   DESCRIPTION
      "Cisco Systems ASR 5xxx series of multimedia core platforms (ASR 5000,
      ASR 5500)

Designed exclusively for mobile and fixed mobile converged applications,
Cisco's ASR 5xxx series products provide a high-performance, highly intelligent
platform ideally suited for development in mobile operator networks
to fulfill key multimedia core networking functions. The platform features 2G/3G/4G
and WiFi multi-service access independent capabilities coupled with a carrier class
high-availability design. Harnessing subscriber awareness with an abundant supply
of distributed processing resources, the ASR 5xxx series offers a variety of high touch Inline Services to enable service providers to monetize the value of the network while enriching the overall subscriber experience.

REVISION   "201509110000Z"
DESCRIPTION
" Removed trap number 1191(starSEAGWSserviceStart) and 1192(starSEAGWSserviceStop) definition added"

REVISION   "201411040000Z"
DESCRIPTION
" Removed trap number 1533 and 1534 and replaced with 1290 and 1291 supporting code"

REVISION   "201410300000Z"
DESCRIPTION
" Added trap number 1288 and 1289 supporting code"

REVISION   "201410080000Z"
DESCRIPTION
" Added trap no. 1282 with the following variables
   starGTPCRLF_sessMgrInst,
   starGTPCRLF_VPNName,
   starGTPCRLF_VPNId,
   starGTPCRLF_ContextName,
   starGTPCRLF_CurrAppTPS

Added trap no. 1283 with the following variables
   starGTPCRLF_sessMgrInst,
   starGTPCRLF_VPNName,
   starGTPCRLF_VPNId,
   starGTPCRLF_ContextName,
   starGTPCRLF_CurrAppDelayTol

Added trap no. 1284 with the following variables
   starGTPCRLF_sessMgrInst,
   starGTPCRLF_VPNName,
   starGTPCRLF_VPNId,
   starGTPCRLF_ContextName,

Added trap no. 1285 with the following variables
   starGTPCRLF_sessMgrInst,
   starGTPCRLF_VPNName,
   starGTPCRLF_VPNId,
   starGTPCRLF_ContextName,

""

REVISION   "201408040000Z"
DESCRIPTION
" Added starNpudriverECCError trap supporting code"

REVISION   "201407230000Z"
DESCRIPTION
" removing the extra 1533 and 1534 traps"

REVISION   "201407160000Z"
DESCRIPTION
" Added starNpudriverECCError trap(reserving the trap id) at 1281"

REVISION   "201406110000Z"
DESCRIPTION
" Added Severity in starChassisCrashListFull Traps"

REVISION   "201405080000Z"
DESCRIPTION
"Added starBFDSessUp, starBFDSessDown and starSRPSwitchoverOccured Traps"
REVISION       "2014042500000Z"
DESCRIPTION
"Added MME Related threshold traps from 440 to 445"
REVISION       "2013022000000Z"
DESCRIPTION
"Removing SGSN substring from trap number 1219 and 1220"
REVISION       "2013022000000Z"
DESCRIPTION
"Extended starChassisType to support KVM QvPC-SI chassis"
REVISION       "2013120600000Z"
DESCRIPTION
"Corrected IPv6 from IPv4 to trap number 1200"
REVISION       "2013120500000Z"
DESCRIPTION
"Added two MIBs (starMRMEServiceStart, starMRMEServiceStop) for MRME service
starMRMEServiceStart- starentTraps 1264
starMRMEServiceStop- starentTraps 1265
Added two MIBs (starThreshPerServiceSAMOGSessions,
starThreshClearPerServiceSAMOGSessions) for per service samog-service
starThreshPerServiceSAMOGSessions- starentTraps 519
starThreshClearPerServiceSAMOGSessions - starentTraps 520"
REVISION       "2013100400000Z"
DESCRIPTION
"Changed following notification names
starThreshAAAAAcctArchiveQueue-1,
starThreshClearAAAAAcctArchiveQueue-1,
starThreshAAAAAcctArchiveQueue-2,
starThreshClearAAAAAcctArchiveQueue-2,
starThreshAAAAAcctArchiveQueue-3,
starThreshClearAAAAAcctArchiveQueue-3
to
starThreshAAAAAcctArchiveQueue1,
starThreshClearAAAAAcctArchiveQueue1,
starThreshAAAAAcctArchiveQueue2,
starThreshClearAAAAAcctArchiveQueue2,
starThreshAAAAAcctArchiveQueue3,
starThreshClearAAAAAcctArchiveQueue3.

