Acronyms	53

Introduction

- Although specific gateway router models were used to validate its content, this application note also applies to all Cisco 1700/2600/3600/3700/2800/3800 series Cisco IOS voice gateways.
- This application note provides configuration guidelines for a toll-bypass network using Cisco IOS voice gateways to connect Nortel Communication Server 1000M, Release 4.0 PBXs. The PBXs are connected to the Cisco IOS voice gateways by E1 QSIG trunk circuits. The Cisco IOS voice gateways “extend” the E1 QSIG trunk circuits with VoIP, using the H.323 protocol.
- Two Nortel Communication Server 1000M, Release 4.0 PBXs were connected via E1 QSIG trunk to two Cisco IOS voice gateways. The voice gateways were connected via IP over Ethernet, and configured for VoIP using H.323. End-to-end calls were placed between the PBXs to exercise and test basic calls as well as QSIG supplementary services such as MWI, call hold, call transfer, call conference, and call forward.
- Using the Nortel PBX configurations and Cisco IOS voice gateway configurations in this application note, successful toll bypass integration was achieved. This includes basic call, call transfer, call conference, and call forward, with limitations on Caller ID features during transfer, forward, hold and conference scenarios. These limitations are detailed in the following sections and all were found to be inherent to the Nortel PBXs. Thus, H.323 toll bypass introduced no new restrictions to the available features or performance.

Network Topology

Figure 1. Network Topology or Test Setup

Hardware Requirements

- (2) Cisco IOS voice gateways with E1 VWICs (voice/WAN interface cards)
- (2) Nortel Communication Server 1000M PBXs
- (1) Nortel Call Pilot Voice Mail System
- (4) Nortel digital station telephones

Software Requirements

- Nortel CS1000M Release 4.0
- Cisco IOS voice gateways: Cisco IOS Release Version 12.4(1.8)T or later.

Features

- Basic Call (ENBLOC and Overlap)
- Call Transfer: Supervised Local Transfer
- Call Transfer: Supervised Network/External Transfer
- Call Conference: Local
- Call Conference: Network/External
- Call Forward: Local
- Call Forward: Network/External
- Call Hold
- MWI

Limitations

- CONNECTED NUMBER was supported in lieu of CALLED (ALERTING) NUMBER. This is inherent to the PBXs and also occurs with the PBXs connected directly via an E1 QSIG trunk.
- During call transfers, the original calling name and number were displayed on the final destination phone only after the transfer was complete. This is inherent to the PBXs and also occurs with the PBXs connected directly via an E1 QSIG trunk.
- For conference calls, connected name and number were not updated on the originating phone when a conferee dropped out. Either the conferencing phone's name/number are displayed, or the trunk number is displayed. This is inherent to the PBXs and also occurs with the PBXs connected directly via an E1 QSIG trunk.
- For conference calls, the calling name and number were generally not passed to the remaining conferee when the conferencing phone dropped out. The only exceptions were conference calls accomplished by an external call followed by a local conference from the original called party (e.g., phone A calls phone C, then phone C conferences in phone D). In the rest of the cases, either the conferencing phone's name / number is displayed, or the trunk number is displayed. This is inherent to the PBXs and also occurs with the PBXs connected directly via a E1 QSIG trunk.
- It is important to set EXTT parameter to "yes" under LD 15 in the PBX configuration to avoid dropped calls on certain conference scenarios when the initiating/conferencing party drops (e.g., Phone A calls Phone C, Phone A conferences in Phone D, and Phone A drops).
- For forwarded calls, the original calling name was not displayed on the final destination. Only the forwarding name was displayed. This is inherent to the PBXs and also occurs with the PBXs connected directly via an E1 QSIG trunk.
- For forwarded calls, the final destination's name and number are updated at the original side before it connects. This is inherent to the PBXs and also occurs with the PBXs connected directly via an E1 QSIG trunk.
- For a call hold on a basic call, when the originating phone places the destination phone on hold, the final destination (CONNECTED) number disappears when hold is invoked and does not reappear when it is released. This does not occur if the destination phone places the originating phone on hold. This is inherent to the PBXs and also occurs with the PBXs connected directly via an E1 QSIG trunk.

Configuration

Configuring the Nortel CS1000M: Switch 1 (ENBLOC)

Note: It is important to set EXTT parameter to “yes” under LD 15 to avoid dropped calls on certain conference scenarios when the initiating/conferencing party drops (e.g., Phone A calls Phone C, Phone A conferences in Phone D, and Phone A drops).

REQ

Configuring the Nortel CS1000M: Switch 2

Note: It is important to set EXTT parameter to "yes" under LD 15 to avoid dropped calls on certain conference scenarios when the initiating/conferencing party drops (e.g., Phone A calls Phone C, Phone A conferences in Phone D, and Phone A drops).

System image file is "flash:c3745-ipvoice-mz.124-1.8.T"

Cisco 3745 (R7000) processor (revision 2.0) with 110592K/20480K bytes of memory.

Processor board ID JMX0813L0Z3

R7000 CPU at 350MHz, Implementation 39, Rev 3.3, 256KB L2, 2048KB L3 Cache

2 FastEthernet interfaces

31 Serial interfaces

4 Channelized E1/PRI ports

2 Voice FXS interfaces

DRAM configuration is 64 bits wide with parity disabled.

151K bytes of NVRAM.

31168K bytes of ATA System CompactFlash (Read/Write)

Configuration register is 0x2102
