# Cisco Agent Desktop User Guide

---

## Introduction

---

Cisco Agent Desktop for Cisco Unified Contact Center Express (Unified CCX) is a robust computer telephony integration solution that is easy to install, configure, and manage. It provides agents with powerful tools to increase productivity, reduce operational costs, and improve customer satisfaction.

Agent Desktop provides call control capabilities—such as call answer, hold, conference, and transfer, and ACD state control—ready/not ready, wrap-up, etc. Customer information is presented to the agent through an enterprise data window and an optional screen pop. Agents can also answer customer e-mail using the optional Agent E-Mail feature. The optional integrated browser enables agents to access intranet and internet web pages to enhance their ability to assist customers. The optional integration with Cisco Unified Presence makes it possible for agents to send instant messages to non-agent subject matter experts to help them assist customers.

## What's New In This Release

Agent Desktop 10.0 includes the following new features:

- Support for JRE 1.7 Update 45
- Support for Internet Explorer 9

## Obtaining Documentation and Submitting a Service Request

For information on obtaining documentation, submitting a service request, and gathering additional information, see the monthly *What's New in Cisco Product Documentation*, which also lists all new and revised Cisco technical documentation, at:

<http://www.cisco.com/en/US/docs/general/whatsnew/whatsnew.html>

Subscribe to the *What's New in Cisco Product Documentation* as a Really Simple Syndication (RSS) feed and set content to be delivered directly to your desktop using a reader application. The RSS feeds are a free service and Cisco currently supports RSS version 2.0.

## Documentation Feedback

You can provide comments about this document by sending e-mail to the following address:

[ccbu\\_docfeedback@cisco.com](mailto:ccbu_docfeedback@cisco.com)

We appreciate your comments.

## Agent Desktop Feature Levels

There are two feature levels of Agent Desktop: Enhanced and Premium.

[Table 1](#) outlines the features available at each feature level. All features not listed here are present in both versions.

**Table 1.** Agent Desktop feature levels

Feature	Enhanced	Premium
Task buttons	x	x
Enterprise data thresholds	x	x
Agent-initiated chat	x	x
Automated recording (part of a work flow)	x	x
Agent workflow HTTP and IPC actions		x
Integrated browser		x
Agent Events - Time of day		x
Agent E-Mail		x
Wrap-up data	x	x
Reason codes	x	x
Cisco Unified CCX Preview Outbound Dialer		x
Cisco Unified Presence integration	x	x

## Cisco IP Communicator

Agent Desktop supports the use of the IP Communicator soft phone. This application is not provided with Agent Desktop and must be purchased and installed separately.

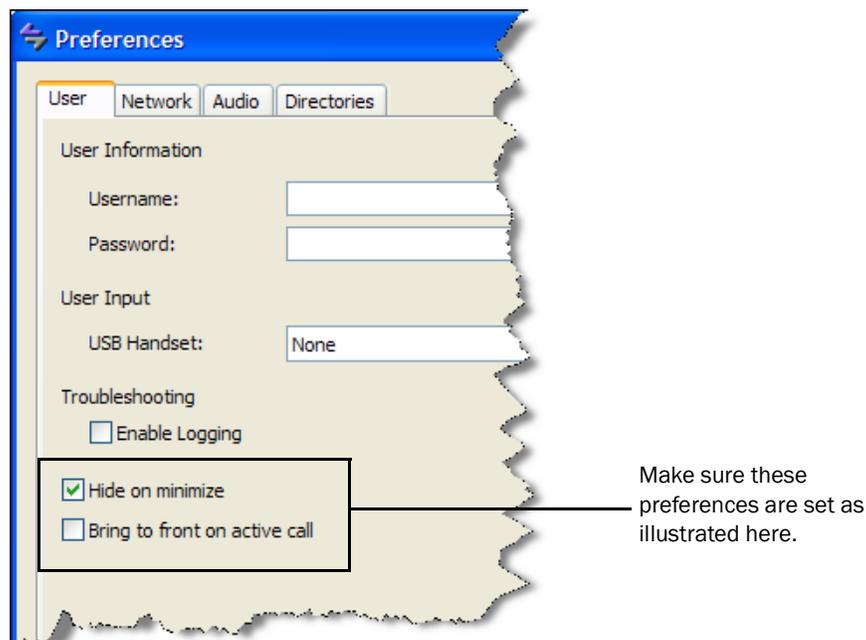

You must start IP Communicator manually (it does not start automatically when you start Agent Desktop). To conserve system resources, you might want to keep IP Communicator minimized as much as possible and use the Agent Desktop interface for call control.

To ensure that IP Communicator does not maximize when a call is received (the default setting) you must change your preferences as outlined in the following procedure.

**To make sure IP Communicator remains minimized when a call is received:**

1. Start IP Communicator.
2. Right-click anywhere on the interface to display a popup menu, and then choose Preferences. The Preferences dialog box appears (Figure 1).

**Figure 1.** IP Communicator Preferences dialog box

3. On the User tab, clear the Bring to front on active call check box (the default setting) and select the Hide on minimize check box.
4. Click OK.

## Automated Updates

---

CAD enables your administrator to update all instances of CAD desktop applications automatically to a newer version.

### CAD Desktop Applications

Every time you launch Agent Desktop, the software checks to see if there is an updated version available, or if there was a system configuration change that requires a Windows registry change. If either of these conditions are true, the software automatically runs the update process.

When an update is available, you will see a dialog box notifying you that your copy of Agent Desktop will be updated. Click OK to proceed with the update.

A progress bar is displayed to show you the status of the download.

When the update is finished, you will see a final dialog box that tells you the update is complete, and which applications were updated. If you have other CAD desktop applications (Supervisor Desktop and Desktop Administrator) on your PC, they will all be updated.

**NOTE:** Because Agent Desktop is automatically installed when Supervisor Desktop is installed, only Supervisor Desktop will be listed as having been updated in the final dialog box. Agent Desktop will be listed only if Supervisor Desktop is not present on your PC.

When you click OK to close the dialog box, any CAD desktop application that had been running on your desktop restarts automatically.

**NOTE:** To ensure that automated updates function correctly, Internet Explorer must be configured so that it checks for newer versions of stored pages. In Internet Explorer, choose Tools > Internet Options. In the Browsing history section on the General tab, click Settings. Select the option labeled Every time I visit the web page.

**NOTE:** If your system is configured with two Unified CCX servers, and one server is upgraded while your instance of Agent Desktop is connected to the older Unified CCX, and your system administrator performs a failover to switch all agents to the upgraded server, your instance of Agent Desktop will not automatically upgrade when you log into the new server. You must shut down Agent Desktop and start it again for the automatic upgrade to take place.

## Java Runtime Environment

If your contact center uses the Agent E-Mail feature (available only in the CAD Premium bundle) and you are assigned to an Agent E-Mail CSQ, every time Agent Desktop is launched, it checks to see if the correct version of Java Runtime Environment (JRE) is installed.

If the correct version is not detected, Agent Desktop prompts you to install the correct JRE.

## Logging In

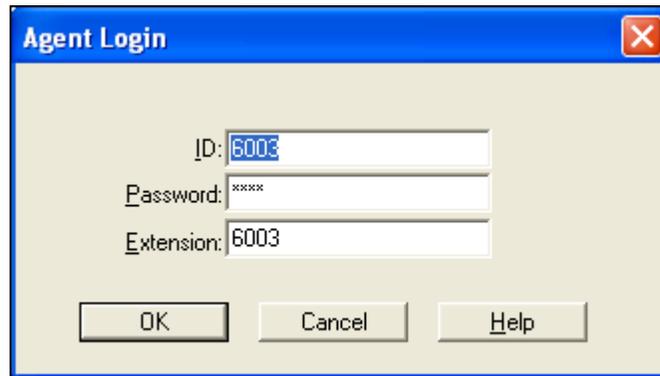

When you launch Agent Desktop, you are required to log in. If your configuration includes Cisco Unified Presence, you must also log into Unified Presence.

- If your Unified Presence and Agent Desktop logins are the same, when you log into Agent Desktop you are automatically logged into Unified Presence.
- If your Unified Presence and Agent Desktop logins are different, you will have to log into Agent Desktop and Unified Presence separately.

### To log into Agent Desktop:

1. Choose Start > All Programs > Cisco > Desktop > Agent. The Agent Login dialog box appears (Figure 2).

Figure 2. Agent Login dialog box

**NOTE:** You might receive a security warning that you are about to view pages over a secure connection. This can occur if you are using Windows XP and one of your configured integrated browser work sites is a secure site (https:// prefix). Select the Always trust content from this publisher check box and the message will not reoccur.

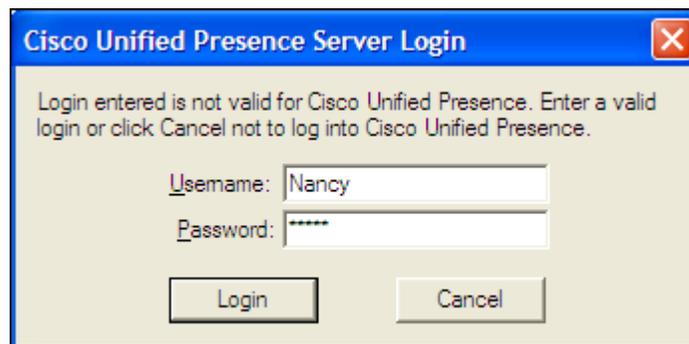

2. Enter your ID, password, and extension in the appropriate fields, then click OK or press Enter.

If you attempt to log in and the ID is already in use by another agent, you will be asked if you want to force the login. If you opt to do so, you will be logged in and the other agent using that ID will be logged out.

**NOTE:** If your team assignment is changed while you are logged in, then you must restart CAD for the change to go into effect.

3. If your configuration includes Cisco Unified Presence and your Unified Presence login is different than your Agent Desktop login, the Cisco Unified Presence Server Login dialog box appears (Figure 3). Type your Unified Presence username and password and click Login.

Figure 3. Cisco Unified Presence Server Login dialog box

Agent Desktop starts and by default is immediately minimized on the taskbar at the bottom of your Windows desktop. This behavior can be configured differently by your administrator, and, if permitted, by you in the Preferences menu.

**NOTE:** Do not attempt to log into Cisco Unified Presence through both Agent Desktop and Cisco Unified Personal Communicator, even if you use different user IDs to do so. If you do, the client applications can behave unpredictably.

**NOTE:** If Agent Desktop and Cisco Unified Presence are located on two different PCs, and you attempt to log into both concurrently using the same user ID, the logins will fail.

## Login Notes

- When you attempt to log in, you might see an error message, “A licensing error has occurred. Please see your administrator.” This generally appears when all Agent Desktop software licenses are in use. For this reason, it is important that you close Agent Desktop completely when you are done using it, rather than simply logging off. As long as Agent Desktop is running, one license is being used.
- While logging into Agent Desktop with the Agent E-mail feature enabled, you might receive multiple security and certificate warnings. The Information bar displays warning messages such as the hostname does not match the certificate, the content is blocked due to certificate errors, or the publisher is

not trusted. Click the security warning displayed on the Information bar in the browser, and select an appropriate action depending on the available options in the popup menu to unblock the content or trust the publisher.

### **If JRE is Missing or the Wrong Version**

You are prompted to install JRE while launching Agent Desktop if you are assigned to an e-mail CSQ and:

- JRE is missing or not available
- The incorrect version of JRE is installed

**NOTE:** Only a user with administrative privileges can install JRE. If you do not have administrative privileges on your computer and you want to install JRE, contact your supervisor.

In the prompting dialog box, do one of the following:

- Click Yes to download the JRE installation file. You must run the installation manually, it will not start automatically. Follow the InstallShield Wizard prompts to complete the installation.
- Click No to continue launching Agent Desktop without the Agent E-Mail feature.

### **Access Through a Virtual Private Network From Behind a NAT Firewall or Router**

Agent Desktop is able to connect to the CAD servers through a virtual private network (VPN). This allows an agent to work remotely and still have the benefits of the full functionality of Agent Desktop.

Using a VPN is recommended in order to provide a more secure connection.

When a desktop is using network address translation (NAT) due to a firewall or router, then VPN software must be used on the desktop to ensure full bi-directional network connectivity between the contact center servers and the desktop. Failure to use VPN software will result in connectivity issues and a loss in functionality such as silent monitoring, recording, and incoming chat message and team message failures.

Cisco AnyConnect Secure Mobility Client is verified to work properly and is supported for access with Agent Desktop.

VPN solutions from other vendors might result in feature loss. Because they have not been formally verified, they are not supported.

**NOTE:** After installing Cisco AnyConnect Secure Mobility Client, you must restart your computer. If you do not restart, monitoring and recording will not work properly.

### **VPN Tunneling**

There are two types of VPN tunneling mechanism, full tunneling and split tunneling, both of which are supported for connection between Agent Desktop and CAD services.

#### **VPN Full Tunneling**

VPN full tunneling virtually replaces the network connection with the local area network defined by the VPN. If VPN full tunneling is used to connect to CAD servers, the VPN connection must be established before starting Agent Desktop. If the VPN connection is lost during a session, you must close Agent Desktop, reestablish the VPN connection, and then restart Agent Desktop.

#### **VPN Split Tunneling**

VPN split tunneling allows you to access a public network and a local area network simultaneously, using the same physical network connection.

There are two types of VPN split tunneling scenarios.

- Scenario 1: The CAD servers are on the public network and a third-party application is used through the VPN. In this scenario, you must launch and log into Agent Desktop before establishing the VPN connection. If the VPN connection is lost during a session, you must restart Agent Desktop and then reestablish the VPN connection.
- Scenario 2: The CAD servers are on the VPN and a third-party application is used through the public network. In this scenario, you must establish the VPN connection before launching Agent Desktop. If the VPN Connection is lost during a session, you must close Agent Desktop, reestablish the VPN connection, and then restart Agent Desktop.

If Agent Desktop can log into all services except the Chat service, it must be restarted after the Chat service comes back online.

## Logging Out

---

When you start Agent Desktop, you use a software license. When you close Agent Desktop, that software license is released so it is available for another agent to use. For this reason, it is important to close Agent Desktop when you are done using it.

If you just log out, the software license remains in use and some features of Agent Desktop, such as Chat, are still available.

There are two methods of logging out and closing Agent Desktop.

### Method 1: Logging Out and Then Closing Agent Desktop (Recommended)

This method ensures that the software license you are using is released and is available for other agents to use.

