Preface ...............................................................................................................................................17

About This Guide .............................................................. 18
Obtaining Documentation and Submitting a Service Request ....................... 18
Documentation Feedback .................................................................. 18
Field Alerts and Field Notices ......................................................... 18
Document Conventions .................................................................. 19
Acronyms and Initialisms .................................................................. 19
Other Learning Resources .................................................................. 20
Online Help .................................................................................. 20
Document Set .................................................................................. 20

Chapter 1: Console Basics ................................................................................. 22

Important Administration Tasks ................................................................. 23
Key Terms and Concepts ........................................................................... 23
Sharing of Business Objects ................................................................. 29
  System Level . .............................................................................. 29
    Administration Console ............................................................. 29
    System Console .......................................................................... 29
  Partition Level . ............................................................................ 30
    Administration Console ............................................................. 30
    System Console .......................................................................... 30
    Tools Console ............................................................................ 30
  Department Level . ........................................................................ 30
    Administration Console ............................................................. 30
    KB Console ............................................................................... 31
    Reports Console ......................................................................... 31
    Supervision Console ................................................................... 31
    Tools Console ............................................................................ 31
    Agent Console ............................................................................ 31
Elements of the User Interface ................................................................. 32
Archive Service Settings ........................................................................................................ 67
  Archive Service Failover Delay (Minutes) ........................................................................ 67
Scheduler Service Settings ..................................................................................................... 67
  Scheduler Service Failover Delay (Minutes) ...................................................................... 67
Incoming Email Settings ......................................................................................................... 67
  Retriever Service Failover Delay ...................................................................................... 67
  Number of Emails to Retrieve .......................................................................................... 68
  Maximum Email Size for Retriever (MB) ........................................................................ 68
  Maximum Body Size for Retriever (KB) ........................................................................... 68
  Message Note for Large Body .......................................................................................... 69
  Invalid Chars List ............................................................................................................ 69
  Action for Large Email .................................................................................................... 69
  Parse Date in Email Header ............................................................................................. 70
  Socket Timeout for Retriever (Seconds) ......................................................................... 70
Spam Emails Settings ............................................................................................................ 70
  Action on Spam Emails .................................................................................................. 71
    Spam Mail Maximum File Size (MB) ............................................................................. 71
    Spam Mail Redirection From Address ......................................................................... 71
    Spam Mail Redirection To Address ............................................................................. 72
    Spam Mails Auto Bcc ..................................................................................................... 72
    Spam Mail Redirection SMTP Preference .................................................................... 72
    Spam Mails SMTP Server ............................................................................................ 73
    Spam Mails SMTP Protocol ......................................................................................... 73
    Spam Mails SMTP Port .................................................................................................. 73
    SMTP Flag ................................................................................................................... 73
    Spam Mails SMTP User Name ..................................................................................... 74
    Spam Mails SMTP Password ......................................................................................... 74
Exception Email Settings ....................................................................................................... 74
  Action On Exception Emails ............................................................................................. 74
    Exception Mail Maximum File Size (MB) ...................................................................... 75
    Exception Mail Redirection From Address .................................................................. 75
    Exception Mail Redirection To Address ....................................................................... 75
    Exception Mails Auto Bcc .............................................................................................. 76
    Exception Mail Redirection SMTP Preference .............................................................. 76
    Exception Mails SMTP Server ....................................................................................... 76
    Exception Mails SMTP Protocol ................................................................................... 77
    Exception Mails SMTP Port ............................................................................................ 77
    SMTP Flag ...................................................................................................................... 77
    Exception Mails SMTP User Name ................................................................................ 77
    Exception Mails SMTP Password .................................................................................. 78
Outgoing Email Settings ....................................................................................................... 78
Number Of New Emails to Dispatch .................................................. 78
Number Of Retry Emails to Dispatch .............................................. 78
Maximum Body Size for Dispatcher (KB) ........................................ 79
Maximum Email Size for Dispatcher (MB) ........................................ 79
Dispatcher Service Failover Delay ...................................................... 80
Mail Default SMTP Preference .......................................................... 80
To: Address for Notifications From Services ..................................... 80
From: Address for Notifications From Services ................................... 81
Socket Timeout for Dispatcher (Minutes) ............................................ 81
Notification Settings for the Retriever Service .................................... 81
  Notification Mails Auto Bcc ............................................................... 82
  Notification Mail Dispatching SMTP Preference .................................. 82
  Notification Mails SMTP Server ......................................................... 82
  Notification Mails SMTP Protocol ...................................................... 83
  Notification Mails SMTP Port ............................................................ 83
  SMTP Flag ....................................................................................... 83
  Notification Mails SMTP User Name ................................................... 83
  Notification Mails SMTP Password ................................................... 84
Notification Email Settings ............................................................... 84
  Default SMTP Server ....................................................................... 84
  Default SMTP Protocol .................................................................... 85
  Default SMTP Port .......................................................................... 85
  SMTP Flag ....................................................................................... 85
  Default SMTP User Name .................................................................. 85
  Default SMTP Password .................................................................... 86
Blocked Attachments Settings ............................................................ 86
  Email for Scan .................................................................................. 86
  Block All Attachments ..................................................................... 86
  Action on Blocked Attachments ......................................................... 87
Workflow Settings ............................................................................. 87
  Alarm Service Failover Delay (Minutes) ............................................. 87
  Alarm Service Delay ......................................................................... 88
  From Email Address for Alarm .......................................................... 88
  BP Rules Service Failover Delay (Minutes) ......................................... 88
  Include Original Message for Auto Acknowledgement and Auto Reply .. 89
  Auto Response Number .................................................................... 89
  Auto Response Time ......................................................................... 89
  Batch Expiry Duration ...................................................................... 90
  Batch Size ....................................................................................... 90
Chat - Customer Intermittent Interval (Seconds) .......................... 124
Chat - Customer Offline Interval ........................................... 124
Chat - Automatic Session Closure Interval (Seconds) ................. 125
Chat - Disable Typing Area and Page Push Area on Customer Exit 125
Chat - Restore Agent Console When a Message Arrives ............ 125
Chat - Enable Sound Alert .................................................... 126
Reason for Chat Transfer ..................................................... 126
Chat Customer Session Settings ............................................. 126
Chat - Customer Chat Message Maximum Length ...................... 126
Chat - Display Timestamp in Customer Chat Console ................ 127
Chat - MeadCo Download on Customer Console ....................... 127
Chat - Restore Customer Console When a Message Arrives .......... 127
Offers Settings ..................................................................... 128
Offer Expiration Period ....................................................... 128
Interval for Re-offering Ignored Offers (Seconds) ....................... 128
Interval for Re-offering Accepted Offers (Seconds) .................... 128
Interval for Checking Eligibility of an Offer That was not Presented (Seconds) . 129
Maximum Time on Webpage (Minutes) ..................................... 129
Limit Number of Offers Per Visit .......................................... 129
Maximum Number of Offers Per Visit ..................................... 130
Maximum Size Allowed for Offers Template Zip File (in Kilobytes) 130
Chat - Agent Availability Buffer Value ................................... 130
Chat - Agent Availability Check Mechanism ............................. 131
Cache Settings ..................................................................... 131
Minimum Idle Time for the Objects in Minutes ......................... 131

Chapter 4: Users ..................................................................... 132

About Users, Groups, Roles, and Actions ................................. 133
Users .................................................................................... 133
Types of Department Users ................................................... 135
User Groups .......................................................................... 136
User Roles ............................................................................. 137
Actions ................................................................................... 139
Permissions ........................................................................... 139
What are the Actions Assigned to the Default Roles? .................. 141
System Administrator .......................................................... 141
Partition Administrator ......................................................... 142
Administrator ................................................................. 143
Agent ................................................................. 145
Chapter 5: Data Masking

- About Data Masking ................................................................. 207
- About Patterns ................................................................. 207
- Creating Patterns ............................................................. 208
- Creating Patterns in XML File ............................................. 209
Exporting Masking Patterns ........................................... 210
Importing Masking Patterns ........................................... 211
Copying Patterns ......................................................... 211
Deleting Patterns ......................................................... 212
Validating Masking Patterns ........................................... 212
Validating Individual Patterns ........................................ 212
Validating Masking Patterns Applied to Channels ............. 213
Applying Patterns to Chat Channel .................................. 214
  At the Partition Level ................................................... 214
  What can the partition administrator do? ......................... 214
  At the Department Level ............................................... 216
  How much control do department administrators get? ....... 217
Applying Patterns to Email Channel ................................. 218
  At the Partition Level ................................................... 218
  What can the partition administrator do? ......................... 218
  At the Department Level ............................................... 220
  How much control do department administrators get? ....... 221

Chapter 6: Single Sign-On ................................................ 223

  About Single Sign-On (SSO) ........................................... 224
  Configuring Single Sign-On (SSO) ................................. 224
    Configuring Single Sign-On (SSO) for Siteminder Systems . 224
    Configuring Single Sign-On (SSO) for LDAP Systems ........ 226
    Configuring Single Sign-On (SSO) for SAML 1.1 Systems .... 227
    Configuring Single Sign-On (SSO) for SAML 2.0 Systems .... 228
  Post-Configuration ..................................................... 230
    Logging in with SSO .................................................. 230
      Logging in with Siteminder SSO ................................. 230
      Logging in with SAML SSO ....................................... 230
      Local Login Setting ............................................... 230
  Troubleshooting ....................................................... 231

Chapter 7: Rich Text Content Policies ................................. 232

  About Rich Text Content Policies .................................. 233
  Enabling and Disabling Rich Text Content Policies ............ 233
Exporting and Importing Rich Text Content Policies ................................. 234
Configuring the Rich Text Content Policy File ................................. 234
  Adding a Common Regular Expression ........................................ 235
  Allowing a New Tag ................................................................. 235
  Allowing a New Attribute for a Tag ......................................... 235
  Adding a Rule for an Attribute Value ...................................... 235
  Allowing a New CSS Property ............................................... 236
  Adding a Rule for a CSS Property Value .................................. 236
  Allowing Links in the Source Attribute of an iframe Tag ............... 237
  Using a Plain Text Policy ....................................................... 238
Restoring Rich Text Content Policies ............................................. 238

Chapter 8: Departments .................................................................................. 239
  About Departments ................................................................. 240
  Creating Departments ............................................................. 241
  Sharing Department Resources ................................................ 242
  Configuring Activity Transfer Between Departments ...................... 243
  Copying Departments ............................................................... 243

Chapter 9: Business Calendars ....................................................................... 246
  About Business Calendars ........................................................ 247
  Managing Shift Labels ............................................................... 248
    Creating Shift Labels ............................................................ 248
    Deleting Shift Labels ............................................................ 248
  Managing Day Labels ............................................................... 249
    Creating Day Labels ............................................................. 249
    Deleting Day Labels ............................................................. 250
  Managing Business Calendars ..................................................... 250
    Setting the Time Zone ........................................................... 250
    Creating Business Calendars ............................................... 251
    Deleting Business Calendars ............................................... 252
  Managing Daylight Saving Changes ........................................... 253
Who can Manage Archive Jobs? ................................................................. 270
Archive Criteria ..................................................................................... 270
Planning the Schedule of Archive Jobs ............................................... 271
About Job Runs .................................................................................. 271
About Purging ..................................................................................... 272
Managing Archive Jobs ................................................................. 272
Creating Archive Jobs ....................................................................... 272
Deleting Archive Jobs ....................................................................... 274
Managing Job Runs ......................................................................... 275
Viewing Job Runs .............................................................................. 275
Stopping Job Runs ............................................................................ 275
Restarting Job Runs .......................................................................... 275
Purging Archived Data ................................................................. 276
Preface

- About This Guide
- Obtaining Documentation and Submitting a Service Request
- Documentation Feedback
- Field Alerts and Field Notices
- Document Conventions
- Acronyms and Initialisms
- Other Learning Resources
Welcome to Cisco® Unified EIM & WIM™, multichannel interaction software used by businesses all over the world to build and sustain customer relationships. A unified suite of the industry’s best applications for web and email interaction management, it is the backbone of many innovative contact center, customer service, and helpdesk organizations.

Cisco Unified EIM & WIM includes a common platform and one or both of the following applications:

- Cisco Unified Web Interaction Manager (Unified WIM)
- Cisco Unified E-Mail Interaction Manager (Unified EIM)

### About This Guide

Cisco Unified Web and E-Mail Interaction Manager Administrator's Guide to Administration Console introduces you to the Administration Console and helps you understand how to use it to set up and manage various business resources.

### Obtaining Documentation and Submitting a Service Request

Subscribe to *What’s New in Cisco Product Documentation*, which lists all new and revised Cisco technical documentation as an RSS feed and delivers content directly to your desktop using a reader application. The RSS feeds are a free service.

### Documentation Feedback

To provide comments about this document, send an email message to the following address: contactcenterproducts_docfeedback@cisco.com

We appreciate your comments.

### Field Alerts and Field Notices

Cisco products may be modified or key processes may be determined to be important. These are announced through use of the Cisco Field Alerts and Cisco Field Notices. You can register to receive Field Alerts and Field
Notices through the Product Alert Tool on Cisco.com. This tool enables you to create a profile to receive announcements by selecting all products of interest.

Log into www.cisco.com and then access the tool at http://www.cisco.com/cisco/support/notifications.html

Document Conventions

This guide uses the following typographical conventions.

<table>
<thead>
<tr>
<th>Convention</th>
<th>Indicates</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Bold</strong></td>
<td>Labels of items on the user interface, such as buttons, boxes, and lists. Or text that must be typed by the user.</td>
</tr>
<tr>
<td><strong>Monospace</strong></td>
<td>The name of a file or folder, a database table column or value, or a command.</td>
</tr>
<tr>
<td><em>Variable</em></td>
<td>User-specific text; varies from one user or installation to another.</td>
</tr>
</tbody>
</table>

Acronyms and Initialisms

Acronyms and initialisms used in this document are listed here:

- ARM: Agent Reporting and Management
- CSA: Cisco Security Agent
- CTI: Computer Telephony Integration
- EAAS: External Agent Assignment Service
- ICM: Intelligent Contact Management
- IPCC: Internet Protocol Contact Center
- IPTA: ICM-picks-the-agent
- JDBC: Java Database Connectivity
- MR: Media Routing
- MRD: Media Routing Domain
- ODBC: Open Database Connectivity
- PG: Peripheral Gateway
- PIM: Peripheral Interface Manager
- SNMP: Simple Network Management Protocol
Other Learning Resources

Various learning tools are available within the product, as well as on the product CD and our web site. You can also request formal end-user or technical training.

Online Help

The product includes topic-based as well as context-sensitive help.

<table>
<thead>
<tr>
<th>Use</th>
<th>To view</th>
</tr>
</thead>
<tbody>
<tr>
<td>![Help button]</td>
<td>Topics in <em>Cisco Unified Web and E-Mail Interaction Manager Help</em>; the Help button appears in the console toolbar on every screen.</td>
</tr>
<tr>
<td>F1 keypad button</td>
<td>Context-sensitive information about the item selected on the screen.</td>
</tr>
</tbody>
</table>

Online help options

Document Set

The Cisco Unified Web and E-Mail Interaction Manager documentation is available in the *documents* folder on the product CD. The latest versions of all Cisco documentation can be found online at [http://www.cisco.com](http://www.cisco.com).

The document set contains the following guides:

- *Hardware and System Software Specification for Cisco Unified Web and E-Mail Interaction Manager*
- *Cisco Unified Web and E-Mail Interaction Manager Installation Guide*
- *Cisco Unified Web and E-Mail Interaction Manager Browser Settings Guide*

User guides for agents and supervisors

- *Cisco Unified Web and E-Mail Interaction Manager Agent’s Guide*
- *Cisco Unified Web and E-Mail Interaction Manager Supervisor’s Guide*
User guides for Knowledge Base managers and authors

- Cisco Unified Web and E-Mail Interaction Manager Knowledge Base Author’s Guide
- Cisco Unified Web and E-Mail Interaction Manager Knowledge Manager’s Guide

User guides for administrators

- Cisco Unified Web and E-Mail Interaction Manager Administrator’s Guide to Administration Console
- Cisco Unified Web and E-Mail Interaction Manager Administrator’s Guide to Routing and Workflows
- Cisco Unified Web and E-Mail Interaction Manager Administrator’s Guide to Chat and Collaboration Resources
- Cisco Unified Web and E-Mail Interaction Manager Administrator’s Guide to Email Resources
- Cisco Unified Web and E-Mail Interaction Manager Administrator’s Guide to Data Adapter
- Cisco Unified Web and E-Mail Interaction Manager Administrator’s Guide to Offers Console
- Cisco Unified Web and E-Mail Interaction Manager Administrator’s Guide to Reports Console
- Cisco Unified Web and E-Mail Interaction Manager Administrator’s Guide to System Console
- Cisco Unified Web and E-Mail Interaction Manager Administrator’s Guide to Tools Console
1

Console Basics

- Important Administration Tasks
- Key Terms and Concepts
- Elements of the User Interface
The Administration Console is the main management console in the system. It helps managers set up users and resources such as calendars, workflows, and email aliases.

**Important Administration Tasks**

All business resources are set up and managed in the Administration Console. Some important tasks performed in this console include:

- Settings for system partition, business partition, and various departments
- User accounts
- Business calendars
- Queues, service levels, and workflows
- Data masking rules for email and chat
- Chat infrastructure (if Unified WIM is installed)
- Email infrastructure (if Unified EIM is installed)
- Data masking for email and chat
- Data adapters
- Classifications
- Dictionaries
- Macros
- Products
- Archive jobs

The next section describes each of these concepts in detail.

**Key Terms and Concepts**

**System and Business Areas**

The application has two areas:

- **System area**: Used by system administrators to set up and manage system resources such as host machines and services. It has two consoles:
  - Administration Console
  - System Console

Very few users need access to this area as it is used only for system administration tasks.

- **Business area**: The main part of the installation, used by business users to perform their tasks. It has all seven consoles:
  - Administration Console
Partitions and Departments

When the application is installed, a partition is created by the installation program, with one department in it. This department is called Service and can be renamed.

You can create additional departments to:

- Mirror your company’s organization
- Create units with independent business processes

Customer information can be shared across all departments. Other resources such as agents and activities can also be shared between departments. Sharing of such resources is one-directional, which means that even if Department A shares its agents with Department B, Department B could decide not to share its agents with Department A.

Settings

Settings are selective properties of business objects and are used to configure the way the system works. For example, security settings help you configure the following properties of user passwords - the expiry time period for passwords, the characters allowed in passwords, etc. Settings are administered in groups. The available groups are:

- System settings group
- Partition settings group
- Department settings group
- User settings group

For more information, see “Settings” on page 41.

Users

A user is an individual—an administrator, manager, or agent—who has a distinct identification with which they log in to Unified EIM & WIM to perform specific functions. Users are assigned roles and permissions, which enable them to perform various tasks. To make it easier to administer a large number of users, users can be organized into named groups.

Users can be created at three levels:

- System level user: This user is typically the system administrator of the system who manages the system partition resources such as: services, loggers, etc.
- Partition level user: This user is typically the system administrator of the system who manages the business partition resources such as: services, departments, etc.
Department level users: Department level users have many different types of functions in the system. For example, the administrator manages resources such as, chat infrastructure, email infrastructure, etc. while the agents handle customer interactions such as chat, emails, etc. Department level users are of three types — Standalone users, NIPTA integrated users, and IPTA integrated users.

Two users are created during the installation:

1. System Administrator: The first system user, created during installation, is a user called System Administrator. Assigned the System Administrator role, this user sets up system resources and creates one or more system-level users.

2. Partition Administrator: The first business user, created during installation, is a user called Partition Administrator. Assigned the Partition Administrator role, this user manages partition users and settings and creates more partition users as well as one or more department-level users to manage department resources.

For more information, see “Users” on page 132.

User Roles

A role is a set of permissible actions for various business resources. An agent’s role, for instance, would include actions such as “View Agent Console,” “Edit customer,” and “Add notes.” You can create user roles as per the needs of your organization, and assign these roles to your employees. To ease your task, the system comes with some default user roles. You can use these, and if required, create your own user roles. You can assign one or more roles to a group of users or an individual user.

For more information, see “Users” on page 132.

User Groups

User groups are a collection of users that share similar functions or roles in the system. Groups make it much easier to manage user accounts. Like users, user groups can also be created in the system partition, business partition, and departments. A standard user group called All Users in Department Name is created in each department. Every new user in the department is automatically included in this group. All users, standalone and Integrated, are included in this group. You should not use this user group to manage activity routing through workflows and pull and transfer permissions on other users, user groups, and queues. In a department, you can create three types of user groups — Standalone user groups, NIPTA integrated user groups, and IPTA integrated user groups.

For more information, see “Users” on page 132.

Email Infrastructure

The email infrastructure enables you to configure email addresses to which customers send messages to your company. It also helps you restrict the types of emails or attachments a user is allowed to receive or send.

The following objects can be configured for emails:

- **Aliases**: Aliases are email addresses that customers use to contact your company—typically something like support@yourcompany.com or sales@yourcompany.com. They function as entry and exit points for emails processed by the system. The Retriever Service monitors the specified aliases and retrieves emails from these aliases when they arrive in the email server. They are used by the inbound workflows to identify which emails to process through the workflows.
- **Blocked Addresses:** Administrators can block certain email addresses or domains. Any email from a blocked address or domain is treated as spam and directly deleted, stored in a separate file, or redirected to another address. This way you can filter out unwanted emails. This feature should supplement any spam or security software that may be running on your corporate email server. If spam is a major issue or concern, corporate email filtering software is recommended as a more permanent solution.

- **Blocked File Extensions:** This is a security feature, which allows you to selectively block certain types of attachments that may contain viruses. You can block attachments of such types from entering the system. (For example, .exe, .vbs, .js, etc.) Using settings for email attachments, the system can be configured to block all attachments, block incoming and outgoing attachments, and delete or quarantine blocked attachments.

- **Delivery Exceptions:** This feature allows you to handle bounced back emails. The system includes 144 common delivery exception scenarios. Other exceptions can be created as needed. You can set up different words and phrases for email subjects and email addresses of incoming email. Emails are treated as bounce backs, permanent or temporary, if any of these words or phrases are found in the subject or email address. A permanent bounceback indicates that an irreparable reason (such as invalid email address) caused the email to bounce back. A temporary bounceback indicates that a temporary reason (such as out of office reply, destination server down, etc.) caused the email to bounce back.

For more information, see *Cisco Unified Web and E-Mail Interaction Manager Administrator’s Guide to Email Resources.*

**Chat and Collaboration Infrastructure**

Chat and collaboration activities are created when customers click chat help links on your website. The appearance of these links is configured with the help of templates. Each link is associated with an entry point and each entry point is in turn associated with a queue. A default entry point is provided in each department.

The following objects should be configured for chat and collaboration activities:

- **Template sets:** The template sets consists of CSS (cascading style sheets) and JSP (JavaServer pages) files that control the look and feel of the chat pane that customers use to type in their messages. The templates are also used to determine what information is requested to identify the customer (e.g. name, email address, phone number). You can also compose messages that the customer will see under certain circumstances (e.g. if they request a chat session out of hours).

- **Entry points:** An entry point is the starting point for a customer to initiate a chat interaction. Every chat help link on a website is mapped to an entry point. Each entry point in turn has a queue associated with it, so that any chat activity created, when the user asks for chat assistance, is routed to the queue.

For more information, see *Cisco Unified Web and E-Mail Interaction Manager Administrator’s Guide to Chat and Collaboration Resources.*

**Data Masking for Email and Chat**

Data masking allows businesses to ensure that sensitive information, like credit card numbers, Social Security Numbers, bank account numbers, etc. is not transmitted from the system to the customers and vice versa. If the customer and agent do add any sensitive data in the email content and chat messages, all such data is masked before it is displayed to customers and agents and before it is stored in the Unified EIM & WIM System.

Data masking is the process of scanning the content for sensitive information and applying regular expressions to mask the sensitive information and hide the original data with characters, like, * ^ #. Data is masked using patterns, which are defined using Javascript and Java regular expressions.
Data masking is available for emails and chats. For more information, see “Data Masking” on page 206.

**Data Adapters**

You may need to access data from external sources, and data links enable you to perform this function. They act like bridges between Cisco Unified EIM & WIM and external data sources. Data can be accessed through various mediums: phone, links, and data adapters.

The following objects should be configured for data adapters:

- **Data Access Links**: Enables you to create links to fetch data from external or internal sources.
- **Data Usage Links**: Allows you to define the format in which you want to display the data fetched by the data access links.

For more information, see *Cisco Unified Web and E-Mail Interaction Manager Administrator’s Guide to Data Adapters*.

**Workflows**

Workflows allow you to implement business processes by defining and automating the progression of activities based on certain rules. A workflow lists the sequence of rules that are applied on an activity as it moves through the system. There are four types of workflows:

- Alarm workflows
- General workflows
- Inbound workflows
- Outbound workflows

For more information, see *Cisco Unified Web and E-Mail Interaction Manager Administrator’s Guide to Routing and Workflows*.

**Queues**

Queues hold incoming customer service activities such as emails and chat sessions that are waiting to be assigned to agents. A department can have any number of queues to map their business process. A single queue can hold multiple activity types like email, task, chat etc. Agent access to queues is controlled by permissions.

For more information, see *Cisco Unified Web and E-Mail Interaction Manager Administrator’s Guide to Routing and Workflows*.

**Service Levels**

Some customers may be more valuable to your company than others. In order to provide good service, agents in your department need to know about the importance of every customer. For this, you can assign service levels to your customers and use them in your workflows. Service levels enable you to define the importance of a particular customer, thereby directing agents to respond immediately to customers with high importance.

For more information, see *Cisco Unified Web and E-Mail Interaction Manager Administrator’s Guide to Routing and Workflows*. 
Calendars
You can create a business calendar for your organization. It allows you to set up working and non-working hours and days for employees in your department. To create your business calendar, it is essential that you first create shifts and day labels.

- **Shift labels:** According to the working hours of your company, you can organize various shifts for agents in your department. It also allows you to create shifts for holidays and extra working hours.
- **Day labels:** Day labels enable you to assign time slots to the shifts that you have created in the Shift label. You cannot create day labels, if you have not created shift labels first.
- **Calendars:** Use the day labels to form a calendar for the work days in a week. You can also specify exceptional days, such as holidays or an extra working day. Please note that you can have only one active calendar for each department.

For more information, see “Business Calendars” on page 246.

Classifications
Classification is a systematic arrangement of resources comprising of categories and resolution codes. You can create and assign classifications to incoming activities or to knowledge base articles. Classifications are of two types:

- **Categories:** Categories are keywords or phrases that help you keep track of different types of activities.
- **Resolution codes:** Resolution codes are keywords or phrases that help you keep track of how different activities were fixed.

For more information, see “Classifications” on page 254.

Dictionaries
Dictionaries refer to a list of words stored in the system for reference. Agents use dictionaries to check spellings in outgoing emails. Each department comes with 13 predefined dictionaries and one of them is configured as the default dictionary. A department can have only one default dictionary and it can be changed according to the business requirements.

For more information, see “Dictionaries” on page 258.

Macros
Macros are shortcuts to perform oft-repeated tasks, such as, inserting customer names in emails, etc. Macros save the response time to customer queries. Instead of repeatedly typing the frequently used sentences or phrases, users can simply add the appropriate macro. When the mail reaches the customer, the macro expands into the whole text. Macros are of two types - business object macros and combination macros.

You can create business object macros for:

- Activity data
- Case data
- Chat session data
- Contact person data
- Contact point data
- Customer data
Email address contact point data
Phone address data
Postal address data
User data
Website data

You can create combination macros with multiple definitions. That is, you can combine multiple macros within a single macro. Multiple macros can be selected from business objects macros to create a combination macro.

For more information, see “Macros” on page 262.

Products

Products allow you to efficiently manage, and organize the list of company’s products. You can create a catalogue of all your products, and also attach files or web pages, and articles from the knowledge base, thereby, providing more information regarding those products. This is helpful for agents, as they can use it to associate products with customers. This adds to the details of a customer, thereby enabling the agent to know and serve the customer better.

For more information, see “Products” on page 266.

Archive Jobs

Old activities can be archived by setting up scheduled or on-demand archive jobs. For more information, see “Archive” on page 268.

Sharing of Business Objects

This section lists the business objects available at different levels in the system and how they are shared.

System Level

The following objects are common for the entire system and are managed by the system administrators.

Administration Console

- Roles, users, and user groups
- Settings

System Console

- Service Processes
- Loggers
- Hosts
Partition Level

The following objects are common for the entire partition and all departments in the partition and are managed by the partition administrators.

**Administration Console**

- Roles, users, and user groups
- Settings: partition and department settings
- Data masking rules for email and chat
- Departments: Departments are created (new or copies of existing departments) and department sharing is managed by partition administrators.

**System Console**

- Service Instances: All departments in an installation use common services that are managed by partition administrators.

**Tools Console**

- Login page language setting: Set at partition level and is available to users in all departments.
- Sections available in the Agent Console Information Pane: Set at partition level and are available to agents in all departments.
- New Activity Shortcuts: Set at partition level and are available to agents in all departments.
- Activity types: Set at partition level and are available to agents in all departments.

Department Level

**Administration Console**

Except for users, any of the following objects cannot be shared with other departments. However, the foreign users can manage these objects in the departments they are shared with. Access to these objects is controlled by roles and permissions.

- Settings
- Roles, users, and user groups: Users can be shared with other departments, and are called foreign users in the departments they are shared with. See details in “Sharing Users with Other Departments” on page 205.
- Business calendars
- Queues, service levels, and workflows
- Chat infrastructure
- Email infrastructure
Data masking
Data adapters
Classifications
Dictionaries
Macros
Products
Archive jobs

KB Console
- KB Articles
  - Not shared
  - Exception: Foreign users can view and create articles in the departments they are shared with.

Reports Console
- Not shared
- Exception: Foreign users can run reports on the departments they are shared with.

Supervision Console
- Not shared
- Exception: Foreign users can create monitors in the departments they are shared with.

Tools Console
- Not shared
- Exception: Foreign users can manage objects in the departments they are shared with.

Agent Console
- Not shared
- Exceptions:
  - Customers: If customer departmentalization is not enabled (see “Customer Departmentalization” on page 66), agents can search and view customers across departments. And, when an agent creates an activity for a customer that already exists in another department, they will see the complete history of the customer (all cases and activities).
  - If two departments are shared, users from one department can transfer activities to another department. For details, see “Sharing Department Resources” on page 242.
  - Foreign users can work on activities from departments they are shared with. And, while working on these activities they can access the data links, KB, and classifications of the foreign department.
Elements of the User Interface

The console user interface has five functional areas:

1. **Console toolbar**: The main toolbar of the console appears at the top of the screen. It allows you to access some frequent commands with a single click.

2. **Tree pane**: The Tree pane lists all the business objects in the application, allowing you to select the node (folder) that you wish to work in. When you select a folder, its first-level contents are displayed in the List pane. In the Tree pane, you can cut paste or copy paste folders, delete folders which you have created, manage bookmarks and print folder contents.

   To expand all first and second level nodes with a single click, shift + click the plus [+] button next to the topmost node. The contents of all first and second level nodes are displayed in the Tree pane.

3. **List pane**: The List pane displays first-level contents of the folder selected in the Tree pane. You can view the name, description, date of creation, etc., of the displayed items. In this pane, you can create items or select existing ones to modify or delete them.

4. **Properties pane**: The Properties pane displays the contents of the business object selected in the List pane. In this pane, you can edit the properties of the selected item.

5. **Status bar**: The status bar is present at the bottom of every screen. It displays the following information:
   - The user name with which the user has logged in the system.
   - The language currently in use.
   - The status of the system (*Loading, Ready*, etcetera).

Unified CCE Integration

- About Unified CCE Integration
- Configuring Integration
- Importing Data
This chapter describes the process of integrating Unified EIM & WIM with Cisco Unified Contact Center Enterprise (Unified CCE).

About Unified CCE Integration

The process of integrating Unified EIM & WIM with Cisco Unified CCE can be easily performed from within the Administration Console by a partition administrator.

Before integrating your Unified EIM & WIM installation with Cisco Unified CCE, make sure Cisco Unified CCE is installed and prepared for integration. For more information on how to configure and prepare your setup, see the Cisco Unified Web and E-Mail Interaction Manager Deployment and Maintenance Guide.

Partition administrators should have the following actions to perform these tasks: Integration - Create, Edit, View, Delete.

Configuring Integration

To integrate Unified EIM & WIM with Unified CCE:

1. In the Tree pane, browse to Administration > Partition: Partition Name > Integration > Unified CCE > Unified CCE.
2. In the List pane toolbar, select Unified CCE.
3. In the Properties pane, on the General tab, you can view the following properties:
   - Name: This is provided by the system and cannot be changed.
   - Description: This is provided by the system and cannot be changed.
   - Enable integration: This field is set to Yes and cannot be edited.
   - Deployment type: This field is set to On-Premises and cannot be edited.

   View the general properties

4. In the Properties pane, on the On-Premises tab, provide the following details for the Primary AWDB section:
   - Unified CCE administration host name: The server name or IP address of the Unified CCE host.
   - Active: Set to Yes.
   - SQL server database name: The name of the AWDB database.
- **Port number**: Set the value to match the port configured in Unified CCE. By default the value is set to 1433.
- **Database administrator login name**: The database administrator’s user name.
- **Database administrator login password**: The database administrator’s password.
- **Maximum capacity**: The maximum number of allowed connections to be made to the AWDB. By default, this is set to 360.

