 1. If you cannot see the OSD on screen, then you must re-configure the OSD Output. You can do this by entering a key sequence on the remote control, from the web interface, or by a command line interface.

- **Using the remote control:** Press the Disconnect key followed by: * # * # 0 x # (where x is output 1 to 2).
- **Using the web interface:** Open a web browser and enter the IP address of the codec. Open the Advanced Configuration menu and navigate to Video OSD Output and select the video output. Using a command line interface: Open a command line interface and connect to the codec (if in doubt of how to do this, see the API Guide for the codec). Enter the command: xConfiguration Video OSD Output [1..2] (select the OSD Output)

**Requires user role:** ADMIN

**Value space:** <1/2>

- **Range:** Select 1 for HDMI output, or select 2 for DVI-I output.

**Example:** Video OSD Output: 1

**Video OSD InputMethod InputLanguage**

The codec can be enabled for Cyrillic input characters in the menus on screen. NOTE: Requires that xConfiguration Video OSD InputMethod Cyrillic is set to On.

**Requires user role:** ADMIN

**Value space:** <Latin/Cyrillic>

- **Latin:** Latin characters can be entered when using the remote control (default).
- **Cyrillic:** Cyrillic characters can be entered using the remote control. NOTE: Requires a Cisco TelePresence Remote Control with Cyrillic fonts.

**Example:** Video OSD InputMethod InputLanguage: Latin

**Video OSD InputMethod Cyrillic**

Set the Cyrillic mode for the menu input language in the menus on screen.

**Requires user role:** ADMIN

**Value space:** <Off/On>

- **Off:** Cyrillic mode is NOT available as a menu input language in the menus on screen.
- **On:** Cyrillic mode is available as a menu input language in the menus on screen. This will enable the setting Video OSD InputMethod InputLanguage.

**Example:** Video OSD InputMethod Cyrillic: Off

**Video OSD LoginRequired**

Determine if the system should require the user to login before accessing the On Screen Display (OSD). If enabled, the user must enter his username and his PIN. After the user has logged in he can only execute the configurations changes and commands allowed by his Role.

**Requires user role:** ADMIN

**Value space:** <Off/On>

- **Off:** No login to the OSD is required.
- **On:** The user must log in to access the On Screen Display (OSD).

**Example:** Video OSD LoginRequired: Off
Video AllowWebSnapshots

Allow or disallow snapshots being taken of the local input sources, remote sites and presentation channel. If allowed, the web interface Call Control page will show snapshots both when idle and in a call.

NOTE: This feature is disabled by default, and must be enabled from the On Screen Display (OSD), from a directly connected Touch controller, or via the codec’s serial port (Camera port and Y-cable).

Requires user role: ADMIN

Value space: <Off/On>

Off: Capturing web snapshots is not allowed.

On: Web snapshots can be captured and displayed on the web interface.

Example: Video AllowWebSnapshots: Off

Video Output HDMI [1,2] RGBQuantizationRange

All devices with HDMI outputs should follow the rules for RGB video quantization range defined in CEA-861. Unfortunately some devices do not follow the standard and this configuration may be used to override the settings to get a perfect image with any display. The default value is set to Full because most HDMI displays expects full quantization range.

Requires user role: ADMIN

Value space: <Auto/Full/Limited>

Auto: RGB quantization range is automatically selected based on the RGB Quantization Range bits (Q0, Q1) in the AVI infoframe. If no AVI infoframe is available, RGB quantization range is selected based on video format according to CEA-861-E.

Full: Full quantization range. The R, G, B quantization range includes all code values (0 – 255). This is defined in CEA-861-E.

Limited: Limited Quantization Range. R, G, B quantization range that excludes some code values at the extremes (16 – 235). This is defined in CEA-861-E.

Example: Video Output HDMI 1 RGBQuantizationRange: Full

Video Output HDMI [1,2] CEC Mode

The HDMI outputs support Consumer Electronics Control (CEC). When set to on (default is off), and the monitor connected to the HDMI output is CEC compatible and CEC is configured, the system will use CEC to set the monitor in standby when the system enters standby. Likewise the system will wake up the monitor when the system wakes up from standby. Please note that the different manufacturers uses different marketing names for CEC, for example Anynet+ (Samsung); Aquos Link (Sharp); BRAVIA Sync (Sony); HDMI-CEC (Hitachi); Kuro Link (Pioneer); CE-Link and Regza Link (Toshiba); RIHD (Onkyo); HDAVI Control, EZ-Sync, VIERA Link (Panasonic); EasyLink (Philips); and NetCommand for HDMI (Mitsubishi).

Requires user role: ADMIN

Value space: <Off/On>

Off: Disable CEC control.

On: Enable CEC control.

Example: Video Output HDMI 1 CEC Mode: Off

Video Output HDMI [1,2] MonitorRole

The HDMI monitor role describes which video stream will be shown on the monitor connected to the video output HDMI connector.