#### *To log out using Method 1:*

1. Click Logout on the toolbar.
  - If your system is configured to require reason codes, before you are logged out the Reason Code dialog box appears. Choose the appropriate reason code and click OK.
  - If you are on a call when you click Logout, a dialog box appears asking you to confirm that you want to log out.
    - If you click Yes, you will be logged out of Agent Desktop but you will retain the call.
    - If you click No, you will remain logged in and Agent Desktop will remain open.
2. Click Close (the X in the upper right corner of the Agent Desktop window) to exit Agent Desktop.

### Method 2: Closing Agent Desktop Without First Logging Out

With this method there is a small chance that the logout will not properly release the software license. If this occurs, the software license you are using will not be released.

An agent can force the license to be released by using a forced login. See ["Logging In" on page 13](#) for more information on forced logins.

***To log out using Method 2:***

- Click Close (the X in the upper right corner of the Agent Desktop window).
  - If your system is configured to require reason codes, before you are logged out the Reason Code dialog box appears. Choose the appropriate reason code and click OK.
  - If you are on a call when you click Close, a dialog box appears asking you to confirm that you want to log out.
    - If you click Yes, you will be logged out of Agent Desktop but you will retain the call.
    - If you click No, you will remain logged in and Agent Desktop will remain open.

## The Agent Desktop Interface

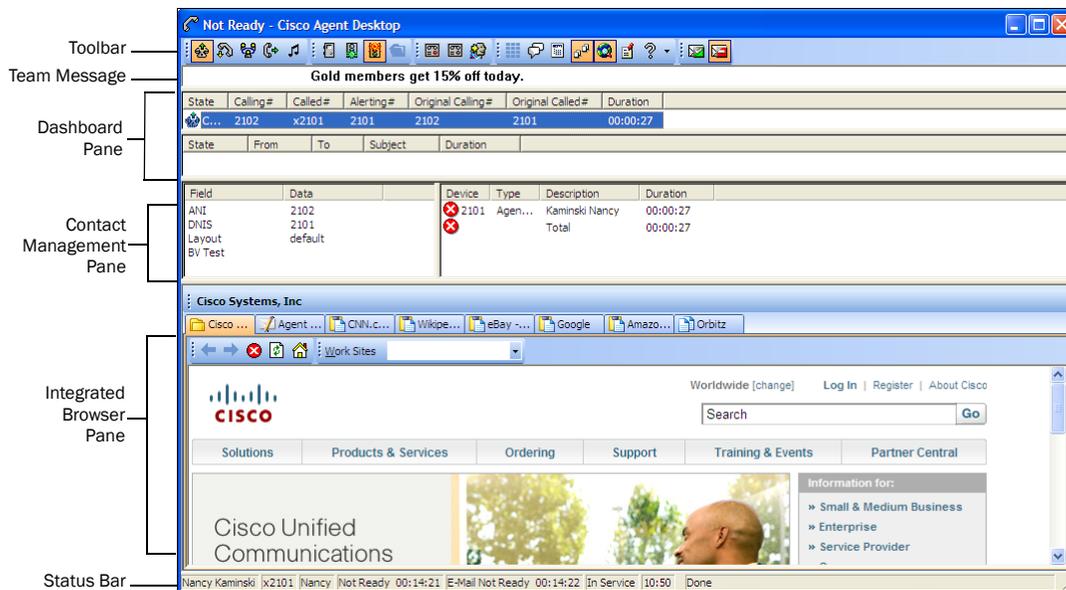

The Agent Desktop interface displays information about active calls and provides phone call handling functions. It also:

- Provides access to websites in its integrated browser
- Displays agent and call statistics in real time
- Allows you to record calls using task buttons (if configured by the administrator)
- Allows you to “chat” with other agents and supervisors using the Chat instant messaging feature

The interface has the following parts:

- Toolbars
- Team message pane
- Contact appearance pane
- Contact management pane
- Integrated browser tools

**Figure 4. Agent Desktop interface**

## Accessibility

Agent Desktop has a number of features that aid accessibility for low-vision and vision-impaired users:

- Follows Windows settings for screen resolution and color/contrast settings

**NOTE:** Enable high contrast before launching Agent Desktop to ensure that all tables match the high contrast settings.

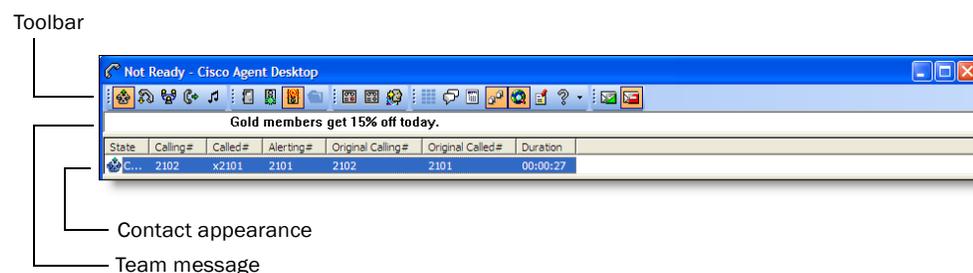

- Scrolling or non-scrolling team messages
- Screen reader-compatible tool tips for all controls
- Toolbar buttons available in small (16 × 16) and large (32 × 32) sizes
- Screen reader-compatible shortcut keys for navigating the application and toolbar
- Uses Windows settings for font sizes for all windows and popups
- Audible tones that sound when a nonagent-initiated dialog appears (for example, new chat windows and notices to the agent that a supervisor is barging in, intercepting, recording, or monitoring)
- Navigation through each pane, browser, and all the elements of the main window using the Tab key
- The Space bar can act as the Enter key for dialog boxes in focus (for example, in the Dial Pad window, you can press the Space bar to select the focused number and Enter to make the call)
- Support for Job Access With Speech 11 (JAWS) screen reader software

For information about configuring accessibility options, see ["Desktop Preferences" on page 30](#).

## Toolbar Buttons and Shortcut Keys

The dashboard toolbar contains buttons for call control and for functions not related to a specific customer contact, such as logging in and out, changing your agent state, initiating a chat session, viewing real time displays, and configuring the appearance of the Agent Desktop interface.

**Figure 5. Dashboard pane**

Call control and agent state buttons on the toolbar are disabled if they control a function that is unavailable in your current situation. For example, if you have placed a call on hold, all other call control buttons are disabled. When you take the call off hold, the other call control buttons are active again. To view the name of a button, move the cursor over the button icon.

**NOTE:** Your toolbar can be configured by your administrator and might use different buttons than those listed below.

You can control the size of the toolbar buttons. See ["Desktop Preferences" on page 30](#) for more information.

The toolbar buttons all have tooltips that describe the function associated with them. To view a button's tooltip, move your cursor over the button.

The optional Cisco Unified Outbound Dialer toolbar can be configured to appear in Agent Desktop by your administrator. Depending on the dialing mode of the calling campaign that your administrator sets up, the toolbar will contain some or all of the available nine buttons. For a complete description of the toolbar, see ["Outbound Dialer Toolbar" on page 47](#).

You can press Alt+T to select the main toolbar of Agent Desktop. After selecting the toolbar, press Tab, Shift+Tab, or the arrow keys to move through the buttons in the toolbar. Press Ctrl+Tab or Ctrl+Shift+Tab to navigate to other toolbars. Press Esc to exit the toolbar and Enter to select the currently focused item.

The following tables list the toolbar buttons and shortcut keys that you can use in Agent Desktop.

[Table 2](#) lists the toolbar buttons and shortcut keys for handling calls.

**Table 2. Call handling toolbar buttons and shortcut keys**

Button	Name	Shortcut	Description
	Answer/Drop	Ctrl+A	Answers or drops the selected call.
	Hold/Unhold	Ctrl+H	Puts a selected call on hold or takes it off hold.
	Conference	Ctrl+F	Initiates a conference call. The parties are put on hold when the conferencing call is made.
	Transfer	Ctrl+T	Initiates a transfer call. The parties are put on hold when the transferring call is made.

Table 2. Call handling toolbar buttons and shortcut keys – *Continued*

Button	Name	Shortcut	Description
	Touch Tones	Ctrl+D	Opens the Enter Touch Tones window.

Table 3 lists the toolbar buttons and shortcut keys for changing agent state.

Table 3. Agent state toolbar buttons and shortcut keys

Button	Name	Shortcut	Description
	Login	Ctrl+L	Logs you into the ACD (alternates with Logout).
	Logout	Ctrl+L	Logs you out of the ACD (alternates with Login).
	Ready	Ctrl+W	Changes your state to Ready, indicating that you are available to receive ACD calls.
	Not Ready	Ctrl+O	Changes your state to Not Ready, indicating that you are not available to receive ACD calls.
	Work	Ctrl+Y	Changes your state to Work, indicating that you are in wrap-up work after terminating a call and, when finished, will be available to receive routed calls.

Table 4 lists the toolbar buttons and shortcut keys for managing windows.

Table 4. Window management toolbar buttons and shortcut keys

Button	Name	Shortcut	Description
	Chat	Ctrl+J	Initiates a chat session with another member of your team, your supervisor, a member of a conference call, or a Cisco Unified Presence user.

Table 4. Window management toolbar buttons and shortcut keys – *Continued*

Button	Name	Shortcut	Description
	Task1-10	Alt+<button number>	(Enhanced/Premium only) Task buttons are configured by your administrator to perform various functions, such as running a macro, launching an application, or sending a predefined chat message to your supervisor. There can be up to ten task buttons on the toolbar, and each button can be assigned more than one action. The buttons can be customized, so yours might be different.
	Make Call	Ctrl+M	Displays the dial pad so you can dial an outgoing call.
	Reports	Ctrl+Q	Displays the Agent Real Time Displays window, where you can view your own call logs and statistics.
	Show/Hide Contact Management	Ctrl+G	Shows or hides the contact management pane.
	Show/Hide Integrated Browser	Alt+B	Shows or hides the integrated browser pane.
	Preferences	Alt+P	Displays the Preferences dialog box, where you can set the Agent Desktop window behavior and window options.
	Help/About	Alt+H	Opens a menu listing the Help and About options. Use the up and down arrow keys to select an option.
—	Help	F1	Opens the Help window.
—	Service Status	Ctrl+Shift+S	Opens the Service Status window.

[Table 5](#) lists the toolbar buttons and shortcut keys for e-mail state. The e-mail state buttons and shortcut keys are available only if the e-mail option is enabled.

**Table 5. E-mail state toolbar buttons and shortcut keys**

Button	Name	Shortcut	Description
	E-mail Ready	Ctrl+Shift+W	You are available to receive e-mails.
	E-mail Not Ready	Ctrl+Shift+O	You are not available to receive e-mails.

[Table 6](#) lists the shortcut keys for moving the cursor to various text elements in the Agent Desktop interface so a screen reader can read the text.

**Table 6. Main window screen reader shortcut keys**

Shortcut Keys	Description
Ctrl+E	Selects the first entry in the Enterprise Data pane. Press Enter to open the Edit Enterprise Data dialog box for the selected entry
Ctrl+S	Selects a contact in the Contact Appearance pane.
Ctrl+Shift+E	Selects a row in the Contact Management Call Activity pane.
Ctrl+Shift+M	Reads the team message.
JAWSKEY* + Page Down	Reads the status bar
JAWSKEY* +T	Reads the title bar
JAWSKEY*+Ctrl+n	Reads the column header along with its value, where n is the desired column number For example, the call contact appearance pane in Agent Desktop can be announced as “State: Connected, Calling Number: 1114, Called Number 1194.” For such an announcement, you must press JAWSKEY+Ctrl+1 to announce the State column header, JAWSKEY+Ctrl+2 to announce the Calling Number header, and JAWSKEY+Ctrl+3 to announce the Called Number header and their respective values.

\* By default, the JAWSKEY is the Insert key. For more information on using this tool, see the JAWS documentation.

[Table 7](#) lists the shortcut keys for the Agent Real Time Display window.

**Table 7. Agent Real Time Display window shortcut keys**

Shortcut Keys	Description
Alt+R	Selects the Real Time Displays drop-down list.
Alt+T	Opens the Dates drop-down list. Available only when the Agent Call Log Display is selected.
Alt+C	Selects the first cell in the grid.

[Table 8](#) lists the shortcut keys for the Dial Pad window.

**Table 8. Dial Pad window shortcut keys**

Shortcut Keys	Description
Alt+P	Selects the first entry in the Employee Phone Book.

[Table 25 on page 82](#) lists the toolbar buttons and shortcut keys for the integrated browser window.

## Team Message

The team message (TM) is a message sent by a supervisor to the team for a selected length of time. A TM can be scrolling or non-scrolling, depending on how you set your desktop preferences. See "[Desktop Preferences](#)" on [page 30](#) for more information.

When there is no message, the TM section is not visible. As soon as your supervisor sends a TM, the TM section of the dashboard opens and the message appears.

## Contact Appearance Pane

The contact appearance pane displays data about the agent's current call appearance and assigned e-mails. There can be more than one call/e-mail appearance in the contact appearance section. For example, you might have an e-mail saved as a draft, one call on hold, and one active call—all will be displayed.

The call contact appearance pane can display up to seven fields. Two fields, State and Duration, will always be present; the other five fields are configurable by your administrator. The available fields are listed in [Table 9](#).

Some fields might display <unavailable> or be blank if the call information is unknown or does not exist.

**Table 9. Call contact appearance fields**

Field	Description
State	The current state of the contact.
Calling#	The number of the phone that made the call.
Called#	The number of the phone that received the call.
Alerting#	The number of the ringing device.
Original Called#	The original number called.
Original Calling#	The initial originating number.
Duration	The length of the phone call.

Agent Desktop displays the same information about the call in the call contact appearance pane as the IP phone displays on its screen. Under certain transfer and conference scenarios, there can be some differences between the enterprise data and the contact appearance data because the data sources are different.

The e-mail contact appearance pane can display up to five fields. The available fields are listed in [Table 10](#).

**Table 10. E-mail contact appearance fields**

Field	Description
State	The current state of the e-mail contact.
From	The name/address of the e-mail sender.
To	The name/address of the e-mail recipient.
Subject	The e-mail subject line.
Duration	The length of time the e-mail is in process.

## Contact Management Pane

The contact management pane contains enterprise data on the left and call activity information on the right (Figure 6).

**Figure 6. Contact Management pane**

The screenshot shows a window divided into two sections. The left section, labeled 'Enterprise data', contains a table with the following data:

Field	Data
ANI	2091
DNIS	2101
Layout	default

The right section, labeled 'Call activity', contains a table with the following data:

Device	Type	Description	Duration
2101	Agent	agent2101	00:02:21
		Total	00:02:21

You can Show/Hide Contact Management on the dashboard toolbar to show or hide this pane of the Agent Desktop interface.

### Enterprise Data

The enterprise data section displays data associated with the selected call. The exact data that is displayed is configured by your administrator.

