Preface

Purpose

This guide provides an overview of Cisco Unified Mobile Agent (Unified MA), Unified MA call flow information, configuration tasks, and step-by-step installation instructions for using the Cisco Unified MA feature for Cisco Unified CCE/CCH.

For ease of use, the guide separates system configuration instructions and troubleshooting information from task-related instructions for supervisors and agents using Unified MA.

Cisco Unified Mobile Agent enables an agent using any PSTN phone and a broadband VPN connection (for agent desktop communications) to function just like a Unified CCE agent sitting in a formal call center and using a Cisco IP Phone monitored and controlled by Cisco Unified Communications Manager (Unified CM) JTAPI.

If you are upgrading to 7.5(1) and are planning to configure a mobile agent to use an analog phone or an IP Phone without Cisco Business Ready Teleworker setup, you should use the Mobile Agent Option. However, if you are planning to configure a mobile agent to use the deployment option of IP Phone with Cisco Business Ready Teleworker setup, use Remote Agent.

Audience

This document is intended for the administrator responsible for Unified MA configuration, and for contact center supervisors and agents using Unified MA to handle calls.

Important Information about Cisco Product Names

Effective with this release:

- Cisco ICM Enterprise Edition is renamed Cisco Unified Intelligent Contact Management Enterprise (abbreviated as Unified ICME).
• Cisco ICM Hosted Edition is renamed Cisco Unified ICM Hosted (abbreviated as Unified ICMH).

• Cisco IPCC Enterprise Edition and Cisco IPCC Hosted Edition are renamed Cisco Unified Contact Center Enterprise (abbreviated as Unified CCE) and Cisco Unified Contact Center Hosted (abbreviated as Unified CCH), respectively.

• Cisco System IPCC Enterprise Edition is renamed Cisco Unified System Contact Center Enterprise (abbreviated as Unified SCCE)

• Cisco IPCC Express is renamed Cisco Unified Contact Center Express (abbreviated as Unified CCX).

The new product names are being introduced in phases. In the 7.5(1) release, the new names refer to the product as a whole. They are not yet used for functions and utilities in the user interface.

This guide refers to the *product as a whole* by its new name. It refers to *components and utilities* by the names that appear in the user interface.

### Organization

The following describes the information contained in the sections of this guide:

### Related Documentation

Read the *Cisco Unified Contact Center Enterprise 7.5 Solution Reference Network Design (SRND)* guide before configuring Unified MA.
For additional information about Cisco Unified Contact Center Enterprise software, see the [Cisco web page](http://www.cisco.com/en/US/products/sw/custcosw/ps1844/tsd_products_support_series_home.html).

## Conventions

This manual uses the following conventions:

<table>
<thead>
<tr>
<th>Convention</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>boldface</strong></td>
<td>Boldface font is used to indicate commands, such as user entries, keys, buttons, and folder and submenu names. For example:</td>
</tr>
<tr>
<td><strong>•</strong></td>
<td><strong>Choose</strong> <em>Edit &gt; Find.</em></td>
</tr>
<tr>
<td></td>
<td><strong>•</strong> <strong>Click</strong> <em>Finish.</em></td>
</tr>
<tr>
<td><strong>italic</strong></td>
<td>Italic font is used to indicate the following:</td>
</tr>
<tr>
<td><strong>•</strong></td>
<td><strong>To introduce a new term.</strong> Example: A <em>skill group</em> is a collection of agents who share similar skills.</td>
</tr>
<tr>
<td></td>
<td><strong>•</strong> For emphasis. Example: <em>Do not</em> use the numerical naming convention.</td>
</tr>
<tr>
<td></td>
<td><strong>•</strong> A syntax value that the user must replace. Example: IF <em>(condition, true-value, false-value)</em></td>
</tr>
<tr>
<td></td>
<td><strong>•</strong> A book title. Example: See the <em>Cisco CRS Installation Guide.</em></td>
</tr>
<tr>
<td><strong>window font</strong></td>
<td>Window font, such as Courier, is used for the following:</td>
</tr>
<tr>
<td></td>
<td><strong>•</strong> Text as it appears in code or that the window displays. Example: <code>&lt;html&gt;&lt;title&gt;Cisco Systems,Inc. &lt;/title&gt;&lt;/html&gt;</code></td>
</tr>
<tr>
<td><strong>&lt;&gt;</strong></td>
<td>Angle brackets are used to indicate the following:</td>
</tr>
<tr>
<td></td>
<td><strong>•</strong> For arguments where the context does not allow italic, such as ASCII output.</td>
</tr>
<tr>
<td></td>
<td><strong>•</strong> A character string that the user enters but that does not appear on the window such as a password.</td>
</tr>
</tbody>

We appreciate your comments.
Part 1: Cisco Unified Mobile Agent

This section provides:

- An introduction to Unified MA.
- Instructions for system configuration of Unified MA.
- Troubleshooting information related to Unified MA.
Introduction to Cisco Unified Mobile Agent for Cisco Unified CCE/CCH

This chapter contains the following topics:

- What is Unified MA for Unified CCE/CCH? , page 7
- Feature Requirements, page 12
- Supported Unified CCE/CCH Features, page 13
- Unsupported or Limited Features for Mobile Agent, page 15
- Important Considerations, page 15
- Unified MA Call Flows, page 17
- Unified Mobile Agent Reporting, page 23

What is Unified MA for Unified CCE/CCH?

Cisco Unified Mobile Agent (Unified MA) enables an agent using any PSTN phone and a broadband VPN connection (for agent desktop communications) to function just like a Unified CCE agent sitting in a formal call center and using a Cisco IP Phone monitored and controlled by Cisco Unified Communications Manager (Unified CM) JTAPI.

Unified MA for Unified CCE/CCH support call center agents using phones that are not directly controlled by Unified CCE/CCH. A mobile agent can be physically located:

- Outside the contact center, using an analog phone in the home or a cell phone.
- Within the contact center, using an IP phone connection that is not being controlled by Unified CCE/CCH or an associated Unified CM.
What is Unified MA for Unified CCE/CCH?

**Figure 1: An Agent at Home Using Unified MA**

Note: Throughout this guide the term local agent refers to a Cisco Unified CCE/CCH agent that is configured as a non-mobile agent. The term mobile agent refers to a Cisco Unified CCE/CCH agent using a phone that is not under control of Unified CCE/CCH. Both local and mobile agents can be physically located within a contact center or at a remote location.

With Cisco Unified MA contact centers can:

- add/enable temporary staff during seasonal high call volume who can be brought on line with reduced startup costs.
- provide agents the flexibility to work from home with similar quality, function, performance, convenience, and security as are available in the corporate headquarters contact center.
- allow agents to use the device they are most comfortable which improves agent productivity, helps to retain agents, and reduces training costs.
- hire skilled employees where they live, and integrate remote workers into geographically dispersed teams with access to equivalent corporate applications.

Note: Some caveats apply; for information, see Non-supported or Limited Unified CCE/CCH Features (page 15).

The sections that follow highlight some of the benefits of Unified MA and describe its features.

**Unified MA Extends Cisco Unified CCE/CCH Capabilities**

Prior to Unified MA, Unified CCE/CCH used a JTAPI interface to Unified CM to connect customer calls arriving on a voice gateway to an agent’s IP phone. Unified MA extends the Unified CCE/CCH architecture by enabling it to connect customer calls to an agent phone that is not controlled by Unified CCE/CCH.
Unified MA uses a pair of CTI ports that function as proxies for the mobile agent phone and the caller phone. Two CTI ports (local and remote) are required for every logged-in mobile agent, and the two CTI ports take the place of the Cisco IP Phone monitored and controlled by Unified CM JTAPI. The local CTI port DN is used by the agent at login and is where callers are routed when this agent is selected. The remote CTI port calls the agent either at login for a nailed-up connection or upon being selected for a call by call connection.

Cisco Unified CC functionality remains intact whether an agent is mobile or local:

- Mobile agents have the same capabilities and functionality that local agents have.
- Mobile agents do not need any specialized equipment; they can receive calls on an analog or cellular phone.
- Unified MA supports Cisco CTI OS Agent Desktop, Cisco Agent Desktop (CAD), and Cisco Agent Desktop-Browser Edition (CAD-BE).
- Mobile agent activity is recorded in the same contact center reports as local agent activity.
- Mobile agent CTI and application data uses the same security mechanisms as local agent data.

**Unified MA Provides Agent Log In Flexibility**

An agent, at various times, can be either a local agent or a mobile agent, depending on how they log in.

Regardless of whether an agent logs in as a local or mobile agent, the skill groups the agent belongs to will not change. In addition, since agents are chosen by existing selection rules, not how they are connected, the same routing applies regardless of how the agent logs in.

**Note:** If you want to use the scripting environment to control routing depending on whether an agent is local or mobile, you will need to assign the agent to different skill groups and design the script accordingly.

In addition, a mobile agent can be available through different phone numbers at different times; the agent enters the phone number at login time. (The phone number only needs to be dialable through the Unified CM dial plan.)

**Note:** For more information about logging in to Unified MA, see Using Unified MA in Your Contact Center (page 45).

**Connection Modes**

Cisco Unified Mobile Agent allows system administrators to configure agents to use either call by call dialing or a nailed connection, or the administrator can configure agents to choose a connection mode at login time.
Mobile Agents are defined as agents using phones not directly controlled by Unified CC, irrespective of their physical location. (The term local agent refers to an agent who uses a phone that is under control of Unified CC, irrespective of physical location.)

Mobile agents can be configured using either of two delivery modes:

- Call by Call – In this mode, the mobile agent’s phone is dialed for each incoming call. When the call ends, the mobile agent’s phone is disconnected before being made ready for the next call.

- Nailed Connection – In this mode, the agent is called at log in time and the line stays connected through multiple customer calls.

**Note:** The administrator can select the Agent chooses option, which allows an agent to select a call delivery mode at log in.

### Call by Call

In a call by call delivery mode, the mobile agent's phone is dialed for each incoming call. When the call ends, the mobile agent's phone disconnects before it is made ready for the next call.

The call by call call flow works as follows:

1. At log in, the agent specifies an assigned extension for a CTI port.

2. A customer call arrives in the system and, through normal ICM configuration and scripting, is queued for a skill group or an agent. (This is no different than existing processing for local agents.)

3. The system assigns an agent to the call. If the agent's Desk Setting is Unified MA-enabled and configured for either call by call or Agent chooses mode, the router uses the extension of the agent's CTI port as a label.

4. The incoming call rings at the agent's CTI port. The JTAPI Gateway and PIM will notice this but do not answer the call.

5. A call to the agent is initiated on another CTI port chosen from a preconfigured pool. If this call fails, Redirect on No Answer processing is initiated.

   **Note:** When using call by call mode, the Answer Wait Time is 3 - 15 seconds longer than in a local agent inbound call scenario. Specify a Redirect on No Answer setting large enough to accommodate the extra processing time. (For instructions, see How to Configure Unified MA on ICM Configuration Manager (page 30).)

6. When the agent takes the remote phone off-hook to answer the call, the system directs the customer call to the agent's call media address and the agent call to the customer's call media address.

7. When the call ends, both connections are terminated and the agent is ready to accept another call.
Note: In call by call delivery mode, callers often perceive a longer ring time compared to nailed connection delivery mode. This is because callers hear the ring tone for the duration of the call flow; ringing stops only after the agent answers. From the IPCC reporting perspective, a mobile agent in call by call delivery mode has a longer Answer Wait Time for the same reason.

Nailed Connection

In nailed connection delivery mode, the agent is called once, at login, and the phone line remains connected through multiple customer calls.

The nailed connection call flow works as follows:

1. At log in, the agent specifies an assigned extension for a CTI port from a pool.

2. A call to the agent is initiated on another CTI port chosen from a preconfigured pool. The agent answers the call. (The agent must answer this setup call to complete the connection and finalize the login procedure.)

3. A customer call arrives in the system and, through normal ICM configuration and scripting, is queued for a skill group or an agent. (This is no different than existing processing for local agents.)

4. The system assigns an agent to the call. If the agent's Desk Setting is Unified MA-enabled and configured for either Nailed connection or Agent chooses mode, the router uses the extension of the agent's CTI port as a label.

5. The incoming call rings at the agent's CTI port. The JTAPI Gateway and PIM will notice this but does not answer the call.

6. The Agent Desktop indicates a call is ringing and the agent clicks Answer.

7. When the agent indicates that they will answer the phone, the system directs the customer call to the agent's call media address and the agent call to the customer's call media address.

8. When the call ends, the customer connection terminates and the agent state is set to Ready.

Connect Tone

The Connect Tone feature in the nailed connection mode enables the system to play a tone to the mobile agent via the agent's headset to let the agent know when a new call is connected. In the nailed connection mode, an audible connect tone can be configured in addition to a call arrival notice (on the desktop only).

Here are the features of Connect Tone:

1. It is an audible tone (2 beeps) that is sent to the mobile agent head set when the call to the nailed connection mobile agent is connected.

2. It is a DTMP tone played by Cisco Unified Communications Manager and cannot be modified.
3. It is particularly useful when auto answer is enabled or the agent is an Outbound agent.

4. The Connect Tone is played only when the nailed connection mobile agent receives a call, as in the following examples:
   - Inbound call to the agent
   - Consultation call to the agent
   - Outbound reservation call to the agent
   - Outbound call to the agent

5. The Connect Tone is not played when the nailed connection mobile agent initiates a call, as in the following examples:
   - Call is made from the agent
   - Consultation call is made from the agent
   - Outbound direct preview call is made
   - Supervisor Barge-in call is made

**See Also**

See the section, *How to Enable the Mobile Agent Connect Tone (page 35)*, for instructions on how to enable the Connect Tone feature.

### Feature Requirements

#### Hardware and Software Requirements

Hardware and software requirements for the Unified MA are identical to those of Cisco Unified CCE. Limitations and scalability for Unified MA are discussed in the *Hardware and System Software Specifications (Bill of Materials) for Cisco Unified ICM/Unified Contact Center Enterprise & Hosted, Release 7.5(1)*.

