Introduction
About this guide

This guide introduces you to the Application Programmer Interface (API) for the TC software in general, and serve as a reference guide for the command line commands for the following product:

- Cisco TelePresence SX20 Codec

User documentation

The user documentation for the Cisco TelePresence systems, running the TC software, have several guides suitable to various user groups.

- Video conference room primer
- Video conference room acoustics guidelines
- Installation guides for the TelePresence systems
- Software release notes for the TC software
- Getting started guide for the TelePresence systems
- User guide for the TelePresence systems (Touch controller)
- User guide for the TelePresence systems (Remote Control)
- Quick reference guides for the TelePresence systems
- Administrator guides for the TelePresence systems
- Camera user guide for the PrecisionHD cameras
- API reference guide for the SX20 Codec
- Regulatory compliance and safety information guides
- Legal and license information for the TC software

To download the user documentation go to:

› http://www.cisco.com/go/quickset-docs
What’s new in this version

This section provides an overview of the new and changed system settings and new features in the TC7.0 software version.

New features and improvements

New GUI for Touch 8

A new visual design for the Touch user interface is introduced.

- Tap the upper left corner to activate/deactivate the Do not disturb feature, to activate/deactivate the Standby feature, and to access the Settings.
- Tap the icon to activate selfview, choose a preset camera position, and pan/tilt/zoom the camera.

IPv6 and dual stack support

IPv6 and dual stack operations are fully supported, also when using ActiveControl and ICE.

Use the following settings if you want to enable dual stack operation with IPv6 as the preferred protocol:

- **Network 1 IPStack**: Dual (enables IPv4 and IPv6 network address (default))
- **Conference 1 CallProtocolIPStack**: Dual (enables dual stack operation for the call protocols)
- **SIP PreferredIPMedia**: IPv6 (selects which IP version to prefer for media if both versions are supported on both ends)
- **SIP PreferredIPSignaling**: IPv6 (selects which IP version to prefer for signaling if both versions are supported on both ends)

Presentation will stop when the presentation source is disconnected

If a presentation source is disconnected or goes into standby (e.g. a PC), the presentation will automatically be ended after 10 seconds. If the source is connected or comes out of standby within 10 seconds, the presentation will automatically be resumed.

When presenting an input source that is not connected, an empty presentation will not be sent to the far end.

Password protection of the Touch Administrator menu

You must sign in with the video system’s administrator password to get access to the Administrator menu on Touch 8.

Support for TMS phonebook when provisioned by CUCM

As from TMS release 14.4 and TC7.0, endpoints that are provisioned by CUCM can use the TMS phone book.

Serviceability: Network status available for Touch 8

Network status for the Touch device is available from the Touch interface. This information can be used to verify that the device has an IP address and that it is receiving and sending packets to the network. You can also detect if packets are lost (dropped or in error). This can help to identify network problems that may cause issues in calls.

Software release notes

For a complete overview of new features and changes, we recommend reading the Software Release Notes (TC7). Go to:

Software download

For software download go to:

System configuration changes

New configurations
- Audio Input Microphone[n] Level: <0..24>
- Audio Input Microphone[n] EchoControl Mode: <Off/On>
- Audio Input Microphone[n] EchoControl NoiseReduction: <Off/On>
- Audio Input Microphone[n] EchoControl Dereverberation: <Off/On>
- User Interface User Preferences: <Off/On>
- Video Input Source[n] Visibility: <Never/Always/If Signal>

Configurations that are removed
- Conference Video Selfview Control: Auto Resizing

Configurations that are modified
- Audio Sounds And Alerts Ring Tone
  - OLD: <Marbles/Ice Crystals/Polaris/Alert/Discreet/Fantasy/Jazz/Nordic/Echo/Rhythmic>
  - NEW: <S: 1, 100>
- Provisioning Mode
  - OLD: <Off/TMS/VCS/Call Way/CUCM/Auto>
  - NEW: <Off/TMS/VCS/Call Way/CUCM/Auto/Edge>
- User Interface Touch Panel Default Panel
  - OLD: <Contact List/Meeting List/Dialpad>
  - NEW: <None/Last Used/Contact List/Meeting List/Dialpad>
- Video Input Source[n] Presentation Selection
  - OLD: <Manual/Automatic/Hidden>
  - NEW: <Manual/Automatic/On Connect/Hidden>
- Video Wallpaper
  - OLD: <None/Custom/Growing/Summersky/Waves>
  - NEW: <None/Custom/Growing/Summersky/Waves/Blue>

System command changes

New commands
- xCommand Audio Sounds And Alerts: Ring Tone List

Commands that are modified
- xCommand Audio Sound Play
  - OLD: Sound (r) <Busy/Call Waiting/Dial/Key Tone/Ringing/Special Info/Telephone Call/Video Call>
  - NEW: Sound (r) <Bump/Busy/Call Disconnect/Call Initiate/Call Waiting/Dial/Key Input/Key Tone/Nav/Nav Back/Notification/OK/Presentation Connect/Ringing/Special Info/Telephone Call/Video Call/Volume>

System status changes

New Statuses
- xStatus Provisioning CUCM UserId
- xStatus Video Input Main Video Source
- xStatus Video Input USB Type
- xStatus Video Layout Site Output Frame Media Channel Id
- xStatus Video Layout Prediction Site Family Output Role Frame Media Channel Id

Statuses that are modified
- xStatus System Unit Diagnostics Message Type
Chapter 2

About the API
API fundamentals

This chapter contains a top-level view of the mechanisms supported by the codec API. You can use the API to manage all parts of the TelePresence system.

Here you can read about how to access the API, how to use the command line and what the different parts of the API can be used for. Information on how to use the feedback functions that are available for the codec is included in this chapter.

The API consists of four major groups:

- Commands
- Configurations
- Status
- Events

These four groups are hierarchically organized, which makes it easier to find related functionality. You can find the complete lists of all commands, configurations and statuses in the following chapters.

Connecting to the API

There are several ways to access the codec API. Regardless of which method you choose, the structure of the API stays the same. Choose the connection method that suits your application best. Before you start, please read this section about the different methods, as some of those may require additional configuration changes before being enabled.

The following commands can be set from the System configuration menu in the web interface or on the on-screen display, or from the command line interface. All of the examples are for the command line interface.

Password

Initially, no password is set for the default admin user. We strongly recommend that you set a password for this user, and any other users possessing an ADMIN role, to restrict access to system configuration. The password can be changed by issuing the following command:

```
xCommand SystemUnit AdminPassword Set Password: <password>
```

RS-232/serial connection

This is one of the most used connections to our products for integrators, as it can be used without an IP-address, DNS or a network.

Codec configurations

There are two different configurations that can be changed for serial connections; the baud-rate and whether login is required or not. A reboot of the codec is required for these settings to take effect.

```
xConfiguration SerialPort BaudRate: <9600/19200/38400/57600/115200>
xConfiguration SerialPort LoginRequired: <Off/On>
```

Connecting

For the SX20 codec you need a USB to RS-232 adapter to connect to the USB port.

Note:

- For security reasons the password prompting is turned on by default, but it can be turned off if preferred.
- The default baud rate is set to 38400. The reason for this is that the codec can give very much feedback. When using 9600 baud it may cause your integration to appear sluggish. We therefore recommend keeping the connection at this speed or higher.
- During the initial boot sequence, the codec uses a baud rate of 38400 regardless of the application baud rate you have set.

Telnet

Telnet can be viewed as the equivalent of the serial protocol in the TCP/IP world. Telnet is disabled by default. Before connecting to the codec with Telnet you have to enable it.

Codec configuration

To enable Telnet service, configure the following setting on the codec. Changing this setting does not require a reboot of the device, but it may take some time to take effect.

```
xConfiguration NetworkServices Telnet Mode: On
```

SSH

SSH is a secure TCP/IP connection and it is enabled by default on the codec. It can be disabled. You need a SSH client, such as PuTTY, to access the API over SSH.

HTTP/HTTPS

As HTTP/HTTPS are connectionless protocols, there is no persistent connection. There are several ways of communicating with the API over HTTP.

Codec configuration

In order to enable or disable the HTTP and HTTPS services, configure the following settings on the codec. Changing these settings requires a reboot of the device.

```
xConfiguration NetworkServices HTTP Mode: <Off/On>
xConfiguration NetworkServices HTTPS Mode: <Off/On>
```

Connecting

You can inspect the API by entering the IP-address or host name of the codec in your favorite web browser. In the web interface, you can find the API documents under the menu section System Configuration > API > XML API. The HTTP POST and GET methods are used to execute commands and get feedback from the codec. This is described in "Using HTTP" on page 19 in this document.
API output

The `xPreferences` is used to set preferences for the RS-232, Telnet and SSH sessions.

The output modes

- **Terminal**: Line based output for use with line based control systems
- **XML**: XML output for use with control systems that understand XML.

The default output mode is `terminal`. To change this you have to define your preferences for each session individually. Examples in this guide are in terminal mode.

To set output mode to XML, issue the command:

```
xPreferences outputmode xml
```

To revert to terminal mode, issue the command:

```
xPreferences outputmode terminal
```
Using the command line

Help

To get a list of all supported root commands you can type `?` or `help` after connecting to the TelePresence System using RS-232, Telnet or SSH.

Bye

Typing the bye command closes the command line interface.

API commands

xConfiguration

Configurations are system settings, such as system name and network settings. These are persistent across boots. Refer to "Configurations" on page 13.

xCommand

Commands instruct the codec to execute actions, such as to dial a number or to search the phone book. Refer to "Commands" on page 12.

xStatus

A status contains the current state of the codec, such as connected calls, the status of the gatekeeper registration, connected inputs and output sources. Refer to "Status" on page 14.

xFeedback

The Feedback commands are used to specify what parts of the configuration and status hierarchies to monitor. Feedback is only issued on the Telnet or SSH session for which it is specified. If you are connecting to the codec with multiple sessions, you have to define feedback individually for each session. Refer to "Feedback mechanism" on page 17.

xPreferences

The xPreferences command is used to set preferences for the RS-232, Telnet and SSH sessions. Refer to "API output" on page 9.

Echo <on/off>

If echo is set to On the key inputs are displayed when entering text in a command line interface.

If echo is set to Off no user input is displayed when entering text in a command line interface.

xEvent

The xEvent command returns information on which events are available for feedback. Refer to "Events" on page 15.

xHistory

The xHistory command returns the call log.

xGetxml

The xGetxml request returns an XML document based on the location parameter attached to the request. The elements (or a complete document) matching the expression will be returned. Refer to "Feedback mechanism" on page 17.

Other commands

Systemtools

The systemtools commands are used for administrative control of the codec and are only available from the command line interface. Systemtools are not a part of the programming API. Refer to "The SystemTools commands" on page 195.

Log

The log command is used to enable advanced logs. It is only used for debugging the system.

Command line shortcuts

If your client supports it, there are some timesaving shortcuts you can use:

- Tab-completion to complete the commands and arguments.
- Arrow up and arrow down keys to navigate your command history.
- <CTRL-a>: Jump to the beginning of the line.
- <CTRL-e>: Jump to the end of the line.
- <CTRL-r>: Incremental command history search.
- <CTRL-w>: Erase the current line.
Searching

You can use // to search for elements anywhere in the status or configuration hierarchy (Example 1).

You can also combine multiple //’s (Example 2).

**WARNING:** The search shortcuts work well for inspecting the API, but should not be used in applications. We recommend that you always use the complete paths to avoid command ambiguity when upgrading to newer firmware releases.

Value types and formats

The system supports the following value types (Example 3):

- **Integer values:** <x..y>
  Defines the valid range for an integer input. x = min value, y = max value.

- **Literal values:** <X/Y/..Z>
  Defines the possible values for a given configuration.

- **String values:** <S: x, y>
  Defines that the valid input for this configuration is a string with minimum length of x and maximum length of y characters. Strings can have rules that further specify their format and length.

Input values that contain spaces need to be quoted

Any values for configurations and commands containing spaces must be enclosed in quotes. Quotes are not necessary for values without spaces.

**Examples:**
- Correct: xCommand dial number: “my number contains spaces”
- Correct: xCommand dial number: 12345
- Incorrect: xCommand dial number: my number contains spaces

Case sensitivity

All commands are case-insensitive. All of the following commands will work.

XCOMMAND DIAL NUMBER: foo@bar.org
xcommand dial number: foo@bar.org
xCommand Dial Number: foo@bar.org

---

Example 1: List all configurations that include a word that starts with DVI:

```
xConfiguration //dvi
*c xConfiguration Video Input DVI 2 RGBQuantizationRange: Full
*c xConfiguration Video Input DVI 2 Type: AutoDetect
** end
```
Commands

Commands instruct the codec to execute actions, such as to dial a number or to search the phone book. All commands start with the prefix xCommand followed by a command path. Writing xCommand ? on the command line will list all the top level commands.

To view the complete list of commands and their parameters, write xCommand ?? on the command line.

Command arguments are key-value pairs. The (r) behind the argument name indicates that the argument is required for the command.

When issuing a xCommand, the command consists of one argument and one required parameter:

Example: xCommand Dial Number: 123

- xCommand is the command prefix. The command to be executed is Dial.
- The example contains one argument, Number: 123. Number is the key and 123 is its value. The key/value pair is separated with ':'.
Configurations

Configurations are system settings that are persistent across boots. Like commands, also configurations are structured in a hierarchy.

Writing `xConfiguration ?` on the command line lists all the top level configurations.

Writing `xConfiguration ??` lists all configurations and their value spaces.

Writing `xConfiguration` lists all configurations and their current values. To list out only parts of the configuration, write `xConfiguration` followed by one or more parts of the configuration paths.

Example: Set the H323 Alias ID

Write in:
```
xConfiguration H323 Profile 1 H323Alias ID: "changed@company.com"
```

Example: Get the H323 Alias ID

Write in:
```
xConfiguration H323 Profile 1 H323Alias ID
```

Result:
```
* c xConfiguration H323 Profile 1 H323Alias ID: "changed@company.com"
**end
```
Status

A status contains the current state of the codec, such as connected calls, the status of the gatekeeper registration, connected inputs and output sources.

Writing `xStatus ?` on the command line lists all top level statuses.

Writing `xStatus` lists all statuses and their current values. To list out only some of the statuses, write `xstatus` followed by the relevant part of the status path.

Example 1: Query all ongoing Call information:

```
xStatus <address expression>
```

Example 2: Query the protocol for a call:

```
xStatus Call Protocol
```

Addressing status information with `xStatus`

To read the status from the system type the root command (xStatus) followed by a path (address expression):

`xStatus <address expression>`
Events

Event returns information about the events that are available for feedback. This overview presents examples of some of the events that are available on the API.

To get an overview of the supported events type ?, ?? or help after xEvent:
- xEvent ? Lists the top level events
- xEvent ?? List all of the available events
- xEvent help Lists the top level events

The result for events depends on the state of the codec.

Example 1: Outgoing Call Indication
Outgoing Call Indication is an event reported when an outgoing call is about to be dialled. Returns the CallId the call has been assigned.

*e OutgoingCallIndication CallId: x
** end

Example 2: Call Disconnect
Call Disconnect is an event reported when a call is disconnected. Returns the CallId of the disconnected call and reason for the call’s disconnection.

*e CallDisconnect CallId: x CauseValue: 0
  CauseString: "" CauseType: LocalDisconnect
  OrigCallDirection: “outgoing”
** end

Example 3: Call Successful
Call Successful is an event reported when a call is connected successfully, that is when all channels are up and established.

*e CallSuccessful CallId: 132 Protocol: “h223”
  ** end

Example 4: FECC Action request
FECC Action request is an event reported when far end is sending FECC commands.

*e FeccActionInd Id: 132 Req: 1 Fan: 1 PanRight: 1 Tilt: 0 TiltUp: 0 Zoom: 0 ZoomIn: 0 Focus: 0 FocusIn: 0 Timeout: 300 VideoSrc: 0 m: 0
** end
Call history

The `xHistory` command returns the call logs.

```
Example with xHistory CallLogs

xHistory
* h xHistory CallLogs Call 13 CallId: 7
* h xHistory CallLogs Call 13 Protocol: “Sip”
* h xHistory CallLogs Call 13 Direction: Incoming
* h xHistory CallLogs Call 13 CallType: Video
* h xHistory CallLogs Call 13 RemoteNumber: “sip:name@company.com”
* h xHistory CallLogs Call 13 CallbackNumber: “sip:name@company.com”
* h xHistory CallLogs Call 13 DisplayName: “name@company.com”
* h xHistory CallLogs Call 13 Dismissed: True
* h xHistory CallLogs Call 13 CallRate: 6000000
* h xHistory CallLogs Call 13 CallPriority: None
* h xHistory CallLogs Call 13 DisconnectCauseValue: 2
* h xHistory CallLogs Call 13 DisconnectCause: “Normal”
* h xHistory CallLogs Call 13 DisconnectCauseType: RemoteDisconnect
* h xHistory CallLogs Call 13 DisconnectCauseCode: 0
* h xHistory CallLogs Call 13 DisconnectCauseOrigin: SIP
* h xHistory CallLogs Call 13 StartTime: “2013/05/22 13:40:13”
* h xHistory CallLogs Call 13 Duration: 123
* h xHistory CallLogs Call 13 Encryption: “Aes-128”
* h xHistory CallLogs Call 13 BookingId: “”
...
* h xHistory CallLogs Recent 6 CounterMissed: 2
* h xHistory CallLogs Recent 6 Counter: 2
...
* h xHistory CallLogs Outgoing 29 Counter: 1
...
* h xHistory CallLogs Received 40 Counter: 6
...
* h xHistory CallLogs Missed 50 Counter: 2
* h xHistory CallLogs Missed 50 NewCounter: 0
** end
```
Feedback mechanism

To build solutions that can reliably keep the state between the application and the codec synchronized, you need to set up a notification system to report the changes in the state of the codec.

The API supports notifications on the following:

- Configuration changes
- Status changes
- Event notifications

These notifications will not be sent unless the user has explicitly told the codec to do so. The user is required to subscribe to all the feedback the application needs. This is done by registering feedback expressions. The way of registering feedback expressions varies according to the connection method used.

When using HTTP, the method of handling feedback differs slightly from what is presented in this section. Refer to "Feedback from codec over HTTP" on page 20.

Feedback expressions

The expression used when registering for feedback is a variant of the XPath language. This language describes a way to select nodes from an XML document. TC software contains three main feedback documents:

<table>
<thead>
<tr>
<th>Document</th>
<th>API command</th>
<th>Path</th>
</tr>
</thead>
<tbody>
<tr>
<td>Status</td>
<td>xStatus</td>
<td>/Status</td>
</tr>
<tr>
<td>Configuration</td>
<td>xConfiguration</td>
<td>/Configuration</td>
</tr>
<tr>
<td>Event</td>
<td>xEvent</td>
<td>/Event</td>
</tr>
</tbody>
</table>

The syntax for feedback registering is: xFeedback register <path>

Never register for all status feedback by issuing xFeedback register /Status. This may give the control application too much data to handle, which may lead to sluggish or unpredictable behavior.

Example 1: Microphones Mute status.

Terminal query

```
xStatus Audio Microphones Mute
  *s Audio Microphones Mute: Off
** end
```

Equivalent feedback expression

```
xFeedback register /Status/Audio/Microphones/Mute
```

Example 2: All video input connectors.

Terminal query

```
xConfiguration Video Input Source Connector
  *c xConfiguration Video Input Source 1 Connector: HDMI
  *c xConfiguration Video Input Source 2 Connector: DVI
  *c xConfiguration Video Input Source 3 Connector: USB
** end
```

Equivalent feedback expression

```
xFeedback register /Configuration/Video/Input/Source/Connector
```

Example 3: Video input connector for source 2.

Terminal query

```
xConfiguration Video Input Source 2 Connector
  *c xConfiguration Video Input Source 2 Connector: DVI
** end
```

Equivalent feedback expression

```
xFeedback register /Configuration/Video/Input/Source[@item='2']/Connector
```
Terminal connections

Managing feedback subscriptions
To register, list and deregister feedback expressions you use the command xFeedback and its corresponding subcommands.

The registered expressions are only valid for the currently active connection. If you open two Telnet sessions and register to get feedback in one session, you do not receive feedback in the other session. This also means that if you disconnect from a session, you have to re-register all expressions after reconnecting.

You can register up to 38 expressions.

Feedback output
The feedback output is exactly the same as you get when querying the system using the xConfiguration and xStatus commands. E.g., if you issue the command xStatus Standby Active on the command line the result is:

*s Standby Active: On
** end

If you have registered for feedback on status changes the feedback you get when the system goes to standby-mode will be exactly the same:

*s Standby Active: On
** end

This means that when you are programming against the device you only need to handle one format.

Example: Managing feedback subscriptions

A: Register feedback expressions.
Write in: xFeedback register /Status/Audio
Result: ** end
OK

Write in: xFeedback register /Event/CallDisconnect
Result: ** end
OK

Write in: xFeedback register /Configuration/Video/MainVideoSource
Result: ** end
OK

B: List out currently registered expressions.
Write in: xFeedback list
Result: /Configuration/Video/MainVideoSource
          /Event/CallDisconnect
          /Status/Audio
          ** end
          OK

C: Deregister feedback expressions.
Write in: xFeedback deregister /Event/CallDisconnect
Result: ** end
OK

Write in: xFeedback deregister /Status/Audio
Result: ** end
OK

D: List the new feedback expressions.
Write in: xFeedback list
Result: /Configuration/Video/MainVideoSource
          ** end
          OK
Using HTTP

The codec supports sending commands and configurations over HTTP and HTTPS. It is also possible to retrieve configurations and statuses this way. This interface exposes the same API as the command line, but in XML format.

### URL cheat sheet

The following table contains the main URLs used when accessing the API over HTTP.

<table>
<thead>
<tr>
<th>Method</th>
<th>URL</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>GET</td>
<td>http://&lt;ip-address&gt;/status.xml</td>
<td>Complete status document</td>
</tr>
<tr>
<td>GET</td>
<td>http://&lt;ip-address&gt;/configuration.xml</td>
<td>Complete configuration document</td>
</tr>
<tr>
<td>GET</td>
<td>http://&lt;ip-address&gt;/command.xml</td>
<td>Complete command document</td>
</tr>
<tr>
<td>GET</td>
<td>http://&lt;ip-address&gt;/valuespace.xml</td>
<td>Complete valuespace document</td>
</tr>
<tr>
<td>GET</td>
<td>http://&lt;ip-address&gt;/getxml?location=&lt;path&gt;</td>
<td>Retrieve document based on a path</td>
</tr>
<tr>
<td>POST</td>
<td>http://&lt;ip-address&gt;/putxml</td>
<td>Configurations and commands in HTTP body</td>
</tr>
<tr>
<td>GET, POST</td>
<td>http://&lt;ip-address&gt;/formputxml?xmldoc=&lt;xml&gt;</td>
<td>Configurations and commands www-urlencoded</td>
</tr>
</tbody>
</table>

### Getting status and configurations

**Example 1:** Get all status entries on the codec.

http://<ip-address>/getxml?location=/Status

**Example 2:** Get just the audio statuses of the codec.

http://<ip-address>/getxml?location=/Status/Audio

**Example 3:** Get all configurations of the codec.

http://<ip-address>/getxml?location=/Configuration

**Example 4:** Get all video configurations of the codec.

http://<ip-address>/getxml?location=/Configuration/Video

### Sending commands and configurations

#### Using HTTP GET

It is possible to use HTTP GET when sending commands or configurations to the codec. This makes it easy to test commands using your browser.

**Example 1:** Setting the camera position.

http://<ip-address>/formputxml?xmldoc=<xml>

**Example 2:** Changing the system name.

http://<ip-address>/formputxml?xmldoc=<xml>

### Using HTTP POST

When sending configurations and commands to the codec, it is important that the HTTP header Content-Type is set to text/xml, i.e. Content-Type: text/xml. The body of the POST should contain the XML content.

**Example 1:** Changing the system name.

**Request**

```
POST /putxml HTTP/1.1
Content-Type: text/xml
Connection: close

<Configuration>
  <SystemUnit>
    <Name>newName</Name>
  </SystemUnit>
</Configuration>
```

**Response**

```
HTTP/1.1 200 OK
Date: <date>
Server: WSGIServer/0.1 Python/2.5.4
Cache-Control: no-cache
Content-Type: text/xml
Content-Length: 91
Connection: close

<?xml version="1.0"?><Command><CameraPositionSetResult item="1" status="OK"/></Command>
```

**Example 2:** Setting the camera position.

**Request**

```
POST /putxml HTTP/1.1
Content-Type: text/xml
Connection: close

<Command>
  <Camera>
    <PositionSet command="True">
      <CameraId>1</CameraId>
      <Pan>200</Pan>
      <Tilt>200</Tilt>
    </PositionSet>
  </Camera>
</Command>
```

**Response**

```
HTTP/1.1 200 OK
Date: <date>
Server: WSGIServer/0.1 Python/2.5.4
Cache-Control: no-cache

<?xml version="1.0"?><Command><CameraPositionSetResult item="1" status="OK"/></Command>
```
Feedback from codec over HTTP

To get notifications from the codec, you need to register HTTP feedback expressions. The codec will then use HTTP POST to send feedback messages to the supplied IP-address. This means that you have to have a HTTP server running for your application to receive updates from the codec.

Registering for feedback

The command for registering is `xCommand HttpFeedback Register`. The syntax for this command and its arguments are described in this section.

HttpFeedback Register syntax:

```xml
xCommand HttpFeedback Register
   FeedbackSlot: <1..4>
   ServerUrl(r): <S: 0, 2048>
   Expression: <S: 1, 255>
   Expression: <S: 1, 255>
   Expression: <S: 1, 255>
   Expression: <S: 1, 255>
   Expression: <S: 1, 255>
   Expression: <S: 1, 255>
   Expression: <S: 1, 255>
   Expression: <S: 1, 255>
   Expression: <S: 1, 255>
   Expression: <S: 1, 255>
   Expression: <S: 1, 255>
   Expression: <S: 1, 255>
```

Feedback output

When the codec notifies the registered HTTP server about changes, the body contains the same XML as when polling. There is however one small difference. The root-node contains an `Identification` node with children that specify the codec from which the notification originated. This means that you can handle multiple codecs with a single HTTP server URI.

Example: Audio volume changed.

```xml
(Configuration xmlns="http://www.company.com/XML/CUIL/2.0">  
   <Identification>  
      <SystemName>integrator</SystemName>  
      <MACAddress>00:00:de:ad:be:ef</MACAddress>  
      <IPAddress>192.168.1.100</IPAddress>  
      <ProductType>Cisco Codec</ProductType>  
      <ProductID>Cisco Codec C90</ProductID>  
      <SWVersion>TC6.0.0.199465</SWVersion>  
      <HWBoard>101401-5 [08]</HWBoard>  
      <SerialNumber>PH0000000</SerialNumber>  
   </Identification>  
   <Audio item="1">  
      <Volume item="1">60</Volume>  
   </Audio>  
</Configuration>
```
Translating from terminal mode to XML

Translating commands
The XML commands maintain the same structure as the terminal commands, but they use a parent-child relationship to describe the hierarchy. You can see this structure in the examples below.

Example 1: Setting up a call.
Terminal
   xCommand Dial Number: "12345" Protocol: H323

XML
   <Command>
   <Dial command="True">
   <Number>12345</Number>
   <Protocol>H323</Protocol>
   </Dial>
   </Command>

Example 2: Assigning video layout to a call.
Terminal
   xCommand Video Layout AssignCall CallId: 2 LayoutId: 1

XML
   <Configuration>
   <Video>
   <Input>
   <Source item="2">
   <Connector>HDMI</Connector>
   </Source>
   </Input>
   </Video>
   </Configuration>

Translating configurations
Translating from xConfiguration to XML is similar to commands, but with the addition of a special attribute "NN" for specifying the index in arrays.

Example: Configuring connector for input source 2.
Terminal
   xConfiguration Video Input Source 2 Connector: HDMI

XML
   <Configuration>
   <Video>
   <Input>
   <Source item="2">HDMI</Source>
   </Input>
   </Video>
   </Configuration>
Dos and don’ts

Here are some issues you should consider when programming the Cisco C- and SX-series API.

AVOID remote control emulation

The use of xCommand Key Press and xCommand Key Click commands is highly discouraged. The commands are still available in the API, but we recommend the use of direct commands, as this ensures backwards compatibility in your integrations. Program against the codec, not the on-screen-display.

DO use complete commands

You should always use complete commands when programming, i.e. always use xConfiguration Video instead of xconf vid. The shortcuts can be used for searches in the API on the command line, but not for programming. The reason for this is that you might end up with ambiguous code when additional commands are added to the API.

DO NOT subscribe to unnecessary feedback

Subscribing to too much feedback may congest the control application. Although the amount of feedback may seem fine in the current version, the amount of feedback may grow in future releases.

DO present one screen to the end user

Avoid making the user look at two menus, one on the control panel and one on the video screen. Do not make the control panel a substitute for the remote control. The on-screen-display is using the exact same API as you have access to through the command interface.

DO NOT use the experimental section in production

Under the listing of commands, status and configurations, you can find subsections that start with Experimental.

- xCommand Experimental
- xStatus Experimental
- xConfiguration Experimental

These sections give access to features that we are still working on and have yet to release for official use. This part of the API will NOT stay backwards compatible and the structure WILL CHANGE.

Do not use the experimental section in production - in future versions of the firmware these sections may be hidden or removed.
Chapter 3

xConfiguration commands
Description of the xConfiguration commands

In this chapter, you can find a complete list of the xConfiguration commands. The examples show either the default value or an example of a value.

We recommend you visit our web site regularly for updated versions of the manual.

Experimental configuration ................................................................. 75
Audio configuration

xConfiguration Audio Input HDMI [1] Mode
If you are connecting a Cisco camera with an integrated microphone to the codec’s HDMI 1 input, you can enable/disable audio input on the port; if you are using any other camera, the audio input will be disabled regardless of this setting.
If you are going to use the integrated microphone, this setting must be On (default value).
Requires user role: ADMIN
Value space: <Off/On>
Off: Disable audio on the HDMI input.
On: Enable audio on the HDMI input.
Example: xConfiguration Audio Input HDMI 1 Mode: On

xConfiguration Audio Input Microphone [1..2] EchoControl Mode
The echo canceller continuously adjusts itself to the audio characteristics of the room and compensates for any changes it detects in the audio environment. If the changes in the audio conditions are very significant the echo canceller may take a second or two to re-adjust.
Requires user role: ADMIN
Value space: <Off/On>
Off: Echo Control should be switched Off if external echo cancellation or playback equipment is used.
On: Echo Control is normally set to On to prevent the far end from hearing their own audio. Once selected, echo cancellation is active at all times.
Example: xConfiguration Audio Input Microphone 1 EchoControl Mode: On

xConfiguration Audio Input Microphone [1..2] EchoControl NoiseReduction
The system has a built-in noise reduction which reduces constant background noise (for example noise from air-conditioning systems, cooling fans etc.). In addition, a high pass filter (Humfilter) reduces very low frequency noise. Requires the Echo Control Mode to be enabled for the microphone.
Requires user role: ADMIN
Value space: <Off/On>
Off: Turn off the Noise Reduction.
On: The Noise Reduction should be enabled in the presence of low frequency noise.
Example: xConfiguration Audio Input Microphone 1 EchoControl NoiseReduction: On

xConfiguration Audio Input Microphone [1..2] EchoControl Dereverberation
The system has built-in signal processing to reduce the effect of room reverberation. Requires the Echo Control Mode to be enabled for the microphone.
Requires user role: ADMIN
Value space: <Off/On>
Off: Turn off the dereverberation.
On: Turn on the dereverberation.
Example: xConfiguration Audio Input Microphone 1 EchoControl Dereverberation: On

xConfiguration Audio Microphones Mute Enabled
Determine whether audio-mute is allowed or not. The default value is True.
Requires user role: ADMIN
Value space: <True/InCallOnly>
True: Muting of audio is always available.
InCallOnly: Muting of audio is only available when the device is in a call. When Idle it is not possible to mute the microphone. This is useful when an external telephone service/audio system is connected via the codec and is to be available when the codec is not in a call. When set to InCallOnly this will prevent the audio-system from being muted by mistake.
Example: xConfiguration Audio Microphones Mute Enabled: True

xConfiguration Audio SoundsAndAlerts KeyTones Mode
The system can be configured to make a keyboard click sound effect (key tone) when pressing a key on the remote control, or when typing text or numbers on the Touch screen control panel.
Requires user role: USER
Value space: <Off/On>
Off: No key tones will be played when you type.
On: You will hear a key tone when you press a key or type text.
Example: xConfiguration Audio SoundsAndAlerts KeyTones Mode: Off
xConfiguration Audio SoundsAndAlerts RingTone

When using the Touch screen control panel: Choose a ringtone from the list. If the setting UserInterface UserPreferences has been set to On, the Ringtone setting is available from the Settings menu. If the setting UserInterface UserPreferences has been set to Off, the Ringtone setting is available from the Administrator settings, and you must login with username and password.

When using the on-screen menus and a remote control: Choose a ringtone from the list.

When using the web interface: Enter the name of the ringtone for incoming calls. To see the list of valid ringtones, navigate to Configuration > Personalization > Ringtone > Select active ringtone.

When using a command line interface (API): Enter the name of the ringtone for incoming calls. To see the list of valid ringtones, run the following API command: xCommand Audio SoundsAndAlerts Ringtone List.

Requires user role: USER

Value space: <S: 1, 100>

Format: String with a maximum of 100 characters.

Example: xConfiguration Audio SoundsAndAlerts RingTone: "Sunrise"

xConfiguration Audio SoundsAndAlerts RingVolume

Sets the ring volume for an incoming call.

Requires user role: USER

Value space: <0..100>

Range: The value goes in steps of 5 from 0 to 100 (from -34.5 dB to 15 dB). Volume 0 = Off.

Example: xConfiguration Audio SoundsAndAlerts RingVolume: 50

xConfiguration Audio Volume

Set the speaker volume.

Requires user role: USER

Value space: <0..100>

Range: The value must be between 0 and 100. The values from 1 to 100 correspond to the range from -34.5 dB to 15 dB (0.5 dB steps). The value 0 means that the audio is switched off.

Example: xConfiguration Audio Volume: 70

Cameras configuration

xConfiguration Cameras PowerLine Frequency

Applies to cameras supporting PowerLine frequency anti-flickering, i.e. Precision 1080p cameras.

Requires user role: ADMIN

Value space: <50Hz/60Hz>

50Hz: Set to 50 Hz.
60Hz: Set to 60 Hz.

Example: xConfiguration Cameras PowerLine Frequency: 50Hz

xConfiguration Cameras Camera [1] Backlight

This configuration turns backlight compensation on or off. Backlight compensation is useful when there is much light behind the persons in the room. Without compensation the persons will easily appear very dark to the far end.

Requires user role: ADMIN

Value space: <Off/On>

Off: Turn off the camera backlight compensation.
On: Turn on the camera backlight compensation.

Example: xConfiguration Cameras Camera 1 Backlight: Off

xConfiguration Cameras Camera [1] Brightness Mode

Set the camera brightness mode.

Requires user role: ADMIN

Value space: <Auto/Manual>

Auto: The camera brightness is automatically set by the system.
Manual: Enable manual control of the camera brightness. The brightness level is set using the Cameras Camera Brightness Level setting.

Example: xConfiguration Cameras Camera 1 Brightness Mode: Auto

xConfiguration Cameras Camera [1] Brightness Level

Set the brightness level. Requires the Camera Brightness Mode to be set to Manual.

Requires user role: ADMIN

Value space: <1..31>

Range: Select a value from 1 to 31.

Example: xConfiguration Cameras Camera 1 Brightness Level: 1
xConfiguration Cameras Camera [1] Flip
With Flip mode (vertical flip) you can flip the image upside down.

Requires user role: ADMIN

Value space: <Auto/Off/On>

Auto: When the camera is placed upside down the image is automatically flipped upside down. This setting will only take effect for a camera that automatically detects which way it is mounted.

Off: Display the video on screen the normal way.

On: When enabled the video on screen is flipped. This setting is used when a camera is mounted upside down, but cannot automatically detect which way it is mounted.

Example: xConfiguration Cameras Camera 1 Flip: Off

xConfiguration Cameras Camera [1] Focus Mode
Set the camera focus mode.

Requires user role: ADMIN

Value space: <Auto/Manual>

Auto: The camera will auto focus once a call is connected, as well as after moving the camera (pan, tilt, zoom). The system will use auto focus only for a few seconds to set the right focus; then auto focus is turned off to prevent continuous focus adjustments of the camera.

Manual: Turn the autofocus off and adjust the camera focus manually.

Example: xConfiguration Cameras Camera 1 Focus Mode: Auto

xConfiguration Cameras Camera [1] Gamma Mode
Applies to cameras which support gamma mode. Gamma describes the nonlinear relationship between image pixels and monitor brightness. The Cisco TelePresence PrecisionHD 720p camera supports gamma mode. The PrecisionHD 1080p camera does not support gamma mode.

Requires user role: ADMIN

Value space: <Auto/Manual>

Auto: Auto is the default and the recommended setting.

Manual: In manual mode the gamma value is changed with the gamma level setting, ref: Cameras Camera [1..n] Gamma Level.

Example: xConfiguration Cameras Camera 1 Gamma Mode: Auto

xConfiguration Cameras Camera [1] Gamma Level
By setting the Gamma Level you can select which gamma correction table to use. This setting may be useful in difficult lighting conditions, where changes to the brightness setting does not provide satisfactory results. Requires the Gamma Mode to be set to Manual.

Requires user role: ADMIN

Value space: <0..7>

Range: Select a value from 0 to 7.

Example: xConfiguration Cameras Camera 1 Gamma Level: 0

xConfiguration Cameras Camera [1] IrSensor
The IR sensor LED is located in the front of the camera and flickers when the IR sensor is activated from the remote control. Both the Codec C Series and PrecisionHD camera have IR sensors, and only one of them needs to be enabled at the time.

Requires user role: ADMIN

Value space: <Off/On>

Off: Disable the IR sensor on the camera.

On: Enable the IR sensor on the camera.

Example: xConfiguration Cameras Camera 1 IrSensor: On

xConfiguration Cameras Camera [1] Mirror
With Mirror mode (horizontal flip) you can mirror the image on screen.

Requires user role: ADMIN

Value space: <Auto/Off/On>

Auto: When the camera is placed upside down the image is automatically mirrored. Use this setting with cameras that can be mounted upside down, and that can auto detect that the camera is mounted upside down.

Off: See the self-view in normal mode, that is the experience of self-view is as seeing yourself as other people see you.

On: See the self-view in mirror mode, that is the self-view is reversed and the experience of self-view is as seeing yourself in a mirror.

Example: xConfiguration Cameras Camera 1 Mirror: Off

This setting applies only when using a Cisco TelePresence PrecisionHD 1080p12x camera. If adjusting the camera position by hand you can configure whether the camera should keep its new position or return to the preset or position it had before.

**Requires user role:** ADMIN

**Value space:** <Off/On>

*Off:* When the camera position is adjusted manually the camera will keep this position until adjusted again. WARNING: If moving the camera by hand, the camera will not register the new pan and tilt values since there is no position feedback. This will result in wrong pan and tilt values when recalling the camera presets subsequently.

*On:* When the camera position is adjusted manually, or the camera detects that the motors have moved, it will first re-initialize (i.e. go to default position) then return to the preset/position it had before the camera was adjusted.

**Example:** xConfiguration Cameras Camera 1 MotorMoveDetection: Off

---

xConfiguration Cameras Camera [1] Whitebalance Mode

Set the camera whitebalance mode.

**Requires user role:** ADMIN

**Value space:** <Auto/Manual>

*Auto:* The camera will continuously adjust the whitebalance depending on the camera view.

*Manual:* Enables manual control of the camera whitebalance. The whitebalance level is set using the Cameras Camera Whitebalance Level setting.

**Example:** xConfiguration Cameras Camera 1 Whitebalance Mode: Auto

---

xConfiguration Cameras Camera [1] Whitebalance Level

Set the whitebalance level. Requires the Camera Whitebalance Mode to be set to manual.

**Requires user role:** ADMIN

**Value space:** <1..16>

*Range:* Select a value from 1 to 16.

**Example:** xConfiguration Cameras Camera 1 Whitebalance Level: 1

---

xConfiguration Cameras Camera [1] DHCP

Applies to cameras which support DHCP over LAN. When set, the command enables support for software upgrade of daisy chained cameras.

**Requires user role:** ADMIN

**Value space:** <Off/On>

*Off:* When the camera is not connected to a LAN, set to Off to disable DHCP.

*On:* Set to On to enable DHCP for the camera. The camera is automatically re-booted, and after re-boot the camera’s DHCP function will force start of MAC and IP address retrieval. To see the result, you can run the following API command: "xStatus Camera". When the camera no longer is connected to a LAN, set to Off.

**Example:** xConfiguration Cameras Camera 1 DHCP: Off
Conference configuration

xConfiguration Conference [1..1] CallProtocolIPStack
Select if the system should enable IPv4, IPv6, or dual IP stack on the call protocol (SIP, H323).

- **Requires user role:** ADMIN
- **Value space:** <Dual/IPv4/IPv6>
  - Dual: Enables both IPv4 and IPv6 for H323 and SIP calls.
  - IPv4: When set to IPv4, the call protocol (SIP, H323) will use IPv4.
  - IPv6: When set to IPv6, the call protocol (SIP, H323) will use IPv6.

**Example:** xConfiguration Conference 1 CallProtocolIPStack: Dual

xConfiguration Conference [1..1] AutoAnswer Mode
Set the auto answer mode.

- **Requires user role:** ADMIN
- **Value space:** <Off/On>
  - Off: An incoming call must be answered manually by pressing the OK key or the green Call key on the remote control, or by tapping the Accept key on the Touch screen control panel.
  - On: Enable auto answer to let the system automatically answer all incoming calls.

**Example:** xConfiguration Conference 1 AutoAnswer Mode: Off

xConfiguration Conference [1..1] AutoAnswer Mute
Determine if the microphone shall be muted when an incoming call is automatically answered.

- **Requires user role:** ADMIN
- **Value space:** <Off/On>
  - Off: The incoming call will not be muted.
  - On: The incoming call will be muted when automatically answered.

**Example:** xConfiguration Conference 1 AutoAnswer Mute: Off

xConfiguration Conference [1..1] AutoAnswer Delay
Define how long (in seconds) an incoming call has to wait before it is answered automatically by the system. Requires that AutoAnswer Mode is switched on.

- **Requires user role:** ADMIN
- **Value space:** <0..50>
- **Range:** Select a value from 0 to 50 seconds.

**Example:** xConfiguration Conference 1 AutoAnswer Delay: 0

xConfiguration Conference [1..1] MicUnmuteOnDisconnect Mode
Determine if the microphones shall be unmuted automatically when all calls are disconnected. This may be done to prepare the system for the next user.

- **Requires user role:** ADMIN
- **Value space:** <Off/On>
  - Off: If muted during a call, let the microphones remain muted after the call is disconnected.
  - On: Unmute the microphones after the call is disconnected.

**Example:** xConfiguration Conference 1 MicUnmuteOnDisconnect Mode: On

xConfiguration Conference [1..1] DoNotDisturb Mode
Determine whether to allow incoming calls.

- **Requires user role:** USER
- **Value space:** <Off/On/Timed>
  - Off: The incoming calls will come through as normal.
  - On: All incoming calls will be rejected and they will be registered as missed calls. The calling side will receive a busy signal. A message telling that Do Not Disturb is switched on will display on the Touch screen control panel or main display. NOTE: This setting is not recommended as all calls will be rejected until the setting is manually turned off. The recommended option is Timed.
  - Timed: When set to timed (default), the system will revert back and allow incoming calls after the specified timeout, defined by the setting: Conference DoNotDisturb DefaultTimeout.

**Example:** xConfiguration Conference 1 DoNotDisturb Mode: Timed
xConfiguration Conference [1..1] DoNotDisturb DefaultTimeout

This setting determines the default duration of a Do Not Disturb session, i.e. the period when incoming calls are rejected and registered as missed calls. The session can be terminated earlier by using the user interface (remote control or Touch screen control panel) or the Conference DoNotDisturb Mode setting. The default value is 60 minutes.

Requires user role: ADMIN

Value space: <0..1440>
  Range: Select the number of minutes (between 0 and 1440, i.e. 24 hours) before the Do Not Disturb session times out automatically.

Example: xConfiguration Conference 1 DoNotDisturb DefaultTimeout: 60

xConfiguration Conference [1..1] FarEndControl Mode

Lets you decide if the remote side (far end) should be allowed to select your video sources and control your local camera (pan, tilt, zoom).

Requires user role: ADMIN

Value space: <Off/On>
  Off: The far end is not allowed to select your video sources or to control your local camera (pan, tilt, zoom).
  On: Allows the far end to be able to select your video sources and control your local camera (pan, tilt, zoom). You will still be able to control your camera and select your video sources as normal.

Example: xConfiguration Conference 1 FarEndControl Mode: On

xConfiguration Conference [1..1] FarEndControl SignalCapability

Set the far end control (H.224) signal capability mode.

Requires user role: ADMIN

Value space: <Off/On>
  Off: Disable the far end control signal capability.
  On: Enable the far end control signal capability.

Example: xConfiguration Conference 1 FarEndControl SignalCapability: On

xConfiguration Conference [1..1] Encryption Mode

Set the conference encryption mode. A padlock with the text "Encryption On" or "Encryption Off" displays on screen for a few seconds when the conference starts.

NOTE: Requires the Encryption Option Key to be installed. When the Encryption Option Key is not installed the encryption mode is set to Off.

Requires user role: ADMIN

Value space: <Off/On/BestEffort>
  Off: The system will not use encryption.
  On: The system will only allow calls that are encrypted.
  BestEffort: The system will use encryption whenever possible.
    > In Point to point calls: If the far end system supports encryption (AES-128), the call will be encrypted. If not, the call will proceed without encryption.
    > In MultiSite calls: In order to have encrypted MultiSite conferences, all sites must support encryption. If not, the conference will be unencrypted.

Example: xConfiguration Conference 1 Encryption Mode: BestEffort

xConfiguration Conference [1..1] DefaultCall Protocol

Set the Default Call Protocol to be used when placing calls from the system.

Requires user role: ADMIN

Value space: <Auto/H323/Sip/H320>
  Auto: Enables auto-selection of the call protocol based on which protocols are available. If multiple protocols are available, the order of priority is: 1) SIP; 2) H323; 3) H320. If the system cannot register, or the call protocol is not enabled, the auto-selection chooses H323.
  H323: H323 ensures that calls are set up as H.323 calls.
  Sip: SIP ensures that calls are set up as SIP calls.
  H320: H320 ensures that calls are set up as H.320 calls (only applicable if connected to a Cisco TelePresence ISDN Link gateway).

Example: xConfiguration Conference 1 DefaultCall Protocol: H323

xConfiguration Conference [1..1] DefaultCall Rate

Set the Default Call Rate to be used when placing calls from the system.

Requires user role: ADMIN

Value space: <64..6000>
  Range: Select a value between 64 and 6000 kbps.

Example: xConfiguration Conference 1 DefaultCall Rate: 1920
xConfiguration Conference [1..1] MaxTransmitCallRate
Specify the maximum transmit bit rate to be used when placing or receiving calls. Note that this is the maximum bit rate for each individual call; use the Conference MaxTotalTransmitCallRate setting to set the aggregated maximum for all simultaneous active calls.