Requires user role: ADMIN

Value space: <First/Second/PresentationOnly/Recorder>

First/Second: Define the role of the monitor in a multi-monitor setup. In a single-monitor setup, there is no difference between First and Second.

PresentationOnly: Show presentation video stream if active, and nothing else.

Recorder: Show all participants, including the local main video. If active, also show the presentation.

Example: Video Output HDMI 1 MonitorRole: First
Video Output HDMI [1,2] OverscanLevel

Some TVs or other monitors may not display the whole image sent out on the systems video output, but cuts the outer parts of the image. In this case this setting can be used to let the system not use the outer parts of video resolution. Both the video and the OSD menu will be scaled in this case.

Requires user role: ADMIN

Value space: <Medium/High/None>
- Medium: The system will not use the outer 3% of the output resolution.
- High: The system will not use the outer 6% of the output resolution.
- None: The system will use all of the output resolution.

Example: Video Output HDMI 1 OverscanLevel: None

Video Output HDMI [1,2] Resolution

Select the preferred resolution for the monitor connected to the video output HDMI connector. This will force the resolution on the monitor.

Requires user role: ADMIN

Value space: <Auto/640_480_60/800_600_60/1024_768_60/1280_1024_60/1280_720_50/1280_720_60/1920_1080_50/1920_1080_60/1280_768_60/1360_768_60/1366_768_60/1600_1200_60/1680_1050_60/1920_1200_60>
- Auto: The system will automatically try to set the optimal resolution based on negotiation with the connected monitor.
- Range: 640x480@60p, 800x600@60p, 1024x768@60p, 1280x1024@60p, 1280x720@50p, 1280x720@60p, 1920x1080@50p, 1920x1080@60p, 1280x768@60p, 1360x768@60p, 1366x768@60p, 1600x1200@60p, 1680x1050@60p, 1920x1200@60p

Example: Video Output HDMI 1 Resolution: Auto

Video Wallpaper

Select a background image (wallpaper) for the video screen when idle.

Requires user role: USER

Value space: <None/Custom/Growing/Summersky/Waves>
- None: There is no background image on the screen, i.e. the background is black.
- Custom: Use the custom wallpaper that is stored on the system as background image on the screen. As default, there is no custom wallpaper stored and the background will be black.
- Growing, Summersky, Waves: The chosen background image is shown on the screen.

Example: Video Wallpaper: Summersky
Experimental settings

The Experimental settings are for testing only and should not be used unless agreed with Cisco. These settings are not documented and WILL change in later releases.
Chapter 4

Setting passwords
Setting the system password

You need to sign in to be able to use the web and command line interfaces of your system.

The video system is delivered with a default user account with full credentials. The user name is admin, and initially, no password is set for the default user.

⚠️ We strongly recommend that you set a password for the admin user, and to any other user with similar credentials, to restrict access to system configuration.

Make sure to keep a copy of the password in a safe place. You have to factory reset the unit if you have forgotten the password.

Other user accounts

You can create as many user accounts as you like for your video system.

You can read more about how to create and manage user accounts in the ► User administration section.

Changing your own system password

Perform the following steps to change the system password.

If a password is currently not set, use a blank Current password; to remove a password, leave the New password fields blank.

1. Sign in to the web interface with your user name and current password.
2. Click your user name in the upper right corner and choose Change password in the drop down menu.
3. Enter the Current password, the New password, and repeat the new password in the appropriate input fields.
   The password format is a string with 0–64 characters.
4. Click Change password.

Changing another user’s system password

If you have administrator access rights, you can change all users’ passwords by performing the following steps:

1. Sign in to the web interface with your user name and password.
2. Go to the Maintenance tab and select User Administration.
3. Choose the appropriate user from the list.
4. Enter a new password and PIN code.
5. Click Save.
Setting the menu password

When starting up the video conference system for the first time anyone can access the Administrator Settings menu with either the remote control or the Touch controller because the menu password is not set.

We strongly recommend that you set a menu password, because the administrator settings may severely affect the behavior of the system.

You should use the web interface or remote control to set the menu password; the Touch controller cannot be used.

Setting the menu password from the web interface

1. Sign in to the web interface with your user name and current password.
2. Go to Configuration > System Configuration.
3. Click Set/Change Administrator Settings menu password to open the menu password dialog.
4. Enter the password in the input field.
5. Click Save to set/change the password.

To find the system’s IP address tap Settings (ıc) > System Information on the Touch controller, or navigate to Home > Settings > System Information using the remote control and on-screen menu.

Setting the menu password using the remote control

1. In the on screen menu, go to Home > Settings > Administrator settings > Set menu password.
   The password format is a string with 0–255 characters.
   To deactivate the password leave the password input field empty.
2. Enter the menu password in the input field. The password you enter is hidden; each character is replaced with a star (*).
   On the remote control, press the # key to toggle between lower or upper case characters and numbers: abc/ABC/123.
3. Select Save to save the changes, or Cancel to leave without saving.
4. Press Home (ıc) to exit.
Setting a root password

You can protect the file system of your video system by setting a password for the root user.