Added , in starLIRcvryErrType object.

Changed StarUDPPortNum object to starUDPPortNum object in
following notifications:
   starECSreaddressServerDown,
   starECSreaddressServerUp.

Added definition for starMMEInitialDisallowReason object.

Added new number for QvPC-SI platform in starChassisType object."
REVISION       "2013092700000Z"
DESCRIPTION
" Added missing object starFractE1TribTimeslots to starSDHFractE1LMIUp notification , changed MAX-ACCESS to accessible-for-notify from not-accessible for the following objects
  starFractE1TribSlot,
  starFractE1TribPort,
  starFractE1TribPath,
  starFractE1TribTug2,
  starFractE1TribTu12
and moved starFractE1TribBundNum object to obsolete state."

REVISION      "201309250000Z"
DESCRIPTION
"Change starSlotPort to storSlotNum in ApsChannelMismatch trap 1150"  
REVISION      "201307230000Z"
DESCRIPTION
"Replaced underscore sign with hyphen from starServiceType enum "
REVISION      "201307150000Z"
DESCRIPTION
"Modified SEVERITY from ERROR to MAJOR for following traps:
  starPortDown,
  starSRPConnDown,
  starLAGGroupDown.

Changed starPortSlot, starPortNum, starContextName and starSRPIpAddress objects access to accessible-for-notify."
REVISION      "201307100000Z"
DESCRIPTION
"Changed the name of trap starThreshNAPTPortChunks to starThreshNATPortChunks and starThreshClearNAPTPortChunks to starThreshClearNATPortChunks"
REVISION      "201306260000Z"
DESCRIPTION
"Changed the APS related traps according to the implementation present in trap_api.c following traps are modified:
  starApsCommandSuccess,
  starApsCommandFailure,
  starApsSwitchSuccess,
  starApsSwitchFailure,
  starApsModeMismatch,
  starApsChannelMismatch,
  starApsByteMismatch,
  starApsFeProtLineFailure,
  starApsLossOfRedundancy,
  starApsLossOfRedundancyClear."
REVISION      "201306110000Z"
DESCRIPTION
"Changed object type from starContextName to starCLIContext for the following traps:

  starLocalUserAdded,
  starLocalUserRemoved,
  starOsShellAccessed,
  starTestModeEntered,
  starLicenseFeaturesModified,
  starHiddenAccessEnabled,
starHiddenAccessDisabled.

REVISION      "201306040000Z"
DESCRIPTION   " Added the missing objects and modified the summary field for starTechSuppPasswdChanged trap"

REVISION      "2013052400000Z"
DESCRIPTION   "Corrected starChassisCrashListFull description section"

REVISION      "2013052200000Z"
DESCRIPTION   "changed starEGTPInterfaceType Enum in trap number 1112"

REVISION      "2013050700000Z"
DESCRIPTION   "changed starEGTPInterfaceType Enum
changed STATE and SEVERITY fields for All APS, related notifications."

REVISION      "2013042500001Z"
DESCRIPTION   "Deprecated following traps
starCardSPCSwitchoverStart,
starCardSPCSwitchoverComplete,
starCardSPCSwitchoverFailed
starCardPACMigrateStart,
starCardPACMigrateComplete,
starCardPACMigrateFailed,

Added following traps for above trap as respective replacement
starCardSwitchoverStart,
starCardSwitchoverComplete,
starCardSwitchoverFailed,
starCardMigrateStart,
starCardMigrateComplete,
starCardMigrateFailed"

REVISION      "20130425000002"
DESCRIPTION   "Added two MIBs (starSAMOGServiceStart, starSAMOGServiceStop) for SAMOG service.
starSAMOGServiceStart- starentTraps 1251
starSAMOGServiceStop- starentTraps 1252"

REVISION      "201304180000Z"
DESCRIPTION   "Changed SUMMARY clause for starLongDurTimerExpiry notification.