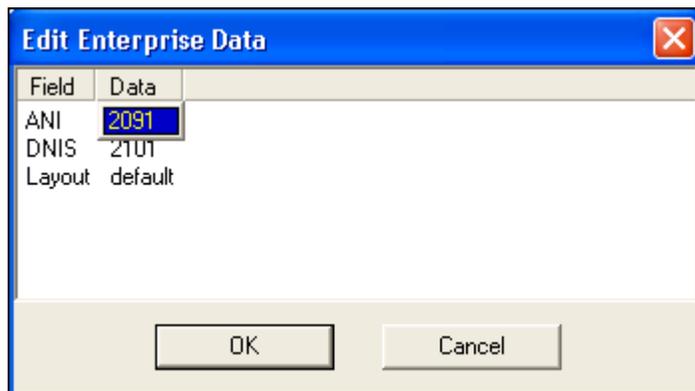

If you are set up by the administrator to be able to edit data fields, you can modify any of the data fields in the enterprise data window while the call is active. The modified data will follow the call. For example, if you transfer it to another agent, that agent will see the modified data (except blank or empty enterprise data), not the original data.

Once the call is dropped, the enterprise data can no longer be modified.

**To modify a data field:**

1. Double-click the field to modify. The Edit Enterprise Data window appears (Figure 7).

Figure 7. Edit Enterprise Data window with ANI field selected for editing

2. Modify the data.
3. Click OK.

**Call Activity**

The call activity section listed in [Table 11](#) displays the call activity for the selected call.

Table 11. Call Activity fields

Field	Description
Device	List of devices the call passed through.
Type	Type of device the call passed through.
Description	Description of the device the call passed through.
Total	Sum of all the durations listed.

**NOTE:** In some cases, a call can be on multiple devices simultaneously. For example, if a call is placed in multiple queues or is conferenced to multiple extensions, the call activity section displays the sum of duration of the call on the device and the duration for which the call was in the queue. The total duration is the sum of all durations, some of which might overlap.

**NOTE:** If a call is RNA (ring no answer) at one agent and then the call is rerouted to and answered by another agent, the total time shown in

the second agent's Call Activity pane is incorrect. However, in any reports seen by the agent or supervisor, the total call time is correct.

### Thresholds

A threshold is the acceptable amount of time a call can remain at a particular device or contact center. Your system administrator can assign caution and warning threshold values to each device type, as well as a total threshold value for a call.

If a call remains at a device longer than the defined caution and warning thresholds, a caution or warning icon is displayed in the call activity pane next to the device. These icons are:

Caution

Warning

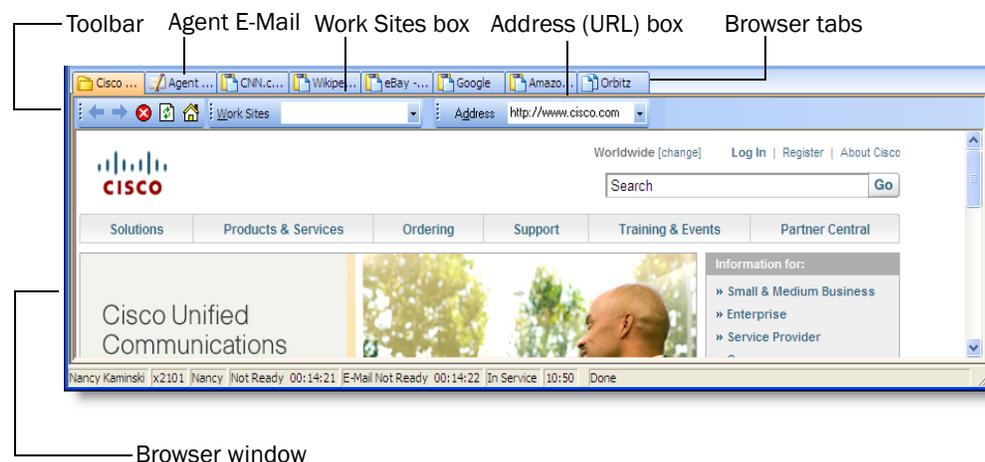

### Integrated Browser Pane (Premium Edition Only)

The integrated browser pane ([Figure 8](#)) displays internet or intranet web pages to help you assist customers. The administrator can configure a specific website to display as your home page, and add a list of work sites (similar to web browser “favorites”) that allow you to navigate to frequently-used websites quickly.

The integrated browser pane includes the:

- Integrated browser toolbar
- Up to 10 browser tabs
- Work Sites box
- Address box (must be configured by the administrator to appear)
- Browser window
- Agent E-Mail tab (The e-mail tab is available only if e-mail option is enabled)
- Unified CCX Web Chat (must be configured by the administrator to appear)

**Figure 8. Integrated Browser pane**

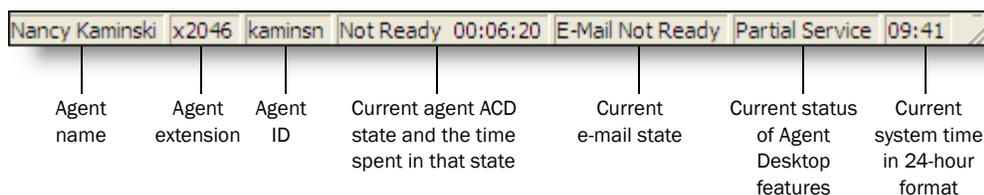

## Status Bar

The status bar displays current information about Agent Desktop (Figure 9).

In the event of a service failure, the Service Status section changes from “In Service” to “Partial Service” or “No Service”. To learn what features are affected by the service outage, double-click the Service Status section to view a popup window that displays which features are active or inactive.

For more information on the Service Status popup window and service autorecovery, see ["Service Status" on page 86](#).

**Figure 9. Status bar**

**NOTE:** E-mail state is shown only if the Agent E-Mail feature is enabled.

## Desktop Preferences

If your administrator configures your toolbar so that you have access to the Preferences button, you can change your Agent Desktop window behavior and accessibility options.

**To set your desktop preferences:**

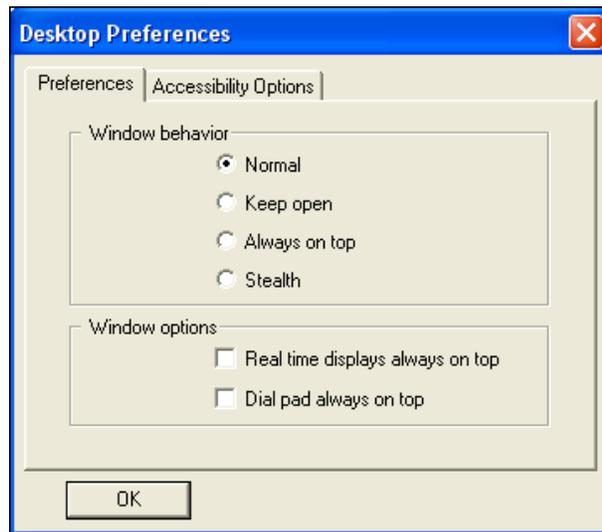

1. Click Preferences on the toolbar. The Desktop Preferences dialog box appears.
2. Select the preferences you desire on each tab, and then click OK.

**Setting the Window Behavior and Window Options Mode**

By default, Agent Desktop is minimized when it is idle and opens when calls are active (Normal mode). If your administrator has enabled you to choose your window behavior mode, you can change the window behavior and window options modes on the Preferences tab in the Desktop Preferences dialog box (Figure 10).

If your administrator has not enabled you to choose your window behavior mode, this tab is hidden and the window behavior is set to the mode your administrator selects.

**Figure 10. Preferences tab**

**Table 12. Window behavior and window options modes**

Mode	Description
Normal	Default. The window appears when calls are present and minimizes when idle.
Keep open	The window remains open when idle.

Table 12. Window behavior and window options modes — *Continued*

Mode	Description
Always on top	The window remains open when idle and on top of all other open applications.  <b>NOTE:</b> When you select the Always on top window behavior, you cannot select the Real time displays and dial pad always on top options.
Stealth	The window appears as an icon in the system tray (lower right-hand corner of your desktop, next to the system clock) and doesn't appear unless double-clicked or if you receive a team message or an e-mail.
Real time displays always on top*	The Agent Real Time Displays window remains open when idle and on top of all other open applications.
Dial pad always on top*	The Dial Pad window remains open when idle and on top of all other open applications.

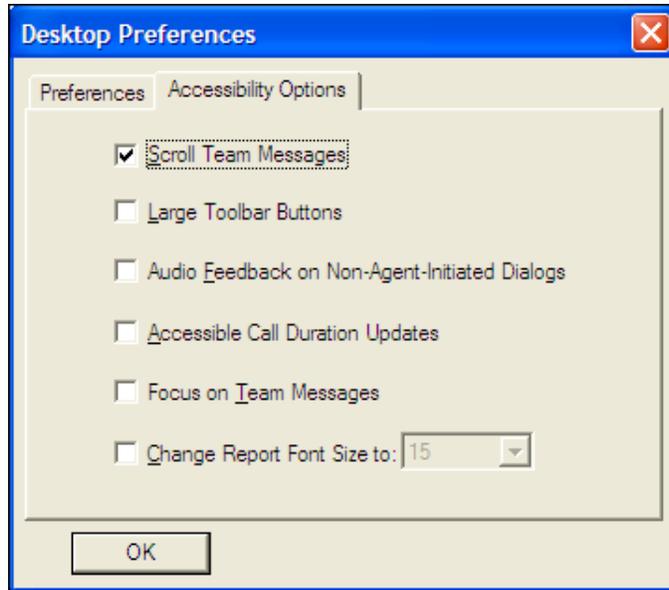

\* If both real time displays and dial pad options are selected to be always on top, the most recent of the two windows you open will be on top.

### Setting the Accessibility Options

**Scroll Team Messages.** If you use a screen reader with Agent Desktop, scrolling team messages (the default mode) can be difficult to read. You can opt to turn off the scrolling feature and have stationary team messages by clearing the Scroll Team

Messages check box on the Accessibility Options tab (Figure 11).

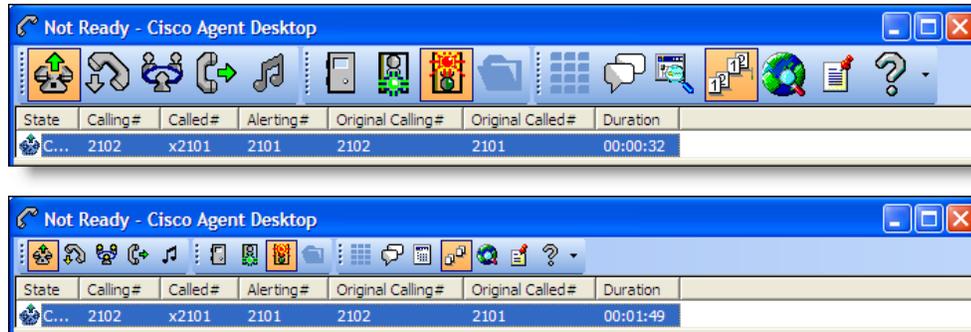

Figure 11. Accessibility Options tab

**NOTE:** Your selected team message behavior will persist from session to session, and does not need to be reset each time you start Agent Desktop.

**Icon Size.** You can change the size of the buttons on the toolbar from the default 16 × 16 pixels to 32 × 32 pixels (Figure 12 for a comparison) by selecting the Large Toolbar Buttons check box. Note that if all of the buttons do not fit on one row, they automatically wrap to another row.

Figure 12. Comparison of large and small toolbar buttons

**Audio Feedback.** Select the Audio Feedback on Non-Agent-Initiated Dialogs check box to enable the sounding of a tone when a dialog initiated by someone other than you appears on your desktop. Examples of such dialogs are new chat windows and notifications that a supervisor is barging in, intercepting, recording, or monitoring your call.

**Call Duration.** Select the Accessible Call Duration Updates check box to prevent screen readers, such as JAWS, from reading the Duration field in the call contact appearance pane. This ensures that screen readers do not continually read off the duration as it increments.

**Team Messages.** Select the Focus on Team Messages check box to enable Agent Desktop to switch focus to the team message pane whenever a team message appears. This allows visually-impaired agents' screen readers to read the incoming team message.

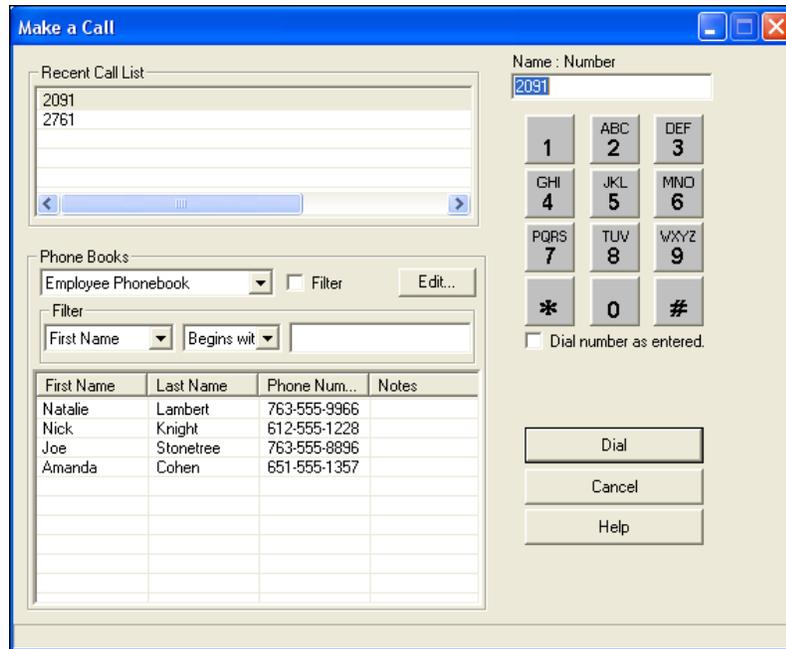

**Report Font Size.** Select the Change Report Font Size To check box and enter a point size in the field to make the fonts bigger or smaller in the real time displays. You can choose a font size between 8 points and 72 points. The default point size is 15 points.

**NOTE:** If you change your font size using the display settings in Windows Control Panel, you must restart Agent Desktop for those changes to take effect.

## The Dial Pad Window

The Dial Pad window enables you to make calls either by entering a phone number or selecting an existing phone number from the recent call list or from a stored phone book (Figure 13).

Figure 13. Dial Pad

**NOTE:** The Dial Pad window is the general name for this window. Depending on what you are doing, the window title can be Make a Call, Transfer a Call, or Conference a Call.