Provide the primary AWDB server details

5. If you have a secondary AWDB and wish to apply it to your integration, click the Secondary AWDB section and provide the necessary details.
6. Click the **Save** button.
7. In the Properties pane, on the Configuration tab, set the following:
   - Select the application instance.
   - Select the Agent Peripheral Gateways that apply.

**Important**: When you save your changes, your system is permanently connected to your Unified CCE installation. This cannot be undone.

Provide configuration details

8. Click the **Save** button. You system is now connected with Unified CCE. To complete the integration, you must import the MRDs users and skill groups from the Unified CCE system. For more information, see “Importing Data” on page 38.
Importing Data

Before the system can become fully integrated with your Unified CCE deployment, data from the Unified CCE must be imported to the application. The following objects can be imported from Unified CCE:

- **Media Routing Domains (MRDs):** These are shown as queues upon importing to a selected department.
- **Users:** These are shown as users upon importing to a selected department.
- **Skill Groups:** These are shown as user groups upon importing to a selected department.

### Importing Media Routing Domains

The MRDs available for importing are decided based on the media classes configured in the partition level setting: Media Class Names (page 51). If you do not see the correct MRDs available for importing, check to make sure that the Media Classes names configured in the setting match the configuration in Unified CCE. Note that media class names are case sensitive.

**To import MRDs:**

1. In the Tree pane, browse to **Administration > Partition:** *Partition Name* > **Integration > Unified CCE > Unified CCE**.
2. In the List pane toolbar, select the **Unified CCE**.
3. In the Properties pane, click the **Import** button.
4. From the Select Department window, select the department to which you are importing the MRDs. If you only have one department in your system, this step is skipped.
5. In the Import from Unified CCE window, under the Media Routing Domains tab, select the MRDs you wish to import and move them to the right. Any MRDs that do not have script selectors, or that have already been imported, are not shown.

![Import MRDs](image)
6. When an MRD is added to the system, a queue is created. In the import window, you can change the names of the queues to how you want them to appear in the application. If a queue created during the MRD import requires a name change later, it must be done through the Queue node in the department.

7. Click the Save button.

Importing Users

To import Unified CCE users:

1. In the Tree pane, browse to Administration > Partition: Partition Name > Integration > Unified CCE > Unified CCE.

2. In the List pane toolbar, select Unified CCE.

3. In the Properties pane, click the Import button.

4. From the Select Department window, select the department to which you are importing the users. If you only have one department in your system, this step is skipped.

5. In the Import from Unified CCE window, click the Users tab and set the following:
   - Select the peripheral gateway from the dropdown.
   - Select the appropriate peripheral.
   - Select the users from the Available Users list if you wish to import and move them to the Select Users in this Department list.

6. Click the Save button.
Importing Skill Groups

To import skill groups:

1. In the Tree pane, browse to Administration > Partition: Partition Name > Integration > Unified CCE > Unified CCE.
2. In the List pane toolbar, select Unified CCE.
3. In the Properties pane, click the Import button.
4. From the Select Department window, select the department to which you are importing the skill groups. If you only have one department in your system, this step is skipped.
5. In the Import from Unified CCE window, click the Skill Groups tab and set the following:
   - Select the peripheral gateway.
   - From the dropdown select the appropriate peripheral.
   - Select the skill groups from the Available Skill Groups list you wish to import and move them to the Selected Skill Groups list.
6. Click the Save button.
Settings

- About Settings
- Configuring Settings
- Creating User Settings Groups
- Unified CCE Integration Settings
- Common Settings
- Security Settings for Cookies
- Logger Settings
- Logger Settings
- User Account Settings
- User Session Settings
- PCI Compliance Settings
- Business Calendar Settings
- Customer Information Settings
- Services Settings
- Incoming Email Settings
- Outgoing Email Settings
- Blocked Attachments Settings
- Workflow Settings
- Activity Assignment Settings
- Monitor Settings
- Activity Handling Settings
- Inbox Settings
- Spelling and Blocked Words Settings
- Search Settings
- Knowledge Base Settings
- Chat Settings
- Offers Settings
- Cache Settings
This chapter helps you configure various aspects of the system with the help of settings.

**About Settings**

Settings are selective properties of business objects and are used to configure the way system works. For example, security settings help you to configure the following properties of user password - the expiry time period for passwords, the characters allowed in passwords, etc.

Settings are administered in groups. The available groups are:

1. **System settings group**: This group is available to system administrators to control the system level resources. These settings cannot be reset at lower levels. This group includes dispatcher settings.

2. **Partition settings group**: This group is available to partition administrators to control the partition level resources. These settings cannot be reset at lower levels. This group includes:
   a. Activity settings
   b. Activity pushback settings
   c. Unified CCE integration settings
   d. Cache settings
   e. Chat settings
   f. Common settings
   g. Dispatcher settings
   h. Retriever settings
   i. General settings
   j. Knowledge base settings
   k. Monitoring settings
   l. Offers settings
   m. Workflow Engine settings
   n. Security settings

3. **Department settings group**: This group is available to administrators to control the department level resources. Department settings can be configured by partition administrators for all departments in the partition, by department administrators for individual departments, and by individual users as user preferences. This group includes:
   a. Activity settings
   b. Activity pushback settings
   c. Chat settings
   d. Common settings
   e. Email blocked file extension settings
   f. General settings
4. **User settings group:** If administrators want settings within a department to have different values for different users, they can achieve it by configuring user settings groups. Only a subset of department settings is available as part of this group. A department comes with a default user settings group and all the users created in that department automatically become a part of the default group. Administrator can make these settings available to individual users as user preferences. Users can configure these settings according to their choice. This group includes:

   a. Activity settings
   b. Activity pushback settings
   c. Common settings
   d. General settings
   e. Knowledge base settings
   f. Monitoring settings
   g. Spell checker settings
   h. User settings

### Settings to Configure After Installation

In this section, we describe certain settings that should be configured soon after installation. These settings are of two types:

1. **Mandatory settings:** These settings must be configured before using the application.
2. **Optional settings:** Although it is not mandatory to change these settings, you are likely to feel the need to configure them for your business.

### Mandatory Settings

#### At the Partition Level

Make sure you configure the following settings:

- To: address for notifications from services (page 80)
- From: address for notifications from services (page 81)
- Notification mails SMTP Server (page 82)
- Default SMTP server (page 84)
Configure the following partition-level settings only if you use ESMTP protocol for exception and spam emails and notifications.

- SPAM mails SMTP user name (page 74)
- SPAM mails SMTP password (page 78)
- Exception mails SMTP user name (page 77)
- Exception mails SMTP password (page 78)
- Notification mails SMTP user name (page 83)
- Notification mails SMTP password (page 84)

**At the Department Level**

Configure the following setting for each department.

- From email address for alarm (page 88)

**Optional Settings**

Although it is not mandatory to change these settings, you are likely to feel the need to configure them for your business.

**At the Partition Level**

- Customer departmentalization (page 66)
- Inactive time out (page 61)
- Deletion time out (page 61)
- SPAM mail redirection from address (page 71)
- SPAM mail redirection to address (page 72)
- Spam mail redirection SMTP preference (page 72)
- Exception mail redirection SMTP preference (page 76)
- Exception mail redirection to address (page 75)
- Exception mail redirection from address (page 75)
- Expiry time for autopushback (page 95)

**At the Department Level**

- Business calendar time zone (page 62)
Configuring Settings

Configuring System Partition Settings

Login to the System partition (zero partition) of the application to access the system partition setting.

**To configure a system partition setting:**

1. Log in to the system partition and go to the Administration Console.
2. In the Tree pane, browse to Administration > Partition: Context Root Name > Settings > Partition.
3. In the List pane, select the Partition settings group.
   The Properties pane refreshes to show the attributes of the group.
4. Next, in the Properties pane, go to the Attributes tab to configure values for settings. From the list, select a setting to modify. In the Value field provide a value for the setting.
5. Click the Save button.

Configuring Business Partition Settings

Login to the Business partition of the application to access the business partition setting.

**To configure a business partition setting:**

1. Log in to the business partition and go to the Administration Console.
2. In the Tree pane, browse to Administration > Partition_Name > Settings > Partition.
3. In the List pane, select the partition settings group.
   The Properties pane refreshes to show the attributes of the group.
4. Next, in the Properties pane, go to the Attributes tab to configure values for settings. From the list, select a setting to modify. In the Value field provide a value for the setting.
5. Click the Save button.

Configuring Department Settings

**To configure a department setting:**

1. Log in to the business partition and go to the Administration Console.
2. In the Tree pane, browse to the Settings node.
   - If you want to configure the settings for all departments, then browse to Administration > Partition_Name > Settings > Department.
   - If you want to configure the setting for an individual department, then browse to Administration > Departments > Department_Name > Settings > Department.
3. In the List pane, select the department settings group.
The Properties pane refreshes to show the attributes of the group.

4. Next, in the Properties pane, go to the Attributes tab to configure values for settings. From the list select a setting to modify and do the following:
   a. In the Value field provide a value for the setting.
   b. If you are configuring the setting for all departments in the partition or for all users in the department (for settings that can be configured at the user setting group level), then in the Can be reset at lower level field select No. Once it is set to No, the value of the setting cannot be changed at lower level. By default it is set to Yes.

   If a setting is made unavailable for lower levels, the value set at the higher level is applicable. When the setting is reset to be available at lower levels, the setting is made available only at the next level and the administrator has to decide if the setting should be made available to levels lower than that. The value of the setting configured at the higher level is carried over to lower levels.

5. Click the Save button.

Configuring User Settings

To configure a user setting:

1. In the Tree pane, browse to Administration > Departments > Department_Name > Settings > User.
2. In the List pane, select a user settings group.
   The Properties pane refreshes to show the attributes of the group.
3. Next go to the Attributes tab to configure the values for the settings. From the list select a setting to modify and do the following:
   a. In the Value field, provide a value for the setting.
   b. In the Can be reset at lower level field select No. Once the value is set to No, the value of the setting cannot be changed at user level. By default it is set to Yes.
4. Click the Save button.

Creating User Settings Groups

Administrator can allow a handful of department setting to be configured at user level. These settings can be configured using the user settings group or the user preferences. In the user settings group the administrator can configure settings for a group of users within the same departments to have different values.

Note that the user setting group is not the same as user group. A user can belong to multiple user groups but can belong to only one user settings group.

To create a user settings group:

1. In the Tree pane browse to Administration > Departments > Department_Name > Settings > User.
2. In the List pane click the New button.
The Properties pane refreshes to show the attributes of the group.

3. In the General tab provide the name and description. The name of the group cannot be changed once the setting is saved.

4. Click the Save button. The Attributes and Relationship tabs are enabled only after the settings group is saved.

5. Next go to the Attributes tab to configure the values for the settings. From the list select a setting to modify and do the following:
   a. In the Value field provide a value for the setting.
   b. If you are configuring the setting for all users in the group, then in the Can be reset at lower level field select No. Once it is set to No, the value of the setting cannot be changed at user level. By default it is set to No. If it is set to Yes then the users in that group can change the value of the setting from User Preferences.

6. From the Relationships tab select users for the group, from the list of available users. Only the users who are not a part of any other user settings group are displayed.

7. Click the Save button.

**Unified CCE Integration Settings**

**Agent Availability Settings After Completion of Call**

**Mark Agent Ready After Completion of Call**

Use this setting to adjust the default agent availability status upon completion of a call activity. If the value is set to True, the agent is automatically marked ready to receive new calls. If the value is set to False, agents have to make themselves available after completing each call.

- Type: Partition settings group
- Subtype: Unified CCE integration
- Data type: Enumeration
- Default value: True
- Value options: True, False

**Event Reason Code to Track Agent State**

Define the event reason code that is sent to Unified CCE to track the agent status. You need to change this setting only if the default reason code 32767 is currently used to track some other status in Finesse.

- Type: Partition settings group
- Subtype: Unified CCE integration
Alert Agent When Non-Interruptible Activity is Assigned

This setting controls whether or not to inform agents that they have been assigned non-interruptible activities that must be completed before working on other activities. This alert does not appear if the Service Email and Chat Activities at the Same Time (page 105) and Service Email and Phone Activities at the Same Time (page 105) settings are enabled.

- Type: Partition settings group
- Subtype: Unified CCE integration
- Data type: Enumeration
- Default value: No
- Value options: Yes, No

Allow Transfer of Activities to Integrated Queues in Other Departments

Use this setting to allow integrated users to transfer activities to mapped queues (that belong to the same MRD) in other departments. When this setting is enabled, the Transfer window shows queues from other departments that belong to the same MRD as the selected activity.

**Important:** This setting applies to email and chat activities.

- Type: Partition settings group
- Subtype: Unified CCE integration
- Data type: Enumeration
- Default value: Yes
- Value options: Yes, No

Chat Watchdog Interval (Seconds)

This setting controls the time interval after which a chat activity is tagged as abandoned if it could not be assigned to an agent.

- Type: Partition settings group
- Subtype: Unified CCE Integration
- Data type: Integer
- Default value: 70
- Minimum value: 70
Enable Chat Queueing

This allows customers to initiate new chats even when all agents are working at their maximum capacity. The chat requests are then queued in Unified CCE to wait for the next available agents. The maximum time for which a chat is queued is defined by the Chat Watchdog Interval (page 49) setting.

- Type: Partition settings group
- Subtype: Unified CCE integration
- Data type: Enumeration
- Default value: Yes
- Value options: Yes, No
- Can be reset at lower level: No

Enable Unified EIM & WIM-Picks-the-Agent-Routing

This setting allows the application to route activities to integrated agents when a label is returned from Unified CCE.

- Type: Partition settings group
- Subtype: Unified CCE integration
- Data type: Enumeration
- Default value: No. If the system is an upgraded installation, it is whatever the previous version’s default was.
- Value options: Yes, No

Maximum Wait Time for Login Response From UCCE (Seconds)

This setting refers to the maximum time allowed while waiting for a login response from Unified CCE before a timeout occurs. If the integrated agent is not logged in within the defined time, a message is displayed to the agent. Timeout generally occurs because of network related issues or configuration issues.

- Type: Partition settings group
- Subtype: Unified CCE Integration
- Data type: Integer
- Default value: 20
- Minimum value: 20
- Maximum value: 120
Media Class Names

This setting refers to the names of the media classes configured in Unified CCE. If the media class names have been changed in Unified CCE from their default names, they must also be changed here to match. Note that media class names are case sensitive.

- Type: Partition settings group
- Subtype: Unified CCE integration
- Data type: String
- Default values:
  - Voice media class: Cisco_Voice
  - Chat media class: CIM_WIM
  - Email media class: CIM_EIM
  - Outbound media class: CIM_OUTBOUND
- Value options: The secondary window allows for custom Media Classes to be designated.

Proactive Monitoring Refresh Interval (Seconds)

This setting controls the interval at which the application verifies if EAAS and Listener services are running.

- Type: Partition settings group
- Subtype: Unified CCE Integration
- Data type: Integer
- Default value: 300
- Minimum value: 300
- Maximum value: 6000

Reason Code for Agent Not Ready

The reason code sent to Unified CCE when agents mark themselves unavailable. You need to change this setting only if the default reason code 2 is currently used to track some other agent status.

- Type: Partition settings group
- Subtype: Unified CCE Integration
- Data type: Integer
- Default value: 2
- Minimum value: 0
- Maximum value: 32767
Starvation Time for Activities

The maximum time the system will wait to send a routing request for an activity. After the time limit set in these settings is met, the request for the waiting activity is sent first. Priority sequence for activities is - delayed callback, chat, and email. For example, if the system is overloaded with multiple callback activities, and is unable to process a chat activity, then after the starvation time of chat activity, it will process the chat activity first before processing the next call activity.

- Type: Partition settings group
- Subtype: Unified CCE integration
- Data type: String
- Default values:
  - Callback: 10 seconds
  - Chat: 60 seconds
  - Email: 12 hours
- Value options:
  - Callback: 10 - 120 seconds
  - Chat: 60 - 180 seconds
  - Email: 1 - 168 hours

Common Settings

Installation Name

Define a unique name for your installation. Provide a 1 to 4-letter code. For example: PRD, EG, TEST, PROD, TST2, DEMO. The name must not contain spaces or special characters. If you have more than one Unified EIM & WIM deployments, make sure that you use a unique installation name for all your Unified EIM & WIM installations. This installation name is appended to the article IDs.

- Type: Partition settings group
- Subtype: Common
- Data type: String
- Default value: —

Web Server URL or Load Balancer URL

In this setting define the Web server URL or the Load Balancer URL if your installation has multiple web servers. This URL is used in the reports notifications.

- Type: Partition settings group
- Subtype: Common
Data type: String  
Default value: —

Date Format
The format in which dates are displayed in the application user interface.

- Type: Department settings group, User settings group
- Subtype: Common
- Data type: Enumeration
- Default value: 09/22/2016 (shows current date)
- Value options:
  - 09/22/2016
  - Sep/22/2016
  - September 22 2016
  - 2016-09-22
  - 22/09/2016
  - 22-09-2016
  - 22 Sep 2016
  - Sep 22, 2016
- Can be reset at lower level: Yes

Date and Time Format
The format in which date and time is displayed in the application user interface.

- Type: Department settings group, User settings group
- Subtype: Common
- Data type: Enumeration
- Default value: 09/22/2015 3:15:30 PM (shows current date and time)
- Value options:
  - 09/22/2015 3:15:30 PM
  - Sep/22/2015 3:15:30 PM
  - September 22 2015 3:15:30 PM
  - 2015-09-22 3:15:30 PM
  - 22/09/2015 3:15:30 PM
  - 22-09-2015 3:15:30 PM
  - 22 Sep 2015 3:15:30 PM
Security Settings for Cookies

Use these settings to secure the cookies created by the application for user consoles and customer websites, which are enabled for Offers. When the cookies are secure, the browser prevents the transmission of cookies over an unencrypted channel.

Secure the Cookies Created by Application for Consoles and Knowledge Portals

Enable this setting to secure all the cookies created by the application for user consoles (For example, Agent Console, Administration Console, etc.). When this setting is enabled, you must configure SSL for accessing the Unified EIM & WIM application. For details, see the Unified EIM and WIM Installation Guide. If SSL is not configured, users will not be able to access the application. You can enable this setting only while accessing the application using the HTTPS protocol.

Important: Changes to this setting take effect when the application is restarted.

- Type: Partition settings group
- Subtype: Security
- Data type: Enumeration
- Default value: No
- Value options: Yes, No

Secure the Cookies Created by Application for Customer Websites

You need to enable this setting if you are using offers. Enable this setting to secure all the cookies created by the application for the customer websites. If this setting is enabled and the customer website is not secure, offers will not work.

Important: This setting must be enabled only if the customer website is secure (HTTPS).

- Type: Partition settings group
- Subtype: Security
- Data type: Enumeration
- Default value: No
Value options: Yes, No

Logger Settings

**Important:** You need to restart the application after changing the logger settings.

**Maximum Backups of Log Files**
This setting determines the maximum number of backup copies you want to save for the log files. After the number of back-up copies of a log file reach the specified number, the system starts deleting the oldest versions from the logs folder. It is recommended that you set the value more than 50.

- Type: System partition settings group
- Subtype: Logger
- Data type: Integer
- Default value: 100
- Minimum value: —
- Maximum value: —

**Default Size in MB**
Use this setting to determine the maximum size of the log files created by the application.

- Type: System partition settings group
- Subtype: Logger
- Data type: Integer
- Default value: 5
- Minimum value: —
- Maximum value: —

**Default Log Level**
This setting determines the default log level of the new processes that are created in the system. This setting does not apply to the processes that have been started at least once.

- Type: System partition settings group
- Subtype: Logger
- Data type: Enumeration
User Account Settings

This set of settings allow administrators to configure and enforce login and password policies for agents and other users.

**Password Complexity Policy**

Use this setting to define the password policy you want to enforce for all user passwords in the system. The value of this setting is defined as a regular expression. Click the Assistance button to change the various properties for the setting. You can test a password after defining the regular expression. You can also change the message that you want to show to users when their passwords do not comply with the password policy. If you do not wish to enforce a policy, you can delete the value of this setting.

- **Type:** Partition settings group
- **Subtype:** Security
- **Data type:** String
- **Default value:** `(?=.*[0-9])(?=.*[a-z][A-Z]).{8,20}` (Default value is blank in systems upgraded from Unified EIM & WIM 9)
- **Default failure message:** The password does not comply with the password policy. Password should be at least of 8 characters having a mix of numbers and alphabets.
- **Minimum value:** 0
- **Maximum value:** 2000
- **Can be reset at lower level:** No

**Login Name Minimum Length**

Use this setting to define the minimum number of characters that a user name must have. This user name is used to log in to the application.

- **Type:** Department settings group
- **Subtype:** Security
- **Data type:** Integer
- **Default value:** 2
- **Minimum value:** 1

---

Important: User name and password settings apply only to standalone users. For integrated users, this information is managed in Unified CCE.
Login Password Case Sensitive

Use this setting to decide if you want the user passwords to be case sensitive. When this setting is enabled, at the time of login a check is made to see if the case of the password matches exactly the password set for the user.

- Type: Department settings group
- Subtype: Security
- Data type: Enumeration
- Default value: Yes
- Value options: Yes, No
- Can be reset at lower level: No

Password Life Time

Use this setting to determine the expiry time for user passwords. The expiry time is calculated from the time the password was created for the first time or from the time the password was last changed. Use the “Password lifetime unit” setting to define the time unit in seconds, minutes, hours, months, or years, for the value of this setting.

- Type: Department settings group
- Subtype: Security
- Data type: Integer
- Default value: 0
- Minimum value: 0
- Maximum value: —
- Can be reset at lower level: No

Password Life Time Unit

Use this setting to define the unit to be used to calculate the time after which the password expires. The actual value of time is defined in the “Password lifetime” setting.

- Type: Department settings group
- Subtype: Security
- Data type: Enumeration
- Default value: Second
- Value options: Second, Minute, Hour, Day, Month, Year
Allow Users to Change Password

Use this setting to determine if users should be allowed to change their password from the Password tab in the Options window available in the user consoles.

- Type: Partition settings group
- Subtype: Common
- Data type: Enumeration
- Default value: Yes
- Value options: Yes, No
- Can be reset at lower level: No

Unsuccessful Attempts Time Frame

Use this setting to decide the time frame within which, if a user makes the defined number of unsuccessful log in attempts, his account is disabled. The maximum number of allowed unsuccessful attempts are defined in the “Maximum number of unsuccessful timed attempts” setting.

- Type: Department setting group
- Subtype: Security
- Data type: Integer
- Default value: 0
- Minimum value: 0
- Maximum value: —
- Can be reset at lower level: No

Unsuccessful Attempts Time Unit

Use this setting to choose the unit of time to define the time frame in the “Unsuccessful attempts time frame” setting.

- Type: Department setting group
- Subtype: Security
- Data type: Enumeration
- Default value: Second
- Value options: Second, Minute, Hour, Day, Month, Year
- Can be reset at lower level: No
**Maximum Number of Unsuccessful Timed Attempts**

Use this setting to decide the number of login attempts a user is allowed in the defined time duration before his account is disabled. The time frame is defined in the “Unsuccessful attempts time frame” setting.

- Type: Department setting group
- Subtype: Security
- Data type: Integer
- Default value: 0
- Minimum value: —
- Maximum value: —
- Can be reset at lower level: No

**Maximum Number of Unsuccessful Attempts**

Use this setting to define the maximum number of unsuccessful attempts a user can make before the user account is disabled. If the value of this setting is zero, then no check is done to see the number of times the user has made unsuccessful log in attempts.

- Type: Department setting group
- Subtype: Security
- Data type: Integer
- Default value: 0
- Minimum value: —
- Maximum value: —
- Can be reset at lower level: No

**Maximum Inactivity Time Frame**

Use this setting to decide the time after which a account is disabled, if it has not been accessed in the specified time. Use the “Maximum inactivity time unit” setting to define the time unit in seconds, minutes, hours, months, or years, for the value of this setting.

- Type: Department setting group
- Subtype: Security
- Data type: Integer
- Default value: 0
- Minimum value: 0
- Maximum value: —
- Can be reset at lower level: No
Maximum Inactivity Time Unit

Use this setting to define the unit to be used to calculate the time after which a user account is disabled, if it has not been accessed in the specified time. The actual value of time is defined in the “Maximum inactivity time frame” setting.

- Type: Department setting group
- Subtype: Security
- Data type: Enumeration
- Default value: Second
- Value options: Second, Minute, Hour, Day, Month, Year
- Can be reset at lower level: No

Allow Local Login for Partition Administrators

Use this setting to define whether or not a partition administrator should be able to log into the application locally once SSO has been enabled. This option is only available to users in partition 1 with the “administer partition” permission. Once enabled, partition administrators may use the following URL to log in:

```
http(s)://HOST_NAME/context_root/web/view/platform/common/login/root.jsp?partitionId=1&localLogin=true.
```

Users outside this partition, or without this permission, will not be able to log in to the application with this URL.

- Type: Partition setting group
- Subtype: Security
- Data type: Enumeration
- Default value: Yes
- Value options: Yes, No
- Can be reset at lower level: No

User Session Settings

Applet Download Time Out (Seconds)

A few applets are used during user sessions. These applets are downloaded when the login screen is opened. Use this setting to define the maximum time for which the system waits for the applets to download. If the download is unsuccessful then the users are advised to close the browser and try to launch the application. It is recommended that you do not set this value for more than 2-3 minutes (120 - 180 seconds).

- Type: Partition settings group
- Subtype: Common
Data type: Integer
Default value: 60
Minimum value: —
Maximum value: —

Inactive Time Out (Seconds)
Use this setting to define the time after which a user session is made inactive if the user does not do any activity in the application. Users can activate the session by providing their password. The session is resumed from the point where it was left.
- Type: Partition settings group
- Subtype: Security
- Data type: Integer
- Default value: 1800
- Minimum: 300
- Maximum: —

Deletion Time Out (Seconds)
Use this setting to define the time for which a user session is kept in the memory of the server after the user session has become inactive. Once this time is elapsed, the system deletes the session from the memory. Users have to login in to the application by providing their user name and password and a new user session is created.
- Type: Partition settings group
- Subtype: Security
- Data type: Integer
- Default value: 3600
- Minimum: 300
- Maximum: —
PCI Compliance Settings

Display a Warning Message to Agents for PCI Compliance

Use this setting to define if the agents should be displayed the PCI Compliance message every time they log in to the Agent Console. The message displayed to the agents is “If you see any credit card account numbers or CVV codes in customer correspondence, please delete them.”

Important: Instead of configuring this setting, you must consider using the Data Masking capabilities (page 206) available in the application. This will help ensure that no sensitive data is exchanged between customers and agents.

- Type: Department setting group
- Subtype: Security
- Data type: Enumeration
- Default value: No
- Value options: Yes, No
- Can be reset at lower level: No

Business Calendar Settings

Business Calendar Time Zone

Use this setting to select the time zone to be used for business calendars.

- Type: Department settings group
- Subtype: General
- Data type: Enumeration
- Default value: (GMT-05:00) Eastern Standard Time (US and Canada)
- Value options:
  (GMT-12:00) Eniwetok, Kwajalein
  (GMT-11:00) Midway Island, Samoa
  (GMT-10:00) Hawaii
  (GMT-09:00) Alaska-Standard
  (GMT-08:00) Alaska-Daylight
  (GMT-08:00) Pacific Standard Time (US & Canada)
  (GMT-07:00) Pacific Daylight Time (US & Canada)
(GMT-07:00) Arizona
(GMT-07:00) Mountain Standard Time (US & Canada)
(GMT-06:00) Mountain Daylight Time (US & Canada)

› Can be reset at lower level: No
Customer Information Settings

Customer Departmentalization

Use this setting to decide if customers should be shared across departments. Enable this setting if you do not want to share customer history and customer information across departments.

![Important: This setting can only be changed while there is one department in the partition. As soon as the second department is created in the partition, the setting becomes disabled and can never be changed.]

- Type: Partition settings group
- Subtype: Security
- Data type: Enumeration
- Default value: No
- Value options: No, Yes

Services Settings

Common Settings for Services

Process Start Timeout (seconds)

When services are started in the system, the DSM monitors them to make sure that all the required services start properly. Use this setting to specify the maximum time for which DSM waits for the services to start. If the services do not start in the specified time, an error is logged in the log files. If the service is started from the System Console, an error message is also displayed to the administrator.

- Type: Partition settings group
- Subtype: General
- Data type: Integer
- Default value: 300
- Minimum value: —
- Maximum value: —
Archive Service Settings

**Archive Service Failover Delay (Minutes)**

The Archive Service needs to report its status at regular intervals to the system. In this setting, specify the maximum time for which the system waits for the service to report its status. If the status is not updated in this duration, the system assumes that the service is not working and restarts the service process.

- Type: Partition settings group
- Subtype: Common
- Data type: Integer
- Default value: 15
- Minimum value: 0
- Maximum value: —

Scheduler Service Settings

**Scheduler Service Failover Delay (Minutes)**

The Scheduler Service needs to report its status at regular intervals to the system. In this setting, specify the maximum time for which the system waits for the service to report its status. If the status is not updated in this duration, the system assumes that the service is not working and restarts the service process.

- Type: Partition settings group
- Subtype: Common
- Data type: Integer
- Default value: 15
- Minimum value: 0
- Maximum value: —

Incoming Email Settings

**Retriever Service Failover Delay**

The Retriever Service needs to report its status at regular intervals to the system. In this setting, specify the maximum time for which the system waits for the service to report its status. If the status is not updated in this duration, the system assumes that the service is not working and restarts the service process.

- Type: Partition settings group
- Subtype: Email retriever
Number of Emails to Retrieve

Use this setting to define the maximum number of emails to be picked by the Retriever Service for processing.

- Type: Partition settings group
- Subtype: Email retriever
- Data type: Integer
- Default value: 15
- Minimum value: 0
- Maximum value: 100

Maximum Email Size for Retriever (MB)

Use this setting to define the maximum size of emails that the Retriever Service can retrieve from the Mail Server. This size includes the email subject, body (text and HTML content), header, and attachments. For example, if the value of the setting is 1 MB, and an email with 1 MB content comes in, this email will not be retrieved, as the size of the email is greater than 1 MB because of headers and both text and HTML parts of email. If the email size exceeds the number specified in this setting, the email is either skipped or deleted, and a notification is sent. This action is defined in the “Action for Large Email” setting.

- Type: Partition settings group
- Subtype: Email retriever
- Data type: Integer
- Default value: 2
- Minimum value: 0
- Maximum value: 35

Maximum Body Size for Retriever (KB)

Use this setting to define the maximum size of the email body that the Retriever Service can retrieve from the Mail Server. This size does not include the header and attachments. If the body size exceeds the size specified in this setting, the body is saved as a text file and is attached to the email. A note is added to the email body that the original email content is available as an attachment. This note can be changed from the “Message note for large body” setting.

- Type: Partition settings group
- Subtype: Email retriever
Message Note for Large Body

Use this setting to change the message added to emails, which exceed the allowed maximum body size for incoming emails.

- Type: Partition settings group
- Subtype: Email retriever
- Data type: String
- Default value: Email body was too large. It is saved as an attachment
- Minimum value: —
- Maximum value: 255

Invalid Chars List

In this setting, list the characters (in the ASCII format) that are not allowed in the “From email address” of incoming emails. If an email address contains these characters, the Retriever Service replaces the email address with the text <Invalid Email Address>.

- Type: Partition settings group
- Subtype: Email retriever
- Data type: String
- Default value: 0,1,2,3,4,5,6,7,8,9,10,11,12,13,14,15,16,17,18,19,20,21,22,23,24,25,26,27,28,29,30,31,32,34,40,41,44,58,59
  ,60,62,64,91,92,93,127
- Minimum value: —
- Maximum value: —

Action for Large Email

Use this setting to decide what should be done with large emails coming in the system. An email is considered as large if it exceeds the size specified in the “Maximum email size for retrieval” setting.

- Type: Partition settings group
- Subtype: Email retriever
- Data type: Enumeration
- Default value: Skip and notify
Value options:

- Skip and Notify: Retriever skips the email and notifies the administrator about the same.
- Delete and Notify: The email is deleted from the mail server and a notification is sent to the administrator.

### Parse Date in Email Header

When this setting is enabled, the Retriever Service gets the “Receive date” or “Send date” from the email header and stores the date in the email tables in the database. If the setting is disabled, the retriever stores the date when the activity for the email was created in the system.

- Type: Partition settings group
- Subtype: Email retriever
- Data type: Enumeration
- Default value: No
- Value options:
  - No: The Retriever Service stores the activity creation date in the email tables.
  - Yes: The Retriever Service stores the “Receive date” or “Send date” in the email table.

### Socket Timeout for Retriever (Seconds)

Use this setting to define the timeout value, in seconds, of the socket which is used to connect to the IMAP or POP3 server to fetch emails. After the configured timeout, the retriever closes old socket and create a new one to try to reconnect and fetch emails. This setting comes into play when the retriever is connected to the server, but is not able to read data from the server. After the defined timeout, the retriever closes the socket, creates a new one, and tries to reconnect and retrieve emails.

**Important:** The value of this setting should be changed only under the advice of the Cisco TAC.

- Type: Partition settings group
- Subtype: Email retriever
- Data type: Integer
- Default value: 300
- Minimum value: 30
- Maximum value: 900

### Spam Emails Settings

Spam emails are emails that are sent from the addresses (email address or domain address) that are blocked in a department. When the Retriever Services picks up emails from the Mail Server, it checks the “from address” and
if the address matches a blocked email address or domain address, it is marked as a spam email and that email is not retrieved. Use the settings described in this section to decide what you want to do with the spam emails.

