Introduction

- This is an Application Note for connectivity between a Siemens Hicom 300 E CS Release 6.6 PBX and Cisco Unified CallManager Express Release 4.0(3) using a Cisco 3745 voice gateway with QSIG protocol.

- The network topology diagram (Figure 1) shows the test setup for end-to-end interoperability with Cisco Unified CallManager Express Release 4.0(3) connected to the PBX via the 3745 T1 QSIG link. The 3745 IOS voice gateway was connected via H.323 to a Cisco 2811 IOS voice gateway. The two gateways were running Cisco Unified CallManager Express 4.0(3). Cisco Unified IP phones (models 7960, 7961G, and 7970) were connected to the 2 Cisco Unified CallManager Express gateways via SIP and SCCP, as per the figure. A NM-HDV and VWIC-1MFT-T1 were used for the T1 QSIG interface. Calls were made to test basic call, caller ID, conference, transfer, forward, and reroute features.

- This Application Note uses the 3745 voice gateway. However, the use of other Cisco voice gateways is also an option since Cisco Unified Call Manager Express QSIG implementation does not depend on the physical interface.

- The inclusion of Cisco SIP phones in this application note is for reference only. Cisco Unified Communications Manager Express 4.0(3) supports SIP end-points with limited number of features.
Network Topology

Figure 1. Test Network Topology.
Limitations

Basic Calls

- Overlap dialing is not supported in either direction.
- Connected Name is not supported on calls between PBX and Cisco Unified IP Phone running SIP.
- Alerting Name is not supported on calls between PBX and Cisco Unified IP Phone running SIP.
- Calling Line (Number) Identification Restriction (CLIR) is not supported by the Siemens PBX for outgoing calls. The PBX does honor CLIR on incoming calls, however.
- Calling Name Identification Restriction (CNIR) and Connected Number/Name Restriction are not supported.

Call Transfers

- The Siemens PBX will not perform a true blind transfer. It can perform a consultation transfer or early attended transfer.
- A blind local transfer originated from a call placed from a PBX station to a SCCP phone on the local Cisco Unified CallManager Express, and then transferred to a SIP phone on the same Cisco Unified CallManager Express (e.g., A calls C1, and C1 transfers to D2) does not complete. The call drops as soon as the number is dialed.
- A consultation or early-attended transfer originated from a call placed from a phone on the remote Cisco Unified CallManager Express to a SIP phone on the local Cisco Unified CallManager Express, and then transferred to a PBX phone (e.g., G1 calls C2, and C2 transfers to A) does not complete.
- For all consultation and early attended network/external transfers, and all consultation and early attended local transfers that involve a transfer from a SCCP phone to a SIP phone, the original calling name and number are not displayed on the final destination. The remaining local transfers and all blind transfers result in the original calling name and number information displaying properly.
- For many call transfers, the called (connected) name and number are not updated on the original phone after the transfer.

Call Forwards

- For "trombone" or "hairpin" calls from the Cisco Unified CallManager Express to PBX to Cisco Unified CallManager Express, the Siemens PBX will not allow a "trombone" or "hairpin" on call forward busy. It invokes a reroute.
- For "trombone" or "hairpin" calls from the PBX to the Cisco Unified CallManager Express to the PBX, call reroute does not occur. Even if Cisco Unified CallManager Express proposes reroute (SCCP phone only), the PBX ignores it.
- For many call forwads, the forwarding called name and number are not displayed on the final destination.
- For many call forwards, the called (connected) name and number are not updated on the original phone.
- Forwarded calls originated from a PBX extension to a remote Cisco Unified CallManager Express SCCP extension, and forwarded to a local Cisco Unified CallManager Express extension (e.g., A calls G1, and G1 forwards to C2), Cisco Unified CallManager Express performs a QSIG reroute, even though a QSIG reroute is not in order (i.e., there is no QSIG "hairpin" or "trombone").
- Forwarded calls originated from a PBX extension to a local Cisco Unified CallManager Express SCCP extension, and forwarded to another local Cisco Unified CallManager Express extension by call forward no reply (e.g., A calls C1, and C1 forwards to D1 or D2), Cisco Unified CallManager Express performs a reroute, and even though a reroute is not in order (i.e., there is no "hairpin" or "trombone").

MWI

- Cisco Unified Communications Manager Express 4.0(3) supports Cisco Unity integration with QSIG. However, in this instance, no testing was performed with Cisco Unified Communications Manager Express 4.0(3) as the message center PINX.
- There was no PBX voice mail system present at the time of testing. Therefore, no testing was performed with the PBX as the message center PINX.
System Components

Hardware Requirements

- Cisco 3745 IOS voice gateway
- NM-HDV
- VWIC-2MFT-T1
- Cisco 2811 IOS voice gateway
- (4) Cisco Unified IP phone 7960s
- (1) Cisco Unified IP phone 7961G
- (1) Cisco Unified IP phone 7970
- (1) Siemens 300 E CS PBX
- (2) Siemens Optiset E Advance Plus digital station phones
- (2) TMDN64P T1 trunk cards (for QSIG & PSTN links)