Requires user role: ADMIN
Value space: <64..6000>
Range: Select a value between 64 and 6000 kbps.
Example: xConfiguration Conference 1 MaxTransmitCallRate: 6000

xConfiguration Conference [1..1] MaxReceiveCallRate
Specify the maximum receive bit rate to be used when placing or receiving calls. Note that this is the maximum bit rate for each individual call; use the Conference MaxTotalReceiveCallRate setting to set the aggregated maximum for all simultaneous active calls.

Requires user role: ADMIN
Value space: <64..10000>
Range: Select a value between 64 and 10000.
Example: xConfiguration Conference 1 MaxReceiveCallRate: 10000

xConfiguration Conference [1..1] MaxTotalTransmitCallRate
This configuration applies when using a video system's built-in MultiSite feature (optional) to host a multipoint video conference.
Specify the maximum overall transmit bit rate allowed. The bit rate will be divided fairly among all active calls at any time. This means that the individual calls will be up-speeded or down-speeded as appropriate when someone leaves or enters a multipoint conference, or when a call is put on hold (suspended) or resumed.
The maximum transmit bit rate for each individual call is defined in the Conference MaxTransmitCallRate setting.

Requires user role: ADMIN
Value space: <64..10000>
Range: Select a value between 64 and 10000.
Example: xConfiguration Conference 1 MaxTotalTransmitCallRate: 10000

xConfiguration Conference [1..1] VideoBandwidth Mode
Set the conference video bandwidth mode.

Requires user role: ADMIN
Value space: <Dynamic/Static>
- Dynamic: The available transmit bandwidth for the video channels are distributed among the currently active channels. If there is no presentation, the main video channels will use the bandwidth of the presentation channel.
- Static: The available transmit bandwidth is assigned to each video channel, even if it is not active.
Example: xConfiguration Conference 1 VideoBandwidth Mode: Dynamic

xConfiguration Conference [1..1] VideoBandwidth MainChannel Weight
The available transmit video bandwidth is distributed on the main channel and presentation channel according to "MainChannel Weight" and "PresentationChannel Weight". If the main channel weight is 2 and the presentation channel weight is 1, then the main channel will use twice as much bandwidth as the presentation channel.

Requires user role: ADMIN
Value space: <1..10>
Range: 1 to 10.
Example: xConfiguration Conference 1 VideoBandwidth MainChannel Weight: 5
xConfiguration Conference [1..1] VideoBandwidth PresentationChannel Weight

The available transmit video bandwidth is distributed on the main channel and presentation channel according to "MainChannel Weight" and "PresentationChannel Weight". If the main channel weight is 2 and the presentation channel weight is 1, then the main channel will use twice as much bandwidth as the presentation channel.

Requires user role: ADMIN

Value space: <1..10>

Example: xConfiguration Conference 1 VideoBandwidth PresentationChannel Weight: 5

xConfiguration Conference [1..1] Presentation Policy

Control how the presentation service is to be performed.

Requires user role: ADMIN

Value space: <LocalRemote/LocalOnly>

LocalRemote: The presentation will be shown locally and sent to remote side.
LocalOnly: The presentation will only be shown locally.

Example: xConfiguration Conference 1 Presentation Policy: LocalRemote

xConfiguration Conference [1..1] Presentation RelayQuality

This configuration applies to video systems that are using the built-in MultiSite feature (optional) to host a multipoint video conference. When a remote user shares a presentation, the video system (codec) will transcode the presentation and send it to the other participants in the multipoint conference. The RelayQuality setting specifies whether to give priority to high frame rate or to high resolution for the presentation source.

Requires user role: ADMIN

Value space: <Motion/Sharpness>

Motion: Gives the highest possible frame rate. Used when there is a need for higher frame rates, typically when there is a lot of motion in the picture.
Sharpness: Gives the highest possible resolution. Used when you want the highest quality of detailed images and graphics.

Example: xConfiguration Conference 1 Presentation RelayQuality: Sharpness

xConfiguration Conference [1..1] Presentation OnPlacedOnHold

Define whether or not to continue sharing a presentation after the remote site has put you on hold.

Requires user role: ADMIN

Value space: <Stop/NoAction>

Stop: The video system stops the presentation sharing when the remote site puts you on hold. The presentation will not continue when the call is resumed.
NoAction: The video system will not stop the presentation sharing when put on hold. The presentation will not be shared while you are on hold, but it will continue automatically when the call is resumed.

Example: xConfiguration Conference 1 Presentation OnPlacedOnHold: NoAction

xConfiguration Conference [1..1] Multipoint Mode

Define how the video system handles multiparty video conferences.

If registered to a Cisco TelePresence Video Communication Server (VCS), the video system can either use its own built-in MultiSite feature, or it can rely on the MultiWay network solution. MultiWay requires that the video network includes a multipoint control unit (MCU).

If registered to a Cisco Unified Communications Manager (CUCM) version 8.6.2 or newer, the video system can use either the CUCM conference bridge, or the video system’s own built-in MultiSite feature. Which one to use is set-up by CUCM.

Both Multiway and the CUCM conference bridge allows you to set up conferences with many participants. The built-in MultiSite allows up to four participants (yourself included) plus one additional audio call.

Note that the built-in MultiSite is optional and may not be available on all video systems.

Requires user role: ADMIN

Value space: <Auto/Off/MultiSite/MultiWay/CUCMMediaResourceGroupList>

Auto: The multipoint method available will be chosen automatically; if none are available the Multipoint Mode will automatically be set to Off. If both MultiWay and MultiSite are available, the MultiWay service takes priority over the built-in MultiSite.
Off: Multiparty conferences are not allowed.
MultiSite: Multiparty conferences are set up using the built-in MultiSite feature. If MultiSite is chosen when the MultiSite feature is not available, the Multipoint Mode will automatically be set to Off.
MultiWay: Multiparty conferences are set up using the MultiWay service. If MultiWay is chosen when the MultiWay service is not available, the Multipoint Mode will automatically be set to Off. This may occur when the NetworkServices MultiWay Address setting is empty or not properly set.
CUCMMediaResourceGroupList: Multiparty conferences (ad hoc conferences) are hosted by the CUCM configured conference bridge. This setting is provisioned by CUCM in a CUCM environment and should never be set manually by the user.

Example: xConfiguration Conference 1 Multipoint Mode: Auto
**xConfiguration Conference [1..1] IncomingMultisiteCall Mode**

Select whether or not to allow incoming calls when already in a call/conference.

**Requires user role:** ADMIN

**Value space:** <Allow/Deny>

*Allow:* You will be notified when someone calls you while you are already in a call. You can accept the incoming call or not. The ongoing call may be put on hold while answering the incoming call; or you may merge the calls (requires MultiSite or MultiWay support).

*Deny:* An incoming call will be rejected if you are already in a call. You will not be notified about the incoming call. However, the call will appear as a missed call in the call history list.

**Example:** xConfiguration Conference 1 IncomingMultisiteCall Mode: Allow

---

**FacilityService configuration**

**xConfiguration FacilityService Service [1..5] Type**

Up to five different facility services can be supported simultaneously. With this setting you can select what kind of services they are. A facility service is not available unless both the FacilityService Service Name and the FacilityService Service Number settings are properly set. Only FacilityService Service 1 with Type Helpdesk is available on the Touch screen control panel. Note that the facility services are not available when using the remote control and on-screen menu.

**Requires user role:** ADMIN

**Value space:** <Other/Concierge/Helpdesk/Emergency/Security/Catering/Transportation>

*Other:* Select this option for services not covered by the other options.

*Concierge:* Select this option for concierge services.

*Helpdesk:* Select this option for helpdesk services.

*Emergency:* Select this option for emergency services.

*Security:* Select this option for security services.

*Catering:* Select this option for catering services.

*Transportation:* Select this option for transportation services.

**Example:** xConfiguration FacilityService Service 1 Type: Helpdesk

---

**xConfiguration FacilityService Service [1..5] Name**

Enter the name of the facility service. Up to five different facility services are supported. A facility service is not available unless both the FacilityService Service Name and the FacilityService Service Number settings are properly set. Only FacilityService Service 1 is available on the Touch screen control panel, and the name will show on the facility service call button. The facility services are not available when using the remote control and on-screen menu.

**Requires user role:** ADMIN

**Value space:** <S: 0, 255>

**Format:** String with a maximum of 255 characters.

**Example:** xConfiguration FacilityService Service 1 Name: ""
**xConfiguration FacilityService Service [1..5] Number**

Enter the number (URI or phone number) of the facility service. Up to five different facility services are supported. A facility service is not available unless both the FacilityService Service Name and the FacilityService Service Number settings are properly set. Only FacilityService Service 1 is available on the Touch screen control panel. The facility services are not available when using the remote control and on-screen menu.

Requires user role: ADMIN

Value space: \(<S: 0, 255>\)

Format: String with a maximum of 255 characters.

Example: \(x\text{Configuration FacilityService Service 1 Number: ""}\)

**xConfiguration FacilityService Service [1..5] CallType**

Set the call type for each facility service. Up to five different facility services are supported. A facility service is not available unless both the FacilityService Service Name and the FacilityService Service Number settings are properly set. Only FacilityService Service 1 is available on the Touch screen control panel. Facility services are not available when using the remote control and on-screen menu.

Requires user role: ADMIN

Value space: \(<\text{Video/Audio}>\)

- Video: Select this option for video calls.
- Audio: Select this option for audio calls.

Example: \(x\text{Configuration FacilityService Service 1 CallType: Video}\)

**H323 configuration**

**xConfiguration H323 NAT Mode**

The firewall traversal technology creates a secure path through the firewall barrier, and enables proper exchange of audio/video data when connected to an external video conferencing system (when the IP traffic goes through a NAT router). NOTE: NAT does not work in conjunction with gatekeepers.

Requires user role: ADMIN

Value space: \(<\text{Auto/Off/On}>\)

- Auto: The system will determine if the H323 NAT Address or the real IP address should be used in signaling. This makes it possible to place calls to endpoints on the LAN as well as endpoints on the WAN. If the H323 NAT Address is wrong or not set, the real IP address will be used.
- Off: The system will signal the real IP address.
- On: The system will signal the configured H323 NAT Address instead of its real IP address in Q.931 and H.245. The NAT Server Address will be shown in the startup-menu as: "My IP Address: 10.0.2.1". If the H323 NAT Address is wrong or not set, H.323 calls cannot be set up.

Example: \(x\text{Configuration H323 NAT Mode: Off}\)

**xConfiguration H323 NAT Address**

Enter the external/global IP address to the router with NAT support. Packets sent to the router will then be routed to the system. Note that NAT cannot be used when registered to a gatekeeper. In the router, the following ports must be routed to the system's IP address:

- Port 1720
- Port 5555-6555
- Port 2326-2487

Requires user role: ADMIN

Value space: \(<S: 0, 64>\)

Format: A valid IPv4 address or IPv6 address.

Example: \(x\text{Configuration H323 NAT Address: ""}\)
xConfiguration H323 Profile [1..1] Authentication Mode
Set the authentication mode for the H.323 profile.

Requires user role: ADMIN

Value space: <Off/On>
Off: If the H.323 Gatekeeper Authentication Mode is set to Off the system will not try to authenticate itself to a H.323 Gatekeeper, but will still try a normal registration.
On: If the H.323 Gatekeeper Authentication Mode is set to On and a H.323 Gatekeeper indicates that it requires authentication, the system will try to authenticate itself to the gatekeeper. Requires the Authentication LoginName and Authentication Password to be defined on both the codec and the Gatekeeper.

Example: xConfiguration H323 Profile 1 Authentication Mode: Off

xConfiguration H323 Profile [1..1] Authentication LoginName
The system sends the Authentication Login Name and the Authentication Password to a H.323 Gatekeeper for authentication. The authentication is a one way authentication from the codec to the H.323 Gatekeeper, i.e. the system is authenticated to the gatekeeper. If the H.323 Gatekeeper indicates that no authentication is required, the system will still try to register. Requires the H.323 Gatekeeper Authentication Mode to be enabled.

Requires user role: ADMIN

Value space: <S: 0, 50>
Format: String with a maximum of 50 characters.

Example: xConfiguration H323 Profile 1 Authentication LoginName: ""

xConfiguration H323 Profile [1..1] Authentication Password
The system sends the Authentication Login Name and the Authentication Password to a H.323 Gatekeeper for authentication. The authentication is a one way authentication from the codec to the H.323 Gatekeeper, i.e. the system is authenticated to the gatekeeper. If the H.323 Gatekeeper indicates that no authentication is required, the system will still try to register. Requires the H.323 Gatekeeper Authentication Mode to be enabled.

Requires user role: ADMIN

Value space: <S: 0, 50>
Format: String with a maximum of 50 characters.

Example: xConfiguration H323 Profile 1 Authentication Password: ""

xConfiguration H323 Profile [1..1] CallSetup Mode
The H.323 Call Setup Mode defines whether to use a Gatekeeper or Direct calling when establishing H323 calls.
NOTE: Direct H.323 calls can be made even though the H.323 Call Setup Mode is set to Gatekeeper.

Requires user role: ADMIN

Value space: <Direct/Gatekeeper>
Direct: An IP address must be used when dialing in order to make the H323 call.
Gatekeeper: The system will use a Gatekeeper to make a H.323 call. When selecting this option the H323 Profile Gatekeeper Address and H323 Profile Gatekeeper Discovery settings must also be configured.

Example: xConfiguration H323 Profile 1 CallSetup Mode: Gatekeeper

xConfiguration H323 Profile [1..1] Gatekeeper Discovery
Determine how the system shall register to a H.323 Gatekeeper.

Requires user role: ADMIN

Value space: <Manual/Auto>
Manual: The system will use a specific Gatekeeper identified by the Gatekeeper’s IP address.
Auto: The system will automatically try to register to any available Gatekeeper. If a Gatekeeper responds to the request sent from the codec within 30 seconds this specific Gatekeeper will be used. This requires that the Gatekeeper is in auto discovery mode as well. If no Gatekeeper responds, the system will not use a Gatekeeper for making H.323 calls and hence an IP address must be specified manually.

Example: xConfiguration H323 Profile 1 Gatekeeper Discovery: Manual

xConfiguration H323 Profile [1..1] Gatekeeper Address
Enter the IP address of the Gatekeeper. Requires the H.323 Call Setup Mode to be set to Gatekeeper and the Gatekeeper Discovery to be set to Manual.

Requires user role: ADMIN

Value space: <S: 0, 255>
Format: A valid IPv4 address, IPv6 address or DNS name.

Example: xConfiguration H323 Profile 1 Gatekeeper Address: "192.0.2.0"
Logging configuration

xConfiguration Logging Mode
Not applicable in this version.

xConfiguration H323 Profile [1..1] H323Alias E164
The H.323 Alias E.164 defines the address of the system, according to the numbering plan implemented in the H.323 Gatekeeper. The E.164 alias is equivalent to a telephone number, sometimes combined with access codes.

Requires user role: ADMIN

Value space: <S: 0, 30>

Format: Compact string with a maximum of 30 characters. Valid characters are 0-9, * and #.

Example: xConfiguration H323 Profile 1 H323Alias E164: "90550092"

xConfiguration H323 Profile [1..1] H323Alias ID
Lets you specify the H.323 Alias ID which is used to address the system on a H.323 Gatekeeper and will be displayed in the call lists. Example: "firstname.lastname@company.com", "My H.323 Alias ID"

Requires user role: ADMIN

Value space: <S: 0, 49>

Format: String with a maximum of 49 characters.

Example: xConfiguration H323 Profile 1 H323Alias ID: "firstname.lastname@company.com"

xConfiguration H323 Profile [1..1] PortAllocation
The H.323 Port Allocation setting affects the H.245 port numbers used for H.323 call signalling.

Requires user role: ADMIN

Value space: <Dynamic/Static>

Dynamic: The system will allocate which ports to use when opening a TCP connection. The reason for doing this is to avoid using the same ports for subsequent calls, as some firewalls consider this as a sign of attack. When Dynamic is selected, the H.323 ports used are from 11000 to 20999. Once 20999 is reached they restart again at 11000. For RTP and RTCP media data, the system is using UDP ports in the range 2326 to 2487. Each media channel is using two adjacent ports, ie 2330 and 2331 for RTP and RTCP respectively. The ports are automatically selected by the system within the given range. Firewall administrators should not try to deduce which ports are used when, as the allocation schema within the mentioned range may change without any further notice.

Static: When set to Static the ports are given within a static predefined range [5555-6555].

Example: xConfiguration H323 Profile 1 PortAllocation: Dynamic
Network configuration

xConfiguration Network [1..1] IPStack
Select if the system should use IPv4, IPv6, or dual IP stack, on the network interface. NOTE: After changing this setting you may have to wait up to 30 seconds before it takes effect.

Requires user role: ADMIN

Value space: <Dual/IPv4/IPv6>
- Dual: When set to Dual, the network interface can operate on both IP versions at the same time, and can have both an IPv4 and an IPv6 address at the same time.
- IPv4: When set to IPv4, the system will use IPv4 on the network interface.
- IPv6: When set to IPv6, the system will use IPv6 on the network interface.

Example: xConfiguration Network 1 IPStack: Dual

xConfiguration Network [1..1] IPv4 Assignment
Define how the system will obtain its IPv4 address, subnet mask and gateway address. This setting only applies to systems on IPv4 networks.

Requires user role: ADMIN

Value space: <Static/DHCP>
- Static: The addresses must be configured manually using the Network IPv4 Address, Network IPv4 Gateway and Network IPv4 SubnetMask settings (static addresses).
- DHCP: The system addresses are automatically assigned by the DHCP server.

Example: xConfiguration Network 1 IPv4 Assignment: DHCP

xConfiguration Network [1..1] IPv4 Address
Enter the static IPv4 network address for the system. This setting is only applicable when Network Assignment is set to Static.

Requires user role: ADMIN

Value space: <S: 0, 64>
Format: A valid IPv4 address.

Example: xConfiguration Network 1 IPv4 Address: "192.0.2.2"

xConfiguration Network [1..1] IPv4 Gateway
Define the IPv4 network gateway. This setting is only applicable when the Network Assignment is set to Static.

Requires user role: ADMIN

Value space: <S: 0, 64>
Format: A valid IPv4 address.

Example: xConfiguration Network 1 IPv4 Gateway: "192.0.2.1"

xConfiguration Network [1..1] IPv4 SubnetMask
Define the IPv4 network subnet mask. This setting is only applicable when the Network Assignment is set to Static.

Requires user role: ADMIN

Value space: <S: 0, 64>
Format: The valid IPv4 address format.

Example: xConfiguration Network 1 IPv4 SubnetMask: "255.255.255.0"

xConfiguration Network [1..1] IPv6 Assignment
Define how the system will obtain its IPv6 address and the default gateway address. This setting only applies to systems on IPv6 networks.

Requires user role: ADMIN

Value space: <Static/DHCPv6/Autoconf>
- Static: The codec and gateway IP addresses must be configured manually using the Network IPv6 Address, Network IPv6 Gateway and Network IPv6 SubnetMask settings (static addresses).
- DHCPv6: All IPv6 addresses, including options, will be obtained from a DHCPv6 server. See RFC 3315 for a detailed description. The Network IPv6 DHCPOptions setting will be ignored.
- Autoconf: Enable IPv6 stateless autoconfiguration of the IPv6 network interface. See RFC 4862 for a detailed description. The options, for example NTP and DNS server addresses, must either be set manually or obtained from a DHCPv6 server. The Network IPv6 DHCPOptions setting determines which method to use.

Example: xConfiguration Network 1 IPv6 Assignment: Autoconf
xConfiguration Network [1..1] IPv6 Address
Enter the static IPv6 network address for the system. This setting is only applicable when the Network IPv6 Assignment is set to Static.

Requires user role: ADMIN
Value space: <S: 0, 64>
Format: A valid IPv6 address.

Example: xConfiguration Network 1 IPv6 Address: "2001:0DB8:0000:0000:0000:0000:0000:0002"

xConfiguration Network [1..1] IPv6 Gateway
Define the IPv6 network gateway address. This setting is only applicable when the Network IPv6 Assignment is set to Static.

Requires user role: ADMIN
Value space: <S: 0, 64>
Format: A valid IPv6 address.

Example: xConfiguration Network 1 IPv6 Gateway: "2001:0DB8:0000:0000:0000:0000:0000:0001"

xConfiguration Network [1..1] IPv6 DHCPOptions
Retrieve a set of DHCP options, for example NTP and DNS server addresses, from a DHCPv6 server.

Requires user role: ADMIN
Value space: <Off/On>

Off: Disable the retrieval of DHCP options from a DHCPv6 server.
On: Enable the retrieval of a selected set of DHCP options from a DHCPv6 server.

Example: xConfiguration Network 1 IPv6 DHCPOptions: On

xConfiguration Network [1..1] DHCP RequestTFTPServerAddress
This setting is used only for video systems that are registered to a Cisco Unified Communications Manager (CUCM).

The setting determines whether the endpoint should ask the DHCP server for DHCP option 150, so that it can discover the address of the TFTP server (provisioning server) automatically.

If this setting is Off or the DHCP server does not support option 150, the TFTP server address must be set manually using the Provisioning/ExternalManager Address setting.

If the Network VLAN Voice Mode setting is Auto and the Cisco Discovery Protocol (CDP) assigns an ID to the voice VLAN, then a request for option 150 will always be sent. That is, the Network DHCP RequestTFTPServerAddress setting will be ignored.

Requires user role: ADMIN
Value space: <Off/On>

Off: The video system will not send a request for DHCP option 150 and the address of the TFTP server must be set manually. See the note above for any exception to this rule.
On: The video system will send a request for option 150 to the DHCP server so that it can automatically discover the address of the TFTP server.

Example: xConfiguration Network 1 DHCP RequestTFTPServerAddress: On

xConfiguration Network [1..1] DNS Domain Name
DNS Domain Name is the default domain name suffix which is added to unqualified names.

Example: If the DNS Domain Name is "company.com" and the name to lookup is "MyVideoSystem", this will result in the DNS lookup "MyVideoSystem.company.com".

Requires user role: ADMIN
Value space: <S: 0, 64>
Format: String with a maximum of 64 characters.

Example: xConfiguration Network 1 DNS Domain Name: ""

xConfiguration Network [1..1] DNS Server [1..3] Address
Define the network addresses for DNS servers. Up to 3 addresses may be specified. If the network addresses are unknown, contact your administrator or Internet Service Provider.

Requires user role: ADMIN
Value space: <S: 0, 64>
Format: A valid IPv4 address or IPv6 address.

Example: xConfiguration Network 1 DNS Server 1 Address: ""
xConfiguration Network [1..1] QoS Mode

The QoS (Quality of Service) is a method which handles the priority of audio, video and data in the network. The QoS settings must be supported by the infrastructure. Diffserv (Differentiated Services) is a computer networking architecture that specifies a simple, scalable and coarse-grained mechanism for classifying, managing network traffic and providing QoS priorities on modern IP networks.

Requires user role: ADMIN

Value space: <Off/Diffserv>

Off: No QoS method is used.

Diffserv: When you set the QoS Mode to Diffserv, the Network QoS Diffserv Audio, Network QoS Diffserv Video, Network QoS Diffserv Data, Network QoS Diffserv Signalling, Network QoS Diffserv ICMPv6 and Network QoS Diffserv NTP settings are used to prioritize packets.

Example: xConfiguration Network 1 QoS Mode: Diffserv

xConfiguration Network [1..1] QoS Diffserv Audio

This setting will only take effect if Network QoS Mode is set to Diffserv.

Define which priority Audio packets should have in the IP network.

The priority for the packets ranges from 0 to 63 - the higher the number, the higher the priority. The recommended class for Audio is CS4, which equals the decimal value 32. If in doubt, contact your network administrator.

The priority set here might be overridden when packets are leaving the network controlled by the local network administrator.

Requires user role: ADMIN

Value space: <0..63>

Range: Select a value between 0 to 63 - the higher the number, the higher the priority. The default value is 0 (best effort).

Example: xConfiguration Network 1 QoS Diffserv Audio: 0

xConfiguration Network [1..1] QoS Diffserv Video

This setting will only take effect if Network QoS Mode is set to Diffserv.

Define which priority Video packets should have in the IP network. The packets on the presentation channel (shared content) are also in the Video packet category. The priority for the packets ranges from 0 to 63 - the higher the number, the higher the priority. The recommended class for Video is CS4, which equals the decimal value 32. If in doubt, contact your network administrator.

The priority set here might be overridden when packets are leaving the network controlled by the local network administrator.

Requires user role: ADMIN

Value space: <0..63>

Range: Select a value between 0 to 63 - the higher the number, the higher the priority. The default value is 0 (best effort).

Example: xConfiguration Network 1 QoS Diffserv Video: 0

xConfiguration Network [1..1] QoS Diffserv Data

This setting will only take effect if Network QoS Mode is set to Diffserv.

Define which priority Data packets should have in the IP network.

The priority for the packets ranges from 0 to 63 - the higher the number, the higher the priority. The recommended value for Data is 0, which means best effort. If in doubt, contact your network administrator.

The priority set here might be overridden when packets are leaving the network controlled by the local network administrator.

Requires user role: ADMIN

Value space: <0..63>

Range: Select a value between 0 to 63 - the higher the number, the higher the priority. The default value is 0 (best effort).

Example: xConfiguration Network 1 QoS Diffserv Data: 0
**xConfiguration Network [1..1] QoS Diffserv Signalling**

This setting will only take effect if Network QoS Mode is set to Diffserv.

Define which priority Signalling packets that are deemed critical (time-sensitive) for the real-time operation should have in the IP network.

The priority for the packets ranges from 0 to 63 - the higher the number, the higher the priority. The recommended class for Signalling is CS3, which equals the decimal value 24. If in doubt, contact your network administrator.

The priority set here might be overridden when packets are leaving the network controlled by the local network administrator.

**Requires user role:** ADMIN

**Value space:** <0..63>

**Range:** Select a value between 0 to 63 - the higher the number, the higher the priority. The default value is 0 (best effort).

**Example:** xConfiguration Network 1 QoS Diffserv Signalling: 0

---

**xConfiguration Network [1..1] QoS Diffserv ICMPv6**

This setting will only take effect if Network QoS Mode is set to Diffserv.

Define which priority ICMPv6 packets should have in the IP network.

The priority for the packets ranges from 0 to 63 - the higher the number, the higher the priority. The recommended value for ICMPv6 is 0, which means best effort. If in doubt, contact your network administrator.

The priority set here might be overridden when packets are leaving the network controlled by the local network administrator.

**Requires user role:** ADMIN

**Value space:** <0..63>

**Range:** Select a value between 0 to 63 - the higher the number, the higher the priority. The default value is 0 (best effort).

**Example:** xConfiguration Network 1 QoS Diffserv ICMPv6: 0

---

**xConfiguration Network [1..1] QoS Diffserv NTP**

This setting will only take effect if Network QoS Mode is set to Diffserv.

Define which priority NTP packets should have in the IP network.

The priority for the packets ranges from 0 to 63 - the higher the number, the higher the priority. The recommended value for NTP is 0, which means best effort. If in doubt, contact your network administrator.

The priority set here might be overridden when packets are leaving the network controlled by the local network administrator.

**Requires user role:** ADMIN

**Value space:** <0..63>

**Range:** Select a value between 0 to 63 - the higher the number, the higher the priority. The default value is 0 (best effort).

**Example:** xConfiguration Network 1 QoS Diffserv NTP: 0

---

**xConfiguration Network [1..1] IEEE8021X Mode**

The system can be connected to an IEEE 802.1X LAN network, with a port-based network access control that is used to provide authenticated network access for Ethernet networks.

**Requires user role:** ADMIN

**Value space:** <Off/On>

**Off:** The 802.1X authentication is disabled (default).

**On:** The 802.1X authentication is enabled.

**Example:** xConfiguration Network 1 IEEE8021X Mode: Off

---

**xConfiguration Network [1..1] IEEE8021X TlsVerify**

Verification of the server-side certificate of an IEEE802.1X connection against the certificates in the local CA-list when TLS is used. The CA-list must be uploaded to the video system. This can be done from the web interface.

This setting takes effect only when Network [1..1] IEEE8021X Eap Tls is enabled (On).

**Requires user role:** ADMIN

**Value space:** <Off/On>

**Off:** When set to Off, TLS connections are allowed without verifying the server-side X.509 certificate against the local CA-list. This should typically be selected if no CA-list has been uploaded to the codec.

**On:** When set to On, the server-side X.509 certificate will be validated against the local CA-list for all TLS connections. Only servers with a valid certificate will be allowed.

**Example:** xConfiguration Network 1 IEEE8021X TlsVerify: Off
xConfiguration Network [1..1] IEEE8021X UseClientCertificate
Authentication using a private key/certificate pair during an IEEE802.1x connection. The authentication X.509 certificate must be uploaded to the video system. This can be done from the web interface.

Requires user role: ADMIN
Value space: <Off/On>
Off: When set to Off client-side authentication is not used (only server-side).
On: When set to On the client (video system) will perform a mutual authentication TLS handshake with the server.
Example: xConfiguration Network 1 IEEE8021X UseClientCertificate: Off

xConfiguration Network [1..1] IEEE8021X Identity
The 802.1X Identity is the user name needed for 802.1X authentication.

Requires user role: ADMIN
Value space: <S: 0, 64>
Format: String with a maximum of 64 characters.
Example: xConfiguration Network 1 IEEE8021X Identity: ""

xConfiguration Network [1..1] IEEE8021X Password
The 802.1X Password is the password needed for 802.1X authentication.

Requires user role: ADMIN
Value space: <S: 0, 32>
Format: String with a maximum of 32 characters.
Example: xConfiguration Network 1 IEEE8021X Password: ""

xConfiguration Network [1..1] IEEE8021X AnonymousIdentity
The 802.1X Anonymous ID string is to be used as unencrypted identity with EAP (Extensible Authentication Protocol) types that support different tunneled identity, like EAP-PEAP and EAP-TTLS. If set, the anonymous ID will be used for the initial (unencrypted) EAP Identity Request.

Requires user role: ADMIN
Value space: <S: 0, 64>
Format: String with a maximum of 64 characters.
Example: xConfiguration Network 1 IEEE8021X AnonymousIdentity: ""

xConfiguration Network [1..1] IEEE8021X EapMd5
Set the Md5 (Message-Digest Algorithm 5) mode. This is a Challenge Handshake Authentication Protocol that relies on a shared secret. Md5 is a Weak security.

Requires user role: ADMIN
Value space: <Off/On>
Off: The EAP-MD5 protocol is disabled.
On: The EAP-MD5 protocol is enabled (default).
Example: xConfiguration Network 1 IEEE8021X Eap Md5: On

xConfiguration Network [1..1] IEEE8021X Eap Ttls
Set the TTLS (Tunneled Transport Layer Security) mode. Authenticates LAN clients without the need for client certificates. Developed by Funk Software and Certicom. Usually supported by Agere Systems, Proxim and Avaya.

Requires user role: ADMIN
Value space: <Off/On>
Off: The EAP-TTLS protocol is disabled.
On: The EAP-TTLS protocol is enabled (default).
Example: xConfiguration Network 1 IEEE8021X Eap Ttls: On

xConfiguration Network [1..1] IEEE8021X Eap Tls
Enable or disable the use of EAP-TLS (Transport Layer Security) for IEEE802.1x connections. The EAP-TLS protocol, defined in RFC 5216, is considered one of the most secure EAP standards. LAN clients are authenticated using client certificates.

Requires user role: ADMIN
Value space: <Off/On>
Off: The EAP-TLS protocol is disabled.
On: The EAP-TLS protocol is enabled (default).
Example: xConfiguration Network 1 IEEE8021X Eap Tls: On
xConfiguration Network [1..1] IEEE8021X Eap Peap
Set the EAP (Protected Extensible Authentication Protocol) mode. Authenticates LAN clients without the need for client certificates. Developed by Microsoft, Cisco and RSA Security.

Requires user role: ADMIN

Value space: <Off/On>
   Off: The EAP-PEAP protocol is disabled.
   On: The EAP-PEAP protocol is enabled (default).

Example: xConfiguration Network 1 IEEE8021X Eap Peap: On

xConfiguration Network [1..1] MTU
Set the Ethernet MTU (Maximum Transmission Unit).

Requires user role: ADMIN

Value space: <576..1500>
   Range: Select a value from 576 to 1500 bytes.

Example: xConfiguration Network 1 MTU: 1500

xConfiguration Network [1..1] Speed
Set the Ethernet link speed.

Requires user role: ADMIN

Value space: <Auto/10half/10full/100half/100full/1000full>
   Auto: Autonegotiate link speed.
   10half: Force link to 10 Mbps half-duplex.
   10full: Force link to 10 Mbps full-duplex.
   100half: Force link to 100 Mbps half-duplex.
   100full: Force link to 100 Mbps full-duplex.
   1000full: Force link to 1 Gbps full-duplex.

Example: xConfiguration Network 1 Speed: Auto

xConfiguration Network [1..1] TrafficControl Mode
Set the network traffic control mode to decide how to control the video packets transmission speed.

Requires user role: ADMIN

Value space: <Off/On>
   Off: Transmit video packets at link speed.
   On: Transmit video packets at maximum 20 Mbps. Can be used to smooth out bursts in the outgoing network traffic.

Example: xConfiguration Network 1 TrafficControl: On

xConfiguration Network [1..1] RemoteAccess Allow
Filter IP addresses for access to ssh/telnet/HTTP/HTTPS.

Requires user role: ADMIN

Value space: <S: 0, 255>
   Format: String with a maximum of 255 characters, comma separated IP addresses or IP range.

Example: xConfiguration Network 1 RemoteAccess Allow: "192.168.1.231, 192.168.1.182"

xConfiguration Network [1..1] VLAN Voice Mode
Set the VLAN voice mode. The VLAN Voice Mode will be set to Auto automatically if you choose Cisco UCM (Cisco Unified Communications Manager) as provisioning infrastructure via the Provisioning Wizard on the Touch screen control panel.

Requires user role: ADMIN

Value space: <Auto/Manual/Off>
   Auto: The Cisco Discovery Protocol (CDP), if available, assigns an id to the voice VLAN. If CDP is not available, VLAN is not enabled.
   Manual: The VLAN ID is set manually using the Network VLAN Voice VlanId setting. If CDP is available, the manually set value will be overruled by the value assigned by CDP.
   Off: VLAN is not enabled.

Example: xConfiguration Network 1 VLAN Voice Mode: Off

xConfiguration Network [1..1] VLAN Voice VlanId
Set the VLAN voice ID. This setting will only take effect if VLAN Voice Mode is set to Manual.

Requires user role: ADMIN

Value space: <1,4094>
   Range: Select a value from 1 to 4094.

Example: xConfiguration Network 1 VLAN Voice VlanId: 1
NetworkServices configuration

xConfiguration NetworkServices H323 Mode
Determine whether the system should be able to place and receive H.323 calls or not.

Requires user role: ADMIN

Value space: <Off/On>
- Off: Disable the possibility to place and receive H.323 calls.
- On: Enable the possibility to place and receive H.323 calls (default).

Example: xConfiguration NetworkServices H323 Mode: On

xConfiguration NetworkServices HTTP Mode
Set the HTTP mode to enable/disable access to the system through a web browser. The web interface is used for system management, call management such as call transfer, diagnostics and software uploads.

Requires user role: ADMIN

Value space: <Off/On>
- Off: The HTTP protocol is disabled.
- On: The HTTP protocol is enabled.

Example: xConfiguration NetworkServices HTTP Mode: On

xConfiguration NetworkServices SIP Mode
Determine whether the system should be able to place and receive SIP calls or not.

Requires user role: ADMIN

Value space: <Off/On>
- Off: Disable the possibility to place and receive SIP calls.
- On: Enable the possibility to place and receive SIP calls (default).

Example: xConfiguration NetworkServices SIP Mode: On

xConfiguration NetworkServices Telnet Mode
Telnet is a network protocol used on the Internet or Local Area Network (LAN) connections.

Requires user role: ADMIN

Value space: <Off/On>
- Off: The Telnet protocol is disabled. This is the factory setting.
- On: The Telnet protocol is enabled.

Example: xConfiguration NetworkServices Telnet Mode: Off

xConfiguration NetworkServices WelcomeText
Choose which information the user should see when logging on to the codec through Telnet/SSH.

Requires user role: ADMIN

Value space: <Off/On>
- Off: The welcome text is: Login successful
- On: The welcome text is: Welcome to <system name>; Software version; Software release date; Login successful.

Example: xConfiguration NetworkServices WelcomeText: On

xConfiguration NetworkServices XMLAPI Mode
Enable or disable the video system's XML API. For security reasons this may be disabled. Disabling the XML API will limit the remote manageability with for example TMS, which no longer will be able to connect to the video system.

Requires user role: ADMIN

Value space: <Off/On>
- Off: The XML API is disabled.
- On: The XML API is enabled (default).

Example: xConfiguration NetworkServices XMLAPI Mode: On
**xConfiguration NetworkServices MultiWay Address**

The MultiWay address must be equal to the Conference Factory Alias, as configured on the Video Communication Server. The Multiway™ conferencing enables video endpoint users to introduce a 3rd party into an existing call.

Multiway™ can be used in the following situations:
1. When you want to add someone else in to your existing call.
2. When you are called by a 3rd party while already in a call and you want to include that person in the call.

Requirements: The Codec SX20 must run software version TC5.1 (or later), Video Communication Server (VCS) version X5 (or later) and Codian MCU version 3.1 (or later). Video systems invited to join the Multiway™ conference must support the H.323 routeToMC facility message if in an H.323 call, or SIP REFER message if in a SIP call.

Requires user role: ADMIN

Value space: \(<S: 0, 255>\)

Format: String with a maximum of 255 characters (a valid dial URI).

Example: xConfiguration NetworkServices MultiWay Address: "h323:multiway@company.com"

**xConfiguration NetworkServices MultiWay Protocol**

Determine the protocol to be used for MultiWay calls.

Requires user role: ADMIN

Value space: \(<Auto/H323/Sip>\)

Auto: The system will select the protocol for MultiWay calls.
H323: The H323 protocol will be used for MultiWay calls.
Sip: The SIP protocol will be used for MultiWay calls.

Example: xConfiguration NetworkServices MultiWay Protocol: Auto

**xConfiguration NetworkServices HTTPS Mode**

HTTPS is a web protocol that encrypts and decrypts user page requests as well as the pages that are returned by the web server.

Requires user role: ADMIN

Value space: \(<Off/On>\)

Off: The HTTPS protocol is disabled.
On: The HTTPS protocol is enabled.

Example: xConfiguration NetworkServices HTTPS Mode: On

**xConfiguration NetworkServices HTTPS VerifyServerCertificate**

When the video system connects to an external HTTPS server (like a phone book server or an external manager), this server will present a certificate to the video system to identify itself.

Requires user role: ADMIN

Value space: \(<Off/On>\)

Off: Do not verify server certificates.
On: Requires the system to verify that the server certificate is signed by a trusted Certificate Authority (CA). This requires that a list of trusted CAs are uploaded to the system in advance.

Example: xConfiguration NetworkServices HTTPS VerifyServerCertificate: Off

**xConfiguration NetworkServices HTTPS VerifyClientCertificate**

When the video system connects to a HTTPS client (like a web browser), the client can be asked to present a certificate to the video system to identify itself.

Requires user role: ADMIN

Value space: \(<Off/On>\)

Off: Do not verify client certificates.
On: Requires the client to present a certificate that is signed by a trusted Certificate Authority (CA). This requires that a list of trusted CAs are uploaded to the system in advance.

Example: xConfiguration NetworkServices HTTPS VerifyClientCertificate: Off

**xConfiguration NetworkServices HTTPS OCSP Mode**

Define the support for OCSP (Online Certificate Status Protocol) responder services. The OCSP feature allows users to enable OCSP instead of certificate revocation lists (CRLs) to check the certificate status.

For any outgoing HTTPS connection, the OCSP responder is queried of the status. If the corresponding certificate has been revoked, then the HTTPS connection will not be used.

Requires user role: ADMIN

Value space: \(<Off/On>\)

Off: Disable OCSP support.
On: Enable OCSP support.

Example: xConfiguration NetworkServices HTTPS OCSP Mode: Off
xConfiguration NetworkServices HTTPS OCSP URL
Specify the URL of the OCSP responder (server) that will be used to check the certificate status.

Requires user role: ADMIN
Value space: <S: 0, 255>
Format: String with a maximum of 255 characters.
Example: xConfiguration NetworkServices HTTPS OCSP URL: "http://ocspserver.company.com:81"

xConfiguration NetworkServices NTP Mode
The Network Time Protocol (NTP) is used to synchronize the time of the system to a reference time server. The time server will subsequently be queried every 24th hour for time updates. The time will be displayed on the top of the screen. The system will use the time to timestamp messages transmitted to Gatekeepers or Border Controllers requiring H.235 authentication. The system will use the time to timestamp messages transmitted to Gatekeepers or Border Controllers that requires H.235 authentication. It is also used for timestamping Placed Calls, Missed Calls and Received Calls.

Requires user role: ADMIN
Value space: <Auto/Off/Manual>
Auto: The system will use the NTP server, by which address is supplied from the DHCP server in the network. If no DHCP server is used, or the DHCP server does not provide the system with a NTP server address, the system will use the static defined NTP server address specified by the user.
Off: The system will not use an NTP server.
Manual: The system will always use the static defined NTP server address specified by the user.
Example: xConfiguration NetworkServices NTP Mode: Manual

xConfiguration NetworkServices NTP Address
Enter the NTP Address to define the network time protocol server address. This address will be used if NTP Mode is set to Manual, or if set to Auto and no address is supplied by a DHCP server.

Requires user role: ADMIN
Value space: <S: 0, 64>
Format: A valid IPv4 address, IPv6 address or DNS name.
Example: xConfiguration NetworkServices NTP Address: "1.ntp.tandberg.com"

xConfiguration NetworkServices SNMP Mode
SNMP (Simple Network Management Protocol) is used in network management systems to monitor network-attached devices (routers, servers, switches, projectors, etc) for conditions that warrant administrative attention. SNMP exposes management data in the form of variables on the managed systems, which describe the system configuration. These variables can then be queried (set to ReadOnly) and sometimes set (set to ReadWrite) by managing applications.

Requires user role: ADMIN
Value space: <Off/ReadOnly/ReadWrite>
Off: Disable the SNMP network service.
ReadOnly: Enable the SNMP network service for queries only.
ReadWrite: Enable the SNMP network service for both queries and commands.
Example: xConfiguration NetworkServices SNMP Mode: ReadWrite

xConfiguration NetworkServices SNMP Host [1..3] Address
Enter the address of up to three SNMP Managers. The system's SNMP Agent (in the codec) responds to requests from SNMP Managers (a PC program etc.), for example about system location and system contact. SNMP traps are not supported.

Requires user role: ADMIN
Value space: <S: 0, 64>
Format: A valid IPv4 address, IPv6 address or DNS name.
Example: xConfiguration NetworkServices SNMP Host 1 Address: ""
xConfiguration NetworkServices SNMP SystemContact
Enter the name of the Network Services SNMP System Contact.

Requires user role: ADMIN
Value space: <S: 0, 50>
Format: String with a maximum of 50 characters.

Example: xConfiguration NetworkServices SNMP SystemContact: ""

xConfiguration NetworkServices SNMP SystemLocation
Enter the name of the Network Services SNMP System Location.

Requires user role: ADMIN
Value space: <S: 0, 50>
Format: String with a maximum of 50 characters.

Example: xConfiguration NetworkServices SNMP SystemLocation: ""

xConfiguration NetworkServices CTMS Mode
This setting determines whether or not to allow multiparty conferences controlled by a Cisco TelePresence Multipoint Switch (CTMS).

Video systems running software TC5.0 or later are able to initiate or join non-encrypted multiparty conferences controlled by CTMS version 1.8 or later. Encrypted conferences are supported as from software versions TC6.0 and CTMS 1.9.1. Encryption is addressed in the NetworkServices CTMS Encryption setting.

Requires user role: ADMIN
Value space: <Off/On>
Off: Multiparty conferencing via CTMS is prohibited.
On: Multiparty conferencing via CTMS is allowed.

Example: xConfiguration NetworkServices CTMS Mode: On

xConfiguration NetworkServices CTMS Encryption
This setting indicates whether or not the video system supports encryption when participating in a multiparty meeting controlled by a Cisco TelePresence Multipoint Switch (CTMS).

CTMS allows three security settings for meetings: non-secure (not encrypted), best effort (encrypted if all participants support encryption, otherwise not encrypted) and secure (always encrypted).

Requires user role: ADMIN
Value space: <Off/BestEffort>
Off: The video system does not allow encryption and therefore cannot participate in a secure CTMS meeting (encrypted). When participating in a best effort CTMS meeting, the meeting will be downgraded to non-secure (not encrypted).
BestEffort: The video system can negotiate encryption parameters with CTMS and participate in a secure CTMS meeting (encrypted). Do not use this value if the CTMS version is older than 1.9.1.

Example: xConfiguration NetworkServices CTMS Encryption: Off

xConfiguration NetworkServices SSH Mode
SSH (or Secure Shell) protocol can provide secure encrypted communication between the codec and your local computer.

Requires user role: ADMIN
Value space: <Off/On>
Off: The SSH protocol is disabled.
On: The SSH protocol is enabled.

Example: xConfiguration NetworkServices SSH Mode: On

xConfiguration NetworkServices SSH AllowPublicKey
Secure Shell (SSH) public key authentication can be used to access the codec.

Requires user role: ADMIN
Value space: <Off/On>
Off: The SSH public key is not allowed.
On: The SSH public key is allowed.

Example: xConfiguration NetworkServices SSH AllowPublicKey: On
Phonebook configuration

xConfiguration Phonebook Server [1..1] ID
Enter a name for the external phone book.
Requires user role: ADMIN
Value space: <S: 0, 64>
Format: String with a maximum of 64 characters.
Example: xConfiguration Phonebook Server 1 ID: ""

xConfiguration Phonebook Server [1..1] Type
Select the phonebook server type.
Requires user role: ADMIN
Value space: <VCS/TMS/Callway/CUCM>
VCS: Select VCS if the phonebook is located on the Cisco TelePresence Video Communication Server.
TMS: Select TMS if the phonebook is located on the Cisco TelePresence Management Suite server.
Callway: Select Callway if the phonebook is to be provided by the WebEx TelePresence subscription service (formerly called CallWay). Contact your WebEx TelePresence provider for more information.
CUCM: Select CUCM if the phonebook is located on the Cisco Unified Communications Manager.
Example: xConfiguration Phonebook Server 1 Type: TMS

xConfiguration Phonebook Server [1..1] URL
Enter the address (URL) to the external phone book server.
Requires user role: ADMIN
Value space: <S: 0, 255>
Format: String with a maximum of 255 characters.