**Action on Spam Emails**

Use this setting to decide what retriever should do with the spam emails coming in the system.

- Type: Partition settings group
- Subtype: Email retriever
- Data type: Enumeration
- Default value: Write to file
- Value options:
  - Delete: Emails are deleted.
  - Write to file: Emails are saved in the `Cisco_Home\eService\logs\RxSpamEmails.txt` file. The size of this file is defined in the “Spam mail maximum file size (megabyte)” setting.
  - Redirect: Emails are redirected to another email address configured in the “Spam mail redirection to address” settings.

**Spam Mail Maximum File Size (MB)**

In this setting define the maximum size of the file in which the spam emails are saved. When the file reaches the maximum size, it is renamed and a new `RxSpamEmails.txt` file is created. An email is sent to the administrator to notify that a new file has been created. The value of this setting cannot be changed from the UI.

- Type: Partition settings group
- Subtype: Email retriever
- Data type: Integer
- Default value: 2
- Minimum value: 1
- Maximum value: —

**Spam Mail Redirection From Address**

Use this setting to specify the email address displayed in the “from” field of the redirected spam emails.

- Type: Partition settings group
- Subtype: Email retriever
- Data type: String
- Default value: —
- Minimum value: 0
- Maximum value: 255
Spam Mail Redirection To Address
Use this setting to specify the email address to which the redirected spam emails should be sent.

- Type: Partition settings group
- Subtype: Email retriever
- Data type: String
- Default value: —
- Minimum value: 0
- Maximum value: 255

Spam Mails Auto Bcc
Provide the email address to which the Bcc copy of the spam email should be sent.

- Type: Partition settings group
- Subtype: Email dispatcher-Mail
- Data type: String
- Default value: —
- Minimum value: 0
- Maximum value: 255

Spam Mail Redirection SMTP Preference
To be able to redirect spam emails to another email address, you need to configure the various properties of the mail server to be used to send the redirected emails. These properties are configured through a group of settings (called the SMTP preferences). In this setting, specify the set of SMTP preferences to be used for redirecting spam emails. If you do not specify a value in this setting, the “Default SMTP preferences” are used.

The SMTP preference set includes the following settings: Spam mails SMTP server, Spam mails SMTP protocol, Spam mails SMTP port, SMTP Flag, Spam mails SMTP user name, and Spam mails SMTP password.

You can choose to use the “Default SMTP preferences” to redirect the spam emails. If you want to do that, do not set any values in the settings that are part of the spam SMTP preferences and the system will automatically use the “Default SMTP preferences” to send out the redirected spam emails.

- Type: Partition settings group
- Subtype: Email retriever
- Data type: String
- Default value: Mail.SpamEmails
- Minimum value: 0
- Maximum value: 255
**Spam Mails SMTP Server**

In this setting provide the name of the outgoing server to be used to redirect the spam emails.

- Type: Partition settings group
- Subtype: Email dispatcher-Mail
- Data type: String
- Default value: —
- Value options: —

**Spam Mails SMTP Protocol**

In this setting select the protocol (SMTP or ESMTP) to be used for the outgoing server.

- Type: Partition settings group
- Subtype: Email dispatcher-Mail
- Data type: Enumeration
- Default value: SMTP
- Value options: SMTP, ESMTP

**Spam Mails SMTP Port**

In this setting provide the port of the outgoing server. The value of the setting cannot be changed from the UI.

- Type: Partition settings group
- Subtype: Email dispatcher-Mail
- Data type: Integer
- Default value: 25
- Value options: —

**SMTP Flag**

If the value selected in the “Default SMTP Protocol” setting is “ESMTP”, this setting needs to be configured to decide if the SMTP protocol should be used if the authentication fails.

- Type: Partition settings group
- Subtype: Email dispatcher-Mail
- Data type: Enumeration
- Default value: Never
- Value options:
  - Never: The switch to SMTP protocol (if ESMTP authentication fails) is not allowed.
If authentication fails: The switch to SMTP protocol (if ESMTP protocol fails) is allowed if the ESMTP authentication fails.

**Spam Mails SMTP User Name**

If the value selected in the “Default SMTP Protocol” setting is “ESMTP”, provide the user name to be used to connect to the mail server.

- Type: Partition settings group
- Subtype: Email dispatcher-Mail
- Data type: String
- Default value: —
- Minimum value: 0
- Maximum value: 255

**Spam Mails SMTP Password**

If the value selected in the “Default SMTP Protocol” setting is “ESMTP”, provide the password to be used to connect to the mail server.

- Type: Partition settings group
- Subtype: Email dispatcher-Mail
- Data type: Encrypted
- Default value: —
- Minimum value: 0
- Maximum value: 255

**Exception Email Settings**

Exception emails are the emails which the Retriever Service fails to parse or store in the database.

**Action On Exception Emails**

Use this setting to decide what the Retriever Service should do with the emails it was unable to retrieve (such as, emails that could not be parsed, emails that could not be inserted in the database, etc.).

- Type: Partition settings group
- Subtype: Email retriever
- Data type: Enumeration
- Default value: Redirect and write to file
- Value options:
  - Delete: Emails are deleted.
Write to file: Emails are saved in the `Cisco_Home\eService\storage\1\mail\Exception Emails\RxExcepEmails.txt` file. The size of this file is defined in the “Exception mail maximum file size (megabyte)” setting.

Redirect and write to file: Emails are redirected to another email address configured in the “Exception mail redirection to address” settings and they are also saved in the `Cisco_Home\eService\storage\1\mail\Exception Email\RxExcepEmails.txt` file. The size of this file is defined in the “Exception mail maximum file size (megabyte)” setting.

### Exception Mail Maximum File Size (MB)

In this setting define the maximum size of the `Cisco_Home\eService\storage\1\mail\Exception Emails\RxExcepEmails.txt` file in which the exception emails are saved. When the file reaches the maximum size, it is renamed and a new RxExcepEmails.txt file is created. An email is sent to the administrator to notify that a new file has been created. The value of this setting cannot be changed from the UI.

- Type: Partition settings group
- Subtype: Email retriever
- Data type: Integer
- Default value: 2
- Minimum value: 1
- Maximum value: —

### Exception Mail Redirection From Address

Use this setting to specify the email address displayed in the “from” field of the redirected exception emails.

- Type: Partition settings group
- Subtype: Email retriever
- Data type: String
- Default value: —
- Minimum value: 0
- Maximum value: 255

### Exception Mail Redirection To Address

Use this setting to specify the email address to which the redirected exception emails should be sent.

- Type: Partition settings group
- Subtype: Email retriever
- Data type: String
- Default value: —
- Minimum value: 0
Maximum value: 255

**Exception Mails Auto Bcc**

Provide the email address to which the Bcc copy of the exception email should be sent.

- Type: Partition settings group
- Subtype: Email dispatcher-Mail
- Data type: String
- Default value: —
- Minimum value: 0
- Maximum value: 255

**Exception Mail Redirection SMTP Preference**

To be able to redirect exception emails to another email address, you need to configure the various properties of the mail server to be used to send the redirected emails. The properties are configured through a group of settings (called the SMTP preferences). In this setting, specify the set of SMTP preferences to be used for redirecting exception emails. If you do not specify a value in this setting, the “Default SMTP preferences” are used to send out the redirected exception emails.

The SMTP preference set includes the following settings: Exception mails SMTP server, Exception mails SMTP protocol, Exception mails SMTP port, SMTP Flag, Exception mails SMTP user name, and Exception mails SMTP password.

You can choose to use the “Default SMTP preferences” to redirect the exception emails. If you want to do that, do not set any values in the settings that are part of the spam SMTP preferences and the system will automatically use the “Default SMTP preferences” to send out the redirected exception emails.

- Type: Partition settings group
- Subtype: Email retriever
- Data type: String
- Default value: Mail.ExcepEmails
- Minimum value: 0
- Maximum value: 255

**Exception Mails SMTP Server**

In this setting provide the name of the outgoing server to be used to redirect the exception emails.

- Type: Partition settings group
- Subtype: Email dispatcher-Mail
- Data type: String
- Default value: —
Exception Mails SMTP Protocol

In this setting select the protocol (SMTP or ESMTP) to be used for the outgoing server.

- Type: Partition settings group
- Subtype: Email dispatcher-Mail
- Data type: Enumeration
- Default value: SMTP
- Value options: SMTP, ESMTP

Exception Mails SMTP Port

In this setting provide the port of the outgoing server. The value of this setting cannot be changed from the UI.

- Type: Partition settings group
- Subtype: Email dispatcher-Mail
- Data type: Integer
- Default value: 25
- Value options: —

SMTP Flag

If the value selected in the “Default SMTP Protocol” setting is “ESMTP”, this setting needs to be configured to decide if the SMTP protocol should be used if the authentication fails.

- Type: Partition settings group
- Subtype: Email dispatcher-Mail
- Data type: Enumeration
- Default value: Never
- Value options:
  - Never: The switch to SMTP protocol (if ESMTP authentication fails) is not allowed.
  - If authentication fails: The switch to SMTP protocol (if ESMTP protocol fails) is allowed if the ESMTP authentication fails.

Exception Mails SMTP User Name

If the value selected in the “Default SMTP Protocol” setting is “ESMTP”, provide the user name to be used to connect to the mail server.

- Type: Partition settings group
Exception Mails SMTP Password

If the value selected in the “Default SMTP Protocol” setting is “ESMTP”, provide the password to be used to connect to the mail server.

Outgoing Email Settings

Number Of New Emails to Dispatch

While sending out emails, the Dispatcher Service picks up some new emails and some retry emails (which it failed to send in the earlier attempts). Use this setting to define the maximum number of new emails to be picked by the dispatcher.

Number Of Retry Emails to Dispatch

While sending out emails, the Dispatcher Service picks up some retry emails (which it failed to send in the earlier attempts) and some new emails. Use this setting to define the maximum number of retry emails to be picked by the dispatcher.
Maximum Body Size for Dispatcher (KB)

Use this setting to define the maximum body size of an outgoing email. This size considers only the email body size and excludes the email attachments. The system will not allow agents or workflows to create outgoing emails whose body size is larger than this setting value. Users are notified while composing email from the Agent Console, and while configuring workflows from Administration Console. If a system generated email (auto-acknowledgements, auto-replies etc.) exceeds this size, the email will not be sent and a notification is sent to the email address configured in the “To: address for notification from Services” setting.

Note: The value of this setting should be 40% less than the email size configured on the SMTP server. This buffer is needed because email data (content and attachments) is encoded before an email is sent out by the SMTP server. For example, if the size configured on SMTP is 10 MB, the value of this setting should be 6 MB.

Maximum Email Size for Dispatcher (MB)

Use this setting to define the maximum size of an outgoing email. This size includes the body of the email and the attachments. The system will not allow agents or workflows to create outgoing emails whose size is larger than this setting value. Users are notified while composing email from the Agent Console, and while configuring workflows from Administration Console. If a system generated email (auto-acknowledgements, auto-replies etc.) exceeds this size, the email will not be sent and a notification is sent to the email address configured in the “To: address for notification from Services” setting.

Note: The value of this setting should be 40% less than the email size configured on the SMTP server. This buffer is needed because email data (content and attachments) is encoded before an email is sent out by the SMTP server. For example, if the size configured on SMTP is 10 MB, the value of this setting should be 6 MB.
Dispatcher Service Failover Delay

The Dispatcher Service needs to report its status at regular intervals to the system. In this setting, specify the maximum time for which the system waits for the service to report its status. If the status is not updated in this duration, the system assumes that the service is not working and restarts the service process.

- Type: Partition settings group
- Subtype: Email dispatcher - Generic
- Data type: Integer
- Default value: 15
- Minimum value: 0
- Maximum value: —

Mail Default SMTP Preference

In this setting specify the set of SMTP preferences to be used for sending out emails from email address for which properties have not been configured in the “Alias” node of the Administration Console. The value of the setting cannot be changed from the UI.

- Type: Partition settings group
- Subtype: Email dispatcher - Mail
- Data type: String
- Default value: NotificationEmails
- Minimum value: 0
- Maximum value: 255

To: Address for Notifications From Services

DSM sends out notifications when any error occurs in the functioning of services (example, retriever, dispatcher, etc). Use this setting to specify the email address to which notifications are sent by the DSM.

- Type: Partition settings group
- Subtype: Common
- Data type: String
- Default value: —
- Minimum value: 0
- Maximum value: 255
From: Address for Notifications From Services

DSM sends out notifications when any error occurs in the functioning of services (example, retriever, dispatcher, etc). Use this setting to specify the email address displayed in the “from” field of the notifications sent by the DSM.

- Type: Partition settings group
- Subtype: Common
- Data type: String
- Default value: —
- Minimum value: 0
- Maximum value: 255

Socket Timeout for Dispatcher (Minutes)

Use this setting to define the timeout value, in minutes, of the socket which is used to connect to SMTP or ESMTP server to send out emails. After the configured timeout, dispatcher closes the socket and create a new one to try to reconnect and send emails. This settings comes into play when dispatcher is connected to the server, but is not able to write data to the server. After the defined time-out, dispatcher closes the socket, creates a new one, and tries to reconnect and send emails.

**Important:** The value of this setting should be changed only under the advice of the Cisco TAC.

- Type: Partition settings group
- Subtype: Email dispatcher - Generic
- Data type: Integer
- Default value: 5
- Minimum value: 0
- Maximum value: 10

Notification Settings for the Retriever Service

Notification emails are sent to administrators when the Retriever Service is unable to retrieve emails because of some errors, including:

- Retriever fails to parse emails
- Retriever fails to insert emails in the database
- Retriever fails to connect to the Mail Server
- Retriever fails to retrieve attachments

Configure the settings described in this section to send out notifications to administrators.
The address to which these notifications are sent, is specified in the “To: address for notifications from services” setting and the from email address is specified in the “From: address for notifications from services” setting.

**Notification Mails Auto Bcc**

Provide the email address to which the Bcc copy of the notification email should be sent to.

- Type: Partition settings group
- Subtype: Email dispatcher-Mail
- Data type: String
- Default value: —
- Minimum value: 0
- Maximum value: 255

**Notification Mail Dispatching SMTP Preference**

To be able to send notification emails out of the system, you need to configure the various properties of the mail server to be used to send the emails. The properties are configured through a group of settings (called the SMTP preferences). In this setting, specify the set of SMTP preferences to be used for sending notification emails. If you do not specify a value in this setting, the “Default SMTP preferences” are used to send out the notification emails.

The SMTP preference set includes the following settings: Notification mails SMTP server, Notification mails SMTP protocol, Notification mails SMTP port, SMTP Flag, Notification mails SMTP user name, and Notification mails SMTP password.

You can choose to use the “Default SMTP preferences” to send out the notification emails. If you want to do that, do not set any values in the settings that are part of the notification SMTP preferences and the system will automatically use the “Default SMTP preferences” to send out the notification emails.

- Type: Partition settings group
- Subtype: Email retriever
- Data type: String
- Default value: Mail.NotificationEmails
- Minimum value: 0
- Maximum value: 255

**Notification Mails SMTP Server**

In this setting provide the name of the outgoing server to be used to send out notification emails.

- Type: Partition settings group
- Subtype: Email dispatcher-Mail
- Data type: String
- Default value: —
Minimum value: 0
Maximum value: 255

**Notification Mails SMTP Protocol**
In this setting select the protocol (SMTP or ESMTP) to be used for the outgoing server.
- Type: Partition settings group
- Subtype: Email dispatcher-Mail
- Data type: Enumeration
- Default value: SMTP
- Value options: SMTP, ESMTP

**Notification Mails SMTP Port**
In this setting provide the port of the outgoing server.
- Type: Partition settings group
- Subtype: Email dispatcher-Mail
- Data type: Integer
- Default value: 25
- Value options: —

**SMTP Flag**
If the value selected in the “Default SMTP Protocol” setting is “ESMTP”, this setting needs to be configured to decide if the SMTP protocol should be used if the authentication fails.
- Type: Partition settings group
- Subtype: Email dispatcher-Mail
- Data type: Enumeration
- Default value: Never
- Value options:
  - Never: The switch to SMTP protocol (if ESMTP authentication fails) is not allowed.
  - If authentication fails: The switch to SMTP protocol (if ESMTP protocol fails) is allowed if the ESMTP authentication fails.

**Notification Mails SMTP User Name**
If the value selected in the “Default SMTP Protocol” setting is “ESMTP”, provide the user name to be used to connect to the mail server.
- Type: Partition settings group
Notification Mails SMTP Password

If the value selected in the “Default SMTP Protocol” setting is “ESMTP”, provide the password to be used to connect to the mail server.

- Type: Partition settings group
- Subtype: Email dispatcher-Mail
- Data type: Encrypted
- Default value: —
- Minimum value: 0
- Maximum value: 255

Notification Email Settings

For various objects in the system, you can configure notifications to be sent to administrators. Some of the objects for which you can configure notifications are, Monitors (in the Supervision Console), Reports (in the Reports Console), Alarm workflows (in the Administration Console), Abandoned chats (in the Administration Console). The address to which these notifications are sent, is specified in the properties of the object and the from email address is specified in the “From: address for notifications from services” setting.

Also, notification emails are sent to administrators to notify about various conditions in the system (specifically services) that need attention. The address to which these notifications are sent, is specified in the “To: address for notifications from services” setting and the from email address is specified in the “From: address for notifications from services” setting.

The settings described in this section are not used for the Retriever Service as this service has its own separate set of settings for sending notifications. For more details, see “Notification Settings for the Retriever Service” on page 81.

Default SMTP Server

In this setting provide the name of the outgoing server.

- Type: Partition settings group
- Subtype: Email dispatcher - Generic
- Data type: String
- Default value: —
- Minimum value: 0
Maximum value: 256

Default SMTP Protocol
In this setting select the protocol (SMTP or ESMTP) to be used for the outgoing server.

- Type: Partition settings group
- Subtype: Email dispatcher - Generic
- Data type: Enumeration
- Default value: SMTP
- Value options: SMTP, ESMTP

Default SMTP Port
In this setting provide the port of the outgoing server. The value of the setting cannot be changed from the UI.

- Type: Partition settings group
- Subtype: Email dispatcher - Generic
- Data type: String
- Default value: 25
- Value options: —

SMTP Flag
If the “Default SMTP Protocol” setting is set as “ESMTP” this setting needs to be configured to decide if the SMTP protocol should be used if the authentication fails.

- Type: Partition settings group
- Subtype: Email dispatcher - Generic
- Data type: Enumeration
- Default value: Never
- Value options:
  - Never: The switch to SMTP protocol (if ESMTP authentication fails) is not allowed.
  - If authentication fails: The switch to SMTP protocol (if ESMTP protocol fails) is allowed if the ESMTP authentication fails.

Default SMTP User Name
If the “Default SMTP Protocol” setting is set as “ESMTP”, provide the user name to be used to connect to the mail server.

- Type: Partition settings group
- Subtype: Email dispatcher - Generic
Default SMTP Password

If the “Default SMTP Protocol” setting is set as “ESMTP”, provide the password to be used to connect to the mail server.

- Type: Partition settings group
- Subtype: Email dispatcher - Generic
- Data type: Encrypted
- Default value: —
- Minimum value: 0
- Maximum value: 255

Blocked Attachments Settings

Email for Scan

Use this setting to configure the criteria for blocking attachments. You can choose to block attachments for incoming emails, or for both incoming and outgoing emails.

**Important:** After changing the value of the setting, you need to restart all retriever instances in the system.

- Type: Department settings group
- Subtype: Email blocked file ext
- Data type: Enumeration
- Default value: Inbound emails only
- Value options: Inbound email only, Both inbound and outbound emails
- Can be reset at lower level: No

Block All Attachments

Use this setting to block all attachments coming in the system.
Settings 87

Type: Department settings group
Subtype: Email blocked file ext
Data type: Enumeration
Default value: No
Value options: Yes, No
Can be reset at lower level: No

**Action on Blocked Attachments**

Use this setting to decide what should be done with all the block attachments. You can either save the attachments in the `Cisco_Home\eService\storage\1\mail\attachments` folder or you can delete them.

Important: After changing the value of the setting, you need to restart all retriever instances in the system.

Type: Department settings group
Subtype: Email blocked file ext
Data type: Enumeration
Default value: Quarantine
Value options:
- Quarantine: The attachment is saved in the `Cisco_Home\eService\storage\1\mail\attachments` folder and a notification email is sent to the administrator.
- Delete: The attachment is deleted.
Can be reset at lower level: No

**Workflow Settings**

**Alarm Service Failover Delay (Minutes)**

The Alarm Service needs to report its status at regular intervals to the system. In this setting, specify the maximum time for which the system waits for the service to report its status. If the status is not updated in this duration, the system assumes that the service is not working and restarts the service process.

Type: Partition settings group
Subtype: Common
Alarm Service Delay

Use this setting to specify the time interval (in seconds) after which the system triggers the alarms configured in the alarm workflows.

- Type: Partition settings group
- Subtype: Common
- Data type: Integer
- Default value: 30
- Minimum value: 0
- Maximum value: —

From Email Address for Alarm

Use this setting to configure the email address to be displayed in the “From” field of alarm notifications.

- Type: Department settings group
- Subtype: Common
- Data type: String
- Default value: —
- Minimum value: 0
- Maximum value: 255
- Can be reset at lower level: No

BP Rules Service Failover Delay (Minutes)

The Workflow Engine Service needs to report its status at regular intervals to the system. In this setting, specify the maximum time for which the system waits for the service to report its status. If the status is not updated in this duration, the system assumes that the service is not working and restarts the service process.

- Type: Partition settings group
- Subtype: Common
- Data type: Integer
- Default value: 15
Include Original Message for Auto Acknowledgement and Auto Reply

Use this setting to include the content of incoming emails in the auto-acknowledgement and auto-reply emails sent to customers in response to the incoming emails.

- Type: Department settings group
- Subtype: Activity
- Data type: Enumeration
- Default value: Enable
- Value options: Disable, Enable
- Can be reset at lower level: Yes

Auto Response Number

Use this setting to define the number of auto-acknowledgements and auto-responses to be sent to a customer in a specified time duration. The time duration is configured through the “Auto response time” setting. For example, if the value in this setting is three and a customer sends four emails in one hour (time duration configured through the “Auto response time” setting), the customer will get auto responses to three emails only.

- Type: Partition settings group
- Subtype: Workflow engine
- Data type: Integer
- Default value: 3
- Minimum value: 3
- Maximum value: 10
- Can be reset at lower level: No

Auto Response Time

In this setting define the time duration (in minutes) to be considered to decide the number of auto responses to be sent to a customer.

- Type: Partition settings group
- Subtype: Workflow engine
- Data type: Integer
- Default value: 1440
Minimum value: 360
Maximum value: 1440

**Batch Expiry Duration**

The Workflow Engine service picks a batch of activities for processing and from that batch, it processes one activity at a time. If the service is unable to process ten consecutive activities from a batch, the batch is marked as expired. Use this setting to define the time for which the Workflow Engine Service waits to pick up the expired batch for processing again.

- Type: Partition settings group
- Subtype: Workflow engine
- Data type: Integer
- Default value: 30
- Minimum value: 30
- Maximum value: 1440

**Batch Size**

Use this setting to define the number of activities to be picked up by the Workflow Engine Service at a time for processing.

- Type: Partition settings group
- Subtype: Workflow engine
- Data type: Integer
- Default value: 200
- Minimum: —
- Maximum: —

**Workflow Engine Service Delay**

Use this setting to define the time interval (in seconds) at which the Workflow Engine Service processes batches of activities. Batch processing includes, picking up a batch of activities, applying the workflow, and assigning the activity to users or queues.

- Type: Partition settings group
- Subtype: Workflow engine
- Data type: Integer
- Default value: 30
- Minimum: —
- Maximum: —
Work Allocation Failover Delay (Minutes)

In the Workflow Engine Service process, a workflow allocation thread runs and allocates work (activities) to the workflow Engine service instances. The workflow allocation thread needs to report its status at regular intervals to the system. In this setting, specify the maximum time for which the system waits for the thread to report its status. If the status is not updated in this duration, the system assumes that the thread is not working and restarts the Workflow Engine Service process.

- Type: Partition settings group
- Subtype: Common
- Data type: Integer
- Default value: 15
- Minimum: 0
- Maximum: —

Set “From” Email Address for Email Activities Transferred Between Departments

This setting determines how the from email address is set for the email activities that are transferred to the department from other departments. Administrators can choose from the following options:

- **Do not change:** The original email address set in the From field is retained.
- **Use default alias of destination department:** The From email address is set to the default alias configured for the department. Make sure that a default alias is configured for the department.
- **Force agents to select “From” email address:** The value of the “From” field is reset to “Please select an email address” and agents are required to pick the From address while sending out the email.

- Type: Department setting group
- Subtype: Activity
- Data type: Enumeration
- Default value: Do not change
- Value options: Do not change, Use default alias of destination department, Force agents to select “From” email address
- Can be reset at lower level: No

Activity Assignment Settings

Mail User Max Load

This setting determines the maximum email activities that can be assigned to agents by workflows or other agents. When an agent reaches the maximum number, workflows cannot assign new activities to the agent and other agents cannot transfer activities to the agent, but the agent can pull activities. All open email activities in
the agent’s inbox qualify for this setting. It can take any numeric value. A value of -1 denotes that infinite number of emails can be assigned to the agent.

- Type: Department settings group, User settings group
- Subtype: Activity
- Data type: Integer
- Default value: -1
- Minimum value: —
- Maximum value: —
- Can be reset at lower level: Yes

**Chat - User Max Load**

This setting determines the maximum chat activities that can be assigned to a user at a given moment. When an agent reaches the maximum number, new chats cannot be assigned to the agent.

- Type: Department settings group
- Subtype: Activity
- Data type: Integer
- Default value: 4
- Minimum value: 1
- Maximum value: —
- Can be reset at lower level: Yes

**Chat - Override User Max Load Setting for Pull**

Use this setting to allow agents to pull chat activities from queues after the agents have reached the maximum value defined in the “Chat user max load” setting.

- Type: Department settings group
- Subtype: Activity
- Data type: Enumeration
- Default value: No
- Value options: Yes, No
- Can be reset at lower level: No
Max Load for All Other Activities

This setting determines the maximum activities, other than emails and chats, that can be assigned to agents by workflows. When a user reaches the maximum number, workflows cannot assign new activities to the agent but, the agent can pull activities and other agents can transfer activities to the agent.

- Type: Department settings group, User settings group
- Subtype: Activity
- Data type: Integer
- Default value: -1
- Minimum value: —
- Maximum value: —
- Can be reset at lower level: Yes

Personalized Activity Assignment Settings

The personalized activity assignment feature allows you to assign activities pertaining to a case to the agent who last sent a response for that case. This feature applies to email activities. For example, say an email (activity ID 1001) comes in for case 2001, and agent Mary responds to the activity. The next email reply (activity ID 1003) from the customer will be assigned to agent Mary. Say, agent Mary transfers the activity to agent John, and agent John responds to this email, the next email (activity ID 1005) for the case 2001 will be assigned to agent John.

This feature works in conjunction with the “Ignore User Max Load for Personalized Activity Assignment” setting. When the Ignore User Max Load for Personalized Activity Assignment setting is enabled, the personalized activity assignment will happen even though the user has reached the maximum load for emails. When the setting is disabled, the Personalized Activity Assignment setting takes affect only when the user has not reached the maximum allowed load (value specified in the setting “Mail user max load”).

To view or configure the personalized activity assignment settings, click the Assistance button in the Value field of the setting.

To use the Personalized Activity Assignment feature for integrated users, the Routing Scripts in Unified CCE need to be configured a certain way. For details, see http://docwiki.cisco.com/w/index.php?title=Sticky_Agent_Configuration&oldid=43651

Personalized Activity Assignment

Use this setting to enable the personalized activity assignment feature and to define if personalized activity assignment should happen always, or only when the agent is logged in and available for emails.

- Type: Department settings group
- Subtype: Queue
- Data type: Enumeration
- Default value: Logged in
- Value options:
Logged in: Activities are assigned to the agent only when the agent is logged in to the application and is available for emails (Availability options in agent inbox are selected).

Always: Activities are always assigned to the agent whether the agent is logged in or not.

Disable: Personalized activity assignment is disabled.

Can be reset at lower level: No

Enable Personalized Activity Assignment for Forwarded Emails

Use this setting to enable personalized activity assignment for forwarded emails. For example, if an agent forwards an email from a case, and another email comes in for the same case, it will get assigned to the agent who had forwarded the last email.

Type: Department settings group
Subtype: Queue
Data type: Enumeration
Default value: Yes
Value options: Yes, No
Can be reset at lower level: No

Enable Personalized Activity Assignment for Foreign Users

Use this setting to enable personalized activity assignment feature for foreign users in a department.

Type: Department settings group
Subtype: Queue
Data type: Enumeration
Default value: Yes
Value options: Yes, No
Can be reset at lower level: No

Ignore User Max Load for Personalized Activity Assignment

Important: This setting does not apply to integrated agents.

Use this setting to override the user max load setting if an email activity that qualifies for personalized activity assignment. When this setting is disabled, the Personalized Activity Assignment setting takes affect only when the user has not reached the maximum allowed load (value specified in the setting “Mail user max load”).

Type: Department settings group
Subtype: Activity
Data type: Enumeration
Service Status for Autopushback

Use this setting to enable the auto-pushback feature for your department. Auto-pushback helps you to automatically pull back activities from logged out agents and assign these activities to other available agents. Pinned activities are not candidates for auto-pushback. Along with this setting, make sure you configure the time duration after which an activity should be considered for pushback and the criteria for activities to be pushed back from the agent’s inbox. Note that these auto-pushback settings apply to the following activities - inbound emails associated with queues, supervisory activities associated with queues, tasks associated with queues, and custom activities associated with queues. The following activities are not considered for auto-pushback - rejected supervisory activities, drafts, pinned activities, locked activities, and outbound emails.

- Type: Department settings group
- Subtype: Activity pushback
- Data type: Enumeration
- Default value: Enabled
- Value options: Disabled, Enabled
- Can be reset at lower level: No

Expiry Time for Autopushback (Minutes)

In this setting, define the time duration after which an activity is pulled back from an agent and is sent back to the original queue to be reassigned to another agent.

- Type: Department settings group, User settings group
- Subtype: Activity pushback
- Data type: Integer
- Default value: 30
- Minimum value: 0
- Maximum value: —
- Can be reset at lower level: Yes

Activity Type for Autopushback

In this setting, determines the criteria for automatically pulling back activities from the agent’s inbox.

- Type: Department settings group, User settings group
- Subtype: Activity pushback
Data type: Enumeration
Default value: New activities only
Value options:
- None: No activities will be pushed back to the queues.
- New activities only: Only activities with substatus “New” will be pushed back to the queues.
- Both new and incomplete activities: All the activities will be pushed back to the queues.
Can be reset at lower level: Yes

Activities to Pull First
This setting determines the criteria for pulling activities in the Agent Console. When the agent clicks the Pull Next button in the Agent Console, the activities based on this criteria are assigned to the agent.
- Type: Department settings group, User settings group
- Subtype: Activity
- Data type: Enumeration
- Default value: Oldest
- Value options: Most overdue, Due Soonest, Highest Priority, Newest, Oldest
- Can be reset at lower level: Yes

Maximum Activities to Display for Pull
Use this setting to specify the maximum number of activities that are displayed in the Pull activities window in the Agent Console.
- Type: Partition settings group
- Subtype: Activity
- Data type: Integer
- Default value: 50
- Minimum value: —
- Maximum value: —

Maximum Activities to Pull
This setting determines the maximum number of activities that are assigned to an agent when he clicks the Pull Next button in the Agent Console.
- Type: Department settings group, User settings group
- Subtype: Activity
- Data type: Integer
Automatically Save Pull Activity Queue

Use this setting to automatically decide the queues from which an agent is assigned activities when he clicks the **Pull Next** button. When the setting is enabled the agent is not allowed to select the queues from the Preferences window in the Agent Console. All the queues on which the agent has pull permission are selected automatically.

- Type: Department settings group
- Subtype: General
- Data type: Enumeration
- Default value: No
- Value options: No, Yes
- Can be reset at lower level: No

Criteria for Push Based Assignment

This setting determines the criteria for assigning activities from queues to agents.

- Type: Department settings group
- Subtype: Activity
- Data type: Enumeration
- Default value: Due soonest
- Value options: Most overdue, Due Soonest, Highest Priority, Newest, Oldest
- Can be reset at lower level: No

Monitor Settings

Common Settings for Monitors

**Data Capturing Interval**

Use this setting to decide the time interval after which the information in the supervision tables is updated in the database.

- Type: Partition settings group
- Subtype: Monitoring
- Data type: Integer
- Default value: 60
- Minimum: 0
- Maximum: —

**Refresh Interval (Seconds)**

Use this setting to define the time interval after which the information displayed in the monitors window (in the Supervision Console) is refreshed.

- Type: Department settings group, User settings group
- Subtype: Monitoring
- Data type: Integer
- Default value: 30
- Minimum value: 0
- Maximum value: —
- Can be reset at lower level: Yes

**Number of Activities to be Monitored for Service Level**

Use this setting to define the number of completed activities (emails and tasks) that should be considered for calculating while calculating the service levels for emails and tasks.