The root user is disabled by default. You have to use the command line interface to enable the root user and set a root password.

Activate the root user and set the password

Perform the following steps to activate the root user and set a password for it:

1. Connect to the system through the network or the system's serial data port (if available) and open a command line interface (SSH or Telnet).
2. Sign in to the system with user name and password. The user needs ADMIN rights.
3. Type the following command:
   
   `systemtools rootsettings on <password>`

   The root password is not the same as the system (admin) password.
About monitors

Connecting the main monitor
The main monitor can be connected to video output HDMI 1 (the default connector for the main monitor) or HDMI 2.*

The codec will read the native resolution of the monitor and output this if possible. Typically this will give the best possible picture for the connected monitor. If auto fails, you will have to select the resolution manually using the Video > Output > HDMI n > Resolution settings.

Connecting to HDMI 1
When connecting the main monitor to HDMI 1 the menu, icons and other information on screen (OSD – on screen display) will be displayed on the monitor automatically. This is because HDMI 1 is the default video output of the codec.

Connecting to HDMI 2
When connecting the main monitor to the HDMI 2* output, the menus, icons and other information are not automatically displayed on screen. You must move the OSD to the chosen output.

* Use of HDMI 2 requires the Dual Display option.

There is no audio on HDMI 2.

Moving the OSD
You can move the OSD using the remote control or the web interface.

Remote control
Check which connector the main monitor is connected to, and run the following key sequence on the remote control.
- Disconnect * # * # 0 x #
- x=1 (HDMI 1)  x=2 (HDMI 2)

Example: Setting HDMI 2 as the OSD output.
- * - # - * - # - 0 - 2 - #

Web interface
Open the System Configuration page. Go to Video > OSD > Output and choose the video output connector for the main monitor.

Dual monitors
Requires the Dual Display option.

When you want to run a dual monitor setup, connect the main monitor to video output HDMI 1 and the second monitor to video output HDMI 2 on the codec.

Dual monitor configuration
To distribute the layout on the two monitors, go to Advanced configuration (menu on screen) or open the System Configuration page (web interface). Then go to Video > Monitors and choose Dual.
Connecting the Cisco TelePresence Touch 8” controller

The Cisco TelePresence Touch 8” controller is an alternative to the remote control and on screen menus.

When a Touch controller is connected to the codec, the remote control cannot be used. You have to disconnect (unpair) the Touch controller in order to to use the remote control.

Touch 8” can be used with a C Series codec running software version TC4.1 or later.

Connecting the Touch controller

The Touch controller must be connected to the codec via LAN. The connection is via the provided power adapter, as illustrated above.

Make sure that the codec’s NetworkServices > SSH > Mode setting is turned On to be able to connect.

The process of associating the Touch controller to the codec is called paring. Note that the codec is signalling that it is available for pairing for only 30 minutes after it is switched on.

We recommend that the Touch controller and video system is kept on the same subnet.

Touch controller set-up

Once the Touch controller is connected to power, the set-up procedure begins. Follow the instructions on screen.

If the codec is not in the list of available codecs displayed on the Touch controller, you can choose a codec manually by entering its IP address.

If the Touch controller needs software upgrade, new software will be downloaded from the codec and installed on the unit automatically as part of the set-up procedure. The Touch controller restarts after the upgrade.

You can verify that the Touch controller is successfully paired to the codec by checking that the codec address is displayed in the top banner.

If you want more details on Touch installation, please read the Cisco TelePresence Touch 8 inch Installation Guide, which is available on the Cisco web site.

* You will find this setting in the Advanced Configuration on-screen menu (remote control) or in the System Configuration page on the web interface.
Optimal definition profiles

Under ideal lighting conditions the bandwidth (call rate) requirements can be substantially reduced.

The optimal definition profile should reflect the lighting conditions in your room and the quality of the video input (camera); the better the lighting conditions and video input, the higher the profile. Then, in good lighting conditions, the video encoder will provide better quality (higher resolution or frame rate) for a given call rate.

In general, we recommend the optimal definition profile set to Normal. However, if lighting conditions are good we recommend that you test the endpoint on the various Optimal Definition Profile settings before deciding on a profile.

Go to System Configuration on the web interface and navigate to Video > Input > Source [1..n] > OptimalDefinition > Profile to choose the preferred optimal definition profile.

You can set a resolution threshold to determine when to allow sending video at 60 fps. For all resolutions lower than this threshold, the maximum transmitted frame rate will be 30 fps; for higher resolutions, 60 fps will be possible if the available bandwidth is adequate.

Go to System Configuration on the web interface and navigate to Video > Input > Source [1..n] > OptimalDefinition > Threshold60fps to set the threshold.

The video input quality settings must be set to Motion for the optimal definition settings to take any effect. With the video input quality set to Sharpness, the endpoint will transmit the highest resolution possible, regardless of frame rate.

Go to System Configuration on the web interface and navigate to Video > Input > Source [1..n] > Quality to set the video quality parameter to Motion.