#### Phone Requirements

A mobile agent can use an analog, digital, or IP phone to handle calls.

**Note:** When Mobile Agent phones are located on a cluster and a SIP Trunk is used to connect the cluster to another cluster under Unified CCE control, you must either use SIP phones as Mobile Agent phones, or select *ttp required* on the Unified CCE cluster to allow mobile agent calls to work.
CTI Port Requirements

Two CTI ports (local and remote) are required for every logged-in mobile agent.

Unified MA uses Unified CM CTI Port as a proxy for the agent's phone. When this proxy is set up, whenever a mobile agent is selected to handle a customer call, the following happens:

- The call is directed to the CTI port's extension.
- Unified CCE/CCH, using the JTAPI Gateway, intercepts the call arriving on the CTI Port and directs Unified CM to connect the call to the mobile agent.

For Unified MA to work properly, you need to configure two pools of CTI Ports:

- One pool to serve as the agent's virtual extension.
- The other pool to initiate calls to the agent.

Each pool requires one port per mobile agent. These CTI Ports must be assigned to the Unified ICME application, and will be recognized by Unified ICME when receiving the Unified CM configuration.

**Note:** For more information, see How to Configure CTI Port Pools (page 28).

Supported Unified CCE/CCH Features

The following features are supported in Release 7.5(1):

- Unified CCE and Unified SCCE support temporary uninstallation while preserving Mobile agent data.

For more information on temporary uninstallation, refer to one of the following installation guides:

- *Installation and Configuration Guide for Cisco Unified Contact Center Enterprise*
- *Installation and Configuration Guide for Cisco Unified System Contact Center Enterprise*

- Mobile agents can participate in outbound campaigns, but they must use a nailed-up connection for all outbound dialing modes.

- Unified MA supports Redirect on No Answer (RONA). If the mobile agent fails to answer, the agent is made Not Ready, and the call is redirected to a RANA DN route point.

- Unified MA supports silent monitoring in CTI OS and in Cisco Agent Desktop
Supported Unified CCE/CCH Features

Note: See Silent Monitoring Limitations (page 16) for a list of silent monitoring usage limitations for Unified MA.

- Unified MA supports the same call control capabilities as Unified CCE/CCH (answer, hold, transfer, etc.). All call control is done through the Cisco Agent Desktop.

- Unified MA supports the following codec: G711_64K_30_MILLISECONDS which default to g711 U-LAW G729_30_MILLISECONDS.

- There is no direct interaction between Unified MA and multichannel applications. Email and Chat are IP applications that will continue to operate normally, assuming the mobile agent has a desktop with enough bandwidth on the broadband connection to support them.

- Unified MA supports Cisco Unified Customer Voice Portal (Unified CVP) and Cisco Unified IP IVR.

Fault Tolerance Support

Fault tolerance for the Unified MA follows the behavior of Cisco Unified CCE/CCH:

- The JTAPI Gateway, IPCC PIM, and CTI components record key events related to Unified MA as part of their normal logging.

- As with standard Unified CC calls, if a peripheral gateway (PG) component such as the JTAPI Gateway fails, the phone call will not be lost, but subsequent call control (transfer, conference, or hold) might not be possible after a failover. The mobile agent is notified of a failure (on the desktop), but they will have to log in again after a Unified CM or ICM failure has occurred.

- Where CTI data is delivered for screen pops, CTI data is preserved.

Unified MA can experience many of the same failure cases as Unified CC:

- Side A/B failure
- IVR failure
- Unified CM failure
- CTI server failure

There are also some failure cases that are unique to Unified MA:

- A situation where a mobile agent is using a cellular phone and the connection is dropped due to non-availability of a signal, would be deemed as external failure. The agent would need to call back and login again.

- If a mobile agent's phone line disconnects while using Nailed Connection mode, the agent would need to log in again to receive new calls.
Unsupported or Limited Features for Mobile Agent

- Mobile Agent scalability may be contingent on specific Unified CM versions, see the *Cisco Unified Contact Center Enterprise 7.5 Solution Reference Network Design (SRND)* for details.

- Cisco Unified Contact Center Express is not supported for Mobile Agent, but does support Remote Agent. See Part 3 of this guide.

- Unified CM-based silent monitoring is not supported for Mobile Agent

- If a Mobile Agent calls RP (route point) or another Mobile Agent's instrument under the following conditions, the call will fail:
  - both Mobile Agents are using an SCCP phone as a mobile phone.
  - The remote call leg which is from RTP CTI Port to Mobile phone is via SIP CTI trunk.

  Workarounds are:
  - Enable RTP on SIP trunk (though note that Unified CM has limited RTP resources).
  - If a SIP trunk is used, use SIP phones.
  - Instead of using a SIP trunk, use H.323.

Important Considerations

Before you proceed, consider the following Unified MA limitations and recommendations:

Failover

- During failover, if an agent in call by call mode answers an alerting call, the call might be dropped. This occurs because the media cannot be bridged when there is no active PG.

- During a prolonged failover, if an agent takes call control action for a Unified MA-to-Unified MA call, the call might be dropped. This occurs because the activating PG might not have information for all agents and calls at that point.

- Unified CM failover causes a Mobile Agent call to be lost because call preservation on H.323 devices is not supported.
Performance

- Mobile agent call processing uses significantly more server resources and therefore will reduce the maximum number of supported agents on both Unified CM and the ICM Agent PG.

For more details about sizing mobile agents, refer to the *Cisco Unified Contact Center Enterprise 7.5 Solution Reference Network Design (SRND)*.

For more information, refer to the *Hardware and System Software Specifications (Bill of Materials) for Cisco Unified ICM/Unified Contact Center Enterprise & Hosted, Release 7.5(1)* for this release.

- Since Unified MA adds processing steps to Unified CCE/CCH default functionality, mobile agents might experience some delay in screen pops.

- From a caller’s perspective, the call by call delivery mode has a longer ring time compared to the nailed connection delivery mode. This is because Unified CCE/CCH does not start to dial the mobile agent’s phone number until after the call information is routed to the Agent Desktop. In addition, the customer call media stream is not connected to the agent until after the agent answers the phone.

  The caller hears a repeated ring tone while Unified CCE/CCH makes these connections.

Codec

The codec settings on the Peripheral Gateway and Voice Gateway must match.

Silent Monitoring

Unified MA provides the following Silent Monitoring support:

- Unified MA supports Silent Monitoring in a CAD or CTI OS deployment.

- Unified MA requires that caller and agent voice gateways be on separate devices if Silent Monitoring is to be used.

- Unified MA does not support Desktop Monitoring.

**Note:** For more information about Silent Monitoring requirements in a Unified MA environment, see *CTI OS System Manager’s Guide for Cisco Unified ICM/Contact Center Enterprise & Hosted*.
Unified MA Call Flows

This section provides sample Unified MA call flows for:

- Inbound calls
- Local consultation calls
- Remote consultation calls
- Remote conference calls

In all Unified MA call flows, the JTAPI Gateway maintains the signaling association between the inbound and outbound calls and, if necessary, performs further operations on the call. JTAPI Gateway, however, does not terminate media; it uses CTI to deliver the customer call from the inbound gateway port to the outbound gateway port.

This means that a mobile agent must use an agent desktop application to log in, change agent state, log out, and perform call control.

About The Figures in This Section

The figures in this section:

- Show a caller and a mobile agent in a cellular network. However, the same concepts apply whether the mobile agent is using an enterprise desk phone, an IP Phone spanning another Unified CM cluster, standard analog phone, or a third-party ACD phone.
- Focus solely on call media flow; a mobile agent must use a CTI Desktop with broadband access to perform agent state and call control.
- Show only a sampling of the call flows possible with Unified MA.

Inbound Call Flow

The following figure shows an inbound call flow.
Figure 2: Mobile Agent Inbound Call Flow

Note: Caller and Agent voice gateways can co-reside on one device, except in deployments where Silent Monitoring is required.

1. The mobile agent becomes available to answer calls by:
   - Logging on to the corporate domain using VPN over the ADSL/Cable connection.
   - Launching the agent desktop interface and logging in to the CTI server with their remote phone information.
   - Entering the Ready mode.

2. A customer call arrives at the Cisco Unified CC.

3. The JTAPI Gateway creates a mobile agent class to manage local and network CTI ports for a mobile agent.

4. The ICM Router passes the call to the local CTI Port of a mobile agent.

5. The JTAPI Gateway places a call on a network CTI port to the agent's cell phone.

6. The JTAPI Gateway uses local and network CTI ports of the mobile agent to stream the call's media from the inbound (caller) gateway port to the outbound (agent) gateway port.

Local Consult Calls

The following figure shows a consult call flow between a mobile agent and a local agent.
Figure 3: Mobile Agent Local Consult Call Flow

Note: Caller and Agent voice gateways can co-reside on one device, except in deployments where Silent Monitoring is required.

1. The mobile agent becomes available to answer calls by:
   - Logging on to the corporate domain using VPN over the ADSL/Cable connection.
   - Launching the agent desktop interface and logging in to the CTI server with their remote phone information.
   - Entering the Ready mode.

2. A customer call arrives at the Cisco Unified CC.

3. The JTAPI Gateway creates a mobile agent class to manage local and network CTI ports for a mobile agent.

4. The ICM Router passes the call to the local CTI Port of a mobile agent.

5. The JTAPI Gateway places Agent Connection Call 1 on a network CTI port to the agent's cell phone.

6. The mobile agent places the customer call on hold and consults a local Unified CCE/CCH agent.

7. The JTAPI Gateway uses local and network CTI ports of the mobile agent to stream the call's media from the IP hard phone to the outbound gateway port.
Remote Consult Calls

The following figure shows a remote consult call flow between two mobile agents.

*Figure 4: Mobile Agent Remote Consult Call Flow*

![Diagram showing the flow of a remote consult call between two mobile agents.]

**Note:** Caller and Agent voice gateways can co-reside on one device, except in deployments where Silent Monitoring is required.

1. The mobile agent becomes available to answer calls by:
   - Logging on to the corporate domain using VPN over the ADSL/Cable connection.
   - Launching the agent desktop interface and logging in to the CTI server with their remote phone information.
   - Entering the Ready mode.

2. A customer call arrives at the Cisco Unified CC.

3. The JTAPI Gateway creates a mobile agent class to manage local and network CTI ports for a mobile agent.

4. The ICM Router passes the call to the local CTI Port of a mobile agent.

5. The JTAPI Gateway places Agent Connection Call 1 on a network CTI port to the agent's cell phone.

6. Mobile Agent 1 puts the customer call on hold and consults Mobile Agent 2.
7. The JTAPI Gateway uses the network CTI port of Mobile Agent 1 and the network CTI port of Mobile Agent 2 to stream the call’s media from the outbound gateway port on Agent Gateway 1 to the outbound gateway port on Agent Gateway 2.

Remote Conference Calls

The following figure shows a remote conference call flow between two mobile agents.

![Figure 5: Mobile Agent Remote Conference Call Flow](image)

**Note:** Caller and Agent voice gateways can co-reside on one device, except in deployments where Silent Monitoring is required.

1. The mobile agent becomes available to answer calls by:
   - Logging on to the corporate domain using VPN over the ADSL/Cable connection.
   - Launching the agent desktop interface and logging into the CTI server with their remote phone information.
   - Entering the Ready mode.

2. A customer call arrives at the Cisco Unified CC.
3. The JTAPI Gateway creates a mobile agent class to manage local and network CTI ports for a mobile agent.

4. The ICM Router passes the call to the local CTI Port of a mobile agent.

5. Unified CM redirects the media stream 1 from inbound gateway on the Caller Gateway to the conference bridge during call merging process.

6. The JTAPI Gateway uses local and network CTI ports of mobile agent 1 to loop the call's Media Stream 2 from the outbound gateway port on the Agent Gateway 1 to the conference bridge.

7. The JTAPI Gateway uses local and network CTI ports of mobile agent 2 to loop the call's Media Stream 3 from the outbound gateway port on the Agent Gateway 2 to the conference bridge.

Outbound Option Call Flow

The following figure shows an Outbound Option call flow between a customer and a mobile agent.

**Note:** Unified MA supports Outbound Option calls in nailed connection delivery mode, only.

**Figure 6: Mobile Agent Outbound Call Flow**

**Note:** Caller and Agent voice gateways can co-reside on one device, except in deployments where Silent Monitoring is required.
1. The mobile agent becomes available to answer calls by:
   - Logging on to the corporate domain using VPN over the ADSL/Cable connection.
   - Launching the agent desktop interface and logging in to the CTI server with their remote phone information.
   - Entering the Ready mode.

2. The JTAPI Gateway creates a mobile agent class to manage local and network CTI ports for a mobile agent.

3. Outbound Option dials the customer number and, after reaching a live customer, the Dialer redirects the customer call to the local CTI Port of an Outbound Option mobile agent.

4. The JTAPI Gateway places a call on a network CTI port to the agent's cell phone.

5. The JTAPI Gateway uses local and network CTI ports of the mobile agent to stream the call's media from the inbound gateway port to the outbound gateway port.

**Unified Mobile Agent Reporting**

Unified MA-specific call data is contained in the following Cisco Unified CC reports:

- **Agent Real time reports** (*Agent20, Agtper20, Agtskg30, Agteam20*). These reports show what kind of call the agent is on (not mobile, call by call, nailed connection), and the mobile agent's phone number.

- **Agent Log Out Reports** (*Agent03, Agtper03, Agteam03*). These reports show what kind of call the agent was on (not mobile, call by call, nailed connection) and the mobile agent's phone number.

- **Agent Real Time All Fields Reports** (*Agent28, Agtper28, Agtskg28, Agteam28*). These reports show what kind of call the agent was on (not mobile, call by call, nailed connection etc.) and the mobile agents phone number.