When you open the Dial Pad window, it stays open and you can switch to other windows. This allows you to use other Agent Desktop features, such as the integrated browser or real time displays, until you need to make a call.

**NOTE:** When the Dial Pad window is open, all call control buttons in the main Agent Desktop window are disabled.

**NOTE:** When you want to transfer a call or make a conference call, and the Make a Call dial pad is open, you must close the dial pad first and then click the Transfer or Conference button on the task bar to open the appropriate type of Dial Pad window.

## Recent Call List

When you dial a phone number, it is automatically entered into the recent call list. This list stores up to 100 entries. As the number of entries exceeds 100, the number at the bottom of the list drops off.

Agent Desktop checks to prevent duplicate phone numbers from appearing in this list. However, if the same phone number is entered twice using different formats, for instance, 555-1212 and 5551212, both numbers will appear on the list.

## Phone Books

Phone books are phone number lists set up by you (your employee phone book) and the system administrator (public phone books). Click the drop-down arrow to choose the phone book you want to use.

**NOTE:** The system administrator can configure Agent Desktop so that one or both types of phone books are not available.

### Employee Phone Book

Your employee phone book is the only one you can edit. All others are controlled by the system administrator.

**To edit your employee phone book:**

1. In the Dial Pad window, choose Employee Phonebook from the Phone Books drop-down list, and then click Edit. The Phone Book Editor dialog box appears (Figure 14).

**Figure 14. Phone Book Editor dialog box**

First Name	Last Name	Phone Num...	Notes
Natalie	Lambert	763-555-9966	
Nick	Knight	612-555-1228	
Joe	Stonetree	763-555-8896	
Amanda	Cohen	651-555-1357	

2. Make one of the following edits:

- To add a new entry to the list, complete the First Name, Last Name, and Phone Number fields and click Add. (Only the Phone Number field is required.)

The Phone Number field allows only these characters:

0–9, aA–zZ, '()+;/:.=? and a space

If you enter any other character you are advised you used a disallowed character. The disallowed character will be replaced by a question mark so you can change it to an allowed character.

Depending on how the system administrator has configured the dial plan, Agent Desktop might convert letters to their numeric equivalent on the dialpad. For example, A,B, and C are converted to the number 2. Contact your administrator for details.

- To edit an existing entry, select it to display it in the edit fields, click Edit, and then make your changes. You cannot remove the phone number from the entry. If you want to edit more than one entry, you can edit the first entry, and then double-click the next entry to save the changes you made to the first entry and move on to the next entry.
  - To delete an entry from the list, select it, and then click Delete.
3. When all your edits are completed, click OK.

### Using the Phone Book Filter

You can use the phone book filter to find phone book entries more easily. The filter enables you to limit the entries listed in the phone book window. You can use any of the four phone book fields to filter the entries.

#### *To use the phone book filter:*

1. In the Dial Pad window, select the Filter check box ([Figure 13 on page 35](#)).
2. From the Filter drop-down lists, select how you want to filter the entries. In the first two drop-down lists, select your filter criteria: the field to filter by, and the filter method. In the third field, enter the filter string.

For example, if you want to see all phone book entries for persons whose last name begins with “J”, select “Last Name” from the first drop-down list, “Begins with” from the second drop-down list, and enter J in the third field.

The filter operates as soon as you enter your filter string in the third field.

3. To stop filtering the phone book, clear the Filter check box or delete the filter string in the third field. The entire phone book will once again be visible.

### Name: Number Field

Use this field to enter the phone number you want to dial. Entering a name is optional, but if one is entered, it must be followed by a colon and a space to separate it from the phone number:

John Doe: 612-555-1212

You can enter phone numbers with or without spaces, parentheses, and dashes. Agent Desktop ignores any non-alphanumeric characters.

You can also select a phone number from the recent call list or a phone book, which is then displayed in the Name: Number field.

Depending on how the system administrator has configured the dial plan, Agent Desktop can automatically add the local access and long distance access codes to numbers you enter. Contact your system administrator for details.

**Dial Number as Entered Check Box**

Select the Dial Number as Entered check box to circumvent any automatic formatting (local access and long distance access codes) and dial the number exactly as you enter it in the Name: Number field.

## Handling Calls

---

When logged in as an agent, you can use Agent Desktop, a hard IP phone, or IP Communicator to handle phone calls.

**NOTE:** See your IP phone documentation for explanations of your phone's functions and features.

The procedures in this section assume you are using the Agent Desktop interface to handle calls.

### Single-line vs. Multi-line Configurations

If your system is configured for single-line use, then Agent Desktop controls and displays only ACD calls. You cannot answer non-ACD calls with Agent Desktop; these calls do not appear in the contact appearance pane and must be answered using your hard IP phone or IP Communicator.

If your system is configured for multi-line use, then Agent Desktop controls and displays calls received on both the ACD and non-ACD extensions. To control any call on the Agent Desktop contact appearance pane, select the call in the pane and then perform the desired activity.

For both single-line and multi-line configurations, you must be logged in and be in the Ready state to receive an ACD call. If your system is configured for multi-line use, you can be in any state to receive a non-ACD call.

You can transfer a call from the ACD extension to the non-ACD extension through the phone or the call control buttons in Agent Desktop. However, you cannot transfer a call from the non-ACD extension to the ACD extension using Agent Desktop; the transfer must be initiated through the phone in order to succeed.

If you transfer a call from the ACD extension to the non-ACD extension, you must answer the call on the non-ACD extension using your phone and not the call control buttons in Agent Desktop.

### Entering Phone Numbers

When dialing a phone number, you can use three different methods to enter the phone number into the dial pad's Name: Number field:

- Type the phone number on your PC keyboard
- Select the numbers from the Dial Pad window
- Select an existing number from the Recent Call List or a phone book

You can enter a number only, or you can enter a name and number. Use the format name: number. You must include the colon and a space to separate the name from the number.

When you enter the number, it doesn't matter whether you include dashes, parentheses, or spaces; only the numbers are read. Depending on how Agent Desktop is configured, you might not have to include the local access or long-distance access codes. Consult your system administrator for information.

In the following sections, whenever you are instructed to enter a number in the Name: Number field, you can do so using any one of these methods.

## Answering a Call

### *To answer a call:*

- Click Answer.

### *To terminate a call:*

- Click Drop.

## Making a Call

You can make a call from any agent state except Logoff, as long as you are not on a call.

Use the Make Call button to make a call.

### *To make a call:*

1. Click Make Call.  
The Make a Call dialog box appears.
2. Enter a number in the Name: Number field.
3. Click Dial.

## Entering Touch Tones During a Call

If you need to send touch tones during a call (for instance, if you are prompted to enter an account number) you can do so using the Touch Tones button. This button activates a number pad on which you enter the required numbers.

**To enter touch tones:**

1. Click Touch Tone when you are prompted to enter numbers during a call. The number pad appears (Figure 15).

**Figure 15. Touch tone number pad**

2. Enter the required numbers and/or symbols. When finished, click Done. The number pad closes and you are returned to the Agent Desktop interface.

**Entering Touch Tones During a Consultative Call**

You can send touch tones during a consultative call (transferring or conferencing).

**To enter touch tones during a consultative call:**

1. During a call, click Transfer or Conference. The Transfer a Call or Conference a Call dialog boxes appear.

2. Make the consultative call.

The person you call must answer in order for the Touch Tones check box to become enabled.

3. Select the Touch Tones check box, and then enter the required number and/or symbols on the number pad.

The number pad generates DTMF tones.

4. Clear the Touch Tones check box. The touch tones option is disabled.

**NOTE:** The Touch Tones check box is automatically disabled when you close the Transferring Call window or Conferencing window.

## Transferring a Call

There are three types of transfers. These types are as follows.

- **Supervised transfer.** This type of transfer is available to every Agent Desktop user, and is triggered by clicking the Transfer button on the toolbar. In this type of transfer, you specify the number to which you want to transfer the active call. You can either hang up before the third party answers, or stay on the line and speak to the third party before actually transferring the call.
- **Blind transfer.** This type of transfer is available only if your administrator has configured a task button with the blind transfer action. In this type of transfer, the active call is transferred directly to a predefined phone number. Once you click the blind transfer task button, the call is transferred to that number and you are no longer connected to the call.
- **Single-step transfer.** This type of transfer is available only if your administrator has configured a task button with the single-step transfer action. In this type of transfer, you specify the number to which you want to transfer the call. Once you do that, the call is transferred directly to the third party and you are disconnected from the call.

**NOTE:** If failover occurs while transferring a call, the Dial Pad window closes. You must end the call to the transfer recipient and initiate the call again in order to transfer the call on hold.

### *To transfer a call:*

1. With a call active, click Transfer. The Transfer a Call window appears.
2. Enter the phone number to which you are transferring the call in the Number field.
3. Click Dial. The party is put on hold, and when the phone rings, the Dial button changes to the Transfer button.
4. Take one of the following actions:
  - Click Transfer when the phone starts ringing. The call is transferred and you are disconnected from the call.
  - Wait for the phone to be answered, then announce the transfer. When you click Transfer, the call is transferred and you are disconnected from the call.

If you opt to announce the transfer, you can click Alternate to switch between the two calls. The party to whom you are not talking is placed on hold.

### *To transfer a call using the blind transfer action:*

- With a call active, click the task button assigned to the blind transfer action. The call is transferred to the predefined phone number and you are disconnected from the call.

***To transfer a call using the single-step transfer action:***

1. With a call active, click the task button assigned to the single-step transfer action. The Transfer a Call window appears.
2. Enter the phone number to which you are transferring the call in the Number field.
3. Click Transfer. The party is put on hold, and the Transfer a Call window closes, the call is transferred to the phone number, and you are disconnected from the call.

## **Making a Conference Call**

You can add other parties to an active call to make a conference call. There are three types of conference call. These types are as follows.

There are three types of conference calls:

- **Supervised conference.** This type of conference is available to every Agent Desktop user, and is triggered by clicking the Conference button on the toolbar. In this type of conference, you specify the number you want to conference in to the active call. You can either add the third party to the call without first speaking to him or her, or speak to the third party before actually completing the conference call.
- **Blind conference.** This type of conference is available only if your administrator has configured a task button with the blind conference action. In this type of conference, a predefined phone number is conferenced directly in to the active call.
- **Single-step conference.** This type of conference is available only if your administrator has configured a task button with the single-step conference action. In this type of conference, you specify the number to be conferenced directly in to the active call.

**NOTE:** If you use a blind conference to add someone to your call, the call might be tagged as a conference call.

**NOTE:** If you log out while on a conference call and then log in again, enterprise data field names will not be displayed in the Enterprise Data pane. The field names will be displayed for the next call you handle.

**NOTE:** If failover occurs while conferencing a call, the Dial Pad window closes. You must end the call to the conference recipient and initiate the call again in order to complete the conference.

**To make a conference call:**

1. With a call active, click Conference. The Conference a Call window appears.
2. Enter the phone number of the person you want to add to the call in the Name: Number field.
3. Click Dial. The party is put on hold, and when the phone rings, the Dial button changes to the Add to Conf button.
4. Take one of the following actions:
  - Click Add to Conf when the phone starts ringing. The third party is added to the conference.
  - Wait for the phone to be answered, then announce the conference. Click Add to Conf to add the person to the conference.

If you opt to announce the conference, you can click Alternate to switch between the two calls. The party to whom you are not talking is placed on hold.

5. To add one or more people to the conference call, repeat Steps 1 through 4 for each person.

**To conference a call using the blind conference action:**

- With a call active, click the task button assigned to the blind conference action. The predefined phone number is conferenced directly into your call.

**To conference a call using the single-step conference action:**

1. With a call active, click the task button assigned to the single-step conference action. The Conference a Call window appears.
2. Enter the phone number you want to conference into the phone call in the Number field and click Add to Conf. The phone number is conferenced directly into your call.

**NOTE:** The total number of conference call participants is configured in the Unified Communications Manager. Ask your supervisor for the total number configured for your contact center.

## Alternating Between Calls

The Alternate function allows you to switch between two parties before transferring a call or adding a call to a conference.

### Alternating Before Transferring a Call

The Alternate function allows you to talk to Party A and Party B separately before completing the transfer of Party A to Party B.

***To alternate between calls before transferring:***

1. While on a call, click Transfer. The Transfer a Call window appears.
2. Enter the phone number to which you are transferring the call in the Name: Number field, and then click Dial. When the phone rings, the Dial button changes to the Transfer button. Wait for Party B to answer the phone.
3. Click Alternate to speak to Party A, and then click Alternate again to speak to Party B. You can continue clicking Alternate to switch between Party A and Party B. When you speak to one party, the other party is put on hold.
4. Click Transfer. Party A is transferred to Party B and you are disconnected from the call.

**Alternating Before Adding a Call to a Conference**

The Alternate function allows you to talk to a conference call and Party B separately before adding Party B to the conference call.

***To alternate between a conference call and another party:***

1. While on a call, click Conference. The Conference a Call window appears.
2. Enter the phone number of the person you want to add to the conference call in the Name: Number field, and then click Dial. When the phone rings, the Dial button changes to the Add to Conf. button. Wait for Party B to answer the phone.
3. Click Alternate to speak to the conference, and then click Alternate again to speak to Party B. You can continue clicking Alternate to switch between the conference call and Party B. When you speak to one party, the other party is on hold.
4. Click Add to Conf. Party B is added to the conference call.

## Cisco Unified Outbound Dialer

If configured by your system administrator, your copy of Agent Desktop might include the Cisco Unified Outbound Dialer toolbar.

Unified Outbound Dialer uses the Direct Preview Dialing Mode. In this mode, you are put into the Reserved state and then presented with a customer call along with customer information in the Enterprise Data window. Based on this information, you can decide to accept, skip, or reject the call. You can also categorize the phone call presented as Voice, Answering Machine, Invalid, Fax/Modem, Busy, or Do Not Call.

The personal callback feature enables you to reschedule a customer call at the customer's request for a more convenient time.

### Outbound Dialer Toolbar

Table 13 describes the Outbound Dialer toolbar buttons and shortcut keys.

**Table 13. Outbound Dialer shortcut keys and toolbar buttons**

Button	Action	Shortcut	Description
	Accept	Alt+Shift+A	The system dials the customer and connects the call to the agent.
	Reject	Alt+Shift+R	The system rejects the current call and releases the agent from the outbound calling reservation. At this point, the system can deliver to the agent another outbound call or a new inbound call.
	Reject Close	Alt+Shift+U	The system rejects the current call and closes the record so the customer will not be called again.
	Skip	Alt+Shift+S	The system skips the current call and presents the agent with another customer call.
	Skip Close	Alt+Shift+T	The system skips the current call and closes the record so the customer will not be called again.