You can read more about the video settings in the System settings chapter.

### Typical resolutions used for different optimal definition profiles, call rates and frame rates

<table>
<thead>
<tr>
<th>Frame rate</th>
<th>Optimal Definition Profile</th>
<th>Call rate</th>
</tr>
</thead>
<tbody>

</table>
ClearPath – Packet loss resilience

ClearPath introduces advanced packet loss resilience mechanisms that increase the experienced quality when you use your video system in an error prone environment.

We recommend that you keep ClearPath enabled on your video system.

Go to Advanced configuration (menu on screen) or open the System Configuration page (web interface):

- Navigate to Conference 1 > PacketLossResilience > Mode
  - Choose Off to disable ClearPath and On to enable ClearPath.
Requirement for speaker systems connected to a Cisco TelePresence C Series codec

Cisco has put in a lot of effort to minimize the camera to screen delay on our TelePresence endpoints.

New consumer TVs are usually equipped with “Motion Flow” or similar technology to insert new video frames between standard frames to create smoother images. This processing takes time and to maintain lip synchronization, the TV will delay the audio so that the audio and video arrives at the same time.

The echo canceller in the Cisco endpoints can handle such delay up to 30ms. Many consumer TVs are not made for real time video communication and may introduce more than 30ms of delay.

If you use such a TV together with a C Series codec it is recommended that you turn off “Motion Flow”, “Natural Motion” or any other video processing that introduces additional delay.

Some consumer TVs also support advanced audio processing like “Virtual Surround” effects and “Dynamic Compression” to improve the TV experience. Such processing will make any acoustic echo canceller malfunction and should hence be switched off.

Some monitors are equipped with a setting called ‘Game Mode’. This mode is specifically designed to help reduce the response time and will usually help to reduce the delay.
Codec C20 – The physical interface

The front panel LEDs

The LED in front of the codec indicates the status of the codec.

- When the LED is **off** the codec is Off.
- The LED flashes **green** during the boot up and shut down of the codec.
- The LED pulses **green** when the infrared (IR) port is activated. This will occur when the remote control is in use.
- The LED is steady **green** when the codec is On, in Standby mode or in Presentation mode.
- When the LED is **red** this indicates an Error has occurred.
Codec C20 – The physical interface, continued...

The rear panel

The connectors used in a basic setup are highlighted in **bold**.

---

**Microphone 1–2**

Mini-Jack 3.5 mm, 4-pole connector. Connect the microphone to Mic 1, which is the main connector.

**Audio input**

RCA sockets, mixed to mono. Used when connecting to PC and external playback devices, such as a VCR or DVD player.

**Audio output**

RCA sockets, mono. Used when connecting to a local loudspeaker system.

**Network connector**

Ethernet interface, 1 × 10 Mb/100 Mb/1 Gigabit Ethernet LAN (RJ-45 Jack) interface.

**USB**

For future use.

---

**Camera Control port**

Camera Control (RS-232) port for power and camera control (pan, tilt, zoom) using the VISCA™* protocol. The Pin No. 4 on the Camera Control port provides 12 V DC / 1 A to the main camera.

**DVI-I input for PC**

DVI-I socket, digital/analog video input for PC presentations.

**HDMI input for camera**

HDMI socket, digital video input for camera.

**HDMI output for the main monitor**

HDMI socket, digital video and audio output for the main monitor.

**HDMI output for the second monitor**

HDMI socket, digital video output for the second monitor.

**Power socket**

The power socket accepts +12 V / 5 A (max) from the external adapter.

The external adapter accepts 100/240 V 50/60 Hz and the maximal load is 75 W.

---

**Power switch**

The power switch (push button) is located on the rear side.

- Push the button to boot up the codec.
- Push and hold the button for 1 second to shut down the codec.
- Push and hold the button for 7 seconds to force a shut down of the codec.

---

**Kensington lock**

The Kensington lock may be used to prevent the codec to be moved from its place or to prevent theft.

---

D14637.10 Profile C20 and Quick Set C20 Administrator Guide TC6.1, APRIL 2013.
Cable configuration for Quick Set C20 with PrecisionHD 1080p 4x camera

The illustration shows you the basic setup when connecting the monitor, PC, PrecisionHD 1080p 4x camera, microphone, loudspeakers (if applicable), LAN and line voltage to the Codec C20.

The early shipments of the Quick Set C20 came with an interim version of the PrecisionHD 1080p 4x camera (the PrecisionHD 1080p 4x* camera).

In order to be able to use the system for video calls, all orange colored sockets must be connected.

The codec must be switched off and disconnected from the line voltage whenever connecting or disconnecting other equipment.
Cable configuration for Quick Set C20 with PrecisionHD 1080p 12x camera

The illustration shows you the basic setup when connecting the monitor, PC, PrecisionHD 1080p 12x camera, microphone, loudspeakers (if applicable), LAN and line voltage to the Codec C20.

In order to be able to use the system for video calls, all orange colored sockets must be connected.