- Type: Department settings group
- Subtype: Monitoring
- Data type: Integer
- Default value: 10
- Minimum value: 1
- Maximum value: —
- Can be reset at lower level: No

**Chat - SLA Threshold Interval (Seconds)**

This setting is required for the, Chat - Current service level (%) and Chat - Daily service level (%), queue-monitoring attributes, viewed from the Supervision Console. With this setting you can decide the threshold interval (in seconds) that all in-progress sessions are checked against, to measure what percentage had a wait time lesser than the threshold. Any session picked up after a wait time lesser than this threshold is counted as having met the service level. The service level is shown as an aggregate percentage based on how many sessions have met the service level and gives an indication of the timely pick-up of sessions by agents. If this value is set to blank, then the “Chat - Current service level (%)” and “Chat - Daily service level (%)” attributes will show a value of 100% for all queues. The default value is 600.
Chat - Daily Service Level Sample Set Definition
This setting defines if the abandoned chat activities should be considered while calculating the daily service level for chats.

Notification Settings for System Monitors
Use these settings to send out notifications for the monitors configured in the system partition. These settings are available in the Administration Console of the system partition.

Default SMTP Server
Use this setting to specify the outgoing server to be used for sending out notifications for monitors configured in the system partition.

Default SMTP Protocol
In this setting select the protocol (SMTP or ESMTP) to be used for the outgoing server.
Default SMTP Port
In this setting provide the port of the outgoing server. The value of the setting cannot be changed from the UI.

SMTP Flag
If the value selected in the “Default SMTP Protocol” setting is “ESMTP”, this setting needs to be configured to decide if the SMTP protocol should be used if the authentication fails.

Default SMTP User Name
If the value selected in the “Default SMTP Protocol” setting is “ESMTP”, provide the user name to be used to connect to the mail server.
**Default SMTP Password**

If the value selected in the “Default SMTP Protocol” setting is “ESMTP”, provide the password to be used to connect to the mail server.

- Type: Partition settings group
- Subtype: Email dispatcher - Generic
- Data type: Encrypted
- Default value: —
- Minimum value: 0
- Maximum value: 255

---

**Activity Handling Settings**

**Common Settings for Activities**

**Alert Agent When Activity Is Assigned**

Use this setting to decide if an alert should be displayed to agents when new activities are assigned to them. If the Agent Console is minimized, or not in focus, an alert is displayed in the bottom right hand side section of the screen. This setting does not apply to chat activities.

- Type: Department settings group, User settings group
- Subtype: Activity
- Data type: Enumeration
- Default value: Always
- Value options:
  - Never: Activity is displayed in the Inbox, but no alert is displayed to agents.
  - Always: An alert is displayed every time an activity is assigned to the agent.
  - When the agent has no open activity: The alert is displayed only when the agent has no activities in the inbox.
- Can be reset at lower level: Yes

**Send Agent an Email When Activities Are Assigned**

Use this setting to decide if an email notification should be sent to agents when new activities are assigned to them. This setting does not apply to chat activities.

- Type: Department settings group, User settings group
- Subtype: Common
Data type: Enumeration
Default value: Never
Value options:
- Never: Email notifications will not be sent.
- When Logged In: Email notifications will be sent only if the agent is logged in.
- When not Logged in: Email notifications will be sent only if the agent is not logged in.
- Always: Email notifications will always be sent whether the agent is logged in or not.
Can be reset at lower level: Yes

**Alert Subject**

Notifications can be sent to users when new activities are assigned to them. Use this setting to configure the subject of these notifications.

- Type: Department settings group
- Subtype: Common
- Data type: String
- Default value: You have received a new activity
- Value options: —
- Can be reset at lower level: No

**Alert Body**

Notification can be sent to users when new activities are assigned to them. Use this setting to configure the message displayed in these notifications.

- Type: Department settings group
- Subtype: Common
- Data type: String
- Default value: You have received a new activity (id = `activity_id`) from customer identified by `contact_point_data`
- Value options: —
- Can be reset at lower level: No

**Force Activity Categorization**

Use this setting to ensure that agents assign categories to each activity before completing it. This setting does not apply to chat activities. For chat, use the Chat - Force Activity Categorization setting.

- Type: Department settings group
- Subtype: Activity
**Force Resolution Code**

Use this setting to ensure that agents assign resolution codes to each activity before completing it. This setting does not apply to chat activities. For chat, use the [Chat - Force Resolution Code](#) setting.

- Type: Department settings group
- Subtype: Activity
- Data type: Enumeration
- Default value: No
- Value options: No, Yes
- Can be reset at lower level: Yes

**Email Activity Settings**

**Include Message Header in Reply**

With this setting you can decide the amount of header information that is displayed to agents in the Agent Console. This information is available in the Activity section of the Information pane.

- Type: Department settings group, User settings group
- Subtype: User
- Data type: Enumeration
- Default value: Basic
- Value options: None, Basic, Complete
- Can be reset at lower level: Yes

**Show CC Field**

With this setting you can make the CC field available in the Reply pane of the Agent Console. If you do not want agents to be able use the CC field, then along with configuring this setting, make sure that the [Edit CC field](#) action is not assigned to the agents.

- Type: Department settings group, User settings group
- Subtype: User
- Data type: Enumeration
- Default value: No
Show BCC Field
With this setting you can make the BCC field available in the Reply pane of the Agent Console. If you do not want agents to be able use the BCC field, then along with configuring this setting, make sure that the Edit BCC field action is not assigned to the agents.

Add Contact Point on Compose
In this setting you can decide if the email address specified in the To field of a composed email activity should be added to the customer profile associated with the case to which the activity belongs.

Allow Agents to Associate a New Outbound Activity With a Queue
Use this setting to allow agents to associate an activity with a queue while composing an outbound email activity. While composing emails, agents are prompted to associate the email with a queue. Agents are displayed the list of queues on which they have pull permissions. This setting does not affect integrated agents and instead, automatically assigns activities to the outbound queue.
Service Email and Phone Activities at the Same Time

Use this setting to determine if agents can continue to work on email activities, which are already assigned to them, while they are on the phone.

- Type: Department settings group
- Subtype: CTI settings
- Data type: Enumeration
- Default value: No
- Value options:
  - Yes: Agents can continue to respond to email activities that are already assigned to them. The Send and Send and Complete buttons are enabled for emails. However, no new emails get assigned to agents while they are on a phone call. If agents are associated with an outbound MRD, they can create outbound emails during a phone call.
  - No: Agents cannot respond to email activities that are already assigned to them. The Send and Send and Complete buttons are disabled for emails. Also, no new emails get assigned to agents while they are on a phone call. Agents cannot create outbound emails while they are on a phone call.
- Can be reset at lower level: No

Service Email and Chat Activities at the Same Time

Use this setting to determine if agents can continue to work on email activities, which are already assigned to them, while they are in a chat session with a customer.

- Type: Department settings group
- Subtype: Activity
- Data type: Enumeration
- Default value: No
- Value options:
  - Yes: Agents can continue to respond to email activities that are already assigned to them. The Send and Send and Complete buttons are enabled for emails. However, no new emails get assigned to agents while they are in a chat session. If agents are associated with an outbound MRD, they can create outbound emails while they are in a chat session.
  - No: Agents cannot respond to email activities that are already assigned to them. The Send and Send and Complete buttons are disabled for emails. Also, no new emails get assigned to agents while they are in a chat session. Agents cannot create outbound emails while they are in a chat session.
- Can be reset at lower level: No
Chat Activity Settings

**Chat - Automatic Case Creation**
Use this setting to decide if cases should be created automatically for chat activities.
- Type: Department settings group
- Subtype: Activity
- Data type: Enumeration
- Default value: Yes
- Value options: Yes, No
- Can be reset at lower level: No

**Chat - Force Activity Categorization**
Use this setting to ensure that agents assign categories to each chat activity before completing it.
- Type: Department settings group
- Subtype: Activity
- Data type: Enumeration
- Default value: No
- Value options: Yes, No
- Can be reset at lower level: No

**Chat - Force Resolution Code**
Use this setting to ensure that agents assign resolution codes to each chat activity before completing it.
- Type: Department settings group
- Subtype: Activity
- Data type: Enumeration
- Default value: No
- Value options: Yes, No
- Can be reset at lower level: No

**Chat - Notification Mail Dispatching From Address**
Use this setting to define which email address should be used in the **From** field of the notifications sent for abandoned chats.
- Type: Department settings group
- Subtype: Common
Chat - MeadCo Download on Agent Console

Use this setting to decide if an agent should be prompted to download MeadCo when he logs in to the Agent Console for the first time from a user desktop.

- Type: Department settings group
- Subtype: General
- Data type: Enumeration
- Default value: Disable
- Value options: Enable, Disable
- Can be reset at lower level: No

Inbox Settings

Common Settings for Inboxes

Customer History View

In this setting, select the display option for the information shown in the History section of the Information pane.

- Type: Department settings group, User settings group
- Subtype: General
- Data type: Enumeration
- Default value: Snapshot View
- Value options: Snapshot View, Tree View
- Can be reset at lower level: Yes

Number of Activities Per Page

This setting determines the number of activities that are displayed on a page in the Main Inbox of the Agent Console.

- Type: Department settings group, User settings group
Subtype: Activity
Data type: Long
Default value: 20
Minimum value: 0
Maximum value: —
Can be reset at lower level: Yes

Enable Auto Save
Use this setting to ensure that the changes made by agents in the Reply and Information panes are not lost when agents switch between activities. When the setting is enabled, the changes made in the Information pane and the Reply pane are saved automatically.

Type: Department settings group
Subtype: General
Data type: Enumeration
Default value: Yes
Value options: No, Yes
Can be reset at lower level: No

Agent Inbox Preference
Use this setting to choose if the Chat inbox or the Main inbox is displayed when an agent logs in the Agent Console.

Type: Department settings group, User settings group
Subtype: General
Data type: Enumeration
Default value: Chat
Value options: Chat, Main
Can be reset at lower level: Yes

Main Inbox Settings

Inbox Sort Column
In this setting, define the column that is used to sort items in the Activity and Cases folders in the Agent Console. Use the “Inbox sort order” setting to define whether the items are sorted in the ascending or descending order. This setting does not apply to the Chat Inbox. For chat, use the Chat - Inbox Sort Column setting.

Type: Department settings group, User settings group
Subtype: Activity
Data type: Enumeration
Default value: Activity ID
Value options: Activity ID, Activity Priority, Case ID, Contact point, Department name, Subject, When created, Activity type, Activity sub status
Can be reset at lower level: Yes

Inbox Sort Order
Use this setting to define the order - ascending or descending, in which items appear in the Activity and Cases folders in the Agent Console. Use the “Inbox sort column” setting to determine the column by which items are sorted. This setting does not apply to the Chat Inbox. For chat, use the Chat - Inbox Sort Order setting.

Type: Department settings group, User settings group
Subtype: Activity
Data type: Enumeration
Default value: Ascending
Value options: Ascending, Descending
Can be reset at lower level: Yes

Default Editor
Use this setting to choose the default editor for activities in the Agent Console. This setting does not apply to chat activities.

Type: Department settings group, User settings group
Subtype: User
Data type: Enumeration
Default value: Plain
Value options: Plain, HTML
Can be reset at lower level: Yes

Email - Enable Sound Alert
Use this setting to define if you want the system to play a sound when an email is assigned to the agent. To minimize distraction, the alert sounds only when the focus is not in the main inbox.

Type: Department settings group
Subtype: General
Data type: Enumeration
Default value: Yes
Mail - Agent Availability Choice Enabled

Use this setting to allow agents to change their availability for email activities in the Agent Console.

- Type: Department settings group
- Subtype: General
- Data type: Enumeration
- Default value: Yes
- Value options:
  - Yes: Agents can change their availability.
  - No: Agents become available automatically when they login and become unavailable when they logout.
- Can be reset at lower level: No

Chat Inbox Settings

Chat - Inbox Sort Column

In this setting, define the column that is used to sort items in the Chat Inbox in the Agent Console. Use the “Chat - Inbox sort order” setting to define whether the items are sorted in the ascending or descending order.

- Type: Department settings group, User settings group
- Subtype: Activity
- Data type: Enumeration
- Default value: Key
- Value options: Key, Activity ID, Case ID, When Created, Customer name, Subject, Activity sub status, Queue name
- Can be reset at lower level: Yes

Chat - Inbox Sort Order

Use this setting to define the order - ascending or descending, in which items appear in the Chat Inbox in the Agent Console. Use the “Chat - Inbox sort column” setting to determine the column by which items are sorted.

- Type: Department settings group, User settings group
Chat - Agent Availability Choice Enabled
Use this setting to allow agents to change their availability in the chat inbox in Agent Console.

- Type: Department settings group
- Subtype: General
- Data type: Enumeration
- Default value: Yes
- Value options:
  - Yes: Agents can change their availability.
  - No: Agents become available automatically when they login and become unavailable when they logout.
- Can be reset at lower level: No

Chat Supervisor Inbox Settings

Chat - My Monitor - Max Join Load
This setting determines the maximum number of chats a supervisor can join from the “My monitors” node in the Agent Console.

- Type: Department settings group
- Subtype: Activity
- Data type: Integer
- Default value: 4
- Minimum value: 1
- Maximum value: —
- Can be reset at lower level: No

Chat - My Monitor - Activity Refresh Interval (Seconds)
In this setting configure the time interval (in seconds) at which the chat activities are refreshed in the My Monitor’s folder of the supervisor’s Agent Console. The following details of chat activities are refreshed - the list of activities for the queue or agent being monitored; the transcript of chats that the supervisor has not joined and is monitoring passively.
Spelling and Blocked Words Settings

Preferred Dictionary of the User
With this setting you can choose the dictionary that the spell checker should use.
- Type: Department settings group, User settings group
- Subtype: Spell checker
- Data type: String
- Default value: —

Auto Spellcheck
Use this setting to enable automatic spell check for emails, tasks, etc. This setting is not used for chat activities. For chat, use the Chat - Auto Spellcheck setting.
- Type: Department settings group, User settings group
- Subtype: Spell checker
- Data type: Enumeration
- Default value: Disable
- Value options: Disable, Enable
- Can be reset at lower level: Yes

Chat - Auto Spellcheck
Use this setting to enable automatic spell check for chats. This setting is not used for emails, tasks, etc.
- Type: Department settings group
Auto Blockcheck

Use this setting to check the content of emails, tasks, etc for blocked words. This setting is not used for chat activities. For chat, use the Chat - Auto Blockcheck setting. The list of blocked words is set from the Dictionaries node in the Administration Console. For details, see “Adding Blocked Words” on page 261.

Chat - Auto Blockcheck

Use this setting to check the chat messages for blocked words. The list of blocked words is set from the Dictionaries node in the Administration Console. For details, see “Adding Blocked Words” on page 261.

Include Original Message Text During Spell Check

Use this setting to decide if the content of the original email message should be checked when the spelling checker is run.
» Value options: Yes, No
» Can be reset at lower level: Yes

Ignore Words With Only Upper Case Letters

With this setting you can decide if the spell checker should ignore misspelled words in upper case. For example, HSBC, TESTNG, etc.

» Type: Department settings group, User settings group
» Subtype: Spell checker
» Data type: Enumeration
» Default value: No
» Value options: Yes, No
» Can be reset at lower level: Yes

Ignore Words With a Mixture of Upper and Lower Case Letters

With this setting you can decide if the spell checker should ignore words with unusual mixture of upper and lower case letters. For example, myFirstWord.

» Type: Department settings group, User settings group
» Subtype: Spell checker
» Data type: Enumeration
» Default value: No
» Value options: Yes, No
» Can be reset at lower level: Yes

Ignore Words With Only Numbers or Special Characters

With this setting you can decide if the spell checker should ignore words with digits in them. For example, 1234.

» Type: Department settings group, User settings group
» Subtype: Spell checker
» Data type: Enumeration
» Default value: No
» Value options: Yes, No
» Can be reset at lower level: Yes
Ignore Words That Contain Numbers

With this setting you can decide if the spell checker should ignore words that have a mix of letters and digits. For example, name123, 123test!, etc.

- Type: Department settings group, User settings group
- Subtype: Spell checker
- Data type: Enumeration
- Default value: No
- Value options: Yes, No
- Can be reset at lower level: Yes

Ignore Web Addresses and File Names

With this setting you can decide if the spell checker should ignore internet addresses and file names. For example, www.company.com, alias@companyname.com, text.pdf, etc.

- Type: Department settings group, User settings group
- Subtype: Spell checker
- Data type: Enumeration
- Default value: No
- Value options: Yes, No
- Can be reset at lower level: Yes

Split Contracted Words

The spelling checker considers correct contracted words as misspelled while using the French and Italian dictionaries. Configure the value of this setting to Yes to ensure that contracted words in these languages are not misidentified by the spelling checker. This setting affects only French and Italian.

- Type: Department settings group, User settings group
- Subtype: Spell checker
- Data type: Enumeration
- Default value: No
- Value options: Yes, No
- Can be reset at lower level: Yes
Search Settings

Maximum Number of Records to Display for Search
Use this setting to specify the maximum number of search results to be displayed in the Results pane of the Search window. This setting also controls the number of results displayed in the Change Customer window launched from Customer section of the Information Pane (Agent Console).

- Type: Partition settings group
- Subtype: Common
- Data type: Integer
- Default value: 100
- Minimum value: —
- Maximum value: 5000

Maximum Number of Records to Display for NAS Search
Use this setting to decide the maximum number of search results to be displayed when an agent uses new activity shortcuts to create activities.

- Type: Partition settings group
- Subtype: Common
- Data type: Integer
- Default value: 9
- Minimum value: —
- Maximum value: —

Always Show Prompt Window for My Searches
Use this setting to define whether you want the search window to come up and allow agents to edit values for a saved search. This setting is meant for users who do not configure their saved searches with the --prompt option for values.

- Type: Department settings group, User settings group
- Subtype: Common
- Data type: Enumeration
- Default value: No
- Value options:
  - Yes: The saved search is not run automatically. The system displays the search criteria that is defined in the My Search, and allows agents to change the values before running the search.
- **No:** Runs the search and displays the search results without providing users with the opportunity to change the predefined values.
  - Can be reset at lower level: Yes

## Knowledge Base Settings

### KB External Import Service Failover Delay (Minutes)

The KB Import Service needs to report its status at regular intervals to the system. In this setting, specify the maximum time for which the system waits for the service to report its status. If the status is not updated in this duration, the system assumes that the service is not working and restarts the service process.

- **Type:** Partition settings group
- **Subtype:** Common
- **Data type:** Integer
- **Default value:** 15
- **Minimum value:** 0
- **Maximum value:** —

### KB Attachment Content Search Service Failover Delay

The Attachment Service needs to report its status at regular intervals to the system. In this setting, specify the maximum time (in minutes) for which the system waits for the service to report its status. If the status is not updated in this duration, the system assumes that the service is not working and restarts the service process.

- **Type:** Partition settings group
- **Subtype:** Common
- **Data type:** Integer
- **Default value:** 15
- **Minimum value:** 0
- **Maximum value:** —

### Article Rating Service Failover Delay (Minutes)

The Article Rating Service needs to report its status at regular intervals to the system. In this setting, specify the maximum time for which the system waits for the service to report its status. If the status is not updated in this duration, the system assumes that the service is not working and restarts the service process.

- **Type:** Partition settings group
- **Subtype:** Knowledge base
Data type: Integer
Default value: 15
Minimum value: 0
Maximum value: —

Update External Attachment Service Update Interval in Minutes
Use this setting to determine the regular time interval at which the KB Import Service synchronizes the content of the external attachments of articles with the content of the files in the external location.

Type: Partition settings group
Subtype: Knowledge base
Data type: Long
Default value: 6
Minimum: —
Maximum: —

Popular Articles Display Count
Use this setting to specify the number of articles that are displayed in the “Most popular articles” folder in the Agent and KB Consoles.

Type: Partition settings group
Subtype: Knowledge base
Data type: Integer
Default value: 10
Minimum: —
Maximum: —

Popular Articles Evaluation Period in Days
Use this setting to determine the number of days for which the article usage is evaluated before it is added to the “Most popular articles” folder.

Type: Partition settings group
Subtype: Knowledge base
Data type: Integer
Default value: 10
Minimum: —
Maximum: —
Popular Articles Update Interval in Hours

Use this setting to determine the time period after which the system updates the list of popular articles displayed in the “Most popular articles” folder.

- Type: Partition settings group
- Subtype: Knowledge base
- Data type: Long
- Default value: 1
- Minimum: —
- Maximum: —

Recently Added Articles Evaluation Period in Days

This setting determines the time period for which a new article is displayed in the “Recently added articles” folder in the Agent and KB Consoles.

- Type: Partition settings group
- Subtype: Knowledge base
- Data type: Long
- Default value: 1
- Minimum: 1
- Maximum: —

Recently Changed Articles Evaluation Period in Days

This setting determines the time period for which an updated article is displayed in the “Recently updated articles” folder in the Agent and KB Consoles.

- Type: Partition settings group
- Subtype: Knowledge base
- Data type: Long
- Default value: 1
- Minimum: 1
- Maximum: —

Article Rating Service Delay in Seconds

Use this setting to specify the time interval (in seconds) after which the system recalculates the ratings of the articles.

- Type: Partition settings group
Subtype: Knowledge base
Data type: Long
Default value: 30
Minimum: 1
Maximum: 3600

Time to Expire in Days
Use this setting to specify the number of days for which an article should be displayed in the “Articles about to expire” folder before it expires.

Type: Partition settings group
Subtype: Knowledge base
Data type: Integer
Default value: 5
Minimum: —
Maximum: —

KB Primary Language
Use this setting to specify the language in which content is added in the knowledge base.

Type: Department settings group
Subtype: Knowledge base
Data type: Enumeration
Default value: —
Value options: English (US), English (UK), Arabic, Chinese (Simplified), Chinese (Traditional), Czech, Danish, Dutch, Finnish, French, German, Greek, Hungarian, Italian, Japanese, Korean, Norwegian (Bokmal), Norwegian (Nynorsk), Portuguese, Portuguese (Brazilian), Romanian, Spanish, Swedish, Turkish
Can be reset at lower level: Yes

Custom Language Label
This setting allows you to add a custom language to the list of languages available in the KB primary language setting.

Type: Department settings group
Subtype: Knowledge Base
Data type: String
Default value: Custom
Minimum: 0
Maximum: 225
Can be reset at lower level: No

Select Article Type and Article Template on Create
Enable this setting to prompt authors to select the article type and template when they create new articles. When this setting is enabled, users see the Select Article window and they have to select an article type and article template to be used for the article they are creating. Authors can always change the article type and template after they have created an article.

Type: Department settings group
Subtype: Knowledge Base
Data type: Enumeration
Default value: No
Value options: Yes, No

Default Article Type and Article Template for Creating Articles
Use this setting to define the default article type and template that should be used for creating new articles. If the article type or template used in this setting is deleted from the system, new articles are created using the General article type and Blank document article template. When the “Select Article Type and Article Template on Create” setting is enabled, authors can set and change the default values from the Select Article window.

Type: Department settings group, User settings group
Subtype: Knowledge Base
Data type: String
Default value: General || Blank Document
Value options: The secondary window displays the list of article types and templates created in the department.
Can be reset at lower level: Yes

Chat Settings

Chat Auto-Pushback Settings
The chat auto-pushback feature allows you to pushback chat activities to the queue, if the agents do not click on the new chats assigned to them in the configured time (default value is 2 minutes). You can also automatically mark the agents unavailable when chats are pushed-back from their inbox.
To view or configure the chat auto-pushback settings, click the Assistance button in the Value field of the setting.

### Enable Auto-Pushback of Chats

Use this setting to decide if new chats assigned to agents should be automatically pushed back from the agent's inbox if they do not click on the activity in the time defined in the Expiry time for auto-pushback for chats setting.

- **Type:** Partition settings group
- **Subtype:** Chat
- **Data type:** Enumeration
- **Default value:** Yes
- **Value options:** Yes, No

### Expiry Time for Auto-Pushback for Chats (Minutes)

In this setting, define the time, in minutes, after which the new chat assigned to the agent will be automatically pushed back from the agent's inbox, if the agent does not click on the chat in the defined time.

- **Type:** Partition settings group
- **Subtype:** Chat
- **Data type:** Integer
- **Default value:** 2
- **Minimum value:** 2
- **Maximum value:** 30

### Make Agent Unavailable on Auto-Pushback of Chats

Use this setting to define if agents should be made unavailable after a chat is pushed back automatically from the agent’s inbox. By default this setting is disabled.

- **Type:** Partition settings group
- **Subtype:** Chats
- **Data type:** Enumeration
- **Default value:** No
- **Value options:** Yes, No
Chat Agent Session Settings

**Chat - Agent Chat Message Maximum Length**

Use this setting to determine the maximum length of messages sent by agents to customers.

- Type: Department settings group
- Subtype: Activity
- Data type: Integer
- Default value: 800
- Minimum value: 1
- Maximum value: —
- Can be reset at lower level: No

**Show Smiley in Agent Chat Toolbar**

The toolbar in the Chat pane has a Smiley button that can be used to add emoticons in the chat messages. Use this setting to determine if this Smiley button should be available to the agents.

- Type: Department settings group
- Subtype: Activity
- Data type: Enumeration
- Default value: Yes
- Value options: Yes, No
- Can be reset at lower level: No

**Chat - Display Timestamp in Agent Chat Console**

Use this setting to decide if the timestamp should be displayed with the chat messages in the Agent Console. This setting applies to open chat activities only.

- Type: Department settings group
- Subtype: Activity
- Data type: Enumeration
- Default value: No
- Value options: Yes, No
- Can be reset at lower level: No
Chat - Display Timestamp in Completed Chat Transcript

Use this setting to decide if the timestamp should be displayed with the chat messages in the Agent Console. This setting applies to completed chat activities only.

- Type: Department settings group
- Subtype: Activity
- Data type: Enumeration
- Default value: Yes
- Value options: Yes, No
- Can be reset at lower level: No

Chat - Customer Intermittent Interval (Seconds)

In this setting, configure the time interval (in seconds) at which the customer’s connection status is checked to see if it is slow or intermittent. If the condition is met, the customer connection status in the Agent Console is changed to “Slow, but still connected”. When this setting is left blank, no check is done.

- Type: Department settings group
- Subtype: Activity
- Data type: Integer
- Default value: 30
- Minimum value: —
- Maximum value: —
- Can be reset at lower level: No

Chat - Customer Offline Interval

In this setting, configure the time interval (in seconds) at which a check is made to see if the customer is connected to the chat session. If the customer is disconnected, the customer connection status in the Agent Console is changed to “Disconnected”. When this setting is left blank, no check is done.

- Type: Department settings group
- Subtype: Activity
- Data type: Integer
- Default value: 10
- Minimum value: 2
- Maximum value: —
- Can be reset at lower level: No

Important: This setting is used only for templates that are upgraded to Unified WIM 11.0(1) from previous versions of Unified WIM (version 4.4 or older).
Chat - Automatic Session Closure Interval (Seconds)

In this setting determine the maximum time (in seconds) for which a chat session can stay open. After the defined time, the chat session is closed automatically. When this setting is left blank, no check is done.

- Type: Department settings group
- Subtype: Activity
- Data type: Integer
- Default value: 14400 (i.e. 4 hours)
- Minimum value: —
- Maximum value: 60
- Can be reset at lower level: No

Chat - Disable Typing Area and Page Push Area on Customer Exit

Use this setting to disable the Page Push section of the Information pane and the typing area of the Chat pane for agents and supervisors, when a customer leaves the chat session.

- Type: Department settings group
- Subtype: Common
- Data type: Enumeration
- Default value: No
- Value options: Yes, No
- Can be reset at lower level: No

Chat - Restore Agent Console When a Message Arrives

Use this setting to decide if you want to draw the agent’s attention to the chat inbox when a chat is new message is sent by the customer. When this setting is enabled, and the Agent Console is minimized when a new chat is assigned to the agent, or a new message is sent by the customer, the Agent Console is opened and the focus is set in the typing area. If the setting is disabled, an alert is displayed in the bottom right hand side of the screen, when a chat is assigned to the agent, or when a customer sends a new chat message.

- Type: Department settings group
- Subtype: Common
- Data type: Enumeration
- Default value: No
- Value options: Yes, No
- Can be reset at lower level: No
Chat - Enable Sound Alert

Use this setting to decide if you want play a sound alert to draw the agent’s attention to the chat inbox when a new chat is assigned to the agent, or a new message is sent by the customer. The sound alert is played only when the Agent Console is minimized or not in focus. If the agent is already working in the Agent Console, the sound alert is not played.

- Type: Department settings group
- Subtype: General
- Data type: Enumeration
- Default value: Yes
- Value options: Yes, No
- Can be reset at lower level: Yes

Reason for Chat Transfer

Use this setting to decide if you want agents to always assign a transfer code to chat activities while transferring chats to other users, queues, or departments.

- Type: Department settings group
- Subtype: Activity
- Data type: Enumeration
- Default value: Optional
- Value options:
  - Optional
  - Required
- Can be reset at lower level: No

Chat Customer Session Settings

**Important:** The settings described in this section are used only for templates that are upgraded to Unified WIM 11.0(1) from previous versions of Unified WIM (version 4.4 or older).

Chat - Customer Chat Message Maximum Length

Use this setting to determine the maximum length of messages sent by customers to an agents.

- Type: Department settings group
- Subtype: Activity
- Data type: Integer
- Default value: 800
› Minimum value: 1
› Maximum value: —
› Can be reset at lower level: No

**Chat - Display Timestamp in Customer Chat Console**
Use this setting to decide if the timestamp should be displayed with the chat messages in the Customer Console.

› Type: Department settings group
› Subtype: Activity
› Data type: Enumeration
› Default value: No
› Value options: Yes, No
› Can be reset at lower level: No

**Chat - MeadCo Download on Customer Console**
Use this setting to decide if a customer should be prompted to download MeadCo when the chat window is opened for the first time from a customer desktop.

› Type: Department settings group
› Subtype: General
› Data type: Enumeration
› Default value: Disable
› Value options: Enable, Disable
› Can be reset at lower level: No

**Chat - Restore Customer Console When a Message Arrives**
Use this setting to decide if you want to draw the customer’s attention to the chat window when a new message is sent to the customer. When this setting is enabled, the customer is alerted in the following ways - If the customer chat window is minimized, it is opened and the focus is set in the typing area; if the customer chat window is open, nothing happens. If the setting is disabled, the customer is alerted in the following ways - If the customer chat window is minimized, it will blink and the text of the title will change; if the customer chat window is open, nothing happens.

› Type: Department settings group
› Subtype: Common
› Data type: Enumeration
› Default value: No
› Value options: Yes, No
› Can be reset at lower level: No
Offers Settings

Offers Managers with the “Edit Offer Settings” action can configure these settings from the Offers Console as well. Changes made from the Offers Console are reflected in the Administration Console, and vice versa.

Offer Expiration Period

The time period, in seconds, after which an offer automatically expires and is removed from the web page if the user has neither accepted nor rejected it. An expired offer is considered to have been ignored.

- Type: Partition settings group
- Subtype: Offers
- Data type: Integer
- Default value: 300
- Minimum value: —
- Maximum value: —

Interval for Re-offering Ignored Offers (Seconds)

The time period, set in seconds, after which an ignored offer may be presented again in the same user session, in case the user becomes eligible for the offer again. The user can be on the same page where he had ignored the offer earlier, or can be on another web page of the website where the same offer is enabled. This setting applies to offers that have the Re-Offer on Ignore option enabled.

- Type: Partition settings group
- Subtype: Offers
- Data type: Integer
- Default value: 300
- Minimum value: —
- Maximum value: —

Interval for Re-offering Accepted Offers (Seconds)

The time period, set in seconds, after which an accepted offer may be presented again in the same user session, in case the user becomes eligible for the offer again. The user can be on the same page where he had accepted the offer earlier, or can be on another web page of the website where the same offer is enabled. For Agent Offers which are accepted, the interval for re-offering is counted from the time the previous offer was accepted, not the time that the previous chat or call ended. This setting applies to offers that have the Re-Offer on Accept option enabled.

- Type: Partition settings group
- Subtype: Offers
Interval for Checking Eligibility of an Offer That was not Presented (Seconds)

The time period, set in seconds, after which a website visitor is checked for eligibility for an automatic chat offer, in case the offer is not presented to the user when he last became eligible. An automatic chat offer is not presented if agents are not available or the chat queue depth is met at the time when the visitor becomes eligible.

- Type: Partition settings group
- Subtype: Offers
- Data type: Integer
- Default value: 120
- Minimum value: 30
- Maximum value: —

Maximum Time on Webpage (Minutes)

The maximum time, set in minutes, a visitor can remain on a webpage before the application stops checking for offer eligibility. This applies to a single webpage, and not for the entire visit to the website. For example, if the maximum time is set to 30 minutes and a visitor remains on the same page for more than 30 minutes, the application will not check for offer eligibility for the remainder of time the visitor is on the page, even if she performs the actions necessary to become eligible for an offer. If the same visitor then moves to another webpage on the same website, the timer starts over.

- Type: Partition settings group
- Subtype: Offers
- Data type: Integer
- Default value: 120
- Minimum value: 1
- Maximum value: —

Limit Number of Offers Per Visit

Use this setting to limit the number of offers that will be presented to a visitor during a single visit to the website. If you enable this setting, make sure you configure the Maximum number of offers per visit setting to define the limit.