Table 13. Outbound Dialer shortcut keys and toolbar buttons — *Continued*

Button	Action	Shortcut	Description
	Skip-Next	Alt+Shift+K	<p>The system skips the call and displays a menu of these options:</p> <ul style="list-style-type: none"> <li>• Wrong Number (Alt+Shift+W). The agent is informed that the number called is a wrong number. After the call terminates, the system calls other customer phone numbers.</li> <li>• Not Home (Alt+Shift+N). The agent is informed that the customer is not home. After the call terminates, the system calls other customer phone numbers.</li> </ul>
	Callback	Alt+Shift+C	<p>Displays the Callback Properties dialog box, which the agent uses to set a time and date to call back the customer. This action is enabled only if the agent is in the talking or wrap-up agent state. The agent also uses this dialog box to cancel a previously-scheduled callback of the current customer. This action works only if the agent is in a talking or wrap-up state during a Unified CCX-generated call.</p>
	Reclassify	Alt+Shift+Q	<p>Displays a menu that enables the agent to reclassify a customer phone number as follows:</p> <ul style="list-style-type: none"> <li>• Voice (Alt+Shift+V)</li> <li>• Answering machine (Alt+Shift+M)</li> <li>• Fax/modem (Alt+Shift+F)</li> <li>• Invalid number (Alt+Shift+I)</li> <li>• Busy (Alt+Shift+B)</li> <li>• Do not call (Alt+Shift+X)</li> </ul>
	Cancel Reservation	Alt+Shift+D	<p>The system releases the agent from the calling campaign and places the agent in the Not Ready state. To resume participating in the calling campaign, the agent must change the agent state to Ready.</p>

Information about Outbound Dialer calls is displayed in the Enterprise Data pane (Figure 16). Unified Outbound Dialer data field names are prefixed with “BA” (Blended Agent).

**Figure 16. Enterprise Data pane with Outbound Dialer data displayed**

Field	Data
BABuddyName	Ted
BACampaign	Outbound
BADialedListID	37
BAResponse	Accept
BAStatus	CO
BATimeZone	+00330
BACustomerNumber	4003
ANI	7005
DNIS	4003
BAAccountNumber	1001

## Reclassifying a Contact

A contact can be classified as either Voice or one of the other options (Answering Machine, Fax/Modem, Invalid, Busy, Do Not Call).

The first time you click Reclassify, the Voice option on the drop-down menu is disabled, because the contact is classified as Voice by default. All other options are enabled.

The next time you Reclassify, the Voice option is now enabled, and all other options are disabled.

You can reclassify a contact as many times as needed. The reclassification options menu will alternate between showing the Voice option enabled and the other options disabled, and the Voice option disabled and the other options enabled. If you need to reclassify a contact from one non-voice option to another non-voice option, you must first reclassify it as Voice in order to select the correct non-voice option.

For example, if you reclassify a Voice contact as Answering Machine, and then want to reclassify it again as Invalid, you must first reclassify it as Voice, and only then can you reclassify it as Invalid.

## Customer Callback

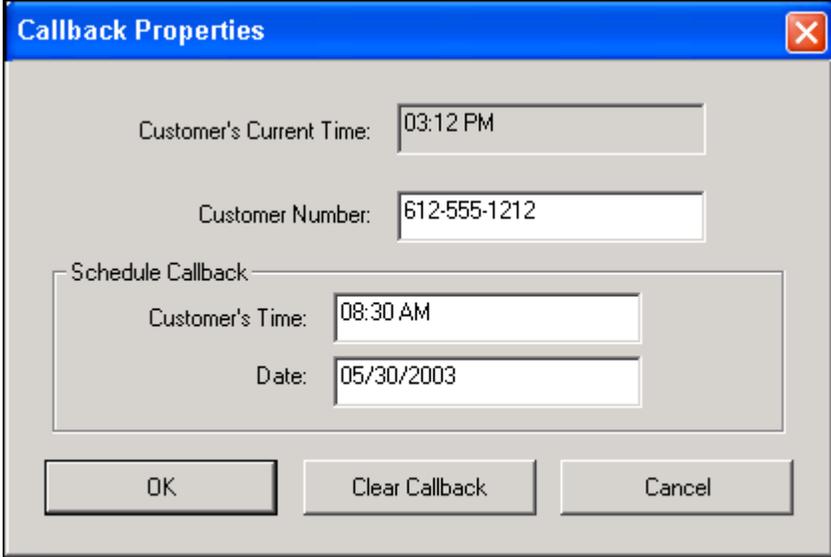

You can schedule a customer callback for a time more convenient to the customer.

### *To schedule a customer callback:*

1. While in Talking or Wrap-up state, click Callback.

The Callback Properties dialog box appears, displaying data about the current customer call (Figure 17).

Figure 17. Callback Properties dialog box

The screenshot shows a Windows-style dialog box titled "Callback Properties". It features a blue title bar with a close button (X) on the right. The main area is light gray and contains three text input fields. The first field is labeled "Customer's Current Time:" and contains the text "03:12 PM". The second field is labeled "Customer Number:" and contains "612-555-1212". Below these is a section titled "Schedule Callback" which contains two more text input fields: "Customer's Time:" with "08:30 AM" and "Date:" with "05/30/2003". At the bottom of the dialog are three buttons: "OK", "Clear Callback", and "Cancel".

2. In the Schedule Callback section, enter a time (HH:MM) and date (MM/DD/YYYY) to call back the customer.

Be sure that the time you enter in the Customer's Time field is the time in the customer's location, not the time in your location. You can enter the time in 12- or 24-hour format. If using the 12-hour format, you must enter AM or PM as well.

You can also change the customer number if the customer wants to be contacted at a different phone number.

3. Click OK.

The call is now scheduled for callback at the time and date you set.

**NOTE:** Some slight discrepancies might occur in the customer callback time if the clock on the agent's PC is not synchronized with the clock on the Unified CCX server.

You can cancel a scheduled customer callback as long as you are still on the customer call (in Talking state) or in Wrap-up state after that call.

**To cancel a scheduled customer callback:**

1. While in Talking or Wrap-up state, click Callback.

The Callback Properties dialog box appears, displaying data about the current customer call.

2. Click Clear Callback.

The scheduled callback call is now cancelled.

## Supervisor Intervention

---

Your supervisor is able to intervene in calls you receive. He or she can:

- “Barge In” on a call—join your call with a customer in a forced conference
- “Intercept” a call—transfer a customer call to him or herself in a forced transfer
- Monitor your calls
- Record your calls

You might be notified when your supervisor monitors or records your calls, depending on how the system is configured.

If notification is turned on, you will see a popup message telling you that your supervisor is intervening in one of the ways mentioned above. You will also be notified when the supervisor stops intervening in your call.

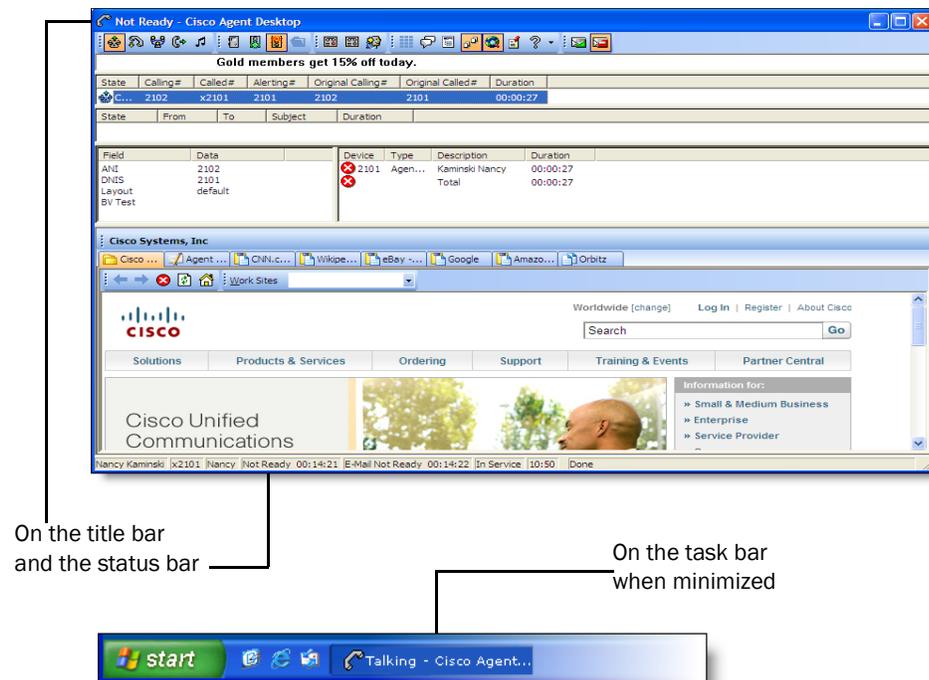

## Agent States

Agent Desktop allows you to change your agent state through the use of the agent state buttons on the toolbar. Only the agent states that are valid choices from your current agent state will be available at any given time.

Your current ACD agent state is displayed in the title bar (the top of the Agent Desktop window) and the status bar (the bottom of the Agent Desktop window). When Agent Desktop is minimized, your current agent state is readily visible on the button on the task bar.

**NOTE:** If you are using Windows 7 and you have set the Taskbar and Start Menu Properties Taskbar buttons setting to Always combine, hide labels, then agent state will not be visible on the task bar.

Figure 18. Your current agent state is displayed in several places

You can change your agent state while on a call (in the Talking state). Your state will change to the state you clicked after you hang up the call. An exception to this is when you click Logout while on a call, your agent state changes immediately from the Talking state to the Logout state. You will be logged out of Agent Desktop but you will retain the call.

**NOTE:** Your agent state is changed to Not Ready automatically if you do not answer your phone. You will not receive any ACD calls until you set your state back to Ready.

The agent state buttons indicate the state you clicked, not your current state. For instance, if you click the Work state button while on a call, the Work button appears to be pressed. Your current state is displayed on the status bar.

Available agent states are listed in [Table 14](#). Available e-mail states are listed in [Table 16 on page 62](#).

**Table 14.** Agent states

State	Description
Logout	You are logged out of the ACD.
Not Ready	You are not available to receive routed calls.
Ready	You are available to receive routed calls.
Reserved	You are temporarily set aside to receive a specific call. Your state changes to the Talking state when you answer the call. If you fail to answer the call within a time limit specified by the system administrator, the ACD places you in a Not Ready state. The Reserved state is automatically set for you by the ACD and does not have a corresponding button. You can be in this state without the phone ringing (you are waiting for it to ring).
Talking	You are on an ACD call with a customer or another agent. This state is automatically set for you by the ACD and does not have a corresponding button.
Work	You are completing work from a previous ACD call, and are unavailable to receive routed calls.

## Using Chat

Chat enables you to send instant messages to agents and supervisors on your teams. In addition, if your configuration includes Cisco Unified Presence, you can send instant messages to non-agents (called subject matter experts, or SMEs) who are using the Unified Presence Client.

**NOTE:** If you don't have the Chat button on your toolbar, then the administrator has configured Agent Desktop so that you cannot initiate a chat session. However, you are still able to receive incoming chat sessions and respond to them.

**NOTE:** If you log out during a chat, your copy of the chat log is lost, the current Chat window closes, and a new Chat window opens so you can continue communicating. The entire chat log is still present in the other party's Chat window.

Figure 19 displays the Contact Selection window.

Figure 19. Contact Selection window

This Contact Selection window displays four contact lists, or drawers: Agents, Supervisors, TAC, and Engineering. The Teammates drawer is default and always available. The TAC and Engineering drawers are examples of customizable drawers, which are available only when you are logged into Unified Presence. Note that the Engineering drawer is closed (the members are not visible).

Your contacts are organized in groupings called drawers. Some drawers, such as the Teammates, Supervisors, and Conference drawers are default drawers. Any other drawers that appear are customized by your administrator and appear only if you are logged into Unified Presence.

- The Teammates drawer lists all the agents on your team. The agents' agent state is indicated both by an icon to the left of the agent name and by text to the right of the agent name. The agent state is updated whenever an agent's state changes. Agents do not have to be currently logged into Agent Desktop to be listed here, but they must have Agent Desktop open and they must have logged in at least once.
- The Supervisors drawer lists all supervisors on your team. It appears only if a supervisor is logged in. Their status is always listed as Available. Supervisors must be logged in to be listed here.
- The Conference drawer appears when you are on a conference call with other agents. SMEs, if they are on the conference call, are not listed here.
- The Personal Contacts drawer appears if you have this drawer set up in Cisco Unified Personal Communicator. The contacts in this drawer are administered in Unified Personal Communicator.
- Other drawers list the SMEs associated with the work flow groups to which you belong. The SMEs' Unified Presence status is indicated both by an icon to the left of the SME name and by text to the right of the SME name. The Unified Presence status is updated whenever an SME status changes.

**NOTE:** When you log into Unified Presence, your status is shown as Available to SMEs unless the administrator has configured the system so that agents appear offline.

**NOTE:** You cannot chat with Cisco Agent Desktop—Browser Edition (CAD-BE) agents or IP Phone agents.

The Contact Selection window also provides menu access to the following call handling functions:

- Making a call
- Transferring a call
- Initiating a conference call

Some Chat features include:

- A chat session is between you and one other party.
- You can participate in multiple concurrent chat sessions.
- The title bar of the Chat window displays the name of the person with whom you are chatting.
- If you flag a chat message as high priority, the Chat window will pop on the other agent's or supervisor's screen so the message will be noticed immediately. This option does not apply to messages sent to SMEs.

- If the priority of a chat message is normal (the default), the Chat window will remain in its current state (open or minimized) and the corresponding icon will flash on your Windows task bar.
- The chat log is in chronological order, with the oldest message at the top of the Chat window. When you close the chat window, the chat log is deleted.
- You can send and receive chat messages even if you are logged out of the ACD, as long as Agent Desktop remains open.

Table 15 lists the shortcut keys for the Chat window.

Table 15. Chat shortcut keys

Shortcut Keys	Description
Alt+L	Starts a chat session with the person highlighted in the Chat Selection window. If you are already chatting with the highlighted person, Alt+L will bring that chat window to the foreground.
Alt+C	Opens the Dialpad so you can call the person highlighted in the Chat Selection window. The Name:Number field is auto-populated with the selected person's extension.
Ctrl+Shift+H	Selects the chat log pane.
Ctrl+A	Selects all the content in the selected field.
Ctrl+C	Copies the selected content to the clipboard.
Ctrl+V	Pastes the content from the clipboard into the text entry field.
Ctrl+X	Removes the selected content from the text entry field and puts it on the clipboard.
Ctrl+E	Pastes Enterprise data of the current call into the text entry field.