Provisioning configuration

xConfiguration Provisioning Connectivity
This setting controls how the device discovers whether it should request an internal or external configuration from the provisioning server.
Requires user role: ADMIN
Value space: <Internal/External/Auto>
Internal: Request internal configuration.
External: Request external configuration.
Auto: Automatically discover using NAPTR queries whether internal or external configurations should be requested. If the NAPTR responses have the "e" flag, external configurations will be requested. Otherwise internal configurations will be requested.
Example: xConfiguration Provisioning Connectivity: Auto

xConfiguration Provisioning Mode
It is possible to configure a video system using a provisioning system (external manager). This allows video conferencing network administrators to manage many video systems simultaneously. With this setting you choose which type of provisioning system to use. Provisioning can also be switched off. Contact your provisioning system provider/representative for more information.
Requires user role: ADMIN
Value space: <Off/TMS/VCS/CallWay/CUCM/Auto/Edge>
Off: The video system will not be configured by a provisioning system.
TMS: The video system will be configured using TMS (Cisco TelePresence Management System).
VCS: The video system will be configured using VCS (Cisco TelePresence Video Communication Server).
Callway: The video system will be configured using the WebEx TelePresence subscription service (formerly named CallWay).
CUCM: The video system will be configured using CUCM (Cisco Unified Communications Manager).
Auto: The provisioning server will automatically be selected by the video system.
Edge: The system will be configured using CUCM via Expressway.
Example: xConfiguration Provisioning Mode: Auto
xConfiguration Provisioning LoginName
This is the user name part of the credentials used to authenticate the video system with the provisioning server. This setting must be used when required by the provisioning server. If Provisioning Mode is Callway (WebEx TelePresence), enter the video number.

Requires user role: ADMIN
Value space: <S: 0, 80>
Format: String with a maximum of 80 characters.
Example: xConfiguration Provisioning LoginName: ""

xConfiguration Provisioning Password
This is the password part of the credentials used to authenticate the video system with the provisioning server. This setting must be used when required by the provisioning server. If Provisioning Mode is Callway (WebEx TelePresence), enter the activation code.

Requires user role: ADMIN
Value space: <S: 0, 64>
Format: A valid IPv4 address, IPv6 address or DNS name.
Example: xConfiguration Provisioning Password: ""

xConfiguration Provisioning HttpMethod
Select the HTTP method to be used for the provisioning.

Requires user role: ADMIN
Value space: <GET/POST>
GET: Select GET when the provisioning server supports GET.
POST: Select POST when the provisioning server supports POST.
Example: xConfiguration Provisioning HttpMethod: POST

xConfiguration Provisioning ExternalManager Address
Enter the IP Address or DNS name of the external manager / provisioning system. If an External Manager Address (and Path) is configured, the system will send a message to this address when starting up. When receiving this message the external manager / provisioning system can return configurations(commands) to the unit as a result.

When using CUCM or TMS provisioning, the DHCP server can be set up to provide the external manager address automatically (DHCP Option 242 for TMS, and DHCP Option 150 for CUCM). An address set in the Provisioning ExternalManager Address setting will override the address provided by DHCP.

Requires user role: ADMIN
Value space: <S: 0, 64>
Format: A valid IPv4 address, IPv6 address or DNS name.
Example: xConfiguration Provisioning ExternalManager Address: ""

xConfiguration Provisioning ExternalManager AlternateAddress
Only applicable when the endpoint is provisioned by Cisco Unified Communication Manager (CUCM) and an alternate CUCM is available for redundancy. Enter the address of the alternate CUCM. If the main CUCM is not available, the endpoint will be provisioned by the alternate CUCM. When the main CUCM is available again, the endpoint will be provisioned by this CUCM.

Requires user role: ADMIN
Value space: <S: 0, 64>
Format: A valid IPv4 address, IPv6 address or DNS name.
Example: xConfiguration Provisioning ExternalManager AlternateAddress: ""

xConfiguration Provisioning ExternalManager Protocol
Determine whether to use secure management or not.

Requires user role: ADMIN
Value space: <HTTP/HTTPS>
HTTP: Set to HTTP to disable secure management. Requires HTTP to be enabled in the NetworkServices HTTP Mode setting.
HTTPS: Set to HTTPS to enable secure management. Requires HTTPS to be enabled in the NetworkServices HTTPS Mode setting.
Example: xConfiguration Provisioning ExternalManager Protocol: HTTP
**xConfiguration Provisioning ExternalManager Path**
Set the Path to the external manager / provisioning system. This setting is required when several management services reside on the same server, i.e. share the same External Manager address.

*Requires user role:* ADMIN

*Value space:* <S: 0, 255>

*Format:* String with a maximum of 255 characters.

*Example:* `xConfiguration Provisioning ExternalManager Path: "tms/public/external/management/SystemManagementService.asmx"`

---

**xConfiguration Provisioning ExternalManager Domain**
Enter the SIP domain for the VCS provisioning server.

*Requires user role:* ADMIN

*Value space:* <S: 0, 64>

*Format:* String with a maximum of 64 characters.

*Example:* `xConfiguration Provisioning ExternalManager Domain: "any.domain.com"`

---

**RTP configuration**

**xConfiguration RTP Ports Range Start**
Specify the first port in the range of RTP ports. Also see the H323 Profile [1..1] PortAllocation setting.

*NOTE:* Restart the system for any change to this setting to take effect.

*Requires user role:* ADMIN

*Value space:* <1024..65502>

*Range:* Select a value from 1024 to 65502.

*Example:* `xConfiguration RTP Ports Range Start: 2326`

---

**xConfiguration RTP Ports Range Stop**
Specify the last RTP port in the range. Also see the H323 Profile [1..1] PortAllocation setting.

*NOTE:* Restart the system for any change to this setting to take effect.

*Requires user role:* ADMIN

*Value space:* <1056..65535>

*Range:* Select a value from 1056 to 65535.

*Example:* `xConfiguration RTP Ports Range Stop: 2486`
Security configuration

**xConfiguration Security Audit Logging Mode**
Determine where to record or transmit the audit logs. The audit logs are sent to a syslog server. When using the External/ExternalSecure modes and setting the port assignment to manual in the Security Audit Server PortAssignment setting, you must also enter the address and port number for the audit server in the Security Audit Server Address and Security Audit Server Port settings.

Requires user role: AUDIT
Value space: <Off/Internal/External/ExternalSecure>

- **Off**: No audit logging is performed.
- **Internal**: The system records the audit logs to internal logs, and rotates logs when they are full.
- **External**: The system sends the audit logs to an external syslog server. The syslog server must support UDP.
- **ExternalSecure**: The system sends encrypted audit logs to an external syslog server that is verified by a certificate in the Audit CA list. The Audit CA list file must be uploaded to the codec using the web interface. The common_name parameter of a certificate in the CA list must match the IP address of the syslog server, and the secure TCP server must be set up to listen for secure (TLS) TCP Syslog messages.

Example: xConfiguration Security Audit Logging Mode: Off

**xConfiguration Security Audit OnError Action**
Determine what happens when the connection to the syslog server is lost. This setting is only relevant when Security Audit Logging Mode is set to ExternalSecure.

Requires user role: AUDIT
Value space: <Halt/Ignore>

- **Halt**: If a halt condition is detected the system codec is rebooted and only the auditor is allowed to operate the unit until the halt condition has passed. When the halt condition has passed the audit logs are re-spoiled to the syslog server. Halt conditions are: A network breach (no physical link), no syslog server running (or incorrect address or port to the syslog server), TLS authentication failed (if in use), local backup (re-spooling) log full.
- **Ignore**: The system will continue its normal operation, and rotate internal logs when full. When the connection is restored it will again send its audit logs to the syslog server.

Example: xConfiguration Security Audit OnError Action: Ignore

**xConfiguration Security Audit Server Address**
The audit logs are sent to a syslog server. Enter the IP address of the syslog server. Only valid IPv4 or IPv6 address formats are accepted. Host names are not supported. This setting is only relevant when Security Audit Logging Mode is set to External or ExternalSecure.

Requires user role: AUDIT
Value space: <S: 0, 64>

Format: A valid IPv4 address or IPv6 address

Example: xConfiguration Security Audit Server Address: ""

**xConfiguration Security Audit Server Port**
The audit logs are sent to a syslog server. Enter the port of the syslog server that the system shall send its audit logs to. This setting is only relevant when Security Audit PortAssignment is set to Manual.

Requires user role: AUDIT
Value space: <0..65535>

Range: Select a value from 0 to 65535.

Example: xConfiguration Security Audit Server Port: 514

**xConfiguration Security Audit Server PortAssignment**
The audit logs are sent to a syslog server. You can define how the port number of the external syslog server will be assigned. This setting is only relevant when Security Audit Logging Mode is set to External or ExternalSecure. To see which port number is used you can check the Security Audit Server Port status. Navigate to Configuration > System status on the web interface or; if on a command line interface, run the command xStatus Security Audit Server Port.

Requires user role: AUDIT
Value space: <Auto/Manual>

- **Auto**: Will use UDP port number 514 when the Security Audit Logging Mode is set to External. Will use TCP port number 6514 when the Security Audit Logging Mode is set to ExternalSecure.
- **Manual**: Will use the port value defined in the Security Audit Server Port setting.

Example: xConfiguration Security Audit Server PortAssignment: Auto
xConfiguration Security Session ShowLastLogon
When logging in to the system using SSH or Telnet you will see the Userid, time and date of the last session that did a successful login.

Requires user role: ADMIN
Value space: <Off/On>
On: Show information about the last session.
Off: Do not show information about the last session.
Example: xConfiguration Security Session ShowLastLogon: Off

xConfiguration Security Session InactivityTimeout
Determine how long the system will accept inactivity from the user before he is automatically logged out.

Requires user role: ADMIN
Value space: <0..10000>
Range: Select a value between 1 and 10000 seconds; or select 0 when inactivity should not enforce automatic logout.
Example: xConfiguration Security Session InactivityTimeout: 0

SerialPort configuration

xConfiguration SerialPort Mode
Enable/disable the serial port (connection via USB and RS-232 adapter).

Requires user role: ADMIN
Value space: <Off/On>
Off: Disable the serial port.
On: Enable the serial port.
Example: xConfiguration SerialPort Mode: On

xConfiguration SerialPort BaudRate
Specify the baud rate (data transmission rate, bits per second) for the serial port. The default value is 38400.
Other connection parameters for the serial port are: Data bits: 8; Parity: None; Stop bits: 1; Flow control: None.

Requires user role: ADMIN
Value space: <9600/19200/38400/57600/115200>
Range: Select a baud rate from the baud rates listed (bps).
Example: xConfiguration SerialPort BaudRate: 38400

xConfiguration SerialPort LoginRequired
Determine if login shall be required when connecting to the serial port.

Requires user role: ADMIN
Value space: <Off/On>
Off: The user can access the codec via the serial port without any login.
On: Login is required when connecting to the codec via the serial port.
Example: xConfiguration SerialPort LoginRequired: On
SIP configuration

**xConfiguration SIP ANAT**
ANAT (Alternative Network Address Types) enables media negotiation for multiple addresses and address types, as specified in RFC 4091.

**Requires user role:** ADMIN

**Value space:** <Off/On>

- **Off:** Disable ANAT.
- **On:** Enable ANAT.

**Example:** xConfiguration SIP ANAT: Off

**xConfiguration SIP AuthenticateTransferror**
Not applicable in this version.

**xConfiguration SIP ListenPort**
Turn on or off the listening for incoming connections on the SIP TCP/UDP ports. If turned off, the endpoint will only be reachable through the SIP registrar (CUCM or VCS). It is recommended to leave this setting at its default value.

**Requires user role:** ADMIN

**Value space:** <On/Off>

- **On:** Listening for incoming connections on the SIP TCP/UDP ports is turned on.
- **Off:** Listening for incoming connections on the SIP TCP/UDP ports is turned off.

**Example:** xConfiguration SIP ListenPort: On

**xConfiguration SIP PreferredIPMedia**
Define the preferred IP version for sending and receiving media (audio, video, data). Only applicable when both Network IPStack and Conference CallProtocolIPStack are set to Dual, and the network does not have a mechanism for choosing the preferred IP version.

**Requires user role:** ADMIN

**Value space:** <IPv4/IPv6>

- **IPv4:** The preferred IP version for media is IPv4.
- **IPv6:** The preferred IP version for media is IPv6.

**Example:** xConfiguration SIP PreferredIPMedia: IPv4

**xConfiguration SIP PreferredIPSignaling**
Define the preferred IP version for signaling (audio, video, data). Only applicable when both Network IPStack and Conference CallProtocolIPStack are set to Dual, and the network does not have a mechanism for choosing the preferred IP version. It also determines the priority of the A/AAAA lookups in DNS, so that the preferred IP version is used for registration.

**Requires user role:** ADMIN

**Value space:** <IPv4/IPv6>

- **IPv4:** The preferred IP version for signaling is IPv4.
- **IPv6:** The preferred IP version for signaling is IPv6.

**Example:** xConfiguration SIP PreferredIPSignaling: IPv4

**xConfiguration SIP OCSP Mode**
Not applicable in this version.

**xConfiguration SIP OCSP DefaultResponder**
Not applicable in this version.

**xConfiguration SIP Profile [1..1] Ice Mode**
ICE (Interactive Connectivity Establishment, RFC 5245) is a NAT traversal solution that the endpoints can use to discover the optimized media path. Thus the shortest route for audio and video is always secured between the endpoints. NOTE: ICE is not supported when registered to CUCM (Cisco Unified Communication Manager).

**Requires user role:** ADMIN

**Value space:** <Auto/Off/On>

- **Auto:** When set to Auto, ICE will be enabled if a turn server is provided, otherwise ICE will be disabled.
- **Off:** Set to Off to disable ICE.
- **On:** Set to On to enable ICE.

**Example:** xConfiguration SIP Profile 1 Ice Mode: Auto
xConfiguration SIP Profile [1..1] Ice DefaultCandidate
This is the default IP address that the endpoint will receive media on until ICE has reached a conclusion about which media route to use (up to the first 5 seconds of a call).

Requires user role: ADMIN
Value space: <Off/On>
- Host: The endpoint will receive media on its own IP address.
- Rflx: The endpoint will receive media on its public IP address as seen by the TURN server.
- Relay: The endpoint will receive media on the IP address and port allocated on the TURN server, and is used as a fallback until ICE has concluded.

Example: xConfiguration SIP Profile 1 Ice DefaultCandidate: Host

xConfiguration SIP Profile [1..1] Turn DiscoverMode
Set the discover mode to enable/disable the application to search for available Turn servers in DNS. Before making calls, the system will test if port allocation is possible.

Requires user role: ADMIN
Value space: <Off/On>
- Off: Set to Off to disable discovery mode.
- On: When set to On, the system will search for available Turn servers in DNS, and before making calls the system will test if port allocation is possible.

Example: xConfiguration SIP Profile Turn DiscoverMode: On

xConfiguration SIP Profile [1..1] Turn BandwidthProbe
Not applicable in this version.

xConfiguration SIP Profile [1..1] Turn DropRflx
DropRflx will make the endpoint force media through the Turn relay, unless the remote endpoint is on the same network.

Requires user role: ADMIN
Value space: <Off/On>
- Off: Disable DropRflx.
- On: The system will force media through the Turn relay when the remote endpoint is on another network.

Example: xConfiguration SIP Profile Turn DropRflx: Off

xConfiguration SIP Profile [1..1] Turn Server
This is the address of the TURN (Traversal Using Relay NAT) server that the endpoints will use. It is used as a media relay fallback and it is also used to discover the endpoint’s own public IP address.

Requires user role: ADMIN
Value space: <S: 0, 255>
Format: The preferred format is DNS SRV record (e.g. _turn._udp.<domain>), or it can be a valid IPv4 or IPv6 address.

Example: xConfiguration SIP Profile 1 Turn Server: "_turn._udp.example.com"

xConfiguration SIP Profile [1..1] Turn UserName
The user name needed for accessing the TURN server.

Requires user role: ADMIN
Value space: <S: 0, 128>
Format: String with a maximum of 128 characters.

Example: xConfiguration SIP Profile 1 Turn UserName: ""

xConfiguration SIP Profile [1..1] Turn Password
The password needed for accessing the TURN server.

Requires user role: ADMIN
Value space: <S: 0, 128>
Format: String with a maximum of 128 characters.

Example: xConfiguration SIP Profile 1 Turn Password: ""

xConfiguration SIP Profile [1..1] URI
The SIP URI (Uniform Resource Identifier) is the address that is used to identify the video system. The URI is registered and used by the SIP services to route inbound calls to the system. The SIP URI syntax is defined in RFC 3261.

Requires user role: ADMIN
Value space: <S: 0, 255>
Format: String with maximum 255 characters and compliant with the SIP URI syntax.

Example: xConfiguration SIP Profile 1 URI: "sip:firstname.lastname@company.com"
xConfiguration SIP Profile [1..1] DisplayName
When configured the incoming call will report the DisplayName instead of the SIP URI.

Requires user role: ADMIN
Value space: <S: 0, 255>
  Format: String with a maximum of 255 characters.

Example: xConfiguration SIP Profile 1 DisplayName: ""

xConfiguration SIP Profile [1..1] Authentication [1..1] LoginName
This is the user name part of the credentials used to authenticate towards the SIP proxy.

Requires user role: ADMIN
Value space: <S: 0, 128>
  Format: String with a maximum of 128 characters.

Example: xConfiguration SIP Profile 1 Authentication 1 LoginName: ""

xConfiguration SIP Profile [1..1] Authentication [1..1] Password
This is the password part of the credentials used to authenticate towards the SIP proxy.

Requires user role: ADMIN
Value space: <S: 0, 128>
  Format: String with a maximum of 128 characters.

Example: xConfiguration SIP Profile 1 Authentication 1 Password: ""

xConfiguration SIP Profile [1..1] DefaultTransport
Select the transport protocol to be used over the LAN.

Requires user role: ADMIN
Value space: <TCP/UDP/Tls/Auto>
  TCP: The system will always use TCP as the default transport method.
  UDP: The system will always use UDP as the default transport method.
  Tls: The system will always use TLS as the default transport method. For TLS connections a SIP CA-list can be uploaded to the video system. If no such CA-list is available on the system then anonymous Diffie Hellman will be used.
  Auto: The system will try to connect using transport protocols in the following order: TLS, TCP, UDP.

Example: xConfiguration SIP Profile 1 DefaultTransport: Auto

xConfiguration SIP Profile [1..1] TlsVerify
For TLS connections a SIP CA-list can be uploaded to the video system. This can be done from the web interface.

Requires user role: ADMIN
Value space: <Off/On>
  Off: Set to Off to allow TLS connections without verifying them. The TLS connections are allowed to be set up without verifying the x.509 certificate received from the server against the local CA-list. This should typically be selected if no SIP CA-list has been uploaded.
  On: Set to On to verify TLS connections. Only TLS connections to servers, whose x.509 certificate is validated against the CA-list, will be allowed.

Example: xConfiguration SIP Profile 1 TlsVerify: Off

xConfiguration SIP Profile [1..1] Outbound
Turn on or off the client initiated connections mechanism for firewall traversal, connection reuse and redundancy. The current version supports RFC 5626.

Requires user role: ADMIN
Value space: <Off/On>
  Off: Connect to the single proxy configured first in Proxy Address list.
  On: Set up multiple outbound connections to servers in the Proxy Address list.

Example: xConfiguration SIP Profile 1 Outbound: Off

xConfiguration SIP Profile [1..1] Proxy [1..4] Address
The Proxy Address is the manually configured address for the outbound proxy. It is possible to use a fully qualified domain name, or an IP address. The default port is 5060 for TCP and UDP but another one can be provided. If SIP Profile Outbound is enabled, multiple proxies can be addressed.

Requires user role: ADMIN
Value space: <S: 0, 255>
  Format: A valid IPv4 address, IPv6 address or DNS name.

Example: xConfiguration SIP Profile 1 Proxy 1 Address: ""
xConfiguration SIP Profile [1..1] Proxy [1..4] Discovery
Select if the SIP Proxy address is to be obtained manually or by using Dynamic Host Configuration Protocol (DHCP).

Requires user role: ADMIN
Value space: <Auto/Manual>
  Auto: When Auto is selected, the SIP Proxy address is obtained using Dynamic Host Configuration Protocol (DHCP).
  Manual: When Manual is selected, the manually configured SIP Proxy address will be used.

Example: xConfiguration SIP Profile 1 Proxy 1 Discovery: Manual

xConfiguration SIP Profile [1..1] Type
Enables SIP extensions and special behaviour for a vendor or provider.
NOTE: The SIP types Alcatel, Avaya, Microsoft, and Nortel are no longer supported from software version TC6.3.

Requires user role: ADMIN
Value space: <Standard/Cisco>
  Standard: Use this when registering to standard SIP Proxy (tested with Cisco TelePresence VCS and Broadsoft)
  Cisco: Use this when registering to Cisco Unified Communication Manager.

Example: xConfiguration SIP Profile 1 Type: Standard

xConfiguration SIP Profile [1..1] Mailbox
When registered to a Cisco Unified Communications Manager (CUCM) you may be offered the option of having a private voice mailbox. Enter the number (address) of the mailbox in this setting, or leave the string empty if you do not have a voice mailbox.

Requires user role: ADMIN
Value space: <S: 0, 255>
  Format: String with a maximum of 255 characters.

Example: xConfiguration SIP Profile 1 Mailbox: "12345678"
Standby configuration

xConfiguration Standby Control
Determine whether the system should go into standby mode or not.

Requires user role: ADMIN

Value space: <Off/On>

Off: The system will not enter standby mode.

On: Enter standby mode when the Standby Delay has timed out. Requires the Standby Delay to be set to an appropriate value.

Example: xConfiguration Standby Control: On

xConfiguration Standby Delay
Define how long (in minutes) the system shall be in idle mode before it goes into standby mode. Requires the Standby Control to be enabled.

Requires user role: ADMIN

Value space: <1..480>

Range: Select a value from 1 to 480 minutes.

Example: xConfiguration Standby Delay: 10

xConfiguration Standby BootAction
Define the camera position after a restart of the codec.

Requires user role: ADMIN

Value space: <None/Preset1/Preset2/Preset3/Preset4/Preset5/Preset6/Preset7/Preset8/Preset9/Preset10/Preset11/Preset12/Preset13/Preset14/Preset15/RestoreCameraPosition/DefaultCameraPosition>

None: No action.

Preset1 to PReset15: After a reboot the camera position will be set to the position defined by the selected preset.

RestoreCameraPosition: After a reboot the camera position will be set to the position it had before the last boot.

DefaultCameraPosition: After a reboot the camera position will be set to the factory default position.

Example: xConfiguration Standby BootAction: DefaultCameraPosition

xConfiguration Standby StandbyAction
Define the camera position when going into standby mode.

Requires user role: ADMIN

Value space: <None/PrivacyPosition>

None: No action.

PrivacyPosition: Turns the camera to a sideways position for privacy.

Example: xConfiguration Standby StandbyAction: PrivacyPosition

xConfiguration Standby WakeupAction
Define the camera position when leaving standby mode.

Requires user role: ADMIN

Value space: <None/Preset1/Preset2/Preset3/Preset4/Preset5/Preset6/Preset7/Preset8/Preset9/Preset10/Preset11/Preset12/Preset13/Preset14/Preset15/RestoreCameraPosition/DefaultCameraPosition>

None: No action.

Preset1 to PReset15: When leaving standby the camera position will be set to the position defined by the selected preset.

RestoreCameraPosition: When leaving standby the camera position will be set to the position it had before entering standby.

DefaultCameraPosition: When leaving standby the camera position will be set to the factory default position.

Example: xConfiguration Standby WakeupAction: RestoreCameraPosition
SystemUnit configuration

**xConfiguration SystemUnit Name**

Enter a System Name to define a name of the system unit. If the H.323 Alias ID is configured on the system then this ID will be used instead of the system name. The system name will be displayed:

1) When the codec is acting as an SNMP Agent.
2) Towards a DHCP server.

Requires user role: **ADMIN**

Value space: `<S: 0, 50>`

Format: String with a maximum of 50 characters.

Example: `xConfiguration SystemUnit Name: "Meeting Room"`

**xConfiguration SystemUnit MenuLanguage**

Select the language to be used in the menus on screen, or on the Touch screen control panel. All languages are not supported on both user interfaces. The default language is English.

Requires user role: **USER**

Value space: `<English/ChineseSimplified/ChineseTraditional/Catalan/Czech/Danish/Dutch/Finnish/French/German/Hungarian/Italian/Japanese/Korean/Norwegian/Polish/PortugueseBrazilian/Russian/Spanish/SpanishLatin/Swedish/Turkish/Arabic/Hebrew>`

Example: `xConfiguration SystemUnit MenuLanguage: English`

**xConfiguration SystemUnit CallLogging Mode**

Set the call logging mode for calls that are received or placed by the system. The call logs may then be viewed via the web interface or using the `xHistory` command.

Requires user role: **ADMIN**

Value space: `<Off/On>`

- Off: Disable logging.
- On: Enable logging.

Example: `xConfiguration SystemUnit CallLogging Mode: On`

**xConfiguration SystemUnit ContactInfo Type**

Choose which type of contact information to show in the status field in the upper left corner of the main display and Touch screen control panel. The information can also be read with the command `xStatus SystemUnit ContactInfo`.

Requires user role: **ADMIN**

Value space: `<Auto/None/IPv4/IPv6/H323Id/E164Alias/H320Number/SipUri/SystemName/DisplayName>`

- Auto: Show the address which another system can dial to reach this system. The address depends on the default call protocol and system registration.
- None: Do not show any contact information in the status field.
- IPv4: Show the IPv4 address as contact information.
- IPv6: Show the IPv6 address as contact information.
- H323Id: Show the H.323 ID as contact information (see the H323 Profile [1..1] H323Alias ID setting).
- E164Alias: Show the H.323 E164 Alias as contact information (see the H323 Profile [1..1] H323Alias E164 setting).
- H320Number: Show the H.320 number as contact information (only applicable if connected to a Cisco TelePresence ISDN Link gateway).
- SipUri: Show the SIP URI as contact information (see the SIP Profile [1..1] URI setting).
- SystemName: Show the system name as contact information (see the SystemUnit Name setting).
- DisplayName: Show the display name as contact information (see the SIP Profile [1..1] DisplayName setting).

Example: `xConfiguration SystemUnit ContactInfo Type: Auto`

**xConfiguration SystemUnit IrSensor**

Both the Codec C Series and PrecisionHD camera have IR sensors, and only one of them needs to be enabled at the time. The IR sensor LED is located on the front of the codec and the camera and flickers when an IR signal is received from the remote control.

Requires user role: **ADMIN**

Value space: `<Auto/Off/On>`

- Auto: The system will automatically disable the IR sensor on the codec if the IR sensor at camera is enabled. Otherwise, the IR sensor on the codec will be enabled.
- Off: Disable the IR sensor on the codec.
- On: Enable the IR sensor on the codec.

Example: `xConfiguration SystemUnit IrSensor: Auto`
Time configuration

xConfiguration Time Zone
Set the time zone where the system is located, using Windows time zone description format.

Requires user role: USER

Value space: <GMT-12:00 (International Date Line West)/GMT-11:00 (Midway Island, Samoa)/GMT-10:00 (Hawaii)/GMT-09:00 (Alaska)/GMT-08:00 (Pacific Time (US & Canada), Tijuana)/GMT-07:00 (Arizona)/GMT-07:00 (Mountain Time (US & Canada))/GMT-07:00 (Chihuahua, La Paz, Mazatlan)/GMT-06:00 (Central America)/GMT-06:00 (Saskatchewan)/GMT-06:00 (Guadalajara, Mexico City, Monterrey)/GMT-06:00 (Central Time (US & Canada))/GMT-05:00 (Indiana (East))/GMT-05:00 (Bogota, Lima, Quito)/GMT-05:00 (Eastern Time (US & Canada))/GMT-04:30 (Caracas)/GMT-04:00 (La Paz)/GMT-04:00 (Santiago)/GMT-04:00 (Atlantic Time (Canada))/GMT-03:30 (Newfoundland)/GMT-03:00 (Buenos Aires, Georgetown)/GMT-03:00 (Greenland)/GMT-03:00 (Brasilia)/GMT-02:00 (Mid-Atlantic)/GMT-01:00 (Cape Verde Is.)/GMT-01:00 (Azores)/GMT (Casablanca, Monrovia)/GMT (Coordinated Universal Time)/GMT (Greenwich Mean Time : Dublin, Edinburgh, Lisbon, London)/GMT+01:00 (West Central Africa)/GMT+01:00 (Amsterdam, Berlin, Bern, Rome, Stockholm, Vienna)/GMT+01:00 (Brussels, Copenhagen, Madrid, Paris)/GMT+01:00 (Sarajevo, Skopje, Warsaw, Zagreb)/GMT+01:00 (Belgrade, Bratislava, Budapest, Ljubljana, Prague)/GMT+02:00 (Harare, Pretoria)/GMT+02:00 (Athens, Istanbul, Minsk)/GMT+02:00 (Helsinki, Kyiv, Riga, Sofia, Tallinn, Vilnius)/GMT+02:00 (Cairo)/GMT+02:00 (Bucharest)/GMT+03:00 (Nairobi)/GMT+03:00 (Moscow, St. Petersburg, Volgograd)/GMT+03:00 (Baghdad)/GMT+03:30 (Tehran)/GMT+04:00 (Abu Dhabi, Muscat)/GMT+04:00 (Baku, Tbilisi, Yerevan)/GMT+04:30 (Kabul)/GMT+05:00 (Islamabad, Karachi, Tashkent)/GMT+05:00 (Ekaterinburg)/GMT+05:30 (Chennai, Kolkata, Mumbai, New Delhi)/GMT+05:45 (Kathmandu)/GMT+06:00 (Sri Jayawardenepura)/GMT+06:00 (Astan, Dasha)/GMT+06:00 (Almaty, Novosibirsk)/GMT+06:30 (Rangoon)/GMT+07:00 (Bangkok, Hanoi, Jakarta)/GMT+07:00 (Krasnoyarsk)/GMT+08:00 (Perth)/GMT+08:00 (Taipei)/GMT+08:00 (Kuala Lumpur, Singapore)/GMT+08:00 (Beijing, Chongqing, Hong Kong, Urumqi)/GMT+08:00 (Irkutsk, Ulaan Batar)/GMT+09:00 (Osaka, Sapporo, Tokyo)/GMT+09:00 (Seoul)/GMT+09:00 (Yakutsk)/GMT+09:30 (Darwin)/GMT+09:30 (Adelaide)/GMT+10:00 (Guam, Port Moresby)/GMT+10:00 (Brisbane)/GMT+10:00 (Vladivostok)/GMT+10:00 (Hobart)/GMT+10:00 (Canberra, Melbourne, Sydney)/GMT+11:00 (Magadan, Solomon Is., New Caledonia)/GMT+12:00 (Fiji, Kamchatka, Marshall Is.)/GMT+12:00 (Auckland, Wellington)/GMT+13:00 (Nuku alofa)>

Range: Select a time zone from the list time zones. If using a command line interface; watch up for typos.

Example: xConfiguration Time Zone: "GMT (Greenwich Mean Time : Dublin, Edinburgh, Lisbon, London)"

xConfiguration Time TimeFormat
Set the time format.

Requires user role: USER

Value space: <24H/12H>

24H: Set the time format to 24 hours.
12H: Set the time format to 12 hours (AM/PM).

Example: xConfiguration Time TimeFormat: 24H

xConfiguration Time DateFormat
Set the date format.

Requires user role: USER

Value space: <DD_MM_YY/MM_DD_YY/YY_MM_DD>

DD_MM_YY: The date January 30th 2010 will be displayed: 30.01.10
MM_DD_YY: The date January 30th 2010 will be displayed: 01.30.10
YY_MM_DD: The date January 30th 2010 will be displayed: 10.01.30

Example: xConfiguration Time DateFormat: DD _ MM _ YY
UserInterface configuration

xConfiguration UserInterface TouchPanel DefaultPanel
Define what (contact list, meeting list, or dial pad) the Touch screen control panel will display on wake up.

Requires user role: USER

Value space: <None/LastUsed/ContactList/MeetingList/Dialpad>

None: None of the below options will appear as default on the Touch screen control panel.

LastUsed: The last used (contact list, meeting list, or dial pad) will appear as default on the Touch screen control panel.

ContactList: The contact list (favorites, directory and history) will appear as default on the Touch screen control panel.

MeetingList: The list of scheduled meetings will appear as default on the Touch screen control panel.

DialPad: The dial pad will appear as default on the Touch screen control panel.

Example: xConfiguration UserInterface TouchPanel DefaultPanel: None

UserInterface UserPreferences
Some user preferences (ringtone, volume, language, date and time, etc) can be made available from the Settings menu, or from the Settings > Administrator menu on the Touch screen control panel. Accessing the Administrator menus requires that the user has admin privileges.

Requires user role: ADMIN

Value space: <Off/On>

Off: The user preferences are available from the Settings > Administrator menu on the Touch screen control panel, for users with admin privileges.

On: The user preferences are available from the Settings menu on the Touch screen control panel.

Example: xConfiguration UserInterface UserPreferences: On

Video configuration

xConfiguration Video AllowWebSnapshots
Allow or disallow snapshots being taken of the local input sources, remote sites and presentation channel. If allowed, the web interface Call Control page will show snapshots both when idle and in a call.

NOTE: This feature is disabled by default, and must be enabled from the on-screen menu, from a directly connected Touch control panel, or via the codec's serial port (USB port and RS-232 adapter).

Requires user role: ADMIN

Value space: <Off/On>

Off: Capturing web snapshots is not allowed.

On: Web snapshots can be captured and displayed on the web interface.

Example: xConfiguration Video AllowWebSnapshots: Off

xConfiguration Video CamCtrlPip CallSetup Mode
This setting is used to switch on self-view for a short while when setting up a call. The Video CamCtrlPip CallSetup Duration setting determines for how long it remains on. This applies when self-view in general is switched off.

Requires user role: ADMIN

Value space: <Off/On>

Off: self-view is not shown automatically during call setup.

On: self-view is shown automatically during call setup.

Example: xConfiguration Video CamCtrlPip CallSetup Mode: Off

xConfiguration Video CamCtrlPip CallSetup Duration
This setting only has an effect when the Video CamCtrlPip CallSetup Mode setting is switched On. In this case, the number of seconds set here determines for how long self-view is shown before it is automatically switched off.

Requires user role: ADMIN

Value space: <1..60>

Range: Choose for how long self-view remains on. The valid range is between 1 and 60 seconds.

Example: xConfiguration Video CamCtrlPip CallSetup Duration: 10
xConfiguration Video DefaultPresentationSource

Define which video input source shall be used as the default presentation source when you press the Presentation key on the remote control. If using the Touch screen control panel this setting has no effect. The Video Input Source n Connector setting defines which input connector to use for input source n.

Requires user role: USER

Value space: <1/2>

Range: Select the video source to be used as the presentation source.

Example: xConfiguration Video DefaultPresentationSource: 2

xConfiguration Video Input DVI [2] RGBQuantizationRange

All devices with DVI inputs should follow the rules for RGB video quantization range defined in CEA-861. Unfortunately some devices do not follow the standard and this configuration may be used to override the settings to get a perfect image with any source. The default value is set to Full because most DVI sources expects full quantization range.

Requires user role: ADMIN

Value space: <Auto/Full/Limited>

Auto: RGB quantization range is automatically selected based on video format according to CEA-861-E. CE video formats will use limited quantization range levels. IT video formats will use full quantization range levels.

Full: Full quantization range. The R, G, B quantization range includes all code values (0 – 255). This is defined in CEA-861-E.

Limited: Limited Quantization Range. R, G, B quantization range that excludes some code values at the extremes (16 – 235). This is defined in CEA-861-E.

Example: xConfiguration Video Input 1 DVI 2 RGBQuantizationRange: Full

xConfiguration Video Input DVI [2] Type

The official DVI standard supports both digital and analog signals. In most cases the default AutoDetect setting can detect whether the signal is analag RGB or digital. However, in some rare cases when DVI-I cables are used (these cables can carry both the analog and digital signals) the auto detection fails. This setting makes it possible to override the AutoDetect and select the correct DVI video input.

Requires user role: ADMIN

Value space: <AutoDetect/Digital/AnalogRGB/AnalogYPbPr>

AutoDetect: Set to AutoDetect to automatically detect if the signal is analag RGB or digital.

Digital: Set to Digital to force the DVI video input to Digital when using DVI-I cables with both analog and digital pins and AutoDetect fails.

AnalogRGB: Set to AnalogRGB to force the DVI video input to AnalogRGB when using DVI-I cables with both analog and digital pins and AutoDetect fails.

AnalogYPbPr: Set to AnalogYPbPr to force the DVI video input to AnalogYPbPr, as the component (YPbPr) signal cannot be auto detected.

Example: xConfiguration Video Input DVI [2] Type: AutoDetect

Typical resolutions used for different optimal definition profiles, call rates and frame rates

<table>
<thead>
<tr>
<th>Frame rate</th>
<th>Optimal Definition Profile</th>
<th>Call rate</th>
</tr>
</thead>
<tbody>
<tr>
<td>30 fps</td>
<td>Normal 512 x 288 1024 x 576 1280 x 720</td>

<td>1920 x 1080 1920 x 1080 1920 x 1080</td>
<td>2010 x 2010 2010 x 2010 2010 x 2010</td>
</tr>
</tbody>
</table>

Limited: Limited Quantization Range. R, G, B quantization range that excludes some code values at the extremes (16 – 235). This is defined in CEA-861-E.

Example: xConfiguration Video Input 1 HDMI 1 RGBQuantizationRange: Auto

xConfiguration Video Input Source [1..3] Name

Enter a name for the video input source. NOTE: Video input source 3 is not supported in this version.

Requires user role: ADMIN

Value space: <S: 0, 50>

Format: String with a maximum of 50 characters.

Example: xConfiguration Video Input Source 1 Name: ""
xConfiguration Video Input Source [1] Connector
Select which video input connector to be active on video input source 1.

Requires user role: ADMIN

Value space: <HDMI>
HDMI: Select HDMI when you want to use the HDMI as input source 1.

Example: xConfiguration Video Input Source 1 Connector: HDMI

xConfiguration Video Input Source [2] Connector
Select which video input connector to be active on video input source 2.

Requires user role: ADMIN

Value space: <DVI>
DVI: Select DVI-I when you want to use the DVI-I 2 as input source 2.

Example: xConfiguration Video Input Source 2 Connector: DVI

xConfiguration Video Input Source [3] Connector
Not applicable in this version.

xConfiguration Video Input Source [1..3] Type
Set which type of input source is connected to the video input. NOTE: Video input source 3 is not supported in this version.

Requires user role: ADMIN

Value space: <other/camera/PC/DVD/document_camera>
Other: Select Other when some other type of equipment is connected to the selected video input.
Camera: Select Camera when you have a camera connected to the selected video input.
PC: Select PC when you have a PC connected to the selected video input.
DVD: Select DVD when you have a DVD player connected to the selected video input.
Document_Camera: Select Document_Camera when you have a document camera connected to the selected video input.

Example: xConfiguration Video Input Source 1 Type: PC

xConfiguration Video Input Source [1..3] PresentationSelection
Define how the video system will behave when a presentation source is connected to the video input. In general, any input source can be used as a presentation source; normally, the main camera (self-view) will not be used as a presentation source. Note that sharing the presentation with the far end always requires additional action (tap Start Presenting on the Touch screen control panel, or press the Presentation key on the remote control).

NOTE: Video input source 3 is not supported in this version.

Requires user role: ADMIN

Value space: <Manual/Automatic/OnConnect/Hidden>
Manual: In manual mode (default value), the contents of the input source will not be presented on the screen until you select it. Use either the remote control or the Touch screen control panel to choose which input source to present.
Automatic: In automatic mode, the content on the input source will be presented on screen automatically. If more than one source is set to Automatic, the last connected source will be used. If any content was active (presented) when the call was disconnected, the content will still be displayed locally.
OnConnect: When in on-connect mode, the content on the input source will be presented on screen when a cable is connected. Otherwise, the behavior is like when in manual mode.
Hidden: In hidden mode, the contents of the input source do not appear in the graphical user interface.

Example: xConfiguration Video Input Source 1 PresentationSelection: Manual

xConfiguration Video Input Source [1..3] Visibility
Define the visibility of the video input source in the menus on the user interface.

Requires user role: ADMIN

Value space: <Never/Always/IfSignal>
Never: Set to Never when the input source is not expected to be used as a presentation source.
Always: When set to Always, the menu selection for the video input source will always be visible on the graphical user interface.
IfSignal: When set to IfSignal, the menu selection for the video input source will only be visible when a presentation source is connected to the video input.

Example: xConfiguration Video Input Source 1 Visibility: IfSignal
xConfiguration Video Input Source [1..3] CameraControl Mode
Select whether or not to enable camera control for the selected video input source when the video input is active.

NOTE: Video input source 3 is not supported in this version.

Requires user role: ADMIN

Value space: <Off/On>

Off: Disable camera control.
On: Enable camera control.

Example: xConfiguration Video Input Source 1 CameraControl Mode: On

xConfiguration Video Input Source [1..3] CameraControl CameraId
Indicates the ID of the camera. This value is fixed in this product.

NOTE: Video input source 3 is not supported in this version.

Value space: <1>

Range: Indicates the ID of the camera.

xConfiguration Video Input Source [1..3] OptimalDefinition Profile
The Video Input Source Quality setting must be set to Motion for the optimal definition settings to take any effect.

The optimal definition profile should reflect the lighting conditions in your room and the quality of the video input (camera); the better the lighting conditions and video input, the higher the profile. Then, in good lighting conditions, the video encoder will provide better quality (higher resolution or frame rate) for a given call rate.

Generally, we recommend using the Normal or Medium profiles. However, when the lighting conditions are good, the High profile can be set in order to increase the resolution for a given call rate.

Some typical resolutions used for different optimal definition profiles, call rates and transmit frame rates are shown in the table below. It is assumed that dual video is not used. The resolution must be supported by both the calling and called systems.

Use the Video Input Source OptimalDefinition Threshold60fps setting to decide when to use the 60 fps frame rate.

NOTE: Video input source 3 is not supported in this version.

Requires user role: ADMIN

Value space: <Normal/Medium/High>

Normal: Use this profile for a normally to poorly lit environment. Resolutions will be set rather conservative.

Medium: Requires good and stable lighting conditions and a good quality video input. For some call rates this leads to higher resolution.

High: Requires nearly optimal video conferencing lighting conditions and a good quality video input in order to achieve a good overall experience. Rather high resolutions will be used.

Example: xConfiguration Video Input Source 1 OptimalDefinition Profile: Medium
xConfiguration Video Input Source [1..3] OptimalDefinition Threshold60fps

For each video input, this setting tells the system the lowest resolution where it should transmit 60fps. So for all resolutions lower than this, the maximum transmitted frame rate would be 30fps, while above this resolution 60fps would also be possible, if the available bandwidth is adequate.

NOTE: Video input source 3 is not supported in this version.

Requires user role: ADMIN

Value space: <512_288/768_448/1024_576/1280_720/1920_1080/Neve>

512_288: Set the threshold to 512x288.
768_448: Set the threshold to 768x448.
1024_576: Set the threshold to 1024x576.
1280_720: Set the threshold to 1280x720.
1920_1080: Set the threshold to 1920x1080.
Never: Do not set a threshold for transmitting 60fps.

Example: xConfiguration Video Input Source 1 OptimalDefinition Threshold60fps: 1280_720

xConfiguration Video Input Source [1..3] Quality

When encoding and transmitting video there will be a trade-off between high resolution and high frame rate. For some video sources it is more important to transmit high frame rate than high resolution and vice versa. The Quality setting specifies whether to give priority to high frame rate or to high resolution for a given source.

NOTE: Video input source 3 is not supported in this version.

Requires user role: ADMIN

Value space: <Motion/Sharpness>

Motion: Gives the highest possible frame rate. Used when there is a need for higher frame rates, typically when a large number of participants are present or when there is a lot of motion in the picture.

Sharpness: Gives the highest possible resolution. Used when you want the highest quality of detailed images and graphics.

Example: xConfiguration Video Input Source 1 Quality: Motion

xConfiguration Video MainVideoSource

Define which video input source shall be used as the main video source. The video input source is configured with the "Video Input Source [1..n] Connector" setting.

NOTE: Video input source 3 is not supported in this version.

Requires user role: USER

Value space: <1/2/3>

Range: Select the source to be used as the main video source.

Example: xConfiguration Video MainVideoSource: 1

xConfiguration Video Layout DisableDisconnectedLocalOutputs

Prevent the built-in layout engine from setting layouts on local outputs that have no monitor connected.

Requires user role: ADMIN

Value space: <Off/On>

Off: The built-in layout engine sets layout on all local outputs, also the ones not having any monitor connected.
On: The built-in layout engine does only set layout on local outputs having a monitor connected.

Example: xConfiguration Video Layout DisableDisconnectedLocalOutputs: On

xConfiguration Video Layout Engine LocalMode

Sets the operating mode of the built-in layout engine.

Requires user role: ADMIN

Value space: <Disabled/Enabled/DisabledPIPs>

Disabled: The built-in layout engine does not display any frames in the layout on the local output.
Enabled: The built-in layout engine displays all frames in the layout on all local outputs.
DisabledPIPs: The built-in layout engine does not display any PIP frame in the layout on the local output.

Example: xConfiguration Video Layout Engine LocalMode: Enabled
**xConfiguration Video Layout LocalLayoutFamily**
Select which video layout family to use locally.

- **Requires user role:** ADMIN
- **Value space:** <Auto/FullScreen/Equal/PresentationSmallSpeaker/PresentationLargeSpeaker/Prominent/Overlay/Single>
  - Auto: The default layout family, as given in the layout database provided by the system, will be used as the local layout.
  - FullScreen: The FullScreen layout family will be used as the local layout. It means that the active speaker or presentation will be shown in full screen. Using this value is not recommended as from TC6.0.
  - Equal: The Equal layout family will be used as the local layout. All videos have equal size, as long as there is space enough on the screen.
  - PresentationSmallSpeaker: The PresentationSmallSpeaker layout family will be used as the local layout. Using this value is not recommended as from TC6.0.
  - PresentationLargeSpeaker: The PresentationLargeSpeaker layout family will be used as the local layout. Using this value is not recommended as from TC6.0.
  - Prominent: The Prominent layout family will be used as the local layout. The active speaker, or the presentation if present, will be a large picture, while the other participants will be small pictures. Transitions between active speakers are voice switched.
  - Overlay: The Overlay layout family will be used as the local layout. The active speaker, or the presentation if present, will be shown in full screen, while the other participants will be small pictures-in-picture (PiP). Transitions between active speakers are voice switched.
  - Single: The active speaker, or the presentation if present, will be shown in full screen. The other participants are not shown. Transitions between active speakers are voice switched.

**Example:** `xConfiguration Video Layout LocalLayoutFamily: Auto`

**xConfiguration Video Layout RemoteLayoutFamily**
Select which video layout family to be used for the remote participants.

- **Requires user role:** ADMIN
- **Value space:** <Auto/FullScreen/Equal/PresentationSmallSpeaker/PresentationLargeSpeaker/Prominent/Overlay/Single>
  - Auto: The default layout family, as given by the local layout database, will be used as the remote layout.
  - FullScreen: The FullScreen layout family will be used as the remote layout. It means that the active speaker or presentation will be shown in full screen. It is recommended not to use this value as from TC6.0.
  - Equal: The Equal layout family will be used as the remote layout. All videos have equal size, as long as there is space enough on the screen.
  - PresentationSmallSpeaker: The PresentationSmallSpeaker layout family will be used as the remote layout. Using this value is not recommended as from TC6.0.
  - PresentationLargeSpeaker: The PresentationLargeSpeaker layout family will be used as the remote layout. Using this value is not recommended as from TC6.0.
  - Prominent: The Prominent layout family will be used as the remote layout. The active speaker, or the presentation if present, will be a large picture, while the other participants will be small pictures. Transitions between active speakers are voice switched.
  - Overlay: The Overlay layout family will be used as the remote layout. The active speaker, or the presentation if present, will be shown in full screen, while the other participants will be small pictures-in-picture (PiP). Transitions between active speakers are voice switched.
  - Single: The active speaker, or the presentation if present, will be shown in full screen. The other participants are not shown. Transitions between active speakers are voice switched.