- Type: Partition settings group
Maximum Number of Offers Per Visit

Configure this setting if you have enabled the **Limit number of offers per visit** setting. In this setting define the maximum offers to be presented per visit. Once this number is met, the visitor is not presented with another offer for the rest of that visit. Note that at the offer level the Offer Manager can configure an offer to be excluded from this limit.

- **Type:** Partition settings group
- **Subtype:** Offers
- **Data type:** Integer
- **Default value:**
- **Minimum value:** 0
- **Maximum value:** —

Maximum Size Allowed for Offers Template Zip File (in Kilobytes)

Use this setting to define the maximum allowed size, in kilobytes, of an offer template zip file that can be uploaded from the Offers Console.

- **Type:** Partition settings group
- **Subtype:** Offers
- **Data type:** Integer
- **Default value:** 250
- **Minimum value:** 250
- **Maximum value:** 25600

Chat - Agent Availability Buffer Value

This setting determines the minimum number or percentage of agents that have to be available for a chat queue mapped to an MRD, before a chat offer is presented to a website visitor. When a website visitor becomes available for a chat offer, the system first checks if the number or percentage of agents configured in this setting are available, and if this condition is met, the chat offer is presented to the website visitor.

- **Type:** Department settings group
- **Subtype:** Chat
- **Data type:** Integer
Chat - Agent Availability Check Mechanism

This setting determines whether the value set in the “Chat - Agent Availability Buffer Value” setting is an absolute value or a percentage of the total number of agents that belong to the chat queue mapped to an MRD.

- Type: Department settings group
- Subtype: Chat
- Data type: Enumeration
- Default value: Percentage
- Value options: Absolute, Percentage
- Can be reset at lower level: No

Cache Settings

Minimum Idle Time for the Objects in Minutes

Use this setting to periodically free-up the cache memory of servers. After the defined time, the unused data is removed from the cache memory.

- Type: Partition settings group
- Subtype: Cache
- Data type: Integer
- Default value: 300
- Minimum value: 100
- Maximum value: —
Users

- About Users, Groups, Roles, and Actions
- What are the Actions Assigned to the Default Roles?
- Managing User Roles
- Managing User Groups
- Managing Users
This chapter will assist you in understanding users, groups, roles, and actions and how to set them up according to your business requirements.

## About Users, Groups, Roles, and Actions

### Users

A user is an individual—an administrator, manager, or agent—who has a distinct identification using which she logs in to Unified EIM & WIM to perform specific functions. Users are assigned roles and permissions, which enable them to perform various tasks. To make it easier to administer a large number of users, users can be organized into named groups.

Users can be created at three levels:

- **System level user:** This user is typically the system administrator of the system who manages the system partition resources, such as services, loggers, handlers, etc.
- **Partition level user:** This user is typically the system administrator of the system who manages the business partition resources, such as services, departments, etc.
- **Department level users:** Department level users have many different types of functions in the system. For example, the administrator manages resources such as, chat infrastructure, email infrastructure, etc. and the agents handle customer interactions, such as chat, emails, phone calls, etc. Department level users are of three types — Standalone users, NIPTA integrated users, and IPTA integrated users.
  - **Standalone user:** This is a Unified EIM & WIM type of user and the routing of activities to this user is done by Unified EIM & WIM.
  - **NIPTA integrated user:** A NIPTA user is a Unified EIM & WIM user that is mapped to a user who belongs to a skill group configured to be a NIPTA skill group in ICM Configuration Manager. Activities are assigned to NIPTA users from NIPTA queues only. For more details on NIPTA queues, see *Cisco Unified Web and E-Mail Interaction Manager Administrator's Guide to Routing and Workflows*.
  - **IPTA integrated user:** An IPTA integrated user is a Unified EIM & WIM user that is mapped to an IPTA user. Activities to this user is assigned from IPTA queues only. For more details on IPTA queues, see *Cisco Unified Web and E-Mail Interaction Manager Administrator's Guide to Routing and Workflows*.

The following table outlines the features and functionality for IPTA, NIPTA, and Standalone Users.

<table>
<thead>
<tr>
<th>User feature and functionality</th>
<th>IPTA Users</th>
<th>NIPTA users</th>
<th>Standalone users</th>
</tr>
</thead>
<tbody>
<tr>
<td>Configured in</td>
<td>Unified CCE</td>
<td>Unified CCE</td>
<td>Unified EIM &amp; WIM</td>
</tr>
<tr>
<td>Associated with Skill Group or User Group in</td>
<td>Unified CCE</td>
<td>Unified EIM &amp; WIM</td>
<td>Unified EIM &amp; WIM</td>
</tr>
<tr>
<td>Status in Unified EIM &amp; WIM</td>
<td>Read only</td>
<td>Read only</td>
<td>Read, Write</td>
</tr>
</tbody>
</table>
If a Unified EIM & WIM user is mapped to a Unified CCE user, and the user attributes are modified in Unified CCE, when the Unified EIM & WIM user is selected in the Administration Console, the modifications are automatically retrieved and synchronized in Unified EIM & WIM.

Two users are created during the installation:

1. **System Administrator**: The first system user, created during installation, is a user called **System Administrator**. Assigned the System Administrator role, this user sets up system resources and creates one or more system-level users.

2. **Partition Administrator**: The first business user, created during installation, is a user called **Partition Administrator**. Assigned the Partition Administrator role, this user manages partition users and settings and creates more partition users as well as one or more department-level users to manage department resources.
## Types of Department Users

The following table describes the licenses, roles, permissions, and explicit actions that need to be assigned to users.

<table>
<thead>
<tr>
<th>Users</th>
<th>Licences</th>
<th>Roles</th>
<th>Explicit Actions</th>

</table>

### User Groups

User groups are a collection of users that share similar functions or roles in the system. Groups make it much easier to manage user accounts. Like users, user groups can also be created in the system partition, business partition, and departments. A standard user group called All Users in Department Name is created in each department. Every new user in the department is automatically included in this group. All users, standalone and Integrated, are included in this group. You should not use this user group to manage activity routing through workflows and pull and transfer permissions on other users, user groups, and queues. In a department, you can...
create three types of user groups — Standalone user groups, NIPTA integrated user groups, and IPTA integrated user groups.

- **Standalone user group:** This is a Unified EIM & WIM type of user group and the routing of activities to users in this group is done by Unified EIM & WIM. You can only add standalone users to this group.

- **NIPTA integrated user group:** A NIPTA integrated user group is a Unified EIM & WIM user group that is mapped to a NIPTA skill group (also known as Non-IPTA skill group). Activities to users in this group are assigned from NIPTA queues only. For more details on NIPTA queues, see *Cisco Unified Web and E-Mail Interaction Manager Administrator’s Guide to Routing and Workflows*. For user groups that map to NIPTA skill groups, the agent list for the skill group is administered and managed in Unified EIM & WIM. You can only add NIPTA users to this group.

- **IPTA integrated user group:** An IPTA integrated user group is a Unified EIM & WIM user group that is mapped to an IPTA skill group. Activities to users in this group are assigned from IPTA queues only. For more details on IPTA queues, see *Cisco Unified Web and E-Mail Interaction Manager Administrator’s Guide to Routing and Workflows*. For user groups that map to an IPTA skill group, the agent list for the skill group is administered and managed in Unified CCE. You cannot add users to this group from Unified EIM & WIM.

### User Roles

A role is nothing but a set of permissible actions for various business resources. An agent’s role, for instance, would include actions such as “View Agent Console,” “Edit customer,” and “Add notes.” You can create user roles as per the needs of your organization, and assign these roles to your employees. To ease your task, the system comes with some default user roles and templates for roles. You can use the default roles, and if required, create your own user roles using role templates. You can assign one or more roles to a group of users or an individual user.

The default user roles are:

- **Administrator:** The administrator is the manager of the department, and has access to the Administration console. You will find that there are two types of administrators that the system allows you to create; Partition Administrator and Department Administrator. Let us see the difference between these two roles. A partition administrator has to be created while installing Unified EIM & WIM. To know more about the role of a partition administrator, see “Partition Administrator” on page 142.

  A department administrator is created by the partition administrator, and has the authority to create all the resources for the department he administers. For example, setting rules for incoming and outgoing activities through workflows, creating classifications, dictionaries, users, and assigning permissions to the users to perform various tasks.

  **Important:** At least one department administrator must be a standalone (not integrated) user.

- **Agent:** An agent is a person who handles customer queries, who is directly in contact with the customer. He has access to the Agent console. Agents are created by the administrator of the department.

- **Agent (Read Only):** An agent (read only) will have access to the Agent console, but he will not be able to compose replies for the customer queries. He can only view them. This role can be assigned to trainees.

- **Author:** An author is the writer of all the articles that agents can use as replies for customer queries. An author has access to the Knowledge Base Console, which is a store house for all company articles.
- **Knowledge Base Manager:** A knowledge base manager can do all the tasks that a user with the author role can do. In addition to that, he can manage article types and templates and configure knowledge workflows from the Knowledge Base Console.

- **Offer Manager:** An offer manager has access to the Offers Console. He can create offers and configure pages where offers should be presented. He can also monitor the success of offers by viewing dashboards.

- **Supervisor:** A supervisor has access to the Supervision Console, and creates monitors for queues, user groups, and users in a department. They can also create and run reports from the Reports Console.

- **Supervisor (Read Only):** A user with the supervisor (read only) role can create and run monitors. Such a user cannot create reports, but can run the reports for which the user has view and run permissions.

- **Wrap-up:** Along with the agent role, assign the wrap-up role to users or user groups that are mapped to agents and skill groups of Unified CCE. Agents with this role go in wrap-up mode after they send and complete an activity. After completing the wrap-up tasks, agents click the **End Wrap-up** button to complete the activity and change their mode to available.

*Selecting user roles*
Actions

When you create a user role, you need to specify the work that the person with that role can handle. Actions define this work. All default user roles have already been assigned certain actions. You can view these actions by clicking on any role and you can use these actions to create new roles.

Permissions

Permissions allow you to give users access to particular business objects, such as KB folders, queues, data access links, etc. To be able to give a permission, the user must first be assigned the appropriate action associated with the object. For example, for KB folders if you want to give the “View Folder” permission to a user, you have to make sure that the user is first assigned the “View Folder” action.

Important Things to Note About Picking and Pulling Activities

Emails

- **Standalone agents** can pick emails from standalone queues and agents. They can also pull emails from standalone queues.

- **Integrated agents** can pick emails from integrated agents and queues that belong to the same MRD. They can also pull emails from the integrated queues that belong to the same MRD. **Integrated agents with Supervisor Role** can pick from the supervisory queue for the MRD to which they belong to. Additionally, **Integrated agents with Administrator Role** can pick from the default exception queue and from the supervisory queue for the MRD to which they belong to. Additionally,

Chats

- **Standalone agents** can pull chats from standalone queues. Pick does not apply to chats.

- **Integrated agents** are assigned chats by the system automatically. They cannot pull chat activities from queues. Pick does not apply to chats.

Tasks

- **Standalone agents** can pick and pull tasks from queues. They cannot pick tasks from agents.

- **Integrated agents** can pick tasks from queues. They cannot pick from agents or pull from queues. Note that tasks are not reported to Unified CCE so the Unified CCE reporting will not record the time spent by agents on tasks.

Important Things to Note About Transferring Activities

Emails

- **Standalone agents** can transfer emails to standalone agents, standalone queues, and departments.

- **Integrated agents** can transfer incoming emails to integrated agents and integrated queues that belong to the same MRD. However, outbound emails created by integrated agents can only be transferred to users and not to queues. There is no transfer to department directly. If the **Allow Transfer of Activities to Integrated Queues in Other Departments** setting is enabled, agents can transfer activities to queues of other departments. To be able to transfer an email to an integrated agent, the agent must be logged in to the application, should not have met the concurrent task limit, and should not be working on a non-interruptible activity. If these requirements are not met, the integrated agent is not displayed in the Transfer Activities window.
Chats

- **Standalone agents** can transfer chats to standalone agents, standalone queues, and departments.

- **Integrated agents** can transfer chats to integrated queues and agents that belong to the same MRD. They cannot transfer to departments. There is no transfer to departments directly. If the **Allow Transfer of Activities to Integrated Queues in Other Departments** setting is enabled, agents can transfer activities to queues of other departments. To be able to transfer a chat to an integrated agent, the agent must be logged in to the application and should not have met the concurrent task limit. If these requirements are not met, the integrated agent is not displayed in the Transfer Activities window. To be able to transfer to a queue, an integrated agent who belongs to that queue’s MRD must be logged in and ready.

Tasks

- **Standalone agents** can transfer tasks to standalone agents and standalone queues. They cannot transfer to departments.

- **Integrated agents** can transfer tasks to integrated agents and integrated queues. They cannot transfer to departments. Note that tasks are not reported to Unified CCE so the Unified CCE reporting will not record the time spent by agents on tasks.
What are the Actions Assigned to the Default Roles?

Now that you already know that every default role has a set of permissible actions assigned to them, you must be curious to find out what these actions are. To learn more about them look at the following tables.

**System Administrator**

The various actions assigned to the System Administrator role are listed in the following table.

<table>
<thead>
<tr>
<th>Resource Name</th>
<th>Actions Permitted</th>
</tr>
</thead>
<tbody>
<tr>
<td>System Resource</td>
<td>View Administrator, View System</td>
</tr>
<tr>
<td>User</td>
<td>Create, Own, View, Edit, Delete</td>
</tr>

*Actions assigned to the Agent role*
The following table describes some of the important agent actions in detail.

<table>
<thead>
<tr>
<th>Resource Name</th>
<th>Actions Permitted</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Activity</td>
<td>Create</td>
<td>Enables the <strong>New Activity</strong> button in the Main Inbox toolbar.</td>
</tr>
<tr>
<td></td>
<td>Complete</td>
<td>Enables the <strong>Complete</strong> button in the Reply pane toolbar when working on email activities, custom activities, or tasks. Also enables the <strong>Send &amp; Complete</strong> button in the Reply pane toolbar if the <strong>Send Email</strong> action is also assigned to the agent.</td>
</tr>
<tr>
<td></td>
<td>Pin</td>
<td>Enables the <strong>Pin/Unpin</strong> button in the the in the Main Inbox toolbar.</td>
</tr>
</tbody>
</table>
|               | Print             | Enables the **Print** button in the following toolbars:  
> The Main Inbox toolbar  
> The toolbar in the Activity section of the Information pane  
> The toolbar in the Case section of the Information pane  
> The Search Console toolbar, while searching for activities  
**Note:** In the Print window (which opens on clicking the **Print** button), only the **Summary of activities assigned to me** and **Currently selected activity contents** options are enabled. The **Currently selected case contents** is enabled only when the **Print Case** action is assigned to an agent. |
|               | Unpin             | Allows an agent to pull the pinned activities from other agents. |
|               | Pull Next Activities | Enables the **Pull** button in the Main Inbox toolbar. To be able to pull activities using this button, the agent needs:  
> **Pull Activities** action for routing queues.  
> **Pull Activities** permission on queues.  
For chats, the following action is also required:  
> **Pull Next Chat Activity** action for chats. |
|               | Pull Selected Activities | Enables the **Pick** button in the Main Inbox toolbar. To be able to pull activities (other than chats) using this button, an agent needs:  
> **Pull Activities** action for routing queues.  
> **Pull Activities** action for users.  
> **Pull Activities** permission on queues.  
> **Pull Activities** permission on users. |
|               | Transfer Activities | Enables the **Transfer** button in the Main Inbox toolbar, the Chat Inbox toolbar, and the Reply pane toolbar. To be able to transfer activities using this button, an agent needs:  
> **Transfer Activities** action for routing queues.  
> **Transfer Activities** action for users.  
> **Transfer Activities** permission on queues.  
> **Transfer Activities** permission on users. |
<p>|               | Assign Classification | Enables the <strong>Save</strong> button in the Classify section of the Information pane, so that agents can assign categories and resolution codes to activities. |</p>

</tr>
</thead>
<tbody>
<tr>
<td>Case</td>
<td>Edit</td>
<td>Allows an agent to edit the case details. Enables the Save button in the Information pane, Case section. The Case status field is enabled only if the agent has the Close Case action.</td>
</tr>
</tbody>
</table>
| Print         |                   | Enables the Print button in the following toolbars:  
|               |                   |  - The Main Inbox toolbar  
|               |                   |  - The toolbar in the Activity section of the Information pane  
|               |                   |  - The toolbar in the Case section of the Information pane  
|               |                   |  - The Search Window toolbar, while searching for cases  
|               |                   |  - Inbox Tree pane > My Work > Cases > My Cases > Open and Closed  
|               |                   | **Note:** In the Print window (which opens on clicking the Print button), only the Currently selected case contents option is enabled. The Summary of activities assigned to me and Currently selected activity contents options are enabled only when the Print Activity action is assigned to an agent. |
| Close Case    |                   | Allows an agent to close an open case. It enables the Close Case button in the Inbox pane toolbar (Inbox Tree pane > My Work > Cases > My Cases > Open). If the agent has the Edit case action, it also enables the Case status field in the Information pane, Case section. |
| Change Case   |                   | Allows an agent to change the case of an activity and associate it with an existing case. It enables the Change Case button in the Information pane, Case section. |
| Create Case   |                   | Allows an agent to create new cases. When a new case is created, the old case associated with the activity is closed and the activity is associated with the new case. It enables the Create Case button in the Information pane, Case section. |
| Chat          | Complete Chat Activity | Enables the Complete button in the Chat pane toolbar. |
|               | Leave Chat Activity | Enables the Leave button in the Chat pane toolbar. Allows an agent to leave a chat without completing the activity. The activity gets completed only when the customer closes the chat session. |
|               | Pull Next Chat Activity | Enables the Pull Chat button. Allows an agent to pull chat activities from queues. To be able to pull chat activities the agent also needs:  
|               |                   |  - Pull Next Activities action for activities  
|               |                   |  - Pull Activities action for routing queues  
|               |                   |  - Pull Activities permission on queues  
|               | Transfer Chat Activity | Enables the Transfer button in the Chat pane toolbar. Allows an agent to transfer chats to other agents, queues, and departments. To be able to transfer chats using this button, the agent needs:  
|               |                   |  - Transfer Activities action for routing queues  
|               |                   |  - Transfer Activities action for users  
|               |                   |  - Transfer Activities permission on queues  
<p>|               |                   |  - Transfer Activities permission on users |</p>

</table>
| Notes         | View              | Allows an agent to view notes associated with cases, activities, customers, and customer associations. It displays the View notes option in the Notes window, which can be accessed using the Notes button from the following panes:  
- Main Inbox toolbar  
- Chat Inbox toolbar  
- Reply pane  
- Chat pane  
- Information pane, in the following sections: Activity, Case, History, and Customer. |
|               | Add               | Allows an agent to add notes to cases, activities, customers, and customer associations. It displays the Add notes option in the Notes window, which can be accessed using the Notes button from the following panes:  
- Main Inbox  
- Chat Inbox  
- Reply pane  
- Chat pane  
- Information pane, in the following sections: Activity, Case, History, and Customer.  
If an agent has the View Notes action, it also enables the Add button in the Notes window. It displays the Add notes option in the Notes window, which can be accessed using the Notes button from the following panes:  
- Main Inbox  
- Chat Inbox  
- Reply pane  
- Chat pane  
- Information pane, in the following sections: Activity, Case, History, and Customer. |
|               | Delete            | Allows an agent to delete the notes associated with cases, activities, customers, and customer associations. It enables the Delete button in the Notes window. The Notes window can be accessed using the Notes button from the following panes:  
- Main Inbox  
- Chat Inbox  
- Reply pane  
- Chat pane  
- Information pane, in the following sections: Activity, Case, History, and Customer.  
The Notes window can only be accessed by agents with the View Notes action. |
| Routing Queue | Pull Activities   | Allows agents to pull activities from routing queues. To be able to pull activities from queues, an agent needs:  
- Pull Next Activities or Pull Selected Activities action for activities  
- Pull Activities permission on routing queues  
For chats, the following action is also required:  
- Pull Next Chat Activity action for chats |
|               | Transfer Activities| Allows agents to transfer activities to routing queues. To be able to transfer activities to queues, an agent needs:  
- Transfer Activities action for activities  
- Transfer Activities permission on queues |
| System Resource | View Agent Console | Allows an agent to access the Agent Console. |
Some important actions assigned to the Agent role

</tbody>
</table>

*Explicit actions for Author role*
**Supervisor**

The following table lists the actions that are part of the default Supervisor role that are required to perform various supervisor tasks in the Agent Console, Supervision Console, and Reports Console.

<table>
<thead>
<tr>
<th>Object</th>
<th>Actions permitted</th>
</tr>
</thead>
</table>
| System Resource    | View Agent, View Reports, View Supervision  
*Note:* These actions provide access to the Agent Console, Reports Console, and Supervision Console                                                                 |
| Report             | Create, Delete, View, Run, Edit, Schedule  
*Note:* With these actions, users can manage reports from the Reports Console.                                                                                                                                 |
| Monitor            | Create Edit, Delete, Run  
*Note:* With these actions, users can manage monitors from the Supervision Console.                                                                                                                           |
| Activities         | Create, Print, Edit Subject, Pin, Complete, Edit, Transfer Activities, Unpin, Add Greetings, Add Header, Add Attachment, Add Folder, Add Signature, Assign Classification |
| Case               | Edit, Print, Close Case, Change Case, Create Case                                                                                                                                                                   |
| Categories         | View                                                                                                                                                                                                             |
| Chat               | Complete Chat Activity, Leave Chat Activity, Transfer Chat Activities, Monitor Chat Activity  
*Additional actions available only in standalone installations:* Pull Chat Activities  
*Note:* The following action enables the supervisor to monitor chats from the My Monitor node in the Agent Console: Monitor Chat Activity |
| Customer           | View Association, Create Association, Edit Association, Delete Contact Person, Delete Contact Details, Delete Association, Edit Contact Details, Edit Contact Person, Change Customer, View, Edit, Delete, Create, Create Contact Details, Create Contact Person |
| Email              | Resubmit supervised email, Reject emails for supervision, Accept emails for supervision Send Email, Send and Complete Email, Edit Reply To field, Edit Reply Type, Edit From field, Edit CC field, Edit BCC field, Edit To field  
*Note:* The following actions enable the supervisor to review outbound email activities: Resubmit supervised email, Reject emails for supervision, Accept emails for supervision |
<p>| Email Attachment   | Delete, Restore                                                                                                                                                                                                   |
| Filter Folder      | Create, Delete, Share Inbox Folder                                                                                                                                                                                |
| KB Folder          | View Folder, View Personal Folder, Suggest Article, Delete Notes, Create Agent Personal Folders, Add Notes, Manage Personal Folders                                                                                   |
| Macros             | View                                                                                                                                                                                                             |
| Notes              | View, Add, Delete                                                                                                                                                                                                  |
| Personal Dictionary| Personal Dictionary                                                                                                                                                                                                |

Managing User Roles

This section talks about:
- Creating User Roles on page 158
- Creating User Subroles on page 161
- Copying User Roles on page 162
- Restoring User Roles on page 162
- Deleting User Roles and Subroles on page 163

Creating User Roles

Important: Additional user roles cannot be created in the Basic edition of Unified EIM & WIM.

To create a user role:
1. In the Tree pane, browse to the Users node. Based on where you want to create a user role, do one of the following:
   - If you are a system administrator, go to the system partition and browse to Administrator > Partition: Context_Root_Name > User > Roles.
   - If you are a partition administrator, go to the business partition and browse to Administrator > Partition: Partition_Name > User > Roles.
If you are a department administrator, browse to **Administration > Departments > Department_Name > User > Roles.**

2. In the List pane toolbar, click the **New** button.

3. In the Properties pane, on the General tab, set the following:
   - **Name:** Provide a name for the role
   - **Description:** Provide a brief description.
   - **Template:** From the dropdown list, select an available template or select **Custom Template** to start with a blank role. The template cannot be changed once you save the role.

4. Click the **Save** button. This enables the Relationships tab.

5. Next, go to the Relationships tab and do the following.
   a. In the Actions section, select the actions for the role.
      - When you start with a custom template, the role does not have any actions associated with it. While selecting the actions for the role, make sure you select all the actions that are required to do a task. For example, if you want a user with this role to be able to manage resolution codes, then make sure you assign all the four actions, Resolution - Create, View, Edit, and Delete, to the role.
      - If you started with a pre-configured template, like the Agent Template, the Actions section will show the list of actions associated with the template. You can customize the role by adding or removing actions. If you feel you want to go back to the original list of actions, you can restore the role to its default state (page 162).
b. Go to the User groups section, and assign the role to user groups. You can also choose to assign roles to users individually; however, it is recommended that you assign roles to user groups. It helps you manage your users better.

Assign the role to user groups

![Properties: User Administrator](image)

Assign the role to users

![Properties: User Administrator](image)

c. Next go to the Users section, and assign the role to users.

d. Now go to the User subroles section, and select the roles you want to associate with this role as subroles. You can even set default roles as subroles. To know more about subroles, see “Creating User Subroles” on page 161.

Select user subroles

![Properties: User Administrator](image)

6. Click the **Save** button to save the role that you have created.

The role that you create is displayed in the List pane.
Creating User Subroles

A subrole is a subset of actions required by a user to function in the system. It is an advanced feature of user management and it helps you manage user actions in a better way. You can create task-based roles and use these roles as subroles of bigger roles in the system. For example, you want your supervisor and administrator to have some common actions. Instead of assigning individual actions to the user, you can create a role, with those actions, and associate that role as a sub role to the supervisor and administrator role.

A role can be a subrole of more than one roles.

To create a subrole:

1. In the Tree pane, browse to the Users node. Based on where you want to create a user subrole, do one of the following:
   - If you are a system administrator, go to the system partition and browse to Administrator > Partition: Context_Root_Name > User > Roles.
   - If you are a partition administrator, go to the business partition and browse to Administrator > Partition: Partition_Name > User > Roles.
   - If you are a department administrator, browse to Administration > Departments > Department_Name > User > Roles.

2. Select the role for which you want to create a subrole.
   - If you want to use an existing role as a subrole, go to Relationships tab and in the User subroles section, select from the available roles.
   - If you want to create a new subrole, follow steps 2 to 5 in “Creating User Roles” on page 158. When you create a role under an existing role, it automatically becomes the subrole of the role.

When a role with subroles is assigned, all its subroles are automatically assigned to the users.
Copying User Roles

When you copy a role, the description of the role and the actions and user subroles associated with the role are copied. The copied role is not assigned to any users or user groups.

To copy a role:

1. In the Tree pane, browse to the Users node. Based on where you want to copy a user role, do one of the following:
   - If you are a system administrator, go to the system partition and browse to Administrator > Partition: Context_Root_Name > User > Roles.
   - If you are a partition administrator, go to the business partition and browse to Administrator > Partition: Partition_Name > User > Roles.
   - If you are a department administrator, browse to Administration > Departments > Department_Name > User > Roles.

2. In the List pane, select the role you want to copy.

3. In the List pane toolbar, click the Copy button.

4. A copy of the role is created. The copied role retains the template of the original role.

Restoring User Roles

When you restore a role, the list of actions associated with the role is reset to its default state. All subroles associated with the role are also removed from the role. You can create a copy of the role before restoring it to its default state. Note that the copied role is not assigned to any users or user groups.

To restore a role:

1. In the Tree pane, browse to the Users node. Based on where you want to restore a user role, do one of the following:
   - If you are a system administrator, go to the system partition and browse to Administrator > Partition: Context_Root_Name > User > Roles.
   - If you are a partition administrator, go to the business partition and browse to Administrator > Partition: Partition_Name > User > Roles.
   - If you are a department administrator, browse to Administration > Departments > Department_Name > User > Roles.

2. In the List pane, select the role you want to restore to its default state.

3. In the Properties pane toolbar, click the Restore Defaults button.

4. A prompt is displayed to confirm the restore action. In this prompt, you get an option to create a copy of the role before restoring it.
Deleting User Roles and Subroles

Delete the user roles that are not needed anymore. Before deleting a role, make sure that it is not assigned to any user. The system does not check to see if the role is in use or not.

The system provided roles cannot be deleted. These roles are:

- In the system partition: System Administrator
- In the business partition: Partition Administrator
- In a department: Administrator, Agent, Agent (read only), Supervisor, Supervisor (read only), Author, Offer Manager, Wrap-up

**To delete a user role or subrole:**

1. In the Tree pane, browse to the **Users** node. Based on where you want to delete the user role from, do one of the following:
   - If you are a system administrator, go to the system partition and browse to **Administrator > Partition: Context_Root_Name > User > Roles.**
   - If you are a partition administrator, go to the business partition and browse to **Administrator > Partition: Partition_Name > User > Roles.**
   - If you are a department administrator, browse to **Administration > Departments > Department_Name > User > Roles.**

2. In the List pane, select the role or subrole you want to delete.

3. In the List pane toolbar, click the **Delete** button.

   You will be prompted to confirm the deletion. Click **OK** to delete the role.

Managing User Groups

This section talks about:

- Creating User Groups in System Partition on page 163
- Creating User Groups in Business Partition on page 166
- Creating User Groups in Departments on page 168
- Creating User Subgroups on page 175
- Deleting User Groups on page 176

Creating User Groups in System Partition

**To create a group of system administrators:**

1. Log in to the system partition (zero partition) and go to the Administration Console.

2. In the Tree pane, browse to **Administration > Partition: Context_Root_Name > User > Groups.**
3. In the List pane toolbar, click the **New** button.

4. In the Properties pane, on the General tab, provide the name and description for the user group.

5. Click the **Save** button. The Relationships and Permissions tabs are enabled only after you click **Save**.

6. In the Relationships tab, do the following.
   a. Go to the Users tab and select the users who should be part of this user group.

   ![Select users](image)

   **Select users**

   b. Go to the User roles tab and select the roles to be assigned to the user group. If you want to view the actions that come as part of the selected role, save the user group and go to the Actions tab to see the list of actions.

   ![Select user roles](image)

   **Select user roles**

   c. Next, go to the Actions tab, and view the list of actions assigned to the user group. Here you can also assign additional actions to the user group. From the Grant field in the Selected actions section, you can identify how actions are assigned to the user. The actions assigned as part of the role show the name of the role, and actions assigned explicitly show the value “Explicit”.

---

164  Cisco Unified Web and E-Mail Interaction Manager Administrator's Guide to Administration Console
It is highly recommended that you do not assign actions directly to user groups. You should always create a user role, with the actions, and assign the role to the user. This makes user management easier. For more details on creating user roles, see “Creating User Roles” on page 158.

![Properties: System Administrators](image)

**Select actions**

d. Next, go to the User subgroups section and select sub groups for the group. For more details on subgroups, see “Creating User Subgroups” on page 175.

![Properties: System Administrators](image)

**Select user subgroups**

7. Click the **Save** button to enable the various options in the Permissions tab.

8. On the Permissions tab, assign permissions for the following objects.

- **Partition**: Own, View, Edit, Administer
- **User**: Own, View, Edit, Delete
- **User group**: Own, View, Edit, Delete, Own, View Edit, Delete

![Properties: System Administrators](image)

**Assign permissions**
9. Click the **Save** button.

**Creating User Groups in Business Partition**

**To create a group of partition administrators:**

1. Log in to the business partition and go to the Administration Console.
2. In the Tree pane, browse to **Administration > Partition: Partition_Name > User > Groups.**
3. In the List pane toolbar, click the **New** button.
4. In the Properties pane, on the General tab, provide the name and description for the user group. Ignore the following fields as they do not need to be set - Peripheral, Skill group, Type, Media Routing Domain.

   ![Properties: Department Administrators](image)

   *Set general properties*

5. Click the **Save** button. The Relationships and Permissions tabs are enabled only after you click **Save.**

6. In the Relationships tab, do the following.
   a. Go to the Users tab and select the users who should be part of this user group.

   ![Properties: Department Administrators](image)

   *Select users*

   b. Go to the User roles tab and select the roles to be assigned to the user group. If you want to view the actions that come as part of the selected role, save the user group and go to the Actions tab to see the list of actions.
Select user roles

c. Next, go to the Actions tab, and view the list of actions assigned to the user group. Here you can also assign additional actions to the user group. You can identify how actions are assigned from the Grant field in the Selected actions section. The actions assigned as part of the role show the name of the role, and actions assigned explicitly show the value “Explicit”.

It is highly recommended that you do not assign actions directly to user groups. You should always create a user role, with the actions, and assign the role to the user. This makes user management easier. For more details on creating user roles, see “Creating User Roles” on page 158.

Select actions

d. Next, go to the User subgroups section and select subgroups for the group. For more details on subgroups, see “Creating User Subgroups” on page 175.

Select user subgroup
Lastly, in the Languages section, select the primary KB language for the user.

7. Click the **Save** button to enable the various options in the Permissions tab.

8. On the Permissions tab, assign permissions for the following objects:
   - **Department**: Own, View, Edit, Administer
   - **Partition**: Own, View, Edit, Administer
   - **Report**: View, Run, Edit, Delete, Schedule
   - **User**: Own, View, Edit, Delete
   - **User group**: Own, View, Edit, Delete, Own, View Edit, Delete

9. Click the **Save** button.

**Creating User Groups in Departments**

This section talks about:
- Creating Groups of Standalone Users on page 168
- Creating Groups of Integrated Users on page 172

**Creating Groups of Standalone Users**

**To create a group of standalone department users:**

1. Log in to the business partition and go to the Administration Console.
2. In the Tree pane, browse to Administration > Departments > Department_Name > User > Groups.
3. In the List pane toolbar, click the **New** button.
4. In the Properties pane, on the General tab, provide the name and description for the user group. Ignore the following fields as they do not need to be set for standalone user groups - Peripheral, Skill group, Type, Media Routing Domain.