Changed MAX-ACCESS to accessible-for-notify for following objects:
starSubMSID,
starSubName,
starSubTimerDuration,
starSubLongDurTimeoutAction,
starSubSetupTime,
starSubHomeAddr,
starSubHomeAddrv6."

REVISION      "2013041600000Z"
DESCRIPTION   "changed STATE and SEVERITY fields for starSDHPathHopUp,
starSDHE1TribUp and starSDHFracTE1LMIDown notifications."

REVISION      "201304090000Z"
DESCRIPTION
"Added trap no. 1251 with the following variables
starPMIPvPnName,
starPMIPServName,
starPMIPSelfAddrType,
starPMIPSelfAddr,
starPMIPPeerAddrType,
starPMIPPeerAddr,
starPMIPPeerOldRstCnt,
starPMIPPeerNewRstCnt,
starPMIPPeerSessCt,
starPMIPFailureReason

Added trap no. 1252 with the following variables
starPMIPvPnName,
starPMIPServName,
starPMIPSelfAddrType,
starPMIPSelfAddr,
starPMIPPeerAddrType,
starPMIPPeerAddr"
REVISION        "201304050000Z"
DESCRIPTION
" Added the following flags in APS related traps"

REVISION        "201304040000Z"
DESCRIPTION
" changed SEVERITY level from INFORMATIONAL to WARNING for
starSGSNRMMMemWarn notification."

REVISION        "201303260000Z"
DESCRIPTION
"Added trap no. 1177, with the following variables
starSlotNum,
starCardType,
starPortSlot"
REVISION        "201303180000Z"
DESCRIPTION
" Modified starPCFUnreachable description section
   Updated correct object name starEISServerVPNName in
   starEISServerAlive
   starEISServerDead traps.
   Added starPCFReachable trap support"
REVISION        "201303110000Z"
DESCRIPTION
" Changed starFanNum range in SYNTAX and MAX-ACCESS.
   Added starFanLocation ASR5500 fan location details.
   Changed SUMMARY clause for following traps
   starFanFailed,
   starFanRemoved,
   starFanInserted,"
starCPUSystem,  
starCPUIdle,  
starCPUIO,  
starCPUIRQ,  
starCPUMemUsed,  
starCPUMemCached

Changed SYNTAX clause from Integer32 to Gauge32 and also changed range for following objects:  
starCPULoad1Min,  
starCPULoad5Min,  
starCPULoad15Min,  
starCPUNumProcesses."

REVISION  "201302280000Z"  
DESCRIPTION  
"Added context name to the OBJECTS and updated ARGUMENTS field for the following traps:  
starLocalUserAdded,  
starLocalUserRemoved,  
starOsShellAccessed,  
starTestModeEntered,  
starLicenseFeaturesModified,  
starHiddenAccessEnabled,  
starHiddenAccessDisabled"

REVISION  "201302260000Z"  
DESCRIPTION  
"Changed starThreshMeasuredPct SYNTAX from Integer32 to Gauge32.  
Changed starPortNum object range.  
Changed SUMMARY clause in starM3UAPCUnavailable and starM3UAPCAvailable traps.  
Changed objects from starThreshInt and starThreshMeasuredInt to starThreshPct and starThreshMeasuredPct and also changed SUMMARY and ARGUMENTS clauses in following traps:  
starThreshIPPoolAvail,  
starThreshClearIPPoolAvail,  
starThreshIPPoolHold,  
starThreshClearIPPoolHold,  
starThreshIPPoolUsed,  
starThreshClearIPPoolUsed,  
starThreshIPPoolRelease,  
starThreshClearIPPoolRelease,  
starThreshIPPoolFree,  
starThreshClearIPPoolFree,  
starThreshNATPortChunks,  
starThreshClearNATPortChunks,  
starThreshPortHighActivity,  
starThreshClearPortHighActivity,  
starThreshTpoDnsFailure,  
starThreshClearTpoDnsFailure,  
starThreshDnsLookupFailure,
starThreshClearDnsLookupFailure,
starThreshBGRoutes,
starThreshClearBGRoutes.