**Example:** `xConfiguration Video Layout RemoteLayoutFamily: Auto`

**xConfiguration Video Layout PresentationDefault View**
Determine how the presentation will show on screen when you start sharing a presentation.

- **Requires user role:** ADMIN
- **Value space:** <Default/Minimized/Maximized>
  - Default: The presentation is a part of the layout.
  - Minimized: The presentation starts up in PiP mode.
  - Maximized: The presentation starts up in full screen mode.

**Example:** `xConfiguration Video Layout PresentationDefault View: Default`

**xConfiguration Video Layout Scaling**
Define how the system shall adjust the aspect ratio for images or frames when there is a difference between the image and the frame it is to be placed in.

- **Requires user role:** ADMIN
- **Value space:** <Off/On>
  - Off: No adjustment of the aspect ratio.
  - On: Let the system automatically adjust aspect ratio.

**Example:** `xConfiguration Video Layout Scaling: On`
Define what to do if the aspect ratio of a video input source doesn’t match the aspect ratio of the corresponding image frame in a composition. For example if you have a 4:3 input source (like XGA) to be displayed on a 16:9 output (like HD720).

**Requires user role:** ADMIN

**Value space:** <Manual/MaintainAspectRatio/StretchToFit>

- **Manual:** If the difference in aspect ratio between the video input source and the target image frame is less than the Video Layout ScaleToFitThreshold setting (in percent), the image is stretched to fit. If not, the system will maintain the original aspect ratio.
- **MaintainAspectRatio:** Maintain the aspect ratio of the input source, and fill in black in the rest of the frame (letter boxing or pillar boxing).
- **StretchToFit:** Stretch (horizontally or vertically) the input source to fit into the image frame. NOTE: The general limitation is that you cannot upscale in one direction and at the same time downscale in the other direction. In such situations the codec will apply letterboxing.

**Example:** `xConfiguration Video Layout ScaleToFit: MaintainAspectRatio`

### xConfiguration Video Layout ScaleToFitThreshold

Only applicable if the Video Layout ScaleToFit setting is set to manual. If the difference in aspect ratio between the video input source and the target image frame is less than the ScaleToFitThreshold setting (in percent), the image is stretched to fit. If not, the system will maintain the original aspect ratio.

**Requires user role:** ADMIN

**Value space:** <0..100>

**Range:** Select a value from 0 to 100 percent.

**Example:** `xConfiguration Video Layout ScaleToFitThreshold: 5`

### xConfiguration Video PIP ActiveSpeaker DefaultValue Position

Determine the position on screen of the active speaker picture-in-picture (PiP). The setting only takes effect when using a video layout where the active speaker is a PiP, i.e. the Overlay layout, or possibly a Custom layout (see the Video Layout LocalLayoutFamily setting). The setting takes effect from the next call onwards; if changed during a call, it will have no effect on the current call.

**Requires user role:** ADMIN

**Value space:** <Current/UpperLeft/UpperCenter/UpperRight/CenterLeft/CenterRight/LowerLeft/LowerRight>

- **Current:** The position of the active speaker PiP will be kept unchanged when leaving a call.
- **UpperLeft:** The active speaker PiP will appear in the upper left corner of the screen.
- **UpperCenter:** The active speaker PiP will appear in the upper center position.
- **UpperRight:** The active speaker PiP will appear in the upper right corner of the screen.
- **CenterLeft:** The active speaker PiP will appear in the center left position.
- **CentreRight:** The active speaker PiP will appear in the center right position.
- **LowerLeft:** The active speaker PiP will appear in the lower left corner of the screen.
- **LowerRight:** The active speaker PiP will appear in the lower right corner of the screen.

**Example:** `xConfiguration Video PIP ActiveSpeaker DefaultValue Position: Current`

### xConfiguration Video PIP Presentation DefaultValue Position

Determine the position on screen of the presentation picture-in-picture (PiP). The setting only takes effect when the presentation is explicitly minimized to a PiP, for example using the remote control or the Touch screen control panel. The setting takes effect from the next call onwards; if changed during a call, it will have no effect on the current call.

**Requires user role:** ADMIN

**Value space:** <Current/UpperLeft/UpperCenter/UpperRight/CenterLeft/CenterRight/LowerLeft/LowerRight>

- **Current:** The position of the presentation PiP will be kept unchanged when leaving a call.
- **UpperLeft:** The presentation PiP will appear in the upper left corner of the screen.
- **UpperCenter:** The presentation PiP will appear in the upper center position.
- **UpperRight:** The presentation PiP will appear in the upper right corner of the screen.
- **CenterLeft:** The presentation PiP will appear in the center left position.
- **CentreRight:** The presentation PiP will appear in the center right position.
- **LowerLeft:** The presentation PiP will appear in the lower left corner of the screen.
- **LowerRight:** The presentation PiP will appear in the lower right corner of the screen.

**Example:** `xConfiguration Video PIP Presentation DefaultValue Position: Current`
xConfiguration Video Selfview
Determine if the main video source (self-view) shall be displayed on screen. This setting is obsoleted by the Video SelfviewDefault Mode setting.

Requires user role: USER

Value space: <Off/On>
On: Display self-view on screen.
Off: Do not display self-view on screen.

Example: xConfiguration Video Selfview: On

xConfiguration Video SelfviewPosition
Select where the small self-view PiP (Picture-in-Picture) will appear on screen. This setting is obsoleted by the Video SelfviewDefault PIPPosition setting.

Requires user role: ADMIN

Value space: <UpperLeft/UpperCenter/UpperRight/CenterLeft/CenterRight/LowerLeft/LowerRight>
UpperLeft: The self-view PiP will appear in the upper left corner of the screen.
UpperCenter: The self-view PiP will appear in the upper center of the screen.
UpperRight: The self-view PiP will appear in the upper right corner of the screen.
CenterLeft: The self-view PiP will appear on the left side of the screen, in center.
CenterRight: The self-view PiP will appear on the right side of the screen, in center.
LowerLeft: The self-view PiP will appear in the lower left corner of the screen.
LowerRight: The self-view PiP will appear in the lower right corner of the screen.

Example: xConfiguration Video SelfviewPosition: LowerRight

xConfiguration Video SelfviewDefault Mode
Determine if the main video source (self-view) shall be displayed on screen after a call. The position and size of the self-view window is determined by the Video SelfviewDefault PIPPosition and the Video SelfviewDefault FullscreenMode settings respectively.

Requires user role: ADMIN

Value space: <Off/Current/On>

On: self-view is switched on when leaving a call.
Current: self-view is left as is, i.e. if it was on during the call, it remains on after the call; if it was off during the call, it remains off after the call.
Off: self-view is switched off when leaving a call.

Example: xConfiguration Video SelfviewDefault Mode: Current
xConfiguration Video SelfviewDefault OnMonitorRole

Determine which monitor/output to display the main video source (self-view) on after a call. The value reflects the monitor roles set for the different outputs in the Video Output HDMI MonitorRole settings.

The setting applies both when self-view is displayed in full screen, and when it is displayed as picture-in-picture (PiP), but only if the Video Monitors setting is set to Dual.

Requires user role: ADMIN

Value space: <First/Second/Current>

First: The self-view picture will be shown on outputs with the Video Output HDMI MonitorRole set to First.
Second: The self-view picture will be shown on outputs with the Video Output HDMI MonitorRole set to Second.
Current: When leaving the call, the self-view picture will be kept on the same output as during the call.

Example: xConfiguration Video SelfviewDefault OnMonitorRole: Current

xConfiguration Video Monitors

Set the monitor layout mode.

Requires user role: ADMIN

Value space: <Single/Dual/DualPresentationOnly>

Single: The same layout is shown on all monitors.
Dual: The layout is distributed on two monitors.
DualPresentationOnly: All participants in the call will be shown on the first monitor, while the presentation (if any) will be shown on the second monitor.

Example: xConfiguration Video Monitors: Single

xConfiguration Video OSD Mode

The OSD (On Screen Display) is where you find the menus, dialogs, icons and indicators, and the navigation is done with a remote control. Define which icons and information to be displayed on screen.

Requires user role: ADMIN

Value space: <Off/On>

Off: Hide the on-screen menus, icons and indicators.
On: Display the on-screen menus, icons and indicators.

Example: xConfiguration Video OSD Mode: On

xConfiguration Video OSD WallpaperSelection

In cases where you want to prevent users from easily changing the wallpaper setting from the Settings menu, the wallpaper setting can be made available from within the Administrator Settings menu. The administrator settings can be password protected. The OSD (On Screen Display) is where you find the menus, dialogs, icons and indicators, and the navigation is done with a remote control.

Requires user role: ADMIN

Value space: <Off/On>

Off: The wallpaper setting will be available from within the Video settings in the Administrator Settings.
On: The Wallpaper menu will be available from the Settings menu.

Example: xConfiguration Video OSD WallpaperSelection: On

xConfiguration Video OSD LanguageSelection

In cases where you want to prevent users from easily changing the language settings from the Settings menu, the language settings can be made available from within the Administrator Settings menu. The administrator settings can be password protected. The OSD (On Screen Display) is where you find the menus, dialogs, icons and indicators, and the navigation is done with a remote control.

Requires user role: ADMIN

Value space: <Off/On>

Off: The language settings will be available from within the SystemUnit settings in the Administrator Settings.
On: The Language menu will be available from the Settings menu.

Example: xConfiguration Video OSD LanguageSelection: On

xConfiguration Video OSD MenyStartupMode

Configure the state of the on-screen menus after a video system / codec boot.

Requires user role: ADMIN

Value space: <Closed/Home>

Closed: The on-screen menu will NOT expand automatically. This setting is recommended for 3rd party integrations that need full control of what is shown on the OSD.
Home: The on-screen menu will show the home menu expanded.

Example: xConfiguration Video OSD MenuStartupMode: Home
xConfiguration Video OSD VirtualKeyboard

Determine whether or not the virtual keyboard will automatically show on screen when text is to be entered in an input field. The OSD (On Screen Display) is where you find the menus, dialogs, icons and indicators, and the navigation is done with a remote control.

Requires user role: ADMIN

Value space: <UserSelectable/AlwaysOn>

UserSelectable: The user has to press a softbutton to open or close the virtual keyboard.
AlwaysOn: The virtual keyboard is automatically shown on screen as long as text can be entered in an input field.

Example: xConfiguration Video OSD VirtualKeyboard: UserSelectable

xConfiguration Video OSD EncryptionIndicator

Define for how long the encryption indicator (a padlock) will be shown on screen. The setting applies to both encrypted and non-encrypted calls, i.e. both to secure and non-secure conferences. The icon for encrypted calls is a locked padlock, and the icon for non-encrypted calls is a crossed out locked padlock.

Requires user role: ADMIN

Value space: <Auto/AlwaysOn/AlwaysOff>

Auto: If the Conference Encryption Mode setting is set to BestEffort and the call is encrypted, the encryption indicator is shown during the first seconds of a call. If the Conference Encryption Mode setting is set to BestEffort and the call is non-encrypted, the crossed out encryption indicator is shown during the entire call. If the Conference Encryption Mode setting is NOT set to BestEffort, the encryption indicator is not shown at all.
AlwaysOn: The encryption indicator is displayed on screen during the entire call. This applies to both encrypted and non-encrypted calls for all Conference Encryption Mode settings.
AlwaysOff: The encryption indicator is never displayed on screen. This applies to both encrypted and non-encrypted calls for all Conference Encryption Mode settings.

Example: xConfiguration Video OSD EncryptionIndicator: Auto

xConfiguration Video OSD MissedCallsNotification

Define if there should be a missed calls notification on screen. The setting only applies when the video system is operated by a remote control and the on-screen menu. When using the Touch screen control panel the notification dialog box will appear on the Touch screen control panel, and not on the OSD.

Requires user role: ADMIN

Value space: <Off/On>

Off: The OSD will NOT show any indication that there have been any missed calls. This setting is recommended for 3rd party integrations that need full control of what is shown on the OSD.
On: The OSD will show a notification of missed calls.

Example: xConfiguration Video OSD MissedCallsNotifications: On

xConfiguration Video OSD AutoSelectPresentationSource

Determine if the presentation source should be automatically selected.

Requires user role: ADMIN

Value space: <Off/On>

Off: Disable automatic selection of the presentation source.
On: Enable automatic selection of the presentation source.

Example: xConfiguration Video OSD AutoSelectPresentationSource: Off

xConfiguration Video OSD CallSettingsSelection

In cases where you want to prevent users from easily changing the call settings from the Settings menu, the call settings can be made available from within the Administrator Settings menu. The administrator settings can be password protected. The OSD (On Screen Display) is where you find the menus, dialogs, icons and indicators, and the navigation is done with a remote control.

Requires user role: ADMIN

Value space: <Off/On>

Off: The call settings will be available from within the Conference settings in the Administrator Settings.
On: The Call Settings menu will be available from the Settings menu.

Example: xConfiguration Video OSD CallSettingsSelection: Off
xConfiguration Video OSD TodaysBookings
This setting can be used to display the system's bookings for today on the main on-screen menu. This requires that the system is bookable by an external booking system, like for example the Cisco TelePresence Management Suite (TMS).

Requires user role: ADMIN
Value space: <Off/On>
Off: Do not display todays bookings.
On: Displays information about this systems bookings on screen.
Example: xConfiguration Video OSD TodaysBookings: Off

xConfiguration Video OSD MyContactsExpanded
Set how the local contacts will be displayed in the phone book dialog on screen. The OSD (On Screen Display) is where you find the menus, dialogs, icons and indicators, and the navigation is done with a remote control.

 Requires user role: ADMIN
Value space: <Off/On>
Off: The local contacts will be placed in a separate folder called MyContacts in the phonebook dialog.
On: The local contacts in the phone book will be shown in the top level of the phonebook dialog.
Example: xConfiguration Video OSD MyContactsExpanded: Off

xConfiguration Video OSD Output
Define which monitor should display the on-screen menus, information and icons. The OSD (On Screen Display) is where you find the menus, dialogs, icons and indicators, and the navigation is done with a remote control.

Requires user role: ADMIN
Value space: <Auto/1/2>
Auto: The system will detect when a monitor is connected to the video output, and send the OSD to the first monitor you connect. If you have a multi-monitor setup, and all monitors are connected before switching on the system, the OSD will be sent to the video output with the lowest numbering, starting on Video OSD Output 1. If the OSD does not show on the desired monitor, disconnect all monitors and reconnect the monitors.
Range 1-2: If you want the OSD to be sent to one specific output, select 1 for HDMI output, or select 2 for DVI-I output. Make sure you connect a monitor to the corresponding video output connector.
Example: xConfiguration Video OSD Output: Auto

xConfiguration Video OSD InputMethod InputLanguage
The codec can be enabled for Cyrillic input characters in the menus on screen. Requires that Video OSD InputMethod Cyrillic is set to On.

 Requires user role: ADMIN
Value space: <Latin/Cyrillic>
Latin: Latin characters can be entered when using the remote control (default).
Cyrillic: Cyrillic characters can be entered using the remote control. Requires a Cisco TelePresence Remote Control with Cyrillic fonts.
Example: xConfiguration Video OSD InputMethod InputLanguage: Latin

xConfiguration Video OSD InputMethod Cyrillic
Set the Cyrillic mode for the menu input language in the menus on screen.

 Requires user role: ADMIN
Value space: <Off/On>
Off: Cyrillic mode is NOT available as a menu input language in the menus on screen.
On: Cyrillic mode is available as a menu input language in the menus on screen. This will enable the setting Video OSD InputMethod InputLanguage.
Example: xConfiguration Video OSD InputMethod Cyrillic: Off

xConfiguration Video OSD LoginRequired
Determine if the system should require the user to login before accessing the menus on screen. If enabled, the user must enter his username and his PIN code. After the user has logged in he can only execute to the configurations changes and commands allowed by his role. The OSD (On Screen Display) is where you find the menus, dialogs, icons and indicators, and the navigation is done with a remote control.

NOTE: The PIN code must be set before enabling this setting, this is done from a web interface. Login to the system from a web browser, navigate to Configuration > User Administration, select the user and add the PIN code.

 Requires user role: ADMIN
Value space: <Off/On>
Off: No login to the menus on screen (OSD) is required.
On: The user must log in to access the menus on screen (OSD).
Example: xConfiguration Video OSD LoginRequired: Off
xConfiguration Video Output HDMI [1,2] RGBQuantizationRange

All devices with HDMI outputs should follow the rules for RGB video quantization range defined in CEA-861. Unfortunately some devices do not follow the standard and this configuration may be used to override the settings to get a perfect image with any display. The default value is set to Full because most HDMI displays expects full quantization range.

Requires user role: ADMIN

Value space: <Auto/Full/Limited>

- **Auto:** RGB quantization range is automatically selected based on the RGB Quantization Range bits (Q0, Q1) in the AVI infoframe. If no AVI infoframe is available, RGB quantization range is selected based on video format according to CEA-861-E.
- **Full:** Full quantization range. The R, G, B quantization range includes all code values (0 - 255). This is defined in CEA-861-E.
- **Limited:** Limited Quantization Range. R, G, B quantization range that excludes some code values at the extremes (16 - 235). This is defined in CEA-861-E.

Example: xConfiguration Video Output HDMI 1 RGBQuantizationRange: Full

xConfiguration Video Output HDMI [1,2] CEC Mode

The HDMI outputs support Consumer Electronics Control (CEC). When set to on (default is off), and the monitor connected to the HDMI output is CEC compatible and CEC is configured, the system will use CEC to set the monitor in standby when the system enters standby. Likewise the system will wake up the monitor when the system wakes up from standby. Please note that the different manufacturers uses different marketing names for CEC, for example Anynet+ (Samsung); Aquos Link (Sharp); BRAVIA Sync (Sony); HD-CEC (Hitachi); Kuro Link (Pioneer); CE-Link and Regza Link (Toshiba); RIHD (Onkyo); HDAVI Control, EZ-Sync, VIERA Link (Panasonic); EasyLink (Philips); and NetCommand for HDMI (Mitsubishi).

Requires user role: ADMIN

Value space: <Off/On>

- **Off:** Disable CEC control.
- **On:** Enable CEC control.

Example: xConfiguration Video Output HDMI 1 CEC Mode: Off

xConfiguration Video Output HDMI [1,2] OverscanLevel

Some TVs or other monitors may not display the whole image sent out on the systems video output, but cuts the outer parts of the image. In this case this setting can be used to let the system not use the outer parts of video resolution. Both the video and the on-screen menu will be scaled in this case.

Requires user role: ADMIN

Value space: <None/Medium/High>

- **None:** The system will use all of the output resolution.
- **Medium:** The system will not use the outer 3% of the output resolution.
- **High:** The system will not use the outer 6% of the output resolution.

Example: xConfiguration Video Output HDMI 1 OverscanLevel: None

xConfiguration Video Output HDMI [1,2] Resolution

Select the preferred resolution for the monitor connected to the video output HDMI connector. This will force the resolution on the monitor.

Requires user role: ADMIN

Value space: <Auto/1024_768_60/1280_1024_60/1280_720_60/1920_1080_60/1280_768_60/1360_768_60/>

- **Auto:** The system will automatically try to set the optimal resolution based on negotiation with the connected monitor.
- **Range:** 1024x768@60p, 1280x1024@60p, 1280x720@60p, 1920x1080@60p, 1280x768@60p, 1360x768@60p

Example: xConfiguration Video Output HDMI 1 Resolution: Auto
xConfiguration Video Wallpaper
Select a background image (wallpaper) for the video screen when idle.

Requires user role: USER

Value space: <None/Custom/Growing/Summersky/Waves>

None: There is no background image on the screen, i.e. the background is black.

Custom: Use the custom wallpaper that is stored on the system as background image on the screen. As default, there is no custom wallpaper stored and the background will be black. You can upload a custom wallpaper to the system using the web interface. The maximum supported resolution is 1920x1200.

Summersky, Growing, Waves: The chosen background image is shown on the screen.

Example: xConfiguration Video Wallpaper: Summersky

Experimental configuration
The Experimental settings are for testing only and should not be used unless agreed with Cisco.

These settings are not documented and WILL change in later releases.
Chapter 4

xCommand commands
Description of the xCommand commands

In this chapter, you can find a complete list of all xCommand type commands with parameters.

We recommend you visit our web site regularly for updated versions of the manual.
Go to:  http://www.cisco.com/go/quickset-docs

Audio commands
---------------------------------------------  80
xCommand Audio Microphones Mute                 80
xCommand Audio Microphones Unmute               80
xCommand Audio Sound Play                      80
xCommand Audio Sound Stop                      80
xCommand Audio VUMeter Start                   80
xCommand Audio VUMeter Stop                    80
xCommand Audio VUMeter StopAll                 81
xCommand Audio SoundsAndAlerts Ringtone List   81

Bookings commands
---------------------------------------------  81
xCommand Bookings List                        81
xCommand Bookings Clear                       82

Boot commands
---------------------------------------------  83
xCommand Boot                                 83

Call commands
---------------------------------------------  83
xCommand Call Accept                          83
xCommand Call Reject                          83
xCommand Call Disconnect                       84
xCommand Call DisconnectAll                   84
xCommand Call Hold                            84
xCommand Call Join                            84
xCommand Call Resume                          84
xCommand Call ExtendConference                85
xCommand Call UnattendedTransfer              85
xCommand Call HoldAll                         85
xCommand Call Ignore                          85
xCommand Call Modify                          85

CallHistory commands
---------------------------------------------  86
xCommand CallHistory AcknowledgeAllMissedCalls 86
xCommand CallHistory AcknowledgeMissedCall    86
xCommand CallHistory DeleteAll                86
xCommand CallHistory DeleteEntry              86
xCommand CallHistory Get                      87
xCommand CallHistory Recents                  87

CallLog commands
---------------------------------------------  88
xCommand CallLog Clear                         88
xCommand CallLog Recent Delete                 88
xCommand CallLog Recent Delete                 88
xCommand CallLog Outgoing Delete               88
xCommand CallLog Received Delete               88
xCommand CallLog Missed Delete                 88
xCommand CallLog Missed Dismiss                89

CamCtrlPip commands
---------------------------------------------  89
xCommand CamCtrlPip                            89

Camera commands
---------------------------------------------  90
xCommand Camera PanTiltReset                   90
xCommand Camera PositionReset                  90
xCommand Camera PositionSet                    90
xCommand Camera Ramp                            91
xCommand Camera TriggerAutofocus               91
xCommand Camera PositionActivateFromPreset     91
xCommand Camera Preset Activate                92
xCommand Camera Preset Edit                    92
xCommand Camera Preset List                    92
xCommand Camera Preset Remove                  92

Audio commands

**xCommand Audio Microphones Mute**
Mute all microphones.

Requires user role: USER

Example:
```
xCommand Audio Microphones Mute
  *r AudioMicrophonesMuteResult (status=OK):
  ** end
```

**xCommand Audio Microphones Unmute**
Unmute microphones.

Requires user role: USER

Example:
```
xCommand Audio Microphones Unmute
  *r AudioMicrophonesUnmuteResult (status=OK):
  ** end
```

**xCommand Audio Sound Play**
Play a specified audio sound.

Requires user role: USER

Parameters:
- **Sound**: <Bump/Busy/CallDisconnect/CallInitiate/CallWaiting/Dial/KeyInput/KeyTone/Nav/NavBack/Notification/OK/PresentationConnect/Ringing/SpecialInfo/TelephoneCall/VideoCall/Volume>
- **Loop**: <On/Off>

Example:
```
xCommand Audio Sound Play Sound: Ringing
  *r AudioSoundPlayResult (status=OK):
  ** end
```

**xCommand Audio Sound Stop**
Stop playing audio sound.

Requires user role: USER

Example:
```
xCommand Audio Sound Stop
  *r AudioSoundStopResult (status=OK):
  ** end
```

**xCommand Audio VUMeter Start**
Start collecting VU meter information for connector given by type and ID.

Requires user role: USER

Parameters:
- **ConnectorType**: <HDMI/Line/Microphone>
- **ConnectorId**: <1..4>

Example:
```
xCommand Audio VUMeter Start ConnectorType: Microphone ConnectorId: 1
  *r AudioVumeterStartResult (status=OK):
  ** end
```

**xCommand Audio VUMeter Stop**
Stop collecting VU meter information for connector given by type and ID.

Requires user role: USER

Parameters:
- **ConnectorType**: <HDMI/Line/Microphone>
- **ConnectorId**: <1..4>

Example:
```
xCommand Audio VUMeter Stop ConnectorType: Microphone ConnectorId: 1
  *r AudioVumeterStopResult (status=OK):
  ** end
```
xCommand Audio VUMeter StopAll
Stop collecting VU meter information for all connectors.

Requires user role: USER

Example:
```
xCommand Audio VUMeter StopAll
  *r AudioVumeterStopResult (status=OK):
    ** end
```

xCommand Audio SoundsAndAlerts Ringtone List
Lists all available ringtones that can be configured using xConfiguration Audio SoundsAndAlerts RingTone.

Requires user role: USER

Example:
```
xCommand Audio SoundsAndAlerts Ringtone List
  *r AudioRingtoneListResult Ringtone 1 Id: "Sunrise"
  *r AudioRingtoneListResult Ringtone 2 Id: "Mischief"
  *r AudioRingtoneListResult Ringtone 3 Id: "Ripples"
  *r AudioRingtoneListResult Ringtone 4 Id: "Reflections"
  *r AudioRingtoneListResult Ringtone 5 Id: "Vibes"
  *r AudioRingtoneListResult Ringtone 6 Id: "Delight"
  *r AudioRingtoneListResult Ringtone 7 Id: "Evolve"
  *r AudioRingtoneListResult Ringtone 8 Id: "Playful"
  *r AudioRingtoneListResult Ringtone 9 Id: "Ascent"
  *r AudioRingtoneListResult Ringtone 10 Id: "Calculation"
  *r AudioRingtoneListResult Ringtone 11 Id: "Mellow"
  *r AudioRingtoneListResult Ringtone 12 Id: "Ringer"
  ** end
```

Bookings commands

xCommand Bookings List
List the stored bookings for the system. The list of booking details is received from the management system. All parameters are optional, and can be used to limit the search result.

If no parameters are used, past, present and future bookings are all listed. To avoid listing bookings from yesterday and before, use DayOffset = 0.

- Days: Number of days to retrieve bookings from.
- DayOffset: Which day to start the search from (today: 0, tomorrow: 1...).
- Limit: Max number of bookings to list.
- Offset: Offset number of bookings for this search.

Requires user role: USER

Parameters:
- Days: <1..365>
- DayOffset: <0..365>
- Limit: <1..65534>
- Offset: <0..65534>

Example:
```
Example 1 (One booking in list)
  xCommand Bookings List
  OK
  *r Bookings ResultInfo TotalRows: 1
  *r Bookings LastUpdated: "2011-09-02T11:19:01Z"
  *r Bookings Booking 1 Id: "273"
  *r Bookings Booking 1 Title: "Sales meeting"
  *r Bookings Booking 1 Agenda: "Describe this command"
  *r Bookings Booking 1 Privacy: Public
  *r Bookings Booking 1 Organizer FirstName: "Ola"
  *r Bookings Booking 1 Organizer LastName: "Normann"
  *r Bookings Booking 1 Organizer Email: "ola.normann@domain.com"
  *r Bookings Booking 1 Time StartTime: "2011-09-02T13:00:00Z"
  *r Bookings Booking 1 Time StartTimeBuffer: 600
  *r Bookings Booking 1 Time EndTime: "2011-09-02T13:30:00Z"
  *r Bookings Booking 1 Time EndTimeBuffer: 0
  *r Bookings Booking 1 MaximumMeetingExtension: 30
  *r Bookings Booking 1 MeetingExtensionAvailability: Guaranteed
  *r Bookings Booking 1 BookingStatus: OK
  ** end
```
Example 2 (When no bookings have been received, or after all bookings have been removed by the command xCommand Bookings Clear)

xCommand Bookings Clear
Clear the current stored list of bookings.

Requires user role: USER

Example:
  xCommand Bookings Clear
** end
  OK
Boot commands

xCommand Boot
Reboot system.
Action: As a default the system restarts after a reboot. By selecting Shutdown, the system will not restart.

Requires user role: USER

Parameters:
Action: <Restart/Shutdown>

Example:
```
xCommand Boot
*r BootResult (status=OK):  
** end
OK
CUIL reboot request, restarting
Connection closed by foreign host.
```

Call commands

xCommand Call Accept
Accept an incoming call. If no CallId is specified, all incoming calls are accepted. The CallId is returned when the xCommand Dial command is run. During the call you can run the xStatus Call command to see the CallId. CallType parameter is not in use.

Requires user role: USER

Parameters:
- CallId: <0..65534>
- CallType(o): <Audio/Video> Not in use.

Example:
```
xCommand Call Accept CallId:19
OK
*r CallAcceptResult (status=OK):  
** end
```

xCommand Call Reject
Reject incoming call. If no call id is specified, all incoming calls are rejected. The CallId is returned when the xCommand Dial command is run. During the call you can run the xStatus Call command to see the CallId.

Requires user role: USER

Parameters:
- CallId: <0.65534>

Example:
```
xCommand Call Reject CallId:20
OK
*r CallRejectResult (status=OK):  
** end
```
xCommand Call Disconnect
Disconnect a call. The CallID is returned when the xCommand Dial command is run. During the call you can run the xStatus Call command to see the CallId.

Requires user role: USER

Parameters:
CallId(r): <0..65534>

Example:
  xCommand Call Disconnect CallId:17
  OK
  *r DisconnectCallResult (status=OK):
  ** end

xCommand Call DisconnectAll
Disconnect all active calls.

Requires user role: USER

Example:
  xCommand Call DisconnectAll
  OK
  *r DisconnectAllResult (status=OK):
  ** end

xCommand Call Hold
Put a call on hold. The CallID is returned when the xCommand Dial command is run. During the call you can run the xStatus Call command to see the CallId.

Requires user role: USER

Parameters:
CallId(r): <0..65534>
Reason(o): <Conference/Transfer/Other>

Example:
  xCommand Call Hold CallId:19
  OK
  *r CallHoldResult (status=OK):
  ** end

xCommand Call Join
Join all existing calls, active and on hold. For this command to work, you have to configure Multiway™ first, see xConfiguration NetworkServices MultiWay Address and xConfiguration Conference 1 Multipoint Mode.

Requires user role: USER

Parameters:
CallId(r): <0..65534>

Example:
  xCommand Call Join
  OK
  *r CallJoinResult (status=OK):
  ** end

xCommand Call Resume
Resume a call that have been put on hold. The CallID is returned when the xCommand Dial command is run. During the call you can run the xStatus Call command to see the CallId.

Requires user role: USER

Parameters:
CallId(r): <0..65534>

Example:
  xCommand Call Resume CallId:19
  OK
  *r CallResumeResult (status=OK):
  ** end
xCommand Call ExtendConference
Request to extend the conference for the call with the specified CallId.
For this command to apply, the following are required:
1) The result from the xStatus Conference Site <CallId> ConferenceExtended must be NotExtended:
   "s Conference Site <CallId> ConferenceExtended: NotExtended"
2) The following tag from the bookings list command must have a value > 0:
   "r Bookings Booking <bookingNumber> MaximumMeetingExtension: "30"
Note: The command returns the result from the command itself, not the result from the extension request to far end. A separate event returns the result from the extension request.
CallId: CallId for the call in question.
Requires user role: USER
Parameters:
   CallId(r): <0..65534>
Example:
   xCommand Call ExtendConference CallId: 1
   OK
   *r CallExtendConferenceResult (status=OK)
   ** end

xCommand Call UnattendedTransfer
Transfers an ongoing call to another participant. The CallID is returned when the xCommand Dial command is run. During the call you can run the xStatus Call command to see the CallId. Fully supported for SIP calls only.
Requires user role: USER
Parameters:
   CallId(r): <0..65534>
   Number(r): <S: 0, 255>
Example:
   xCommand Call UnattendedTransfer CallId: 2 Number: destination@example.com
   *r TransferUriResult (status=OK):
   ** end

xCommand Call Modify
Modifies the call type of the current call, to either an audio call or a video call. Not in use.
Requires user role: USER
Parameters:
   CallId(r): <0..65534>
   CallType(r): <Audio/Video>
Example:
   xCommand Call Modify CallType: Audio CallId: 16
   *r CallModifyResult (status=Error):
      Reason: Callescalation not enabled
   ** end

xCommand Call HoldAll
Puts all ongoing calls on hold.
Requires user role: USER
Parameters:
Example:
   xCommand Call HoldAll

xCommand Call Ignore
Turns off the ringtone for the incoming call. The call can still be answered.
Requires user role: USER
Parameters:
   CallId(r): <0..65534>
Example:
   xCommand Call Ignore CallId: 22
   *r IgnoreResult (status=OK):
   ** end
CallHistory commands

**xCommand CallHistory AcknowledgeAllMissedCalls**
Turns off the missed calls indicator on the touch controller for all missed calls.

**Requires user role:** USER

**Example:**
```
{xCommand CallHistory AcknowledgeAllMissedCalls
*r AcknowledgeAllMissedCallsResult (status=OK):
** end
```

**xCommand CallHistory AcknowledgeMissedCall**
Turns off the missed calls indicator on the touch controller for the specified call. CallHistoryId: CallHistoryId for the call in question. AcknowledgeConsecutiveDuplicates: Includes all surrounding calls with duplicate information.

**Requires user role:** USER

**Parameters:**
- CallHistoryId(r): <1..2147483647>
- AcknowledgeConsecutiveDuplicates(o): <False/True>

**Example:**
```
{xCommand CallHistory AcknowledgeMissedCall CallHistoryId: 5
*r AcknowledgeMissedCallResult (status=OK):
** end
```

**xCommand CallHistory DeleteAll**
Deletes all information on previous calls.
Filter: You can filter which calls to delete, either all, missed, placed or received calls.

**Requires user role:** USER

**Parameters:**
- Filter(o): <All/Missed/Placed/Received>

**Example:**
```
xCommand CallHistory DeleteAll Filter: Missed
*r CallHistoryDeleteAllResult (status=OK):
** end
```

**xCommand CallHistory DeleteEntry**
Deletes all information on the specified call.
CallHistoryId: CallHistoryId for the call in question. AcknowledgeConsecutiveDuplicates: Includes all surrounding calls with duplicate information.

**Requires user role:** USER

**Parameters:**
- CallHistoryId(r): <1..2147483647>
- AcknowledgeConsecutiveDuplicates(o): <False/True>

**Example:**
```
xCommand CallHistory DeleteEntry CallHistoryId: 5
*r CallHistoryDeleteEntryResult (status=OK):
** end
```
xCommand CallHistory Get
Retrieve all information on previous calls made on the video system.
Filter: You can filter which calls to retrieve; either all, missed, placed or received calls.
Offset: Sets the call from which to start.
Limit: Defines the amount of calls in the output.
DetailLevel: Sets the level of detail for the information on these calls.
SearchString: Allows you to set the command to apply to a specified display name or call back number.
CallHistoryId: CallHistoryId for the call in question.
Requires user role: USER
Parameters:
- Filter(o): <All/Missed/Placed/Received/UnacknowledgedMissed>
- Offset(o): <0..65534>
- Limit(o): <0..65534>
- DetailLevel(o): <Basic/Full>
- SearchString(o): <S: 0, 255>
- CallHistoryId(o): <0..65534>

Example:
xCommand CallHistory Get Filter: All Offset: 3 DetailLevel: Basic
    *r CallHistoryGetResult Entry 0 CallHistoryId: 2
    *r CallHistoryGetResult Entry 0 CallbackNumber: "sip:room1@company.com"
    *r CallHistoryGetResult Entry 0 DisplayName: "display.name"
    *r CallHistoryGetResult Entry 0 StartTime: "2013-04-09T10:56:36"
    *r CallHistoryGetResult Entry 0 DaysAgo: 182
    *r CallHistoryGetResult Entry 0 OccurrenceType: Received
    *r CallHistoryGetResult Entry 0 IsAcknowledged: Acknowledged
    *r CallHistoryGetResult Entry 1 CallHistoryId: 1
    *r CallHistoryGetResult Entry 1 CallbackNumber: "sip:name@company.com"
    *r CallHistoryGetResult Entry 1 DisplayName: "name"
    *r CallHistoryGetResult Entry 1 StartTime: "2013-04-09T10:53:53"
    *r CallHistoryGetResult Entry 1 DaysAgo: 182
    *r CallHistoryGetResult Entry 1 OccurrenceType: Received
    *r CallHistoryGetResult Entry 1 IsAcknowledged: Acknowledged
    *r CallHistoryGetResult ResultInfo Offset: 3
    *r CallHistoryGetResult ResultInfo Limit: 65534
** end

xCommand CallHistory Recents
Retrieve aggregated information on previous calls made on the video system.
Filter: You can filter which calls to retrieve; either all, missed, placed or received calls.
Offset: Sets the call from which to start.
Limit: Defines the amount of calls in the output.
DetailLevel: Sets the level of detail for the information on these calls.
SearchString: Allows you to set the command to apply to a specified display name or call back number.
CallHistoryId: CallHistoryId for the call in question.
Requires user role: USER
Parameters:
- Filter(o): <All/Missed/Placed/Received/UnacknowledgedMissed>
- Offset(o): <0..65534>
- Limit(o): <0..65534>
- DetailLevel(o): <Basic/Full>
- SearchString(o): <S: 0, 255>
- CallHistoryId(o): <0..65534>

Example:
xCommand CallHistory Recents Filter: Missed Offset: 6 DetailLevel: Full
    *r CallHistoryRecentsResult ResultInfo Offset: 6
    *r CallHistoryRecentsResult ResultInfo Limit: 65534
** end
**CallLog commands**

**xCommand CallLog Clear**
Clear call logs stored in the system. If a logtag is given as argument, that specific call is deleted from the logs. If no logtag is given the system deletes all call logs. The LogTag values for the calls are found by issuing the xHistory CallLog Call command.

Requires user role: USER

Parameters:
- LogTag: \(<0..2147483647>\)

Example:
```
xCommand CallLog Clear
*r ClearResult (status=OK):
** end
```

**xCommand CallLog Recent Delete**
Delete the call log of recent calls. If a logtag is given as argument, that specific call is deleted from the log. If no logtag is given the system deletes all call logs. The LogTag values for recent calls are found by issuing the xHistory CallLog Recent command.

Requires user role: USER

Parameters:
- LogTag: \(<0..2147483647>\)

Example:
```
xCommand CallLog Recent Delete
*r DeleteResult (status=OK):
** end
```

**xCommand CallLog Outgoing Delete**
Delete the call log of outgoing calls. If a logtag is given as argument, that specific call is deleted from the log. If no logtag is given the system deletes the complete outgoing calls log. The LogTag values for outgoing calls are found by issuing the xHistory CallLog Outgoing command.

Requires user role: USER

Parameters:
- LogTag: \(<0..2147483647>\)

Example:
```
xCommand CallLog Outgoing Delete LogTag:202
*r DeleteResult (status=OK):
** end
```

**xCommand CallLog Received Delete**
Delete the call log of received calls. If a logtag is given as argument, that specific call is deleted from the log. If no logtag is given the system deletes the complete received calls log. The LogTag values for received calls are found by issuing the xHistory CallLog Received command.

Requires user role: USER

Parameters:
- LogTag: \(<0..2147483647>\)

Example:
```
xCommand CallLog Received Delete LogTag:126
*r DeleteResult (status=OK):
** end
```

**xCommand CallLog Missed Delete**
Delete the call log of missed calls. If a logtag is given as argument, that specific call is deleted from the log. If no logtag is given the system deletes the complete missed calls log. The LogTag values for missed calls are found by issuing the xHistory CallLog Missed command.

Requires user role: USER

Parameters:
- LogTag: \(<0..2147483647>\)

Example:
```
xCommand CallLog Missed Delete LogTag:119
*r DeleteResult (status=OK):
** end
```
**xCommand CallLog Missed Dismiss**

Review the call log of dismissed calls. If a logtag is given as argument, that specific call is deleted from the log. If no logtag is given the system deletes the complete missed calls log. The LogTag values for missed calls are found by issuing the xHistory CallLog Missed command.

**Requires user role:** USER

**Parameters:**
- LogTag: <0..2147483647>

**Example:**
- xCommand CallLog Missed Dismiss LogTag:119
  *r DismissResult (status=OK):
  ** end

---

**CamCtrlPip commands**

**xCommand CamCtrlPip**

Show or hide the camera self-view in a small window (picture in picture).

**Mode:** Select whether the self-view picture in picture is on or off.

**Duration:** Set how long the self-view is shown for on screen.

**Requires user role:** USER

**Parameters:**
- Mode(r): <On/Off>
- Duration: <0..60>

**Example:**
- xCommand CamCtrlPip Mode: On
  *r CamCtrlPipResult (status=OK):
  ** end
Camera commands

xCommand Camera PanTiltReset
The camera is reset to its default values for pan and tilt. If the camera is daisy chained, the CameraId is given by its place in the chain.

Requires user role: USER

Parameters:
- CameraId(r): <1..1>

Example:
```bash
xCommand Camera PanTiltReset CameraId:1
OK
```
```
*r PanTiltResetResult (status=OK):
** end
```

xCommand Camera PositionReset
Reset the camera position the the default position.

Requires user role: USER

Parameters:
- CameraId(r): <1..1>

Example:
```bash
xCommand Camera PositionReset CameraId:1
OK
```
```
*r CameraPositionResetResult (status=OK):
** end
```

xCommand Camera PositionSet
Position the camera by defining the pan, tilt, zoom and focus parameters. If the camera is placed in a daisy chain you need to know the CameraId for the camera you want to address.

Requires user role: USER

Parameters:
- CameraId(r): <1..1>
- Pan: <-65535..65535>
- Tilt: <-65535..65535>
- Zoom: <0..65535>
- Focus: <0..65535>

Example:
```bash
xCommand Camera PositionSet CameraId:1 Pan:200 Tilt:300
OK
```
```
*r CameraPositionSetResult (status=OK):
** end
```
**xCommand Camera Ramp**

Move the camera in a specified direction. The camera moves at specified speed until a stop command is issued. In a daisy chain, you need to know the CameraId for the camera you want to address. Be aware that pan and tilt can be operated simultaneously, but no other combinations. In the latter case only the first operation specified is executed. For example, if you try to run both zoom and pan at the same time, only zoom is executed.

**NOTE:** You must run a stop command to stop the camera, see the example below.

**CameraId:** Give the camera id.

**Pan:** Move the camera to the Left or Right, followed by Stop.

**PanSpeed:** Set the pan speed.

**Tilt:** Move the camera Up or Down, followed by Stop.

**TiltSpeed:** Set the tilt speed.

**Zoom:** Zoom the camera In or Out, followed by Stop.

**ZoomSpeed:** Set the zoom speed.

**Focus:** Focus the camera Far or Near, followed by Stop.

**Requires user role:** USER

**Parameters:**

- CameraId(r): <1..1>
- Pan: <Left/Right/Stop>
- PanSpeed: <1..15>
- Tilt: <Down/Up/Stop>
- TiltSpeed: <1..15>
- Zoom: <In/Out/Stop>
- ZoomSpeed: <1..15>
- Focus: <Far/Near/Stop>

**Example:**

```
xCommand Camera Ramp CameraId:1 Pan:left PanSpeed:1
OK
*r RampResult (status=OK):
** end
```

**xCommand Camera TriggerAutofocus**

Trigger the auto-focus functionality. The camera must support auto-focus functionality. If the camera is daisy chained, the CameraId is given by its place in the chain.

**Requires user role:** USER

**Parameters:**

- CameraId(r): <1..1>

**Example:**

```
xCommand Camera TriggerAutofocus CameraId:1
OK
*r TriggerAutofocusResult (status=OK):
** end
```

**xCommand Camera PositionActivateFromPreset**

Selects pan, tilt, zoom and focus parameters for the given camera id from the selected preset.

**CameraId:** Give the camera id.

**PresetId:** Select preset 1 to 15.

**Requires user role:** USER

**Parameters:**

- CameraId(r): <1..1>
- PresetId(r): <1..15>

**Example:**

```
xCommand Camera PositionActivateFromPreset CameraId:1 PresetID:1
OK
*r PositionActivateFromPresetResult (status=OK):
** end
```
**xCommand Camera Preset Activate**

Activate one of the stored camera preset.

Note: The xCommand Camera Preset commands applies to an individual camera. This is in contrast to the xCommand Preset commands where a single preset covers ALL connected cameras plus the Video Input switcher settings.

PresetId: The ID of the camera preset you want to activate.

Requires user role: USER

Parameters:
- PresetId(r): <1..35>

Example:
```
xCommand Camera Preset Activate PresetId: 1
OK
```
```
*r CameraPresetActivateResult (status=OK)
** end
```

**xCommand Camera Preset List**

List information about available camera presets.

Note: The xCommand Camera Preset commands are used to store camera positions for individual cameras. This is in contrast to the xCommand Preset commands where a single preset stores/recalls ALL connected cameras plus the Video Input switcher settings. This makes it more usable for integrations where one wants to store multiple camera positions individually per camera rather than a complete camera position set.

PresetId: Filter on specified preset.

Requires user role: USER

Parameters:
- PresetId: <1..35>

Example:
```
xCommand Camera Preset List PresetId: 1
OK
```
```
*r CameraPresetListResult (status=OK)
** end
```

**xCommand Camera Preset Edit**

Edit a stored camera preset. You can change the name of the camera preset and its position in the list that is returned by the xCommand Camera Preset List command.

Note: The xCommand Camera Preset commands applies to an individual camera. This is in contrast to the xCommand Preset commands where a single preset covers ALL connected cameras plus the Video Input switcher settings.

PresetId: The ID of the camera preset you want to edit.

ListPosition: The position in the list returned by the xCommand Camera Preset List command.

Name: The name of the camera preset. It will be used in the list returned by the xCommand Camera Preset List command.

Requires user role: USER

Parameters:
- PresetId(r): <1..35>
- ListPosition: <1..35>
- Name: <S: 0, 255>

Example:
```
xCommand Camera Preset Edit PresetId: 1 ListPosition: 1 Name: ""
OK
```
```
*r CameraPresetEditResult (status=OK)
** end
```

**xCommand Camera Preset Remove**

Remove a camera preset.

Note: The xCommand Camera Preset commands applies to an individual camera. This is in contrast to the xCommand Preset commands where a single preset covers ALL connected cameras plus the Video Input switcher settings.

PresetId: The ID of the camera preset you want to remove.

Requires user role: USER

Parameters:
- PresetId(r): <1..35>

Example:
```
xCommand Camera Preset Remove PresetId: 1
OK
```
```
*r CameraPresetRemoveResult (status=OK)
** end
```
xCommand Camera Preset Store
Store the current position of the chosen camera. The camera is identified by the CameraId parameter.