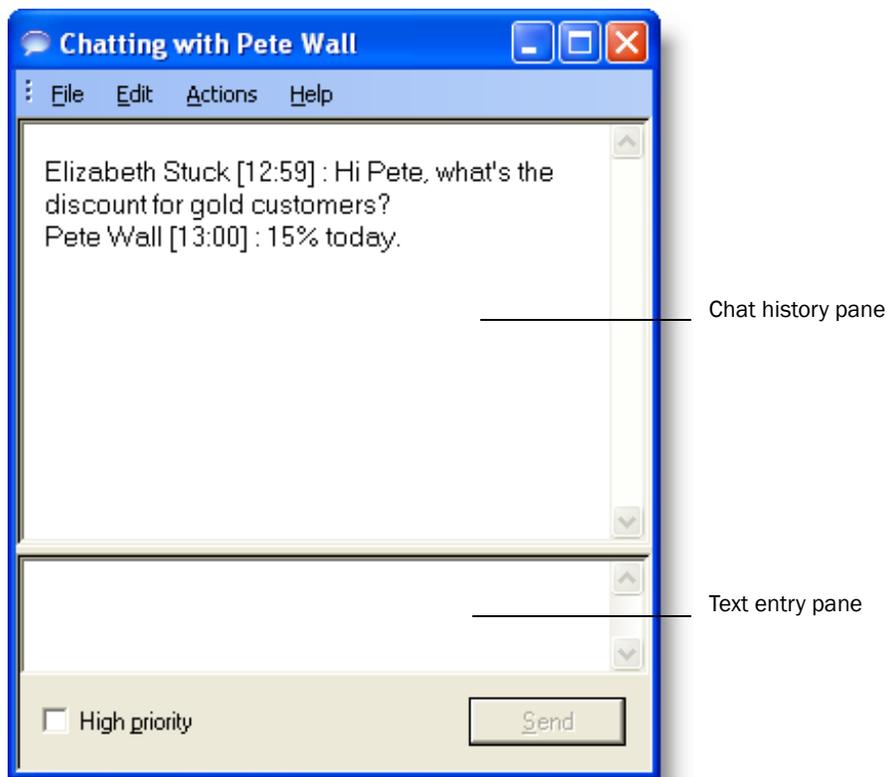

## Sending a Chat Message

### *To initiate a chat session:*

1. On the toolbar, click Chat. The Contact Selection window appears ([Figure 19 on page 55](#)). This window lists the names and status of people with whom you can chat.

2. To chat with a person, double-click that person's name. A Chat window opens and a session begins with the person you selected (Figure 20).

Figure 20. Chat session window

3. Type your message in the text entry field.
4. If you want your message to be noticed immediately by popping on the recipient's screen, select the High priority check box.
5. Click Send or press Enter. Your message is sent to your chat partner and logged in the chat log pane.

**To terminate a chat session:**

- Choose File > Close or click Close in the upper right-hand corner of the Chat window.

**Sending Enterprise Data**

You can use Chat to send the enterprise data associated with a call to someone.

**To send enterprise data:**

1. With a call active, open a chat session with the person to whom you want to send enterprise data.
2. From the Actions menu, choose Paste Enterprise Data. The enterprise data from the active call is pasted into the Chat window.
3. Click Send.

**Predefined High-Priority Chat Messages**

You might have a task button configured to send a high priority chat message to your supervisor(s). This chat message is a predefined message set up by your administrator (for instance, "Please monitor my call"). It appears in a Chat window that pops up on your supervisor's desktop. It behaves just like a chat message you send that is tagged as a high priority message.

**Calling Someone in Your Chat List**

You can make a call, transfer a call, or conference a call to anyone listed in your Contact Selection window using the call control actions.

**NOTE:** To call someone, you must be logged into Agent Desktop and be in an agent state that allows you to make a call.

**NOTE:** You cannot call someone listed in your Personal Contacts drawer.

You do not have to be chatting with an agent or SME in order to call them.

The call control menu items are typically disabled for SMEs. In order to make a call, transfer a call, or conference a call to an SME on your chat list, the SME must be configured as an External Contact by your administrator. If an SME name does not have a phone number associated with it, the call control menu items are disabled.

**To call someone in your chat list:**

1. Do one of the following:
  - a. If you are not chatting with the person you want to call, right-click that person's name in the Contact Selection window and choose Call from the resulting popup menu, or select the person's name and then choose Call from the Actions menu.
  - b. If you are chatting with the person you want to call, choose Call from the Actions menu in Chat Session window.

The Make a Call dial pad appears with the person's phone number autofilled in the Name: Number field.

2. Click Dial.

***To transfer or conference a call to someone in your chat list:***

1. With a call active, do one of the following:
  - a. If you are not chatting with the person you want to call, right-click that person's name in the Contact Selection window and choose Transfer or Conference from the resulting popup menu, or select the person's name and then choose Transfer or Conference from the Actions menu.
  - b. If you are chatting with the person you want to call, choose Transfer or Conference from the Actions menu. The Transfer a Call or Conference a Call dial pad appears with the person's phone number autofilled in the Name: Number field.
2. Click Dial.

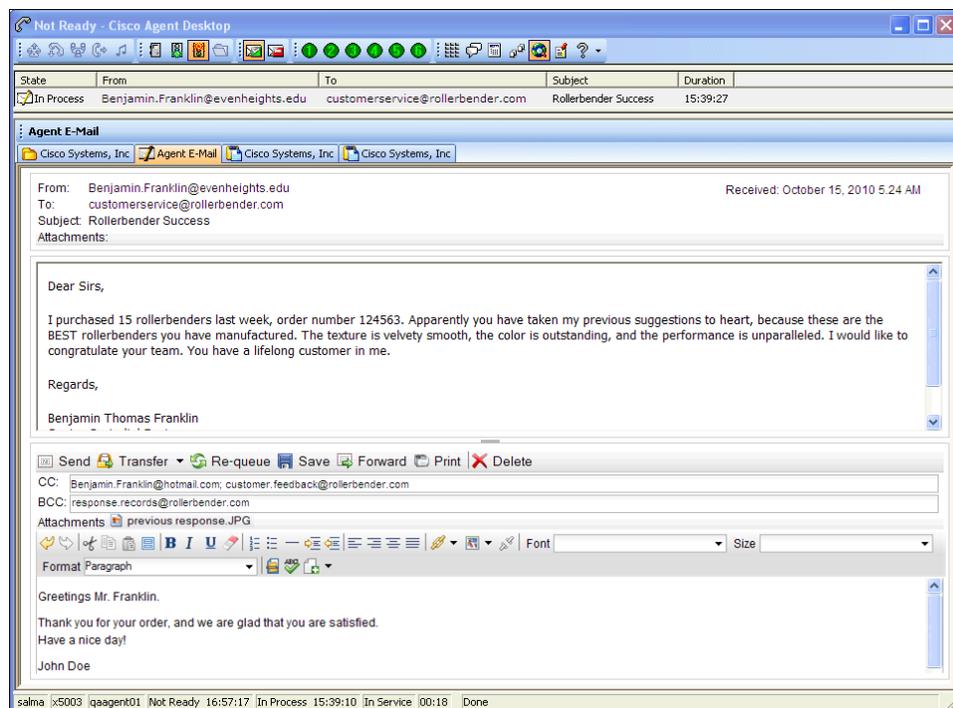

## Using Agent E-Mail

The Agent E-Mail feature is available only in the CAD Premium package.

If you are assigned to one or more e-mail CSQs in addition to voice CSQs, Agent Desktop will display an Agent E-Mail tab in the integrated browser pane and several e-mail state buttons on the toolbar.

When you click the E-Mail Ready button, your e-mail state changes to E-Mail Ready and the next available e-mail in your e-mail CSQs appears in your Contact Appearance pane (Figure 21).

**Figure 21.** Agent Desktop with Agent E-Mail enabled

**NOTE:** The e-mail portion of the contact appearance pane is not visible until there are e-mails present.

You can work on one e-mail at a time. You can have up to five e-mails in your contact appearance pane (for example, four saved as drafts and one in process). The exact number allowed depends on how your administrator has configured Agent E-Mail. For example, if the maximum number of e-mails allowed in your contact appearance window is three, you can have two e-mails saved as drafts and one e-mail in process. The e-mails are delivered one at a time only after the previous e-mail is sent or saved as draft.

When you select an e-mail to work on, the e-mail text is displayed in the upper portion of the Agent E-Mail tab, and a pane for your response is displayed in the lower portion of the tab.

The following actions are not supported in the Agent E-Mail tab:

- Click to dial is not available for phone numbers included in a customer e-mail.

**NOTE:** If the e-mail content (excluding attachments) is over 512 KB in size, you will see an error message that the e-mail might not be able to be displayed in Agent Desktop. If you opt to not try to display the e-mail, or if you try to display it and it fails, the e-mail will still be listed in your contact appearance pane, and you will be able to forward, re-queue, transfer, send, save, or delete it.

If configured by your administrator, you can attach files to your e-mail replies, or use templates your administrator has set up to insert boilerplate text to your e-mail.

You can carbon copy (CC) or blind carbon copy (BCC) an external e-mail address by manually entering the e-mail address in the respective fields. This is in addition to any automatic BCCs configured for the CSQ.

You might receive e-mails that contain a reply-to e-mail address that is different from the e-mail address from which it was sent. In this case, you will see both Reply-To and From fields. If configured by your administrator, your response is sent to the reply-to e-mail address. You cannot change where your response is sent.

**NOTE:** Agent E-Mail cannot verify if an e-mail address is valid, and it will not notify you if an e-mail cannot be delivered because the address is wrong. Make sure you type external e-mail addresses correctly to ensure the e-mail reaches all recipients.

## E-Mail States

The e-mail states are similar to agent states. Available e-mail states are listed in [Table 16](#).

Table 16. E-mail states

Button	State	Shortcut	Description
	E-Mail Ready	Ctrl+Shift+W	You are available to receive e-mails.
	E-Mail Not Ready	Ctrl+Shift+O	You are not available to receive e-mails.

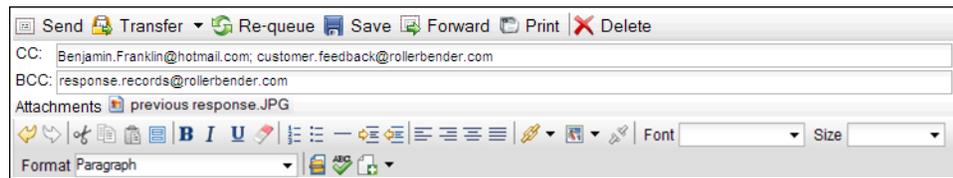

Table 16. E-mail states — *Continued*

Button	State	Shortcut	Description
—	In Process	—	You have received an e-mail and are currently working with it. You can process e-mail while in either the E-Mail Ready or E-Mail Not Ready states.

## E-Mail Toolbar

The e-mail toolbar enables you to send, transfer, re-queue, save, forward, print, and delete e-mail.

Figure 22. E-mail toolbar

The toolbar button functions are described in [Table 17](#).

Table 17. E-mail toolbar button functions

Icon	Button	Shortcut	Description
	Send	Ctrl+Enter	Sends your reply to the customer.
	Transfer	Ctrl+Shift+R	Displays a drop-down list of available CSQs (including the CSQ the e-mail was originally delivered to) to which you can transfer the e-mail. When you transfer an e-mail, any messages you wrote in reply that are in draft state are saved automatically with the original e-mail.
	Re-queue	Ctrl+R	Returns the current e-mail to the CSQ so it can be worked on by another agent. When you re-queue an e-mail, any messages you wrote in reply that are in draft state are saved automatically with the original e-mail.

Table 17. E-mail toolbar button functions — *Continued*

Icon	Button	Shortcut	Description
	Save	Alt+S	Saves the e-mail you are working on as a draft. E-mail you save remains in your contact appearance pane until you send, re-queue, transfer, or delete it.
	Forward	Ctrl+Shift+F	Forwards the e-mail to an external account.  This option appears only if your administrator has enabled it for the e-mail CSQ.  Forwarding an e-mail allows you to compose a note or a comment to the forwarded recipient(s). The e-mail will still be assigned to you for resolution.
	Print	Ctrl+P	Displays the inbound customer e-mail and the outbound (or draft) reply e-mail in a new tab or a new window, depending on the administrator's settings, along with the system Print dialog box. You must close the window or tab manually after you print the e-mail.
	Delete	Alt+ Backspace	Deletes the current e-mail. Depending on how CAD is configured, the e-mail might actually be deleted, or it might be forwarded to an e-mail address set up by the administrator so that a supervisor can decide if the e-mail should really be deleted or sent back into a CSQ.
—	CC	—	Allows you to enter one or more external e-mail addresses to copy them on your response. Separate multiple e-mail addresses with a semicolon.  This option appears only if your administrator has enabled it for the e-mail CSQ.

Table 17. E-mail toolbar button functions — *Continued*

Icon	Button	Shortcut	Description
—	BCC	—	Allows you to enter one or more external e-mail addresses to copy them on your response, while hiding the recipients' e-mail addresses. This is in addition to any automatic BCCs configured for the CSQ by your administrator. Separate multiple e-mail addresses with a semicolon.  This option appears only if your administrator has enabled it for the e-mail CSQ.
—	Attachment	—	Lists the files that you have attached to your response using the Attach File option.
	Undo	Ctrl+Shift+Z	Undoes the last action. Clicking the button again or repeating the keystrokes continues to undo the actions in order, starting with the most recent action.
	Redo	Ctrl+Shift+Y	Redoes the last action. Clicking the button again or repeating the keystrokes continues to redo the actions in order, starting with the most recent action.
	Cut	Ctrl+X	Removes the selected content and puts it on the clipboard.
	Copy	Ctrl+C	Copies the selected content to the clipboard.
	Paste	Ctrl+V	Pastes the content from the clipboard.
	Select All	Ctrl+Shift+L	Selects all the content.
	Bold	Ctrl+B	Changes the selected text to bold.
	Italics	Ctrl+I	Changes the selected text to italic.
	Underline	Ctrl+U	Underlines the selected text.
	Remove Format	—	Removes any format applied to the selected text.