Changed SUMMARY and ARGUMENTS clauses in following traps:
starThreshCPUUtilization,
starThreshClearCPUUtilization,
starThreshCPUUtilization10Sec,
starThreshClearCPUUtilization10Sec,
starThreshCPUMemUsage,
starThreshClearCPUMemUsage,
starThreshCPUorbsWarn,
starThreshClearCPUorbsWarn,
starThreshCPUorbsCritical,
starThreshClearCPUorbsCritical,
starThreshLicense,
starThreshClearLicense,
starThreshPortRxUtil,
starThreshClearPortRxUtil,
starThreshPortTxUtil,
starThreshClearPortTxUtil,
starThreshAAAAAuthFailRate,
starThreshClearAAAAAuthFailRate,
starThreshAAAAAcctFailRate,
starThreshClearAAAAAcctFailRate,
starThreshAAARetryRate,
starThreshClearAAARetryRate,
starThreshAAAAmgrQueue,
starThreshClearAAAAmgrQueue,
starThreshAAAAAcctArchiveQueue-1,
starThreshClearAAAAAcctArchiveQueue-1,
starThreshAAAAAcctArchiveQueue-2,
starThreshClearAAAAAcctArchiveQueue-2,
starThreshAAAAAcctArchiveQueue-3,
starThreshClearAAAAAcctArchiveQueue-3,
starThreshRPSsetupFailRate,
starThreshClearRPSsetupFailRate,
starThreshPPPSsetupFailRate,
starThreshClearPPPSsetupFailRate,
starThreshStorageUtilization,
starThreshClearStorageUtilization,
starThreshIPSECIKEFailRate,
starThreshClearIPSECIKEFailRate,
starThreshNPUUtilization,
starThreshClearNPUUtilization,
starThreshDiameterRetryRate,
starThreshClearDiameterRetryRate,
starThreshSystemCapacity,
starThreshClearSystemCapacity,
starThreshEDRFileSpace,
starThreshClearEDRFileSpace,
starThreshCDRFileSpace,
starThreshClearCDRFileSpace,
starThreshCardTemperatureNearPowerOffLimit,
starThreshClearCardTemperaturePowerOffLimit.
DESCRIPTION
"Changed SYNTAX clause for starPortNum and starRedundantPortNum objects"

REVISION       "201209250000Z"

DESCRIPTION
"Changed starSlotMappingTable table DESCRIPTION."

REVISION       "201207230000Z"

DESCRIPTION
"Removed starSGSNAllocated and starSGSNUsed objects and added starThreshInt and starThreshMeasuredInt objects for starSGSNRMCPUWarn, starSGSNRMCPUWarnClear, starSGSNRMMemWarn, starSGSNRMMemWarnClear, starRMCPUOver, starRMCPUOverClear, starSGSNRMMemOver and starSGSNRMMemOverClear."

REVISION       "201207130000Z"

DESCRIPTION
"Removed starSGSNAllocated and starSGSNUsed objects and added starThreshInt and starThreshMeasuredInt objects for starSGSNRMCPUWarn, starSGSNRMCPUWarnClear, starSGSNRMMemWarn, starSGSNRMMemWarnClear, starRMCPUOver, starRMCPUOverClear, starSGSNRMMemOver and starSGSNRMMemOverClear."

REVISION       "201207130000Z"

DESCRIPTION
"Removed starSGSNAllocated and starSGSNUsed objects and added starThreshInt and starThreshMeasuredInt objects for starSGSNRMCPUWarn, starSGSNRMCPUWarnClear, starSGSNRMMemWarn, starSGSNRMMemWarnClear, starRMCPUOver, starRMCPUOverClear, starSGSNRMMemOver and starSGSNRMMemOverClear."