5. Click the **Save** button. The Relationships and Permissions tabs are enabled only after you click **Save**.

6. In the Relationships tab, do the following.
   a. Go to the Users tab and select the users who should be part of this user group. Only standalone users are displayed here.
b. Go to the User roles tab and select the roles to be assigned to the user group. If you want to view the actions that come as part of the selected role, save the user group and go to the Actions tab to see the list of actions.

Select user roles

Select actions

c. Next, go to the Actions tab, and view the list of actions assigned to the user group. Here you can also assign additional actions to the user group. You can identify how actions are assigned from the Grant field in the Selected actions section. The actions assigned as part of the role show the name of the role, and actions assigned explicitly show the value “Explicit”.

It is highly recommended that you do not assign actions directly to user groups. You should always create a user role, with the actions, and assign the role to the user. This makes user management easier. For more details on creating user roles, see “Creating User Roles” on page 158.
d. Next, go to the User subgroups section and select sub groups for the group. For more details on subgroups, see Creating User Subgroups on page 175.

![Select user subgroup]

e. Next, go the User attribute settings tab and select a user attribute setting for the group. This lets you control the level of access a user has in the system. For more details on user attribute settings, see Cisco Unified Web and E-Mail Interaction Manager Administrator's Guide to Tools Console.

![Select user attributes]

---

**Important:** User attributes settings cannot be created in the Basic edition of Unified WIM and Unified EIM.

---

f. Lastly, in the Languages section, select the primary KB language for the user.

7. Click the **Save** button to enable the various options in the Permissions tab.

8. On the Permissions tab, assign permissions for the following objects.
   - **KB Folder:** Own folder, View folder, Edit folder, Delete folder, Create folder, Create article, Edit article, Delete article, Suggest article, Manage suggestions, View personal folder
   - **Report:** View, Run, Edit, Delete, Schedule
   - **Routing Queue:** Own, View, Edit, Delete, Transfer activities, Pull activities
   - **Usage - Links:** Own, View, Edit, Delete, Execute
- **User**: Own, View, Edit, Delete, Transfer activities, Pull activities
- **User group**: Own, View, Edit, Delete, Transfer activities, Pull activities

Set permissions

9. Click the **Save** button.

**Creating Groups of Integrated Users**

**To create a group of integrated users:**

1. Log in to the business partition and go to the Administration Console.
2. In the Tree pane, browse to **Administration > Departments > Department_Name > User > Groups**.
3. In the List pane toolbar, click the **New** button.
4. In the Properties pane, on the General tab, provide the following details:
   - **Peripheral**: From the dropdown list, select the Unified CCE peripheral to which the skill group belongs. Every time the user group administration screen is loaded, the peripheral list is dynamically populated with the current list of peripherals that exist in Unified CCE.
   - **Skill group**: From the dropdown list, select the skill group to which the user group should map. All Unified CCE skill groups that belong to the selected peripheral are dynamically retrieved from Unified CCE. One skill group can be mapped to only one user group.

When you select a skill group, a message is displayed that a Unified EIM & WIM user group is getting mapped to a Unified CCE skill group and this would affect the reporting of the skill group. Once you click the **OK** button in the message, the following fields are populated automatically.
   - **Name**: The name of the user group is displayed. Do not change the value of this field.
   - **Type**: The type of skill group. If the user group is mapped to an IPTA skill group, the type would be “UnifiedCCE-picks-the-agent”. If the user group is not mapped to a NIPTA skill group, the type would be “Unified EIM & WIM-picks-the-agent”. The value in this field cannot be changed.
   - **Media Routing Domain**: It displays the Media Routing Domain associated with the skill group selected in the **Skill group** field. The value in this field cannot be changed.

In addition to these properties, you can also provide a brief description of the user group.
- **Description:** Provide a brief description.

5. Click the **Save** button. The Relationships and Permissions tabs are enabled only after you click **Save**.

6. Next, on the **Relationships** tab, configure the following properties.
   a. Go to the **Users** section and select the users who should be part of this user group. You can add users to NIPTA user groups only. For IPTA user groups, you see a read-only view of the users that are part of the user group.

   ![Select users](image)

   **Select users**

   b. Go to the **User roles** section and select the roles to be assigned to the user group. If you want to view the actions that come as part of the selected role, save the user group and go to the **Actions** tab to see the list of actions.

   ![Select user roles](image)

   **Select user roles**
c. Next, go to the Actions section, and view the list of actions assigned to the user group. Here you can also assign additional actions to the user group. You can identify how actions are assigned from the Grant field in the Selected actions section. The actions assigned as part of the role show the name of the role, and actions assigned explicitly show the value “Explicit”.

It is highly recommended that you do not assign actions directly to user groups. You should always create a user role, with the actions, and assign the role to the user group. This makes user management easier. For more details on creating user roles, see “Creating User Roles” on page 158.

![Select actions]

Select actions

---

d. Next, go the User attribute settings tab and select a user attribute setting for the group. This lets you control the level of access a user has in the system. For more details on user attribute settings, see Cisco Unified Web and E-Mail Interaction Manager Administrator's Guide to Tools Console.

![Select user attributes]

Select user attributes

---

e. Lastly, in the Languages section, select the primary KB language for the user. The User Subgroups tab is disabled for integrated user groups.

7. Click the Save button to enable the various options in the Permissions tab.

8. On the Permissions tab, assign permissions for the following objects.

- **KB Folder:** Own folder, View folder, Edit folder, Delete folder, Create folder, Create article, Edit article, Delete article, Suggest article, Manage suggestions, View personal folder
Creating User Subgroups

A group can be added as a subgroup to another group, to assign additional privileges such as, roles, actions, permissions, etc. to the subgroup. For example, if you want the administrator group to also act as supervisors, you can add the administrator group as the subgroup of the supervisor group. Along with the privileges the administrator group already has, it also gets all the privileges of the supervision group.

Do not create subgroups for integrated user groups.

To create a subgroup:

1. In the Tree pane, browse to the Users node. Based on where you want to create a user subgroup, do one of the following.
   - If you are a system administrator, go to the system partition and browse to Administrator > Partition: Context_Root_Name > User > Groups.
   - If you are a partition administrator, go to the business partition and browse to Administrator > Partition: Partition_Name > User > Groups.
   - If you are a department administrator, browse to Administration > Departments > Department_Name > User > Groups.

2. Select the group for which you want to create a subgroup.
If you want to use an existing group as a subgroup, go to Relationships tab and in the User subgroups section, select from the available groups.

Select subgroups

If you want to create a new subgroup, follow steps 3 to 9 from one of the following sections: “Creating User Groups in System Partition” on page 163, “Creating User Groups in Business Partition” on page 166, “Creating Groups of Standalone Users” on page 168, or “Creating Groups of Integrated Users” on page 172. When you create a group under an existing group, it automatically becomes the subgroup of the group.

Deleting User Groups

If a Unified EIM & WIM user group is mapped to a Unified CCE skill group, and the Unified CCE skill group is deleted, when the Unified EIM & WIM user group is clicked, a warning appears indicating that the user group will be unmapped in Unified EIM & WIM.

To delete a user group:

1. In the Tree pane, browse to the Users node. Based on from where you want to delete the user group, do one of the following.
   - If you are a system administrator, go to the system partition and browse to Administrator > Partition: Context_Root_Name > User > Roles.
   - If you are a partition administrator, go to the business partition and browse to Administrator > Partition: Partition_Name > User > Roles.
   - If you are a department administrator, browse to Administration > Departments > Department_Name > User > Roles.
2. In the List pane, select the user group you want to delete.
3. In the List pane toolbar, click the Delete button.

Managing Users

This section talks about:

- Creating System Administrators on page 177
Creating System Administrators

**Important:** If you are editing the properties of an existing user who is logged into the application, the user updates take effect only on the next login.

To create a system administrator:

1. Log in to the system partition and go to the Administration Console.
2. In the Tree pane, browse to Administration > Partition: Context_Root_Name > User > Users.
3. In the List pane toolbar, click the **New** button.
4. In the Properties pane, on the General tab, set the following:
   a. In the General section, provide the following details.
      - **User name:** Type a name for the user. This name is used by the user to log in to the application.
      - **Password:** Type the password.
      - **User status:** Select the status of the user. By default, the new user’s status is **Enabled**. Once the user is saved, the following four options are available: Enabled, Disabled, Logged in, and Not logged in. For more information, see “Changing User Status” on page 202.

The following fields are optional.

- **Title**
- **First name**
- **Middle name**
- **Last name**
- **Suffix**
- **Screen name:** This field is not in use.
- **Mobile number 1**
- **User type**
b. Next, go to the Business section, and provide the following information. All the fields are optional.
   - **Employment status**: The options available are - Customer, Employee, Partner, and Reseller.
   - **Company**
   - **Division**
   - **Department**
   - **Job title**
   - **Work address line 1**
   - **Work address line 2**
   - **Work city**
   - **Work state**
   - **Work zip code**
   - **Work country**
   - **Work phone**
   - **Extension**
   - **Work pager**
   - **Work fax**
   - **Email address**
   - **Mobile number 2**
   - **ACD name**
   - **Hire date**
c. Next, go to the Personal section, and provide the following information. All the fields are optional.

- **Home address line 2**
- **Home city**
- **Home state**
- **Home zip code**
- **Home country**
- **Home phone**
- **Home pager**
- **Home fax**
- **Mobile number 3**
- **Secondary email address**
d. Finally, go to the Miscellaneous section, and provide the following information. All the fields are optional.

- **Primary language**
- **Gender**
- **Creation date**: This field displays the name of the user who created the user. The value is populated automatically when the user is saved and it cannot be changed.
- **Created by**: This field displays the date and time when the user is created. The value is populated automatically when the user is saved and it cannot be changed.
- **Social Security Number**

5. Next, go to the Relationships tab, and set the following.

a. Go to the User groups section and select the user group to which you want to add the user. If you have not created any user groups yet, you can create them and add the users later. For more details, see “Creating User Groups in System Partition” on page 163. Although it is optional to manage users through user groups, we highly recommend that you use groups as it makes user management easier.

When a user is added to a group, he is automatically assigned the roles and actions of the group. You can also choose to assign actions and roles to users individually; however, it is not recommended.
b. Go to the User roles section and select the roles to be assigned to the user. If you want to view the actions that come as part of the selected role, save the user and go to the Actions tab to see the list of actions.

![Select user roles](image)

Select user roles

Choose the roles for the user and select the actions that come as part of the selected role.

Go to the Actions section, and view the list of actions assigned to the user. Here you can also assign additional actions to the user. You can identify how actions are assigned from the Grant field in the Selected actions section. The actions assigned explicitly show the value “Explicit”.

It is highly recommended that you do not assign actions directly to user. You should always create a user role, with the actions, and assign the role to the user. This makes user management easier. For more details on creating user roles, see “Creating User Roles” on page 158.

![Select actions](image)

Select actions

6. Click the **Save** button to enable the various options in the Permissions tab.

7. On the Permissions tab, assign permissions for the following objects.
   - **Partition**: Own, View, Edit, Administer
   - **User**: Own, View, Edit, Delete
   - **User group**: Own, View, Edit, Delete, Own, View Edit, Delete
If you have added a user to a user group, and the user group has permissions on various objects, then that permissions show selected and disabled. If you are using user groups for user management, you should assign permissions to user groups, and not to individual users.

8. Click the **Save** button.

Creating Partition Administrators

---

**Important:** If you are editing the properties of an existing user who is logged into the application, the user updates take effect only on the next login.

**To create a partition administration:**

1. Log in to the business partition and go to the Administration Console.
2. In the Tree pane, browse to **Administration > Partition**: *Partition_Name* > **User** > **Users**.
3. In the List pane toolbar, click the **New** button.
4. In the Properties pane, on the General tab, set the following:
   a. In the General section, provide the following details:
      - **User name**: Type a name for the user. This name is used by the user to log in to the application.
      - **Password**: Type the password.
      - **User status**: Select the status of the user. By default the new user’s status is **Enabled**. Once the user is saved, the following four options are available: Enabled, Disabled, Logged in, and Not logged in. For more information, see “Changing User Status” on page 202.

The following fields are optional.

- **Title**
- **First name**
- **Middle name**
- **Last name**
- **Suffix**
- **Screen name**: This field is not in use.
• **Peripheral**: This field is not in use.
• **Unified CCE Agent Login Name**: This field is not in use.

Set general properties

b. Next go to the Business section, and provide the following information. All the fields are optional.

• **Company**
• **Division**
• **Department**
• **Job title**
• **Email address**
• **Work phone**
• **Extension**
• **Mobile number 1**
• **Employment status**: The options available are - Customer, Employee, Partner, and Reseller.

Set business properties
c. Next, go to the Personal section, and provide the following information. All the fields are optional.

- Home address line 1
- Home address line 2
- Home city
- Home state
- Home zip code
- Home phone
- Mobile number 2
- Secondary email address

Set personal properties

d. Finally, go to the Miscellaneous section. The following information is displayed.

- **Creation date**: This field displays the name of the user who created the user. The value is populated automatically when the user is saved and it cannot be changed.

- **Created by**: This field displays the date and time when the user is created. The value is populated automatically when the user is saved and it cannot be changed.

View miscellaneous properties

5. Next, go to the Relationships tab, and set the following.

a. Go to the User groups section and select the user group to which you want to add the user. If you have not created any user groups yet, you can create them and add the users later. For more details, see “Creating User Groups in Business Partition” on page 166. Although it is optional to manage users through user groups, we highly recommend that you use groups as it makes user management easier.
When a user is added to a group, he is automatically assigned the roles and actions of the group. You can also choose to assign actions and roles to users individually; however, it is not recommended.

Select user groups

b. Go to the User roles section and select the roles to be assigned to the user. If you want to view the actions that come as part of the selected role, save the user and go to the Actions tab to see the list of actions.

Select user roles

c. Next, go to the Actions section, and view the list of actions assigned to the user. Here you can also assign additional actions to the user. You can identify how actions are assigned from the Grant field in the Selected actions section. The actions assigned explicitly show the value “Explicit”.

It is highly recommended that you do not assign actions directly to user. You should always create a user role, with the actions, and assign the role to the user. This makes user management easier. For more details on creating user roles, see “Creating User Roles” on page 158.
Lastly, in the Languages section, select the primary KB language for the user.

6. Click the **Save** button to enable the various options in the Permissions tab.

7. On the Permissions tab, assign permissions for the following objects.
   - **Department:** Own, View, Edit, Administer
   - **Partition:** Own, View, Edit, Administer
   - **Report:** View, Run, Edit, Delete, Schedule
   - **User:** Own, View, Edit, Delete
   - **User group:** Own, View, Edit, Delete, Own, View Edit, Delete

If you have added a user to a user group, and the user group has permissions on various objects, then those permissions show selected and disabled. If you are using user groups for user management, you should assign permissions to user groups, and not to individual users.

8. Click the **Save** button.
Creating Department Users

Important: If you are editing the properties of an existing user who is logged into the application, the user updates take effect only on the next login.

This section talks about:

- Creating Standalone Users on page 187
- Creating Integrated Users on page 195

Creating Standalone Users

To create a standalone user:

1. In the Tree pane, browse to Administration > Departments > Department_Name > User > Users.
2. In the List pane toolbar, click the New button.
3. In the Properties pane, on the General tab, set the following.

   a. In the General section, provide the following details:

      - **User name**: Type a name for the user. This name is used by the user to log in to the application. Make sure that you provide a unique user name, and a user with this name does not exist in Unified CCE.

      - **Password**: Type the password. There are important setting related to setting up password. For more details, see “User Account Settings” on page 56.

      - **Screen name**: You need to set the screen name for a user who has the Unified WIM license. This is the name displayed to chat customers in the Chat Customer Console. You can use the same screen name for more than one user in the system. Do not change the screen name of an agent when the agent is logged in the application and is servicing chats.

      - **User status**: Select the status of the user. By default the new user’s status is **Enabled**. Once the user is saved, the following four options are available: Enabled, Disabled, Logged in, and Not logged in. For more information, see “Changing User Status” on page 202.

   The following fields are optional.

   - **Title**
   - **First name**
   - **Middle name**
   - **Last name**
   - **Suffix**
   - **External assignment**: This field is not in use and the value of the field cannot be changed.
   - **Peripheral**: Do not set this field for standalone users.
• **Unified CCE Agent Login Name**: Do not set this field for standalone users.

![Properties: Ashley](image)

*Set general properties*

b. Next go to the Business section, and provide the following information. All the fields are optional.

- **Company**
- **Division**
- **Department**
- **Job title**
- **Manager**: Here you can set the manager of a user. For more details, see “Assigning Manager of Users” on page 203.
- **Email address**
- **Work phone**
- **Extension**
- **Mobile number 1**
- **Employment status:** The options available are - Customer, Employee, Partner, and Reseller.

![Properties: Ashley](image)

**Set business properties**

c. Next, go to the Personal section, and provide the following information. All the fields are optional.

- **Home address line 1**
- **Home address line 2**
- **Home city**
- **Home state**
- **Home zip code**
- **Home phone**
- **Mobile number 2**
- **Secondary email address**

![Properties: Ashley](image)

**Set personal properties**

d. Next, go to the Miscellaneous section. The following information is displayed:

- **Creation date:** This field displays the name of the user who created the user. The value is populated automatically when the user is saved and it cannot be changed.
- **Created by**: This field displays the date and time the user is created. The value is populated automatically when the user is saved and it cannot be changed.

![Properties: Ashley](Image)

**View miscellaneous properties**

e. Finally, go to the Custom section. This displays the list of custom attributes created for users. You can add these custom attributes from the Tools Console. First, you need to create the custom attribute from **Tools > Partition: Partition_Name > Business objects > Attributes setting > System > User data**. Then, add the custom attribute to **Administration Console - Users - General - Custom screen** available at, **Tools > Departments > Department_Name > Business objects > Attributes settings > Screen**. For more details on custom attribute, see *Cisco Unified Web and E-Mail Interaction Manager Administrator’s Guide to Tools Console*.

[Important: Custom attributes cannot be created in the Basic edition of Unified WIM and Unified EIM.](Image)

![Properties: Ashley](Image)

**Set custom properties**

4. Next, go to the Relationships tab, and set the following.
   a. First, go to the Licenses tab and assign licenses to the user. The following licenses are available:
      - CIH Platform - Basic or CIH Platform - Advanced
      - Unified WIM (if Unified WIM is installed)
      - Unified EIM (if Unified EIM is installed)
      - Data Adapter
b. Go to the User groups section and select the user group to which you want to add the user. If you have not created any user groups yet, you can create them and add the users later. For more details, see “Creating User Groups in Business Partition” on page 166. Although it is optional to manage users through user groups, we highly recommend that you use groups as it makes user management easier.

When a user is added to a group, he is automatically assigned the roles and actions of the group. You can also choose to assign actions and roles to users individually; however, it is not recommended.
c. Go to the User roles section and select the roles to be assigned to the user. If you want to view the actions that come as part of the selected role, save the user and go to the Actions tab to see the list of actions.

![Select user roles](image)

Select user roles

d. Next, go to the Actions section, and view the list of actions assigned to the user. Here you can also assign additional actions to the user. You can identify how actions are assigned from the Grant field in the Selected actions section. The actions assigned explicitly show the value “Explicit”. If you want to allow the user to import and export content for translations from the Knowledge Base Console, assign the “Import Translation” and “Export Translation” actions to the user.

It is highly recommended that you do not assign actions directly to user. You should always create a user role, with the actions, and assign the role to the user. This makes user management easier. For more details on creating user roles, see “Creating User Roles” on page 158.

![Select actions](image)

Select actions

e. Next, go the User attribute settings tab and select a user attribute setting for the group. This lets you control the level of access a user has in the system. For more details on user attribute settings, see Cisco Unified Web and E-Mail Interaction Manager Administrator's Guide to Tools Console.
f. Next, in the Languages section, select the primary KB language for the user.

g. Next, in the Direct reports section you can select the users who reports to this user. For more details, see “Assigning Manager of Users” on page 203.
h. Next, in the Departments section you can share the user across departments. For more details, see “Sharing Users with Other Departments” on page 205.

5. Click the **Save** button to enable the various options in the Permissions tab.

6. On the Permissions tab, assign permissions for the following objects.

   - **KB Folder**: Own folder, View folder, Edit folder, Delete folder, Create folder, Create article, Edit article, Delete article, Suggest article, Manage suggestions, View personal folder
   - **Report**: View, Run, Edit, Delete, Schedule
   - **Routing Queue**: Own, View, Edit, Delete, Transfer activities, Pull activities
   - **Usage - Links**: Own, View, Edit, Delete, Execute
   - **User**: Own, View, Edit, Delete, Transfer activities, Pull activities
   - **User group**: Own, View, Edit, Delete, Transfer activities, Pull activities

   If you have added a user to a user group, and the user group has permissions on various objects, then that permission shows selected and disabled. If you are using user groups for user management, you should assign permissions to user groups, and not to individual users.

7. Click the **Save** button.
Creating Integrated Users

To create an integrated user:

1. In the Tree pane, browse to Administration > Departments > Department_Name > User > Users.
2. In the List pane toolbar, click the New button.
3. In the Properties pane, on the General tab, set the following.
   a. In the General section, provide the following details.
      i. **Peripheral:** From the dropdown list, select the Unified CCE peripheral to which the agent belongs. Every time the user administration screen is loaded, the peripheral list is dynamically populated with the current list of peripherals that exist in Unified CCE.
      ii. **Unified CCE Agent Login Name:** From the dropdown list, select the agent to which the user should map. All Unified CCE agents that belong to the selected peripheral are dynamically retrieved from Unified CCE.

When you select an agent login name, a message is displayed that a Unified EIM & WIM user is getting mapped to a Unified CCE agent and this would affect the reporting on the agent. Once you click the OK button in the message, the following fields are populated automatically.

i. **User name:** This name is used by the user to log in to the application. Do not change the value of this field.
ii. **First name:** First name of the user. Do not change the value of this field.
iii. **Last name:** Last name of the user. Do not change the value of this field.
iv. **Password:** Password of the user. Do not change the value of this field.
      v. **Screen name:** The screen name of the chat agent. This is the name displayed to chat customers in the Customer Console. You can change the value in this field. This is a required field for users who have the Unified WIM license. You can use the same screen name for more than one user in the system.
      vi. **User status:** Select the status of the user. By default the new user’s status is Enabled. Once the user is saved, the following four options are available: Enabled, Disabled, Logged in, and Not logged in. For more information, see “Changing User Status” on page 202.

If a Unified EIM & WIM user group is mapped to a Unified CCE skill group, and the skill group attributes are modified in Unified CCE, when the Unified EIM & WIM user group is clicked, the modifications are automatically retrieved and synchronized in Unified EIM & WIM.

The following fields are optional.

i. **Title**
ii. **Middle name**
iii. **Suffix**
• **External assignment:** This field is not in use and the value of the field cannot be changed.

Set general properties

b. Next go to the Business section, and provide the following information. All the fields are optional.

- **Company**
- **Division**
- **Department**
- **Job title**
- **Manager:** Here you can set the manager of a user. For more details, see “Assigning Manager of Users” on page 203.
- **Email address**
- **Work phone**
- **Extension**
- **Mobile number 1**
- **Employment status**: The options available are - Customer, Employee, Partner, and Reseller.

![Properties: Ashley](image)

*Set business properties*

c. Next, go to the Personal section, and provide the following information. All the fields are optional.

- **Home address line 1**
- **Home address line 2**
- **Home city**
- **Home state**
- **Home zip code**
- **Home phone**
- **Mobile number 2**
- **Secondary email address**

![Properties: Ashley](image)

*Set personal properties*

d. Next, go to the Miscellaneous section. The following information is displayed.

- **Creation date**: This field displays the name of the user who created the user. The value is populated automatically when the user is saved and it cannot be changed.
- **Created by**: This field displays the date and time the user is created. The value is populated automatically when the user is saved and it cannot be changed.

View miscellaneous properties

e. Finally, go to the Custom section. This displays the list of custom attributes created for users. You can add these custom attributes from the Tools Console. First, you need to create the custom attribute from Tools > Partition: Partition_Name > Business objects > Attributes setting > System > User data. Then, add the custom attribute to Administration Console - Users - General - Custom screen available at, Tools > Departments > Department_Name > Business objects > Attributes settings > Screen. For more details on custom attribute, see Cisco Unified Web and E-Mail Interaction Manager Administrator’s Guide to Tools Console.

**Important**: Custom attributes cannot be created in the Basic edition of Unified WIM and Unified EIM.

Set custom properties

4. Next, go to the Relationships tab, and set the following.
   
a. First, go to the Licenses tab and assign licenses to the user. The following licenses are available:
   
   - CIH Platform - Basic or CIH Platform - Advanced
   - Unified WIM (if Unified WIM is installed)
   - Unified EIM (if Unified EIM is installed)
b. Go to the User groups section and select the user group to which you want to add the user. If you have not created any user groups yet, you can create them and add the users later. For more details, see “Creating User Groups in Business Partition” on page 166. Although it is optional to manage users through user groups, we highly recommend that you use groups as it makes user management easier. When a user is added to a group, he is automatically assigned the roles and actions of the group. You can also choose to assign actions and roles to users individually; however, it is not recommended.

c. Go to the User roles section and select the roles to be assigned to the user. If you want to view the actions that come as part of the selected role, save the user and go to the Actions tab to see the list of actions.

d. Next, go to the Actions section, and view the list of actions assigned to the user. Here you can also assign additional actions to the user. You can identify how actions are assigned from the Grant field in the Selected actions section. The actions assigned explicitly show the value “Explicit”. If you want to allow the user to import and export content for translations from the Knowledge Base Console, assign the “Import Translation” and “Export Translation” actions to the user.

It is highly recommended that you do not assign actions directly to user. You should always create a user role, with the actions, and assign the role to the user. This makes user management easier. For more
details on creating user roles, see “Creating User Roles” on page 158.

e. Next, go the User attribute settings tab and select a user attribute setting for the group. This lets you control the level of access a user has in the system. For more details on user attribute settings, see Cisco Unified Web and E-Mail Interaction Manager Administrator Guide to Tools Console.

**User attributes settings cannot be created in the Basic edition of Unified WIM and Unified EIM.**

f. Next, in the Languages section, select the primary KB language for the user.
g. Next, in the Direct reports section you can select the users who reports to this user. For more details, see “Assigning Manager of Users” on page 203.

Select users for direct reports

h. Next, in the Departments section you can share the user across departments. For more details, see “Sharing Users with Other Departments” on page 205.

Select departments

5. Click the Save button to enable the various options in the Permissions tab.

6. On the Permissions tab, assign permissions for the following objects.
   - **KB Folder**: Own folder, View folder, Edit folder, Delete folder, Create folder, Create article, Edit article, Delete article, Suggest article, Manage suggestions, View personal folder
   - **Report**: Own, View, Edit, Delete, Schedule
   - **Usage - Links**: Own, View, Edit, Delete, Execute
If you have added a user to a user group, and the user group has permissions on various objects, then that permission shows selected and disabled. If you are using user groups for user management, you should assign permissions to user groups, and not to individual users.

Assign permissions

7. Click the **Save** button.

Deleting Users

You can delete users which are not being used. However, if a user has any open activities or cases, or suggestions in feedback state, then such a user cannot be deleted. You must reassign the cases and activities before deleting the user.

To delete a user:

1. In the Tree pane, browse to the **Users** node. Based on where you want to delete the user from, do one of the following:
   - If you are deleting a system administrator, go to the system partition and browse to **Administrator > Partition: Context_Root_Name > User > Users**.
   - If you are deleting a partition administrator, go to the business partition and browse to **Administrator > Partition: Partition_Name > User > Users**.
   - If you are a department administrator, browse to **Administration > Departments > Department_Name > User > Users**.
2. In the List pane, select the user you want to delete.
3. In the List pane toolbar, click the **Delete** button.
4. A message appears asking to confirm the deletion. If the user has created any monitors in the Supervision Console, a message is displayed to inform that all the monitors created by the user will be deleted. Click **Yes** to delete the user.

Changing User Status

The user status feature allows you to enable or disable users in the system. It also helps you know which users are logged in to the application. A user can have one of the following status:
Enabled: This status indicates that the user is enabled and can log in to the application.

Disabled: This status indicates that the user is disabled. A disabled user cannot login to the application.

Logged in: This status indicates that the user is logged in to the application.

Not logged in: This status indicates that the user is not logged in to the application.

To change the status of a user:

1. In the Tree pane, browse to the Users node. Based on where the user is, do one of the following:
   - If you are in system partition, browse to Administrator > Partition: Context_Root_Name > User > Users.
   - If you are in business partition, browse to Administrator > Partition: Partition_Name > User > Users.
   - If you are in a department, browse to Administration > Departments > Department_Name > User > Users.

2. In the List pane, select the user whose status you want to change.

3. In the Properties pane, go to the General tab.

4. Go to the General section, and in the User status field select the Enabled option to enable the user, or select the Disabled option to disable the user. If a user is logged in to the application and you want to end his session, select the Not logged in option. The user is then logged out and displayed a message saying that their session has ended.

5. Click the Save button.

Assigning Manager of Users

A manager can monitor the activities and cases assigned to agents from the Agent Console. A manager has a My Team folder in his Inbox tree, in the Agent Console, in which all the users who report to the user are listed. The manager has a read only view of the activities and cases assigned to the users reporting to him.
You can assign a manager of the user in two ways. Either edit the properties of the manager to assign direct reports to him. Or, edit the user properties to assign the manager to the user. Use the first option if all the users are already created in the system and you want to assign managers for all the users. Use the second option to assign a manager while creating the user.

You cannot assign managers of user groups.

**To assign a manager of a user:**

1. In the Tree pane, browse to Administration > Departments > Department_Name > User > Users.
2. In the List pane, select a user and do one of the following:
   - If you are editing the properties of the manager, then in the Properties pane, go the Relationships tab and in the Direct reports section, select the users who report to the selected user. The user becomes the manager of the selected users.
   - If you are assigning the manager of the user, then in the General tab, go to the Business section and in the Manager field click the Assistance button. The Select Manager window appears. Select a manager for the user and click the OK button.
3. Click the Save button.
Sharing Users with Other Departments

To be able to share users among departments, first the departments should be shared with each other. Only partition administrators can share departments. For more details see, “Sharing Department Resources” on page 242.

Shared users show as foreign users in the other departments.

To share a user with other departments:

1. In the Tree pane, browse to Administration > Departments > Department_Name > User > Users.
2. In the List pane, select a user.
3. In the Properties pane, on the Relationships tab, go to the Departments section and select a department from the list. If you do not see any departments in the list, contact your partition administrator.
4. Click the Save button.
Data Masking

- About Data Masking
- About Patterns
- Creating Patterns
- Creating Patterns in XML File
- Exporting Masking Patterns
- Importing Masking Patterns
- Copying Patterns
- Deleting Patterns
- Validating Masking Patterns
- Applying Patterns to Chat Channel
- Applying Patterns to Email Channel
Data masking allows businesses to ensure that sensitive information, like credit card numbers, Social Security Numbers, bank account numbers, etc. is not transmitted from the system to the customers and vice versa. If the customer and agent do add any sensitive data in the email content and chat messages, all such data is masked before it is displayed to customers and agents and before it is stored in the Unified EIM & WIM System.

Data masking is the process of scanning the content for sensitive information and applying regular expressions to mask the sensitive information and hide the original data with characters, like, *, ^, #. Data is masked using patterns, which are defined using Javascript and Java regular expressions.

Data masking is available for emails and chats.

About Patterns

Patterns are definitions of data masking rules that you apply to the content of emails and chat messages to hide sensitive data. Patterns are defined using JavaScript and Java regular expressions. In the pattern definition, you also define the character to use for replacing the matching data (for example, *, ^, #). You can enable the Luhn algorithm for masking credit card numbers. This algorithm distinguishes the valid credit card numbers from a random sequence of numbers.

A partition administrator with the Manage Application Security action can manage patterns - that is, create, delete, edit, copy, import, and export patterns.

You can either create a pattern from the user interface, or you can create patterns in an XML file and import the file using the import feature.

Out-of-the-box patterns
Creating Patterns

To create a pattern:

1. In the Tree pane, browse to Administration > Partition: Partition Name > Security > Data Masking > Patterns.

2. In the List pane toolbar, click the New button.

3. In the Properties pane, on the General tab, set the following:
   - **Name**: Type a name for the pattern.
   - **Description**: Provide a description for the pattern that explains what type of masking is done by the pattern.
   - **Active**: Make the pattern active when it is ready for use. Only active patterns can be applied to channels. Once a pattern is made active and used in channels, it can be made inactive only after the association from the channels is removed.

4. In the Properties pane, on the Masking Pattern tab, set the following:
   - **Masking Character**: From the dropdown list, select the character to be used to mask the data. The default value is *. Options available are: *, -, #, X, x.
   - **Javascript Regular Expression**: Provide the Javascript regular expression for masking.
   - **Java Regular Expression**: Provide the Java regular expression for masking.
   - **Number of characters to unmask from right**: Provide the number of characters, from the right, that should be ignored while masking. For example, if you are masking the social security number and you do not want to mask the last 4 numbers of the SSN, the SSN will show as *****3545.
   - **Number of characters to unmask from left**: Provide the number of characters, from the left, that should be ignored while masking. For example, if you are masking a 10 digit account number and you do not want to mask the first 4 numbers of the account number, the account number will show as 8765*****
Apply Luhn Algorithm: Select Yes to apply the Luhn algorithms to credit card numbers.