Software Requirements

- Cisco Unified CallManager Express Release 4.0(3)
- Cisco IOS Software, 3700 Software (C3745-IPVOICE-M), Version 12.4(11)T
- Cisco IOS Software, 2800 Software (C2800NM-IPVOICE-M), Version 12.4(11)T
- Siemens 300 E CS Release 6.6

G1, G2 – 7960 – SCCP

- Cisco7960 IP phone version 7.2(T0.23)
- Cisco 7960 IP phone app load P0030702T023
- Cisco 7960 IP phone boot load PC0303010200

C2, D2 – 7960 - SIP

- Cisco7960 DSP load ID PS03AT46
- Cisco 7960 IP phone app load P0S3-07-5-00
- Cisco 7960 IP phone boot load PC030301

C1 – 7961G – SCCP

- Cisco7961G IP phone load file: TERM61.DEFAULT
- Cisco 7961G IP phone app load ID: Jar41.2-9-1-45.sbn
- Cisco 7961G IP phone boot load ID: 7961G_64-020704128Amd64meg.bin

D1 – 7970 – SCCP

- Cisco7970 IP phone load file: SCCP70.8-0-3S
- Cisco 7970 IP phone app load ID: jar70scp.8-0-2.25.sbn
- Cisco 7970 IP phone boot load ID: 7970_64060118.bin
**Features**

**Features Supported**

- Basic Call, ENBLOC Dialing only
- CLIP-Calling Line (Number) Identification Presentation on Basic and Forwarded Calls
- CLIR-Calling Line (Number) Identification Restriction on Basic Calls (See Limitations section.)
- CNIP-Calling Name Identification Presentation on Basic and Forwarded Calls
- COLP-Connected Line (Number) Identification Presentation on Basic Calls (See Limitations section.)
- CONP-Connected Name Identification Presentation on Basic Calls (See Limitations section.)
- Alerting Name (See Limitations section.)
- Tandem PSTN call
- Consultation Transfer – Local (See Limitations Section)
- Consultation Transfer – Network/External (See Limitations Section)
- Early Attended Transfer – Local (See Limitations Section)
- Early Attended Transfer – Network/External (See Limitations Section)
- Blind Transfer – Local (See Limitations Section)
- Blind Transfer – Network/External (See Limitations Section)
- Call Forward Unconditional by Join – Local (See Limitations Section)
- Call Forward Unconditional by Join – Network/External (See Limitations Section)
- Call Forward Busy by Join – Local (See Limitations Section)
- Call Forward Busy by Join – Network/External (See Limitations Section)
- Call Forward No Reply by Join – Local (See Limitations Section)
- Call Forward No Reply by Join – Network/External (See Limitations Section)
- Call Forward Unconditional by Reroute – Network/External (See Limitations Section)
- Call Forward Busy by Reroute – Network/External (See Limitations Section)
- Call Forward No Reply by Reroute – Network/External (See Limitations Section)
Features Not Supported

- Overlap Dialing
- CNIR-Calling Name Identification Restriction
- COLR- Connected Line (Number) Identification Restriction
- CONR- Connected Name Identification Restriction
- Blind Transfers initiated from PBX
- CLIP-Calling Line (Number) Identification Presentation on Transferred Calls
- CNIP-Calling Name Identification Presentation on Transferred Calls
- COLP-Connected Line (Number) Identification Presentation on Transferred Calls
- CONP-Connected Name Identification Presentation on Transferred Calls
- COLP-Connected Line (Number) Identification Presentation on Forwarded Calls
- CONP-Connected Name Identification Presentation on Forwarded Calls
- Call Completion to Busy Subscriber (Call Back when Free)
- Call Completion on No Reply (Call Back Next Used)
- Path Replacement for Call Transfer by Join
- Path Replacement for Trombone Connection
- Path Replacement for Call Diversion by Forward Switch
### Configuration

#### Configuring the Siemens 300 E CS Release 6.6

Below is the dialplan configuration:

```plaintext
DIS-DPLN:DGTS,;

Configuring the Remote Cisco Unified CallManager Express (Cisco 2811)

REMOTE-2811#sho ver

Cisco IOS Software, 2800 Software (C2800NM-IPVOICE-M), Version 12.4(4)XC4, RELE)
Synched to technology version 12.4(5.13)T
Technical Support: http://www.cisco.com/techsupport
Copyright (c) 1986-2006 by Cisco Systems, Inc.
Compiled Mon 24-Jul-06 18:33 by ealyon

ROM: System Bootstrap, Version 12.4(1r) [hqluong 1r], RELEASE SOFTWARE (fc1)
ROM: Cisco IOS Software, 2800 Software (C2800NM-IPVOICE-M), Version 12.4(4)XC4,)

REMOTE-2811 uptime is 10 weeks, 22 hours, 30 minutes
System returned to ROM by power-on
System restarted at 16:23:28 UTC Thu Sep 7 2006
System image file is "flash:c2800nm-ipvoice-mz.124-4.XC4.bin"

Cisco 2811 (revision 53.51) with 251904K/10240K bytes of memory.
Processor board ID FHK0946F0MZ
2 FastEthernet interfaces
2 Voice FXS interfaces
DRAM configuration is 64 bits wide with parity enabled.
239K bytes of non-volatile configuration memory.
62592K bytes of ATA CompactFlash (Read/Write)

Configuration register is 0x2