Notes about mobile agents and reporting:

- The mobile agent must be *logged in* through the Agent Desktop for call data to be recorded in Cisco Unified CC reports.

- Service level for mobile agent calls might be different than local agent calls, since it takes longer to connect the call to the agent.

For example, a call by call mobile agent might have a longer Answer Wait Time Average than a local agent. This is because Unified CCE/CCH does not start to dial the mobile agent’s phone number until after the call information is routed to the Agent Desktop. In addition, the customer call media stream is not connected to the agent until after the agent answers the phone.

Chapter 2

System Configuration for Unified Mobile Agent

This chapter contains the following topics:

- **Summary of Unified Mobile Agent System Configuration Tasks**, page 25
- **About Unified Mobile Agent Performance and Optimization**, page 26
- **Configuring Unified CM for Unified MA**, page 26
- **Configuring the Unified CM Maximum Call Duration Timer**, page 29
- **Configuring Agent Desk Setting for Unified MA**, page 30
- **Configuring Device Targets for Unified MA**, page 32
- **Configuring Cisco CTI OS for Unified MA**, page 34
- **Enabling the Connect Tone Feature**, page 35
- **How to Enable the Mobile Agent Connect Tone**, page 35

**Summary of Unified Mobile Agent System Configuration Tasks**

This section describes the configuration tasks specific to Unified MA configuration. It does not describe Unified CCE/CCH.

**Note:** For complete details about installing and configuring Unified CCE/CCH, see *Installation and Configuration Guide for Cisco Unified Contact Center Enterprise*.

**Table 1: Unified MA System Configuration Tasks**

<table>
<thead>
<tr>
<th>Task</th>
<th>See</th>
</tr>
</thead>
</table>
| Configure Unified CM CTI Port pools and Call Duration Timer | Configuring Unified Communications Manager for Unified MA (page 26) provides:  
- Information about naming conventions for CTI Port pools in a Unified MA deployment and instructions for configuring and mapping the port pools. |
### About Unified Mobile Agent Performance and Optimization

Unified MA is resource-intensive. Since it essentially uses two CTI ports for each mobile agent, you might find that your system's call capacity level will be lower.

For complete information about configuring Unified MA to maximize performance, refer to this release's version of the following documents:

- *Hardware and System Software Specifications (Bill of Materials) for Cisco Unified ICM/Unified Contact Center Enterprise & Hosted, Release 7.5(1)*

- *Cisco Unified Contact Center Enterprise 7.5 Solution Reference Network Design*

### Configuring Unified CM for Unified MA

This section contains the following topics:

- Configuring and Mapping Unified CM CTI Ports for Unified MA

- Configuring the Unified CM Maximum Call Duration Timer

### Configuring and Mapping Unified CM CTI Ports for Unified MA

This section describes the CTI Port Pool configuration tasks specific to Mobile Agent Option configuration. It does not discuss installation or configuration of Cisco Unified CC Enterprise.

**Note:** For more information about installing and configuring Unified CM with Cisco Unified CC Enterprise, see *Installation and Configuration Guide for Cisco Unified Contact Center Enterprise* or the *Installation and Configuration Guide for Cisco Unified System Contact Center Enterprise* (if using the System Deployment of Unified CCE).

Unified MA needs two CTI Port pools configured on Unified CM:
• A **local** CTI port, which Unified MA uses as the agent's virtual extension.

• A **network** CTI port, which Unified MA uses to initiate a call to the mobile agent's phone.

**Naming Conventions for Local and Network Ports**

• The local port _must_ begin with the string **LCP**.

• The network port _must_ begin with the string **RCP**.

• Although not required, for best practices, use the following naming convention:
  
  – For a **local** CTI Port pool name, configure a name in the format LCPxxxxFyyyy, where **LCP** identifies a local CTI Port Pool, **xxxx** is the peripheral ID for the Unified CM PIM, and **yyyy** is the number of local CTI Port.

    Example: **LCP5000F0000** would represent CTI Port: 0 in a local CTI Port pool for the Unified CM PIM with the peripheral ID **5000**.

  – For a **network** CTI Port pool name, use the same format, except substituting **RCP** as the first three characters.

**Note:** While a naming convention is not required, the substrings identifying the Unified CM PIM peripheral ID and the CTI Port _must_ match for each local/network pair.

CTI Port configuration consists of the following steps:

1. Adding the CTI port as you would for an IP Phone.

2. Using the naming convention described above to map the local and network CTI ports.

   **Note:** Each local CTI port needs to have a corresponding network CTI port.

3. Adding a directory number for the local CTI port (that is, the agent's virtual extension).

4. Mapping the local and network CTI ports with the PG user.

**Note:**

• In Unified MA deployments, the Music on Hold (MoH) feature must be enabled for all **local** CTI ports to ensure that callers hear music when they are placed on hold. However, the MoH feature should be disabled for all **network** CTI ports.

• By default, MoH is enabled for mobile agents in the nailed connection mode. This lets you play a media file to the nailed up mobile agent while the agent is on hold. The media file is played from the network CTI Port through the Gateway to the remote agent phone device. However, if Unified CM default settings have been modified, the MoH feature is disabled. Browse to [http://www.cisco.com/en/US/products/sw/voicesw/ps556/products_qanda_item09186a0080094766.shtml#one](http://www.cisco.com/en/US/products/sw/voicesw/ps556/products_qanda_item09186a0080094766.shtml#one). You can also refer to the Unified
How to Configure Unified CM CTI Port Pools for Unified MA

Perform the following steps to configure CTI Ports.

**Step 1**
In Unified CM Administration, select **Device > Phone**.

**Step 2**
Click **Add a New Phone**.

**Step 3**
From **Phone Type**, select **CTI Port**.

**Step 4**
Click **Next**.

**Step 5**
In **Device Name**, enter a unique name for the **local** CTI Port pool name; click **OK** when finished.

Using the example naming convention format LCPxxxxFyyyy:
- **LCP** identifies the CTI Port as a local device.
- **xxxx** is the peripheral ID for the Unified CM PIM.
- **yyyy** is the directory number (the agent extension) of the local CTI Port.

The name **LCP5000F0000** would represent CTI Port: 0 in a local CTI Port pool for the Unified CM PIM with the peripheral ID **5000**.

**Step 6**
In **Description**, enter text identifying the local CTI Port pool.

**Step 7**
Use the Device Pool drop-down list to choose the device pool to which you want network CTI Port pool assigned. (The device pool defines sets of common characteristics for devices.)

**Step 8**
Click **Save**.

**Step 9**
Highlight a record and select **Add a New DN**.

**Step 10**
Add a unique directory number for the CTI port you just created.

**Step 11**
When finished, click **Save** and **Close**.

**Step 12**
Repeat the steps above to configure the **network** CTI Port pool.

In **Device Name**, using the example naming convention format RCPxxxxFyyyy, where:
- **RCP** identifies the CTI Port as a network device.
- **xxxx** is the peripheral ID for the Unified CM PIM.
- **yyyy** is the directory number (the agent extension) of the network CTI Port.
The name **RCP5000F0000** would represent CTI Port: 0 in a network CTI Port pool for the Unified CM PIM with the peripheral ID **5000**.

**Step 13**  
In Description, enter text identifying the network CTI Port pool.

**Step 14**  
Use the Device Pool drop-down list to choose the device pool to which you want network CTI Port pool assigned. (The device pool defines sets of common characteristics for devices.)

**Step 15**  
Click **Save**.

**Step 16**  
Highlight a record and select Add a New DN.

**Step 17**  
Add a unique directory number for the CTI port you just created.

**Step 18**  
When finished, click **Save** and **Close**.

---

**How to Map Local and Network CTI ports With PG User**

After you have defined the CTI Port pool, you must associate the CTI Ports with PG users.

**Step 1**  
In Unified CM Administration, select **Application User**.

**Step 2**  
Select a user name and associate ports with it.

**Step 3**  
When finished, click **Save** and **Close**

**Note:** If CTI ports for Unified MA are disassociated at the Unified CM while a mobile agent is on an active call, the call might be dropped.

---

**Configuring the Unified CM Maximum Call Duration Timer**

By default, mobile agents in nailed connection mode will be logged out after 12 hours. This happens because a Unified CM Service Parameter -- the Maximum Call Duration Timer -- determines the amount of time an agent phone can remain in the Connected state after login.

If you anticipate that nailed connection agents in your Unified MA deployment will be logged on **longer than** 12 hours, follow the instructions below to either:

- Increase the Maximum Call Duration Timer setting.
- Disable the timer entirely.
How to Configure the Unified CM Maximum Call Duration Timer

**Note:** This procedure applies only to Unified MA deployments where agents logged on in nailed connection mode are to remain connected longer than 12 hours.

**Note:** If your Mobile Agent deployment uses intercluster trunks, you must perform the following steps on both local and network Unified CM clusters.

---

**Step 1** In Unified CM Administration, select **System > Service Parameters**.

**Step 2** In the Server drop-down list, choose a server.

**Step 3** In the Service drop-down list, choose **Unified CM**.

The Service Parameters Configuration window appears.

**Step 4** In the Cluster-wide Parameters section, specify a **Maximum Call Duration Timer** setting.

The default is 720 minutes (12 hours); the maximum setting allowed is 35791 minutes.

**Note:** To disable the timer, enter 0.

**Step 5** Click **Save**.

---

Configuring Agent Desk Setting for Unified MA

This section describes Agent Desk Settings you should modify to accommodate Unified MA features.

You can configure Agent Desk settings through:

- ICM Configuration Manager
- System IPCC Web Administration

How to Configure Agent Desk Settings with ICM Configuration Manager

This section describes Agent Desk Settings configuration settings you should specify in ICM Configuration Manager to accommodate Unified MA features.

**Note:** The instructions below describe how to configure one Agent Desk Setting; repeat this process for each different Agent Desk Setting in your deployment.

**Step 1** From the ICM Configuration Manager, choose **Configure ICM > Enterprise > Agent Desk Settings List**.
The ICM Agent Desk Settings List dialog box opens.

**Step 2**  
Click Retrieve.

**Step 3**  
Click Add.

**Step 4**  
Fill in the following Attributes tab information, making sure to include settings for the following fields and check boxes:

- **Ring no answer time.** Unified CCE/CCH will allow a call to ring at the agent’s station before redirecting the call. This can be from 1 to 120 seconds.
  
  **Note:** If using call by call mode, the answer wait time will be longer than in a local agent inbound call scenario, so specify a value in this field to accommodate the extra processing time.

- **Logout non-activity time.** The number of seconds of agent inactivity while in the not ready state before IPCC will logout the agent. A blank entry will disable the timer.

  **Note:** In addition, the CTI OS ConnectionProfiles key RejectIfAlreadyLoggedIn should be set to 1 to prohibit an agent from logging in again as both a remote and a local agent. For more information, see Configuring Unified MA for Cisco CTI Object Server (CTI OS) (page 34).

- **Cisco Unified Mobile Agent** (checkbox). Enables the Unified MA feature so that the agent can login remotely and take calls from any phone.

- **Mobile agent mode.** Select how call connections are made to the mobile agent’s phone:
  
  - **Agent chooses.** Agent selects call by call or nailed connection at login.
  
  - **Call by call.** Agent's phone is dialed for each incoming call. When a call ends, the connection is terminated before the agent is made ready for next call.
  
  - **Nailed connection.** Agent is called once, at login. The line stays connected through multiple customer calls.

**Step 5**  
Click Save.

---

**Note:** For complete details configuring Agent Desk Settings in Unified CCE/CCH, see *Installation and Configuration Guide for Cisco Unified Contact Center Enterprise*.

---

**How to Configure Agent Desk Settings with System IPCC Web Administration**

This section describes Agent Desk Settings configuration settings you should specify through System IPCC Web Administration to accommodate Unified MA features.

**Note:** The instructions below describe how to configure one Agent Desk Setting; repeat this process for each different Agent Desk Setting in your deployment.
<table>
<thead>
<tr>
<th>Step 1</th>
<th>Log in to the System IPCC Web Administration tool.</th>
</tr>
</thead>
<tbody>
<tr>

</table>

**Note:** For complete details configuring Agent Desk Settings using the IPCC Web Administration Tool, see *Installation and Configuration Guide for Cisco Unified System Contact Center Enterprise*.

### Configuring Device Targets for Unified MA

Unified CCE systems require that a device target be configured for each IP telephone that might be used by an agent. The only difference between configuring a device target for a local agent and a remote agent is that Unified MA uses the agent's *local CTI port* instead of the agent's *extension*. 
How to Configure Device Targets

**Note:** This step is not required for deployments that use the System PG.

**Step 1**
From the ICM Configuration Manager, choose **Configure ICM > Targets > Device Target > Device Target Explorer**.

The Device Target Explorer window opens.

**Step 2**
Click **Retrieve** and then click **Add Device Target**.

The Device Target tab opens.

**Step 3**
Enter values for the following fields:

- **Name.** An enterprise name for the target. This name must be unique among all device targets in the enterprise.

- **Global Address.** The global address for the device. Must be set to a value that is unique from all other device targets in the enterprise. It is suggested that you use the same value that you entered in the Enterprise Name field.

- **Config Parameters.** Use this field to enter any specific configuration parameters that might be required:
  - /devtype (CiscoPhone)
  - /dn (full phone number)
  - /ext (extension)

**Note:** For Unified MA, instead of entering the agent extension (ext) value, specify the local CTI Port assigned to the agent.

The ICM software gives this string to the Unified CM to initialize the device.

- **Description.** Enter a description of the device. This is an optional field used to provide additional information about the device.

**Step 4**
When finished, click the **Save**.

**Note:** For complete details configuring Device Targets in Unified CCE/CCH, see *Installation and Configuration Guide for Cisco Unified Contact Center Enterprise*. 
Configuring Cisco CTI OS for Unified MA

This section describes information about CTI OS configuration settings that you need to know after initial installation of a Mobile Agent-enabled CTI OS Server.