REVISION       "201207130000Z"

DESCRIPTION
"Changed object from starServiceVpnID to starServiceVpnName and arguments macro in starSessionRejectNoResource Notification.

Added commas(,) in ARGUMENTS field of starServiceLossLCClear Trap definition.

Added additional object starCPUSlot and starCPUNumber in starThreshCPUOrbsWarn, starThreshClearCPUOrbsWarn, starThreshCPUOrbsCritical and starThreshClearCPUOrbsCritical traps."

REVISION       "201207090000Z"

DESCRIPTION
"starSAEGWSessThreshold and starSAEGWSessThresholdClear Notification objects have been added.
Fixed starServiceLossLCClear ARGUMENTS field information."

REVISION       "201205150000Z"

DESCRIPTION
"ASR5500 slot types are added in StarentSlotType"

REVISION       "201204130000Z"

DESCRIPTION
"The Notifications starThreshPortSpecRxUtil,starThreshClearPortSpecRxUtil, starThreshPortSpecTxUtil,starThreshClearPortSpecTxUtil has been moved to deprecated state."

REVISION       "201204050000Z"

-- single subscriber info

-- This is used to perform a lookup on information on a single subscriber. This is done in a
-- two-step process
--
-- 1. Use a SET pdu to provide the keys to lookup. Set one or more of the fields
--    starSessSub1Context, starSessSub1NAI, starSessSub1MSID, starSessSub1IpAddr
--
--    The SET pdu returns once the query is complete. This query can takes some time
--    especially on large systems, so do not use small retry timers.
--
-- 2. Use a GET pdu to retrieve the data.
--
-- Note that in some cases, multiple subscribers might match the given search criteria.
-- The starSessSub1LastResult field identifies if zero, one or multiple matches were found.
-- If multiple matches are found, data is returned for one of them.

starCardTempOverheat NOTIFICATION-TYPE
OBJECTS { starSlotNum,
               starCardTemperature }
STATUS  current
DESCRIPTION
  "The card has reached a temperature beyond its safe operating range."
Probable Cause: External temperature is too high; One or more fan failures; blockages the prevent fan air inflow/outflow.

Action to be Taken: Inspect chassis for any item that may be blocking chassis air flow. Verify adjacent equipment is not obstructing air flow. Verify that the fans are running via the CLI/EMS. Check air filters. Check chassis maintenance schedule to see if chassis needs routine air filter replacement. Verify room temperature is within acceptable operating conditions.

Clear Condition: This condition is cleared when the card reaches its operating temperature range or is removed from the system.

Condition Clear Alarm: This condition is cleared by a starCardTempOK notification.

---SUMMARY "[Card %d] Card has overheated; measured temperature %d C"
---ARGUMENTS {0,1}
---STATE NONOPERATIONAL
---SEVERITY CRITICAL
::= { starentTraps 1 }

starCardTempOK NOTIFICATION-TYPE
OBJECTS { starSlotNum,
           starCardTemperature }
STATUS current
DESCRIPTION
  "The temperature of the card is now within its safe operating range. This notification is only generated if the card has previously generated a starCardTempOverheat notification."

Action to be Taken: No action required. The cause for the card overheat condition should be investigated.

---SUMMARY "[Slot %d] Temperature OK (%d C)"

-- CPU Notifications

starCPUBusy NOTIFICATION-TYPE
OBJECTS { starCPUSlot, starCPUNumber }
STATUS current
DESCRIPTION
   "The CPU is experiencing very high usage.
Probable Cause: For SPC/SMC CPUs this typically represents an abnormal amount
of management (CLI, SNMP, CORBA) requests. For PAC/PSC cards this indicates
that the system is reaching its capacity.
Action to be Taken: For SPC/SMC cards, this may be a transient condition because
of a burst of management activity. Monitor the CPU usage and if it is persistently
high, examine the CPU table to determine which management activity is causing the
excessive usage. For PAC/PSC cards, this indicates the system is nearing its overall
capacity. Monitor CPU usage and if it is persistently high, the system may need
additional PACs/PSCs to keep up with the system load.
Clear Condition: Verify that CPU usage returned to a normal load.
This can represent a transient condition; the trap will be periodically
repeated if the condition persists."