Note: The xCommand Camera Preset commands applies to an individual camera. This is in contrast to the xCommand Preset commands where a single preset covers ALL connected cameras plus the Video Input switcher settings. The xCommand Camera Preset commands are useful when you want to handle multiple camera positions individually per camera, rather than working with complete sets of camera positions.

PresetId: The ID of this camera preset. If not set explicitly, the codec will assign a preset ID automatically.

CameraId: Which camera to store the position of.

ListPosition: The new camera preset’s position in the list returned by the xCommand Camera Preset List command.

Name: The name of the new camera preset. It will be used in the list returned by the xCommand Camera Preset List command.

Requires user role: USER

Parameters:
- PresetId: <1..35>
- CameraId (r): <1..1>
- ListPosition: <1..35>
- Name: <S: 0, 255>

Example:
```
xCommand Camera Preset Store
PresetId: 1 CameraId: 1 ListPosition: 1 Name ""
OK
```

Conference commands

xCommand Conference DoNotDisturb Activate
This command switches on the Do Not Disturb mode, and the Timeout parameter allows you to control when it is switched off again. It only takes effect when xConfiguration Conference DoNotDisturb Mode is set to Timed.

When Do Not Disturb is switched on, all incoming calls are rejected and registered as missed calls. The calling side receives a busy signal.

Timeout: The number of minutes before Do Not Disturb is switched off. If not set, Do Not Disturb times out after 1440 minutes (24 hours).

Requires user role: USER

Parameters:
- Timeout: <0..1440>

Example:
```
xCommand Conference DoNotDisturb Activate
 Timeout: <0..1440>
```

xCommand Conference DoNotDisturb Deactivate
This command switches off the Do Not Disturb mode. This command only takes effect when xConfiguration Conference DoNotDisturb Mode is set to Timed. When Do Not Disturb is switched off incoming calls come through as normal.

Requires user role: USER

Example:
```
xCommand Conference DoNotDisturb Deactivate
```

xCommand Conference ActiveSpeaker Reset
Resets ActiveSpeaker. Normal voice switching is switched back on.

Requires user role: USER

Example:
```
xCommand Conference ActiveSpeaker Reset
```

Copyright © 2014 Cisco Systems, Inc. All rights reserved.
xCommand Conference ActiveSpeaker Set

For manually setting the active speaker in a conference. Overrides normal voice switching.

Target: Identifies local or remote participant.
CallId: Identifies CallID for remote participant. Only relevant if Target is set to "remote".

Requires user role: USER

Parameters:
- Target(r): <local/remote>
- CallId: <0..65534>

Example:

Example 1
xCommand Conference ActiveSpeaker Set Target: local
*r ConferenceActiveSpeakerSetResult (status=OK):
  ** end

Example 2
xCommand Conference ActiveSpeaker Set Target: remote CallID: 3
*r ConferenceActiveSpeakerSetResult (status=OK):
  ** end

Dial commands

xCommand Dial

Dial out from the system. Returns information about the CallId and ConferenceId, which are required for some other commands.

Number: Enter the number or address.
Protocol: Select the SIP, H323 or H320 protocol.
CallRate: Set a call rate.
CallType: Select the audio or video call type.
BookingId: Any identifier that an external booking system (e.g. TMS, CTS-MAN) can use for its own references to match placed calls with the booking systems internal identifier for a meeting. This can be any string, e.g. a GUID. The booking Id is supplied in call logs, call events etc for the call.
DisplayName: The display name of the remote participant.

Requires user role: USER

Parameters:
- Number(r): <S: 0, 255>
- Protocol: <H320/H323/Sip>
- CallRate: <64..6000>
- CallType: <Audio/Video>
- BookingId: <S: 0, 255>
- Appearance(o): <1..999999999>
- DisplayName(o): <S: 0, 255>

Example:

xCommand Dial Number:543210 Protocol:h323
OK
*r DialResult (status=OK):
CallId: 2
ConferenceId: 1
  ** end
DTMFSend commands

**xCommand DTMFSend**
Send DTMF tones to the far end.

CallId: The CallID is returned when the xCommand Dial command is run. During the call you can run the xStatus Call command to see the CallId.

DTMFString: Enter the DTMF string.

**Requires user role:** USER

**Parameters:**
- CallId: <0..65534>
- DTMFString(r): <0..32>

**Example:**
xCommand DTMFSend CallId:2 DTMFString:1234
*r DTMFSendResult (status=OK):
** end

FacilityService commands

**xCommand FacilityService Dial**
Dial out from the system to a facility service. A maximum of five facility services can be defined; which one of these five to dial to is identified by the ServiceId (ref. xConfiguration Facility Service [ServiceId] Type/Name/Number/CallType). The command returns information about the CallId and ConferenceId.

ServiceId: The identifier of the facility service.

**Requires user role:** USER

**Parameters:**
- ServiceId(r): <1..5>

**Example:**
xCommand FacilityService Dial ServiceId: 1
OK
*r FacilityServiceDialResult (status=OK):
  CallId: 2
  ConferenceId: 1
** end
FarEndControl commands

xCommand FarEndControl Camera Move
Move the far end camera (the remote camera). NOTE: The far end camera moves in the specified direction until the stop command (ref: xCommand FarEndControl Camera Stop) is issued
CallId: The CallID is returned when the xCommand Dial command is run. During the call you can run the xStatus Call command to see the CallId.
Value: Select the action for how to move the camera.
Requires user role: USER
Parameters:
  CallId: <0..65534>
  Value(r): <Left/Right/Up/Down/ZoomIn/ZoomOut>
Example:
  xCommand FarEndControl Camera Move CallId:3 Value:left
  *r FECCMoveResult (status=OK):
  ** end

xCommand FarEndControl Camera Stop
Stop the far end camera after the xCommand FarEndControl Camera Move has been issued.
CallId: The CallID is returned when the xCommand Dial command is run. During the call you can run the xStatus Call command to see the CallId.
Value: Select the action for how to move the camera.
Requires user role: USER
Parameters:
  CallId: <0..65534>
Example:
  xCommand FarEndControl Camera Stop CallId:3
  *r FECCMoveResult (status=OK):
  ** end

xCommand FarEndControl Preset Activate
While in a call, this command is used to activate a preset on the far end codec. The preset covers the far end codec’s camera positions and input video switcher settings.
The preset must be stored on the far end codec beforehand, either by using the xCommand Preset Store command locally on the far end codec, or by using the xCommand FarEndControl Preset Store command from a remote codec.
Note: The far end codec’s xConfiguration Conference FarEndControl Mode setting must be switched On for the FarEndControl commands to work.
CallId: The CallId is required to identify the far end codec only when in a Multipoint call. The CallId is returned when issuing the xCommand Dial command. During the call you can run the xStatus Call command to see the CallId.
PresetId: The PresetId must be retrieved from the far end codec since this is the ID of the preset that is stored on that codec.
Requires user role: USER
Parameters:
  CallId: <0..65534>
  PresetId(r): <1..15>
Example:
  xCommand FarEndControl Preset Activate CallId:3 PresetId:1
  *r FECCPresetActivateResult (status=OK):
  ** end
xCommand FarEndControl Preset Store
While in a call, this command is used to store a preset on the far end codec. The preset covers the far end codec’s camera positions and input video switcher settings.
Note: The far end codec’s xConfiguration Conference FarEndControl Mode setting must be switched On for the FarEndControl commands to work.
CallId: The CallId is required to identify the far end codec only when in a Multipoint call. The CallId is returned when issuing the xCommand Dial command. During the call you can run the xStatus Call command to see the CallId.
PresetId: The PresetId must be retrieved from the far end codec since this is the ID of the preset that is stored on that codec.

Requires user role: USER

Parameters:
- CallId: <0..65534>
- PresetId(r): <0..15>

Example:
xCommand FarEndControl Preset Store CallId:3 PresetId:1
*r FECCPresetStoreResult (status=OK):
** end

xCommand FarEndControl Source Select
Select which video input source to use as the main source on the far end system.
CallId: The CallId is returned when the xCommand Dial command is run. During the call you can run the xStatus Call command to see the CallId.
SourceId: Select a video input source on the far end.

Requires user role: USER

Parameters:
- CallId: <0..65534>
- SourceId(r): <0..15>

Example:
xCommand FarEndControl Source Select CallId:3 SourceId:1
*r FECCSelectSourceResult (status=OK):
** end

HttpFeedback commands

xCommand HttpFeedback Register
Register the system to a HTTP(S) server to return XML feedback over HTTP(S) to specific URLs.
FeedbackSlot: You can have from 1 to 4 slots for feedback.
ServerUrl: Define the URL for the HTTP(S) server.
Expression[1..15]: What parts of the Status and Configuration XML documents to monitor are specified by XPath expressions. You can have from 1 to 15 XPath expressions.

Requires user role: USER

Parameters:
- FeedbackSlot: <1..4>
- ServerUrl(r): <S: 1, 2048>
- Expression[1..15]: <S: 1, 255>

Example:
xCommand HttpFeedback Register FeedbackSlot:1 ServerUrl:10.47.19.41 Expression[1]:Status/Video Expression[2]:Status/Audio Expression[3]:Status/Call Expression[4]:Status/Conference
OK
*r FeedbackRegisterResult (status=OK):
FeedbackSlot: 1
** end

xCommand HttpFeedback Deregister
Deregister XML feedback over HTTP(S).

Requires user role: USER

Parameters:
- FeedbackSlot(r): <1..4>

Example:
xCommand HttpFeedback Deregister FeedbackSlot:1
OK
*r FeedbackDeregisterResult (status=OK):
FeedbackSlot: 1
** end
Key commands

xCommand Key Click
Emulates a remote control key press, followed by a key release.

Requires user role: ADMIN

Parameters:

Key(r): <0/1/2/3/4/5/6/7/8/9/C/Call/Disconnect/Down/F1/F2/F3/F4/F5/Grab/Home/Layout/
Left/Mute/MuteMic/Ok/PhoneBook/Presentation/Right/Selfview/Square/SrcAux/SrcCamera/
SrcDocCam/SrcPc/SrcVcr/Star/Up/VolumeDown/VolumeUp/ZoomIn/ZoomOut>

Example:

xCommand Key Click Key:Down
*r KeyClickResult (status=OK):
** end

xCommand Key Press
Emulates a remote control key press without releasing it. The Key Press command must be followed
by a Key Release command to emulate releasing the key.

Requires user role: ADMIN

Parameters:

Key(r): <0/1/2/3/4/5/6/7/8/9/C/Call/Disconnect/Down/F1/F2/F3/F4/F5/Grab/Home/Layout/
Left/Mute/MuteMic/Ok/PhoneBook/Presentation/Right/Selfview/Square/SrcAux/SrcCamera/
SrcDocCam/SrcPc/SrcVcr/Star/Up/VolumeDown/VolumeUp/ZoomIn/ZoomOut>

Example:

xCommand Key Press Key:Home
*r KeyPressResult (status=OK):
** end

xCommand Key Release
Emulates a remote control key release. The Key Release command is issued after a Key Press
command.

Requires user role: ADMIN

Parameters:

Key(r): <0/1/2/3/4/5/6/7/8/9/C/Call/Disconnect/Down/F1/F2/F3/F4/F5/Grab/Home/Layout/
Left/Mute/MuteMic/Ok/PhoneBook/Presentation/Right/Selfview/Square/SrcAux/SrcCamera/
SrcDocCam/SrcPc/SrcVcr/Star/Up/VolumeDown/VolumeUp/ZoomIn/ZoomOut>

Example:

xCommand Key Release Key:Home
*r KeyReleaseResult (status=OK):
** end
Message commands

xCommand Message Alert Display
Display a message on screen, for a specified duration of time (in seconds). NOTE: If Duration is not set, the command must be followed by xCommand Message Alert Clear.
Use the xFeedback commands to monitor the feedback from the user. Read more about the xFeedback commands in the API introduction section in this guide.
Title: Enter a message title.
Text: Enter the message to be displayed. The <p> and <br> HTML tags will result in line breaks as normal; any other tags will appear as plain text.
Duration: Set how long (in seconds) the message is to be displayed on the screen. If set to 0 (zero) the message does not disappear until a xCommand Message Alert Clear message has been sent.
Requires user role: ADMIN
Parameters:
  Title: <S: 0, 255>
  Text(r): <S: 0, 255>
  Duration: <0..3600>
Example:
xCommand Message Alert Display Title: "Message" Text: "The meeting will end in 5 minutes." Duration: 20
OK
  *r MessageAlertDisplayResult (status=OK):
  ** end

xCommand Message Alert Clear
Remove the message which was displayed using the xCommand Message Alert Display command. This is required when the Duration parameter is not set.
Requires user role: ADMIN
Example:
xCommand Message Alert Clear
OK
  *r MessageAlertClearResult (status=OK):
  ** end

xCommand Message TextLine Display
Display a text line on screen. Optionally you can place the text line at a specified location and for a specified duration of time (in seconds). NOTE: If Duration is not set, the command must be followed by xCommand Message TextLine Clear.
Text: Enter the text line to be displayed. The <p> and <br> HTML tags will result in line breaks as normal; any other tags will appear as plain text.
X: Enter the X-coordinate (horizontal) on screen. X=0 is in the upper left corner.
Y: Enter the Y-coordinate (vertical) on screen. Y=0 is in the upper left corner.
Duration: Set how long (in seconds) the text line is to be displayed on the screen. If set to 0 (zero) the text line is displayed until a xCommand Message TextLine Clear command has been sent.
Requires user role: ADMIN
Parameters:
  Text(r): <S: 0, 140>
  X: <1..10000>
  Y: <1..10000>
  Duration: <0..3600>
Example:
OK
  *r MessageTextLineDisplayResult (status=OK):
  ** end

xCommand Message TextLine Clear
Clears the text line which was defined by the xCommand Message TextLine Display command.
Requires user role: ADMIN
Example:
xCommand Message TextLine Clear
OK
  *r MessageTextLineClearResult (status=OK):
  ** end
xCommand Message Prompt Display

Display a small window on screen with a title, text and up to five options for response from the user. The message is displayed on screen until the user gives a response, or until the system receives the following command xCommand Message Prompt Clear.

Use the xFeedback commands to monitor the feedback from the user. Read more about the xFeedback commands in the API introduction section in this guide.

Title: Enter the title of the message.
Text: Enter the text line to be displayed. The <p> and <br> HTML tags will result in line breaks as normal; any other tags will appear as plain text.
FeedbackId: To identify the feedback enter a FeedbackId.
Option.1 to Option.5: Enter the text to appear on the feedback options.

Requires user role: ADMIN

Parameters:
Title: <S: 0, 255>
Text(r): <S: 0, 255>
FeedbackId: <S: 0, 255>
Option.1: <S: 0, 255>
Option.2: <S: 0, 255>
Option.3: <S: 0, 255>
Option.4: <S: 0, 255>
Option.5: <S: 0, 255>

Example:
xCommand Message Prompt Display
Title: "Meeting extension" Text: "The meeting is about to end. Do you want to extend the meeting?" Option.1: "No" Option.2: "Yes, extend with 5 minutes" Option.3: "Yes, extend with 10 minutes"
OK
*r MessagePromptDisplayResult (status=OK):
** end

xCommand Message Prompt Clear

Remove the window displayed using the xCommand Message Alert Display command.

Use the xFeedback commands to monitor the feedback from the user. Read more about the xFeedback commands in the API introduction section in this guide.

FeedbackId: The FeedbackId corresponds to the FeedbackId given by the xCommand Message Prompt Display command.

Requires user role: ADMIN

Parameters:
FeedbackId: <S: 0, 255>

Example:
xCommand Message Prompt Clear
OK
*r MessagePromptClearResult (status=OK):
** end

xCommand Message Prompt Response

Give a response to the xCommand Message Prompt Display.

Use the xFeedback commands to monitor the feedback from the user. Read more about the xFeedback commands in the API introduction section in this guide.

FeedbackId: The FeedbackId corresponds to the FeedbackId given by the xCommand Message Prompt Display command.
OptionId: The OptionId corresponds to the OptionIds given as possible responses in the xCommand Message Prompt Display command.

Requires user role: USER

Parameters:
FeedbackId: <S: 0, 255>
OptionId(r): <1..5>

Example:
xCommand Message Prompt Response OptionId: 1
OK
*r MessagePromptResponseResult (status=OK):
** end
xCommand Message Echo
Issuing the command makes the API raise a message-echo event. The command has no other impact on the codec. Usage can be to poll the codec from a control system or any external device/system to check for connectivity. To monitor the feedback use the xFeedback command. You can read more about the xFeedback command in the general API introduction section.

Text: Enter the text to be echoed.

Requires user role: ADMIN

Parameters:

Text: <0, 255>

Example:

```plaintext
xCommand Message Echo Text: "MyEchoListener99"
*** end
```

xCommand Message FarendMessage
This command is used to send generic messages to the participants in a conference. Not in use in this software version.

CallId: The remote participant to whom the message needs to be sent.

Type: Type of the message.

Text: Enter the text line to be displayed.

Requires user role: USER

Parameters:

CallId(o): <0..65534>

Type(r): <0, 255>

Text(r): <0, 1450>

LocalEcho(o): <On/Off>

Example:

```plaintext
xCommand Message FarendMessage CallId: 3 Type: 3 Text: Hello
```

Phonebook commands

xCommand Phonebook Folder Add
Phonebook entries can be stored in folders. Use this command to add a folder to the local phonebook. The command returns the FolderId, which is a unique string that identifies the folder; typically the format is "localGroupId-n".

Name(r): The name of the folder.

ParentFolderId: The unique identifier for the parent folder. The identifier will be returned by an xCommand Phonebook Search command. It was also returned when the xCommand Phonebook Folder Add command was issued to make the parent folder.

Requires user role: USER

Parameters:

Name(r): <0, 255>

ParentFolderId: <0, 255>

Example:

```plaintext
xCommand Phonebook Folder Add Name: "New York Office"
OK
*r PhonebookFolderAddResult (status=OK):
    Name: localGroupId-3
** end
```
**xCommand Phonebook Folder Modify**
Modify an existing phonebook folder.

- **FolderId**: The unique identifier for the folder. The identifier will be returned by an xCommand Phonebook Search command. It was also returned when the xCommand Phonebook Folder Add command was issued to make the folder.
- **Name(r)**: The name of the contact.
- **ParentFolderId**: The unique identifier for the parent folder. The identifier will be returned by an xCommand Phonebook Search command. It was also returned when the xCommand Phonebook Folder Add command was issued to make the parent folder.

**Requires user role:** USER

**Parameters:**
- **FolderId(r)**: <S: 0, 255>
- **Name**: <S: 0, 255>
- **ParentFolderId**: <S: 0, 255>

**Example:**
```
xCommand Phonebook Folder Modify FolderId:localGroupId-3 Name: "New York Head Office"
OK
*r PhonebookFolderModifyResult (status=OK):
** end
```

**xCommand Phonebook Folder Delete**
Delete an existing folder from the local phonebook.

- **FolderId**: The unique identifier for the folder. The identifier will be returned by an xCommand Phonebook Search command. It was also returned when the xCommand Phonebook Folder Add command was issued to make the folder.

**Requires user role:** USER

**Parameters:**
- **FolderId(r)**: <S: 0, 255>

**Example:**
```
xCommand Phonebook Folder Delete FolderId:localGroupId-3
OK
*r PhonebookFolderDeleteResult (status=OK):
** end
```

**xCommand Phonebook Contact Add**
Add a new contact to the local phonebook. The command returns the ContactId, which is a unique string that identifies the contact; typically the format is “localContactId-n”.

You can add several contact methods to a contact using the xCommand Phonebook ContactMethod Add command. Note that only the first contact method will appear in the Favorites list on the Cisco TelePresence Touch controller. All contact methods are available in the API, on the web interface and when using the remote control.

- **Name**: The name of the contact.
- **FolderId**: The unique identifier for the folder that you want to store the contact in. The identifier will be returned by an xCommand Phonebook Search command. It was also returned when the xCommand Phonebook Folder Add command was issued to make the folder.
- **ImageURL**: Currently not in use.
- **Title**: The title of the contact.
- **Number**: The phone number or address of the contact.
- **Protocol**: Select Auto, SIP, H323 or H320 protocol.
- **CallRate**: Set a call rate.
- **CallType**: Select a call type (audio or video).
- **Device**: Select the device type.

**Requires user role:** USER

**Parameters:**
- **Name(r)**: <S: 0, 255>
- **FolderId**: <S: 0, 255>
- **ImageURL**: <S: 0, 255>
- **Title**: <S: 0, 255>
- **Number**: <S: 0, 255>
- **Protocol**: <Auto/H320/H323/SIP>
- **CallRate**: <0..6000>
- **CallType**: <Audio/Video>
- **Device**: <Mobile/Other/Telephone/Video>

**Example:**
```
xCommand Phonebook Contact Add Name: "John Doe" Number:12345
OK
*r PhonebookContactAddResult (status=OK):
Name: localContactId-1
** end
```
xCommand Phonebook Contact Modify

Modify contact details of an existing contact in the local phonebook. The following parameters can be changed using this command: Name, FolderId, ImageURL and Title. You must use the xCommand Phonebook ContactMethod Modify command to change the other parameters: Number, Protocol, CallRate, CallType and Device.

ContactId: The unique identifier for the contact you want to modify. The identifier will be returned by an xCommand Phonebook Search command. It was also returned when the xCommand Phonebook Contact Add command was issued to make the contact.

Name: The name of the contact.

FolderId: A unique identifier for the folder. The identifier will be returned by an xCommand Phonebook Search command. It was also returned when the xCommand Phonebook Folder Add command was issued.

ImageURL: Currently not in use.

Title: The title of the contact.

Requires user role: USER

Parameters:
- ContactId(r): <S: 0, 255>
- Name: <S: 0, 255>
- FolderId: <S: 0, 255>
- ImageURL: <S: 0, 255>
- Title: <S: 0, 255>

Example:
```
xCommand Phonebook Contact Modify ContactId:localContactId-1 Name: "John Doe - office"
OK
```

```
*r PhonebookContactModifyResult (status=OK):
** end
```

xCommand Phonebook Contact Delete

Delete an existing contact from the local phonebook.

ContactId: The unique identifier for the contact. The identifier will be returned by an xCommand Phonebook Search command. It was also returned when the xCommand Phonebook Contact Add command was issued to make the contact.

Requires user role: USER

Parameters:
- ContactId(r): <S: 0, 255>

Example:
```
xCommand Phonebook Contact Delete ContactId:localContactId-1
OK
```

```
*r PhonebookContactDeleteResult (status=OK):
** end
```
xCommand Phonebook ContactMethod Add
Add contact details for an existing contact in the local phonebook. The command returns the ContactMethodId, which is a unique string that identifies the contact method; typically the format is "n".

You can add several contact methods to a contact. Note that only the first contact method will appear in the Favorites list on the Cisco TelePresence Touch controller. The first contact method may have been created when issuing the xCommand Phonebook Contact Add command to make the contact. All contact methods are available in the API, on the web interface and when using the remote control.

ContactId: The unique identifier for the contact that you want to add a contact method to. The identifier will be returned by an xCommand Phonebook Search command. It was also returned when the xCommand Phonebook Contact Add command was issued to make the contact.
Device: Set which type of device to call to.
Number(r): The phone number or address of the contact.
Protocol: Select Auto, SIP, H323 or H320 protocol.
CallRate: Set a call rate.
CallType: Select a call type (audio or video).

Requires user role: USER

Parameters:
ContactId(r): <S: 0, 255>
Device: <Mobile/Other/Telephone/Video>
Number(r): <S: 0, 255>
Protocol: <Auto/H320/H323/SIP>
CallRate: <0..6000>
CallType: <Audio/Video>

Example:
```
xCommand Phonebook ContactMethod Add ContactId:localContactId-2
Number:54321 Protocol:H323
OK
```

xCommand Phonebook ContactMethod Modify
Modify details about the contact method for an existing contact in the local phonebook.

ContactId: The unique identifier for the contact. The identifier will be returned by an xCommand Phonebook Search command. It was also returned when the xCommand Phonebook Contact Add command was issued to make the contact.
ContactMethodId: The unique identifier for the contact method you want to modify. The identifier will be returned by an xCommand Phonebook Search command. It was also returned when the xCommand Phonebook ContactMethod Add or xCommand Phonebook Contact Add commands were issued to make the contact method.
Device: Set which type of device to call to.
Number: The phone number or address of the contact.
Protocol: Select Auto, SIP, H323 or H320 protocol.
CallRate: Set a call rate.
CallType: Select a call type (audio or video).

Requires user role: USER

Parameters:
ContactId(r): <S: 0, 255>
ContactMethodId(r): <S: 0, 255>
Device: <Mobile/Other/Telephone/Video>
Number: <S: 0, 255>
Protocol: <Auto, H320/H323/SIP>
CallRate: <0..6000>
CallType: <Audio/Video>

Example:
```
xCommand Phonebook ContactMethod Modify ContactMethodId:117
ContactId:localContactId-10 Number:"newnumber@cisco.com"
OK
```
xCommand Phonebook ContactMethod Delete

Delete a contact method from an existing contact in the local phonebook.
ContactId: The unique identifier for the contact you want to change. The identifier will be returned by an xCommand Phonebook Search command. It was also returned when the xCommand Phonebook Contact Add command was issued to make the contact.
ContactMethodId: The unique identifier for the contact method you want to delete. The identifier will be returned by an xCommand Phonebook Search command. It was also returned when the xCommand Phonebook ContactMethod Add command was issued to make the contact method.

Requires user role: USER

Parameters:
- ContactId(r): <S: 0, 255>
- ContactMethodId(r): <S: 0, 255>

Example:
```
xCommand Phonebook ContactMethod Delete
ContactId:localContactId-2
ContactMethodId:1
OK
```

xCommand Phonebook Search

The search command lets you search in both the local and corporate phone books. A search gives a ResultSet.
PhonebookId: The identifier of the phonebook server that will be used. See the xConfiguration Phonebook Server ID setting. Not necessary to use.
PhonebookType: Define whether to search the local phone book or the corporate phonebook.
SearchString: Search for entries containing this string (note that the entry does not have to begin with the string). If no FolderId is specified, all folders / phonebook directories will be searched. The SearchString parameter is optional for software version TC2.0 and later.
SearchField: Currently not in use.
Offset: Get records starting with this offset in a search. The default value is 0. Offset is used together with Limit to support paging.
FolderId: Search only in the specified folder. The FolderId (string) is listed in the ResultSet of a search result containing folders.
Limit: Limit the number of records in the result set to this number. For example, if the limit is set to 10, the ResultSet will contain only 10 entries (Contacts and Folders) even if the total number of hits is larger. The maximum limit is 1000.
Recursive: This parameter will only have effect when searching the local phone book. The setting determines whether a local phone book search should be limited to the given FolderId, or also recursively search in its subfolders. If not specified, the search will be recursive.

When issuing the command without specifying any parameters, all folders, contacts and contact methods in the local phone book will be returned.

Requires user role: USER

Parameters:
- PhonebookId: <S: 0, 255>
- PhonebookType: <Corporate/Local>
- SearchString: <S: 0, 255>
- SearchField: <Name/Number>
- Offset: <0..65534>
- FolderId: <S: 0, 255>
- Limit: <0..65534>
- Recursive: <False/True>
- ContactType(o): <Any/Folder/Contact>

Example:
```
xCommand Phonebook Search
PhonebookType:Corporate Limit:2
FolderId:"corporate _ 001"
OK
*r PhonebookSearchResult ResultSet ResultInfo TotalRows: 25
*r PhonebookSearchResult ResultSet Contact 1 Name: "John Doe (office)"
```
Presentation commands

**xCommand Presentation Start**
Open a media stream from the selected presentation source.
PresentationSource: Select the video input source to be used for presentation.
SendingMode: Select whether the presentation is shown locally or locally and remotely.

**Requires user role:** USER

**Parameters:**
- PresentationSource: <1..2>
- SendingMode: <LocalRemote/LocalOnly>

**Example:**
```
xCommand Presentation Start PresentationSource:2
  SendingMode: LocalRemote
  OK
```

**xCommand Presentation Stop**
Stop the media stream from the presentation source.

**Requires user role:** USER

**Example:**
```
xCommand Presentation Stop
  OK
  /* PresentationStopResult (status=OK):
  */
```

---

* PhonebookSearchResult ResultSet Contact 1 ContactId: "localContactId-3"
  ContactMethod 1 ContactMethodId: "1"
  PhonebookSearchResult ResultSet Contact 1 ContactMethod 1 Name: "John.Doe.Office@company.com"
  PhonebookSearchResult ResultSet Contact 1 ContactMethod 1 Protocol: H323
  PhonebookSearchResult ResultSet Contact 1 ContactMethod 2 ContactMethodId: "2"
  PhonebookSearchResult ResultSet Contact 1 ContactMethod 2 Name: "SIP:John.Doe.Office@company.com"
  PhonebookSearchResult ResultSet Contact 1 ContactMethod 2 Protocol: SIP
  PhonebookSearchResult ResultSet Contact 1 ContactMethod 2 Protocol: "H323:John.Doe.Home@company.com"

  PhonebookSearchResult ResultSet Contact 2 ContactMethod 2 ContactMethodId: "4"
  PhonebookSearchResult ResultSet Contact 2 ContactMethod 2 Name: "SIP:John.Doe.Home@company.com"
  PhonebookSearchResult ResultSet Contact 2 ContactMethod 2 Protocol: SIP

** end**
### Preset commands

**xCommand Preset Store**

Store the connector selections for all video input sources and the current position for all cameras. Note that information about all video input sources and all camera positions are included in the same preset. The system may hold 15 predefined video input presets. These presets are available for far end control, i.e. they are referred in the PresetId parameter of the xCommand FarEndControl Preset Activate command. In contrast, the xCommand Camera Preset commands applies to individual cameras only. Those presets are not available for far end control.

- **PresetId**: The ID of this preset.
- **Type**: Currently it makes no difference if you select Camera or All. However, this may change in the future (other audio or video settings may be included in a preset). If you want to ensure that a preset only affects camera positions we recommend that you select Camera.
- **Description**: Enter a description of the camera preset.

**Requires user role**: USER

**Parameters**:
- PresetId(r): <1..15>
- Type(r): <All/Camera>
- Description: <S: 0, 255>

**Example**:

```
> xCommand Preset Store PresetId:3 Type:Camera Description:"Left view"
OK
```

**r PresetStoreResult (status=OK):**

```
** end
```

**xCommand Preset Clear**

Delete a preset.

- **PresetId**: The ID of the preset you want to delete.

**Requires user role**: USER

**Parameters**:
- PresetId(r): <1..15>

**Example**:

```
xCommand Preset Clear PresetId:3
OK
```

**r PresetClearResult (status=OK):**

```
** end
```

**xCommand Preset Activate**

Activate one of the stored local presets.

- **PresetId**: The ID of the preset you want to activate.

**Requires user role**: USER

**Parameters**:
- PresetId(r): <1..15>

**Example**:

```
xCommand Preset Activate PresetId:3
OK
```

**r PresetActivateResult (status=OK):**

```
** end
```
Provisioning commands

xCommand Provisioning StartUpgrade
The codec software can be upgraded from the provisioning server. When starting the upgrade the software is automatically downloaded and installed. The codec reboots to complete the software upgrade.

Requires user role: ADMIN

Example:
```plaintext
xCommand Provisioning StartUpgrade
*r StartUpgradeResult (status=OK):
** end
```

xCommand Provisioning CompleteUpgrade
Starts installing the software upgrade if you wish to install it before it is set to do so.

Requires user role: USER

Example:
```plaintext
xCommand Provisioning CompleteUpgrade
*r CompleteUpgradeResult (status=OK):
** end
```

xCommand Provisioning PostponeUpgrade
Postpones the installing of the software upgrade.

Requires user role: USER

Parameters:
SecondsToPostpone(r): <0..65534>

Example:
```plaintext
xCommand Provisioning PostponeUpgrade SecondsToPostpone: 60
*r PostponeUpgradeResult (status=OK):
** end
```

xCommand Provisioning CUCM CAPF OperationStart
Starts a pending CAPF (Certificate Authority Proxy Function) operation toward the CUCM. When the CUCM administrator initiates an operation that the endpoint should perform (like installing, updating or deleting certificates), this command can be used to start the CAPF operation.

AuthString: Set the authentication string required for the CAPF operation.

Requires user role: USER

Parameters:
AuthString(o): <S: 4, 10>

Example:
```plaintext
xCommand Provisioning CUCM CAPF OperationStart AuthString: 123456
*r CAPFStartResult (status=OK):
** end
```

xCommand Provisioning CUCM CTL Delete
Delete the stored CTL and ITL files (CTL: Certificate Trust List, ITL: Identity Trust List).

Requires user role: USER

Example:
```plaintext
xCommand Provisioning CUCM CTL Delete
*r DeleteResult (status=OK):
** end
```
Security commands

**xCommand Security FIPSMode Activate**
Activate FIPS (140-2) mode. NOTE: Activating FIPS mode implies a reset to factory defaults. While in FIPS mode, software upgrade is disabled and the following limitations apply: All calls are encrypted, unencrypted communication protocols like Telnet and HTTP cannot be used. IEEE802.1x and SNMP are disabled. The SIP Profile Type setting cannot be Microsoft. The root user is not available (root settings cannot be changed).
To exit FIPS mode, perform a factory reset.

**Requires user role**: ADMIN

**Parameters**:
Confirm: <Yes>

**Example**:
```
xCommand Security FIPSMode Activate Confirm: "Yes"
OK
```
```
*r SecurityFIPSModeActivateConfirmResult (status=OK)
** end
```

---

**xCommand Provisioning CUCM ExtensionMobility Login**
Login command for the Extension Mobility service. You login to the Extension Mobility service with a user name and pin. If there are multiple profiles available for that user, a separate event will be sent with the available profiles for the user. A new login command with the profile can then be submitted.

**Requires user role**: USER

**Parameters**:
UserId(r): <S: 1, 255>
Pin(r): <S: 1, 255>
Profile(o): <S: 1, 255>

**Example**:
```
xCommand Provisioning CUCM ExtensionMobility Login UserId: user1 Pin: 1234
```
```
*r NoResult (status=OK):
** end
```
```
*e ExtensionMobilityProfileSelection Profile 0 Name: "Profile 1 for user1"
*e ExtensionMobilityProfileSelection Profile 0 Id: "profile1+For+user1"
*e ExtensionMobilityProfileSelection Profile 1 Name: "Private"
*e ExtensionMobilityProfileSelection Profile 1 Id: "private"
```
```
xCommand Provisioning CUCM ExtensionMobility Login UserId: user1 Pin: 1234 Profile: private
```
```
*r NoResult (status=OK):
** end
```
```
*e ExtensionMobility Success: "True" ResponseCode: "Success"
```

---

**xCommand Provisioning CUCM ExtensionMobility Logout**
This command will log you out of your Extension Mobility profile.

**Requires user role**: USER

**Example**:
```
xCommand Provisioning CUCM ExtensionMobility Logout
```
```
*r NoResult (status=OK):
** end
```
### xCommand Security Persistency

Set the following features to persistent or non-persistent mode. In non-persistent mode the information gathered by the specified feature does not persist a reboot of the system. Persistent mode is the default. This command reboots the system.

**Configuration:** In non-persistent mode, all configurations are set back to default when the system reboots.

**CallHistory:** In non-persistent mode call history is deleted when the system reboots.

**InternalLogging:** In non-persistent mode eventlog is deleted when the system reboots.

**LocalPhonebook:** In non-persistent mode local phone book is deleted when the system reboots.

**DHCP:** In non-persistent mode all IP related information is deleted when the system reboots.

**ConfirmAndReboot:** Reboots the system.

**Requires user role:** ADMIN

**Parameters:**
- Configurations(r): <NonPersistent/Persistent>
- CallHistory(r): <NonPersistent/Persistent>
- InternalLogging(r): <NonPersistent/Persistent>
- LocalPhonebook(r): <NonPersistent/Persistent>
- DHCP(r): <NonPersistent/Persistent>
- ConfirmAndReboot(r): <Yes>

**Example:**
```
xCommand Security Persistency Configurations: Persistent
CallHistory: Persistent
InternalLogging: Persistent
LocalPhonebook: Persistent
DHCP: Persistent
ConfirmAndReboot: Yes
```

### Standby commands

#### xCommand Standby Activate

Set the system in standby mode, which turns off the video outputs and put the camera into sleep mode.

**Requires user role:** USER

**Example:**
```
xCommand Standby Activate
```

```
xCommand Standby Activate
   *r ActivateResult (status=OK):
   ** end
```

#### xCommand Standby Deactivate

Bring the system out of standby mode.

**Requires user role:** USER

**Example:**
```
xCommand Standby Deactivate
```

```
xCommand Standby Deactivate
   *r DeactivateResult (status=OK):
   ** end
```

#### xCommand Standby ResetTimer

Set a temporary standby delay (in minutes). If the system is in standby mode when the reset timer is set, the system is brought out of standby mode. When left idle for the given delay the system goes into standby mode. Setting the reset timer does not affect the Standby Delay in the Advanced configuration menu (or by xConfiguration Standby Delay). Next time this delay is the valid standby delay.

**Requires user role:** USER

**Parameters:**
- Delay(r): <1..480>

**Example:**
```
xCommand Standby ResetTimer Delay:10
```

```
xCommand Standby ResetTimer Delay:10
   *r ResetResult (status=OK):
   ** end
```
SystemUnit commands

xCommand SystemUnit OptionKey Add
Add an option key to support additional features.

Requires user role: ADMIN

Parameters:
- Key(r): <S: 16, 24>

Example:
```plaintext
xCommand SystemUnit OptionKey Add Key:******************
```
```
*r OptionKeyResult (status=OK):
** end
```

xCommand SystemUnit OptionKey RemoveAll
Removes all Option keys.

Requires user role: ADMIN

Parameters:
- Confirm(r): <Yes>

Example:
```plaintext
xCommand SystemUnit OptionKey RemoveAll Confirm: Yes
```
```
*r OptionKeyResult (status=OK):
** end
```

xCommand SystemUnit ReleaseKey Add
Add the software release key. Used to enable new software (applicable for main software releases).

Requires user role: ADMIN

Parameters:
- Key(r): <S: 16, 24>

Example:
```plaintext
xCommand SystemUnit ReleaseKey Add Key:******************
```
```
*r ReleaseKeyResult (status=OK):
** end
```

xCommand SystemUnit ReleaseKey RemoveAll
Removes all Release keys.

Requires user role: ADMIN

Parameters:
- Confirm(r): <Yes>

Example:
```plaintext
xCommand SystemUnit ReleaseKey RemoveAll Confirm: Yes
```
```
*r ReleaseKeyResult (status=OK):
** end
```

xCommand SystemUnit AdminPassword Set
Set an administrator password to restrict access the codec. After a restart of the codec this password also applies to the web interface.

Requires user role: ADMIN

Parameters:
- Password(r): <S: 0, 64>

Example:
```plaintext
xCommand SystemUnit AdminPassword Set Password:**********
```
```
*r AdminPasswordSetResult (status=OK):
** end
```

xCommand SystemUnit Diagnostics Run
This command runs all self-diagnostics commands on the system.

Requires user role: ADMIN

Parameters:
- ResultSet(o): <Alerts/All/None>

Example:
```plaintext
xCommand SystemUnit Diagnostics Run
```
```
*r DiagnosticsResult (status=OK):
** end
```
**xCommand SystemUnit Diagnostics ExtendedLogging Start**

Turns on the extended logging, which stores more information than regular logging in the log files. You can determine the duration in seconds. Note that extended logging uses more of your video system’s resources, and should only be used when troubleshooting an issue.

**Requires user role:** USER

**Parameters:**
- **Duration(o):** <1..600>

**Example:**
```
xCommand SystemUnit Diagnostics ExtendedLogging Start Duration: 20
OK
```
```
*r ExtendedLoggingModeResult (status=OK):
```

---

**xCommand SystemUnit Diagnostics ExtendedLogging Stop**

 Stops the logging started with `xCommand SystemUnit Diagnostics ExtendedLogging Start`.

**Requires user role:** USER

**Example:**
```
xCommand SystemUnit Diagnostics ExtendedLogging Stop
OK
```
```
*r ExtendedLoggingModeResult (status=OK):
```
```
** end
```

---

**xCommand SystemUnit MenuPassword Set**

Set a menu password to restrict access to Administrator Settings menu. If you have a remote control the password can also be set from the on screen menu. If you have a Cisco TelePresence Touch controller the menu password is set from the command line interface.

**Requires user role:** ADMIN

**Parameters:**
- **Password(r):** <S: 0, 255>

**Example:**
```
xCommand SystemUnit MenuPassword Set Password:***********
```
```
*r MenuPasswordSetResult (status=OK):
```
```
** end
```

---

**xCommand SystemUnit MenuPassword Validate**

Validate that the supplied password is correct.

**Requires user role:** ADMIN

**Parameters:**
- **Password(r):** <S: 0, 255>

**Example:**
```
xCommand SystemUnit MenuPassword Validate Password:***********
```
```
*r MenuPasswordValidateResult (status=OK):
```
```
** end
```

---

**xCommand SystemUnit DateTime Set**

Set the date and time for the system, if not available from NTP (Network Time Protocol).

**Requires user role:** ADMIN

**Parameters:**
- **Year:** <2008..2037>
- **Month:** <1..12>
- **Day:** <1..31>
- **Hour:** <0..23>
- **Minute:** <0..59>
- **Second:** <0..59>

**Example:**
```
xCommand SystemUnit DateTime Set Year:2012 Month:7 Day:3 Hour:12 Minute:0 Second:0
```
```
*r DateTimeSetResult (status=OK):
```
```
** end
```

---

---
xCommand SystemUnit DateTime Get

Read the time and date from the system.

Requires user role: USER

Example:
```
xCommand SystemUnit DateTime get
*r DateTimeGetResult (status=OK):
  Year: 2012
  Month: 7
  Day: 3
  Hour: 12
  Minute: 0
  Second: 0
** end
```

xCommand SystemUnit FactoryReset

Reset the codec to factory default settings. The call logs are deleted and all system parameters are reset to default values. All files that have been uploaded to the codec are deleted. The Release key and Option key are not affected.

As a default the system restarts after the factory reset, but other behavior can be forced by selecting a different TrailingAction.

TrailingAction: Select Shutdown or NoAction to override the default behavior (Restart).

Requires user role: ADMIN

Parameters:
- Confirm(r): <Yes>
- TrailingAction: <NoAction/Restart/Shutdown>

Example:
```
xCommand SystemUnit FactoryReset Confirm: Yes
*r FactoryResetConfirmResult (status=OK):
** end
```

xCommand SystemUnit SoftwareUpgrade

Initiate a software upgrade by fetching the software on a given URL. If the server requires username and password these parameters must be included.

Requires user role: ADMIN

Parameters:
- URL(r): <S: 0, 255>
- UserName: <S: 0, 255>
- Password: <S: 0, 255>

Example:
```
xCommand SystemUnit SoftwareUpgrade URL: "ftp://<ftp_server_ip_address>/s52000tc4_0_0.pkg" UserName: testDownload Password: 1234
*r SystemUnitSoftwareUpgradeResult (status=OK):
** end
```

xCommand SystemUnit ConfigurationProfile Change

Select a previously saved configuration profile. NOTE: Requires a restart of the codec.

Requires user role: ADMIN

Parameters:
- Name(r): <S: 0, 255>

Example:
```
xCommand SystemUnit ConfigurationProfile Change Name: "My_ConfigurationProfile_1"
*r ConfigurationProfileChangeResult (status=OK):
  Warning: New configuration profile will be active after next boot.
** end
```

xCommand SystemUnit ConfigurationProfile Remove

Delete a configuration profile that has been stored in the system.

Requires user role: ADMIN

Parameters:
- Name(r): <S: 0, 255>

Example:
```
xCommand SystemUnit ConfigurationProfile Remove Name: "My_ConfigurationProfile_1"
*r ConfigurationProfileRemoveResult (status=OK):
** end
```
xCommand SystemUnit ConfigurationProfile SaveCurrentConfigurationAs
Save the current system settings into a configuration profile. Assign a name to the new profile. The name is the unique identifier of the profile.

Requires user role: ADMIN

Parameters:
- Name(r): <S: 0, 255>

Example:
```
xCommand SystemUnit ConfigurationProfile SaveCurrentConfigurationAs Name: "My_ConfigurationProfile_1"
```
```
*ConfigurationProfileSaveCurrentConfigurationResult (status=OK):
  ** end
```

xCommand SystemUnit ConfigurationProfile List
List configuration profiles that have been stored in the system.

Requires user role: ADMIN

Example:
```
xCommand SystemUnit ConfigurationProfile List
```
```
*ConfigurationProfileListResult (status=OK):
  Profile: My_ConfigurationProfile_1
  Profile: My_ConfigurationProfile_2
  ** end
```

xCommand SystemUnit ConfigurationProfile CancelChange
Cancel the "ConfigurationProfile Change" command, that would otherwise take effect after next system boot.

Requires user role: ADMIN

Example:
```
xCommand SystemUnit ConfigurationProfile CancelChange
```
```
*ConfigurationProfileCancelChangeResult (status=OK):
  ** end
```

xCommand SystemUnit Notifications RemoveAll
Clears the list of system notifications that are reported by xStatus SystemUnit Notifications Text/Type.

Requires user role: ADMIN

Example:
```
xCommand SystemUnit Notifications RemoveAll
```
```
*NotificationsRemoveAllResult (status=OK):
  ** end
```

xCommand SystemUnit ReleaseKey List
List all software versions that the system has a valid release key for.

Requires user role: ADMIN

Example:
```
xCommand SystemUnit ReleaseKey List
```
```
*SystemUnit ReleaseKey 1 Version: "TC1"
*SystemUnit ReleaseKey 2 Version: "TC2"
*SystemUnit ReleaseKey 3 Version: "TC3"
*SystemUnit ReleaseKey 4 Version: "TC4"
*SystemUnit ReleaseKey 5 Version: "TC5"
*SystemUnit ReleaseKey 6 Version: "TC6"
  ** end
```
**Video commands**

**xCommand Video PictureLayoutSet**
Select the screen layout mode.
Target: Select if the target is the local layout or the remote layout.
CallId: The CallID is returned when the xCommand Dial command is run. During the call you can run the xStatus Call command to see the Callld.
LayoutFamily: Select a layout family.
CustomLayoutName: Enter a name for the layout.

**Requires user role:** USER

**Parameters:**
- Target: <local/remote>
- CallId: <0..65534>
- LayoutFamily: <auto/custom/equal/fullscreen/overlay/presentationlargespeaker/presentationsmallspeaker/prominent/single/speaker_full>
- CustomLayoutName: <S: 1, 128>

**Example:**
```plaintext
xCommand Video PictureLayoutSet Target: Local LayoutFamily: equal
```

**xCommand Video LayoutSetPresentationView**
Set the presentation view mode.
View: Select Default when you want the presentation to be viewed with the default settings for the codec. Select Maximized when you want the presentation to be displayed in full screen. Select Minimized when you want the presentation to be displayed in a small picture on screen.