**Note:** For complete instructions on installing and configuring CTI OS Server, see *CTI OS System Manager's Guide for Cisco Unified ICM/Contact Center Enterprise & Hosted*.

About CTI OS Installation and Unified MA

**Note:** Running the CTI OS 7.x server installer is not the same as running CTI OS 7.x installer from the CTI OS bin directory.

To configure Mobile Agent, first run the CTI OS 7.x server installer. Then run the CTI OS installer from the CTI OS bin directory. The first installer updates CTI OS server while the second installer allows you to configure mobile agent. Use this procedure for configuring any new feature made available in a maintenance release.

During the peripheral identification step of CTI OS Server installation:

- The Unified MA feature is enabled for the CTI Desktop (from the CTI OS bin directory).
- The call delivery mode (agent choose, call by call, nailed connection) is defined.

About Call Delivery Mode and Agent Profiles

- The call delivery mode selected during CTI OS Server installation enables CTI OS to send an agent profile to each desktop client for that mode.
- The call delivery mode the agent uses at login needs to match the mode configured for the agent in the Agent Desk Setting.
- Re-running the CTI OS installation and selecting a different Mobile Agent mode will overwrite the existing profile.
- Additional profiles can be added manually using the CTI OS registry.

How to Prevent Duplicate Logins to the Same AgentID

In the default Installation, the CTI OS system does not prevent duplicate logins. If you want to change the default, you need to make the following change in the Windows Registry for the key `RejectIfAlreadyLoggedln`.

Perform the following steps to prevent duplicate logins.
Enabling the Connect Tone Feature

Mobile Agent Connect Tone is a new feature in Release 7.5. In a nailed-up connection, it enables the system to play a tone to the mobile agent via the agent's headset to let the agent know when a new call is connected. In the default Installation, the Mobile Agent Connect Tone feature is disabled.

How to Enable the Mobile Agent Connect Tone

If Unified MA Connect Tone is required, you need to make the following change in the Windows Registry for the key PlayMAConnectTone under the JTAPI GW PG registry entries.

Perform the following steps to allow a mobile agent in the nailed connection mode to hear a tone when a new call is connected.

---

**Step 1**
On the PG machine, open the Registry Editor (regedit.exe).

**Step 2**
Navigate to HKEY_LOCAL_MACHINE\SOFTWARE\Cisco Systems, Inc\ICM\icm7\PG\PG\CurrentVersion\JGWS\jgw1\JGWData\Config\PlayMAConnectTone

The Edit DWORD Value dialog box appears.

**Step 3**
In the Value data: field, enter 1 to enable Mobile Agent Connect Tone and click OK.

**Step 4**
Exit the Registry Editor to save the change, and cycle the PG service.
Enabling the Connect Tone Feature
Troubleshooting Unified Mobile Agent

This troubleshooting section contains trace level settings for Unified MA, general Unified MA troubleshooting information, samples of Unified MA log content, FAQs, and recovery tips.

This chapter contains the following topics:

- MA Trace Levels, page 37
- Unified MA Failure Recovery Tips, page 38
- Samples of Unified MA Log Content, page 38

MA Trace Levels

Trace levels for troubleshooting Mobile Agent are provided below:

**JTAPI Gateway:**

There is no separate trace mask for Mobile Agent. To enable trace for Mobile Agent, the following traces can be enabled as needed.

- Procmon <customer instance name> <nodename> jgw<#>
- >>>>trace JT_TPREQUESTS /on
- >>>>trace JT_CONNECTION /on
- >>>>trace JT_MEMORY /on
- >>>>trace JT_TERM_EVENT_RTP /on

**EAGTPIM:**
There is no separate trace mask for Mobile Agent. The existing tele_drive_OP_ERR bit is turned on using default trace level.

**CTIOS, CTISever, OPC:**

There is no additional trace mask for Mobile Agent.

Condition: The user has configured the mobile agent option within the ICM Agent Desk settings page. However, the Agent Desktop softphone application does not display any fields on the login dialog for the agent to log in as a mobile agent. Problem: The CTIOS Server was not set up properly during install or the connection profiles defined in the registry are not defined correctly for Mobile Agents. The ShowFieldBitmask value needs to be defined in the connection profile for the appropriate mobile agent settings. The CTIOS Server connection profiles sent to the CTIOS client desktop contain the information for ShowFieldBitmask which controls what fields are displayed on the login dialog. Recommended Action: Rerun the CTIOS Server setup program, on the Peripheral dialog screen select the Mobile Agent option and the appropriate work mode. The registry is automatically updated with the appropriate values when the CTIOS Server setup program is run.

### Unified MA Failure Recovery Tips

**Table 2: Unified MA Failure Recovery Tips**

<table>
<thead>
<tr>
<th>Recovery Issue</th>
<th>Resolution</th>
</tr>
</thead>
<tbody>
<tr>
<td>Power failure</td>
<td>Once the power is back up, verify that the Agent Desktop reboots properly and that the network is available. You can then login.</td>
</tr>
<tr>
<td></td>
<td><strong>Note:</strong> UPS can mitigate the risk of a power failure at home by keeping the cable modem and agent’s PC powered up for a certain duration.</td>
</tr>
<tr>
<td>Internet failure</td>
<td>When the broadband connection is lost, the agent goes offline. Once the connection is reestablished, login again.</td>
</tr>
<tr>
<td>Agent Desktop reboot</td>
<td>See Power failure, above.</td>
</tr>
<tr>
<td>Agent Desktop application restart</td>
<td>Restart the application and log back into the server. If a call is still in progress, do not change the state to Ready.</td>
</tr>
<tr>
<td>VPN tunnel failure</td>
<td>If broadband access is available, but the connection to the corporate site is not, verify that the VPN tunnel is not misconfigured / broken. If it is broken, it will have to be reconfigured by the System Administrator.</td>
</tr>
</tbody>
</table>

### Samples of Unified MA Log Content

Agent login - When a mobile agent with agentID:2025 and remote phone number:2090 logs in using assigned local CTI port:5000, the "AgentInstrument" field will contain "5000;2090":

```
16:18:23 SESSION 1: MsgType:SET_AGENT_STATE_REQ
(InvokeID:0xa0a5 PeripheralID:5000 AgentState:LOGIN 16:18:23 SESSION 1:
AgentWorkMode:RA_NAILED_CONNECTION
```
An agent event is sent to the agent desktop. The AgentInstrument field in all subsequent agent events for the mobile agent with agentID:2025 has 5000 (that is, local CTI Port) as Agent extension and AgentInstrument.

Failed agent login - Try to log in a mobile agent (cti port=5001, remote phone=3000, agentID=74003) and agent's desk setting is set to Mobile Agent, but CTI Port Name for 5001 in CCM does not start with "LCP". Peripheral Error Code: PERERR_TELDRIVE_MOBILEAGENT_INCORRECT_LCP=10151.

Failed agent login - Try to log in a mobile agent (cti port=5001, remote phone=3000, agentID=74000) while agent's desk setting is not enabled for Mobile Agent. Peripheral Error Code: PERERR_TELDRIVE_MOBILEAGENT_MODE_NOT_ALLOWED=10153.

Mobile agent transitions to Available state - Mobile agent with agentID:2025 and remote phone number:2090 logged in using local CTI port(5000) sends a request to change its agent state to AS_AVAILABLE.

16:18:30 SESSION 1: MsgType:SET_AGENT_STATE_REQ (InvokeID:0xa0bb PeripheralID:5000 AgentState:AVAILABLE 16:18:30 SESSION 1: AgentWorkMode:RA_CALL_BY_CALL NumSkillGroups:0 EventReasonCode:0 AgentInstrument:"5000" 16:18:30 SESSION 1: AgentID:"2025" )

An agent event is sent to the agent desktop. Agent event has local CTI Port (5000) as Agent extension and AgentInstrument.

Note: If a mobile agent is configured to use nailed connection, disconnecting the nailed connection call causes agent state to transition to AS_LOGGED_OUT.

Unified Mobile Agent Option is Unavailable in Agent Desktop Login Dialog

Symptom:

The Agent Desktop softphone application does not display the Unified Mobile Agent Mode option to allow an agent to log in as a mobile agent.

Message:

None.

Cause:

Unified MA settings were not specified during CTI OS Server setup.

Action:

1. Rerun the CTIOS Server setup program and specify the following on the Peripheral Identifier screen.

2. Select the Enable Mobile Agent checkbox.

3. From the Mobile Agent Mode drop-down list, select Agent chooses.

4. When the CTIOS Server setup program is run, the registry is automatically updated with the appropriate values.
Call Mode Unavailable in Agent Desktop Login Dialog

**Symptom:**

The agent is unable to select a call mode on the login dialog. The call mode field is disabled and set to either call by call or nailed connection; there is no option to change it.

**Message:**

None.

**Cause:**

The CTIOS Server was not set up properly during install, or the connection profiles defined in the registry are not defined correctly for mobile agents.

**Action:**

1. Rerun the CTIOS Server setup program and specify the following on the Peripheral Identifier screen.
2. Select the **Enable Mobile Agent** checkbox.
3. From the Mobile Agent Mode drop-down list, select **Agent chooses**.
4. When the CTIOS Server setup program is run, the registry is automatically updated with the appropriate values.

Mobile Agent Login Failed

**Symptom:**

Mobile agent login failed with an error message.

**Message:**

See the table below.

**Cause:**

Mobile agent login failures can result from a number of causes. Login failure messages are described in the table below.

<table>
<thead>
<tr>
<th>Message</th>

**Action:**

See possible actions listed in the table above.

**Mobile Agent is Logged Out**

**Symptom:**

Call by call delivery mode fails and mobile agent is logged out.

**Message:**

None.
Cause:
Agent call cannot connect due to invalid phone number.

Action:
Check to make sure mobile agent phone number is entered correctly before logging back in.

Mobile Agent is Set to Not Ready

Symptom:
Call by call delivery mode fails and mobile agent is set to Not Ready.

Message:
None.

Cause:
Mobile agent state changed to Not Ready because the mobile agent did not answer the call, or the mobile agent's phone line rang busy.

Action:
Check mobile agent phone line and make sure the line is available.

Call By Call Delivery Mode Fails

Symptom:
Call by call delivery mode fails.

Message:
RESOURCE_NOT_AVAILABLE appears in JTAPI Gateway Log

Cause:
The codec settings on the PG and Voice Gateway do not match.

Action:
Use the CtiPortMediaCapability registry key (...\PG\CurrentVersion\JGWS\Jgw#\JGWData\Config\CtiPortMediaCapability) to change the codec configuration on either the PG or Voice Gateway.

Valid values are: 0 (the default for G.711 support and 1 for G.729 codec support.)
Note: Voice Gateways participating in Unified MA calls need to have dial-peer to support the correct codec.
Part 2: Using Unified Mobile Agent in Your Contact Center

This section provides the following:

- Important information about Unified Mobile Agent features and functionality.
- Instructions for call processing for agents using the Cisco CTI OS Agent Desktop or the Cisco Agent Desktop.
- Instructions for call processing and agent management for supervisors using the Cisco CTI OS Supervisor Desktop or CAD Supervisor Desktop.

Note:
- This section describes tasks that are specific to interacting with Unified MA. For complete information about using these desktops, refer to the Cisco CTI OS documentation (located on the Cisco web page (http://www.cisco.com/en/US/products/sw/custcosw/ps14/products_user_guide_list.html) ) and the CAD documentation (located on the Cisco web page (http://www.cisco.com/en/US/products/sw/custcosw/ps427/products_user_guide_list.html)).

- Refer to the Hardware and System Software Specifications (Bill of Materials) for Cisco Unified ICM/Unified Contact Center Enterprise & Hosted, Release 7.5(1) for this release (located on the Cisco web page (http://www.cisco.com/en/US/products/sw/custcosw/ps1001/products_user_guide_list.html)) for details about desktop operating system and software requirements.
Important Considerations

Before You Begin

Cisco recommends that you disable home or cell phone calling features that might impact a customer call experience prior to login. Examples of calling features are, but may not be limited to:

- Call waiting
- Call forwarding
- Voicemail

Before you log in and begin to process calls as a mobile agent, you should be aware of the way Mobile Agent operates. Specifically,

- Mobile agents cannot perform agent state and call control without a CTI Desktop.
- Unified MA supports Outbound Option calls in nailed connection delivery mode, only.
- If a mobile agent on one PG calls a mobile agent on a different PG, and both PGs are connected to the same Unified CM cluster, only blind transfer/conference are supported.
- During a consult transfer or conference call, a source Unified MA agent does not hear a ring back after dialing the destination agent because the media stream cannot be bridged until that agent answers. If configured, the source agent hears Music on Hold (MoH).
- You cannot transfer or conference a call using the buttons on your mobile agent phone; you must use the Agent Desktop to perform these functions.
- If you log in and intend to use nailed connection mode, you **must** answer the setup call before log in is complete.
• If a mobile agent in call by call mode places an outbound call -- that is, uses the CTI OS Agent Desktop **Dial** button or the Cisco Agent Desktop **Make Call** button -- the agent's phone will ring before the destination phone rings. This happens because Unified CCE establishes the agent call leg before it establishes the destination call leg.

• By default, a mobile agent in nailed connection mode on CTI OS Agent Desktop **does not ring** when a call arrives.

**Note:** For information about how to change the default setting, see How to Enable a Ring Tone on the CTI OS Agent Desktop (page 51).