The codec must be switched off and disconnected from the line voltage whenever connecting or disconnecting other equipment.
DNAM for Profile 42”

The DNAM (Digital Natural Audio Module) is built on two specially designed and separate modules: the amplifier and the loudspeaker cabinet.

The DNAM loudspeaker

3-way center loudspeaker system
- Frequency range 50 Hz - 20 kHz
- 2 x 100 mm low- and midrange loudspeaker 8 ohm nominal, excellent quality (SEAS Prestige series)
- 1 x 25 mm dome tweeter, 6 ohm nominal, excellent quality
- Digitally filtered audio signals received from DNAM amplifier
- Long time max power 70 watt on all loudspeakers
- Enclosed MDF loudspeaker cabinet

Integrated stereo loudspeaker
Each side has:
- 1 x 90 mm fullrange loudspeaker, 8 ohm nominal, excellent quality
- Frequency range 70 Hz - 20 kHz
- Enclosed MDF loudspeaker cabinet

The DNAM amplifier

- 5 x 50 watt continuous average output power
- Full frequency range for audio (20 Hz – 20 kHz)
- Digital signal processing and filtering on all channels for best audio detail clarity
- Digital crossover filtering on center channels

In/out:
- Audio In: SPDIF (stereo) or Analog (mono) using the same connector
- Audio Loop Out: line out directly from the input; always analog even with SPDIF in
- Audio Stereo Out: male XLR, common GND configuration
- Loudspeaker Out: female D-SUB 15-pin

- Fuse 2 A 250 V slow, 5 x 20 mm, Littelfuse type 215002. Always use this type of fuse. Using a different type may lead to serious hardware malfunction.

Spare fuses

The Profile system is delivered with two spare DNAM fuses in the column.

Take care not to damage the fuse and fuse holder when replacing a fuse.
- Push the fuse holder slightly inwards and turn counter-clockwise to release the fuse.
- When reinserting the fuse and fuse holder, push slightly inwards and turn the holder carefully clockwise until it locks in place.
Factory resetting

If you have to reset your video system to its default factory settings, we recommend that you use either a Touch controller or the web interface. If neither of these methods are available, you can use the video system’s power button. The remote control and on-screen menu do not give access to factory reset.

When factory resetting the video system the following happens:

- Call logs will be deleted.
- Passwords will be reset to default.
- All system parameters will be reset to default values.
- All files that have been uploaded to the system will be deleted. This includes, but is not limited to, custom backgrounds, certificates, the favorites list (My contacts) and the inactive software image.
- Release keys and option keys will not be affected.
- The system restarts automatically after the reset.

! It is not possible to undo a factory reset.

If you want to backup your current configuration before you factory reset the unit, open a web browser and follow these steps:

- Enter the IP address of the video system in the address bar and sign in.
- Navigate to Maintenance > Backup and Restore.
- Click Take backup and follow the instructions to save the file on your computer.

Touch

1. Tap gently on the Touch screen if the unit is in sleep mode.
2. Navigate to Settings (∧) > Administrator Settings > Reset.
3. Tap the Factory Reset button.
   The system reverses to the default factory settings and restarts automatically. This will take a few minutes.
   The system confirms the factory reset by displaying a notification on the main screen when up and running again. The notification disappears after approximately 10 seconds.

Web

Tap Settings (∧) > System Information on the Touch controller to find the system’s IP address (IPv4 or IPv6).

1. Open a web browser and enter the IP address of the video system in the address bar.
3. Read the provided information carefully before you click Perform a factory reset.
4. If you are sure you want to perform a factory reset, click the red Reset button.
   The system reverts to the default factory settings and restarts automatically. This will take a few minutes.
   The system confirms the factory reset by displaying a notification on the main screen when up and running again. The notification disappears after approximately 10 seconds.

Power button

1. Power down the system by pressing and holding the power button until the system shuts down and the power LED turns off.
2. Press and hold the power button until the LED start blinking slowly (approximately 10 seconds). Then release the button.
3. Within four seconds after the LED starts blinking, press the power button twice.
   Now the LED will flash more quickly. The system reverses to the default factory settings and restarts automatically. This will take a few minutes.
   The system confirms the factory reset by displaying a notification on the main screen when up and running again. The notification disappears after approximately 10 seconds.

If you failed to press the power button twice within the four seconds, the system will not revert to the default factory settings, and you will not see the confirmation message. If this happens, go back to step 1 and try again.
Factory resetting the Touch 8” controller

You must use the New message indicator and Mute buttons to reset the Touch 8” controller to its default factory settings. When factory resetting the Touch controller the logs will be cleared, and the configuration and pairing information are lost.

The Touch controller restarts after the reset and must be paired to the video system anew. When successfully paired it receives a new configuration from the video system.

⚠️ It is not possible to undo a factory reset.

1. Locate the New message indicator and Mute buttons. The New message indicator is a bit hard to see, but it is the button with the exclamation mark on it.