Configure the pattern properties

5. Click the Save button.

Creating Patterns in XML File

While preparing a file for importing patterns, keep in mind that:

- Only XML files can be used to import patterns.
- You can name the file anything you want.
- Elements should be defined in the order specified in the pattern file exported from the application.
- Elements and values of elements in the XML file are case sensitive.
- For user created patterns, the isDefault element should be always set to no. Likewise, for default patterns, the isDefault element should be always set to yes.
- If you are importing a pattern that already exists in the system, your existing pattern will be overwritten by the import process.

The following table lists the names of the properties as they appear in the file and on the UI. For the description of each field, see “Creating Patterns” on page 208.

<table>
<thead>
<tr>
<th>Name on the UI</th>
<th>Name in the file</th>
</tr>
</thead>
<tbody>
<tr>

</table>

Data Masking 209
Exporting Masking Patterns

Patterns can be exported in XML format to share them across installations or if you wish to edit the patterns through an XML file. All the patterns configured in the system will be part of the exported XML file.

To export patterns:

1. In the Tree pane, browse to Administration > Partition: Partition Name > Security > Data Masking > Patterns.
2. In the List pane toolbar, from the Import/Export button select the Export Patterns option.
3. A prompt appears to save the patterns XML file.
Importing Masking Patterns

Only XML files can be used to import patterns.

To import a pattern:
1. In the Tree pane, browse to Administration > Partition: Partition Name > Security> Data Masking > Patterns.
2. In the List pane toolbar, from the Import/Export button select the Import Patterns option.
3. In the Import patterns window, provide the location of the XML file. Click OK.

The system notifies when the patterns are imported successfully. You will also be notified if the import process will over-write existing patterns.

If the file has any issues, the import process is aborted and the user is notified. Some of the issues with the file can be:

- Type of file is not XML.
- Size of the imported file is more than 10 MB.
- XML is malformed.
- The values of the name, description, Javascript Regular Expression, Java Regular Expression fields are more than the allowed size.
- A custom pattern is defined as a default pattern.
- A default pattern is not defined as a default pattern.
- The Javascript regular expression defined in the file is not correct.
- The Java regular expression defined in the file is not correct.
- You are deactivating a pattern that is in use.

Copying Patterns

To copy a pattern:
1. In the Tree pane, browse to Administration > Partition: Partition Name > Security> Data Masking > Patterns.
2. In the List pane, select a pattern.
3. In the List pane toolbar, click the Copy button.

You are notified when the pattern is copied. All patterns are copied in the inactive state. You can make them active when you are ready to use the pattern.

### Deleting Patterns

Patterns cannot be deleted if they are associated with a channel. You must remove all associations before deleting the pattern.

**To delete a pattern:**

1. In the Tree pane, browse to Administration > Partition: Partition Name > Security > Data Masking > Patterns.
2. In the List pane select a pattern.
3. In the List pane toolbar, click the Delete button.

### Validating Masking Patterns

#### Validating Individual Patterns

After you create a pattern, test it by using the validation option available for each pattern.

**To validate a pattern:**

1. In the Tree pane, browse to Administration > Partition: Partition Name > Security > Data Masking > Patterns.
2. In the List pane, select the pattern you want to test.
3. In the Properties pane toolbar, click the Validate button.
4. In the Validate Pattern Name Pattern window, do the following:
   a. In the Sample Data provide the text you want to use for testing the pattern and Click the Show Me button.
   b. In the Masked Data section, you will see the Javascript regular expression and Java regular expression applied to the sample data. All the settings configured in the Masking Pattern tab will be applied to the sample data.
c. After you are done testing, click the **Close** button.

![Validate patterns](image)

**Validating Masking Patterns Applied to Channels**

In addition to validating individual patterns, you can validate the patterns selected for a channel and make sure that they work properly as a group and the order of the selected patterns is correct.

**To validate patterns applied to channels:**

1. In the Tree pane, browse to **Administration > Partition: Partition Name > Security > Data Masking > Channels**. If you are validating from the department level, browse to **Administration > Departments > Department Name > Security > Data Masking > Channels**.

2. In the List pane select the channel you want to test.

3. In the Properties pane toolbar, click the **Validate** button.

4. In the Validate Pattern window, do the following:
   a. In the Sample Data provide the text you want to use for testing the pattern and Click the **Show Me** button.
   b. In the Masked Data section, you will see all the selected patterns applied to the sample data.
c. After you are done testing, click the **Close** button.

![Validate the patterns selected for a channel](image)

### Applying Patterns to Chat Channel

#### At the Partition Level

A partition administrator with the following actions can perform this task:

- **Manage Application Security**: Allows you to view the patterns applied to channels and to apply patterns to channels.

- **View Application Security**: Gives a read-only view of the patterns applied to channels. Users with this action cannot change any configurations.

#### What can the partition administrator do?

- Enable data masking for chat for all departments and manage all configurations from the partition level.

- Give control to the department administrators to configure their own settings. At this point, department administrators can choose to configure their own settings or can continue to use the settings configured by the partition administrators. Once a department administrator decides to configure their own settings, they are not affected by the changes made by the partition administrator.
To apply patterns to the chat channel:

1. In the Tree pane, browse to Administration > Partition: Partition Name > Security> Data Masking > Channels.

2. In the List pane select Chat.

3. In the Properties pane, on the General tab, set the following:
   - **Name**: This field is read-only.
   - **Description**: This field is read-only.
   - **Enable data masking**: Select Yes to enable data masking for chat messages. By default this is set to No.
   - **Allow customers to send off the record chat messages**: Enable this setting to allow customers and agents to exchange off the record messages. Data masking rules do not apply to such messages. During a chat, only the customer has the option to enable off-the-record feature. All messages exchanged in this mode are not stored in the Unified EIM & WIM system. By default this is set to Yes.
   - **Allow resetting at department level**: Use this setting to allow department level administrators to set their own configurations and masking rules for the chat channel. When this setting is enabled, department administrators get an option to either follow the partition level settings, or to configure their own. By default this is set to No.

4. Next, go to the Masking Patterns tab and select the patterns to be applied to the chat channel and define the order of the patterns. While defining the order make sure that the longest pattern is on top followed by the short patterns. This ensures that patterns that use smaller matches do not partially mask the text that would match the longer text. For example, if you are selecting both Visa Credit Card 16 Digits and Visa Credit Card 13 Digits, make sure the order is - Visa Credit Card 16 Digits and then Visa Credit Card 13 Digits. If
the order is not correct, and let us say you mask the following content: Visa 16: 4485-0713-3727-3343 and Visa 13: 4222-2222-2222-2, it will be masked as Visa 16: ****************343 and Visa 13: ****************. You will notice that the 16 digit credit card did not get masked properly.

Select masking patterns for chat

5. Next, go to the Department tab to see a read-only view of the departments that are using the masking patterns applied by the partition administrator.

View the list of departments

6. Click the Save button.

7. After saving the changes, validate the patterns selected for the channel. For details, see “Validating Masking Patterns Applied to Channels” on page 213.

At the Department Level

A department administrator with the following actions can perform this task:

- **Manage Department Security**: Allows you to view the patterns applied to channels and to apply patterns to channels.

- **View Department Security**: Gives a read-only view of the patterns applied to channels. Users with this action cannot change any configurations.
How much control do department administrators get?

- If the partition administrator has not given control to department administrators to configure their own settings, the department administrators get a read-only view of the settings configured by the partition administrator.

- If the department administrator has the option to configure their own settings, and they choose to do so, they are not affected by the changes made to the configurations by the partition administrators.

To apply patterns to the chat channel:

1. In the Tree pane, browse to **Administration > Departments > Department Name > Security > Data Masking > Channels**.

2. In the List pane select **Chat**.

3. In the Properties pane, select from the following two options to decide if you want to continue to use the settings configured by the partition administrator, or you want to configure data masking for your own department. These options are enabled only if the partition administrator allows department administrators to over-write the partition level settings.
   - **Use settings configured by the partition administrators**: Your department will automatically use the configurations configured at the partition level. Any changes made at the partition level will be applied to the department immediately.
   - **Use department settings**: You will manage the data masking configurations on your own and independent of the partition administrator. Any changes made by the partition administrator will not be applied to your department.

4. In the Properties pane, on the General tab, set the following:
   - **Name**: This field is read-only.
   - **Description**: This field is read-only.
   - **Enable data masking**: Select **Yes** to enable data masking for chat messages. By default this is set to **No**.
   - **Allow customers to send off the record chat messages**: Enable this setting to allow customers and agents to exchange off the record messages. Data masking rules do not apply to such messages. During a chat, only the customer has the option to enable off-the-record feature. Any messages exchanged in this mode are not stored in the Unified EIM & WIM system. By default this is set to **Yes**.

![Properties: Chat](image)

*Set the general properties*
5. Next, go to the Masking Patterns tab and select the patterns to be applied to the chat channel and define the order of the patterns. While defining the order make sure that the longest pattern is on top followed by the short patterns. This ensures that patterns that use smaller matches do not partially mask the text that would match the longer text. For example, if you are selecting both Visa Credit Card 16 Digits and Visa Credit Card 13 Digits, make sure the order is - Visa Credit Card 16 Digits and then Visa Credit Card 13 Digits. If the order is not correct, and let us say you mask the following content: Visa 16: 4485-0713-3727-3343 and Visa 13: 4222-2222-2222-2, it will be masked as Visa 16: ****************343 and Visa 13: ****************. You will notice that the 16 digit credit card did not get masked properly.

6. Click the **Save** button.

7. After saving the changes, validate the patterns selected for the channel by using the **Validate** button. For details, see “Validating Masking Patterns Applied to Channels” on page 213.

---

**Applying Patterns to Email Channel**

**At the Partition Level**

A partition administrator with the following actions can perform this task:

- **Manage Application Security**: Allows you to view the patterns applied to channels and to apply patterns to channels.

- **View Application Security**: Gives a read-only view of the patterns applied to channels. Users with this action cannot change any configurations.

**What can the partition administrator do?**

- Enable data masking for incoming and outgoing emails for all departments and manage all configurations from the partition level.
Give control to the department administrators to configure their own settings. At this point, department administrators can choose to configure their own settings or can continue to use the settings configured by the partition administrators. Once a department administrator decides to configure their own settings, they are not affected by the changes made by the partition administrator.

To apply patterns to the email channel:
1. In the Tree pane, browse to Administration > Partition: Partition Name > Security > Data Masking > Channels.
2. In the List pane select Email.
3. In the Properties pane, on the General tab, set the following:
   - **Name:** This field is read-only.
   - **Description:** This field is read-only.
   - **Enable data masking in incoming emails:** Select Yes to enable data masking for incoming emails. By default this is set to No.
   - **Enable data masking in outgoing emails:** Select Yes to enable data masking for outgoing emails. By default this is set to No.
   - **Allow resetting at department level:** Use this setting to allow department level administrators to set their own configurations and masking rules for the chat channel. When this setting is enabled, department administrators get an option to either follow the partition level settings, or to configure their own. By default this is set to No.

4. Next, go to the Masking Patterns tab and select the patterns to be applied to the email channel and define the order of the patterns. While defining the order make sure that the longest pattern is on top followed by the short patterns. This ensures that patterns that use smaller matches do not partially mask the text that would match the longer text. For example, if you are selecting both Visa Credit Card 16 Digits and Visa Credit Card 13 Digits, make sure the order is - Visa Credit Card 16 Digits and then Visa Credit Card 13 Digits. If
the order is not correct, and let us say you mask the following content: Visa 16: 4485-0713-3727-3343 and Visa 13: 4222-2222-2222-2, it will be masked as Visa 16: ***************343 and Visa 13: **************. You will notice that the 16 digit credit card did not get masked properly.

Select masking patterns

5. Next, go to the Department level tab to see a read-only view of the departments that are using the masking patterns applied by the partition administrator.

View the list of departments

6. Click the Save button.

7. After saving the changes, validate the patterns selected for the channel by using the Validate button. For details, see “Validating Masking Patterns Applied to Channels” on page 213.

At the Department Level

A department administrator with the following actions can perform this task:

- **Manage Department Security**: Allows you to view the patterns applied to channels and to apply patterns to channels.
- **View Department Security**: Gives a read-only view of the patterns applied to channels. Users with this action cannot change any configurations.
How much control do department administrators get?

- If the partition administrator has not given control to department administrators to configure their own settings, department administrators get a read-only view of the settings configured by the partition administrator.

- If the department administrator has the option to configure their own settings, and they choose to do so, they are not affected by the changes made to the configurations by the partition administrators.

To apply patterns to the email channel:

1. In the Tree pane, browse to Administration > Departments > Department Name > Security > Data Masking > Channels.
2. In the List pane select Email.
3. In the Properties pane, select from the following two options to decide if you want to continue to use the settings configured by the partition administrator, or you want to configure data masking for your own department. These options are enabled only if the partition administrator allows department administrators to over-write the partition level settings.
   - Use settings configured by the partition administrators: Your department will automatically use the configurations configured at the partition level. Any changes made at the partition level will be applied to the department immediately.
   - Use department settings: You will manage the data masking configurations on your own and independent of the partition administrator. Any changes made by the partition administrator will not be applied to your department.
4. In the Properties pane, on the General tab, set the following:
   - Name: This field is read-only.
   - Description: This field is read-only.
   - Enable data masking in incoming emails: Select Yes to enable data masking for incoming emails. By default this is set to No.
   - Enable data masking in outgoing emails: Select Yes to enable data masking for outgoing emails. By default this is set to No.

View the general properties
5. Next, go to the Masking Patterns tab and select the patterns to be applied to the email channel and define the order of the patterns. While defining the order make sure that the longest pattern is on top followed by the short patterns. This ensures that patterns that use smaller matches do not partially mask the text that would match the longer text. For example, if you are selecting both Visa Credit Card 16 Digits and Visa Credit Card 13 Digits, make sure the order is - Visa Credit Card 16 Digits and then Visa Credit Card 13 Digits. If the order is not correct, and let us say you mask the following content: Visa 16: 4485-0713-3727-3343 and Visa 13: 4222-2222-2222-2, it will be masked as Visa 16: ****************343 and Visa 13: *****************. You will notice that the 16 digit credit card did not get masked properly.

6. Click the Save button.

7. After saving the changes, validate the patterns selected for the channel by using the Validate button. For details, see “Validating Masking Patterns Applied to Channels” on page 213.
Single Sign-On

- About Single Sign-On (SSO)
- Configuring Single Sign-On (SSO)
- Post-Configuration
- Troubleshooting
About Single Sign-On (SSO)

Organizations and their staff often must use multiple applications that require authentication in order to perform their necessary tasks. However, each application typically has its own authentication mechanism. This creates extra work for the administration of users if they must be created and maintained in each system. It is also inconvenient to the end user as they must remember login credentials for each system.

Single Sign-On (SSO) is a feature that allows users to use the same credentials to access their applications without having to needlessly go through the individual authentication process for every application. SSO can be enabled on any system that uses the following:

- Siteminder (page 224)
- LDAP (Lightweight Directory Access Protocol) (page 226)
- SAML 1.1 (Security Assertion Markup Language) (page 227)
- SAML 2.0 (page 228)

Configuring Single Sign-On (SSO)

Before configuring your system for SSO, keep in mind that:

- The process of configuring a system for Single Sign-On must be performed by a user with access to the Security settings at the partition level.
- Once SSO has been configured, all users in the deployment are enabled for SSO.
- SSO does not have any additional password restrictions other than those used in user creation.

Configuring Single Sign-On (SSO) for Siteminder Systems

To configure SSO for Siteminder systems:

1. In the Tree pane, browse to Administration > Partition: Partition_Name > Security > Single Sign On.
2. In the List pane, select **Single Sign On Configuration**.

![Administration panel](image)

*Browse to single sign-on node*

3. In the Properties pane, under the General tab, set the following:
   - **Enable Single Sign On**: Select **Yes** to enable SSO. Select **No** to disable SSO.
   - **Single Sign On Type**: Select **Siteminder**.

4. Click the **SSO Configuration** tab.

5. Under the SSO Configuration tab, provide the following:
   - **Siteminder Header Name**: The name of the attribute in the HTTP header which Siteminder uses to pass the user name to the application.
SSL enabled on Web Server or Load-balancer: If the Web server or load-balancer used is enabled for SSL, set the value to Yes. If not, set the value to No.

Provide Siteminder configuration details

6. Click the Save button.

Configuring Single Sign-On (SSO) for LDAP Systems

To configure SSO for LDAP systems:
1. In the Tree pane, browse to Administration > Partition: Partition_Name > Security > Single Sign On
2. In the List pane, select Single Sign On Configuration.
3. In the Properties pane, set the following:
   - Enable Single Sign On: Select Yes to enable SSO. Select No to disable SSO.
   - Single Sign On Type: Select LDAP.
4. Click the SSO Configuration tab.
5. Under the SSO Configuration tab, provide the following:
   - LDAP URL: The URL of the LDAP server
   - DN Attribute: The attribute of the DN that contains the user login name. For example, CN.
   - Base: The value specified for Base is used by the application as the search base. Search base is the starting location for search in LDAP directory tree. For example, DC=mycompany, DC=com.
   - DN for LDAP Search: Perform one of the following:
     - If your LDAP system does not allow anonymous bind, provide the DN of a user who has search permissions on the LDAP directory tree.
     - If the LDAP server allows anonymous bind, leave this field blank.
   - Password: Perform one of the following:
     - If your LDAP system does not allow anonymous bind, provide the password of a user who has search permissions on the LDAP directory tree.
     - If the LDAP server allows anonymous bind, leave this field blank.
SSL Enabled on LDAP: If SSL is enabled on the LDAP server, set the value to Yes. If not, set the value to No.

Keystore Location: The location of the Java KeyStore (JKS), eg: C:\keystore\v15\SSO\keystore.jks. This must be provided if SSL is enabled.

SSL enabled on Web Server or Load-balancer: If the Web server or load-balancer used is enabled for SSL, set the value to Yes. If not, set the value to No.

To configure SSO for SAML 1.1 systems:
1. In the Tree pane, browse to Administration > Partition: Partition_Name > Security > Single Sign On
2. In the List pane, select Single Sign On Configuration.
3. In the Properties pane, set the following:
   - Enable Single Sign On: Select Yes to enable SSO. Select No to disable SSO.
   - Single Sign On Type: Select SAML 1.1.
4. Click the SSO Configuration tab.
5. Under the SSO Configuration tab, provide the following:
   - Entity ID: Entity ID or the Issuer
   - Identity Provider Certificate: The public key certificate. The certificate must start with “-----BEGIN CERTIFICATE-----” and end with “-----END CERTIFICATE-----”
Select either SAML Subject Identifier or SAML Attribute.

User Identity Attribute Name: Applicable only when User ID Location value is an SAML attribute.

User Identity Type: The value in this field is set to SAML_EGAIN_USERNAME (Unified EIM & WIM user name) and it cannot be changed.

SSL Enabled on Web Server or Load-Balancer: If the Web server or load-balancer used is enabled for SSL, set the value to Yes. If not, set the value to No.

6. Click the Save button.

Configuring Single Sign-On (SSO) for SAML 2.0 Systems

Information provided here can also be applied to Chat Customer Single Sign-On settings. For more information, see the Cisco Unified Web and E-Mail Interaction Manager Administrator’s Guide to Chat and Collaboration Resources.

To configure SSO for SAML 2.0 systems:
1. In the Tree pane, browse to Administration > Partition: Partition_Name > Security > Single Sign On
2. In the List pane, select Single Sign On Configuration.
3. In the Properties pane, set the following:
   - Enable Single Sign On: Select Yes to enable SSO. Select No to disable SSO.
   - Single Sign On Type: Select SAML 2.0.
4. Click the SSO Configuration tab.
5. Under the SSO Configuration tab, the Service Provider can be allowed to initiate the authentication for SAML in addition to Identity Provider.
   - Under the Identity Provider option, provide the following:
     - Entity ID: Entity ID or the Issuer
     - Identity Provider Certificate: The public key certificate. The certificate must start with “-----BEGIN CERTIFICATE-----” and end with “-----END CERTIFICATE-----”
     - User Identity Location: Select either SAML Subject Identifier or SAML Attribute.
- **User Identity Attribute Name**: Applicable only when User ID Location value is an SAML attribute.
- **User Identity Type**: The value in this field is set to `SAML_EGAIN_USERNAME` (Unified EIM & WIM user name) and it cannot be changed.
- **SSL Enabled on Web Server or Load-Balancer**: If the Web server or load-balancer used is enabled for SSL, set the value to **Yes**. If not, set the value to **No**.

If you wish to allow the Service Provider to initiate the authentication for SAML, provide the following under the Service Provider option:

- **Service Provider Initiated Authentication**: Set to Enable.
- **Entity ID**: Entity ID or the Service Provider.
- **Request Signing Certificate**: Click the Assistance button and provide the following information in the next window and click **OK**.
  - **Java Keystore File**: Provide the file path of your Java Keystore File. This file will be in .jks format and contains the decryption key the system needs to access files secured by SAML.
  - **Alias Name**: The unique identifier for the decryption key.
  - **Keystore Password**: The password required for accessing the Java Keystore File.
  - **Key Password**: The password required for accessing the Alias' decryption key.
- **Identity Provider Login URL**: The URL for SAML authentication.
- **Logout URL**: The URL to which users are redirected upon logging out.

**Important**: Enabling the Service Provider to initiate SAML authentication is optional, but providing the authentication information to the Identity Provider is mandatory.

Provide SAML configuration details

6. Click the **Save** button.
Post-Configuration

Once SSO has been configured, minor changes are made to the application that may alter your user experience.

Logging in with SSO

The URL needed for users to access the application may be different from what you were previously using, depending on which SSO type you are using.

Important: LDAP systems do not require a new URL to access the application.

Logging in with Siteminder SSO

Once you have configured your system to use Siteminder, use the following URLs to access the application:

- **Partition 1:** `http(s)://HOST_NAME/context_root/Siteminder/SSO/POST.controller`
- **Partition 0:**
  `http(s)://HOST_NAME/context_root/Siteminder/SSO/POST.controller?partitionId=0`

Logging in with SAML SSO

Once you have configured your system to use SAML 1.1 or 2.0, obtain the necessary tokens for your users and use the following URLs to access the application:

- **Partition 1:** `http(s)://HOST_NAME/context_root/SAML/SSO/POST.controller`
- **Partition 0:**
  `http(s)://HOST_NAME/context_root/SAML/SSO/POST.controller?partitionId=0`

An access token is required to log in to this partition with this URL. The token must have an attribute named `application_url` containing the value:

`/context_root/web/view/platform/common/login/root.jsp?partitionId=0`

Local Login Setting

Users of Partition 1 with the “administer partition” permission are able to log into the application locally without using SSO access methods by using the following URL:

`http(s)://HOST_NAME/context_root/web/view/platform/common/login/root.jsp?partitionId=1&localLogin=true`. Users outside this partition, or without this permission, will not be able to log in to the application with this URL.

For more information about this setting, see “Allow Local Login for Partition Administrators” on page 60.
Troubleshooting

If you encounter any errors from the Application server, such as Exception inside doPost of SSOController servlet and Exception in getting KnowledgeSessionId, contact your solutions consult for assistance.
Rich Text Content Policies

- About Rich Text Content Policies
- Enabling and Disabling Rich Text Content Policies
- Exporting and Importing Rich Text Content Policies
- Configuring the Rich Text Content Policy File
- Restoring Rich Text Content Policies
About Rich Text Content Policies

In order to prevent Cross Site Scripting (XSS) issues from rich text content entered by agents, customers, and authors in chat messages and knowledge articles, the application enforces a default content policy that whitelists the allowed HTML and CSS elements and attributes. Application security administrators can modify the content policy to meet their requirements. Administrators can modify the content policy for each of the following:

- Chat messages sent by agents to customers
- Chat messages sent by customers to agents
- Content of incoming emails
- Content of outgoing emails
- Knowledge article content created by authors

The content policy is an XML file that outlines the rules to be followed while parsing the content. It primarily addresses three things:

- What HTML tags should be allowed?
- What attributes of these HTML tags should be allowed?
- What values of these attributes should be allowed?

When the rich text content policies have been enabled, the application can begin validating and sanitizing the content of users.

- **Input validation:** If the content violates the defined policy, entire content is rejected and the user is shown an error message indicating the same. Validation is applied to:
  - Customer to Agent Chat Data (Using Chat - Customer Policy)
  - Agent to Customer Chat Data (Using Chat - Agent Policy)

- **Input sanitation:** If the content violates the defined policy, the attributes that violate the policy are stripped off and the sanitized content is saved in application. Users are not shown errors during sanitation. Sanitation is applied to:
  - Note Content (Using Default Policy)
  - Internal Messaging – Body Content (Using Default Policy)
  - Content created in application (Using Knowledge - Author Policy)

Content policies can be adjusted to only allow the use plain text as well. To learn how, see “Using a Plain Text Policy” on page 238.

Enabling and Disabling Rich Text Content Policies

To enable or disable rich text content policies:

1. Log into the business partition and go to the Administration Console.
2. In the Tree pane, browse to **Administration > Partition: Partition_Name > Rich Text Content Policy.**
3. In the List pane, select one of the content policies.
4. In the Properties pane, under the General tab, set the Enable field to Yes to enable, and No to disable.
5. Click the Save button.

Exporting and Importing Rich Text Content Policies

If you wish to adjust the rich text policies and configure the XML files to suit your needs, you need to export the existing policies, adjust the files, and then import them back into the system.

To export and import rich text content policies:
1. Log into the business partition and go to the Administration Console.
2. In the Tree pane, browse to Administration > Partition: Partition_Name > Rich Text Content Policy.
3. In the List pane, select one of the content policies.
4. In the Properties pane, click the Import/Export button.
5. In the dropdown menu, select Export Policy and save the XML file to a local directory.
6. Make the desired changes to the policy XML file and save your changes. To learn how to configure the XML file, see “Configuring the Rich Text Content Policy File” on page 234.
7. Return to the Administration Console and select the Import Policy option from the same dropdown menu.
8. Locate the updated XML file and import it.
9. Click the Save button.

Configuring the Rich Text Content Policy File

The policy XML file has four notable sections:

- **Common Regular Expressions**: In this section, the regular expressions that can be used in the rest of the policy file are defined between the `<common-regexps>` tags.
- **Common Attributes**: In this section, the attributes that can be used while specifying the tag-rules are defined between the `<common-attributes>` tags.
- **Tag Rules**: In this section, the parsing rules that will be used for each tag individually are defined between the `<tag-rules>` tags.
- **CSS Rules**: In this section, the parsing rules that will be used for each CSS property individually are defined between the `<css-rules>` tags.

Once you have exported the desired policy file from the application to your local directory, you can begin making edits to the XML file.
Adding a Common Regular Expression

To create a common regular expression:

- Create an alias in the Common Regular Expressions section. For example, to add the common regular expression \((\d)\)+, make the following entry:

```
<common-regexps>
<regexp name="number" value="(\d)+"/>
</common-regexps>
```

Here "number" has been used as the alias for the regular expression.

Allowing a New Tag

To allow a new tag:

- A new tag rule corresponding to this tag must be added in the Tag Rules section. For example, to allow the `<span>` tag, make the following entry:

```
<tag-rules>
<tag name="span" action="validate"/>
</tag-rules>
```

Here, action="validate" ensures that the attributes of the tag follow the rules outlined for them.

Allowing a New Attribute for a Tag

To allow a new attribute for a tag:

- The attribute must be added to the corresponding tag rule in the Tag Rules section. For example, to allow attribute `dir` for the `<span>` tag, make the following entry:

```
<tag name="span" action="validate">
<attribute name="dir"/>
</tag>
```

Adding a Rule for an Attribute Value

There are two ways for adding a rule for an attribute value:

- Adding a list of literal values
- Adding a list of regular expressions

To specify both literal values as well as regular expressions for attribute values, you can use a combination of both.
To add a list of literal values:

- If you want to allow fixed values for an attribute, you need to specify a list of literal values. For example, to allow values ltr and rtl for attribute dir of the <span> tag, the following entry is made:

  <tag name="span" action="validate">
  <attribute name="dir">
    <literal-list>
      <literal value="ltr"/>
      <literal value="rtl"/>
    </literal-list>
  </attribute>
  </tag>

To add a list of regular expressions:

- An example of adding a list of regular expressions is to allow values that are represented by the regular expression, such as \d+px and the common regular expression number, for the attribute width of the <img> tag. To do so, the following entry is made:

  <tag name="img" action="validate">
  <attribute name="width">
    <regexp-list>
      <regexp value="\d+px"/>
      <regexp name="number"/>
    </regexp-list>
  </attribute>
  </tag>

Allowing a New CSS Property

To allow a new CSS property:

- A new CSS rule corresponding to this property can be added in the CSS Rules section. For example, to allow the CSS property width, the following entry is made:

  <css-rules>
  <property name="width"/>
  </css-rules>

Adding a Rule for a CSS Property Value

There are two ways for adding a rule for a CSS property value:

- Adding a list of literal values
- Adding a list of regular expressions
To specify both literal values as well as regular expressions for CSS property values, you can use a combination of both.

**To add a list of literal values:**

- If you want to allow fixed values for a CSS property, you must specify a list of literal values. For example, to allow values auto and inherit for the CSS property width, the following entry is made:

  ```xml
  <property name="width">
  <literal-list>
    <literal value="auto"/>
    <literal value="inherit"/>
  </literal-list>
  </property>
  ```

**To add a list of regular expressions:**

- An example of adding a list of regular expressions is to allow values that are represented by the regular expression \( (\d)+(px) \) and the common regular expression number for the CSS property width, the following entry is made:

  ```xml
  <property name="width">
  <regexp-list>
    <regexp value="(\d)+(px)"/>
    <regexp name="number"/>
  </regexp-list>
  </property>
  ```

### Allowing Links in the Source Attribute of an iframe Tag

**To allow links in the source attribute of an iframe tag:**

- Make the following entry in the XML file:

  ```xml
  <tag name="iframe" action="validate">
  <attribute name="src">
  <regexp-list>
    <regexp value="((http(s:|:))?)((//)?)((www.)?)(externaldomain/)((.)*)"/>
  </regexp-list>
  </attribute>
  </tag>
  ```

  If you wished to allow links from w3schools, for instance, simply replace `externaldomain` with `w3schools.com`. 
Using a Plain Text Policy

If you wish to ensure that content of your customers, authors, and agents only use plain text, there is a simple change you can make to the policy.

**To allow plain text content only:**

- Import a policy file with only the following content:
  ```xml
  <?xml version="1.0" encoding="ISO-8859-1" ?>
  <anti-samy-rules xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance" xsi:noNamespaceSchemaLocation="antisamy.xsd">
  </anti-samy-rules>
  ```

Restoring Rich Text Content Policies

If you’re not satisfied with your changes, you can restore the default policy settings.

---

**Important:** Restoring the content policy overwrites any custom policies, so make sure to export any custom policy files before restoring.

**To restore rich text content policies:**

1. Log into the business partition and go to the Administration Console.
2. In the Tree pane, browse to **Administration > Partition:** *Partition_Name* > **Rich Text Content Policy**.
3. In the List pane, select the policy you wish to restore.
4. In the Properties pane, click the **Restore** button.
5. In the window that opens, click **Yes**.
Departments

- About Departments
- Creating Departments
- Sharing Department Resources
- Configuring Activity Transfer Between Departments
- Copying Departments
This chapter will assist you in understanding departments and how to set them up according to your business requirements.

About Departments

Every organization needs to form various departments to meet their requirements, and divide their workforce accordingly. Departments enable you to form a mirror of the departments in your company. Departments and department administrators are created by the partition administrator. All departments that are created will be formed under a Partition. A partition level user will be able to view all departments under it. Whereas, a department level user can only view his own and shared departments.

As a department administrator, you have the power to control and manage your department. This is made possible via the resources available in each department. Each department has twelve types of resources for use in your department. The Administration tree has an individual node for each type of resource.

The Administration Console tree

The following business objects are available in departments:

- Archive jobs: For more information, see “Archive” on page 268.
- Calendars: For more information, see “Business Calendars” on page 246.
- Chat: For more information, see, Cisco Unified Web and E-Mail Interaction Manager Administrator’s Guide to Chat and Collaboration Resources
- Classifications: For more information, see “Classifications” on page 254.
- Dictionaries: For more information, see “Dictionaries” on page 258.
- Email infrastructure: For more information, see, Cisco Unified Web and E-Mail Interaction Manager Administrator’s Guide to Email Resources
- Data Masking for emails and chat: For more information, see “Data Masking” on page 206.
Creating Departments

Only a partition administrator can create departments.

**To create a department:**
1. In the Tree pane, browse to Administration > Departments.
2. In the list pane toolbar, click the New button.
3. In the Properties pane, on the General tab, provide the name and general description for the department. The following characters are not allowed in the name: < , . ? : > $ * \ / #

<table>
<thead>
<tr>
<th>Name</th>
<th>Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>Name</td>
<td>Customer Support</td>
</tr>
<tr>
<td>Description</td>
<td></td>
</tr>
</tbody>
</table>

   Set general properties

4. On the Sharing tab, select the departments that you want to share resources with from the list of available departments. Activities are not shared unless specified. To share activities with a particular department, locate it in the Selected departments list and change the value of the Activities column to Shared for this department.
While transferring chats to other departments, you can choose to share the chat transcript from the original department with the agents of the other department. To enable this, select Yes in the View Chat Transcript column. By default chat transcripts are not shared between departments.