**Note:** If a mobile agent in nailed connection mode has not disabled voicemail and rejects the setup call, the setup call is sent to voicemail. The mobile agent continues to be logged into the CTI Desktop and agent state is set to Ready. However, because the setup call was not accepted, the system will log off the mobile agent when the voicemail ends and the agent phone line disconnects.
Unified Mobile Agent for Agents

Unified MA is available on the following Cisco Agent Desktops:

• Cisco CTI OS Agent Desktop

• Cisco Agent Desktop (CAD) and Cisco Agent Desktop-Browser Edition (CAD-BE)

This chapter contains the following topics:

• Using the CTI OS Agent Desktop, page 49
• Using the Cisco Agent Desktop (CAD), page 54

Using the CTI OS Agent Desktop

Unified MA is available with the Cisco CTI OS Agent Desktop.

CTI OS Agent Desktop provides an interface that:

• Enables you to perform telephony call control -- such as call answer, hold, conference, and transfer -- and agent state control -- such as ready/not ready, wrap up, etc.

• Presents customer call data in the form of a screen pop.

• Provides you with agent statistics and chat capability.

Note: CTI OS only supports chat between agents on the same peripheral.

Note: For more information about using CTI OS Agent Desktop to handle calls, refer to the CTI OS Agent Desktop User Guide for Cisco Unified ICM/CC Enterprise & Hosted.
How to Log In

Perform the following steps to log in to the CTI OS Agent Desktop.

**Step 1**
From the desktop, click **Login**.

The CTI Login dialog box displays.

*Figure 7: CTI Login*

**Step 2**
In the CTI Login dialog box, enter the following information in the corresponding fields:

- **Connect to.** Use the drop-down menu to select the connection mode you want to use.

- **Agent ID or Agent Login Name.** Your supervisor assigns your Agent ID.

  *Note:* You are prompted to enter either your Agent ID or Agent Login Name. Log in options are determined during the installation of the CTI OS Server.

- **Password.** Your supervisor assigns your this password.

- **Instrument.** The directory number for the local CTI port; this is your Unified CCE phone extension.

- **Mobile Agent.** You must select this checkbox to log in as a mobile agent.

- **Phone Number.** The dial number for the phone you intend to use.

  *Note:* The format for the phone number must follow the dial plan, for example, 91978-936-xxxx.

- **Call Mode.** Use the drop-down menu to choose the connection mode you want to use; Call by call or nailed connection.
Note: Auto-answer is supported only with the nailed connection mode.

Step 3 Click OK.

The desktop automatically enters the state configured on the switch (either Ready or Not Ready) and the buttons for actions that state are enabled.

Note: For a Nailed connection, a setup call must be received and answered before agent login is complete.

See Also

Agent Login Fails (page 41)
Connection Modes (page 9)

How to Verify Log In

Perform the following steps to verify your log in.

Step 1 Check to be sure that your desktop is in the Ready or Not Ready state.

Note: Switch configuration determines the state the desktop enters at log in time.

Step 2 Check to be sure the status bar of your Unified MA Desktop displays the following:

• Agent ID for the logged in agent
• Agent Extension
• Agent Instrument
• Current Agent Status
• The server that the desktop is connected to

Step 3 Check to be sure the action buttons that are allowed for your current agent state are enabled.

How to Enable a Ring Tone on the CTI OS Agent Desktop

Note: This procedure applies only to agents using CTI OS Agent Desktop in nailed connection delivery mode.

By default, a CTI OS Agent Desktop in nailed connection delivery mode does not ring when a call arrives. Instead, an alert message appears on the desktop to indicate the arrival of a call.

Perform the following steps to enable a ring tone on the CTI OS Agent Desktop:
Step 1
Click **Dial**.

The CTI Dialing Pad dialog displays.

Step 2
Click **More**.

The Options dialog displays.

Step 3
Click the **Mute Tones** tab and clear the **Ring Back** check box.

This action disables the mute setting of the ring back tone.

Step 4
Click **Close**.

This setting remains in effect until you change it or log out. You need to repeat these steps each time you log in.

**See Also**

Nailed Connection (page 11)

How to Enable the Ready State

You must be set to the Ready state to accept calls. At log in, the system switch determines whether you are placed in the Ready or Not Ready state.

Step 1
If you are in the Not Ready state and the **Ready** button is enabled, click the **Ready** button.

How to Initiate a Call

Perform the following steps to initiate a call.

Step 1
Enter a state from which you can make a call. (You are in the correct state to make a call if the **Dial** button is enabled.)

**Note:** Depending on the switch, you might also be able to make calls if the **Ready** or **Not Ready** buttons are enabled.

Step 2
Use the CTI Dial Pad to enter a phone number.

How to Transfer a Call

Perform the following steps to transfer a call.
Step 1  Click the Transfer button. The CTI Dialing Pad dialog box appears.

Step 2  Enter the phone number to be dialed in the Dialed Number field or select a destination from the pull-down menu. The pull-down menu contains the last six numbers dialed from this desktop.

Step 3  Optionally, click the More button to display the Call Data tab, where you can optionally enter data associated with the call.

Step 4  Do one of the following:

a. If you do want to speak with the consulted agent, click the Transfer Init button. When the Transfer Init button is pressed, the call is put on hold. The agent has an opportunity to speak to the consulted agent before completing the transfer. When the consult call is answered, the button changes to Transfer Complete. To complete the transfer, click Transfer Complete.

b. If you do not want to speak with the consulted agent, click Single Step. The call transfers automatically.

How to Conference a Call

Perform the following steps to conference a call.

Step 1  Click the Conference button.

The CTI Dialing Pad dialog box displays.

Step 2  Enter the phone number to be dialed in the Dialed Number field or select a destination from the pull-down menu. The pull-down menu contains the last six numbers dialed from this desktop.

Step 3  Optionally, click the More button to display the CTI Dialing Pad.

Step 4  Click the Conference Init button.

This action places the call on hold, which gives you an opportunity to speak to the consulted agent before completing the conference. When the consult call is answered, the button changes to Conference Complete.

Step 5  Click Conference Complete to complete the conference.

The two calls now appear on the Call Information Grid as one call.

Integrating CRM Desktops with Unified CCE via CTI OS

Customer Relationship Management (CRM) applications can be integrated with Unified CCE via CTI OS to allow an agent to log in via their CRM application, and they can be enhanced to allow an agent to have a Mobile Agent Checkbooks option and to supply a call mode and phone
number. However, those integrated CRM interfaces must be enhanced in order to support using mobile agents. It is likely that a mobile agent could log in via the CTI OS agent desktop and then continue to use the integrated CRM agent interface as usual for call control and any further agent state control. However, this capability would have to be verified for each CRM integrated offering.

The Cisco CTI Driver for Siebel is an installable component developed by Cisco that enables integration of the Cisco Unified CCE with the Siebel CRM Environment. In this solution, the Siebel Agent Desktop provides the agent state and call control interface. The Siebel Desktop utilizes the Cisco CTI Driver for Siebel, which is built on top of the CTI Desktop Toolkit C++ CIL to communicate with the CTI Object Server. For more information

See the *Cisco Unified Contact Center Enterprise 7.5 Solution Reference Network Design (SRND)* guide for additional information on CRM desktop integrations.

**Using the Cisco Agent Desktop (CAD)**

Unified MA is available with the Cisco Agent Desktop.

**CAD:**

- Provides call control capabilities—such as call answer, hold, conference, and transfer, and ACD state control—ready/not ready, wrap up, etc.

- Presents customer information through an enterprise data window and an optional screen pop.

- Requires minimum screen real estate and enables agents to customize its functionality to meet their individual needs.

**Note:** For complete information about using CAD to handle calls, see the *Cisco Agent Desktop User Guide for Cisco Unified ICM/CC Enterprise & Hosted*.

**How to Log In**

Perform the following steps to start Cisco Agent Desktop and log in as a mobile agent.

**Step 1** Choose **Start > Programs > Cisco > Desktop > Agent**.

The Mobile Agent Login dialog box displays.
Step 2  In the Mobile Agent Login dialog box, enter the following information in the corresponding fields:

Step 3  Enter your Login Name/Agent ID.

You are prompted to enter either your Agent ID or Login Name. Log in options are determined during the installation of the CTI OS Server.

The maximum length for the Login Name field is 32 characters. For Agent ID, extension and password fields, the maximum data length is limited to 12 characters.

Note: If the login method (Login Name or Agent ID) is changed while you are in the process of logging in, an error message displays to indicate the log in method has changed. You will need to restart Agent Desktop to log in using the new method.

Step 4  Enter your Password.

Step 5  Enter your Extension.

Agent Desktop can control only those calls on the extension entered in this field, regardless of whether the mobile agent is configured with multiple extensions.

Step 6  Select Mobile Agent Mode.

Step 7  Under Mobile Agent Parameters, select a call delivery mode.

Step 8  Specify a Mobile Agent Phone Number. The dial number for the phone you are using.

Note: The Mobile Agent Phone Number field can contain only numeric characters.

Step 9  Click OK.

The Agent Desktop starts and is immediately minimized on the taskbar at the bottom of the mobile agent's Windows desktop.
Note: For a Nailed connection, a setup call must be received and answered before agent login is complete.

How to Verify Log In

Step 1  Check to be sure your Cisco Agent Desktop displays the following:

• Your agent name, as configured in ICM.
• Your agent extension, as entered in the Login dialog box.
• Your agent ID or name, as entered in the Login dialog box.
• Your current agent state and the time spent in that state.
• Current status of agent desktop features.
• Current system time.

Note: Remember, you must enter the Ready state before you can begin processing calls.

How to Enable the Ready State

You must be set to the Ready state to answer an ACD call.

Step 1  On the toolbar, click Ready.

How to Initiate a Call

Step 1  Click Not Ready.

Note: You must be in the Not Ready state to initiate a call.

Step 2  Click Make Call.

The Make a Call window appears.

Step 3  Enter a number in the Name: Number field.

Step 4  Click Dial

How to Transfer a Call

There are two types of transfer calls:
Supervised transfers. In a supervised transfer, the mobile agent speaks to the third party to whom the call is being transferred before connecting the active call; this allows the mobile agent to confirm that the third party is ready to accept the call.

Blind transfers. In a blind transfer, the mobile agent transfers the active call to the third party without speaking. The remote agent hangs up before the third party answers the phone and therefore, can't confirm if the third party is ready to accept the call.

Follow the instructions below to transfer a call.

Step 1  With a call active, click Transfer.

The Transferring Call window appears.

Step 2  Enter the phone number to which the remote agent is transferring the call in the Name: Number field.

Step 3  Click Dial.

Step 4  When the phone rings, the Dial button changes to the Transfer button.

Step 5  If: You want to do a supervised transfer.

Then: Wait for the third person to answer the phone, announce the transfer, then click Transfer.

If: You want to do a blind transfer.

Then: Click Transfer without waiting for the third person to pick up the phone.

How to Conference a Call

There are two types of conference calls:

Supervised conference. In a supervised conference, the mobile agent speaks to the third party the agent wants to add to the call before completing the conference, to confirm that the third party is ready to accept the call.

Blind conference. In a blind conference, the mobile agent adds the third party to the conference without speaking to him or her.

Note: When using a blind conference to add someone to the call, the remote agent might or might not see the call tagged as a conference call in the dashboard pane.

Follow the instructions below to make a conference call.

Step 1  With a call active, click Conference.
The Conferencing window appears.

**Step 2** Enter the phone number of the person the mobile agent wants to add to the call in the Name: Number field.

**Step 3** Click **Dial**.

When the phone rings, the **Dial** button changes to the **Add to Conf.** button.

**Step 4**

**If:** If you want a supervised conference.

**Then:** Wait for the third person to answer the phone, announce the conference, then click **Add to Conf.**

**If:** If you want a blind conference.

**Then:** Click Add to Conf. without waiting for the third person to pick up the phone.

The Conferencing window closes.

**Step 5** To add one or more people to the conference call, repeat Steps 1 to 4 for each person.

**Note:** The total number of conference call participants on a call is determined by settings on the Unified CM. Ask your supervisor for the total number configured for your contact center.
Chapter 6

Unified Mobile Agent for Supervisors

Unified MA is available on the following Cisco supervisor desktops:

- Cisco CTI OS Supervisor Desktop
- CAD Supervisor Desktop

This chapter contains the following topics:

- Using the CTI OS Supervisor Desktop, page 59
- Using the CAD Supervisor Desktop, page 61

Using the CTI OS Supervisor Desktop

Unified MA is available with CTI OS Supervisor Desktop. The CTI OS Supervisor Desktop has all of the functionality of the Agent Desktop, with additional functions for monitoring and managing Agent Team members.

**Note:** CTI OS Supervisor Desktop is supported for use on Unified CCE/CCH, only. It is not supported for use on TDM peripherals.

The instructions that follow describe CTI OS Supervisor Desktop tasks that are specific to configuring and interacting with mobile agents. For complete information about using this desktop, see *CTI OS Supervisor Desktop User Guide for Cisco Unified ICM/CC Enterprise & Hosted*.

How to login to the CTI OS Supervisor Desktop

**Step 1** Select **Start** > **Programs** > **Cisco Systems CTI Toolkit** > **IPCC Supervisor Desktop**.
The Supervisor Softphone and Team Real-Time Status windows appear.

**Step 2**  
On the Softphone, click **Login**.

The Login dialog box appears.

**Step 3**  
Enter the following information in the dialog box:

- **Connect to.** Use the drop-down menu to select the connection mode that you want to use.
- **Agent ID** or **Agent Login Name.** The agent ID as assigned by the agent's manager.
  
  **Note:** Depending on the option chosen for logging in during the installation of the CTI OS Server, the Login dialog on the Agent desktop will prompt for either the Agent ID or the Agent Login Name.

- **Password.** The password as assigned by the agent's manager.
- **Instrument.** The directory number for the local CTI port (the agent’s virtual extension).
- **Mobile Agent.** Check this box to log in as a mobile agent.
- **Phone Number.** The dial number for the phone the mobile agent is using. This should include all dial-plan information Unified CCE/CCH needs to reach the agent phone.
- **Call Mode.** Choose Nailed Connection or Call by Call. A new call is placed to the agent for each incoming call. (For more information, see How does Unified MA deliver calls to mobile agents? (page 9))

  **Note:**
  - If you login using nailed connection mode, you must answer a setup call before login is complete.
  - Auto answer is supported with the Unified MA Nailed Connection mode. It is not supported with the Unified MA call by call connection mode.