**Requires user role:** ADMIN

**Parameters:**
- View: <Default/Maximized/Minimized>

**Example:**
```plaintext
xCommand Video Layout SetPresentationView View:Default
```

**xCommand Video OSD Close**
Closes all menus on the on-screen display.
Element: The on-screen menu.

**Requires user role:** ADMIN

**Parameters:**
- Element: <Menu>

**Example:**
```plaintext
xCommand Video OSD Close Element: Menu
```

**xCommand Video PIP ActiveSpeaker Set**
Sets position for the active speakers PiP (picture in picture).
Position: Predefined positions.
CenterLeft: The ActiveSpeaker PiP appears on the left side of the screen, in center.
CenterRight: The ActiveSpeaker PiP appears on the right side of the screen, in center.
LowerLeft: The ActiveSpeaker PiP appears in the lower left corner of the screen.
LowerRight: The ActiveSpeaker PiP appears in the lower right corner of the screen.
UpperCenter: The ActiveSpeaker PiP appears on top of the screen, in center.
UpperLeft: The ActiveSpeaker PiP appears in the upper left corner of the screen.
UpperRight: The ActiveSpeaker PiP appears in the upper right corner of the screen.

**Requires user role:** ADMIN

**Parameters:**
- Position: <CenterLeft/CenterRight/LowerLeft/LowerRight/UpperCenter/UpperLeft/UpperRight>

**Example:**
```plaintext
xCommand Video PIP ActiveSpeaker Set Position: UpperRight
```
xCommand Video PIP Presentation Set

Sets position for the presentation PiP (picture in picture).

Position: Predefined positions.

CenterLeft: The presentation PiP appears on the left side of the screen, in center.
CenterRight: The presentation PiP appears on the right side of the screen, in center.
LowerLeft: The presentation PiP appears in the lower left corner of the screen.
LowerRight: The presentation PiP appears in the lower right corner of the screen.
UpperCenter: The presentation PiP appears on top of the screen, in center.
UpperLeft: The presentation PiP appears in the upper left corner of the screen.
UpperRight: The presentation PiP appears in the upper right corner of the screen.

Requires user role: ADMIN

Parameters:

Position(r): <CenterLeft/CenterRight/LowerLeft/LowerRight/UpperCenter/UpperLeft/UpperRight>

Example:

```
xCommand Video PIP Presentation Set Position: LowerLeft
*r PresentationPipSetResult (status=OK):
** end
```
**xCommand Video PIP Presentation Set**

Sets position for the presentation PiP (picture in picture).

Position: Predefined positions.

- **CenterLeft**: The presentation PiP appears on the left side of the screen, in center.
- **CenterRight**: The presentation PiP appears on the right side of the screen, in center.
- **LowerLeft**: The presentation PiP appears in the lower left corner of the screen.
- **LowerRight**: The presentation PiP appears in the lower right corner of the screen.
- **UpperCenter**: The presentation PiP appears on top of the screen, in center.
- **UpperLeft**: The presentation PiP appears in the upper left corner of the screen.
- **UpperRight**: The presentation PiP appears in the upper right corner of the screen.

Requires user role: ADMIN

Parameters:

`Position(r): <CenterLeft/CenterRight/LowerLeft/LowerRight/UpperCenter/UpperLeft/UpperRight>`

Example:

```
xCommand Video PIP Presentation Set Position: LowerLeft
*r PresentationPipSetResult (status=OK):
  ** end
```

**xCommand Video PreviewFilmstrip Set**

Moves the location of the filmstrip associated with the layouts used in presentation preview mode.

Not in use in this software version.

- **LowerCenter**: The preview appears on the bottom of the screen, in center.
- **LowerLeft**: The preview appears in the lower left corner of the screen.
- **LowerRight**: The preview appears in the lower right corner of the screen.
- **UpperCenter**: The preview appears on top of the screen, in center.
- **UpperLeft**: The preview appears in the upper left corner of the screen.
- **UpperRight**: The preview appears in the upper right corner of the screen.

Requires user role: ADMIN

Parameters:

`Position(r): <LowerCenter/LowerLeft/LowerRight/UpperCenter/UpperLeft/UpperRight>`

Example:

```
xCommand Video PreviewFilmstrip Set Position: LowerCenter
*r PreviewFilmstripSetResult (status=OK):
  ** end
```

**Experimental commands**

The Experimental commands are for testing only and should not be used unless agreed with Cisco. These commands are not documented and WILL change in later releases.
Chapter 5

xStatus commands
## Description of the xStatus commands

In this chapter, you can find all of the xStatus commands and the responses. Status type commands return information about the system and system processes. You can query all information or just some of it.

We recommend you visit our web site regularly for updated versions of the manual.

Audio status

xStatus Audio
Shows the top level overview of the audio status. The identities of the LocalInput, RemoteInput, LocalOutput and RemoteOutput are used when querying additional information.

xStatus Audio Microphones Mute
Shows the microphones mute mode.
Value space of the result returned:
<On/Off>
Example:
  xStatus Audio Microphones Mute
  *s Audio Microphones Mute: Off
  ** end

xStatus Audio Volume
Shows the volume level (dB) of the loudspeaker output.
Value space of the result returned:
<0..100>
Example:
  xStatus Audio Volume
  *s Audio Volume: 70
  ** end

xStatus Audio Input RemoteInput [n] CallId
Shows the CallId for the remote audio input.
You can run the command xStatus Audio Input RemoteInput to find the identity [n] of the input.
Value space of the result returned:
<0..65534>
Example:
  xStatus Audio Input RemoteInput 8 CallId
  *s Audio Input RemoteInput 8 CallId: 28
  ** end

xStatus Audio Input Connectors Microphone [n] ConnectionStatus
Indicates whether a microphone is detected on the microphone input connector.
Value space of the result returned:
<NotConnected/HeadsetMicConnected/GenesisConnected/Connected>
Example:
  xStatus Audio Input Connectors Microphone ConnectionStatus
  *s Audio Input Connectors Microphone 1 ConnectionStatus: NotConnected
  *s Audio Input Connectors Microphone 2 ConnectionStatus: Connected
  ** end

xStatus Audio Input Connectors Microphone [n] EcReferenceDelay
Returns the detected latency for each loudspeaker to microphone path. The result is in milliseconds.
Value space of the result returned:
<Integer>
Example:
  xStatus Audio Input Connectors Microphone 1 EcReferenceDelay
  *s Audio Connectors Microphone 1 EcReferenceDelay: 120
  ** end

xStatus Audio Input Connectors HDMI [n] EcReferenceDelay
Returns the detected latency for each loudspeaker to microphone path for systems supporting HDMI input used as microphone input. The result is in milliseconds.
Value space of the result returned:
<Integer>
Example:
  xStatus Audio Input Connectors HDMI 1 EcReferenceDelay
  *s Audio Connectors HDMI 1 EcReferenceDelay: 0
  ** end
Call status

xStatus Call
Shows the top level overview of the call status. The call identity is used when query for additional information about the call.

xStatus Call [1..n] Status
Shows the status of a call. You can run the command xStatus Call to find the call identity.

Value space of the result returned:
<Idle/Dialling/Ringing/Connecting/Connected/Disconnecting/OnHold/EarlyMedia/Preserved/RemotePreserved>

Example:

```
xStatus Call 27 Status
*s Call 27 Status: Connected
** end
```

xStatus Call [n] Direction
States the direction of the call initiation. You can run the command xStatus Call to find the call identity.

Value space of the result returned:
<Incoming/Outgoing>

Example:

```
xStatus Call 27 Direction
*s Call 27 Direction: Outgoing
** end
```

xStatus Call [n] Protocol
Shows the call protocol of the incoming or outgoing call. You can run the command xStatus Call to find the call identity.

Value space of the result returned:
<H323/SIP/H320>

Example:

```
xStatus Call 27 Protocol
*s Call 27 Protocol: "h323"
** end
```

xStatus Call [n] CallType
Shows the call type of the incoming or outgoing call. You can run the command xStatus Call to find the call identity.

Value space of the result returned:
<Video/Audio/AudioCanEscalate/ForwardAllCall/Unknown>

Example:

```
xStatus Call 27 CallType
*s Call 27 CallType: Video
** end
```

xStatus Call [n] RemoteNumber
Shows the remote (far end) number or URI of an incoming or outgoing call. You can run the command xStatus Call to find the call identity.

Value space of the result returned:
<String>

Example:

```
xStatus Call 27 RemoteNumber
*s Call 27 RemoteNumber: "5585232"
** end
```

xStatus Call [n] CallbackNumber
Shows the remote (far end) number or URI of an incoming or outgoing call, including the call protocol, for call back. You can run the command xStatus Call to find the call identity.

Value space of the result returned:
<String>

Example:

```
xStatus Call 27 CallbackNumber
*s Call 27 CallbackNumber: "h323:firstname.lastname@company.com"
** end
```
xStatus Call [n] DisplayName
Shows the name of the remote (far end) participant in an incoming or outgoing call. You can run the command xStatus Call to find the call identity.

Value space of the result returned:
<String>

Example:
xStatus Call 27 DisplayName
*s Call 27 DisplayName: "firstname.lastname@company.com"
** end

xStatus Call [n] TransmitCallRate
Shows the transmit bandwidth in the call in kilobits per second (kbps). You can run the command xStatus Call to find the call identity.

Value space of the result returned:
<Integer>

Example:
xStatus Call 27 TransmitCallRate
*s Call 27 TransmitCallRate: 768
** end

xStatus Call [n] ReceiveCallRate
Shows the receive bandwidth in the call in kilobits per second (kbps). You can run the command xStatus Call to find the call identity.

Value space of the result returned:
<Integer>

Example:
xStatus Call 27 ReceiveCallRate
*s Call 27 ReceiveCallRate: 4000
** end

xStatus Call [n] FacilityServiceId
When calling a facility service, the facility service id is shown. Otherwise the value 0 is returned.

Value space of the result returned:
<0..5>

Example:
xStatus Call FacilityServiceId
*s Call 3 FacilityServiceId: 1
** end

xStatus Call [n] Encryption Type
Shows the encryption type of the call. You can run the command xStatus Call to find the call identity.

Value space of the result returned:
"None"/"Aes-128"

Example:
xStatus Call Encryption Type
*s Call 27 Encryption Type: "None"
** end

xStatus Call [n] PlacedOnHold
Shows the placed on hold status of the call. You can run the command xStatus Call to find the call identity.

Value space of the result returned:
,True,False>

Example:
xStatus Call PlacedOnHold
*s Call 27 PlacedOnHold: False
** end
**xStatus Call [n] Duration**
Shows the duration of a call (in seconds). You can run the command `xStatus Call` to find the call identity.

Value space of the result returned:
<Integer>

Example:
```
xStatus Call 27 Duration
*s Call 27 Duration: 2354
** end
```

**xStatus Call [n] SecurityStatus**
Security status of a call represents the least of the security statuses of all the endpoints involved in a CUCM call.

Value space of the result returned:
<Invalid/Unknown/NotAuthenticated/Authenticated>

**xStatus Call [n] AnswerState**
Indicates if a call is answered, ignored or has been automatically answered by a system.

Value space of the result returned:
<Unanswered/Ignored/Autoanswered/Answered>

Example:
```
xStatus Call AnswerState
*s Call 5 AnswerState: Answered
** end
```

**xStatus Call [n] ModifyState**
Shows the current state of a pending Call Modify operation. Not in use in this software version.

OutgoingModify: a request CallEscalate to Video is pending.
IncomingModify: a peer has requested to escalate the call to Video.
Idle: No Call Modify operation is pending.

Value space of the result returned:
<Idle/Outgoing/Incoming>

Example:
```
xStatus Call ModifyState
*s Call 11 ModifyState: Idle
** end
```
Camera status

xStatus Camera
Shows the top level overview of the camera status.

xStatus Camera [1..1] Connected
Shows if the camera is connected or not.
Value space of the result returned:
<String>
Example:
  xStatus Camera 1 Connected
  *s Camera 1 Connected: True
  ** end

xStatus Camera [1..1] HardwareID
Shows the hardware identity of the camera.
Value space of the result returned:
<String>
Example:
  xStatus Camera 1 HardwareID
  *s Camera 1 HardwareID: "50000000"
  ** end

xStatus Camera [1..1] Manufacturer
Shows the manufacturer of the camera.
Value space of the result returned:
<String>
Example:
  xStatus Camera 1 Manufacturer
  *s Camera 1 Manufacturer: "TANDBERG"
  ** end

xStatus Camera [1..1] Model
Shows the camera model.
Value space of the result returned:
<String>
Example:
  xStatus Camera 1 Model
  *s Camera 1 Model: "PrecisionHD 1080p 12X"
  ** end

xStatus Camera [1..1] SoftwareID
Shows the software identity of the camera.
Value space of the result returned:
<String>
Example:
  xStatus Camera 1 SoftwareID
  *s Camera 1 SoftwareID: "S01718-4.0FINAL [ID:40063] 2010-10-20"
  ** end

xStatus Camera [1..1] SerialNumber
Shows the camera serial number.
Value space of the result returned:
<String>
Example:
  xStatus Camera 1 SerialNumber
  *s Camera 1 SerialNumber: "B1AB26B00010"
  ** end

xStatus Camera [1..1] IPAddress
Shows the camera IP address.
Value space of the result returned:
<String>
Example:
  xStatus Camera 1 IPAddress
  *s Camera 1 IPAddress: ""
  ** end
**xStatus Camera [1..1] MacAddress**  
Shows the MAC (Media Access Control) address for the camera.  
**Value space of the result returned:**  
<String>  
**Example:**  
```  
xStatus Camera 1 MacAddress  
*s Camera 1 MacAddress: ""  
** end  
```

**xStatus Camera [1..1] Position Pan**  
Shows the current pan (move left and right) position of the camera. The value range depends on camera type.  
**Value space of the result returned:**  
<-65535..65535>  
**Example:**  
```  
xStatus Camera 1 Position Pan  
*s Camera 1 Position Pan: 412  
** end  
```

**xStatus Camera [1..1] Position Tilt**  
Shows the current tilt (move up and down) position of the camera. The value range depends on camera type.  
**Value space of the result returned:**  
<-65535..65535>  
**Example:**  
```  
xStatus Camera 1 Position Tilt  
*s Camera 1 Position Tilt: 106  
** end  
```

**xStatus Camera [1..1] Position Zoom**  
Shows the current zoom (zoom in and out) position of the camera. The value range depends on camera type.  
**Value space of the result returned:**  
<0..65535>  
**Example:**  
```  
xStatus Camera 1 Position Zoom  
*s Camera 1 Position Zoom: 828  
** end  
```

**xStatus Camera [1..1] Position Focus**  
Shows the current focus position of the camera. The value range depends on camera type.  
**Value space of the result returned:**  
<0..65535>  
**Example:**  
```  
xStatus Camera 1 Position Focus  
*s Camera 1 Position Focus: 4597  
** end  
```

**xStatus Camera [1..1] Capabilities Options**  
Shows the camera capabilities (ptzf = pan, tilt, zoom, focus).  
**Value space of the result returned:**  
<String>  
**Example:**  
```  
xStatus Camera 1 Capabilities Options  
*s Camera 1 Capabilities Options: "ptzf"  
** end  
```

**xStatus Camera [1..1] Flip**  
In Flip mode (vertical flip) the image can be flipped upside down.  
**Value space of the result returned:**  
<"Auto"/"On"/"Off">  
**Example:**  
```  
xStatus Camera 1 Flip  
*s Camera 1 Flip: "Off"  
** end  
```
**xStatus Camera [n] UpgradeStatus**

Returns the status of the camera software upgrade.
- **None**: No upgrade going on at the moment.
- **Downloading**: Downloading the upgrade.
- **Installing**: Installing the upgrade.
- **Rebooting**: Rebooting the system to take the upgrade in use.

**Value space of the result returned:**

<None/Downloading/Installing/Rebooting>

**Example:**

```plaintext
xStatus Camera 1 UpgradeStatus
*s Camera 1 UpgradeStatus: None
** end
```

**xStatus Camera [n] DownloadProgress**

Indicates how many percent of the new camera software upgrade has been downloaded. Result -1 indicates that the information is not available for that camera type.

**Value space of the result returned:**

<Integer>

**Example:**

```plaintext
xStatus Camera 1 DownloadProgress
*s Camera 1 DownloadProgress: 0
** end
```
Conference status

xStatus Conference
Shows the top level overview of the conference status. The identity of the Conference Site can only be read during a call.

xStatus Conference Presentation Mode
Shows the status of the secondary video stream.
Value space of the result returned:
<On/Off>
Example:
  xStatus Conference Presentation Mode
  *s Conference Presentation Mode: Off
  ** end

xStatus Conference Presentation Protocol
Shows the video protocol used when transmitting the presentation.
Value space of the result returned:
<String>
Example:
  xStatus Conference Presentation Protocol
  *s Conference Presentation Protocol: "H264"
  ** end

xStatus Conference Presentation Resolution Height
Shows the height of the presentation.
Value space of the result returned:
<0..3000>
Example:
  xStatus Conference Presentation Resolution Height
  *s Conference Presentation Resolution Height: 0
  ** end

xStatus Conference Presentation LocalSource
Shows the local video input source that is used when the presentation is sent from the local site.
Value space of the result returned:
<1..5>
Example:
  xStatus Conference Presentation LocalSource
  *s Conference Presentation LocalSource: 0
  ** end

xStatus Conference Presentation LocalSendingMode
Shows whether the presentations are set to be shown locally and sent to remote side, only shown locally or not shown at all.
Value space of the result returned:
<Off/LocalRemote/LocalOnly>
Example:
  xStatus Conference Presentation LocalSendingMode
  *s Conference Presentation LocalSendingMode: Off
  ** end
xStatus Conference Presentation LastLocalSource
Identifies the last used local presentation source.
Value space of the result returned:
<integer>
Example:
```plaintext
xStatus Conference Presentation LastLocalSource
*s Conference Presentation LastLocalSource: 2
** end
```

xStatus Conference Site [n] Capabilities FECC NumberOfPresets
Shows the number of presets available for the input sources at a far end site.
Value space of the result returned:
<1..15>
Example:
```plaintext
xStatus Conference Site 2 Capabilities FECC NumberOfPresets
*s Conference Site 2 Capabilities FECC NumberOfPresets: 15
** end
```

xStatus Conference Site [n] Capabilities FECC NumberOfSources
Shows the number of input sources that can be connected at a far end site.
Value space of the result returned:
<1..5>
Example:
```plaintext
xStatus Conference Site 2 Capabilities FECC NumberOfSources
*s Conference Site 2 Capabilities FECC NumberOfSources: 5
** end
```

xStatus Conference Site [n] Capabilities FECC Source [n] SourceId
Shows the ID of an input source that can be connected at a far end site.
Value space of the result returned:
<integer>
Example:
```plaintext
xStatus Conference Site 2 Capabilities FECC Source 1 SourceId
*s Conference Site 2 Capabilities FECC Source 1 SourceId: 6
** end
```

xStatus Conference Site [n] Capabilities FECC Source [n] Name
Shows the name of an input source that can be connected at a far end site.
Value space of the result returned:
<string>
Example:
```plaintext
xStatus Conference Site 2 Capabilities FECC Source 1 Name
*s Conference Site 2 Capabilities FECC Source 1 Name: "Main camera"
** end
```

xStatus Conference Site [n] Capabilities FECC Source [n] Options
Shows available options for an input source that can be connected at a far end site (for a camera: p=pan; t=tilt; z=zoom; f=focus).
Value space of the result returned:
<string>
Example:
```plaintext
xStatus Conference Site 2 Capabilities FECC Source 1 Options
*s Conference Site 2 Capabilities FECC Source 1 Options: "ptzf"
** end
```

xStatus Conference Site [n] Capabilities FECC Mode
Shows whether or not you have permission to control the input sources at a far end site.
On: Far end input source control is permitted.
Off: Far end input source control is not permitted.
Value space of the result returned:
<On/Off>
Example:
```plaintext
xStatus Conference Site 2 Capabilities FECC Mode
*s Conference Site 2 Capabilities FECC Mode: On
** end
```
xStatus Conference Site [n] Capabilities Presentation
Lists the presentation capabilities for other participants in the conference.

Value space of the result returned:
<True/False>

Example:
*xStatus Conference Site 2 Capabilities Presentation
*s Conference Site 2 Capabilities Presentation: True
** end

xStatus Conference Site [n] MicrophonesMuted
Lists the audio mute status for other participants in the conference.

Value space of the result returned:
<True/False>

Example:
*xStatus Conference Site 2 MicrophonesMuted
*s Conference Site 2 MicrophonesMuted: True
** end

xStatus Conference Site [n] Manufacturer
Shows the manufacturer of the video system at a far end site.

Value space of the result returned:
<String>

Example:
*xStatus Conference Site 2 Manufacturer
*s Conference Site 2 Manufacturer: "Cisco"
** end

xStatus Conference Site [n] SoftwareID
Shows the ID of the software running on the video system at a far end site.

Value space of the result returned:
<String>

Example:
*xStatus Conference Site 2 SoftwareID
*s Conference Site 2 SoftwareID: "TC5"
** end

xStatus Conference Site [n] BlackScreenCause
Shows the reason why the screen is black while in a CTMS (Cisco TelePresence Multipoint Switch) managed conference.
FirstParticipant: You are the first and only participant in the meeting.
LastParticipant: You are the only remaining participant in the meeting.
NoResources: The conference started with insufficient resources.
EarlyJoin: The scheduled conference has not started yet.
HostNotJoined: The conference is waiting for the host to join.
SecurityIssues: The video is blocked due to security issues.
NoVideo: It is a conference without video.
WebexOnly: It is a Webex only conference.

Value space of the result returned:
<None/Other/FirstParticipant/LastParticipant/NoResources/EarlyJoin/HostNotJoined/SecurityIssues/NoVideo/WebexOnly>

Example:
*xStatus Conference Site 2 BlackScreenCause
*s Conference Site 2 BlackScreenCause: None
** end

xStatus Conference Site [n] ConferenceExtended
Shows the status of conference extension (only relevant for conferences scheduled from CTS-MAN (Cisco TelePresence Manager); they can be extended only once).
Unsupported: Conference extension is not supported.
NotExtended: The conference is not (yet) extended.
Extended: The conference has been extended, and is currently in the extended phase.

Value space of the result returned:
<Unsupported/NotExtended/Extended>

Example:
*xStatus Conference Site 2 ConferenceExtended
*s Conference Site 2 ConferenceExtended: NotExtended
** end
xStatus Conference Site [n] BookingId
Shows the booking ID of a conference (if assigned). The booking ID can be used for easy identification of a call or conference.

Value space of the result returned:
<String>

Example:
```
xStatus Conference Site 2 BookingId
's Conference Site 33 BookingId: "MyConference"
** end
```

xStatus Conference Site [n] SecurityStatus
Security status of a call represents the least of the security statuses of all the endpoints involved in a CUCM call.
Invalid: Initial status.
Unknown: In the absence of the Call-Info header, that CUCM uses to pass this status to the phone, the phone assumes a value of Unknown.
NotAuthenticated: The current connected call is not signaling authenticated. This call is not secure.
Authenticated: The current connected call is signaling authenticated. This is not a fully secured call.
Encrypted: Encrypted indicates the current connected call is signaling/media encrypted. This call is secure.

Value space of the result returned:
<Invalid/Unknown/Authenticated/NotAuthenticated/Encrypted>

Example:
```
xStatus Conference Site SecurityStatus
's Conference Site 21 SecurityStatus: Unknown
** end
```

xStatus Conference Site [n] UnattendedTransfer
Indicates whether Unattended Transfer is available for the call.

Value space of the result returned:
<True/False>

Example:
```
xStatus Conference Site UnattendedTransfer
's Conference Site 14 UnattendedTransfer: True
** end
```

xStatus Conference Site [n] AttendedTransfer
Indicates whether Attended Transfer is available for the call.

Value space of the result returned:
<True/False>

Example:
```
xStatus Conference Site AttendedTransfer
's Conference Site 14 AttendedTransfer: True
** end
```

xStatus Conference Site [n] Appearance
Returns identification for the shared line appearance in the call.

Value space of the result returned:
<Integer>

Example:
```
xStatus Conference Site Appearance
's Conference Site 14 Appearance: 0
** end
```

xStatus Conference Site [n] GCI
Returns Global Call Identification (GCI) of the call. The GCI is used to identify whether the call is remote or local and it is provided by CUCM.

Value space of the result returned:
<String>

Example:
```
xStatus Conference Site GCI
's Conference Site 14 GCI: ""
** end
```

xStatus Conference Site [n] CalText
Returns the Confidential Access Level (CAL) of the session sent by vendors that support AS-SIP.

Value space of the result returned:
<String>

Example:
```
xStatus Conference Site CalText
's Conference Site 14 CalText: ""
** end
```
xStatus Conference Site [n] Hold
Indicates whether the far-end site can be placed on hold or not.
Value space of the result returned:
<True/False>
Example:
  xStatus Conference Site Hold
  *s Conference Site 2 Hold: True
  ** end

xStatus Conference Site [n] Preserved
Indicates if the far end site is having connection issues, and has been preserved to avoid invoking features that can break the call.
Value space of the result returned:
<Off/Local/Remote>
Example:
  xStatus Conference Site Preserved
  *s Conference Site 3 Preserved: Off
  ** end

xStatus Conference Line [n] Mode
Indicates whether the system is configured as private or shared line on CUCM.
Value space of the result returned:
<Shared/Private>
Example:
  xStatus Conference Line Mode
  *s Conference Line 1 Mode: Private
  ** end

xStatus Conference Line [n] Appearance Status
Returns the status of the shared line call.
Value space of the result returned:
<Idle/Private/Trying/Progressing/Alerting/Active/Held/HeldPrivate/Unknown>
Example:
  xStatus Conference Line 1 Appearance Status
  *s Conference Line 1 Appearance Status 5464 Status: Held
  ** end

xStatus Conference Line [n] Appearance URI
Returns the URI of the shared line call. Not visible for a private call.
Value space of the result returned:
<String>
Example:
  xStatus Conference Line 1 Appearance URI
  *s Conference Line 1 Appearance 5464 URI: "12345@cisco.com"
  ** end

xStatus Conference Line [n] Appearance GCI
Returns Global Call Identification (GCI) of the shared line call. The GCI is used to identify whether the call is remote or local and it is provided by CUCM.
Value space of the result returned:
<String>
Example:
  xStatus Conference Line 1 Appearance GCI
  *s Conference Line 1 Appearance 5464 GCI: "1-161386"
  ** end

xStatus Conference Multipoint Mode
Shows how the Multipoint video conferences are handled. See xConfiguration Conference Multipoint Mode for more information.
Value space of the result returned:
<Off/MultiWay/MultiSite/Auto/CUCMMediaResourceGroupList>
Example:
  xStatus Conference Multipoint Mode
  *s Conference Multipoint Mode: "MultiWay"
  ** end
xStatus Conference DoNotDisturb
Shows whether DoNotDisturb mode is switched on or not.

Value space of the result returned:
<Active/Inactive>

Example:
```
xStatus Conference DoNotDisturb
*s Conference DoNotDisturb: Inactive
** end
```

xStatus Conference ActiveSpeaker Mode
Shows whether the ActiveSpeaker mode is switched on or not.

Value space of the result returned:
<On/Off>

Example:
```
xStatus Conference ActiveSpeaker Mode
*s Conference ActiveSpeaker Mode: Off
** end
```

xStatus Conference ActiveSpeaker SiteId
Returns the SiteId (CallId) of the current active speaker.

Value space of the result returned:
<Integer>

Example:
```
xStatus Conference ActiveSpeaker SiteId
*s Conference ActiveSpeaker SiteId: 0
** end
```

xStatus Conference SelectedCallProtocol
Indicates which call protocol is used as default.

Value space of the result returned:
<H323/SIP/H320>

Example:
```
xStatus Conference SelectedCallProtocol
*s Conference SelectedCallProtocol: SIP
** end
```

Diagnostics status

xStatus Diagnostics
Shows the top level overview of the diagnostics. The example shows the status for an ongoing call. The identities of the call and channels are used when querying additional information.

```
xStatus Diagnostics Call [n] Channels IncomingAudioChannel [n] Netstat 1 Jitter
xStatus Diagnostics Call [n] Channels IncomingVideoChannel [n] Netstat 1 Jitter
xStatus Diagnostics Call [n] Channels IncomingDataChannel [n] Netstat 1 Jitter
xStatus Diagnostics Call [n] Channels OutgoingAudioChannel [n] Netstat 1 Jitter
xStatus Diagnostics Call [n] Channels OutgoingVideoChannel [n] Netstat 1 Jitter
xStatus Diagnostics Call [n] Channels OutgoingDataChannel [n] Netstat 1 Jitter
```

Shows the jitter at the present moment in the incoming/outgoing channel, as specified by RFC 3550.

Value space of the result returned:
<Integer>

Example:
```
xStatus Diagnostics Call 27 Channels OutgoingDataChannel 327 Netstat 1 Jitter
*s Diagnostics Call 27 Channels OutgoingDataChannel 327 Netstat 1 Jitter: 0
** end
```
xStatus Diagnostics Call \([n]\) Channels IncomingAudioChannel \([n]\) Netstat 1 Packets

xStatus Diagnostics Call \([n]\) Channels IncomingVideoChannel \([n]\) Netstat 1 Packets

xStatus Diagnostics Call \([n]\) Channels IncomingDataChannel \([n]\) Netstat 1 Packets

xStatus Diagnostics Call \([n]\) Channels OutgoingAudioChannel \([n]\) Netstat 1 Packets

xStatus Diagnostics Call \([n]\) Channels OutgoingVideoChannel \([n]\) Netstat 1 Packets

xStatus Diagnostics Call \([n]\) Channels OutgoingDataChannel \([n]\) Netstat 1 Packets

Shows the number of packets received/sent in the incoming/outgoing channels.

Value space of the result returned:

\(<\text{Integer}>\)

**Example:**

```
xStatus Diagnostics Call 27 Channels OutgoingDataChannel 327 Netstat 1 Packets
*s Diagnostics Call 27 Channels OutgoingDataChannel 327 Netstat 1 Packets: 405
** end
```
xStatus Diagnostics Call [n] Channels IncomingAudioChannel [n] Netstat 1 LastIntervalLost

xStatus Diagnostics Call [n] Channels IncomingVideoChannel [n] Netstat 1 LastIntervalLost

xStatus Diagnostics Call [n] Channels IncomingDataChannel [n] Netstat 1 LastIntervalLost

xStatus Diagnostics Call [n] Channels OutgoingAudioChannel [n] Netstat 1 LastIntervalLost

xStatus Diagnostics Call [n] Channels OutgoingVideoChannel [n] Netstat 1 LastIntervalLost

xStatus Diagnostics Call [n] Channels OutgoingDataChannel [n] Netstat 1 LastIntervalLost

Shows the number of packets lost during the last interval for the incoming/outgoing channels.

Value space of the result returned:

<Integer>

Example:

xStatus Diagnostics Call 27 Channels IncomingDataChannel 327 Netstat 1 LastIntervalLost
*s Diagnostics Call 27 Channels IncomingDataChannel 327 Netstat 1 LastIntervalLost: 0
** end

xStatus Diagnostics Call [n] Channels IncomingAudioChannel [n] Netstat 1 LastIntervalReceived

xStatus Diagnostics Call [n] Channels IncomingVideoChannel [n] Netstat 1 LastIntervalReceived

xStatus Diagnostics Call [n] Channels IncomingDataChannel [n] Netstat 1 LastIntervalReceived

xStatus Diagnostics Call [n] Channels OutgoingAudioChannel [n] Netstat 1 LastIntervalReceived

xStatus Diagnostics Call [n] Channels OutgoingVideoChannel [n] Netstat 1 LastIntervalReceived

xStatus Diagnostics Call [n] Channels OutgoingDataChannel [n] Netstat 1 LastIntervalReceived

Shows the number of packets received during the last interval for the incoming/outgoing channels.

Value space of the result returned:

<Integer>

Example:

xStatus Diagnostics Call 27 Channels IncomingDataChannel 327 Netstat 1 LastIntervalReceived
*s Diagnostics Call 27 Channels IncomingDataChannel 327 Netstat 1 LastIntervalReceived: 84
** end
xStatus Diagnostics Call [n] Channels IncomingAudioChannel [n] Netstat 1 Drop

xStatus Diagnostics Call [n] Channels IncomingVideoChannel [n] Netstat 1 Drop

xStatus Diagnostics Call [n] Channels IncomingDataChannel [n] Netstat 1 Drop

xStatus Diagnostics Call [n] Channels OutgoingAudioChannel [n] Netstat 1 Drop

xStatus Diagnostics Call [n] Channels OutgoingVideoChannel [n] Netstat 1 Drop

xStatus Diagnostics Call [n] Channels OutgoingDataChannel [n] Netstat 1 Drop

Shows the number of packets dropped in the incoming/outgoing channel.

Value space of the result returned:

<Integer>

Example:

xStatus Diagnostics Call 27 Channels OutgoingDataChannel 327 Netstat 1 Drop

*s Diagnostics Call 27 Channels OutgoingDataChannel 327 Netstat 1 Drop: 0

** end

xStatus Diagnostics Call [n] Channels IncomingAudioChannel [n] Netstat 1 Bytes

xStatus Diagnostics Call [n] Channels IncomingVideoChannel [n] Netstat 1 Bytes

xStatus Diagnostics Call [n] Channels IncomingDataChannel [n] Netstat 1 Bytes

xStatus Diagnostics Call [n] Channels OutgoingAudioChannel [n] Netstat 1 Bytes

xStatus Diagnostics Call [n] Channels OutgoingVideoChannel [n] Netstat 1 Bytes

xStatus Diagnostics Call [n] Channels OutgoingDataChannel [n] Netstat 1 Bytes

Shows the number of bytes received/sent in the incoming/outgoing channel.

Value space of the result returned:

<Integer>

Example:

xStatus Diagnostics Call 27 Channels OutgoingDataChannel 327 Netstat 1 Bytes

*s Diagnostics Call 27 Channels OutgoingDataChannel 327 Netstat 1 Bytes: 129920

** end
xStatus Diagnostics Call [n] Channels IncomingAudioChannel [n] Netstat 1 ChannelRate
xStatus Diagnostics Call [n] Channels IncomingVideoChannel [n] Netstat 1 ChannelRate
xStatus Diagnostics Call [n] Channels IncomingDataChannel [n] Netstat 1 ChannelRate
xStatus Diagnostics Call [n] Channels OutgoingAudioChannel [n] Netstat 1 ChannelRate
xStatus Diagnostics Call [n] Channels OutgoingVideoChannel [n] Netstat 1 ChannelRate
xStatus Diagnostics Call [n] Channels OutgoingDataChannel [n] Netstat 1 ChannelRate

Shows the bandwidth for the incoming/outgoing channel.

Value space of the result returned:
<integer>

Example:
```
xStatus Diagnostics Call 27 Channels OutgoingDataChannel 327 Netstat 1 ChannelRate
`s Diagnostics Call 27 Channels OutgoingDataChannel 327 Netstat 1 ChannelRate: 128000
** end
```

xStatus Diagnostics Call [n] Channels IncomingAudioChannel [n] Netstat 1 MaxJitter
xStatus Diagnostics Call [n] Channels IncomingVideoChannel [n] Netstat 1 MaxJitter
xStatus Diagnostics Call [n] Channels IncomingDataChannel [n] Netstat 1 MaxJitter
xStatus Diagnostics Call [n] Channels OutgoingAudioChannel [n] Netstat 1 MaxJitter
xStatus Diagnostics Call [n] Channels OutgoingVideoChannel [n] Netstat 1 MaxJitter
xStatus Diagnostics Call [n] Channels OutgoingDataChannel [n] Netstat 1 MaxJitter

Shows the maximum jitter that has been measured during last time interval (5 seconds).

Value space of the result returned:
<integer>

Example:
```
xStatus Diagnostics Call 27 Channels OutgoingDataChannel 327 Netstat 1 MaxJitter
`s Diagnostics Call 27 Channels OutgoingDataChannel 327 Netstat 1 MaxJitter: 0
** end
```
**H320 status**

**xStatus H320 Gateway Status**
Returns the state of the H320 Gateway, if the codec is paired with an ISDN Link.

*Value space of the result returned:*
<OK/OKWithWarning/Error/Inactive/Warning>

*Example:*
```
xStatus H320 Gateway status
*s H320 Gateway Status: Error
** end
```

**xStatus H320 Gateway Address**
Returns the IPv4 address of the ISDN Gateway, if the endpoint is paired to one.

*Value space of the result returned:*
<OK/OKWithWarning/Error/Inactive>

*Example:*
```
xStatus H320 Gateway Address
*s H320 Gateway Status: Inactive
** end
```

**xStatus H320 Gateway Number**
Returns the IPv6 address of the ISDN Gateway if the endpoint is paired to one.

*Value space of the result returned:*
<String>

*Example:*
```
xStatus H320 Gateway Number
*s H320 Gateway Number: ""
** end
```

**xStatus H320 Gateway Mode**
Returns information on the type of calls the ISDN Gateway is configured for, if the codec is paired
with an ISDN Link.

*Value space of the result returned:*
<Unknown/PRI/BRI/External/G703>

*Example:*
```
xStatus H320 Gateway Mode
*s H320 Gateway Mode: Unknown
** end
```

**xStatus H320 Gateway Reason**
Shows the reason for rejected Gateway registration. Only available if the codec is connected to an
ISDN Link.

*Value space of the result returned:*
<String>

*Example:*
```
xStatus H320 Gateway Reason
*s H320 Gateway Reason: ""
** end
```

**xStatus H320 Gateway Id**
Returns the unique identification of the H320 Gateway, if the codec is paired with an ISDN Link.

*Value space of the result returned:*
<String>

*Example:*
```
xStatus H320 Gateway Id
*s H320 Gateway Id: "00:50:60:0B:EF:11"
** end
```
H323 status

xStatus H323
Shows the top level overview of the H323 status.

xStatus H323 Gatekeeper Status
Shows the gatekeeper registration status.

Value space of the result returned:
<Required/Discovering/Authenticated/Authenticating/Registering/Registered/Inactive/Rejected>

Example:

xStatus H323 Gatekeeper Status
*s H323 Gatekeeper Status: Registered
** end

xStatus H323 Gatekeeper Address
Displays the IP address of the gatekeeper where the system is registered.

Value space of the result returned:
<String>

Example:

xStatus H323 Gatekeeper Address
*s H323 Gatekeeper Address: "192.0.1.20"
** end

xStatus H323 Gatekeeper Port
Shows the port which is used when connecting to on the gatekeeper.

Value space of the result returned:
<Integer>

Example:

xStatus H323 Gatekeeper Port
*s H323 Gatekeeper Port: 1719
** end

xStatus H323 Gatekeeper Reason
Shows the reason for rejected registration.

Value space of the result returned:
<String>

Example:

xStatus H323 Gatekeeper Reason
*s H323 Gatekeeper Reason: ""
** end
**HttpFeedback status**

**xStatus HttpFeedback**
Shows the top level overview of the HTTP status.

**xStatus HttpFeedback [1..4] URL**
Shows the URL (Uniform Resource Locator) of the HTTP server. There can be up to three HTTP servers, specified by the URL.

Value space of the result returned:
<String>

Example:
```
xStatus HttpFeedback 1 URL
** end
```

**xStatus HttpFeedback [1..4] Expression [1..15]**
Shows the feedback from the HTTP server. There can be up to 15 expressions for each URL. See the xCommand HttpFeedback commands for more information.

Value space of the result returned:
<String>

**ICE status**

**xStatus ICE Configured**
Shows the ICE configuration status. ICE (Interactive Connectivity Establishment, RFC 5245) is a NAT traversal solution that the endpoints can use to discover the optimized media path. Thus the shortest route for audio and video is always secured between the endpoints.

Value space of the result returned:
<On/Off>

Example:
```
xStatus ICE Configured
*s ICE Configured: "Off"
** end
```

**xStatus ICE Defaultcandidate**
Returns the default candidate where the endpoint initially receives media.

Value space of the result returned:
<Host/Rflx/Relay>

Example:
```
xStatus ICE Defaultcandidate
*s ICE Defaultcandidate: "Host"
** end
```

**xStatus ICE Turn IP**
Returns the IP address of the TURN server that is currently in use.

Value space of the result returned:
<String>

Example:
```
xStatus ICE Turn IP
*s ICE Turn IP: "192.0.1.20"
** end
```
xStatus ICE Turn Hostname
Returns the hostname, or IP address, that is configured as the TURN server.

Value space of the result returned:
<String>

Example:
*xStatus ICE Turn Hostname
  *s ICE Turn Hostname: "callway.medianetworkservices.com"
** end

xStatus ICE Turn Username
Returns the user name used for accessing the TURN server.

Value space of the result returned:
<String>

Example:
*xStatus ICE Turn Username
  *s ICE Turn Username: "username"
** end

xStatus ICE Call Result
Shows the state of the ICE routing in the present call.
Succeeded: The ICE routing is in use.
Failed: The ICE routing has failed.
Unsupported: ICE routing is not supported.
Mangled: ICE cannot route the media, because a server, such as VCS, is set to handle it.

Value space of the result returned:
<Succeeded/Failed/Unsupported/Mangled>

Example:
*xStatus ICE Call Result
  *s ICE Call 0 Result: "Unsupported"
** end

xStatus ICE Call Local Candidate
Returns the network interface type the local system is using to send media.
HOST: The endpoint sends media from its own IP address.
PRFLX: The endpoint sends media from its public IP address as seen by the remote Peer.
SRFLX: The endpoint sends media from its public IP address as seen by the TURN server.
RELAY: The endpoint sends media from the IP address and port allocated on the TURN server, and is used as a fallback until ICE has concluded.

Value space of the result returned:
<String>

Example:
*xStatus ICE Call Local Candidate
  *s ICE Call 1 Local Candidate: "HOST"
** end

xStatus ICE Call Local IP
Returns the IP address the local system is using for media routing in the present call.

Value space of the result returned:
<String>

Example:
*xStatus ICE Call Local IP
  *s ICE Call 1 Local IP: "192.0.1.20"
** end

xStatus ICE Call Remote Candidate
Returns the network interface type the remote system is using to send media.
HOST: The far-end receives media on its own IP address.
PRFLX: The far-end receives media on its public IP address as seen by the remote Peer.
SRFLX: The far-end receives media on its public IP address as seen by the TURN server.
RELAY: The far-end receives media on the IP address and port allocated on the TURN server, and is used as a fallback until ICE has concluded.

Value space of the result returned:
<String>

Example:
*xStatus ICE Call Remote Candidate
  *s ICE Call 1 Remote Candidate: "SRFLX"
** end
xStatus ICE Call Remote IP
Returns the IP address the remote system is using for media routing in the present call.

Value space of the result returned:
<String>

Example:
  xStatus ICE Call Remote IP
  "s ICE Call Remot e IP: "192.0.1.20"
  ** end

xStatus ICE Turn Discovermode
Returns the result of the turn server test, if xConfiguration SIP Profile[1] Turn DiscoverMode is set to On.

Verified: The server was reached, and the user name and password were received.
NotVerified: Configuration has been received, but neither server or credentials has been verified.
Failed: The server was not reached.
Off: Turn discovery mode is set to Off.

Value space of the result returned:
<Verified/NotVerified/Failed/Off>

Example:
  xStatus ICE Turn Discovermode
  "s ICE Turn Discovermode: "Verified"
  ** end

xStatus ICE Turn Bandwidth
Returns the bandwidth available for the turn server right after xConfiguration SIP Profile 1 Turn BandwidthProbe is set to On.

Probing failed: Could not obtain information on bandwidth.
Probe Aborted: The probing was canceled because a call started.
Probe Connected: The probing has started.
Probe progress: Shows the bandwidth at this stage of the test.
Probe stopped with loss: The probing finished, because packet loss was detected. The loss is shown in kbps.
Probe Completed: The probing completed. The bandwidth result shown in kbps.

Value space of the result returned:
<"Probing failed"/"Probe Aborted"/"Probe Connected"/"Probe progress"/"Probe stopped with loss: kbps"/"Probe Completed: kbps">

Example:
  xStatus ICE Turn Bandwidth
  "s ICE Turn Bandwidth: "Probe Completed: 6000kbps"
  ** end
MediaChannels status

xStatus MediaChannels
Shows the top level overview of the media channel status. The example shows the status for an ongoing call. The identities of the call and channels are used when querying additional information.

xStatus MediaChannels Call [n] IncomingAudioChannel [n] Encryption Status
Shows the encryption status on the incoming channel.
Value space of the result returned:
<On/Off>
Example:
xStatus MediaChannels Call 27 IncomingAudioChannel 327 Encryption Status
*s MediaChannels Call 27 IncomingAudioChannel 327 Encryption Status: Off
** end

xStatus MediaChannels Call [n] IncomingAudioChannel [n] Audio Protocol
Shows the audio algorithm for the incoming audio channel.
AACLD: The AAC-LD is an MPEG-4 Low Delay Audio Coder audio compression format.
G722: The G.722 algorithm is an ITU standard.
G7221: The G.722.1 algorithm is a licensed royalty-free ITU-T standard.
G711Mu: The G.711 Mu-law compression algorithm is used in North America and Japan.
G711A: The G.711 A-law compression algorithm is used in Europe and the rest of the world.
G729: The G.729 algorithm is an ITU standard.
G729AB: The G.729 annex A and B is an ITU standard.
Opus: Opus is a lossy audio compression format.
Value space of the result returned:
<AACLD/G722/G7221/G711Mu/G711A/G729/G729AB/Opus>
Example:
xStatus MediaChannels Call 27 IncomingAudioChannel 327 Audio Protocol
*s MediaChannels Call 27 IncomingAudioChannel 327 Audio Protocol: AACLD
** end

xStatus MediaChannels Call [n] IncomingAudioChannel [n] Audio Mute
Audio mute status of incoming audio.
Value space of the result returned:
,True/False
Example:
xStatus MediaChannels Call 27 IncomingAudioChannel 327 Audio Mute
*s MediaChannels Call 27 IncomingAudioChannel 327 Audio Mute: True
** end

xStatus MediaChannels Call [n] IncomingAudioChannel [n] Audio Channels
Shows the number of incoming audio channels.
Value space of the result returned:
<Integer>
Example:
xStatus MediaChannels Call 27 IncomingAudioChannel 327 Audio Channels
*s MediaChannels Call 27 IncomingAudioChannel 327 Audio Channels: 1
** end

xStatus MediaChannels Call [n] IncomingAudioChannel [n] Transport RTP Local IpAddress
Shows the local IP address of the Real-time Transport Protocol (RTP) port for the incoming audio in the media channel.
Value space of the result returned:
<String>
Example:
xStatus MediaChannels Call 27 IncomingAudioChannel 327 Transport RTP Local IpAddress
*s MediaChannels Call 27 IncomingAudioChannel 327 Transport RTP Local IpAddress: "192.168.24.190"
** end
**xStatus MediaChannels Call [n] IncomingAudioChannel [n] Transport RTP Local Port**

Shows the local UDP port number of the Real-time Transport Protocol (RTP) port for the incoming audio in the media channel.

**Value space of the result returned:**

<Integer>

**Example:**

```
xStatus MediaChannels Call 27 IncomingAudioChannel 327 Transport RTP Local Port
*s MediaChannels Call 27 IncomingAudioChannel 327 Transport RTP Local Port: 16404
** end
```

**xStatus MediaChannels Call [n] IncomingAudioChannel [n] Transport RTP Remote IpAddress**

Shows the remote IP address of the Real-time Transport Protocol (RTP) port for the incoming audio in the media channel.