Table 17. E-mail toolbar button functions — *Continued*

Icon	Button	Shortcut	Description
	Numbered List	—	Inserts a numbered list.
	Bullet list	Ctrl+\	Inserts a bulleted list.
	Horizontal Rule	—	Inserts a horizontal rule at the cursor position.
	Increase Indent	—	Increases the space between the margin and the content.
	Decrease Indent	—	Decreases the space between the margin and the content.
	Align Left	—	Aligns the left edge of the content to the left margin.
	Align Right	—	Aligns the right edge of the content to the right margin.
	Align Center	—	Aligns the content to the center of the page.
	Justify	—	Aligns the left and right edges of the content evenly across the width of the page.
	Create Link	—	Creates a hyperlink of the selected text to the specified URL. You must include the full address for the hyperlink to work properly. For example, <a href="http://www.cisco.com">http://www.cisco.com</a> .
	Remove Link	—	Removes the hyperlink from the selected text. This option is enabled only when the hyperlinked text is selected.
—	Font	—	Allows you to change the font of the selected text.
—	Size	—	Allows you to change the font size of the selected text.
—	Format	Ctrl+1, Ctrl+2, Ctrl+3, Ctrl+4	Allows you to apply heading (Ctrl+1), subheading (Ctrl+2), sub-subheading (Ctrl+3), and paragraph (Ctrl+4) formats to the selected text.

Table 17. E-mail toolbar button functions — *Continued*

Icon	Button	Shortcut	Description
	Attach File	Ctrl+Shift+H	Allows you to attach a file to your response.
	Spell Check	F7	Checks the spelling of your response.
	Insert Template	Ctrl+Shift+P	Opens the template menu. Select a pre-defined template to insert into the response at the point where the cursor is placed.

## E-Mail Format

The format of an e-mail reply is determined by the format of the incoming e-mail. If the customer e-mail is in text format, then the reply is in text format. If the customer e-mail is in HTML format, then the reply is in HTML format. You cannot choose the format for your reply.

The customer's original e-mail is quoted at the bottom of your reply. You cannot edit the customer's e-mail in your reply.

## Answering an E-Mail

To answer an e-mail, follow these steps.

### *To answer an e-mail:*

1. Click E-Mail Ready. Your e-mail state changes to E-Mail Ready and the next available e-mail is sent to your contact appearance pane.
2. Click the e-mail. The text of the e-mail is displayed in the upper portion of the Agent E-Mail tab in the browser pane.

**NOTE:** If the e-mail has a long subject line and appears truncated, you can view the entire subject line by hovering your mouse over the Subject Line field.

3. To include other recipients in your reply, type their e-mail addresses in the CC and/or BCC fields.

**NOTE:** Any address entered in the CC field is visible to all e-mail recipients, while addresses entered in the BCC field are not visible to any e-mail recipients.

4. In the Response section of the Agent E-Mail tab, type your response to the e-mail.
  - Click Attach File to navigate to a file location and select a file to attach to your reply. The file attachment can be of any format. By default, the maximum attachment file size is 10 MB. This limit can be configured by your administrator, so the limit in your contact center might be different.
  - Click Insert Template to display a drop-down list of available templates set up by your administrator that you can insert in your reply. The template is inserted where your cursor is positioned. You can insert multiple templates.
  - Click Check Spelling to run a spell check on your reply.

**NOTE:** Spell check is not supported for Finnish, Canadian French, Polish, Swedish, Turkish, Traditional and Simplified Chinese, Japanese, and Korean languages.

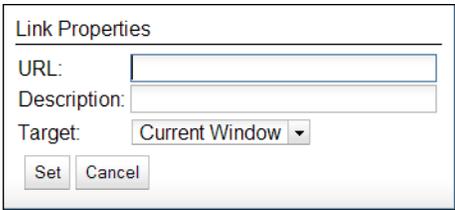

**NOTE:** Do not right-click in the Response pane. Selecting any option on the resulting menu can result in the loss of all text in your response.

5. When your reply is complete, click Send. Your reply is sent to the customer.

**To create a hyperlink in your e-mail response, follow these steps:**

1. In the Response section of the Agent E-Mail tab, select the text in your e-mail response for which you want to create a hyperlink or place the cursor where you want the hyperlink.
2. Click Create Link on the e-mail toolbar. The Link Properties dialog box appears (Figure 23).

**Figure 23.** Link Properties dialog box

The image shows a screenshot of a dialog box titled "Link Properties". It contains three input fields: "URL:" with an empty text box, "Description:" with an empty text box, and "Target:" with a dropdown menu showing "Current Window". At the bottom, there are two buttons: "Set" and "Cancel".

- Complete the fields as described below:

Field	Description
URL	Enter the address of the content to which you are linking. You must include the full address for the hyperlink to work properly. For example, <a href="http://www.cisco.com">http://www.cisco.com</a> .
Description	Enter a description of the hyperlink that appears in your e-mail response as a link.
Target	Do not change the Target setting. If you do, the Link Properties dialog box will close, and you will have to start the process over again.

- Click Set.

## Reviewing E-Mail

The E-Mail Review CSQ is used to review agent responses to customer e-mails. Agents who are assigned to the E-Mail Review CSQ review each e-mail before it is sent to the customer. Reviewers can edit, transfer, re-queue, and send reviewed e-mail using Agent E-Mail functionality.

**NOTE:** Only e-mail answered by agents whose work flow group and e-mail CSQ are configured for review is sent to the E-Mail Review CSQ. E-mail cannot be transferred manually to the E-Mail Review CSQ.

### *To review an e-mail:*

- Click E-Mail Ready. Your e-mail state changes to E-Mail Ready and the next available e-mail to be reviewed is sent to your contact appearance pane.
- Click the e-mail. The customer's e-mail, with the agent response and any attachments are displayed in the upper portion of the Agent E-Mail tab in the browser pane.
- Review the e-mail and edit it as necessary. You can do any of the following actions:
  - Transfer the e-mail to any CSQ to be handled by another agent. You cannot transfer an e-mail to a Review CSQ.
  - Re-queue the e-mail to the E-Mail Review CSQ to be reviewed by another reviewer.
  - Send the e-mail to the customer. The sent e-mail shows the e-mail address of the original CSQ to which it was queued, not the e-mail address of the E-Mail Review CSQ,

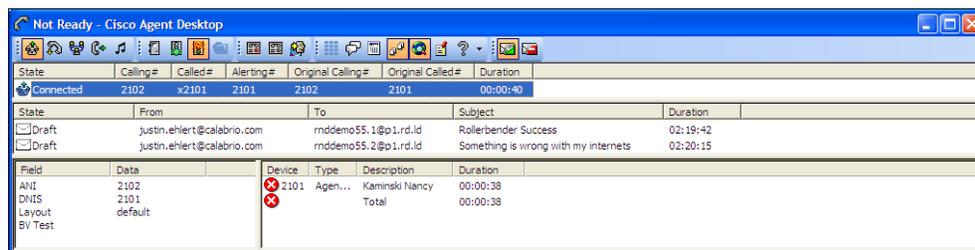

If you have edited the e-mail, any edits you made are preserved when the e-mail is transferred or re-queued, and the e-mail is saved as a draft.

## Managing E-Mails and Calls

An incoming call will always take precedence over an e-mail you are working on. When you receive a call, the e-mail in process is automatically saved as a draft and your e-mail state is changed to E-Mail Not Ready.

**NOTE:** If you receive a call while the Select E-mail Wrap-up dialog box is open after sending an e-mail reply, all the call control buttons are disabled. To answer the call through the Agent Desktop interface, you must select a wrap-up code to close the dialog box.

**Figure 24.** Agent Desktop showing an active call and two draft e-mails

If configured by the administrator, when an ACD call is finished, the system automatically returns you to your previous e-mail state and you can continue writing your response.

**NOTE:** Your administrator can configure the e-mail CSQ so that you automatically return to the e-mail state (processing or ready) you were in before you answered a call so you can resume working on e-mail.

**NOTE:** If you manually change the e-mail state while in the middle of a call you will remain in that e-mail state upon completion of the call.

**NOTE:** You can work on e-mail in either the E-Mail Ready or E-Mail Not Ready states. To continue to receive e-mails for processing, you must change to the E-Mail Ready state.

The status of each e-mail in the contact appearance pane is shown both by text and by icon. The status icons are listed in [Table 18](#).

**Table 18.** E-mail status as shown in the contact appearance pane

Icon	Description
	In Process. The e-mail is currently being worked on.
	Draft. Work on the e-mail has started but was interrupted for some reason, and so was saved as a draft.

### E-Mail Re-queue on Logout

Your administrator has the option of configuring Agent E-Mail so that, when you log out, any e-mail that is assigned to you is re-queued to be handled by another agent. In this case, any messages written by you are saved automatically with the original e-mail.

If the re-queue on logout option is not enabled, e-mail you save as a draft remains assigned to you when you log out. It will appear in the contact appearance pane when you log back in. If an e-mail is urgent and requires immediate handling, but you must log out, it is recommended that you re-queue the e-mail so that it can be worked on by another agent.

## Using Unified CCX Web Chat

---

If configured by your administrator, Agent Desktop will display Unified CCX Web Chat in the first tab in the integrated browser pane. Unified CCX Web Chat enables you to chat with customers if you are assigned to one or more chat CSQs.

For more information on how to use Unified CCX Web Chat, refer to the *Cisco Unified CCX Web Chat Agent and Supervisor Desktop User Guide* available at:

[http://www.cisco.com/en/US/products/sw/custcosw/ps1846/tsd\\_products\\_support\\_series\\_home.html](http://www.cisco.com/en/US/products/sw/custcosw/ps1846/tsd_products_support_series_home.html)

## Using Recording

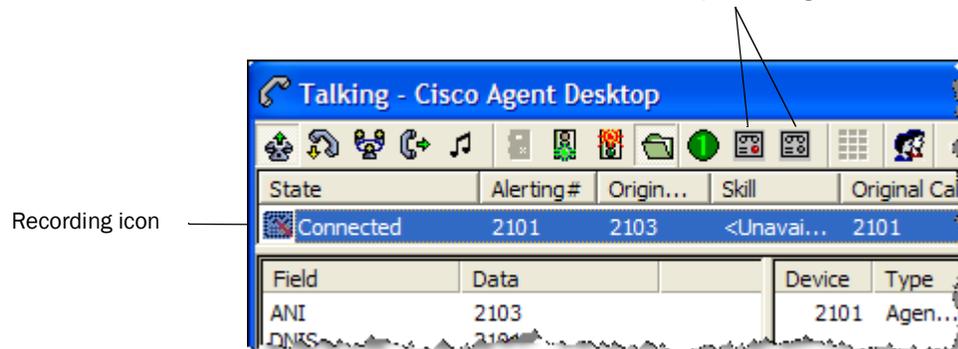

You can record calls if you are set up to do so by your administrator. The administrator customizes your toolbar with two task buttons: one button starts recording and the other button stops recording (Figure 25).

**NOTE:** The default icons for customizable task buttons are green circles with numbers inside them, like this: . Using them on the Agent Desktop toolbar is optional. Your administrator can choose to use other icons for the buttons assigned to the recording functions.

When you are recording a call, the icon next to the call information in the Call Activity pane changes from the Talking icon  to the Recording icon .

**Figure 25. Recording a call**

In this instance of Agent Desktop, custom icons, not the default task buttons, are used to start and stop recording.

When recording a call, keep in mind the following:

- The recording starts when you are connected to a customer call and you click Start Recording.
- The recording ends automatically when the call terminates, or when you click Stop Recording, whichever comes first.
- You cannot use the Stop Recording button to stop a recording that your supervisor started. Clicking the Stop Recording button has no effect.
- Your supervisor can stop a recording that you started.
- Only your supervisor can play back recordings that you make.
- Recording in a multi-line environment depends on your configuration. You might not be able to record non-ACD calls.

## Agent Real Time Displays

---

There are several real time displays (reports) you can view in the Agent Report window. These displays are:

- [Agent ACD State Log Display \(page 74\)](#)
- [Agent Call Log Display \(page 75\)](#)
- [Agent Statistics Display \(page 76\)](#)
- [Contact Service Queue Statistics Display \(page 77\)](#)
- [Agent E-Mail Log Display \(page 78\)](#)
- [Agent E-Mail Detail Display \(page 79\)](#)

You can sort real time displays by any of the columns in the display in ascending or descending order by clicking on the column header.

**NOTE:** The Agent Real Time Displays window is designed to always be on top of other open windows. However, if the “Always on Top” window behavior mode is selected for the main Agent Desktop window, it will override the Agent Real Time Displays behavior and the Agent Desktop window will appear on top.

### *To view agent real time displays:*

1. On the dashboard toolbar, click Reports. The Agent Real Time Displays window appears.
2. From the Real Time Displays drop-down list, select the display you want to view. The display appears in the window.
3. Click Refresh (if enabled) to update the information, if necessary.

**NOTE:** If a display you select to view is unavailable because of a service failure, the display will be blank, and “Real Time Display: Inactive” is shown in the display window status bar. You can check which real time displays are unavailable by viewing the Service Status window. See ["Service Status" on page 86](#) for more information.

## Agent ACD State Log Display

The Agent ACD State Log Display shows a record of all ACD server state transitions for the current day, starting at midnight. The report is in chronological order.

The display data is listed in [Table 19](#).

**Table 19. Agent ACD State Log Display fields**

Field	Description
Start Time	The time the ACD agent state was initiated. Start time is based on the time the Unified CCX system received the ACD agent state data from CAD, so that the start time reflects the Recording & Statistics server time, not the time shown on your PC. Note that if the Recording & Statistics server and the agent PC are in different time zones, this is taken into account so that start times display the correct time zone.
Agent State	ACD agent state. The last ACD state written to the log is actually the previous ACD state that you were in. In order to calculate State Duration, the current state cannot be written to the log until you transition to the next ACD agent state.
Wrap-up Data	Any wrap-up data you entered when transitioning to the Work state after a call or after sending an e-mail.
Reason Code	A number followed by a string description in parentheses identifying why the agent is in the current state. Blank if there is no reason code. This field applies only to the Not Ready and Logout states.
State Duration	Length of time you were in the ACD agent state.

### Agent Call Log Display

The Agent Call Log Display shows a record of calls made and received over the last seven days by day. Calls displayed for a particular day are received after midnight in the Unified CCX server's time zone. In a multi-line environment, both ACD and non-ACD calls are listed.

The display data is listed in [Table 20](#).

**Table 20. Agent Call Log Display fields**

Field	Description
Start Time	Time the call started. Start time is based on the time the Unified CCX system receives the state data from Agent Desktop, so that the start time reflects the Unified CCX server time, not the time shown on your PC. Note that if the Unified CCX server and the agent PC are in different time zones, this is taken into account so that start times display the correct time zone.
Direction	Inbound or outbound call.
Answered	(Yes/No) Was the call answered?
Calling Party	The number of the phone that made the call.
Called Party	The number of the phone that received the call.
Call Duration	The length of the call. For inbound calls: call duration = ring time + talk time + hold time. For outbound calls: call duration = dialtone + ringback + talk time + hold time.