**Step 4**  
Click **OK**.

The supervisor automatically enters the Not Ready state and the **Ready, Dial, and Logout** agent state control buttons are enabled.

---

**How to Verify Log In**

**Step 1**  
Check that your desktop is in the Not Ready state.

**Step 2**  
Check that the status bar of your Unified MA Supervisor Desktop displays the following:

- Agent ID for the logged in supervisor
• Supervisor Extension
• Supervisor Instrument
• Current Supervisor Status
• The server that the Supervisor is connected to

**Step 3**  Check that the **Ready**, **Dial**, and **Logout** agent state control buttons are enabled.

---

**How to Configure a Mobile Agent**

CTI Desktop agent configuration is handled through ICM Configuration Manager or, in System IPCC, through the Web Administration tool. For more information, see How to Configure Unified Mobile Agent on ICM Configuration Manager (page 30).

**How to Monitor Mobile Agent Calls**

A supervisor can silent monitor an agent on his/her team. The silent monitoring feature voice packets sent to and received by the agent's IP device are captured from the network and sent to the supervisor desktop. At the supervisor desktop, these voice packets are decoded and played on the supervisor's system sound card.

**Note:** For more information about silent monitoring, see CTI OS Supervisor Desktop User Guide for Cisco Unified ICM/Contact Center Enterprise & Hosted and Cisco Supervisor Desktop User Guide.

**Step 1**  Select a logged in agent from the Team State Information grid.

**Step 2**  In the Team State window, click **Start Silent Monitor**.

When the targeted agent desktop accepts the session, the voice conversation between the monitored agent and the caller will be forwarded to the supervisor desktop and played back on the soundcard of the system.

**Step 3**  Click **Stop Monitoring Agent** to end the monitoring session.

---

**Using the CAD Supervisor Desktop**

Unified MA is available with CAD Supervisor Desktop. The CTI OS Supervisor Desktop has all of the functionality of the Agent Desktop, with additional functions for monitoring and managing Agent Team members.
The instructions that describe CAD Supervisor Desktop tasks that are specific to configuring and interacting with mobile agents. For complete information about using this desktop, see *CAD Supervisor Desktop User Guide for Cisco Unified ICM/CC Enterprise & Hosted*.

## How to Log In to the Supervisor Desktop

**Step 1** Log in to Cisco Agent Desktop.  

**Note:** You must be logged in to be able to use all of Supervisor Desktop's functionality.

**Step 2** Choose Start > Programs > Cisco > Desktop > Supervisor. The Supervisor Login dialog box appears.

**Step 3** Enter your Supervisor Desktop login ID and password, and then click OK or press Enter.

Supervisor Desktop starts. The application will show no data and the status bar will display “No Service” until you select a team from the Team drop-down list.

**Note:**

- Supervisor Desktop can be configured by the Administrator so that you log in using your login name, not your login ID. The field name (Login ID or Login Name) will reflect which login method you should use.
- The first time you log into Supervisor Desktop, the password is empty by default—all you need to enter is your Login ID. Use the Change Password function to create your password.
- It might take some time for Supervisor Desktop to start because default report data must be generated.

## How to View Mobile Agents

**Step 1** In Supervisor Desktop, choose View > Preferences, and then select the Agents node.

**Step 2** In the Format node text grid, check the elements you want to use to identify an agent.

The elements are:

- Name
- Extension
- Application used by the agent (CAD, CAD-BE, or IPPA)
- Type of agent (mobile)

A sample of what the name will look like appears on the Sample line.

**Step 3** Click OK.
For example, if you enter John Doe x1000 CAD 6125551234 (Mobile):

- *John Doe* is the agent name.
- *x1000* is the CTI port the agent is connected to when logging in.
- *CAD* is the application the agent uses.
- *6125551234 (Mobile)* is the number of the phone device the mobile agent is using to handle calls.
Remote Agent, the predecessor of Mobile Agent, offers two deployment options:

- Remote Agent with IP Phone (over a Cisco Business Ready Teleworker setup).
- Remote Agent with analog phone.

Mobile Agent provides flexibility and ease of use benefits compared to the Remote Agent with analog phone. Remote Agent will continue to be supported for customers who already have it installed.

However, if you are upgrading to 7.5(1) and are planning to configure a mobile agent to use an analog phone or an IP Phone without Cisco Business Ready Teleworker setup, you should use the Mobile Agent Option.

**Note:** Remote Agent continues to be the product of choice for remote IP Phone with the Cisco Business Ready Teleworker setup.
Introduction to IPCC Remote Agent Option

IPCC Remote Agent Option provides the capability to use remote agents when staffing contact centers.

Note: A remote agent is classified as limited to a single agent working at a remote site, such as the agent’s home or in an office outside the contact center’s headquarters. They are not classified as agents working at one of the contact center’s sites. Multiple agents sitting in remote sites are considered branch agents.

Support is provided for remote agents using one of the following options:

- Remote Agent with IP Phone (over a Cisco Business Ready Teleworker setup)

- Remote Agent with analog phone

By means of this support, Cisco IPCC remote agents with IP Phone can benefit from standard Cisco 8xx series Router support, persistent VPN, Cisco IOS based security, and QoS for voice.

Agents are connected to the corporate network using a residential broadband (cable or DSL) network connection that can support voice, data, and video traffic. The connection is secure, and provides "always-on" access to call-center applications using a VPN. Built-in, end-to-end security helps ensure that confidential customer information, such as medical records and financial information, is protected, and the corporate network is secure from "back door" attacks.

This chapter contains the following topics:

- About IPCC Remote Agent Option Primary Components, page 68
- How Cisco IPCC Remote Agent Option Works with an IP Phone, page 69
- How Cisco IPCC Remote Agent Option Works with an Analog Phone, page 70
- Remote Agent with IP Phone Call Flow, page 71
The primary components of the IPCC Remote Agent Option are:

- **Cisco IP Contact Center solution**: Cisco IP Contact Center combines Cisco IP telephony and ready-to-use computer telephony integration (CTI) capabilities in a call-center product suite. The software includes intelligent call routing, multichannel automatic call distribution (ACD) capability, IVR, call queuing, and consolidated reporting features.

  Cisco IP Contact Center components include the following:

  - Unified CM: Provides traditional private branch exchange (PBX) telephony features and functions to packet-telephony devices. Installed on a server-class PC, Cisco Unified CM software provides basic call processing, signaling, and connection services to Cisco IP Phones, VoIP gateways, and software applications.

  - Cisco Computer Telephony Integration Object Server (CTI OS) Desktop and Cisco Agent Desktop (CAD): Allow an agent to control the remote agent state (for example, Login, Available/Unavailable, and Work or Wrap Up) and perform call control (answer, release, hold, and transfer).

  - Unified CVP (formerly Internet Service Node) or Cisco IP IVR: Provides announcements, prompting, gathering of caller-entered digits, and a queue point to park calls when all remote agents are busy.

  - VoIP gateways.

  - Centralized monitoring and recording: Provides call-center managers with real-time and historic data for all remote agents.

- **Cisco Business Ready Teleworker architecture** (for IP Phone only): The Cisco Business Ready Teleworker architecture, combined with Cisco IP Contact Center, gives remote agents the same accessibility to call-center applications as staff based at central sites. Cisco Business Ready Teleworker provides the most comprehensive security and network management available in a teleworking environment over a standard cable or broadband connection. This includes QoS to help ensure prioritization of mission-critical or delay-sensitive traffic. Cisco Business Ready Teleworker can be quickly and cost-effectively deployed to deliver high-quality, consistent application access for remote agents through an always-on, secure, and centrally managed connection to the enterprise network.

  **Note:** A remote agent using an analog phone does not require a Cisco 8xx Series Router and does not use the Cisco Business Ready Teleworker setup.

  Cisco Business Ready Teleworker components include the following:

  - VPN: Provides secure, consistent access to information, call-center applications, and customer data. The VPN tunnel is transparent to applications and the end user, and promotes
stable and consistent application behavior over the WAN, protecting and extending existing infrastructure investments.

**Note:** Agents will receive persistent VPN communication from the Cisco 800 Series Router.

– Advanced application access: With IP telephony a separate PBX, voice switch, or ACD call-control platform at the remote-agent location is not needed. Network-based ACD extends call-center services to thousands of remote-agent locations simultaneously.

– QoS: Helps ensure high-quality voice communication between the caller and remote agent. Voice, data, and video can be delivered over the same line by prioritizing applications based on bandwidth requirements or business priorities.

**Note:** QoS delivers marked tagged packets, but the service is not guaranteed since it is over a service provider network.

– Network security and authentication: Security is integrated completely with all other functions. End-to-end security options for remote agents include trust and identity options (802.1x authentication), integrated firewall, intrusion detection system (IDS), and host-based intrusion detection with Cisco Security Agent.

– Centralized management and support: Helps ensure control over the performance of remote agents as though they were based on the main call center. Administrators can push policies and configurations transparently to remote-agent locations, perform quality surveys, and do real-time remote monitoring.

**See Also**

Refer to the Cisco unified CCE, CTI OS, and CAD documentation set at the Cisco web page (http://www.cisco.com/univercd/cc/td/doc/product/icm/index.htm) for detailed information about these applications.

**How Cisco IPCC Remote Agent Option Works with an IP Phone**

**Note:** IPCC Remote Agent Option with IP Phone is supported on the Cisco Unified Contact Center Enterprise, the Cisco Unified Contact Center Hosted, and the Cisco Unified Contact Center Express solutions.

At the remote agent site, a Cisco IP Phone, with an ACD extension number, connects to a Cisco 8xx Series secure, persistent Broadband Router that provides a secure VPN connection back to the call center over a broadband facility. The router, based on Cisco IOS Software, provides all the features necessary for an always-on, business-ready connection in a single cost-effective platform. A Unified CM on the corporate network provides the call management on the IP Phone.
Note: This is one option available when using IPCC Remote Agent Option. This product is also available using the Remote Agent with analog phone.

Figure 9: IPCC Remote Agent Option with IP Phone

When a call comes in to the call center, the Unified CM alerts the Cisco IP Contact Center, which then finds the best available remote agent based on customer-defined business rules. If no remote agents are available, the call is held in an IVR queue, and the caller hears a recorded message or music until an agent becomes available.

How Cisco IPCC Remote Agent Option Works with an Analog Phone

Note: IPCC Remote Agent Option with analog phone is supported on the Cisco IPCC Enterprise Edition and the Cisco IPCC Hosted Edition solutions, only.

At the remote agent site, an analog phone connects to the PSTN and using an active broadband connection, the agent uses VPN to access the corporate site (using SoftVPN client) from his/her PC.

Figure 10: IPCC Remote Agent Option with Analog Phone
When a call comes in to the contact center, the Unified CM alerts the Cisco IP Contact Center, which then finds the best available remote agent based on customer-defined business rules. If the remote agent is on an analog phone, Unified CM sends the call to the Voice Gateway (VG248), which in turn sends it to the PSTN through the VoIP gateway's PRI lines. If no remote agents are available, the call is held in an IVR queue, and the caller hears a recorded message or music until an agent becomes available.

Remote Agent with IP Phone Call Flow

The following figure displays a typical call flow.

Figure 11: Remote Agent with IP Phone Call Flow

1. The remote agent becomes available by logging on to the corporate domain using VPN over the ADSL/Cable connection, and by launching the agent desktop interface to log on the CTI server. The remote agent then goes into a ready mode.

2. Customer calls in from PSTN.

3. Call flows in on PRI VoIP gateway.

4. Call is processed by Unified CM and routed to Unified IP IVR.

5. Call is sent to the remote agent.

6. The remote agent's IP Phone rings and the agent desktop receives a screen pop with the incoming call.

7. The supervisor, whether remote or in contact center, can fully control an agent, including barge, intercept, chat, and state controls.

Remote Agent with Analog Phone Call Flow

The following figure displays a typical call flow.
1. The remote agent becomes available by logging on to the corporate domain using VPN over the ADSL/Cable connection, and by launching the agent desktop interface to log on the CTI server. The remote agent then goes into a ready mode.

2. Customer calls in from PSTN.

3. Call flows in on PRI VoIP gateway.

4. Call is processed by Unified CM and routed to Cisco IP IVR.

5. A VG248 port is designated as the remote agent phone. An incoming call to IPCC sends a ring command to the VG248 port.

6. The VG248 FXS port is connected to the FXO port on the voice gateway.

7. The voice gateway using Private line automatic ring down (PLAR) forwards the ring command over PSTN to the remote agent's analog phone.

8. The analog phone receives the ring command from its local PSTN provider. (This happens because the PLAR was sent from the IPCC voice gateway.)

9. The remote agent's analog phone rings and the agent desktop receives a screen pop with the incoming call.
Chapter 8

System Configuration for Remote Agent with IP Phone

Configuration Guidelines

The following tables provide configuration checklists and guidelines to follow when using the Remote Agent with IP Phone.

Configuring Remote Agent with IP Phone

Note: IPCC Remote Agent Option with IP Phone is supported on the Cisco Unified Contact Center Enterprise, the Cisco Unified Contact Center Hosted, and the Cisco Unified Contact Center Express solutions.

