

Cisco Small Business WAP371 Wireless AC/N Dual Radio Access Point with Single Point Setup, Firmware Version 1.0.0.10

Version 1.0.0.10

May, 2014

These release notes describe the open issues for the Cisco Small Business WAP371 Wireless AC/N Dual Radio Access Point with Single Point Setup.

Requirements

- Your computer must meet the recommended hardware and software requirements.
- A computer with browser support for:
 - Internet Explorer v7.0 or later
 - Chrome v5.0 or later
 - Firefox v3.0 or later
 - Safari v3.0 or later

Limitations

- In Wireless > WorkGroup Bridge page, only Infrastructure Client Interface can be configured.

Resolved Issues

- None. This is the initial release of this product.

Open Caveats

These are the open caveats for firmware version 1.0.0.10

Table 1 Open Caveats in Firmware Version 1.0.0.10

Ref Number	Description
CSCul73641	<p>Symptom: WAP371 Wireless reason 3:STA is leaving IBSS or ESS issue.</p> <p>Workaround: This issue occurs when there is much interference in the environment. Set up the wireless network with a rational design.</p>
CSCul48943	<p>Symptom: GUI responds really slow after clicking Save.</p> <p>Workaround: This issue occurs occasionally on specific PCs with different OS browsers.</p>
CSCun58608	<p>Symptom: Power LED flashes even after setting the static ipv4/ipv6 address.</p> <p>Workaround: This issue occurs when the WAP does not receive the DHCP address.</p>
CSCuo18776	<p>Symptom: POE power warning.</p> <p>Workaround: If you enable 80 MHz channel (@5G radio) and the channel carries a high amount of traffic, then the WAP device will need more power than what the IEEE 802.3af PoE standard provides (12.95 W). We highly recommend that when the 80 M channel is enabled, the WAP device should either be powered by a power adapter or an 802.3at Power Source Equipment (PSE). If the required power for the WAP device exceeds the maximum power delivered by the PSE, then the WAP device may reboot.</p>