2. Press and hold the New message indicator until it lights up (approximately 10 seconds).

3. Press the Mute button twice. The Touch controller automatically reverts to the default factory settings and restarts.
Technical specifications

Quick Set C20

SET DELIVERED COMPLETE WITH:
- Codec C20, PrecisionHD 1080p 4x or 12x camera, Table Microphone 20, remote control, cables and power supply

BANDWIDTH
- H.323/SIP up to 6 Mbps point-to-point

FIREWALL TRAVERSAL
- Cisco TelePresence Expressway technology
- H.460.18, H.460.19 firewall traversal

VIDEO STANDARDS
- H.261, H.263, H.263+, H.264

VIDEO FEATURES
- Native 16:9 widescreen
- Advanced screen layouts
- Intelligent video management
- Local auto layout

VIDEO INPUTS (2 INPUTS)
One HDMI input; supported formats:
- 1920 x 1080@60 fps (1080p60)
- 1920 x 1080@50 fps (1080p50)
- 1920 x 1080@30 fps (1080p30)
- 1920 x 1080@25 fps (1080p25)
- 1280 x 720@60 fps (720p60)
- 1280 x 720@50 fps (720p50)
- 640 x 480@60 fps (480p60)
- 800 x 600@60 fps (SVGA)
- 1024 x 768@60, 70, 75, 85 fps (XGA)
- 1280 x 1024@60, 75 fps (SXGA)

One DVI-I input; supported formats:
Analog (VGA):
- 1920 x 1080@60 Hz (1080p60)
- 1280 x 720@60 Hz (720p60)
- 1600 x 1200@60 Hz (UXGA)
- 1280 x 1024@60, 75 Hz (SXGA)
- 1280 x 960@60 Hz
- 1024 x 768@60, 70, 75, 85 Hz (XGA)
- 1920 x 1200@50 Hz (WUXGA)

- 1680 x 1050@60 Hz (WSXGA+)
- 1440 x 900@60 Hz (WXGA+)
- 1280 x 800@60 Hz (WXGA)
- 1280 x 768@60 Hz (WXGA)

Digital (DVI-D):
- Same as HDMI, ref. above.
- Extended Display Identification Data (EDID)

VIDEO OUTPUTS (2 OUTPUTS)
Two HDMI output; supported formats:
- 1920 x 1080@60 fps (1080p60)
- 1280 x 720@60 fps (720p60)
- 1366 x 768@60 fps (WXGA)
- 1280 x 768@60 fps (WXGA)
- 1280 x 1024@60 fps (SXGA)
- 1024 x 768@60 fps (XGA)
- 800 x 600@60 fps (SVGA)
- 640 x 480@60 fps (VGA)

- VESA Monitor Power Management
- Extended Display Identification Data (EDID)

LIVE VIDEO RESOLUTIONS (ENCODER/DECODE)
- 176 x 144@30, 60 fps (CIF)
- 352 x 288@30, 60 fps (CIF)
- 512 x 288@30, 60 fps (w288p)
- 576 x 448@30, 60 fps (448p)
- 768 x 448@30, 60 fps (w448p)
- 1024 x 576@30, 60 fps (w576p)
- 640 x 480@30, 60 fps (VGA)
- 800 x 600@30, 60 fps (SVGA)
- 1024 x 768@30 fps (XGA)
- 1280 x 768@30 fps (WXGA)
- 1280 x 720@30 fps (720p30)
- 1280 x 720@60 fps (720p60)
- 1920 x 1080@30 fps (1080p30)*

- 720p30 from 768 kbps
- 720p60 from 1152 kbps*
- 1080p30 from 1472 kbps*

AUDIO STANDARDS
- G.711, G.722, G.722.1, G.729AB (only in SIP calls), 64 kbps AAC-LD

AUDIO FEATURES
- High quality 20kHz
- One acoustic echo canceller
- Automatic gain control (AGC)
- Automatic noise reduction
- Active lip synchronization

AUDIO INPUTS (4 INPUTS)
- Two microphones, 4 pin MiniJack
- Two RCA/Phono (mixed to mono)

AUDIO OUTPUTS (3 OUTPUTS)
- Two RCA/Phono (dual mono)
- One HDMI (digital main audio)

DUAL STREAM
- H.239 (H.323) dual stream
- BFCS (SIP) dual stream
- Support resolutions up to WXGA (1280 x 768)
- When dual stream is activated the main video stream maximum is 720p at 30fps

MULTIPOUNT SUPPORT
- Cisco TelePresence Multiway support (requires Cisco TelePresence Video Communication Server [Cisco VCS] and Cisco TelePresence MCU)
- Ability to natively join multipoint conferences hosted on Cisco Telepresence Multipoint Switch (CTMS)

PROTOCOLS
- H.323
- SIP
- ISDN (requires Cisco TelePresence ISDN Link)

EMBEDDED ENCRYPTION
- H.323/SIP point-to-point
- Standards-based: H.235v3 and AES
- Automatic key generation and exchange
- Supported in dual stream