<table>
<thead>
<tr>
<th>Step</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>1.</td>
<td>Provision the remote agent PC and IP Phone on the IPCC central site to ensure operability before distributing it to a remote agent site.</td>
</tr>
</tbody>
</table>
| 2.   | At a remote agent site, connect the agent desktop to the RJ45 port on the back of the IP Phone.  
  Note: The IP Phone and agent desktop PC get their network settings from DHCP. |
### Remote Agent with IP Phone Considerations

#### Network Requirements

<table>
<thead>
<tr>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Ensure the ADSL and Cable bandwidth values are set to at least 256kb uplink and 1 Mbps downlink.</td>
</tr>
<tr>
<td>Do not exceed 60ms to 90ms of jitter delay each way on the maximum ADSL network delay. If the ADSL delay is greater than the maximum, the IPCC application will encounter longer response times.</td>
</tr>
<tr>
<td>Make sure the IPCC bandwidth value does not exceed 128k uplink; otherwise, the remote agent solution might not work properly.</td>
</tr>
<tr>
<td>The default codec for 256kb uplink is the G.729. To achieve higher voice quality, use the G.711.</td>
</tr>
<tr>
<td>Only unicast Music on Hold (MoH) streams are supported.</td>
</tr>
<tr>
<td>Set up a transcoder to enable outside callers to receive MOH, if the MOH server is not set up to stream G.729 codec.</td>
</tr>
<tr>
<td>As a backup to the remote agent desktop, you can configure the remote agent to use the IP Phone as a login device when possible.</td>
</tr>
</tbody>
</table>

IP Phones supported with IPCC Remote Agent Option are those currently compatible with IPCC as listed in the *Hardware and System Software Specifications (Bill of Materials) for Cisco Unified ICM/Unified Contact Center Enterprise & Hosted, Release 7.5(1).*
Chapter 9

System Configuration for Remote Agent with Analog Phone

This chapter contains the following topics:

- Configuration Guidelines, page 75
- Remote Agent with Analog Phone Considerations, page 77

Configuration Guidelines

The following tables provide configuration checklists and guidelines to follow when using the Remote Agent with analog phone.

Configuring Remote Agent with Analog Phone at the Central Office Site

Note: IPCC Remote Agent Option with analog phone is supported on the Cisco IPCC Enterprise Edition and the Cisco IPCC Hosted Edition solutions, only.

Provision the remote agent PC and analog Phone on the IPCC central site to ensure operability before distributing it to a remote agent site.

Configuration Summary: Add the VG248 voice gateway to the Unified CM configuration at the central office site. Each of the ports on the VG248 are what the agents use as their login...
devices when they are remote. These are the extensions they use when they log in. The configuration on the VG248 is a connection through PLAR routing direct to the agents home (or remote) phone. For an example configuration, See also Sample Cisco IOS Configuration for Analog FXO to PRI Gateway (page 91)

<table>
<thead>
<tr>
<th>Step</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>1.</td>
<td>On the Unified CM, assign a Directory Number (DN) to a port on the VG248; for example: 6777.</td>
</tr>
<tr>
<td>2.</td>
<td>On the DC (Domain Controller)/DNS Server, create a DNS entry for the remote agent's desktop; otherwise the agent will not be able to connect to a CTI server. DNS entries can be dynamically updated or entered as static updates. If DNS entries are not desired, ensure that the client connects to the CTI server through IP.</td>
</tr>
<tr>
<td>3.</td>
<td>Create labels for the new extension connected to Unified CM and the Unified IP IVR peripheral.</td>
</tr>
<tr>
<td>4.</td>
<td>Add the device target to the IPCC configuration. See the IPCC Administration &amp; Configuration Guide.</td>
</tr>
<tr>
<td>5.</td>
<td>Add the device to pguser. This is described in the Cisco Unified CM Administration Guide. Go to the 'Users' - Application and select the user associated with the PG. From the list of unregistered devices, add the appropriate device to the list of associated devices.</td>
</tr>
<tr>
<td>6.</td>
<td>Directly connect the VG248 FXS port to a FXO port on the gateway router. Each FXS port you are using on the VG248 is connected to an FXO port on the voice gateway router.</td>
</tr>
<tr>
<td>7.</td>
<td>Configure the gateway FXO port as a connection plar to your (the agent's) home (or remote) phone number; for example: 6035551212. <strong>Note:</strong> The phone number must match the dial plan setup in Unified CM. The connection plar command goes on the FXO port of the gateway router(s).</td>
</tr>
</tbody>
</table>

Agent's Home (Remote) Configuration and Setup

<table>
<thead>
<tr>
<th>Step</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>1.</td>
<td>Configure the agent desktop PC at the remote site with an IP address, a network mask, DNS, and default gateway configured for DHCP.</td>
</tr>
<tr>
<td>2.</td>
<td>Set up the VPN client to connect to the contact center's headquarters.</td>
</tr>
</tbody>
</table>

Example Remote Connection Process

<table>
<thead>
<tr>
<th>Step</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>1.</td>
<td>Ensure that the VPN connection is up.</td>
</tr>
<tr>
<td>2.</td>
<td>Log into the CTIOS server.</td>
</tr>
<tr>
<td>3.</td>
<td>Agent logs in on extension 6777 and goes Available on extension 6777. Unified IPCC Enterprise knows to send the call to 6777. <strong>The phone number 6777 is the agent's remote number that is configured at the gateway. This needs to be done ahead of time. Every port on the VG248 that will be used for agents should have an associated remote phone number to call using the connection plar command.</strong></td>
</tr>
<tr>
<td>4.</td>
<td>The agent gets notification that a call is coming and the home (or remote) phone rings.</td>
</tr>
</tbody>
</table>
Remote Agent with Analog Phone Network Requirements Checklist

<table>
<thead>
<tr>
<th><strong>Network Requirements</strong></th>
</tr>
</thead>
<tbody>
<tr>
<td>Do not exceed 150ms Round Trip Time (RTT) of ADSL/Cable network delay.</td>
</tr>
<tr>
<td>Do not exceed not exceed 60ms of jitter delay.</td>
</tr>
<tr>
<td>The minimum broadband bandwidth for the agent desktop is 256kb uplink and 1 Mbps downlink.</td>
</tr>
<tr>
<td>Configure the voice gateway/access server with at least one active PRI, T1, E1, or DS3 connection to the PSTN.</td>
</tr>
<tr>
<td>The remote agent's phone number is the number assigned via PLAR routing in the VoIP gateway.</td>
</tr>
</tbody>
</table>

**Note:** The remote agent PSTN phone number might vary in an actual deployment.

<p>| |</p>
<table>
<thead>
<tr>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>The phones at the remote sites will be analog phones only connected to the PSTN.</td>
</tr>
<tr>
<td>The current configuration only supports unicast Music on Hold (MoH) streams. A Unified CM is the MoH server.</td>
</tr>
<tr>
<td>The maximum PSTN delay supported is 250ms.</td>
</tr>
<tr>
<td>Configure the VG248 to use G.711.</td>
</tr>
</tbody>
</table>

Remote Agent with Analog Phone Considerations

An analog phone is classified as any PSTN phone; for example, a regular touchtone phone or a mobile/cell phone both qualify as analog phones.
Remote Agent User Information

IPCC Remote Agent Option is available on the following Cisco desktops:

- **Cisco CTI Toolkit Agent Desktop**: Provides an interface that enables agents to perform telephony call control and agent state control. The CTI Toolkit Agent Desktop provides an interface to allow call data to be presented to an agent in the form of a screen pop. The CTI Toolkit Agent Desktop also provides agents with statistics and chat capability.

  **Note:** CTI OS only supports chat between agents on the same peripheral.

- **Cisco CTI Toolkit IPCC Supervisor Desktop**: The Supervisor Desktop has all of the functionality of the Agent Desktop, with additional functions for monitoring and managing Agent Team members.

  **Note:** The CTI Toolkit IPCC Supervisor Desktop is supported for use on Cisco IPCC Enterprise only. It is not supported for use on TDM peripherals.

- **Cisco Agent Desktop**: Provides call control capabilities—such as call answer, hold, conference, and transfer, and ACD state control—ready/not ready, wrap up, etc. Customer information is presented to an agent through an enterprise data window and an optional screen pop. Cisco Agent Desktop requires minimum screen real estate and enables agents to customize its functionality to meet their individual needs.

  **Note:** CAD is not available with IP Phone Agent using an analog phone.

**Note:**

- Refer to the Cisco CTI OS documentation (located on the [Cisco web page](http://www.cisco.com/en/US/products/sw/custcosw/ps14/products_user_guide_list.html)) and the CAD documentation (located on the [Cisco web page](http://www.cisco.com/en/US/products/sw/custcosw/ps427/products_user_guide_list.html)).

- Refer to the *Hardware and System Software Specifications (Bill of Materials) for Cisco Unified ICM/Unified Contact Center Enterprise & Hosted, Release 7.5(1)* for this release.
Using CTI Toolkit and CAD Desktops

This chapter contains the following topics:

- Using CTI Toolkit and CAD Desktops, page 80
- Installation and Configuration Checklists, page 85
- Hardware Installation and Configuration, page 86

Using CTI Toolkit and CAD Desktops

Using the CTI Toolkit Agent Desktop

<table>
<thead>
<tr>
<th>Action</th>
<th>Resolution</th>
</tr>
</thead>
<tbody>
<tr>
<td>How does an agent log in to the desktop?</td>
<td>To log into CTI Toolkit Agent Desktop, click the Login button. The Login button connects agents to the CTI Server and logs agents into a selected ACD switch. When an agent clicks the Login button, the CTI Login dialog box appears.</td>
</tr>
<tr>
<td></td>
<td>Enter the following information in the dialog box:</td>
</tr>
<tr>
<td></td>
<td>• Connect to. Use the drop-down menu to select the connection profile that you want to use.</td>
</tr>
<tr>
<td></td>
<td>• Agent ID. The agent ID as assigned by the agent's manager.</td>
</tr>
<tr>
<td></td>
<td>Note: Depending on the option chosen for logging in during the installation of the CTI OS Server, the Login dialog on the Agent desktop will prompt for either the Agent ID or the Login Name.</td>
</tr>
<tr>
<td></td>
<td>• Password. The password as assigned by the agent's manager.</td>
</tr>
<tr>
<td></td>
<td>• Instrument. The device ID assigned to the teleset where the agent will receive calls.</td>
</tr>
<tr>
<td></td>
<td>After entering this information, click the OK button.</td>
</tr>
<tr>
<td></td>
<td>On a successful login, the following occurs:</td>
</tr>
<tr>
<td></td>
<td>• The agent automatically enters the state configured on the switch, either Ready or Not Ready state.</td>
</tr>
<tr>
<td></td>
<td>• The status bar on the bottom of the CTI Toolkit Agent Desktop Screen displays the following information</td>
</tr>
<tr>
<td></td>
<td>– Agent ID for the logged in agent</td>
</tr>
<tr>
<td></td>
<td>– Agent Extension</td>
</tr>
<tr>
<td>Action</td>
<td>Resolution</td>
</tr>
<tr>
<td>--------</td>
<td>------------</td>

<tr>
<td></td>
<td>– Agent Instrument</td>
</tr>
<tr>
<td></td>
<td>– Current Agent Status</td>
</tr>
<tr>
<td></td>
<td>– The server that the agent is connected to</td>
</tr>
<tr>
<td></td>
<td>• Buttons for actions that are allowed from your current agent state are enabled.</td>
</tr>
</tbody>
</table>

**Note:** If the **Login** button is not enabled when the CTI Toolkit Agent Desktop displays, the remote agent did not successfully log in.

<table>
<thead>
<tr>
<th>How can an agent verify a successful login?</th>
<th>On a successful login, the following occurs:</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>• The remote agent automatically enters the state configured on the switch, either Ready or Not Ready state.</td>
</tr>
<tr>
<td></td>
<td>• The status bar on the bottom of the CTI Toolkit Agent Desktop window displays the following information:</td>
</tr>
<tr>
<td></td>
<td>– Agent ID for the logged in agent</td>
</tr>
<tr>
<td></td>
<td>– Agent Extension</td>
</tr>
<tr>

<td>– Agent Instrument</td>
</tr>
<tr>
<td></td>
<td>– Current Agent Status</td>
</tr>
<tr>
<td></td>
<td>– The server that the agent is connected to</td>
</tr>
<tr>
<td></td>
<td>• Buttons for actions that are allowed from your current agent state are enabled.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>How does an agent enter the Ready state to start accepting calls?</th>
<th>An agent enters either Ready or Not Ready state on completion of a successful login, depending on the configuration of the agent’s switch. If the agent is in the Not Ready state and the <strong>Ready</strong> button is enabled, enter the Ready state by clicking the <strong>Ready</strong> button.</th>
</tr>
</thead>
</table>

<table>
<thead>
<tr>
<th>How does an agent perform a transfer?</th>
<th>To transfer a call, perform the following steps:</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>1. Click the <strong>Transfer</strong> button. The CTI Dialing Pad dialog box appears.</td>
</tr>
<tr>
<td></td>
<td>2. Enter the phone number to be dialed in the Dialed Number field or select a destination from the pull-down menu. The pull-down menu contains the last six numbers dialed from this desktop.</td>
</tr>
<tr>
<td></td>
<td>3. Optionally, click the <strong>More</strong> button to display the Call Data tab, where you can enter data associated with the call.</td>
</tr>
<tr>
<td></td>
<td>The remaining steps depend on whether the agent wants to speak with the consulted agent upon call transfer.</td>
</tr>
</tbody>
</table>
### Action | Resolution
---|---
| If the agent does not want to speak with the consulted agent, click the **Single Step** button. The call is transferred automatically.
| If the agent wants to speak with the consulted agent, click the **Transfer Init** button. Once the **Transfer Init** button is pressed, the call is placed on hold. The agent has an opportunity to speak to the consulted agent before completing the transfer. When the consult call is answered, the button changes to **Transfer Complete**. To complete the transfer, click the **Transfer Complete** button.

### How does an agent initiate a conference call?
To initiate a conference call, perform the following steps:

1. Click the **Conference** button. The CTI Dialing Pad dialog box appears.

2. Enter the phone number to be dialed in the Dialed Number field or select a destination from the pull-down menu. The pull-down menu contains the last six numbers dialed from this desktop.