![Properties: Customer Support](image)

*Share department resources with other departments*

5. Lastly, on the Permissions tab, assign permissions to the users and user groups to own, view, edit, and administer the department that you have created.

![Properties: Customer Support](image)

*Assign permissions*

6. Click the Save button, to save the department you have created.

**Sharing Department Resources**

Resources can be shared with other departments.

**To share resources with other departments:**

1. In the Tree pane, browse to the department whose resources are to be shared.
2. Now, go to the Properties pane. On the Sharing tab, do the following:
   a. From the list of available departments, select the departments that should be allowed to share resources with your department. For example, if you select the Sales department from the list, the administrator of the Sales department will be able to share users with your department. Such shared users become Foreign users in your department.
b. Activities are not shared unless specified. To share activities with a particular department, locate it in the *Selected departments* list and change the value of the *Activities* column to *Shared* for this department. When you share activities, all users of the selected department are able to see the activities from your department. Users do not need to be foreign users in your department to view the activities.

c. While transferring chats to other departments, you can choose to share the chat transcript from the your department with the agents of the other department. To enable this, select *Yes* in the *View Chat Transcript* column. By default chat transcripts are not shared between departments.

3. Click the *Save* button.

### Configuring Activity Transfer Between Departments

In integrated installations, the application can be configured to allow mapped agents to transfer activities to mapped queues (that belong to the same MRD) in departments other than the department in which they are created.

**To configure activity transfer between departments:**

- Enable the Allow transfer of activities to integrated queues in other departments partition level setting *(page 49)*. Mapped agents now see mapped queues (that belong to the same MRD) in their home department and in all foreign departments in the Transfer window in the Agent Console.

### Copying Departments

You can copy an existing department. By copying a department, you get a ready structure, and you can edit any of the resources available in the department according to your requirements. This is a time saver and eases your task of creating multiple departments.

The following table describes how objects in a department get copied.

<table>
<thead>
<tr>
<th>#</th>
<th>Object name</th>
<th>Notes</th>
</tr>
</thead>
<tbody>
<tr>

</tr>
</tbody>
</table>
| 22.| Users                                          | Copied as in original department with following exceptions:  
  **User name** is copied as `username_new_department_name`  
  Licenses of users are not copied  
  Actions, Roles, and Permissions are copied. Note: Permissions are disabled for the copied users until licenses are assigned to them. |
| 23.| Workflows                                      | Copied as in original department with following exception:  
  The **Active** field of workflows is set to **No**. |
| 24.| Archive Jobs                                   | Not copied                                                                                     |

**Objects in the Knowledge Base Console**

| 25. | Knowledge Base                                 | Copied as in original department with following exception:  
  User created folders and articles within are copied and same as original department. Personal folders are copied as `foldername_new_department_name`. |
| 26. | Article bookmarks                              | Not copied                                                                                     |

**Objects in the Tools Console**

| 27. | Screen Attribute Settings                      | Copied as in the original department                                                           |
| 28. | User Attribute Settings                         | Copied as in the original department                                                           |
To copy a department:

1. In the Tree pane, browse to Administration > Departments.
2. In the Tree pane, select the department you want to copy.
3. In the Tree pane toolbar, click the Copy button.
4. In the Copy department window that appears, provide the name of the new department and click OK to create a copy of the department.

About Business Calendars
Managing Shift Labels
Managing Day Labels
Managing Business Calendars
Managing Daylight Saving Changes
This chapter will assist you in understanding business calendars and how to set them up according to your business requirements.

**About Business Calendars**

Calendars are used to map working hours of the contact center. Calendars are primarily used in:

- Setting due dates for activities routed through workflow. When activities are routed through a workflow that has an SLA node, due date is set according to the calendar.
- Reports: Calendars are used in reports. For example, reports like Email volume by queue, Email age by queue, and Email volume by alias.

---

Important: It is not mandatory to set calendars. If not set, the system considers the agent’s work time as 24*7*365.

---

In a calendar, you set up the working and non-working times of users. This enables the functioning of service levels. Service levels are used for setting due dates for activities, cases, and tasks, and trigger alarms to alert supervisors.

To configure a calendar, you need to create the following.

- Shift labels: A shift label describes the type of shift, and whether agents work in that shift or not. For example, you can create shift labels like:
  - Morning shift and Evening shift, when agents work.
  - Lunch break, Holidays, and Weekends, when agents do not work.

- Day labels: Day labels define the work time for each shift. Shift labels are used for creating day labels. For example, you can create day labels like:
  - Weekday
    - 8 am to 12 pm: Morning shift
    - 12 pm to 1 pm: Lunch break
    - 1 pm to 5 pm: Evening shift
  - Holiday
    - 12 am to 11.59 pm: Holiday

Use day labels to create calendars.
Managing Shift Labels

Creating Shift Labels

A shift label describes the type of shift, and whether the agents work in that shift or not. For example, morning shift, afternoon shift, lunch break, Christmas holiday, etc. Once created, shift labels are used in day labels.

**To create a shift label:**

1. In the Tree pane, browse to Administration > Departments > Department_Name > Calendar > Shift Labels.
2. In the List pane toolbar, click the New button.
   The Properties pane refreshes to show the properties of the new shift label.
3. In the Properties pane, in the General tab, provide the following details.
   - **Name:** Type a name for the shift label. Do not use a comma (,) in the name.
   - **Description:** Type a brief description.
   - **Agents work this shift:** Specify if agents work in this shift or not. By default Yes is selected. Select No if agents do not work in this shift.

![Properties: Morning shift](image)

4. Click the Save button.

Deleting Shift Labels

You cannot delete a shift label if it is used in any day label. First, remove the shift label from the day label, where it is used, and then delete the shift label.

**To delete a shift label:**

1. In the Tree pane, browse to Administration > Departments > Department_Name > Calendar > Shift Labels.
2. In the List pane, select the shift label you want to delete.
3. In the List pane toolbar, click the Delete button.
Managing Day Labels

Creating Day Labels

In day labels, you can set the work time for each shift. For example, you can divide the 24 hours available in a day into working shifts of eight hours each. Therefore, each day would have three shifts.

Important: Before creating day labels, first create the shift labels.

To create a day label:

1. In the Tree pane, browse to Administration > Departments > Department_Name > Calendar > Day Labels.

2. In the List pane toolbar, click the New button.

   The Properties pane refreshes to show the properties of the new day label.

3. In the Properties pane, go to the General tab and provide the following details.
   - **Name**: Type a name for the day label. Do not use a comma (,) in the name.
   - **Description**: Type a brief description.
   - **Time zone**: It shows the time zone selected for the department. This field is disabled. If you want to change the time zone for your department, you can do it by changing the Business calendar timezone setting. For details on how to change this setting, see, “Setting the Time Zone” on page 250.

   ![Properties Weekday](image)

   **Set general properties**

4. Next, go to the Times tab and provide the following details.
   - **Start time**: Select the start time for the day label.
   - **End time**: Select the end time for the day label.
   - **Shift label**: From the dropdown list, select the shift label to be used.
Likewise, specify the start time, end time, and shift labels for the whole day.

Set start times and end times for day labels

5. Click the Save button.

Deleting Day Labels

You cannot delete a day label if it is used in any calendar. First, remove the day label from the calendar, where it is used, and then you can delete it.

**To delete a day label:**
1. In the Tree pane, browse to Administration > Departments > Department_Name > Calendar > Day Labels.
2. In the List pane, select the day label you want to delete.
3. In the List pane toolbar, click the Delete button.

Managing Business Calendars

Setting the Time Zone

Before you create a calendar, determine the time zone when your agents work. Make sure that you select the appropriate time zone in the department setting, **Business calendar timezone**. If you configure the calendar first, and then change the time zone setting, the start time and end time in the day labels get changed.

For example, you create a day label with the start time as 8 am and end time as 4 pm, and the time zone selected is (GMT -5:00) Eastern Standard Time (US and Canada). After creating a day label, you change the time zone setting to, (GMT -8:00) Pacific Standard Time (US and Canada). The day label start time changes to 5 am, and end time changes to 1 pm and the time zone changes to (GMT -8:00) Pacific Standard Time (US and Canada).

**Important:** It is recommended that you set the time zone first and then configure the calendars.

**To change the time zone setting:**
1. In the Tree pane, browse to Administration > Departments > Department_Name > Settings > Department.
2. In the List pane, select the department settings group.
3. In the Properties pane, go to the Attributes tab.
4. In the Attributes tab, select the Business calendar timezone setting. From the available time zones, select the time zone for your department.
5. Click the Save button.

Creating Business Calendars

You can create business calendars for your department. At a time, only one calendar can be active. You can set calendars for all the days of the week, and the exception days, like holidays, weekends etc.

---

**Important**: You need to create day labels before creating calendars.

---

**To create a calendar:**

1. In the Tree pane, browse to Administration > Departments > Department_Name > Calendar > Calendars.
2. In the List pane toolbar, click the New button.
   
   The Properties pane refreshes to show the properties of the new calendar.
3. In the Properties pane, go to the General tab, and provide the following details.

   - **Name**: Type a name for the calendar.
   - **Description**: Type a brief description.
   - **Effective start date**: Select the date on which the calendar becomes active. Two calendars in a department cannot have overlapping dates. Also, the start date should be greater than the current date.
   - **Effective end date**: Select the date on which the calendar becomes inactive. Two calendars in a department cannot have overlapping dates. Also, the end date should be greater than the start date.

   On the set end date, the calendar becomes inactive. Once a calendar becomes inactive, the system considers the agents work time as 24*7*365, unless some other calendar becomes active automatically.

   - **Time Zone**: It shows the time zone selected for the department. This field is disabled. If you want to change the time zone for your department, you can do it by changing the Business calendar timezone setting. For details on how to change this setting, see, “Setting the Time Zone” on page 250.

---

**Properties: Customer Support Calendar**

<table>
<thead>
<tr>
<th>Name</th>
<th>Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>Name *</td>
<td>Customer Support Calendar</td>
</tr>
<tr>
<td>Description</td>
<td></td>
</tr>
<tr>
<td>Effective start date *</td>
<td>01/01/2015</td>
</tr>
<tr>
<td>Effective end date *</td>
<td>1/23/2015</td>
</tr>
<tr>
<td>Time zone</td>
<td>(GMT-05:00) Eastern Standard Time (US &amp; Canada)</td>
</tr>
</tbody>
</table>

---

Set general properties
4. Now, go to the Normal Week tab, and select the day label to be used for each day of the week.

<table>
<thead>
<tr>
<th>Day Of Week</th>
<th>Day Label</th>
</tr>
</thead>
<tbody>
<tr>
<td>Sunday</td>
<td>Weekend</td>
</tr>
<tr>
<td>Monday</td>
<td>Weekday</td>
</tr>
<tr>
<td>Tuesday</td>
<td>Weekday</td>
</tr>
<tr>
<td>Wednesday</td>
<td>Weekday</td>
</tr>
<tr>
<td>Thursday</td>
<td>Weekday</td>
</tr>
<tr>
<td>Friday</td>
<td>Weekday</td>
</tr>
<tr>
<td>Saturday</td>
<td>Weekend</td>
</tr>
</tbody>
</table>

Configure the calendar for a normal week

5. Lastly, go to the Exceptions tab. Specify the day labels to be used for exception days, like holidays, weekends, etc. Select the date on which there is some exception, and then select the day label to be used for that day.

![Important: The exception dates should be between the start date and end date of the calendar.]

Configure the calendar for the exception days, like holidays

6. Click the **Save** button.

Deleting Business Calendars

To delete a calendar:

1. In the Tree pane, browse to Administration > Departments > Department_Name > Calendar > Calendars.
2. In the List pane, select the calendar you want to delete.
3. In the List pane toolbar, click the **Delete** button.
Managing Daylight Saving Changes

When changes in the day light saving occur, you need to make the following two changes in calendars.

- In the department setting, Business calendar timezone, change the time zone.
- In the day labels, in the Times tab, adjust the start times and end times for all shifts.
Classifications

- About Classifications
- Managing Categories
- Managing Resolution Codes
This chapter will assist you in understanding what classifications are and how to configure them.

**About Classifications**

Classification is a systematic arrangement of resources comprising of categories and resolution codes. You can create and assign classifications to incoming activities or to knowledge base articles. Classifications are of two types:

- Categories
- Resolution codes

Categories and resolution codes can be assigned to incoming activities in two ways:

- Manually, from the Agent Console
- Automatically, through workflows

**Managing Categories**

Categories are keywords or phrases that help you keep track of different types of activities. This section talks about:

- Creating Categories on page 255
- Deleting Categories on page 256

**Creating Categories**

To create a category:

1. In the Tree pane, browse to Administration > Department > Department_Name > Classifications > Categories.
2. In the List pane toolbar, click the New button.
3. In the Properties pane, on the General tab, provide the following details.
   - **Name**: Type the name of the category.
   - **Description**: Provide a brief description.
Treat the classification as a complaint: Select Yes to create a complaint type of category.

Set general properties

4. Click the Save button.

Deleting Categories

To delete a category:

1. In the Tree pane, browse to Administration > Department > Department_Name > Classifications > Categories.
2. In the List pane, select the category you want to delete.
3. In the List pane toolbar, click the Delete button.

Managing Resolution Codes

Resolution codes are keywords or phrases that help you keep track of how different activities were fixed. This section talks about:

- Creating Resolution Codes on page 256
- Deleting Resolution Codes on page 257

Creating Resolution Codes

To create a resolution code:

1. In the Tree pane, browse to Administration > Department > Department_Name > Classifications > Resolution Codes.
2. In the List pane toolbar, click the New button.
3. In the Properties pane, on the General tab, provide the following details.
   - Name: Type the name of the resolution code.
Description: Provide a brief description.

Set general properties

4. Click the Save button.

Deleting Resolution Codes

To delete a resolution code:

1. In the Tree pane, browse to Administration > Department > Department_Name > Classifications > Resolution Codes.
2. In the List pane, select the resolution code you want to delete.
3. In the List pane toolbar, click the Delete button.
Dictionaries

- About Dictionaries
- Choosing a Default Dictionary
- Creating Dictionaries
- Adding Blocked Words
- Approving Suggested Words
- Viewing Approved Words
This chapter will assist you in understanding what dictionaries are and how to configure them.

**About Dictionaries**

Dictionaries refer to a list of words stored in the system for reference. Agents use dictionaries to check spellings in outgoing emails. Each department comes with 13 predefined dictionaries and one of them is configured as the default dictionary. A department can have only one default dictionary and it can be changed according to the business requirements.

Dictionaries are available in the following languages:

1. Danish
2. Dutch
3. English (UK)
4. English (US)
5. Finnish
6. French
7. German
8. Italian
9. Norwegian (Bokmal)
10. Portuguese
11. Brazilian Portuguese
12. Spanish
13. Swedish

---

**Important:** The application does not have dictionaries for the following languages: Chinese (Simplified), Chinese (Traditional), Czech, Greek, Japanese, Korean, Norwegian (Nynorsk), Portuguese (Brazilian), and Turkish.

---

**Choosing a Default Dictionary**

**To choose a default dictionary:**

1. In the Tree pane, browse to Administration > Department > Department_Name > Dictionaries.
2. In the List pane, select a dictionary.
3. In the Properties pane, on the General tab, in the **Default** field, choose **Yes** from the drop down list.

![Dictionary properties](image)

*Set a dictionary as the default dictionary for a department*

4. Click the **Save** button.

### Creating Dictionaries

You can also create your own dictionary and store words in it and you can make this as the default dictionary for your department.

**To create a new dictionary:**

1. In the Tree pane, browse to **Administration > Department > Department_Name > Dictionaries**.
2. In the List pane toolbar, click the **New** button.
3. In the Properties pane, on the General tab, provide the following details.
   - **Name**: Provide the name of the dictionary.
   - **Description**: Provide a brief description.
   - **Language**: From the drop down list, select a language for the dictionary.

   ![Dictionary properties](image)

   *Configure the general properties*

   Click the **Save** button to enable the **Default** field.
   - **Default**: Select **Yes** to make this the default dictionary of the department.

4. Click the **Save** button.
Adding Blocked Words

You can create a list of blocked words that users should not be allowed to use in emails, chats, etc. Any word that is included in this list is blocked, irrespective of whether it is present in the list of approved words. You must remove the word from this list if you wish to allow users to use it.

To add blocked words:
1. In the Tree pane, browse to Administration > Department > Department_Name > Dictionaries.
2. In the List pane, select a dictionary.
3. In the Properties pane, on the Special words tab, go to the Blocked section.
4. Add the list of blocked words. If you want to delete a blocked word, select the word and click the Delete button.
5. Click the Save button.

Approving Suggested Words

While using the spell-checker users can suggest words that can be added to the dictionary. As an administrator, you can review the list of suggested words and can add these words to the dictionary. If the same word is added in the blocked and approved list, then the word is considered as a blocked word.

To approve suggested words:
1. In the Tree pane, browse to Administration > Department > Department_Name > Dictionaries.
2. In the List pane, select a dictionary.
3. In the Properties pane, on the Special words tab, go to the Suggested section.
4. View the list of suggested words. To approve a word, select the word, and click the Approve button. To delete a suggested word, select the word and click the Delete button.
5. Click the Save button.

Viewing Approved Words

To view the approved words:
1. In the Tree pane, browse to Administration > Department > Department_Name > Dictionaries.
2. In the List pane, select a dictionary.
3. In the Properties pane, on the Special words tab, go to the Suggested section.
4. View the list of approved words. To delete an approved word, select the word and click the Delete button.
5. Click the Save button.
Macros

- About Macros
- Creating Business Object Macros
- Creating Combination Macros
- Deleting Macros
This chapter will assist you in understanding what macros are and how to configure them.

**About Macros**

Macros are commands that fetch stored content. They are easy to use, and display the actual content, when expanded. Macros enable you to enter a single command to perform a series of frequently performed actions. For example, you can define a macro to contain a greeting for email replies. Instead of typing the greeting each time, you can simply use the macro. It is important to note that a macro’s expansion is contextual to the object, and two macros of similar looking attribute expand differently depending upon the context object. For example, the macros “Email address of the contact point” and “Contact point data of the activity”, both return the email address of the customer, but the first one returns the email address saved in the customer profile and the second one returns the email address associated with the activity in which the macro is used.

You can create two types of macros:

1. **Business Objects macros**: In Business Objects you can create macros for several objects. For example, Activity data, Customer data, User data, etc. You have to define an attribute to a macro from the list of system provided attributes. Please note that you can define only a single attribute for each macro.

2. **Combination macros**: In Combination Macros you can create macros with multiple descriptions. That is, you can combine multiple macros within a single macro. Multiple macros can be selected from both Business Objects and Combination macro types.

**Creating Business Object Macros**

To create a business object macro:

1. In the Tree pane, browse to Administration > Department > Department_Name > Macros > Business Objects > Business Object Name.

2. In the List pane toolbar, click the New button.

3. In the Properties pane, on the General tab, provide the following details.
   - **Name**: Type a name for the macro.
   - **Description**: Provide a brief description.
   - **Default value**: Provide the default value for the macro.
   - **Exception article**: Click the Assistance button and from the Select Article window, select the exception article for the macro.
<table>
<thead>
<tr>
<th>Name</th>
<th>Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>Name</td>
<td>activity_id</td>
</tr>
<tr>
<td>Description</td>
<td>Unique ID of the activity</td>
</tr>
<tr>
<td>Default value</td>
<td></td>
</tr>
<tr>
<td>Exception article</td>
<td></td>
</tr>
<tr>
<td>Definition</td>
<td>casemgmt:activity_data.activity_id</td>
</tr>
</tbody>
</table>

**Definition:** Click the Assistance button and from the Select Attribute window, select the attribute that defines this macro. Please note that for any date attributes (for example, case creation date) are displayed in the GMT timezone.

---

**Creating Combination Macros**

**To create a combination macro:**

1. In the Tree pane, browse to Administration > Department > Department_Name > Macros > Combinations.
2. In the List pane toolbar, click the New button.
3. In the Properties pane, on the General tab, provide the following details.
   - **Name:** Type the name of the macro.
   - **Description:** Provide a brief description.
   - **Default value:** Provide the default value for the macro.
   - **Exception article:** Click the Assistance button and from the Select Article window, select the exception article for the macro.
   - **Definition:** Click the Assistance button and from the Select Definition window, select the attributes that define this macro.

---

**Set general properties**

4. Click the Save button.
4. Click the Save button.

Deleting Macros

Important: Macros used in workflows cannot be deleted.

To delete a macro:
1. In the Tree pane, browse to Administration > Department > Department_Name > Macros.
2. Select the type of macro you want to delete.
3. In the List pane, select the macro you want to delete.
4. In the List pane toolbar, click the Delete button.
Products

- About Products
- Creating Product Catalogs
- Deleting Product Catalogs
This chapter will assist you in understanding what product catalogues are and how to configure them.

### About Products

You can associate products from the product catalog in the system with customers in a department. A product catalog enables you to have a handy reference of your products within the system. You can configure the system to list your product catalogs with customized articles. A product catalog is a complete enumeration of items (products) arranged systematically with descriptive details.

### Creating Product Catalogs

**To create a product catalog:**

1. In the Tree pane, browse to Administration > Department > Department_Name > Products.
2. In the List pane toolbar, click the New button.
3. In the Properties pane, on the General tab, provide a name and description for the product catalog.
4. Click the Attributes tab to add more details about the product.
5. The Articles tab enables you to select an article from the Knowledge base.
6. Click the Save button.

### Deleting Product Catalogs

**To delete a product catalog:**

1. In the Tree pane, browse to Administration > Department > Department_Name > Products.
2. In the List pane, select the product catalog you want to delete and click the Delete button.
Archive

- About Archives
- Managing Archive Jobs
- Managing Job Runs
- Purging Archived Data
About Archives

Data is stored in the active database. With time, the size of the data usually increases to a point where it begins to affect the performance of the system. 150 GB should be considered the maximum limit for the size of the active database, after which we recommend archiving to avoid performance issues. Hence, it is important that data that is not in use anymore is stored somewhere other than the active database.

- Archiving is a systematic process which moves data from the active database to the archive database. Periodic archiving helps to keep the size of the active database within prescribed levels, thereby improving the performance of the system.

What Can You Archive?

You can archive cases and activities that are more than eight days old. Attachments of archived activities remain on the file server and the link between archived activities and attachments is preserved even after activities are archived.

Once archived, a case or activity cannot be “unarchived.” If a customer replies to an archived case, a new case gets created.

About Archive Jobs

An archive job is a process that runs automatically at a scheduled time and archives data based on a specified criteria (such as, the age of the data and the queue to which it belongs). You can create multiple archive jobs in a department, but two jobs cannot have overlapping schedules. A job runs only when it is in active state.

When a job is run, the archiving of data happens in batches. Each archive job is broken into batches of 5000 cases. For example, if a job is scheduled to archive 22000 cases, it processes them in batches of 5000 cases. To archive 22000 cases, it will run four batches of 5000 cases and a fifth batch of 2000 cases. Breaking of a job into batches ensures that if an error occurs while archiving the data, or if the archive process is stopped and restarted, only a small piece of data has to be processed again.

Every batch completes archiving in two steps:

- First, it inserts data from the active database to the archive database.
- After successfully inserting the data in the archive database, it deletes the data from the active database.

Important: The Archive Jobs node is available only in installations that use the Standard Edition of Microsoft SQL. Installations using the Enterprise edition of Microsoft SQL Server database, leverage the underlying table partitioning capabilities of the Enterprise edition of the database server.

Important: For archive jobs to work, the Scheduler and Archive services should be running.
**Default Quarterly Archive Job**

When the application is installed, a Default Quarterly Archive Job is created in the system. This job runs on Sundays and archives all closed cases and completed activities for the last 90 days. You can edit this archive job as required.

**Who can Manage Archive Jobs?**

Only users with appropriate actions can manage archive jobs. The actions required for managing archive jobs are:

- View archive jobs: For viewing the Archive node and archive jobs in a department
- Edit archive jobs: For editing jobs
- Create archive jobs: For creating jobs
- Delete archive jobs: For deleting jobs
- Purge archive jobs: For deleting archived data

Partition administrators have all these actions assigned to them by default, but these actions have to be given explicitly to department administrators. Since archiving is a very sensitive process, discretion should be used while assigning archiving actions to users.

**Archive Criteria**

While creating archive jobs, you can specify two criteria.

1. The relative age of activities and cases to be archived: You need to specify the relative age of cases and activities that should be picked up for archive. The age can be given in days, weeks, or months.

   For example: You set the job to archive closed cases and completed activities that were closed or completed one month before the date on which the archive job runs. It means the job will archive:
   - All completed activities that belong to cases that were closed one month before the job run.
   - All completed activities that do not have any case associated and were completed one month before the job run.
   - All cases that were closed one month before the job run.

   **Important:** Since activities belonging to a case can be present in multiple departments, archiving checks if the first activity of a case belongs to the department in which the job is run. If it is, only then that case and its associated activities are archived.

2. The queue to which the completed activities and closed cases belong: When you specify a queue, the job archives only the cases and activities that belong to that queue.

   Important things to note are:
   - If the last activity of a closed case belongs to a queue specified in a filter, then the case with all its constituent activities is archived.
   - If there are activities that belongs to the queue specified in the filter, with no case association, then those activities are archived.
If the last activity in a closed case does not belong to any queue, the case and all its constituent activities do not get archived.

Planning the Schedule of Archive Jobs

When an archive job runs, it puts additional load on the system. To ensure that the productivity of agents is not affected by the archive jobs running on the system, plan the schedule of archive jobs in a way that they do not run at peak business hours.

While scheduling jobs you can specify two things. They are:

- The days of the week when an archive job should run.
- The time of the day when the job should run. In this, you can select between two options. They are:
  - Set the job to run throughout the day. For example, if your call center is closed on Saturday and Sunday, you can schedule the archive jobs to run throughout the day, on Saturday and Sunday.
  - Set the job to run between specified start and end time. For example, if your call centre runs 24/7, and has less load from 10 pm to 6 am on Monday and Tuesday, then you can schedule the archive jobs to run from 10 pm to 6 am, on Monday and Tuesday.

Two active jobs in a department cannot be scheduled for the same or overlapping time. For example, you cannot have a job scheduled from 4 pm to 6 pm, and another job scheduled from 5 pm to 7 pm on the same day. However, you can have one job scheduled from 4 pm to 6 pm, and another from 6 pm to 8 pm on the same day.

About Job Runs

A job run is a record that indicates the time at which the archive job started and ended, the status of the job, whether it is running, completed, or failed, and the number of cases and activities handled by the archive job. Every time the system runs an archive job, a new job run is created. For example, if an archive job is scheduled to run from Monday to Friday between 6 am and 9 am, and the job runs successfully every day, then there will be six job runs for the archive job. You can view all the job runs for an archive job in the History tab of the Properties pane.

A job run can have one of the following status:

- Running: The archive job is running and is in progress.
- Completed: The job run was completed when:
  - The time allotted for the job to run is over.
  - Or
  - There was no more data left for archiving.
- Failed: The job encountered some problem while archiving and could not run successfully.

---

**Important:** If a job fails, no other scheduled job can run in the system till the failure of the job is resolved and the failed job is restarted manually.

An archive job can fail because of one of the following reasons:

- Network connection is down
- Application database or archive database is down
About Purging

As the archive jobs run, they keep moving the data from the active to the archive database, and the data size on the archive database increases. At some time the need will arise to delete the archived data. Purge is a process which helps you to systematically delete data from the archive database. Once purged, the information is lost permanently and it cannot be recovered. Data is purged job run wise and you can purge only those job runs that have completed successfully. You cannot purge a job run that is in a running state or has failed because of some error. Purge also deletes the attachments associated with the activities being purged.

When a job run is purged, it can have one of the following status:

- Purge started: The job run has been queued for purge.
- Purge completed: Purge has completed successfully.
- Purge failed: Purge has failed because of some error.

Managing Archive Jobs

Creating Archive Jobs

An archive job is a process that runs automatically at a scheduled time, and archives data based on the specified criteria (such as, the age of data and the queue to which it belongs). You can create multiple archive jobs in a department, but two jobs cannot have overlapping schedules. A job runs only when it is in active state.

After you create a job, it runs automatically on the scheduled date and time. You cannot start a job manually. However, when a job starts running you can stop and restart it manually.

To create an archive job:

1. In the Tree pane, browse to Administration > Departments > Department_Name > Archive Jobs.
2. In the List pane toolbar, click the New button.
   The Properties pane refreshes to show the attributes of the new job.
3. In the Properties pane, on the General tab, provide the following details.
   - Name: Type the name of the archive job. This is required information.
   - Description: Type a brief description.

- Archive database storage is full
- Internal error in the archive process
  - Stopped: The job has been stopped manually while it was running.
Active: By default the status of the job is not active. Select Yes to make it active. A job can run only when it is in active state.

Set general properties

4. Next, go to the Options tab. Here you set the criteria for the archive job.
   - In the Timeframe section, specify that when the archive job is run, archive the closed cases and completed activities that were closed or completed \( n \) days before the date on which the archive job runs. Select the relative time frame in days, weeks, or months. For example, if you want to archive cases and activities which were completed two months before the date on which the archive job runs, then select two months.

Set the time frame option

- In the Queues section, select the queues on which the archive job should run.

Select queues

5. Next, go to the Schedule tab. Here specify the days and time when the archive job should run.
   - Select the days on which the archive job should run.
   - Specify the time of the day when the archive job should run. There are two options available.
- **Archive throughout the day:** For example, you can schedule the archive job to run on Saturday and Sunday throughout the day.
- **Archive only between the specified start and end time:** For example, you can schedule the archive job to run on Saturday and Sunday from 8 pm to 11 pm.

Select the duration for which you want to schedule the archive job.

6. Click the **Save** button.

---

**Important:** The History tab is enabled only after you save the job.

From the History tab you can view the list of job runs. If you are creating a new job, the list will be empty. You can also stop, restart, and purge the job runs from the History tab.

**Deleting Archive Jobs**

**Important:** A job cannot be deleted if it has job runs that have not been purged. Before you can delete an archive job, you have to purge the data archived by that job.

**To delete an archive job:**

1. In the Tree pane, browse to Administration > Departments > Department_Name > Archive Jobs.
2. In the List pane, select the archive job you want to delete.
3. In the List pane toolbar, click the **Delete** button.
Managing Job Runs

Viewing Job Runs

Every time an archive job runs, a record is created indicating the start and end time of the job, if the job is in running state, if it completed successfully or it failed, and the number of cases and activities archived by the job. Each record is called a Job run, and all job runs for an archive job can be viewed from the History tab.

To view a job run:

1. In the Tree pane, browse to Administration > Departments > Department_Name > Archive Jobs.
2. In the List pane, select an archive job.
3. In the Properties pane, go to History tab. Here you can see a list of job runs. You can see the following details about the job run.
   - **Start time:** Time when the job run started.
   - **End time:** Time when the job run ended.
   - **Status:** Status can be running, completed, or failed.
   - **Cases archived:** Number of cases archived.
   - **Activities archived:** Number of activities archived.

Stopping Job Runs

**Important:** A job can be stopped only if it is in running state.

To stop a job:

1. In the Tree pane, browse to Administration > Departments > Department_Name > Archive Jobs.
2. In the List pane, select an archive job.
3. In the Properties pane, go to the History tab and select the job run you want to stop.
4. Click the **Stop** button.

Restarting Job Runs

You will need to restart a job if:

- You stopped the job manually: If you restart a job within its scheduled time, it will run till the end of the schedule. If the restart happens outside the scheduled time, then it will only complete the batch it was archiving at the time you stopped the job.

4. A message appears asking to confirm the deletion. Click **Yes** to delete the archive job.
The job failed while running: In case of a failure, if the job is restarted within the scheduled time, it runs till the end of the schedule. And, if the restart happens outside the schedule time, it will only complete the batch it was archiving at the time of failure.

**Important:** If a job run fails and its schedule expires, such a job run can also be restarted. On restart it will only complete the batch it was archiving at the time of failure.

To restart a job:
1. In the Tree pane, browse to Administration > Departments > Department_Name > Archive Jobs.
2. In the List pane, select an archive job.
3. In the Properties pane, go to the History tab and select the job run you want to restart.
4. Click the Restart button.

**Purging Archived Data**

As archive jobs run, they keep moving the data from the active to the archive database, and the data size on the archive database increases. At sometime the need will arise to delete the archived data. Purge is a process which helps you to systematically delete data from the archive database. Once purged, the information is lost permanently and it cannot be recovered. The data can be purged job run wise, and you can purge only those job runs that have completed successfully. You cannot purge a job run that is in a running state or has failed because of some error. Purge also deletes the attachments associated with the activities being purged.

**Important:** Once you set up a job run for purge, it cannot be stopped, and the purged data is lost and cannot be recovered.

When a job run is purged, it can have one of the following status.
- Purge started: The job run has been queued for purge
- Purge completed: Purge has completed successfully
- Purge failed: Purge failed because of some errors

**Important:** Purge of the archived data does not start immediately. Data is purged at the purge interval defined at the time of installing the application and it cannot be changed.

To purge archived data:
1. In the Tree pane, browse to Administration > Departments > Department_Name > Archive Jobs.
2. In the List pane, select an archive job.
3. In the Properties pane, go to the History tab and select the job run you want to purge.
4. Click the **Purge** button.

The status of the job run changes to Purge started, and it shows the name of the user who started the purge and the time at which the purge started.