**Value space of the result returned:**

<String>

**Example:**

```
xStatus MediaChannels Call 27 IncomingAudioChannel 327 Transport RTP Remote IpAddress
*s MediaChannels Call 27 IncomingAudioChannel 327 Transport RTP Remote IpAddress: "192.168.136.130"
** end
```

**xStatus MediaChannels Call [n] IncomingAudioChannel [n] Transport RTCP Local Port**

Shows the local UDP port number of the Real-time Transport Control Protocol (RTCP) port for the incoming audio in the media channel.

**Value space of the result returned:**

<Integer>

**Example:**

```
xStatus MediaChannels Call 27 IncomingAudioChannel 327 Transport RTCP Local Port
*s MediaChannels Call 27 IncomingAudioChannel 327 Transport RTCP Local Port: 16405
** end
```

**xStatus MediaChannels Call [n] IncomingAudioChannel [n] Transport RTCP Remote IpAddress**

Shows the remote IP address of the Real-time Transport Control Protocol (RTCP) port for the incoming audio in the media channel.

**Value space of the result returned:**

<String>

**Example:**

```
xStatus MediaChannels Call 27 IncomingAudioChannel 327 Transport RTCP Remote IpAddress
*s MediaChannels Call 27 IncomingAudioChannel 327 Transport RTCP Remote IpAddress: "192.168.136.130"
** end
```
xStatus MediaChannels Call [n] IncomingAudioChannel [n] Transport RTCP Remote Port
Shows the remote UDP port number of the Real-time Transport Control Protocol (RTCP) port for the incoming audio in the media channel.

Value space of the result returned:
<Integer>

Example:
```
*xStatus MediaChannels Call 27 IncomingAudioChannel 327 Transport RTCP Remote Port
*s MediaChannels Call 27 IncomingAudioChannel 327 Transport RTCP Remote Port: 50933
** end
```

xStatus MediaChannels Call [n] IncomingVideoChannel [n] Encryption Status
Shows the encryption status on the incoming channel.

Value space of the result returned:
<On/Off>

Example:
```
xStatus MediaChannels Call 27 IncomingVideoChannel 330 Encryption Status
*s MediaChannels Call 27 IncomingVideoChannel 330 Encryption Status: Off
** end
```

xStatus MediaChannels Call [n] IncomingVideoChannel [n] ChannelRole
Shows if the incoming channel is the main video channel or presentation channel.

Value space of the result returned:
<Main/Presentation/Legacy>

Example:
```
xStatus MediaChannels Call 27 IncomingVideoChannel 330 ChannelRole
*s MediaChannels Call 27 IncomingVideoChannel 330 ChannelRole: Main
** end
```

xStatus MediaChannels Call [n] IncomingVideoChannel [n] Video Protocol
Shows the video algorithm for the incoming video channel.

H264: The H.264 algorithm is an ITU-T standard for video compression.
H263: The H.263 algorithm is an ITU-T standard for video compression.
H261: The H.261 algorithm is an ITU-T standard for video compression.

Value space of the result returned:
<Off/Raw/H261/H263/H263pp/H264/MPV4/JPEG/HEVC>

Example:
```
xStatus MediaChannels Call 27 IncomingVideoChannel 330 Video Protocol
*s MediaChannels Call 27 IncomingVideoChannel 330 Video Protocol: H264
** end
```

xStatus MediaChannels Call [n] IncomingVideoChannel [n] Video FrameRate
Shows the video frame rate of the incoming channel.

Value space of the result returned:
<Integer>

Example:
```
xStatus MediaChannels Call 27 IncomingVideoChannel 330 Video FrameRate
*s MediaChannels Call 27 IncomingVideoChannel 330 Video FrameRate: 25
** end
```

xStatus MediaChannels Call [n] IncomingVideoChannel [n] Video ResolutionX
Shows the width (resolution in direction X) of the incoming video.

Value space of the result returned:
<Integer>

Example:
```
xStatus MediaChannels Call 27 IncomingVideoChannel 330 Video ResolutionX
*s MediaChannels Call 27 IncomingVideoChannel 330 Video ResolutionX: 768
** end
```
**xStatus MediaChannels Call [n] IncomingVideoChannel [n] Video ResolutionY**
Shows the height (resolution in direction Y) of the incoming video.

Value space of the result returned:
<Integer>

Example:
```
xStatus MediaChannels Call 27 IncomingVideoChannel 330 Video ResolutionY
```
```
*s MediaChannels Call 27 IncomingVideoChannel 330 Video ResolutionY: 448
```

**xStatus MediaChannels Call [n] IncomingVideoChannel [n] Transport RTP Local IpAddress**
Shows the local IP address of the Real-time Transport Protocol (RTP) port for the incoming video in the media channel.

Value space of the result returned:
<String>

Example:
```
xStatus MediaChannels Call 27 IncomingVideoChannel 330 Transport RTP Local IpAddress
```
```
*s MediaChannels Call 27 IncomingVideoChannel 330 Transport RTP Local IpAddress: "192.168.24.190"
```

**xStatus MediaChannels Call [n] IncomingVideoChannel [n] Transport RTP Remote IpAddress**
Shows the remote IP address of the Real-time Transport Protocol (RTP) port for the incoming video in the media channel.

Value space of the result returned:
<String>

Example:
```
xStatus MediaChannels Call 27 IncomingVideoChannel 330 Transport RTP Remote IpAddress
```
```
*s MediaChannels Call 27 IncomingVideoChannel 330 Transport RTP Remote IpAddress: "192.168.136.130"
```

**xStatus MediaChannels Call [n] IncomingVideoChannel [n] Transport RTP Local Port**
Shows the local UDP port number of the Real-time Transport Protocol (RTP) port for the incoming video in the media channel.

Value space of the result returned:
<Integer>

Example:
```
xStatus MediaChannels Call 27 IncomingVideoChannel 330 Transport RTP Local Port
```
```
*s MediaChannels Call 27 IncomingVideoChannel 330 Transport RTP Local Port: 16404
```

**xStatus MediaChannels Call [n] IncomingVideoChannel [n] Transport RTCP Local IpAddress**
Shows the local IP address of the Real-time Transport Control Protocol (RTCP) port for the incoming video in the media channel.

Value space of the result returned:
<String>

Example:
```
xStatus MediaChannels Call 27 IncomingVideoChannel 330 Transport RTCP Local IpAddress
```
```
*s MediaChannels Call 27 IncomingVideoChannel 330 Transport RTCP Local IpAddress: "192.168.24.190"
```

**xStatus MediaChannels Call [n] IncomingVideoChannel [n] Transport RTCP Remote Port**
Shows the remote UDP port number of the Real-time Transport Control Protocol (RTCP) port for the incoming video in the media channel.

Value space of the result returned:
<Integer>

Example:
```
xStatus MediaChannels Call 27 IncomingVideoChannel 330 Transport RTCP Remote Port
```
```
*s MediaChannels Call 27 IncomingVideoChannel 330 Transport RTCP Remote Port: 50932
```

**xStatus MediaChannels Call [n] IncomingVideoChannel [n] Transport RTCP Local IpAddress**
Shows the local IP address of the Real-time Transport Control Protocol (RTCP) port for the incoming video in the media channel.

Value space of the result returned:
<String>

Example:
```
xStatus MediaChannels Call 27 IncomingVideoChannel 330 Transport RTCP Local IpAddress
```
```
*s MediaChannels Call 27 IncomingVideoChannel 330 Transport RTCP Local IpAddress: "192.168.136.130"
```

**end**
xStatus MediaChannels Call [n] IncomingVideoChannel [n] Transport RTCP Local Port
Shows the local UDP port number of the Real-time Transport Control Protocol (RTCP) port for the incoming video in the media channel.

Value space of the result returned:
<Integer>

Example:
xStatus MediaChannels Call 27 IncomingVideoChannel 330 Transport RTCP Local Port
    *s MediaChannels Call 27 IncomingVideoChannel 330 Transport RTCP Local Port: 16405
** end

xStatus MediaChannels Call [n] IncomingVideoChannel [n] Transport RTCP Remote IpAddress
Shows the remote IP address of the Real-time Transport Control Protocol (RTCP) port for the incoming video in the media channel.

Value space of the result returned:
<String>

Example:
xStatus MediaChannels Call 27 IncomingVideoChannel 330 Transport RTCP Remote IpAddress
    *s MediaChannels Call 27 IncomingVideoChannel 330 Transport RTCP Remote IpAddress: "192.168.136.130"
** end

xStatus MediaChannels Call [n] IncomingVideoChannel [n] Transport RCTP Remote Port
Shows the remote UDP port number of the Real-time Transport Control Protocol (RTCP) port for the incoming video in the media channel.

Value space of the result returned:
<Integer>

Example:
xStatus MediaChannels Call 27 IncomingVideoChannel 330 Transport RTCP Remote Port
    *s MediaChannels Call 27 IncomingVideoChannel 330 Transport RTCP Remote Port: 50933
** end

xStatus MediaChannels Call [n] OutgoingAudioChannel [n] Encryption Status
Shows the encryption status on the outgoing channel.

Value space of the result returned:
<On/Off>

Example:
xStatus MediaChannels Call 27 OutgoingAudioChannel 328 Encryption Status
    *s MediaChannels Call 27 OutgoingAudioChannel 328 Encryption Status: Off
** end

xStatus MediaChannels Call [n] OutgoingAudioChannel [n] Audio Protocol
Shows the audio algorithm for the outgoing audio channel.
AACLD: The AAC-LD is an MPEG-4 Low Delay Audio Coder audio compression format.
G722: The G.722 algorithm is an ITU standard.
G7221: The G.722.1 algorithm is a licensed royalty-free ITU-T standard.
G711Mu: The G.711 Mu-law compression algorithm is used in North America and Japan.
G711A: The G.711 A-law compression algorithm is used in Europe and the rest of the world.
G729: The G.729 algorithm is an ITU standard.
G729AB: The G.729 annex A and B is an ITU standard.
Opus: Opus is a lossy audio compression format.

Value space of the result returned:
<AACLD/G722/G7221/G711Mu/G711A/G729/G729AB/Opus>

Example:
xStatus MediaChannels Call 27 OutgoingAudioChannel 328 Audio Protocol
    *s MediaChannels Call 27 OutgoingAudioChannel 328 Audio Protocol: AACLD
** end

xStatus MediaChannels Call [n] OutgoingAudioChannel [n] Audio Channels
Shows the number of outgoing audio channels.

Value space of the result returned:
<Integer>

Example:
xStatus MediaChannels Call 27 OutgoingAudioChannel 328 Audio Channels
    *s MediaChannels Call 27 OutgoingAudioChannel 328 Audio Channels: 1
** end
xStatus MediaChannels Call [n] OutgoingAudioChannel [n] Transport RTP Local IPAddress
Shows the local IP address of the Real-time Transport Protocol (RTP) port for the outgoing audio in the media channel.

Value space of the result returned:
<String>

Example:
```
xStatus MediaChannels Call 27 OutgoingAudioChannel 328 Transport RTP Local IPAddress
*s MediaChannels Call 27 OutgoingAudioChannel 328 Transport RTP Local IPAddress: "192.168.24.190"
** end
```

xStatus MediaChannels Call [n] OutgoingAudioChannel [n] Transport RTP Remote Port
Shows the remote UDP port number of the Real-time Transport Protocol (RTP) port for the outgoing audio in the media channel.

Value space of the result returned:
<Integer>

Example:
```
xStatus MediaChannels Call 27 OutgoingAudioChannel 328 Transport RTP Remote Port
*s MediaChannels Call 27 OutgoingAudioChannel 328 Transport RTP Remote Port: 50932
** end
```

xStatus MediaChannels Call [n] OutgoingAudioChannel [n] Transport RTP Local Port
Shows the local UDP port number of the Real-time Transport Protocol (RTP) port for the outgoing audio in the media channel.

Value space of the result returned:
<Integer>

Example:
```
xStatus MediaChannels Call 27 OutgoingAudioChannel 328 Transport RTP Local Port
*s MediaChannels Call 27 OutgoingAudioChannel 328 Transport RTP Local Port: 16404
** end
```

xStatus MediaChannels Call [n] OutgoingAudioChannel [n] Transport RTP Remote IPAddress
Shows the remote IP address of the Real-time Transport Protocol (RTP) port for the outgoing audio in the media channel.

Value space of the result returned:
<String>

Example:
```
xStatus MediaChannels Call 27 OutgoingAudioChannel 328 Transport RTP Remote IPAddress
*s MediaChannels Call 27 OutgoingAudioChannel 328 Transport RTP Remote IPAddress: "192.168.136.130"
** end
```

xStatus MediaChannels Call [n] OutgoingAudioChannel [n] Transport RTCP Local IPAddress
Shows the local IP address of the Real-time Transport Control Protocol (RTCP) port for the outgoing audio in the media channel.

Value space of the result returned:
<String>

Example:
```
xStatus MediaChannels Call 27 OutgoingAudioChannel 328 Transport RTCP Local IPAddress
*s MediaChannels Call 27 OutgoingAudioChannel 328 Transport RTCP Local IPAddress: "192.168.24.190"
** end
```

xStatus MediaChannels Call [n] OutgoingAudioChannel [n] Transport RTCP Local Port
Shows the local UDP port number of the Real-time Transport Control Protocol (RTCP) port for the outgoing audio in the media channel.

Value space of the result returned:
<Integer>

Example:
```
xStatus MediaChannels Call 27 OutgoingAudioChannel 328 Transport RTCP Local Port
*s MediaChannels Call 27 OutgoingAudioChannel 328 Transport RTCP Local Port: 16405
** end
```
xStatus MediaChannels Call [n] OutgoingAudioChannel [n] Transport RTCP Remote IpAddress
Shows the remote IP address of the Real-time Transport Control Protocol (RTCP) port for the outgoing audio in the media channel.

Value space of the result returned:
<String>
Example:
```
xStatus MediaChannels Call 27 OutgoingAudioChannel 328 Transport RTCP Remote IpAddress
's MediaChannels Call 27 OutgoingAudioChannel 328 Transport RTCP Remote IpAddress: "192.168.136.130"
** end
```

xStatus MediaChannels Call [n] OutgoingAudioChannel [n] Transport RCTP Remote Port
Shows the remote UDP port number of the Real-time Transport Control Protocol (RTCP) port for the outgoing audio in the media channel.

Value space of the result returned:
<Integer>
Example:
```
xStatus MediaChannels Call 27 OutgoingAudioChannel 328 Transport RTCP Remote Port
's MediaChannels Call 27 OutgoingAudioChannel 328 Transport RTCP Remote Port: 50933
** end
```

xStatus MediaChannels Call [n] OutgoingVideoChannel [n] Encryption Status
Shows the encryption status on the outgoing channel.

Value space of the result returned:
<On/Off>
Example:
```
xStatus MediaChannels Call 27 OutgoingVideoChannel 331 Encryption Status
's MediaChannels Call 27 OutgoingVideoChannel 331 Encryption Status: Off
** end
```

xStatus MediaChannels Call [n] OutgoingVideoChannel [n] ChannelRole
Shows if the outgoing channel is the main video channel or presentation channel.

Value space of the result returned:
<Main/Presentation/Legacy>
Example:
```
xStatus MediaChannels Call 27 OutgoingVideoChannel 331 ChannelRole
's MediaChannels Call 27 OutgoingVideoChannel 331 ChannelRole: Main
** end
```

xStatus MediaChannels Call [n] OutgoingVideoChannel [n] Video Protocol
Shows the video algorithm for the outgoing video channel.
H264: The H.264 algorithm is an ITU-T standard for video compression.
H263: The H.263 algorithm is an ITU-T standard for video compression.
H261: The H.261 algorithm is an ITU-T standard for video compression.

Value space of the result returned:
<Off/Raw/H261/H263/H263p/H263pp/H264/MPV4/JPEG/HEVC>
Example:
```
xStatus MediaChannels Call 27 OutgoingVideoChannel 331 Video Protocol
's MediaChannels Call 27 OutgoingVideoChannel 331 Video Protocol: "H264"
** end
```

xStatus MediaChannels Call [n] OutgoingVideoChannel [n] Video FrameRate
Shows the video frame rate of the outgoing channel.

Value space of the result returned:
<Integer>
Example:
```
xStatus MediaChannels Call 27 OutgoingVideoChannel 331 Video FrameRate
's MediaChannels Call 27 OutgoingVideoChannel 331 Video FrameRate: 30
** end
```
**xStatus MediaChannels Call [n] OutgoingVideoChannel [n] Video ResolutionX**

Shows the width (resolution in direction X) of the outgoing video.

**Value space of the result returned:**

<Integer>

**Example:**

```plaintext
xStatus MediaChannels Call 27 OutgoingVideoChannel 331 Video ResolutionX
*s MediaChannels Call 27 OutgoingVideoChannel 331 Video ResolutionX: 768
** end
```

**xStatus MediaChannels Call [n] OutgoingVideoChannel [n] Video ResolutionY**

Shows the height (resolution in direction Y) of the outgoing video.

**Value space of the result returned:**

<Integer>

**Example:**

```plaintext
xStatus MediaChannels Call 27 OutgoingVideoChannel 331 Video ResolutionY
*s MediaChannels Call 27 OutgoingVideoChannel 331 Video ResolutionY: 448
** end
```

**xStatus MediaChannels Call [n] OutgoingVideoChannel [n] Transport RTP Local IpAddress**

Shows the local IP address of the Real-time Transport Protocol (RTP) port for the outgoing video in the media channel.

**Value space of the result returned:**

<String>

**Example:**

```plaintext
xStatus MediaChannels Call 27 OutgoingVideoChannel 331 Transport RTP Local IpAddress
*s MediaChannels Call 27 OutgoingVideoChannel 331 Transport RTP Local IpAddress: "192.168.24.190"
** end
```

**xStatus MediaChannels Call [n] OutgoingVideoChannel [n] Transport RTP Local Port**

Shows the local UDP port number of the Real-time Transport Protocol (RTP) port for the outgoing video in the media channel.

**Value space of the result returned:**

<Integer>

**Example:**

```plaintext
xStatus MediaChannels Call 27 OutgoingVideoChannel 331 Transport RTP Local Port
*s MediaChannels Call 27 OutgoingVideoChannel 331 Transport RTP Local Port: 16404
** end
```

**xStatus MediaChannels Call [n] OutgoingVideoChannel [n] Transport RTP Remote IpAddress**

Shows the remote IP address of the Real-time Transport Protocol (RTP) port for the outgoing video in the media channel.

**Value space of the result returned:**

<String>

**Example:**

```plaintext
xStatus MediaChannels Call 27 OutgoingVideoChannel 331 Transport RTP Remote IpAddress
*s MediaChannels Call 27 OutgoingVideoChannel 331 Transport RTP Remote IpAddress: "192.168.136.130"
** end
```

**xStatus MediaChannels Call [n] OutgoingVideoChannel [n] Transport RTP Remote Port**

Shows the remote UDP port number of the Real-time Transport Protocol (RTP) port for the outgoing video in the media channel.

**Value space of the result returned:**

<Integer>

**Example:**

```plaintext
xStatus MediaChannels Call 27 OutgoingVideoChannel 331 Transport RTP Remote Port
*s MediaChannels Call 27 OutgoingVideoChannel 331 Transport RTP Remote Port: 50932
** end
```
xStatus MediaChannels Call [n] OutgoingVideoChannel [n] Transport RTCP Local IpAddress
Shows the local IP address of the Real-time Transport Control Protocol (RTCP) port for the outgoing video in the media channel.

Value space of the result returned:
<String>

Example:
```plaintext
xStatus MediaChannels Call 27 OutgoingVideoChannel 331 Transport RTCP Local IpAddress
*s MediaChannels Call 27 OutgoingVideoChannel 331 Transport RTCP Local IpAddress: "192.168.24.190"
** end
```

xStatus MediaChannels Call [n] OutgoingVideoChannel [n] Transport RTCP Local Port
Shows the local UDP port number of the Real-time Transport Control Protocol (RTCP) port for the outgoing video in the media channel.

Value space of the result returned:
<Integer>

Example:
```plaintext
xStatus MediaChannels Call 27 OutgoingVideoChannel 331 Transport RTCP Local Port
*s MediaChannels Call 27 OutgoingVideoChannel 331 Transport RTCP Local Port: 16405
** end
```

xStatus MediaChannels Call [n] OutgoingVideoChannel [n] Transport RTCP Remote IpAddress
Shows the remote IP address of the Real-time Transport Control Protocol (RTCP) port for the outgoing video in the media channel.

Value space of the result returned:
<String>

Example:
```plaintext
xStatus MediaChannels Call 27 OutgoingVideoChannel 331 Transport RTCP Remote IpAddress
*s MediaChannels Call 27 OutgoingVideoChannel 331 Transport RTCP Remote IpAddress: "192.168.136.130"
** end
```

xStatus MediaChannels Call [n] OutgoingVideoChannel [n] Transport RTCP Remote Port
Shows the remote UDP port number of the Real-time Transport Control Protocol (RTCP) port for the outgoing video in the media channel.

Value space of the result returned:
<Integer>

Example:
```plaintext
xStatus MediaChannels Call 27 OutgoingVideoChannel 331 Transport RTCP Remote Port
*s MediaChannels Call 27 OutgoingVideoChannel 331 Transport RTCP Remote Port: 50933
** end
```
Network status

xStatus Network
Shows the top level overview of the network status.

xStatus Network 1 Ethernet MacAddress
Shows the MAC (Media Access Control) address for the Ethernet interface.
Value space of the result returned:
<String>
Example:
xStatus Network 1 Ethernet MacAddress
*s Network 1 Ethernet MacAddress: "00:50:60:02:FD:C7"
** end

xStatus Network 1 Ethernet Speed
Shows the Ethernet speed in Mbps. The speed can be in full-duplex or half-duplex.
Value space of the result returned:
"10 half"/"10 full"/"100 half"/"100 full"/"1000 full"
Example:
xStatus Network 1 Ethernet Speed
*s Network 1 Ethernet Speed: "100full"
** end

xStatus Network 1 IPv4 Address
Shows the IPv4 address that uniquely identifies this system.
Value space of the result returned:
<String>
Example:
xStatus Network 1 IPv4 Address
*s Network 1 IPv4 Address: "192.0.2.149"
** end

xStatus Network 1 IPv4 SubnetMask
Shows the subnet mask which determines which subnet an IPv4 address belongs to.
Value space of the result returned:
<String>
Example:
xStatus Network 1 IPv4 SubnetMask
*s Network 1 IPv4 SubnetMask: "255.255.255.0"
** end

xStatus Network 1 IPv4 Gateway
Shows the address of the IPv4 gateway.
Value space of the result returned:
<String>
Example:
xStatus Network 1 IPv4 Gateway
*s Network 1 IPv4 Gateway: "192.0.2.10"
** end

xStatus Network 1 IPv4 DNS Domain Name
Shows the domain name.
Value space of the result returned:
<String>
Example:
xStatus Network 1 IPv4 DNS Domain Name
*s Network 1 IPv4 DNS Domain Name: "www.example.com www.example.int"
** end

xStatus Network 1 IPv4 DNS Server [1..5] Address
Shows the IP address of the DNS server.
Value space of the result returned:
<String>
Example:
xStatus Network 1 IPv4 DNS Server 1. Address
*s Network 1 IPv4 DNS Server 1 Address: "192.0.2.60"
** end
**xStatus Network 1 IPv4 DHCP TftpServerAddress**

Returns the IP address of the TFTP server (provisioning server) as assigned by DHCP, provided that the DHCP server supports option 150. This status is used only when xConfiguration Provisioning Mode is CUCM.

**Value space of the result returned:**

<String>

**Example:**

```
xStatus Network 1 IPv4 DHCP TftpServerAddress
*s Network 1 IPv4 DHCP TftpServerAddress: "192.0.2.0"
** end
```

---

**xStatus Network 1 IPv4 DHCP TmsServer**

Returns the IP address of the TMS server (provisioning server) as assigned by DHCP, provided that the DHCP server supports option 242. This status is used only when xConfiguration Provisioning Mode is TMS.

**Value space of the result returned:**

<String>

**Example:**

```
xStatus Network 1 IPv4 DHCP TmsServer
*s Network 1 IPv4 DHCP TmsServer: "192.0.2.0"
** end
```

---

**xStatus Network 1 IPv4 DHCP ProvisioningServer**

Returns the IP address of the VCS provisioning server as assigned by DHCP, provided the provisioning server address is defined as a vendor encapsulated option in the DHCP server. This status is used only when xConfiguration Provisioning Mode is VCS.

**Value space of the result returned:**

<String>

**Example:**

```
xStatus Network 1 IPv4 DHCP ProvisioningServer
*s Network 1 IPv4 DHCP ProvisioningServer: "192.0.2.0"
** end
```

---

**xStatus Network 1 IPv4 DHCP ProvisioningDomain**

Returns the SIP domain of the VCS provisioning server as assigned by DHCP, provided the provisioning server address is defined as a vendor encapsulated option in the DHCP server. This status is used only when xConfiguration Provisioning Mode is VCS.

**Value space of the result returned:**

<String>

**Example:**

```
xStatus Network 1 IPv4 DHCP ProvisioningDomain
*s Network 1 IPv4 DHCP ProvisioningDomain: "1234@company.com"
** end
```

---

**xStatus Network 1 IPv6 Address**

Shows the IPv6 address that uniquely identifies this system.

**Value space of the result returned:**

<String>

**Example:**

```
xStatus Network 1 IPv6 Address
*s Network 1 IPv6 Address: ""
** end
```
xStatus Network 1 IPv6 Gateway
Shows the address of the IPv6 gateway.
Value space of the result returned:
<String>
Example:
  xStatus Network 1 IPv6 Gateway
  *s Network 1 IPv6 Gateway: ""
  ** end

xStatus Network 1 MTU
Shows the MTU (Maximum Transmission Unit) size for the network.
Value space of the result returned:
<Integer>
Example:
  xStatus Network 1 MTU
  *s Network 1 MTU: 1500
  ** end

xStatus Network 1 VLAN Voice VlanId
The feedback shows the VLAN Voice ID; or Off if the VLAN Voice Mode is not enabled.
Value space of the result returned:
"Off"/"1".."4094"
Example:
  xStatus Network 1 VLAN Voice VlanId
  *s Network 1 VLAN Voice VlanId: "Off"
  ** end

xStatus Network CDP Platform
Returns the hardware platform name of the switch connected to the endpoint.
Value space of the result returned:
<String>
Example:
  xStatus Network CDP Platform
  *s Network 1 CDP Platform: "cisco WS-C3750X-48P"
  ** end

xStatus Network CDP Version
Returns information about the software release version the switch is running.
Value space of the result returned:
<String>
Example:
  xStatus Network CDP Version
  *s Network 1 CDP Version: "Cisco IOS Software, C3750E Software (C3750E-
  UNIVERSALK9-M), Version 15.0(1)SE2, RELEASE SOFTWARE (fc3)*Technical
  Support: http://www.cisco.com/techsupport*Copyright (c) 1986-2011 by Cisco
  Systems, Inc.*Compiled Thu 22-Dec-11 00:05 by prod _ rel _ team"
  ** end

xStatus Network CDP Capabilities
Describes the functional capability for the switch in form of a device type. See documentation for
CDP protocol for more information.
Value space of the result returned:
<String>
Example:
  xStatus Network CDP Capabilities
  *s Network 1 CDP Capabilities: "0x0029"
  ** end

xStatus Network CDP DeviceId
Identifies the name of the switch in form of a character string.
Value space of the result returned:
<String>
Example:
  xStatus Network CDP DeviceId
  *s Network 1 CDP DeviceId: "123456.company.com"
  ** end
xStatus Network CDP PortID
Returns the identification the switch uses of the port the endpoint is connected to.

Value space of the result returned:
<String>

Example:
```plaintext
xStatus Network CDP PortID
*s Network 1 CDP PortID: "GigabitEthernet1/0/23"
** end
```

xStatus Network CDP Duplex
Indicates the status (duplex configuration) of the CDP broadcast interface. Used by network operators to diagnose connectivity problems between adjacent network elements.

Value space of the result returned:
<String>

Example:
```plaintext
xStatus Network CDP Duplex
*s Network 1 CDP Duplex: "Full"
** end
```

xStatus Network CDP VTPMgmtDomain
Returns the switch’s configured VTP management domain name-string.

Value space of the result returned:
<String>

Example:
```plaintext
xStatus Network CDP VTPMgmtDomain
*s Network 1 CDP VTPMgmtDomain: "anyplace"
** end
```

xStatus Network CDP Address
Returns the first network address of both receiving and sending devices.

Value space of the result returned:
<String>

Example:
```plaintext
xStatus Network CDP Address
*s Network 1 CDP Address: "192.0.1.20"
** end
```

xStatus Network CDP PrimaryMgmtAddress
Returns the management address used to configure and monitor the switch the endpoint is connected to.

Value space of the result returned:
<String>

Example:
```plaintext
xStatus Network CDP PrimaryMgmtAddress
*s Network 1 CDP PrimaryMgmtAddress: "10.1.1.2"
** end
```

xStatus Network CDP SysName
Returns the SysName as configured in the switch the endpoint is connected to.

Value space of the result returned:
<String>

Example:
```plaintext
xStatus Network CDP SysName
*s Network 1 CDP SysName: ""
** end
```

xStatus Network CDP SysObjectID
Returns the SysObjectID as configured in the switch the endpoint is connected to.

Value space of the result returned:
<String>

Example:
```plaintext
xStatus Network CDP SysObjectID
*s Network 1 CDP SysObjectID: ""
** end
```

xStatus Network CDP VoIPApplianceVlanID
Identifies the VLAN used for VoIP traffic from the endpoint to the switch. For more information see documentation of the IEEE 802.1Q protocol.

Value space of the result returned:
<String>

Example:
```
xStatus Network CDP VoIPApplianceVlanID
*s Network 1 CDP VoIPApplianceVlanID: "300"
** end
```

NetworkServices status

xStatus NetworkServices NTP Address
Returns the address of the NTP server(s) the codec is using.

Value space of the result returned:
<String>

Example:
```
xStatus NetworkServices NTP Address
*s NetworkServices NTP Address: "12.104.193.12 64.104.222.16 144.254.15.121"
** end
```

xStatus NetworkServices NTP CurrentAddress
Returns the address of the NTP server that is currently in use.

Value space of the result returned:
<String>

Example:
```
xStatus NetworkServices NTP CurrentAddress
*s NetworkServices NTP CurrentAddress: "123.254.15.121"
** end
```

xStatus NetworkServices NTP Status
Returns the status of the endpoints synchronizing with the NTP server.
Unknown: State of the synchronization is unknown.
Synced: The system is in sync with the NTP server
Discarded: The NTP result has been discarded.

Value space of the result returned:
<Unknown/Synced/Discarded>

Example:
```
xStatus NetworkServices NTP Status
*s NetworkServices NTP Status: Synced
** end
```
**Preset status**

**xStatus Preset**
Shows the top level overview of the camera presets status.

**xStatus Preset [1..15] Defined**
Shows if a camera preset is stored at this position.

Value space of the result returned:
<Ture/False>

Example:
*s Preset 1 Defined: True
** end

**xStatus Preset [1..15] Type**
Shows the camera preset type.

Value space of the result returned:
<All/Camera>

Example:
*s Preset 1 Type: All
** end

**xStatus Preset [1..15] Description**
Lists the configured name for the specific preset.

Value space of the result returned:
<String>

Example:
*s Preset 1 Description: "Zoom in"
** end

**Provisioning status**

**xStatus Provisioning**
Shows the top level overview of the provisioning status.

**xStatus Provisioning Status**
Shows the status of the provisioning.

Failed: The provisioning failed.
AuthenticationFailed: The authentication failed.
Provisioned: The endpoint is provisioned.
Idle: The provisioning is not active.
NeedConfig: The endpoint needs to be configured.
ConfigError: An error occurred during configuration.

Value space of the result returned:
<Failed/AuthenticationFailed/Provisioned/Idle/NeedConfig/ConfigError>

Example:
*s Provisioning Status: Provisioned
** end

**xStatus Provisioning Reason**
Shows the cause when provisioning has failed.

Value space of the result returned:
<String>

Example:
*s Provisioning Reason: ""
** end
xStatus Provisioning Server
Identifies the server the system is provisioned to. This address may either be defined in the xConfiguration ExternalManager Address setting, or provided by DHCP.

Value space of the result returned:
<String>

Example:
    xStatus Provisioning Server
    "s Provisioning Server: "192.0.2.0"
    ** end

xStatus Provisioning Software UpgradeStatus SessionId
Shows the ID of the session for the software upgrade.

Value space of the result returned:
<String>

Example:
    xStatus Provisioning Software UpgradeStatus SessionId
    "s Provisioning Software UpgradeStatus SessionId: ""
    ** end

xStatus Provisioning Software UpgradeStatus LastChange
Shows the date and time for the latest software upgrade.

Value space of the result returned:
<String>

Example:
    xStatus Provisioning Software UpgradeStatus LastChange
    "s Provisioning Software UpgradeStatus LastChange: "2011-06-07T07:20:03Z"
    ** end

xStatus Provisioning Software UpgradeStatus Status
Shows the status of the software upgrade.

Value space of the result returned:
<None/InProgress/Failed/InstallationFailed/Succeeded>

Example:
    xStatus Provisioning Software UpgradeStatus Status
    "s Provisioning Software UpgradeStatus Status: None"
    ** end

xStatus Provisioning Software UpgradeStatus Phase
Shows the phase of the software upgrade.

Value space of the result returned:
<None/DownloadPending/FormingHierarchy/Downloading/DownloadPaused/DownloadDone/Seeding/AboutToInstallUpgrade/Postponed/PeripheralsReady/UpgradingPeripherals/Installing>

Example:
    xStatus Provisioning Software UpgradeStatus Phase
    "s Provisioning Software UpgradeStatus Phase: None"
    ** end

xStatus Provisioning Software UpgradeStatus Message
Shows the system message for the software upgrade.

Value space of the result returned:
<String>

Example:
    xStatus Provisioning Software UpgradeStatus Message
    "s Provisioning Software UpgradeStatus Message: ""
    ** end

xStatus Provisioning Software UpgradeStatus VersionId
Shows the version ID of the software currently being uploaded and installed.

Value space of the result returned:
<String>

Example:
    xStatus Provisioning Software UpgradeStatus VersionId
    "s Provisioning Software UpgradeStatus VersionId: "s52000tc5_1_0.pkg"
    ** end

xStatus Provisioning Software UpgradeStatus URL
Shows the URL that the new software currently is being uploaded and installed from.

Value space of the result returned:
<String>

Example:
    xStatus Provisioning Software UpgradeStatus URL
    "s Provisioning Software UpgradeStatus URL: "http://.../s52000tc5_1_0.pkg"
    ** end
xStatus Provisioning Software UpgradeStatus SecondsUntilUpgrade
Indicates how many seconds remain before the software upgrade is automatically installed. The upgrade installation can be started manually by issuing the command xCommand Provisioning CompleteUpgrade or postponed with the command xCommand Provisioning PostponeUpgrade.

Value space of the result returned:
<Integer>

Example:
```
xStatus Provisioning Software UpgradeStatus SecondsUntilUpgrade
  *s Provisioning Software UpgradeStatus SecondsUntilUpgrade: 0
** end
```

xStatus Provisioning Software Current VersionId
Shows the version ID of the current software.

Value space of the result returned:
<String>

Example:
```
xStatus Provisioning Software Current VersionId
  *s Provisioning Software Current VersionId: "s52000tc5_1_0.pkg"
** end
```

xStatus Provisioning Software Current URL
Shows the URL that the current software was uploaded from.

Value space of the result returned:
<String>

Example:
```
xStatus Provisioning Software Current URL
  *s Provisioning Software Current URL: "http://.../s52000tc5_1_0.pkg"
** end
```

xStatus Provisioning Software Current CompletedAt
Shows date and time for when the current software upgrade was completed.

Value space of the result returned:
<String>

Example:
```
xStatus Provisioning Software Current CompletedAt
  *s Provisioning Software Current CompletedAt: "2011-06-07T07:20:03Z"
** end
```

xStatus Provisioning CUCM CAPF Mode
Shows the authentication mode required for a pending CAPF operation, if any.

- IgnoreAuth: No pending or ongoing CAPF operation.
- NullAuth: Pending or ongoing CAPF operation that does not require authentication.
- StringAuth: Pending or ongoing CAPF operation that requires string authentication.
- LSCAuth: Pending or ongoing CAPF operation that requires authentication by Locally Significant Certificate.
- MICAUth: Pending or ongoing CAPF operation that requires authentication by Manufacturer Installed Certificate.

Value space of the result returned:
<IgnoreAuth/NullAuth/StringAuth/LSCAuth/MICAuth>

Example:
```
xStatus Provisioning CUCM CAPF Mode
  *s Provisioning CUCM CAPF Mode: IgnoreAuth
** end
```

xStatus Provisioning CUCM CAPF ServerName
Shows the CAPF server name. This can be a hostname, a FQDN or an IP address.

Value space of the result returned:
<IgnoreAuth/NullAuth/StringAuth/LSCAuth/MICAuth>

Example:
```
xStatus Provisioning CUCM CAPF ServerName
  *s Provisioning CUCM CAPF ServerName: "192.168.0.1"
** end
```
xStatus Provisioning CUCM CAPF ServerPort
Shows the port number to be used for CAPF operations.

Value space of the result returned:
<Integer>

Example:
```
xStatus Provisioning CUCM CAPF ServerPort
*s Provisioning CUCM CAPF ServerPort: 3804
** end
```

xStatus Provisioning CUCM CAPF LSC
Shows whether a Locally Significant Certificate (LSC) is installed or not.

Value space of the result returned:
<NotInstalled/Installed>

Example:
```
xStatus Provisioning CUCM CAPF LSC
*s Provisioning CUCM CAPF LSC: NotInstalled
** end
```

xStatus Provisioning CUCM CAPF OperationState
Shows the state of the current CAPF operation, if any.
Pending: A CAPF operation is pending.
NonPending: There is no CAPF operation in process.
InProgress: A CAPF operation is in progress.
Failed: The CAPF operation has failed.

Value space of the result returned:
<Pending/NonPending/InProgress/Failed>

Example:
```
xStatus Provisioning CUCM CAPF OperationState
*s Provisioning CUCM CAPF OperationState: NonPending
** end
```

xStatus Provisioning CUCM CAPF OperationResult
Shows the result of the last CAPF operation.
NotSet: No CAPF operation has been executed yet.
CAPFUnknown: Unknown CAPF failure.
CAPFInvalidAuthStrLen: Invalid length of authentication string (should be 4-10 digits).
CAPFInvalidInitReason: Invalid init reason specified.
CAPFInvalidAuthMode: Invalid authentication mode.
CAPFNotNone: Last CAPF session is still running.
CAPFNullClnt: Invalid client.
CAPFNullClntcontext: Invalid client context.
CAPFInvalidUsageStartSession: Session is in wrong state.
CAPFNullSessionData: Session context data is empty.
CAPFInvalidSession: Invalid CAPF session.
CAPFNullParameters: Invalid server parameters.
CAPFNoStat: Empty status.
CAPFTimeout: The operation has timed out.
CAPFConnLost: Connection to the CAPF server has been lost.
CAPFFail: CAPF operation has been terminated.
CAPFKeyGenFailed: Key generation has failed.
CAPFConnectFailed: Failed to connect to CAPF server.
CAPFFenceError: Unknown internal CAPF failure.
CAPFServerBusy: CAPF server is busy.
CAPFAuthRejected: Authentication has been rejected.
CAPFInvalidParms: Invalid parameters.
CAPFCancelled: CAPF operation has been canceled.
CAPFFailed: CAPF operation has failed.
CAPFSuccess: CAPF operation has succeeded.
CAPFMinorItem: CAPF operation has succeeded.
CAPFUpdated: Locally Significant Certificate (LSC) has been updated. CAPF operation has succeeded.

Value space of the result returned:
<NotSet/CAPFUnknown/CAPFInvalidAuthStrLen/CAPFInvalidInitReason/CAPFInvalidAuthMode/
CAPFNotNone/CAPFNullClnt/CAPFNullClntcontext/CAPFInvalidUsageStartSession/CAPFInvalidSessionData/CAPFNullParameters/CAPFNoStat/CAPFTimeout/
CAPFConnLost/CAPFFail/CAPFKeyGenFailed/CAPFConnectFailed/CAPFFenceError/
CAPFServerBusy/CAPFAuthRejected/CAPFInvalidParms/CAPFCancelled/CAPFFailed/
CAPFSuccess/CAPFUpdated>

Example:
```
xStatus Provisioning CUCM CAPF OperationResult
```
Provisioning CUCM CAPF OperationResult: NotSet
** end

**Status Provisioning CUCM ProvisionSecurity**
Shows the provisioned configuration file type.
None: The provisioned configuration file is plain text or the endpoint has not been provisioned.
Signed: The provisioned configuration file is signed.
Encrypted: The provisioned configuration file is signed and encrypted.

**Value space of the result returned:**
<None/Signed/Encrypted>

**Example:**

```
xStatus Provisioning CUCM ProvisionSecurity
*xs Provisioning CUCM ProvisionSecurity: None
** end
```

**Status Provisioning CUCM UserId**
Returns the current UCM user id for this device. When the Extension Mobility service is in use, this command returns the signed in UserId.

**Value space of the result returned:**
<String>

**Example:**

```
xStatus Provisioning CUCM UserId
*xs Provisioning CUCM UserId: ""
** end
```

**Status Provisioning CUCM CTL State**
Shows whether the Certificate Trust List (CTL) file is installed or not.

**Value space of the result returned:**
<NotInstalled/Installed>

**Example:**

```
xStatus Provisioning CUCM CTL State
*xs Provisioning CUCM CTL State: Installed
** end
```

**Status Provisioning CUCM ExtensionMobility Enabled**
Indicates if Extension Mobility is enabled for the UCM registered device.

**Value space of the result returned:**
<True/False>

**Example:**

```
xStatus Provisioning CUCM ExtensionMobility Enabled
*xs Provisioning CUCM ExtensionMobility Enabled: False
** end
```

**Status Provisioning CUCM ExtensionMobility LoggedIn**
Indicates whether you are logged in to Extension Mobility or not.

**Value space of the result returned:**
<True/False>

**Example:**

```
xStatus Provisioning CUCM ExtensionMobility LoggedIn
*xs Provisioning CUCM ExtensionMobility LoggedIn: False
** end
```

**Status Provisioning CUCM ExtensionMobility LastLoggedInUserId**
Returns the user id last logged in to the system. Only in use if UCM Extension Mobility is enabled, and UCM is configured to remember the last logged in user on an endpoint.

**Value space of the result returned:**
<String>

**Example:**

```
xStatus Provisioning CUCM ExtensionMobility LastLoggedInUserId
*xs Provisioning CUCM ExtensionMobility LastLoggedInUserId: "User 1"
** end
```

**Status Provisioning CUCM TVS Proxy [n]Server**
Returns the address of the TVS server in form of a hostname, FQDN or IPv4 address.

**Value space of the result returned:**
<String>

**Example:**

```
xStatus Provisioning CUCM TVS Proxy 1 Server
*xs Provisioning CUCM TVS Proxy 1 Server: "192.0.2.0"
** end
```
xStatus Provisioning CUCM TVS Proxy [n] IPv6Address
Returns the address of the TVS server in form of a hostname, FQDN or IPv6 address.

Value space of the result returned:
<String>

Example:

```
xStatus Provisioning CUCM TVS Proxy 1 IPv6Address
*s Provisioning CUCM TVS Proxy 1 IPv6Address: ""
```

xStatus Provisioning CUCM TVS Proxy [n] Port
Returns the number of the port the TVS is running on.

Value space of the result returned:
<Integer>

Example:

```
xStatus Provisioning CUCM TVS Proxy 1 Port
*s Provisioning CUCM TVS Proxy 1 Port: 2445
```

xStatus Provisioning CUCM TVS Proxy [n] Priority
Returns the Priority of the TVS proxy in use. Lowest priority proxy is preferred.

Value space of the result returned:
<Integer>

Example:

```
xStatus Provisioning CUCM TVS Proxy 1 Priority
*s Provisioning CUCM TVS Proxy 1 Priority: 0
```

Security status

xStatus Security FIPS Mode
Shows the FIPS mode status.

Value space of the result returned:
<On/Off>

Example:

```
xStatus Security FIPS Mode
*s Security FIPS Mode: Off
```

xStatus Security Persistency Configurations
Shows whether the systems all configurations are set to persistent or non-persistent mode. Persistent is the default mode.

Value space of the result returned:
<NonPersistent/Persistent>

Example:

```
xStatus Security Persistency Configurations
*s Security Persistency Configurations: Persistent
```

xStatus Security Persistency CallHistory
Shows whether call history logging is set to persistent or non-persistent mode. Persistent is the default mode.

Value space of the result returned:
<NonPersistent/Persistent>

Example:

```
xStatus Security Persistency CallHistory
*s Security Persistency CallHistory: Persistent
```
**xStatus Security Persistency InternalLogging**
Shows whether internal logging is set to persistent or non-persistent mode. Persistent is the default mode.

Value space of the result returned:
<NonPersistent/Persistent>

Example:
```
xStatus Security Persistency InternalLogging
*s Security Persistency InternalLogging: Persistent
** end
```

**xStatus Security Persistency LocalPhonebook**
Shows whether local phone book is set to persistent or non-persistent mode. Persistent is the default mode.

Value space of the result returned:
<NonPersistent/Persistent>

Example:
```
xStatus Security Persistency LocalPhonebook
*s Security Persistency LocalPhonebook: Persistent
** end
```

**xStatus Security Persistency DHCP**
Shows whether DHCP logging is set to persistent or non-persistent mode. Persistent is the default mode.

Value space of the result returned:
<NonPersistent/Persistent>

Example:
```
xStatus Security Persistency DHCP
*s Security Persistency DHCP: Persistent
** end
```

**xStatus Security Audit Server Port**
Returns information on which syslog server port the audit logs are configured to be sent to.

Value space of the result returned:
<Integer>

Example:
```
xStatus Security Audit Server Port
*s Security Audit Server Port: 514
** end
```
Cisco TelePresence SX20 Codec API Reference Guide

SIP status

xStatus SIP
Shows the top level overview of the SIP status.

xStatus SIP Proxy [1] Status
Shows the status of the communication between the endpoint and the SIP Proxy server.
- Active: The communication between the endpoint and the SIP Proxy is active.
- DNSSelected: The attempt to establish communication to the DNS server failed.
- DNSFailed: The attempt to establish communication to the DNS server failed.
- Off: There is no communication between the endpoint and the SIP Proxy.
- Timeout: The attempt to establish communication to the SIP Proxy timed out.
- UnableTCP: The system is unable to use TCP as the transport method.
- UnableTLS: The system is unable to use TLS as the transport method.
- Unknown: The status of the communication is not known.
- AuthenticationFailed: Wrong user name or password.

Value space of the result returned:
<Active/DNSSelected/Off/Ready/Timeout/UnableTCP/UnableTLS/Unknown/AuthenticationFailed>

Example:
```
xStatus SIP Proxy 1 Status
*s SIP Proxy 1 Status: Active
** end
```

xStatus SIP Proxy [1] Address
Shows the address of the SIP Proxy that the system communicates with.

Value space of the result returned:
<String>

Example:
```
xStatus SIP Proxy 1 Address
*s SIP Proxy 1 Address: "192.0.2.50"
** end
```

xStatus SIP Proxy [1] Secure
Shows the encryption status of the signaling with the SIP Proxy server.