3. Optionally, click the **More** button to display the CTI Dialing Pad.

4. Click the **Conference Init** button. The call is now put on hold. The agent will have an opportunity to speak to the consulted agent before completing the conference. When the consult call is answered, the button changes to **Conference Complete**. To complete the conference, click the **Conference Complete** button.

When the conference operation completes, the two calls then appear on the Call Information Grid as one call.

### When is an agent available to make calls?
An agent is able to make calls if the **Dial** button is enabled. Depending on the agent’s switch, the agent might also be able to make calls if the **Ready** or **Not Ready** buttons are enabled.

### Using the CAD Desktop

| Action | Resolution |
---|---|
| How does an agent log in to the desktop? | To start Agent Desktop:

1. Choose **Start > Programs > Cisco > Desktop > Agent**. The Agent Login dialog box appears.

**Note:**

- For IPCC Enterprise only, Agent Desktop prompts for either the remote agent’s Login ID or the Login Name in the Login dialog box. Which prompt appears depends on how the administrator has configured the system.

- If the login method (Login Name or Login ID) is changed while the remote agent is in the process of logging in, an error message appears stating that the login method has changed. The remote agent must restart Agent Desktop to log in using the new method. (The information in this note is not applicable to Unified CCX.)
<table>
<thead>
<tr>
<th>Action</th>
<th>Resolution</th>
</tr>
</thead>
<tbody>
<tr>
<td>2. Enter the remote agent login ID or login name, password, and extension in the appropriate fields, and then click OK or press Enter.</td>
<td></td>
</tr>
<tr>
<td>– If the remote agent attempts to log in and the login ID/login name (with or without the same extension used in association with it) is already in use by another agent, the remote agent will be asked to forcibly log in. If the remote agent opts to do so, that agent is logged in and the other agent using that ID will be logged out.</td>
<td></td>
</tr>
<tr>
<td>– If the remote agent attempts to log in and the extension is already in use by another agent, that agent will not be able to log in unless a different extension is entered.</td>
<td></td>
</tr>
</tbody>
</table>

Agent Desktop starts and is immediately minimized on the taskbar at the bottom of the remote agent’s Windows desktop.

Login notes:

- The maximum length for the Login Name field is 32 characters. For Agent ID, extension and password fields, the maximum data length is limited to 12 characters.
- Agent Desktop can control only those calls on the extension entered in the Login dialog box, even if the remote agent is configured with multiple extensions.

| How does an agent get into the Ready state to start accepting calls? | Clicking the **Ready** button changes the state to Ready, indicating that the remote agent is available to receive ACD calls. |
| How does an agent transfer a call? | There are two types of transfer calls: |
| | • **Supervised transfers.** In a supervised transfer, the remote agent speaks to the third party to whom the call is being transferred before connecting the active call, to confirm that the third party is ready to accept the call. |
| | • **Blind transfers.** In a blind transfer, the remote agent transfers the active call to the third party without speaking. The remote agent hangs up before the third party answers the phone and, therefore, cannot confirm if the third party is ready to accept the call. |

To transfer a call:

1. With a call active, click **Transfer**.
   
   The Transferring Call window appears.

2. Enter the phone number to which the remote agent is transferring the call in the Name: Number field.

3. Click **Dial**.
### Action | Resolution
--- | ---
 | When the phone rings, the **Dial** button changes to the Transfer button.

4. Take one of the following actions:
   - For a supervised transfer, wait for the third person to answer the phone, announce the transfer, then click **Transfer**.
   - For a blind transfer, click **Transfer** without waiting for the third person to pick up the phone.

How does an agent initiate a conference call?

| | There are two types of conference calls:
--- | ---

- **Supervised conference.** In a supervised conference, the remote agent speaks to the third party he or she wants to add to the call before completing the conference, to confirm that the third party is ready to accept the call.

- **Blind conference.** In a blind conference, the remote agent adds the third party to the conference without speaking to him or her.

**Note:** When using a blind conference to add someone to the call, the remote agent might or might not see the call tagged as a conference call in the dashboard pane.

To make a conference call:

1. With a call active, click **Conference**.
   - The Conferencing window appears.

2. Enter the phone number of the person the remote agent wants to add to the call in the Name: Number field.

3. Click **Dial**.
   - When the phone rings, the **Dial** button changes to the **Add to Conf.** button.

4. Take one of the following actions:
   - For a supervised conference, wait for the third person to answer the phone, announce the conference, then click **Add to Conf.**
   - For a blind conference, click **Add to Conf.** without waiting for the third person to pick up the phone.

   The Conferencing window closes.

5. To add one or more people to the conference call, repeat Steps 1 to 4 for each person.
Action | Resolution
--- | ---
Note: The total number of conference call participants on a call is determined by settings on the Unified CM. Ask you supervisor for the total number configured for your contact center.

When is an agent available to make calls? | When the remote agent is in the Not Ready state and the system is functioning to enable call control, the agent is available to make and receive calls.

---

**Installation and Configuration Checklists**

Validating Installation and Configuration of Remote Agent with IP Phone Components Checklist

<table>
<thead>
<tr>
<th>Issue</th>
<th>Resolution</th>
</tr>
</thead>
<tbody>
<tr>
<td>Does the IP Phone boot?</td>
<td>Make sure the separate power supply is used for the phone. The 831 router does not supply power to the IP Phone.</td>
</tr>
<tr>
<td>Does the IP Phone register with Unified CM?</td>
<td>The phone must be configured for DHCP; also, domain information must be entered in to the phone configuration.</td>
</tr>
<tr>
<td>Is the IPsec tunnel running?</td>
<td>Reboot the 831.</td>
</tr>
<tr>
<td>Do you have internet access?</td>
<td>Make sure you have network access to the internet.</td>
</tr>
<tr>
<td>Can the agent desktop log in to CTI OS Server?</td>
<td>Make sure the PC is registered in DNS. Make sure the agent login ID/password is valid.</td>
</tr>
<tr>
<td>When you pick up the IP Phone, does the desktop reflect that the line is off hook?</td>
<td>Cycle the PG for the remote agent.</td>
</tr>
<tr>
<td>Are callers routed to the remote agent?</td>
<td>Make sure callers are routing to the remote agent and the PG is online.</td>
</tr>
<tr>
<td>When the remote agent receives a call, does the desktop client's main window display the incoming call?</td>
<td>Check to see if the desktop client's main window displays the incoming call.</td>
</tr>
<tr>
<td>Is the desktop window displaying the incoming call correctly?</td>
<td>Check to see if the desktop window displays the incoming call correctly.</td>
</tr>
<tr>
<td>Does the MTP application log in?</td>
<td>If you are using the Platronics headset, make sure the USB connection is secure and that it is able to play sound from the desktop.</td>
</tr>
<tr>
<td>What's the agent's readiness state when taking a call using an IP Phone?</td>
<td>As soon as the agent takes a call (either via the IP Phone or the agent desktop), the agent state changes to either the Talking state or the Not Ready state and the agent is unavailable for calls. (The agent will not receive any calls while already on a call.)</td>
</tr>
</tbody>

Hardware Installation and Configuration

Refer to the *Hardware and System Software Specifications (Bill of Materials) for Cisco Unified ICM/Unified Contact Center Enterprise & Hosted, Release 7.5(1)* and the *Cisco Response Solutions (CRS) Software and Hardware Compatibility Guide* (located on the [Cisco web site](http://www.cisco.com/univercd/cc/td/doc/product/icm/index.htm)) for details about desktop hardware requirements.
Chapter 11

Troubleshooting Cisco IPCC Remote Agent Option

This chapter contains the following topics:

• Caveats and Limitations, page 87
• Troubleshooting Information, page 90

Caveats and Limitations

Remote Agent has limitations regarding the following:

• Agents
• Supervisors
• Network
• Security
• Reporting

Agent Limitations

• Only one IPCC Remote Agent Option per household is supported.
• Media Termination for CTI OS and CAD is not supported.
• CTI OS Agent Login might take up to 30 seconds. CAD Agent Login might take up to two minutes. Other operations such as Ready/Not ready are not impacted.
• There might be times when the ADSL/Cable link goes down. When the link is back up, the remote agent might have to reset their ADSL/Cable modem, 8xx Series Router, and IP Phone.
The remote agent must become familiar with restarting the 8xx Series Router. Total time for
the router to cycle is about two minutes, after which the remote agent will have to log in
again for CTI application.

- Cisco CAD-based IP Phone only agent and Cisco IP Phone control for CTI OS is not supported
  for remote agents.

- Remote agents might experience a delay in screen pop.

- The analog phone itself cannot initiate transfers, conferences, and holds. These functions can
  only be executed via the CTI OS/CAD desktop agent interface, and only to another agent.

- Remote agents can use the agent desktop interface to initiate calls, but only to other agents.

- A mobile agent nailed up call may be terminated by the following two Unified CCM timers,
  and this termination can log out a nailed up mobile agent:

  - The Maximum Call Duration timer (the default value is 720 minutes).
  - The Maximum Call Hold timer (the default value is 360 minutes).

To keep the mobile agent logged in, the values for both these timers need to be set to 0, which
makes the timer never expire.

These timers can be configured from the Unified CCM Administration web page from the
serviced parameters under the Unified CM service.

Supervisor Limitations

- Desktop-based Silent Monitoring/Recording will not work and is not supported. (Silent
  Monitor—for both CTI OS and CAD—is not supported with Network Address Translation.)

- Remote supervisors are only supported for the Remote Agent with IP Phone.

Network Limitations

- Network Address Translation (NAT) is supported when IPCC Remote Agent Option is used
  with the Cisco Business Ready Teleworker Model. Design guides for Business Ready
  Teleworker can be found at:

  - http://www.cisco.com/go/teleworker
  - http://www.cisco.com/go/v3pn
  - http://www.cisco.com/go/srnd

- Routing through a Cisco 800 Series Router with Firewall enabled is supported.
- The G.729 codec is not supported for software conference bridges. Voice quality might degrade when the remote agent IP Phone is configured using a G.729 codec and an agent enters a Unified CM software conference bridge. The conference bridge must be configured on a DSP hardware device. There is no loss of conference voice quality using a DSP conference bridge.

**Note:** Use this solution even for pure IP telephony deployments.

- The IPCC server recognizes failures when the remote agent desktop or connection breaks. It will stop routing calls to that agent until an agent logs back in and goes to a ready call state. Callers will be routed to other available agents.

- The only traffic that is marked for priority AF31 from the agent desktop is voice. CTI traffic and Desktop Application traffic is not marked. Voice gets the priority. CRM Desktops like Siebel and Oracle are supported; however, Silent Monitoring and Recording is not supported for CRM Desktops such as Siebel, Oracle, and so forth. Silent Monitoring, both Desktop based and SPAN Port based, is not supported with CRM Desktops and will not work.

- Do not use soft VPN clients to establish VPN connectivity for remote agents with IP Phones. VPN connection has to be set up using hardware-based VPN through a 8xx Series Router.

- If the remote agent PC modem is down or the connection goes down, Unified ICME software via CTI/CAD/CTI OS server will recognize the failure and will stop routing calls to that agent, until an agent logs back in again, and goes to a ready call state.

- If the ADSL/Cable delay is greater than the maximum, the IPCC application encounters longer application response times.

### Security Limitations

- Wireless access points are supported; however, determine their use by the enterprise security policies of the customer. Wireless use does not affect remote agent performance since the bandwidth that wireless supports is greater than the broadband link.

**Note:** 7920 Wireless IP Phones are not supported.

- This solution has only been tested with centralized IPCC and Unified CM Clusters. Testing was not performed with CTI OS using security and Cisco Support Tools.

### Reporting Limitations

- No special reports exist for individual remote agents. IPCC Enterprise reports as they pertain to a Headquarter Contact Center are applicable.

- Real Time reporting, Historical reporting, and the monitoring of desktop queue statistics are not supported.
Troubleshooting Information

This section lists troubleshooting FAQs and recovery tips.

**Table 3: IPCC Remote Agent Option Failure Recovery Tips**

<table>
<thead>
<tr>
<th>Recovery Issue</th>
<th>Resolution</th>
</tr>
</thead>
</table>
| Power failure  | When the power is back up, verify that the machine comes back up properly and that the network is available.  
For CTI OS, start the CTI desktop and login to the CTI OS server. For Remote Option with IP Phone configuration, the IP Phone needs to contact the TFTP server and register with Unified CM.  
**Note:** UPS can mitigate the risk of a power failure at home by keeping the cable modem and agent's PC powered up for a certain duration. |
| Internet failure | If the internet goes down, the connection is lost and the agent goes offline.  
For CTI OS, when the internet is back up, the agent must re-connect to the CTI OS server and log back in. For Remote Option with IP Phone configuration, the IP Phone will also be disconnected and needs to be reconnected with Unified CM. |
| Reconnection of the phone to the desktop | Connect the desktop to the IP Phone's second switch port, then connect the IP Phone to the 800 Series Router. |
| Agent Desktop reboot | See Power failure, above. |
| Agent Desktop Application restart | Restart the application and log back into the server. If a call is still in progress, do not change the state to Ready. |
| IP Phone registration failure | Verify that the Internet is available, followed by the network. If yes, check if the TFTP server and Unified CM are online. |
| VPN tunnel failure | If Internet access is available, but the connection to the corporate site is not, verify that the VPN tunnel is not misconfigured / broken. If it is broken, it will have to be reconfigured by the System Administrator. |
Sample Cisco IOS Configuration for Analog FXO to PRI Gateway

The following section provides a sample Cisco IOS configuration for an analog FXO to PRI gateway.

Analog FXO to PRI Gateway

```
hostname pri-fxo-gateway

isdn switch-type primary-ni
controller T1 3/0
framing esf
linecode b8zs
cablelength short 133
pri-group timeslots 1-24

interface Serial3/0:23
bandwidth 230400
no ip address
encapsulation hdlc
no logging event link-status
isdn switch-type primary-ni
isdn incoming-voice voice
no cdp enable