IP NETWORK FEATURES
- DNS lookup for service configuration
- Differentiated Services (QoS)
- IP adaptive bandwidth management (including flow control)
- Auto gatekeeper discovery
- Dynamic playout and lip-sync buffering
- H.245 DTMF tones in H.323
- Date and time support via NTP
- Packet loss based downspeeding
- URI dialing
- TCP/IP
- DHCP
- 802.1x Network authentication
- 802.1Q Virtual LAN
- 802.1p QoS and class of service
- ClearPath
- Mediant: Mediatrace and Metadata

IPV6 NETWORK SUPPORT
- Single call stack support for both H323 and SIP
- Dual-stack: IPv4 and IPv6 for DHCP, SSH, HTTP, HTTPS, DNS, DiffServ
- Support for both static and autoconfiguration (stateless address autoconfiguration)

CISCO UNIFIED COMMUNICATIONS MANAGER
- Native registration with Cisco Unified Communications Manager
- Basic Cisco Unified Communications Manager provisioning
- Firmware upgrade from Cisco Unified Communications Manager
- Cisco Discovery Protocol and DHCP option 150 support
- Basic telephony features such as hold, resume, transfer, and corporate directory lookup
SECURITY FEATURES
- Management through HTTPS and SSH
- IP administration password
- Menu administration password
- Disable IP services
- Network settings protection

NETWORK INTERFACES
- One LAN/Ethernet (RJ-45) 10/100/1000 Mbit

OTHER INTERFACES
- USB device for future usage

PRECISIONHD 1080P 12X CAMERA
- 1/3" CMOS
- 12 x zoom
- +15°/-25° tilt, +/- 90° pan
- 43.5° vertical field of view
- 72° horizontal field of view
- Focus distance 0.3m–infinity
- 1920 x 1080 pixels progressive @ 60fps
- Other formats supported (configurable through dip-switch):
  - 1920 x 1080@60Hz (HDML only)
  - 1920 x 1080@50Hz (HDMI only)
  - 1920 x 1080@30Hz
  - 1920 x 1080@25Hz
  - 1280 x 720@60 Hz
  - 1280 x 720@50 Hz
  - 1280 x 720@30 Hz
  - 1280 x 720@25 Hz
- Automatic or manual focus/brightness/whitebalance
- Far-end camera control
- Upside–down mounting with manual flipping of picture

Note: The early shipments of the Quick Set C20 came with an interim version of the PrecisionHD 1080P 4X camera

SYSTEM MANAGEMENT
- Support for the Cisco TelePresence Management Suite (Cisco TMS)
- Total management through embedded SNMP, Telnet, SSH, XML, SOAP
- Remote software upload through web server, SCP, HTTP, HTTPS
- Remote control and on-screen menu system

DIRECTORY SERVICES
- Support for local directories (My Contacts)
- Corporate directory
- Unlimited entries using server directory supporting LDAP and H.350 (requires Cisco TMS)
- Unlimited number for corporate directory (through Cisco TMS)
- Received calls with date and time
- Placed calls with date and time
- Missed calls with date and time

POWER
- Auto-sensing power supply
- 100–120/200–240 VAC, 60/50Hz
- 75 W max for codec and main camera

OPERATING TEMPERATURE AND HUMIDITY
- 0° C to 35° C (32°F to 95°F) ambient temperature
- 10% to 90% relative humidity (RH)

STORAGE AND TRANSPORT TEMPERATURE
- -20° C to 60° C (-4°F to 140°F) at RH 10–90%
- Non-condensing

DIMENSIONS
Codec C20:
- Length: 13.8in. / 35.0cm
- Height: 1.2in. / 3.0cm
- Depth: 5in. / 12.7cm
- Weight: 4lbs / 1.8kg

MTBF PRODUCT RELIABILITY/MTBF
The predicted reliability is expressed in the expected random Mean Time Between Failures (MTBF) for the electronic components based on the Power On Hours:
- Power On Hours (POH) > 69 000 hours
- Useful Life Cycle > 6 years

ISO 9001 certificate is available upon request

APPROVALS
EU/EEC
- Directive 2006/95/EC (Low Voltage Directive)
- Standard EN 60950–1
- Standard EN 55022, Class A
- Standard EN 55024
- Standard EN 61000–3–2/3–3
- Directive 2011/65/EU (RoHS)

Warning: This is a class A product. In a domestic environment this product may cause radio interference in which case the user may be required to take adequate measures.

USA
- Approved according to UL 60950–1
- Complies with FCC168 Class A

Note: This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference in which case the user will be required to correct the interference at his own expense.

Canada
- Approved according to CAN/CSA C22.2 No. 60950–1
- This Class A digital apparatus complies with Canadian ICES-003
- Cet appareil numérique de la classe A est conforme à la norme NMB-003 du Canada

  - Standard EN 61000-3-2/-3-3
- Directive 2011/65/EU (RoHS)

Warning: This is a class A product. In a domestic environment this product may cause radio interference in which case the user may be required to take adequate measures.