Value space of the result returned:
<True/False>

Example:
```
xStatus SIP Proxy 1 Secure
*s SIP Proxy 1 Secure: True
** end
```

xStatus SIP Proxy [1] Verified
Shows whether or not the SSL certificate of the server that the video system / codec tries to register to is included in the codec’s trusted CA-list. The server is typically a Cisco VCS or CUCM.
- True: The server’s SIP certificate is checked against the trusted CA-list on the codec and found valid. Additionally, the fully qualified domain name of the server matches the valid certificate.
- False: A TLS connection is not set up because the SIP certificate verification failed or the domain name did not match. Note that the status also returns False when TLS is not used (xConfiguration SIP Profile 1 DefaultTransport not set to TLS) or certificate verification is switched off (xConfiguration SIP Profile TlsVerify set to Off).

Value space of the result returned:
<True/False>

Example:
```
xStatus SIP Proxy 1 Verified
*s SIP Proxy 1 Verified: False
** end
```
xStatus SIP Registration [n] Status
Shows the status of the registration to the SIP Proxy Server.
Deregister: The system is in the process of de-registering to the SIP Proxy.
Failed: The system failed to register to the SIP Proxy.
Inactive: The system is not registered to any SIP Proxy.
Registered: The system is registered to the SIP Proxy.
Registering: The system is in the process of registering to the SIP Proxy.

Value space of the result returned:
<Deregister/Failed/Inactive/Registered/Registering>

Example:
```
xStatus SIP Registration 1 Status
*s SIP Registration 1 Status: Registered
** end
```

xStatus SIP Registration [n] Reason
Shows a message to explain the reason why the SIP registration failed.

Value space of the result returned:
<String>

Example:
```
xStatus SIP Registration 1 Reason
*s SIP Registration 1 Reason: "404 Not Found"
** end
```

xStatus SIP Registration [n] URI
Shows the URI used for registration to the SIP Proxy server.

Value space of the result returned:
<String>

Example:
```
xStatus SIP Registration 1 URI
*s SIP Registration 1 URI: "firstname.lastname@company.com"
** end
```

xStatus SIP Registration [n] Authentication
Shows which authentication mechanism is used when registering to the SIP Proxy Server.
Digest: Uses the Digest access authentication method, as specified by RFC 2069.
NTLM: Uses the NTLM authentication method, which is a Microsoft authentication protocol.
Off: No authentication mechanism is used.

Value space of the result returned:
<Digest/NTLM/Off>

Example:
```
xStatus SIP Registration 1 Authentication
*s SIP Registration 1 Authentication: Off
** end
```

xStatus SIP Profile 1 Proxy [1] Status
Shows the status of the communication between the endpoint and the SIP Proxy server.
Active: The communication between the endpoint and the SIP Proxy is active.
DNSFailed: The attempt to establish communication to the DNS server failed.
Off: There is no communication between the endpoint and the SIP Proxy.
Timeout: The attempt to establish communication to the SIP Proxy timed out.
UnableTCP: The system is unable to use TCP as the transport method.
UnableTLS: The system is unable to use TLS as the transport method.
Unknown: The status of the communication is not known.
AuthenticationFailed: Wrong user name or password.

Value space of the result returned:
<Active/DNSFailed/Off/Timeout/UnableTCP/UnableTLS/Unknown/AuthenticationFailed>

Example:
```
xStatus SIP Profile 1 Proxy 1 Status
*s SIP Profile 1 Proxy 1 Status: Active
** end
```
**xStatus SIP Profile 1 Proxy [1] Address**
Shows the address of the SIP Proxy that the system communicates with.

*Value space of the result returned:*
<String>

*Example:*
* xStatus SIP Profile 1 Proxy Address
  *s SIP Profile 1 Proxy Address: "192.0.2.50"
  ** end

**xStatus SIP Profile 1 Secure**
Shows the encryption status of the signaling with the SIP Proxy server.

*Value space of the result returned:*
<True/False>

*Example:*
* xStatus SIP Profile 1 Secure
  *s SIP Profile 1 Secure: True
  ** end

**xStatus SIP Profile 1 Verified**
Shows whether or not the SSL certificate of the server that the video system / codec tries to register to is included in the codec’s trusted CA-list. The server is typically a Cisco VCS or CUCM.

*True:* The server’s certificate is included in the codec’s trusted CA-list and is valid.
*False:* The certificate is not included in the codec’s trusted CA-list or is invalid.

*Value space of the result returned:*
<True/False>

*Example:*
* xStatus SIP Profile 1 Verified
  *s SIP Profile 1 Verified: False
  ** end

**xStatus SIP Profile 1 Authentication**
Shows which authentication mechanism is used when registering to the SIP Proxy Server.

*Digest:* Uses the Digest access authentication method, as specified by RFC 2069.
*NTLM:* Uses the NTLM authentication method, which is a Microsoft authentication protocol.
*Off:* No authentication mechanism is used.

*Value space of the result returned:*
<Digest/NTLM/Off>

*Example:*
* xStatus SIP Profile 1 Authentication
  *s SIP Profile 1 Authentication: Off
  ** end

**xStatus SIP Profile 1 Mailbox MessagesWaiting**
Indicates how many new messages are in the mailbox.

*Value space of the result returned:*
<Integer>

*Example:*
* xStatus SIP Profile 1 Mailbox MessagesWaiting
  *s SIP Profile 1 Mailbox MessagesWaiting: 0
  ** end

**xStatus SIP Profile 1 CallForward Mode**
Indicates whether the call forward mode for SIP is set to on or off.

*Value space of the result returned:*
<On/Off>

*Example:*
* xStatus SIP Profile 1 CallForward Mode
  *s SIP Profile 1 CallForward Mode: Off
  ** end
xStatus SIP Profile 1 CallForward URI
Indicates the address the incoming calls are directed to when call forward mode is set on.

Value space of the result returned:
<String>

Example:
```
xStatus SIP Profile 1 CallForward URI
  *s SIP Profile 1 CallForward URI: ""
  ** end
```

xStatus SIP Profile 1 CallForward DisplayName
Returns the URI that is displayed on the user interface for the forwarded call.

Value space of the result returned:
<String>

Example:
```
xStatus SIP Profile 1 CallForward DisplayName
  *s SIP Profile 1 CallForward DisplayName: ""
  ** end
```

xStatus SIP Profile 1 Registration [n] Status
Shows the status of the registration to the SIP Proxy Server.
Deregister: The system is in the process of de-registering to the SIP Proxy.
Failed: The system failed to register to the SIP Proxy.
Inactive: The system is not registered to any SIP Proxy.
Registered: The system is registered to the SIP Proxy.
Registering: The system is in the process of registering to the SIP Proxy.

Value space of the result returned:
<Deregister/Failed/Inactive/Registered/Registering>

Example:
```
xStatus SIP Profile 1 Registration 1 Status
  *s SIP Profile 1 Registration 1 Status: Registered
  ** end
```

xStatus SIP Profile 1 Registration [n] Reason
Shows a message to explain the reason why the SIP registration failed.

Value space of the result returned:
<String>

Example:
```
xStatus SIP Profile 1 Registration 1 Reason
  *s SIP Profile 1 Registration 1 Reason: "404 Not Found"
  ** end
```

xStatus SIP Profile 1 Registration [n] URI
Shows the URI used for registration to the SIP Proxy server.

Value space of the result returned:
<String>

Example:
```
xStatus SIP Profile 1 Registration 1 URI
  *s SIP Profile 1 Registration 1 URI: "firstname.lastname@company.com"
  ** end
```

xStatus SIP Profile 1 DirectoryURI Primary URI
Returns the primary directory URI set for the endpoint in UCM. Directory URI is associated with a
directory number, and can be used to make calls and identify callers. Up to five directory URIs can
be set, but only one of them can be set as primary.

Value space of the result returned:
<String>

Example:
```
xStatus SIP Profile DirectoryURI Primary URI
  *s SIP Profile 1 DirectoryURI Primary URI: "123456@company.com"
  ** end
```
xStatus SIP Profile 1 DirectoryURI Primary URI

Returns the primary directory URI set for the endpoint in UCM. Directory URI is associated with a directory number, and can be used to make calls and identify callers. Up to five directory URIs can be set, but only one of them can be set as primary.

Value space of the result returned:

<String>

Example:

xStatus SIP Profile DirectoryURI Primary URI
*s SIP Profile 1 DirectoryURI Primary URI: "123456@company.com"
** end

Standby status

xStatus Standby Active

Shows if the system is in standby or not.

Value space of the result returned:

<On/Off>

Example:

xStatus Standby Active
*s Standby Active: Off
** end
xStatus SystemUnit status

Shows the top level overview of the system unit status.

xStatus SystemUnit ProductType
Shows the product type.

Value space of the result returned:
<String>

Example:
  xStatus SystemUnit ProductType
  *s SystemUnit ProductType: "Cisco TelePresence Codec"
  ** end

xStatus SystemUnit ProductId
Shows the product identity.

Value space of the result returned:
<String>

Example:
  xStatus SystemUnit ProductId
  *s SystemUnit ProductId: "Cisco TelePresence Codec C90"
  ** end

xStatus SystemUnit ProductPlatform
Shows the product platform.

Value space of the result returned:
<String>

Example:
  xStatus SystemUnit ProductPlatform
  *s SystemUnit ProductPlatform: "C90"
  ** end

xStatus SystemUnit Uptime
Shows the number of seconds since the last restart of the codec.

Value space of the result returned:
<Integer>

Example:
  xStatus SystemUnit Uptime
  *s SystemUnit Uptime: 597095
  ** end

xStatus SystemUnit Software Application
Shows which software application is running on the codec.

Value space of the result returned:
<String>

Example:
  xStatus SystemUnit Software Application
  *s SystemUnit Software Application: "Endpoint"
  ** end

xStatus SystemUnit Software Version
Shows the software version installed on the codec.

Value space of the result returned:
<String>

Example:
  xStatus SystemUnit Software Version
  *s SystemUnit Software Version: "TC5.1.0"
  ** end

xStatus SystemUnit Software Name
Shows the name of the software that is installed on the codec.

Value space of the result returned:
<String>

Example:
  xStatus SystemUnit Software Name
  *s SystemUnit Software Name: "s52010"
  ** end
xStatus SystemUnit Software ReleaseDate
Shows the release date of the software installed on the codec.

Value space of the result returned:
<String>

Example:
```
xStatus SystemUnit Software ReleaseDate
*s SystemUnit Software ReleaseDate: "2012-02-22"
** end
```

xStatus SystemUnit Software MaxVideoCalls
Shows the maximum number of simultaneous video calls that is supported.

Value space of the result returned:
<Integer>

Example:
```
xStatus SystemUnit Software MaxVideoCalls
*s SystemUnit Software MaxVideoCalls: 3
** end
```

xStatus SystemUnit Software MaxAudioCalls
Shows the maximum number of simultaneous audio calls that is supported.

Value space of the result returned:
<Integer>

Example:
```
xStatus SystemUnit Software MaxAudioCalls
*s SystemUnit Software MaxAudioCalls: 3
** end
```

xStatus SystemUnit Software ReleaseKey
Shows if there is a valid releasekey for the software version that is installed on the codec.

Value space of the result returned:
<String>

Example:
```
xStatus SystemUnit Software ReleaseKey
*s SystemUnit Software ReleaseKey: "true"
** end
```

xStatus SystemUnit Software OptionKeys NaturalPresenter
Shows if the system has the option key installed that supports the NaturalPresenter functionality.

Value space of the result returned:
<String>

Example:
```
xStatus SystemUnit Software OptionKeys NaturalPresenter
*s SystemUnit Software OptionKeys NaturalPresenter: "true"
** end
```

xStatus SystemUnit Software OptionKeys MultiSite
Shows if the system has the option key installed that supports the MultiSite functionality.

Value space of the result returned:
<String>

Example:
```
xStatus SystemUnit Software OptionKeys MultiSite
*s SystemUnit Software OptionKeys MultiSite: "true"
** end
```

xStatus SystemUnit Software OptionKeys PremiumResolution
Shows if the system has the option key installed that supports the PremiumResolution functionality.

Value space of the result returned:
<String>

Example:
```
xStatus SystemUnit Software OptionKeys PremiumResolution
*s SystemUnit Software OptionKeys PremiumResolution: "true"
** end
```

xStatus SystemUnit Software OptionKeys HighDefinition
Shows if the system has the option key installed that supports the HighDefinition functionality.

Value space of the result returned:
<String>

Example:
```
xStatus SystemUnit Software OptionKeys HighDefinition
*s SystemUnit Software OptionKeys HighDefinition: "true"
** end
```
xStatus SystemUnit Software OptionKeys DualDisplay
Shows if the system has the option key installed that supports the DualDisplay functionality.

Value space of the result returned:
<String>

Example:
xStatus SystemUnit Software OptionKeys DualDisplay
's SystemUnit Software OptionKeys DualDisplay: "true"
** end

xStatus SystemUnit Hardware Module SerialNumber
Shows the serial number of the hardware module in the codec.

Value space of the result returned:
<String>

Example:
xStatus SystemUnit Hardware Module SerialNumber
's SystemUnit Hardware Module SerialNumber: "F9AA99A00090"
** end

xStatus SystemUnit Hardware Module Identifier
Shows the revision of the hardware module in the codec.

Value space of the result returned:
<String>

Example:
xStatus SystemUnit Hardware Module Identifier
's SystemUnit Hardware Module Identifier: "1"
** end

xStatus SystemUnit Hardware MainBoard SerialNumber
Shows the serial number of the main board in the codec.

Value space of the result returned:
<String>

Example:
xStatus SystemUnit Hardware MainBoard SerialNumber
's SystemUnit Hardware MainBoard SerialNumber: "PH09999989"
** end

xStatus SystemUnit Hardware MainBoard Identifier
Shows the revision of the main board in the codec.

Value space of the result returned:
<String>

Example:
xStatus SystemUnit Hardware MainBoard Identifier
's SystemUnit Hardware MainBoard Identifier: "101400-5 [06]"
** end

xStatus SystemUnit Hardware MonitoringSoftware
The feedback shows the monitoring software id.

Value space of the result returned:
<String>

Example:
xStatus SystemUnit Hardware MonitoringSoftware
's SystemUnit Hardware MonitoringSoftware: "39"
** end

xStatus SystemUnit Hardware Monitoring Fan [n] Status
The feedback shows the speed (rpm) for the specified fan.

Value space of the result returned:
<String>

Example:
xStatus SystemUnit Hardware Monitoring Fan 1 Status
's SystemUnit Hardware Monitoring Fan 1 Status: "locked on 1096 rpm"
** end
xStatus SystemUnit Hardware Temperature
The feedback shows the current maximum temperature (degree Celsius) measured in the codec/system.

Value space of the result returned:
<String>

Example:
  xStatus SystemUnit Hardware Temperature
  *s SystemUnit Hardware Temperature: "64.0"
  ** end

xStatus SystemUnit Hardware TemperatureThreshold
Returns information on the maximum temperature for the codec. If this temperature is exceeded the system automatically shuts down.

Value space of the result returned:
<String>

Example:
  xStatus SystemUnit Hardware TemperatureThreshold
  *s SystemUnit Hardware TemperatureThreshold: "85"
  ** end

xStatus SystemUnit State System
Shows what state the system is in.
InCall: The system is in a call.
Initialized: The system is ready for use.
Initializing: The system is initializing.
Multisite: The system is in a Multisite conference.
Sleeping: The system is in sleep mode.

Value space of the result returned:
<InCall/Initialized/Initializing/Multisite/Sleeping>

Example:
  xStatus SystemUnit State System
  *s SystemUnit State System: Initialized
  ** end

xStatus SystemUnit State MaxNumberOfCalls
Shows the the maximum number of simultaneous calls.

Value space of the result returned:
<0..5>

Example:
  xStatus SystemUnit State MaxNumberOfCalls
  *s SystemUnit State MaxNumberOfCalls: 3
  ** end

xStatus SystemUnit State MaxNumberOfActiveCalls
Shows the the maximum number of simultaneous active calls. Calls that are set on hold/transfer are not counted as active.

Value space of the result returned:
<0..5>

Example:
  xStatus SystemUnit State MaxNumberOfActiveCalls
  *s SystemUnit State MaxNumberOfActiveCalls: 3
  ** end

xStatus SystemUnit State NumberOfActiveCalls
Shows the number of active calls.

Value space of the result returned:
<0..5>

Example:
  xStatus SystemUnit State NumberOfActiveCalls
  *s SystemUnit State NumberOfActiveCalls: 0
  ** end

xStatus SystemUnit State NumberOfSuspendedCalls
Shows the number of suspended calls.

Value space of the result returned:
<0..5>

Example:
  xStatus SystemUnit State NumberOfSuspendedCalls
  *s SystemUnit State NumberOfSuspendedCalls: 0
  ** end
xStatus SystemUnit State NumberOfInProgressCalls

Shows the number of calls in progress.

Value space of the result returned:

<0..5>

Example:

*xStatus SystemUnit State NumberOfInProgressCalls
* s SystemUnit State NumberOfInProgressCalls: 0
** end

xStatus SystemUnit State Subsystem Application

Shows the status of the sub system application.

Initialized: The sub-system application is initialized.
Initializing: The sub-system application is initializing.

Value space of the result returned:

<Initialized/Initializing>

Example:

*xStatus SystemUnit State Subsystem Application
* s SystemUnit State Subsystem Application: Initialized
** end

xStatus SystemUnit ContactInfo

Returns the system’s active contact information. This is the address which is used to reach this system.

Value space of the result returned:

<String>

Example:

*xStatus SystemUnit ContactInfo
* s SystemUnit ContactInfo: "firstname.lastname@company.com"
** end

xStatus SystemUnit ContactName

Returns the system’s active contact name. The result depends on which protocol, if any, the system is registered on. Unlike Contact Info, Contact Name is not configurable and is automatically set by the system.

Value space of the result returned:

<String>

Example:

*xStatus SystemUnit ContactName
Not registered to a protocol
Example 2: Registered on SIP
* s SystemUnit ContactName: "1234@192.0.2.0"
** end

xStatus SystemUnit Notifications Notification [n] Type

Lists the system notification types. Notifications are issued e.g. when a system is rebooted because of a software upgrade, or when a factory reset is performed.

FactoryResetOK: This value is returned after a successful factory reset.
FactoryResetFailed: This value is returned after a failed factory reset attempt.
SoftwareUpgradeOK: This value is returned after a successful software upgrade.
SoftwareUpgradeFailed: This value is returned after a failed software upgrade attempt.
RebootRequired: This value is returned when a reboot is required.
Other: This value is returned for any other notifications.

All the notifications can be removed from the list by issuing the xCommand SystemUnit Notifications RemoveAll command.

Value space of the result returned:

<FactoryResetOK, FactoryResetFailed, SoftwareUpgradeOK, SoftwareUpgradeFailed, RebootRequired, Other>

Example:

*xStatus SystemUnit Notifications Notification 1 Type
* s SystemUnit Notifications Notification 1 Type: SoftwareUpgradeOK
** end
**xStatus SystemUnit Notifications Notification [n] Text**

Lists text related to important system notifications. Notifications are issued e.g. when a system was rebooted because of a software upgrade, or when a factory reset has been performed.

All the notifications can be removed from the list by issuing the `xCommand SystemUnit Notifications RemoveAll` command.

**Value space of the result returned:**

<String>

**Example:**

```
xStatus SystemUnit Notifications Notification 1 Text
  *s SystemUnit Notifications Notification 1 Text: "OK"
** end
```

**xStatus SystemUnit Diagnostics LastRun**

Shows when the SystemUnit diagnostics was last run on the codec.

**Value space of the result returned:**

<String>

**Example:**

```
xStatus SystemUnit Diagnostics LastRun
  *s SystemUnit Diagnostics LastRun: "2012-08-17, 16:23:27"
** end
```

**xStatus SystemUnit Diagnostics Message Type**

Returns information on the results of the latest diagnostics on the system.

**Value space of the result returned:**

<string>

**Example:**

```
xStatus SystemUnit Diagnostics Message Type
  *s SystemUnit Diagnostics Message 1 Type: InvalidAdminPassword
** end
```

**xStatus SystemUnit Diagnostics Message Level**

Returns information on the level of the diagnostics message.

Error: There is an error in the system. The system can still be used, but there can be some restrictions.

Warning: A problem is detected and a more specific report follows indicating the exact problem.

Critical: The warning level is critical. The system cannot be used.

**Value space of the result returned:**

>Error/Warning/Critical>

**Example:**

```
xStatus SystemUnit Diagnostics Message Level
  *r Status (status=Error):
    Reason: No match on address expression
    XPath: Status/SystemUnit/Diagnostics/Message/Level
** end
```

**xStatus SystemUnit Diagnostics Message Description**

A description of the current diagnostics alerts.

**Value space of the result returned:**

<String>

**Example:**

```
xStatus SystemUnit Diagnostics Message Description
  *s SystemUnit DiagnosticsResult Message 1 Description: "IP configuration incomplete"
** end
```

**xStatus SystemUnit Diagnostics Message References**

Additional information on the diagnostics alert, if available.

**Value space of the result returned:**

<String>

**Example:**

```
xStatus SystemUnit Diagnostics Message References
  *s SystemUnit DiagnosticsResult Message 1 References: ""
** end
```
xStatus SystemUnit Diagnostics ExtendedLogging Mode
Indicates whether extended logging of diagnostics is turned on or off.

Value space of the result returned:
<On/Off>

Example:
xStatus SystemUnit Diagnostics ExtendedLogging Mode
*s SystemUnit Diagnostics ExtendedLogging Mode: Off
** end

Time status

xStatus Time Zone Olson
Shows the current time zone in Olson format.

Value space of the result returned:
<String>

Example:
xStatus Time Zone Olson
*s Time Zone Olson: Europe/Berlin
** end
Video status

xStatus Video Input
Shows the top level overview of the video input status.

xStatus Video Monitors
Returns the monitor layout mode.
Single: The same layout is shown on all monitors.
Dual: The layout is distributed on two monitors.
DualPresentationOnly: All participants in the call will be shown on the first monitor, while the presentation (if any) will be shown on the second monitor.
Quadruple: The layout is distributed on four monitors, so that each remote participant and the presentation will be shown on separate monitors.

Value space of the result returned:
<Single/Dual/DualPresentationOnly/Triple/Quadruple>

Example:
```
xStatus Video Monitors
  *s Video Monitors: Single
  ** end
```

xStatus Video Input LastConnectedSource
Shows the last connected video input source.

Value space of the result returned:
<1..1>

Example:
```
xStatus Video Input LastConnectedSource
  *s Video Input LastConnectedSource: 0
  ** end
```

xStatus Video Input MainVideoSource
Returns the local video input currently used as the main source. The main video source is set with the xConfiguration Video Input VideoMainSource command.

Value space of the result returned:
<Integer>

Example:
```
xStatus Video Input MainVideoSource
  *s Video Input MainVideoSource: 1
  ** end
```

xStatus Video Input Source [1..3] Resolution Height
Shows the resolution height (in pixels) for the video input source.

Value space of the result returned:
<0..3000>

Example:
```
xStatus Video Input Source 1 Resolution Height
  *s Video Input Source 1 Resolution Height: 1080
  ** end
```

xStatus Video Input Source [1..3] Resolution Width
Shows the resolution width (in pixels) for the video input source.

Value space of the result returned:
<0..4000>

Example:
```
xStatus Video Input Source 1 Resolution Width
  *s Video Input Source 1 Resolution Width: 1920
  ** end
```

xStatus Video Input Source [1..3] Resolution RefreshRate
Shows the resolution refresh rate (Hz) for the video input source.

Value space of the result returned:
<0..300>

Example:
```
xStatus Video Input Source 1 Resolution RefreshRate
  *s Video Input Source 1 Resolution RefreshRate: 50
  ** end
```
xStatus Video Input Source [1..3] Resolution FormatType
Shows the resolution format type for the video input source.

Value space of the result returned:
<Unknown/AnalogCVTBlanking/AnalogCVTReducedBlanking/AnalogGTFDefault/
AnalogGTFSecondary/AnalogDiscreteTiming/AnalogDMTBlanking/AnalogCEABlanking/Digital>

Example:
xStatus Video Input Source 1 Resolution FormatType
*s Video Input Source 1 Resolution FormatType: Digital
** end

xStatus Video Input Source [1..3] Resolution FormatStatus
Shows the resolution format status for the video input source.

Value space of the result returned:
<Ok/AnalogOutOfRange/AnalogNotFound/Interlaced/Error/Unknown>

Example:
xStatus Video Input Source 1 Resolution FormatStatus
*s Video Input Source 1 Resolution FormatStatus: Ok
** end

xStatus Video Input Source [1..3] MediaChannelId
For internal use only.

Value space of the result returned:
<Integer>

Example:
xStatus Video Input Source MediaChannelId
*s Video Input Source 1 MediaChannelId: 2
*s Video Input Source 2 MediaChannelId: 3
** end

xStatus Video Input HDMI [1] Connected
Shows if there is something connected to the HDMI connector. Not all connections can be detected.

Value space of the result returned:
<True/False/Unknown>

Example:
xStatus Video Input HDMI 1 Connected
*s Video Input HDMI 1 Connected: True
** end

xStatus Video Input HDMI [1] SignalState
Shows the signal state for the HDMI input.
Unknown: The signal format is unknown.
OK: A signal is detected and the signal format is supported.
Unsupported: A signal is detected, but the signal format is not supported.

Value space of the result returned:
<Unknown/OK/Unsupported>

Example:
xStatus Video Input HDMI 1 SignalState
*s Video Input HDMI 1 SignalState: OK
** end

xStatus Video Input DVI [2] Connected
Shows if there is something connected to the DVI connector. Not all connections can be detected.

Value space of the result returned:
<True/False/Unknown>

Example:
xStatus Video Input DVI 2 Connected
*s Video Input DVI 2 Connected: False
** end
**xStatus Video Input DVI [2] SignalState**

Shows the signal state for the DVI-I input.

- **Unknown**: The signal format is unknown.
- **OK**: A signal is detected and the signal format is supported.
- **Unsupported**: A signal is detected, but the signal format is not supported.

**Value space of the result returned:**

<Unknown/OK/Unsupported>

**Example:**

```
xStatus Video Input DVI 2 SignalState
*s Video Input DVI 2 SignalState: OK
** end
```

**xStatus Video Input USB 3 Connected**

Shows if there is something connected to the USB connector. Not all connections can be detected.

**Value space of the result returned:**

<True/False/Unknown>

**Example:**

```
xStatus Video Input USB 3 Connected
*s Video Input USB 3 Connected: False
** end
```

**xStatus Video Input USB 3 SignalState**

Shows the signal state for the USB input.

- **Unknown**: The signal format is unknown.
- **OK**: A signal is detected and the signal format is supported.
- **Unsupported**: A signal is detected, but the signal format is not supported.

**Value space of the result returned:**

<Unknown/OK/Unsupported>

**Example:**

```
xStatus Video Input USB 3 SignalState
*s Video Input USB 3 SignalState: Unknown
** end
```

**xStatus Video Output**

Shows the top level overview of the video output status.

**xStatus Video Output HDMI [n] MonitorRole**

Describes which video stream is shown on the monitor connected to the video output HDMI connector.

- **First/Second/Third/Fourth**: The role of the monitor in a multi-monitor setup. In a single-monitor setup, there is no difference between First, Second, Third and Fourth.
- **PresentationOnly**: Shows presentation video stream if active.
- **Recorder**: Shows all participants, including the local main video. If active, shows also the presentation.
- **InternalSetup**: Determined by the system, when xConfiguration Video Output HDMI [n] MonitorRole is set to Auto.

**Value space of the result returned:**

<First/Second/Third/Fourth/PresentationOnly/Recorder/InternalSetup>

**Example:**

```
xStatus Video Output HDMI 1 MonitorRole
*s Video Output HDMI 1 MonitorRole: First
** end
```

**xStatus Video Output HDMI [1, 2] Resolution Height**

Shows the resolution height (in pixels) for the video output HDMI.

**Value space of the result returned:**

<120..3000>

**Example:**

```
xStatus Video Output HDMI 1 Resolution Height
*s Video Output HDMI 1 Resolution Height: 720
** end
```

**xStatus Video Output HDMI [1, 2] Resolution Width**

Shows the resolution width (in pixels) for the video output HDMI.

**Value space of the result returned:**

<176..4000>

**Example:**

```
xStatus Video Output HDMI 1 Resolution Width
*s Video Output HDMI 1 Resolution Width: 1280
** end
```
xStatus Video Output HDMI [1, 2] Resolution RefreshRate
Shows the resolution refresh rate (Hz) for the video output HDMI.

Value space of the result returned:

<1..300>

Example:
```
xStatus Video Output HDMI 1 Resolution RefreshRate
*s Video Output HDMI 1 Resolution RefreshRate: 60
** end
```

xStatus Video Output HDMI [1, 2] Connected
Indicates whether a display is connected to the HDMI video output or not. NOTE: When a display enters standby mode, the endpoint may not be able to detect it. The connector status will then return False/Unknown even if the display is physically connected.

True - A display is connected to the video output connector.
False - No display is connected to the video output.

Value space of the result returned:

<True/False>

Example:
```
xStatus Video Output HDMI Connected
*s Video Output HDMI 1 Connected: False
** end
```

xStatus Video Layout
Shows the top level overview of the video layout status.

xStatus Video Layout Mode
Indicates type of layout currently used by the codec, custom or default.

Value space of the result returned:

<Default/Custom>

Example:
```
xStatus Video Layout Mode
*s Video Layout Mode: Default
** end
```

xStatus Video Layout PresentationView
Returns information about the presentation view mode.

Value space of the result returned:

<Default/Maximized/Minimized>

Example:
```
xStatus Video Layout PresentationView
*s Video Layout PresentationView: "Default"
** end
```

xStatus Video Layout Site [n] Output [1..2] FamilyName
Shows the name of the video layout family.

Value space of the result returned:

<String>

Example:
```
xStatus Video Layout Site 1 Output 1 FamilyName
*s Video Layout Site 1 Output 1 FamilyName: "fullscreen"
** end
```

xStatus Video Layout Site [n] Output [1..2] FullFamilyName
Shows the name, included information about self-view on/off, for the video layout family.

Value space of the result returned:

<String>

Example:
```
xStatus Video Layout Site 1 Output 1 FullFamilyName
*s Video Layout Site 1 Output 1 FullFamilyName: "fullscreen-local-single-camctrl"
** end
```
xStatus Video Layout Site [n] Output [1..2] GraphicName
Shows the name of the graphic layout. The name identifies the layout used right now at the specified output.

NOTE: Note that while the FamilyName is constant as long as the configurations on the system does not change, the GraphicName varies depending on system state (the number of participants for instance).

Value space of the result returned:
<String>

Example:
  xStatus Video Layout Site 1 Output 1 GraphicName
  *s Video Layout Site 1 Output 1 GraphicName: "full-pip"
  ** end

Shows the horizontal position of the upper left corner of the frame.

Value space of the result returned:
<0..10000>

Example:
  xStatus Video Layout Site 1 Output 1 Frame 1 PositionX
  *s Video Layout Site 1 Output 1 Frame 1 PositionX: 0
  ** end

xStatus Video Layout Site [n] Output [1..2] Frame [1..6] PositionY
Shows the vertical position of the upper left corner of the frame.

Value space of the result returned:
<0..10000>

Example:
  xStatus Video Layout Site 1 Output 1 Frame 1 PositionY
  *s Video Layout Site 1 Output 1 Frame 1 PositionY: 0
  ** end

Shows the width of the frame.

Value space of the result returned:
<0..10000>

Example:
  xStatus Video Layout Site 1 Output 1 Frame 1 Width
  *s Video Layout Site 1 Output 1 Frame 1 Width: 10000
  ** end

xStatus Video Layout Site [n] Output [1..2] Frame [1..6] Height
Shows the height of the frame.

Value space of the result returned:
<0..10000>

Example:
  xStatus Video Layout Site 1 Output 1 Frame 1 Height
  *s Video Layout Site 1 Output 1 Frame 1 Height: 10000
  ** end

xStatus Video Layout Site [n] Output [1..2] Frame [1..6] Layer
Shows the layer of the frame.

Value space of the result returned:
<1..6>

Example:
  xStatus Video Layout Site 1 Output 1 Frame 1 Layer
  *s Video Layout Site 1 Output 1 Frame 1 Layer: 1
  ** end
xStatus Video Layout Site [n] Output [1..2] Frame [1..6] MediaChannelId
For internal use only.

Value space of the result returned:
<Integer>

Example:
```
xStatus Video Layout Site Output Frame MediaChannelId
*s Video Layout Site 1 Output 1 Frame 1 MediaChannelId: 157
*s Video Layout Site 1 Output 2 Frame 1 MediaChannelId: 157
*s Video Layout Site 1 Output 3 Frame 1 MediaChannelId: 157
*s Video Layout Site 1 Output 4 Frame 1 MediaChannelId: 157
*s Video Layout Site 1 Output 5 Frame 1 MediaChannelId: 157
** end
```

xStatus Video Layout Site [n] Output [1..2] Frame [1..6] VideoSourceType
Describes the video source type in the frame.

Value space of the result returned:
<String>

Example:
```
xStatus Video Layout Site 1 Output 1 Frame VideoSourceType
*s Video Layout Site 1 Output 1 Frame 1 VideoSourceType: "graphic"
** end
```

xStatus Video Layout Site [n] Output [1..2] Frame [1..6] VideoSourceId
Shows the video source Id which is used when adding or updating frames. See the xCommand Video Layout Frame Add and xCommand Video Layout Frame Update.

Value space of the result returned:
<Integer>

Example:
```
xStatus Video Layout Site 1 Output 1 Frame VideoSourceId
*s Video Layout Site 1 Output 1 Frame 1 VideoSourceId: 0
** end
```

xStatus Video Layout Site [n] Output [1..2] Frame [1..6] InputNumber
Shows the layout input number.

Example:
```
xStatus Video Layout Site 1 Output 1 Frame 1 InputNumber
*s Video Layout Site 1 Output 1 Frame 1 InputNumber: 0
** end
```

Shows the filename of the layout frame.

Value space of the result returned:
<String>

Example:
```
xStatus Video Layout Site 1 Output 1 Frame Filename
*s Video Layout Site 1 Output 1 Frame 1 Filename: "/user/posters/wallpaper.png"
** end
```
**xStatus Video Layout Site [n] Output [n] Frame [n] VideoSourceContent**

Shows the video source content type of each layout frame.

- noSource: There is no source.
- black: The frame is black.
- main: The frame displays the main image from a local or a remote user.
- self-view: The frame displays the self-view image.
- selfviewPip: The frame displays the self-view image in PiP format.
- speaker: The frame displays the image of the speaker.
- speakerPip: The frame displays the image of the speaker in PiP format.
- presentation: The frame displays the image of the presentation.
- presentationPip: The frame displays the image of the presentation in PiP format.
- presentationPreview: The frame displays the preview image of the presentation.
- localInput: The frame displays the image of the local input source.
- wallpaper: The frame displays the wallpaper.
- gui: The frame displays the user interface.
- internal: For internal use.

**Value space of the result returned:**

Value space of the result returned:

<noSource/black/main/selfview/selfviewPip/speaker/speakerPip/presentation/presentationPip/presentationPreview/localInput/wallpaper/gui/internal>

**Example:**

```javascript
*x Video Layout Site 1 Output 1 Frame 1 VideoSourceContent: wallpaper
*x Video Layout Site 1 Output 2 Frame 1 VideoSourceContent: wallpaper
*x Video Layout Site 1 Output 3 Frame 1 VideoSourceContent: wallpaper
*x Video Layout Site 1 Output 3 Frame 2 VideoSourceContent: gui
*x Video Layout Site 1 Output 4 Frame 1 VideoSourceContent: wallpaper
*x Video Layout Site 1 Output 5 Frame 1 VideoSourceContent: wallpaper
** end
```

**xStatus Video Layout Site [n] Output [n] FrameContainer [n] PositionX**

For internal use only.

**Value space of the result returned:**

<Integer>

**xStatus Video Layout Site [n] Output [n] FrameContainer [n] PositionY**

For internal use only.

**Value space of the result returned:**

<Integer>

**xStatus Video Layout Site [n] Output [n] FrameContainer [n] Width**

For internal use only.

**Value space of the result returned:**

<Integer>

**xStatus Video Layout Site [n] Output [n] FrameContainer [n] Height**

For internal use only.

**Value space of the result returned:**

<Integer>

**xStatus Video Layout Site [n] Output [n] FrameContainer [n] Content**

For internal use only.

**Value space of the result returned:**

<Integer>

**xStatus Video Layout Site [n] Output [n] FrameContainerId**

For internal use only.

**Value space of the result returned:**

<Integer>

**xStatus Video Layout Prediction Site [n] FrameContainer OutputRole [n] PositionX**

For internal use only.

**Value space of the result returned:**

<Integer>

**xStatus Video Layout Prediction Site [n] FrameContainer OutputRole [n] PositionY**

For internal use only.

**Value space of the result returned:**

<Integer>
xStatus Video Layout Prediction Site [n] FrameContainer OutputRole [n] Width
For internal use only.
Value space of the result returned:
<Integer>

xStatus Video Layout Prediction Site [n] FrameContainer OutputRole [n] Height
For internal use only.
Value space of the result returned:
<Integer>

xStatus Video Layout Prediction Site [n] Output [1..2] Frame [1..6] MediaChannelId
For internal use only.
Value space of the result returned:
<Integer>
Example:
  *s Video Layout Prediction Site 1 Output 1 Frame 1 MediaChannelId: 157
  *s Video Layout Prediction Site 1 Output 2 Frame 1 MediaChannelId: 157
  *s Video Layout Prediction Site 1 Output 3 Frame 1 MediaChannelId: 157
  *s Video Layout Prediction Site 1 Output 4 Frame 1 MediaChannelId: 157
  *s Video Layout Prediction Site 1 Output 5 Frame 1 MediaChannelId: 157
  ** end

xStatus Video Selfview Mode
Shows whether selfview mode is set on or not.
Value space of the result returned:
<On/Off>
Example:
  *s Video Selfview Mode: Off
  ** end

xStatus Video Selfview FullscreenMode
Shows whether selfview is set on full screen mode or not.
Value space of the result returned:
<On/Off>
Example:
  xStatus Video Selfview FullscreenMode
  *s Video Selfview FullscreenMode: Off
  ** end

xStatus Video Selfview PIPPosition
Shows the position of the selfview image on the screen.
Value space of the result returned:
<UpperLeft/UpperCenter/UpperRight/CenterLeft/CenterRight/LowerLeft/LowerRight>
Example:
  xStatus Video Selfview PIPPosition
  *s Video Selfview PIPPosition: LowerRight
  ** end

xStatus Video Selfview OnMonitorRole
Identifies which monitor(s) contains the selfview, if present.
Value space of the result returned:
<First/Second/Third/Fourth>
Example:
  xStatus Video Selfview OnMonitorRole
  *s Video Selfview OnMonitorRole: First
  ** end

xStatus Video PIP ActiveSpeaker Position
Shows the position of the active speaker’s image on the screen.
Value space of the result returned:
<UpperLeft/UpperCenter/UpperRight/CenterLeft/CenterRight/LowerLeft/LowerRight>
Example:
  xStatus Video PIP ActiveSpeaker Position
  *s Video PIP ActiveSpeaker Position: UpperCenter
  ** end
xStatus Video PIP Presentation Position

Shows the position of the presentation image on the screen.

Value space of the result returned:

<UpperLeft/UpperCenter/UpperRight/CenterLeft/CenterRight/LowerLeft/LowerRight>

Example:
```
xStatus Video PIP Presentation Position
*s Video PIP Presentation Position: CenterLeft
** end
```

xStatus Video OSD Output

Indicates which monitor is used for on-screen display output.

Value space of the result returned:

<Integer>

Example:
```
xStatus Video OSD Output
*s Video OSD Output: 3
** end
```

xStatus Video OSD Mode

Indicates whether on-screen display is in indicator or full mode.

Indicators: The on-screen display is in passive mode when a Touch controller is paired to the system.

Full: Full on-screen display menu is active and can be controlled with a remote control.

Value space of the result returned:

<Indicators/Full>

Example:
```
xStatus Video OSD Mode
*s Video OSD Mode: Full
** end
```

Experimental status

The Experimental status is for testing only and should not be used unless agreed with Cisco. These settings are not documented and WILL change in later releases.
Chapter 6

Appendices
Startup script

You can add a startup script on the codec to execute certain commands from the API during boot up.

Adding a startup script

The startup script can be used to execute certain commands from the API during boot up. To enable this feature one must log in to the codec as root and follow the below points.

Login to the codec

1. Connect to the codec through the network, using a command line interface (SSH, Telnet or SCP) and login as root.
2. Make a user directory using the following command:
   
   "mkdir /user/scripts.d"
3. Put an executable file (permission must be changed to executable) in this directory.

Example of the text in such a file:

```
#!/usr/bin/env tsh

xCommand Audio LocalInput Update InputId: 1
MixerMode: Fixed
```

The startup script file

- The file must start with the following sequence:
  
  `#!/usr/bin/env tsh`
- The file can contain any xCommand or xConfiguration command
- The system executes the commands and configurations in sequence.
- The file can have any name as long as it is placed in this directory.
- For multiple commands you must use Unix end of line (LF). Windows end of line does not work.
Cisco TelePresence Remote Control

Microphone: Press the microphone key to toggle the microphones on/off.

Volume: Press plus (+) or minus (−) on the volume key to adjust the volume.

Mute the ringtone: Press minus (−) on the volume key to mute the ringtone on an incoming call.

OK/Select: Press the check key to confirm your choice or selection.

Phone book: Press the phone book key to display the local Phone book.

Home: Press the home key to key to show the menu on screen.

Presentation: Press the presentation key to show/hide a presentation.

Zoom: Press the + or − on the zoom key to zoom the camera in and out.

Arrows:
- Up/Down: Use the ▲ and ▼ arrow keys to navigate in the menu.
- Arrow Right: Press the → arrow key to expand the selected menu item or to move to the right in a text field.
- Arrow Left: Press the ← arrow key to go one step back in the menu or to move to the left in a text field.

Call: Using the call key:
- INITIATE A CALL: Select a name from the Phone book or enter the name, number or URI and press the Call key to initiate the call.
- SHORTCUT TO RECENT CALLS: Use the Call key as a shortcut to Recent Calls when the Call menu is not visible.

Clear: Press the clear key to remove characters in a text field.

Function keys: Represents shortcuts and advanced functions. Each key reflects a soft key on screen.

Waking up the system
Grab the remote control and make sure your hand touches the rubber line sensors going along both sides of the remote control.

or: Press any key on the remote control.

IR transmitter range (DIP switch setting)
The IR transmitter has a short and long range. Open the battery cover and remove the batteries to set the DIP switch.
- Short range (1 m): Move the DIP switch down.
- Longer range: Move the DIP switch up.
Remote control key map

The Cisco TelePresence Remote Control 5 has the following button codes and IR signal parameters.

### Button codes - Remote control 5

</tr>
</tbody>
</table>
The SystemTools commands

Note: The systemtools commands are used for administrative control of the codec and is only available from a command line interface. Systemtools should not be used to program the codec.

Required parameters in angle brackets: <text>
Optional parameters in square brackets: [text]

To get an overview of the supported commands type "systemtools ?".

Example:

Example:

Example:
systemtools rootsettings on [password]
Command to control the root user availability.
Enable access to the system for the root user on all ports.
  password: The root user password.

systemtools rootsettings serial [password]
Command to control the root user availability.
Enable access to the system for the root user on the serial port.
  password: The root user password.

systemtools rootsettings off
Command to control the root user availability.
Disable access to the system for the root user on all ports.

systemtools rootsettings never
Command to control the root user availability.
  NOTE: The root user is permanently turned off.
To get back the root user the system must be reset to factory
defaults, ref. xCommand SystemUnitFactoryReset.

systemtools securitysettings jitc
Set up security requirements so they meet JITC.
Set password and PIN policies enforced on the codec.

systemtools securitysettings isjitc
Check if the current settings are JTIC compliant.

systemtools securitysettings default
Revert to default security settings.

systemtools securitysettings ask
Query for the separate configurations. When issuing this
command you can see each policy separately.
  • Press enter to keep the current value.
  • Enter a number and press enter to change the given policy.
  • The default value “0” indicates no restrictions.

Max failed login attempts [0]?
  • Number of failed logins until a user is set inactive.
Suspend-time after max failed login attempts (minutes) [0]?
  • Number of minutes the user is set inactive after maximum
  failed login attempts have been exceeded.

Max simultaneous sessions total [0]?
  • Maximum number of users that can be logged in simultaneous
to web and maximum number of users that can be logged in
simultaneous to ssh/Telnet.

Max simultaneous sessions per user [0]?
  • Maximum number of simultaneous sessions per user.

Number of passwords to remember [0]?
  • Number of previous passwords that the new password must
differ from.

Number of PINs to remember [0]?
  • Number of previous PINs that the new PIN must differ from.

Maximum time between password renewals (days) [0]?
  • If the user has not changed the password within the renewal
time the user will be set inactive.

Minimum number of characters in passwords [0]?
  • Minimum number of numerical characters in passwords.

Max consecutive equal digits in PINs [0]?
  • Maximum consecutive equal digits in PINs.

Minimum number of digits in PINs [0]?
  • Minimum number of digits in PINs.

Maximum number of digits in PINs [0]?
  • Maximum number of digits in PINs.

Max consecutive identical characters in passwords [0]?
  • Maximum consecutive identical characters in passwords.

Minimum number of characters in passwords [0]?
  • Minimum number of characters in passwords.

Minimum number of lower-case letters in passwords [0]?
  • Minimum number of lower-case letters in passwords.

Minimum number of upper-case letters in passwords [0]?
  • Minimum number of upper-case letters in passwords.

Minimum number of characters groups in passwords [0]?
  • Minimum number of character groups in passwords.

Minimum number of character changed from previous password [0]?
  • Minimum number of character changed from previous
  password.

systemtools securitystatus
Shows the security status for the codec.
# About disconnect cause types

The following parameters are logged when a call is disconnected. The disconnect cause types are used in disconnect events (xEvent) and also logged in xHistory CallLogs.

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
<th>Value Space</th>
</tr>
</thead>
<tbody>
<tr>
<td>CauseType</td>
<td>Describes why the call was disconnected.</td>
<td>{ OtherLocal, LocalDisconnect, UnknownRemoteSite, LocalBusy, LocalReject, InsufficientSecurity, OtherRemote, RemoteDisconnect, RemoteBusy, RemoteRejected, RemoteNoAnswer, CallForwarded, NetworkRejected }</td>
</tr>
<tr>
<td>CauseString</td>
<td>Describes the Cause Code.</td>
<td></td>
</tr>
<tr>
<td>CauseCode</td>
<td>The disconnect Cause Codes are defined in SIP and Q.850.</td>
<td></td>
</tr>
<tr>
<td>CauseOrigin</td>
<td>SIP, Q.850, internal.</td>
<td></td>
</tr>
</tbody>
</table>

## Example 1:

```
xHistory CallLogs Call 694
...
*h xHistory CallLogs Call 694 DisconnectCause: "Normal"
*h xHistory CallLogs Call 694 DisconnectCauseType: RemoteDisconnect
*h xHistory CallLogs Call 694 DisconnectCauseCode: 16
*h xHistory CallLogs Call 694 DisconnectCauseOrigin: Q850
...
** end
```