## Agent Statistics Display

The Agent Statistics Display shows your performance statistics for the current day, starting at midnight. This display is automatically updated every 30 seconds. You cannot refresh the data manually.

The display data is listed in [Table 21](#).

**Table 21. Agent Statistics Display fields**

Field	Description
Calls Presented	Number of inbound calls (ACD or non-ACD) that are delivered to your extension (causes your phone to ring). This can be verified by counting the number of entries whose call direction displays "Inbound" in the Agent Call Log for the current day.

Table 21. Agent Statistics Display fields – Continued

Field	Description
Calls Handled	Number of inbound calls (ACD or non-ACD) that are answered at your extension. This can be verified by counting the number of entries whose Call Answered column displays “Yes” in the Agent Call Log for inbound calls only for the current day.
Avg Talking	The total time on calls (all talk time + all hold time) divided by the number of calls.
Max Talking	The length of the longest call (talk time + hold time).
Total Talking	The total time on calls (all talk time + all hold time).
Avg Ready	The total time spent in the Ready state divided by the number of times spent in the Ready state.
Max Ready	The longest time spent in the Ready state.
Total Ready	The total time spent in the Ready state.
Avg Not Ready	The total time spent in the Not Ready state divided by the number of times spent in the Not Ready state.
Max Not Ready	The longest time spent in the Not Ready state.
Total Not Ready	The total time spent in the Not Ready state.
Avg After Call Work	The total time spent in the Work state divided by the number of times spent in the Work state.
Max After Call Work	The longest time spent in the Work state.
Total After Call Work	The total time spent in the Work state.

### Contact Service Queue Statistics Display

The Contact Service Queue Statistics Display shows information about CSQs and the calls routed to them for the current day, starting at midnight. This display is automatically updated every 10 seconds. You cannot refresh the data manually.

The display data is listed in [Table 22](#).

Table 22. Contact Service Queue Statistics Display fields

Field	Description
Calls Waiting	The total number of calls waiting in the CSQs from which the agent receives calls.

Table 22. Contact Service Queue Statistics Display fields — *Continued*

Field	Description
Current Oldest	The elapsed wait time of the oldest call in the CSQ.
E-Mails in Queue	The total number of e-mails waiting in the CSQs from which the agent receives e-mail.
Oldest E-Mail in Queue	The elapsed wait time of the oldest e-mail in the CSQ.

**NOTE:** The E-Mails in Queue and Oldest E-Mail in Queue fields appear only if the agent supports at least one e-mail CSQ.

### Agent E-Mail Log Display

The Agent E-Mail Log Display shows a record of the e-mails that the agent retrieved or for which the agent in one way or another completed activity over the last seven days, by day, starting at midnight each day. The Agent E-Mail Log Display appears only if the agent supports at least one e-mail CSQ.

The display data is listed in [Table 23](#).

Table 23. Agent E-Mail Log Display fields

Field	Description
E-Mail Retrieve Time	The time the agent retrieved the e-mail.
Status	If the e-mail is still at the agent desktop, either In Process or Draft, as per the previous status. If the agent has completed activity on the e-mail, the means by which the agent completed that activity: Delete, Transfer, Re-queue, or Sent.
Close Time	The date and time that the agent transferred, re-queued, or sent the e-mail. If the e-mail status is In Process or Draft, the date and time of the last change in e-mail status is displayed.
Processing Duration	The length of time that the agent spent processing the e-mail.
On Desk Duration	The length of time from when the agent retrieved the e-mail to when the agent sent, transferred, or re-queued the e-mail.
To	Address to which the e-mail was sent.
From	Address from which the e-mail was sent.

Table 23. Agent E-Mail Log Display fields — *Continued*

Field	Description
Subject	The e-mail subject line.
Contact Service Queue	The CSQ through which the e-mail was routed to the agent.

### Agent E-Mail Detail Display

The Agent E-Mail Detail Display shows statistics accumulated over the current day, starting at midnight. The Agent E-Mail Detail Display appears only if the agent supports at least one e-mail CSQ.

The display data is listed in [Table 24](#).

Table 24. Agent E-Mail Detail Display fields

Field	Description
E-Mails Retrieved	The number of e-mails the agent has retrieved since midnight. The retrieval might be the result of agent action or the outcome of a work flow.
E-Mails Transferred	The number of e-mails the agent has transferred since midnight.
E-Mails Requeued	The number of e-mails the agent has re-queued since midnight.
E-Mails Sent	The number of e-mails the agent has sent since midnight.
E-Mails Deleted	The number of e-mails the agent has deleted since midnight.
Total In-Process Time Sent E-Mails	The total time in process for e-mails that the agent has sent. All in-process time is included for the e-mails, regardless of whether the in-process time occurred during the current day or not.
Average In-Process Time Sent E-Mails	The average in-process time across all e-mails that the agent has sent. In determining the average, all in-process time for each e-mail is averaged, regardless of whether the in-process time occurred during the current day or not.

**Table 24. Agent E-Mail Detail Display fields**

Field	Description
Maximum In-Process Time Sent E-Mails	The longest in-process time across all e-mails that the agent has sent. In determining the longest, all in-process time is included for each e-mail, regardless of whether the in-process time occurred during the current day or not.

## Using the Integrated Browser

---

The integrated browser allows you to view intranet and internet web pages from within Agent Desktop.

The administrator can configure the integrated browser so that popup windows are displayed either as a new tab in the integrated browser, or as a regular Internet Explorer popup window.

The integrated browser can be configured to support up to 10 tabs. The first tab is reserved for web pages that your supervisor can push to you in order to assist you in helping customers.

You can click Show/Hide Integrated Browser on the dashboard toolbar to show or hide this section of the Agent Desktop window.

The administrator can configure a specific web page to display in the browser pane as your home page. If the administrator does not do this, the pane is blank except for the message, "The home page is not configured in Desktop Administrator."

If set up by your system administrator as part of a work flow, Agent Desktop can use call enterprise data to interact with a web application, such as a customer database, and display customer information in the integrated browser.

### Integrated Browser Notes

- You must have Internet Explorer 8 or 9 on your PC for the integrated browser to function.
- The tabbed browsing feature of Internet Explorer is not available in the integrated browser.
- The integrated browser supports only one web session at a time for web applications that use cookies for session management. For example, you cannot log into a web application that uses cookies in one tab as User A and then log into the same web application in another tab as User B. However, multiple web sessions are supported for web applications that use URL-based session management.
- Reordering of integrated browser tabs by dragging is not supported.

### Browser Toolbar

The integrated browser toolbar contains basic browser buttons that allow you to navigate among web pages you view, refresh a current page, and return to your home page.

Table 25 lists the integrated browser shortcut keys and toolbar buttons.

Table 25. Integrated browser toolbar buttons and shortcut keys

Icon	Name	Shortcut	Description
	Back	Alt+left arrow	Returns you to the last page you viewed.
	Forward	Alt+right arrow	Takes you to the page you viewed before clicking the Back button.
	Stop	Esc	Stops the browser from loading a web page.
	Refresh	F5	Refreshes the current web page.
	Home	Alt+Home	Returns you to your predefined home page.
—	New tab	Ctrl+Shift+T	Opens a new tab.
—	Next tab	Ctrl+Shift+Tab	Takes you to the next tab.
—	New tab	Ctrl+N	Opens a new window (if enabled by your administrator) or opens a new tab.
—	Address	Alt+D	Selects the Address field (if configured).
—	Browser	Ctrl+Shift+B	Selects the browser pane.
—	Toolbar	Alt+I	Selects the browser toolbar.
—	Work Sites	Alt+W	Selects the Work Sites field.
—	Specified Tab	Ctrl+Shift+ <tab #>	Takes you to the specified tab, where 0 is the first tab, 1 is the next tab, and so on.
—	—	Shift+click	Opens a link in a new window.
—	—	Ctrl+click	Opens a link in a new tab in the background.
—	—	middle mouse button	Opens a link in a new tab in the background.
—	—	Ctrl+Shift+click	Opens a link in a new tab in the foreground.

## Accessing Work Sites

The system administrator can set up a list of frequently-used websites. These “favorites” appear in the Work Sites box. You can select a website from this drop-down list to access it quickly, without having to type in its web address.

## Accessing Other Websites

The system administrator can configure the browser to include the optional Address field. This enables you to access a website that is not listed in the Work Sites box.

### *To access a website using the Address field:*

- Enter the website's address (URL) in the Address field, and then press Enter.

## Dialing Hyperlinked Phone Numbers

If enabled by the administrator, you can dial a phone number displayed as a hyperlink on a web page by clicking it whenever you are in an agent state where the dial pad is enabled (any state except Logoff).

- The phone number must be 10 digits long and use the North American dial string format:  
`<area code> <exchange> <subscriber number>`
- The phone number can have parentheses around the area code, and use any combination of spaces, hyphens, and periods in the phone number.
- Numbers shorter than 10 digits, such as local numbers without area codes or phone extensions, cannot be dialed.
- Phone numbers that are actually image files or are populated from databases cannot be dialed.
- Some web sites hide hyperlinks; the phone number might not look like it is hyperlinked, but it actually is and can be dialed.
- The phone number cannot contain alpha characters. For instance, the phone number 800-GET-PZZA cannot be dialed.
- A dialed hyperlinked phone number will not appear in the Recent Call List in the Dial Pad window.
- The phone number hyperlinks disappear if you refresh the site by right-clicking and choosing the Refresh menu option. To refresh the page without losing the hyperlinks, press F5 or click Refresh on the integrated browser toolbar.

## Reason Codes

Agent Desktop can be configured by the system administrator so that you are required to enter reason codes.

Reason codes describe why you have transitioned to the Not Ready, E-Mail Not Ready, or Logout agent state. These codes are set up by your system administrator and are customized for your contact center.

Whenever you initiate a transition to the Not Ready, E-Mail Not Ready, or Logout state, or such a transition is included in a work flow, a popup dialog box appears (Figure 26). You must select the one appropriate code from that dialog box and click OK in order to make the transition.

You can click the Not Ready or E-Mail Not Ready button again when you are already in the Not Ready or E-Mail Not Ready state. This enables you to enter another reason code. Reports will show back-to-back Not Ready or E-Mail Not Ready state changes with the appropriate times in state and the respective reason codes. However, if you choose the same reason code again, a new state change is not recorded.

There are several situations in which you will not see the Reason Code dialog box:

- Your supervisor initiates the transition (a reason code indicating that the supervisor forced the agent state change is automatically selected).
- The agent state change is part of a work flow in which automated reason codes are enabled.

Figure 26. Reason Code dialog box

## Wrap-up Data

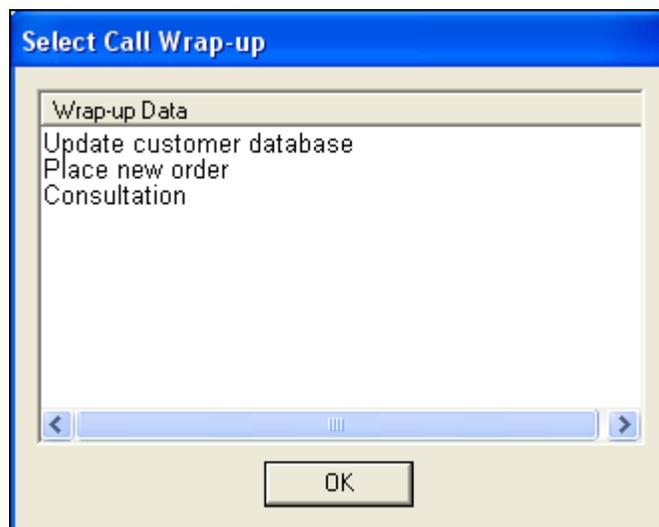

---

Agent Desktop can be configured by the administrator so that you are required to enter wrap-up data.

Contact centers use wrap-up data for purposes such as tracking the frequency of different activities or identifying the account to which to charge a call, among others. Like reason codes, wrap-up data descriptions are set up by your administrator to reflect the needs of your contact center.

If you transition to the Work state immediately after ending a call or sending an e-mail, the Select Call Wrap-up dialog box appears (Figure 27). (This happens when you click Work during the call, or when the CSQ through which you received the call has been configured with the Automatic Work option.) Select the one appropriate description that sums up the call outcome and click OK to continue.

Figure 27. Select Call Wrap-up dialog box

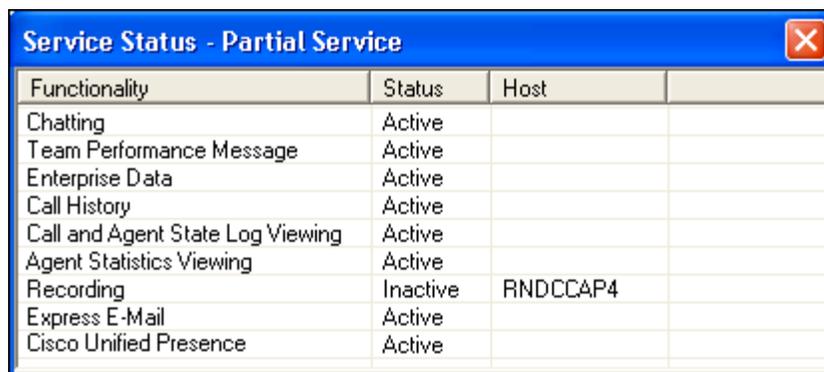

## Service Status

When Agent Desktop detects that it is unable to communicate with a service (generally within three minutes of the service failure), the status bar displays “Partial Service” or “No Service” to indicate some or all of the services have failed.

When Agent Desktop detects that the service is again available (usually within one minute of service recovery), the status bar displays “In Service” to indicate the services have recovered.

To learn more about what is affected by the service failure, double-click the status message on the status bar. Agent Desktop displays a popup box that lists CAD features and indicates if that feature is available or not due to the service outage (Figure 28). The server that hosts the failed service is listed in the Host column. This field can display either the host’s IP address, host name, or both.

Figure 28. Server Status popup dialog box

Functionality	Status	Host	
Chatting	Active		
Team Performance Message	Active		
Enterprise Data	Active		
Call History	Active		
Call and Agent State Log Viewing	Active		
Agent Statistics Viewing	Active		
Recording	Inactive	RNDCCAP4	
Express E-Mail	Active		
Cisco Unified Presence	Active		

## Phone Network Failure

In the event that your phone loses its connection to the network, you are automatically moved to the Not Ready agent state, and you will see a popup window displaying a message that the phone is out of service.

Until you complete your current call, the phone cannot reconnect to the network and Agent Desktop will not be able to show the call’s actual length because it shows as “terminated” in the system.

When the phone comes back into service, the popup window displays a message that the phone is in service. You can then change your agent state back to Ready and resume taking calls.
