Identifying the new Cisco D9854-I Advanced Program Receiver and D9824 Multi Decryption Receiver Hardware Releases

1  Overview
2  Identifying the D9854-I Receiver Hardware
3  Identifying the D9824 with FEC and IP Input
   If You Have Questions
1 Overview

This document describes how users can identify the hardware versions of the Cisco D9854-I Advanced Program Receiver and the D9824 Multi Decryption Receiver units. The new hardware versions contain new functionality from the 4.00 software version.

Audience

This document is intended for all users of the D9854-I Advanced Program Receiver and the D9824 Multi Decryption Receiver.

2 Identifying the D9854-I Receiver Hardware

The following is a list of ways to identify the new D9854-I unit:

- The front panel overlay has a new D9854-I label.
- The rear panel has new TS Input/Output connectors on the Ethernet port, as shown below.

- The D9854-I is identified in the web GUI banner, as shown below.
3  Identifying the D9824 with FEC and IP Input

The following is a list of ways to identify the new D9824 unit with FEC and IP Input:

- The rear panel TS Inputs/Outputs connector is labeled as TS instead of TS OUT on the Ethernet port, as shown below.

- The D9824 front panel About menu (Main: About: Features) indicates the installed features.
  a. In the Features list, press up and down to scroll through the list of options.
  b. Check that the MPOIP In and MPOIP FEC features are set to Yes in the Installed menu.

- In the D9824 web GUI, the Features/Licenses page displays the installed hardware options (System Settings > Identification > Features/Licenses), as shown below.

  - Check that the MPOIP In and MPOIP FEC features are set to Yes.