USA
- Approved according to UL 60950-1
- Complies with FCC15B Class A

Note: This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference in which case the user will be required to correct the interference at his own expense.

Canada
- Approved according to CAN/CSA C22.2 No. 60950-1
- This Class A digital apparatus complies with Canadian ICES-003
- Cet appareil numérique de la classe A est conforme à la norme NMB-003 du Canada

All specifications are subject to change without notice, system specifics may vary.

March 2013
### Supported RFCs

The RFC (Request for Comments) series contains technical and organizational documents about the Internet, including the technical specifications and policy documents produced by the Internet Engineering Task Force (IETF).

#### Current RFCs and drafts supported

- RFC 1889 RTP: A Transport Protocol for Real-time Applications
- RFC 2190 RTP Payload Format for H.263 Video Streams
- RFC 2450 Internet protocol, version 6 (IPv6) specification
- RFC 2617 Digest Authentication
- RFC 2782 DNS RR for specifying the location of services (DNS SRV)
- RFC 2976 The SIP INFO Method
- RFC 3016 RTP Payload Format for MPEG-4 Audio/Visual Streams
- RFC 3261 SIP: Session Initiation Protocol
- RFC 3262 Reliability of Provisional Responses in SIP
- RFC 3263 Locating SIP Servers
- RFC 3264 An Offer/Answer Model with SDP
- RFC 3311 UPDATE method
- RFC 3361 DHCP Option for SIP Servers
- RFC 3420 Internet Media Type message/sipfrag
- RFC 3515 Refer method
- RFC 3550 RTP: A Transport Protocol for Real-Time Applications
- RFC 3551 RTP Profile for Audio and Video Conferences with Minimal Control
- RFC 3581 Symmetric Response Routing
- RFC 3605 RTCP attribute in SDP
- RFC 3711 The Secure Real-time Transport Protocol (SRTP)
- RFC 3840 Indicating User Agent Capabilities in SIP
- RFC 3890 A Transport Independent Bandwidth Modifier for SDP
- RFC 3891 The SIP “Replaces” Header
- RFC 3892 Referred-By Mechanism
- RFC 3960 Early Media
- RFC 3986 Uniform Resource Identifier (URI): Generic Syntax
- RFC 4028 Session Timers in SIP
- RFC 4145 TCP-Based Media Transport in the SDP
- RFC 4235 An INVITE-Initiated Dialog Event Package for the Session Initiation Protocol (SIP)
- RFC 4566 SDP: Session Description Protocol
- RFC 4568 SDP: Security Descriptions for Media Streams
- RFC 4574 The Session Description Protocol (SDP) Label Attribute
- RFC 4582 The Binary Floor Control Protocol
- RFC 4583 Session Description Protocol (SDP) Format for Binary Floor Control Protocol (BFCP) Streams
- RFC 4585 Extended RTP Profile for RTCP-Based Feedback
- RFC 4587 RTP Payload Format for H.261 Video Streams
- RFC 4629 RTP Payload Format for ITU-T Rec. H.263 Video
- RFC 4733 RTP Payload for DTMF Digits, Telephony Tones and Telephony Signals
- RFC 4796 The SDP Content Attribute
- RFC 4862 IPv6 stateless address autoconfiguration
- RFC 5104 Codec Control Messages in the RTP Audio-Visual Profile with Feedback (AVPF)
- RFC 5168 XML Schema for Media Control
- RFC 5577 RTP Payload Format for ITU-T Recommendation G.722.1
- RFC 5589: SIP Call Control Transfer
- RFC 5626 Managing Client-Initiated Connections in the Session Initiation Protocol (SIP)
- RFC 6184 RTP Payload Format for H.264 Video
In general, user documentation for the Cisco TelePresence products is available here:

► http://www.cisco.com/go/telepresence/docs

You have to choose your product category in the right pane until you find your product. This is the path you have to follow:

TelePresence >
   TelePresence Solutions Platform >
      TelePresence Quick Set >
         Cisco TelePresence Quick Set Series

Alternatively, you can use the following short-link to find the documentation:

► http://www.cisco.com/go/quickset-docs

The documents are organized in the following categories:

Installation guides:
   Install and Upgrade > Install and Upgrade Guides

Getting started guide:
   Install and Upgrade > Install and Upgrade Guides
   Maintain and Operate > Maintain and Operate Guides

Administrator guides:
   Maintain and Operate > Maintain and Operate Guides

User guides and Quick reference guides:
   Maintain and Operate > End-User Guides

API reference guides:
   Reference Guides | Command references

Knowledge base articles and frequently asked questions:
   Troubleshoot and Alerts > Troubleshooting Guides

CAD drawings:
   Reference Guides > Technical References

Video conferencing room guidelines:
   Design > Design Guides

Software licensing information:
   Software Downloads, Release and General Information > Licensing Information

Regulatory compliance and safety information:
   Install and Upgrade > Install and Upgrade Guides

Software release notes:
   Software Downloads, Release and General Information > Release Notes
Intellectual property rights