STATUS current
DESCRIPTION
   "The CPU is experiencing a low memory condition.
Probable Cause: For SPC CPUs this typically represents an abnormal number
of management sessions, in particular CLI sessions. For PAC/PSC cards this
indicates that the system is reaching its capacity.
Action to be Taken: For SPC cards, this may be a transient condition because
of a burst of management activity. Monitor memory usage and if it is persistently
high, examine the CPU table to determine which management activity is causing the
excessive usage. Verify that large numbers of CLI sessions are not being generated
and, if needed, terminate extra sessions. For PAC/PSC cards, this indicated the system
is nearing its overall capacity. Monitor memory usage and if it is persistently high,
the system may need additional PACs/PSCs or additional PAC/PSC memory to keep up with the
system load."
Clear Condition: Verify that memory usage returned to a normal load. This can represent a transient condition; the trap will be periodically repeated if the condition persists.

of a new server, or a previously unreachable server becoming reachable.

Action to be Taken: No Action Required."
starAAAAuthServerMisconfigured NOTIFICATION-TYPE
OBJECTS { radiusAuthServerIndex, radiusAuthServerAddress }
STATUS current
DESCRIPTION
"The Authentication, Authorization and Accounting (AAA) server has been misconfigured. This server is not usable until this condition is repaired.

Action to be Taken: Examine the system configuration and correct the misconfiguration. See the user documentation for details on AAA configuration.

Clear Condition: Verify that communication to the AAA authentication server has been restored.

Condition Clear Alarm: When this condition clears a starAAAAuthServerReachable notification will be generated."

starAAAAccServerUnreachable NOTIFICATION-TYPE
OBJECTS { radiusAccServerIndex, radiusAccServerAddress }
STATUS current
DESCRIPTION
"The Authentication, Authorization and Accounting (AAA) server cannot be reached.

Probable Cause: The AAA server is down, or there is a network issue preventing communication with the AAA server.

Actions to be Taken: Restore the AAA server to an operational status; Verify that the AAA server is reachable by performing a 'ping' operation from the CLI in the appropriate context. Check the admin logs for notification of communication problems.

Clear Condition: Verify that communication to the AAA accounting server has been restored.

Condition Clear Alarm: When this condition clears a starAAAAccServerReachable notification will be generated."

starAAAAccServerReachable NOTIFICATION-TYPE
OBJECTS { radiusAccServerIndex, radiusAccServerAddress }
The Authentication, Authorization and Accounting (AAA) server is now reachable. This can be the result of a system startup, the configuration of a new server, or a previously unreachable server becoming reachable.

Note that since Accounting servers are not responding to 'hello'-type messages, it is not always possible to accurately determine when an accounting server is reachable. A server may be declared 'reachable' when the ST16 is ready to start using the server, but before any acknowledgement is actually received from the server. Once accounting information actually is sent to the server a starAAAccServerUnreachable will be generated if the server does not properly respond.

Action to be Taken: No Action Required."

Probable Cause: This can happen if there is an inter-SGSN handoff and the new SGSN is not listed in GGSN service and its PLMN policy is set to reject unknown SGSNs.

Action to be Taken: List the SGSN address in the GGSN service.

Condition Clear Alarm: NA"

starCongestion NOTIFICATION-TYPE
OBJECTS { starServiceType, starCongestionPolicy, starCongestionResourceType } STATUS current
DESCRIPTION
   "A congestion condition has occurred.

Probable Cause: This is the result of an operator-configured congestion
threshold being reached. This can be due to high usage of the resource being monitored which indicates that the IMG is reaching its peak capacity, or could be caused by the incorrect configuration of the congestion thresholds.

Actions to be Taken: Verify that the congestion thresholds are correct; if the congested state is seem repeatedly, or for sustained periods of time, additional system capacity may need to be brought online.

This system is cleared when the use of the specific resource falls below the configured limit.

Condition Clear Alarm: A starCongestionClear notification is sent when there are no congestion conditions for a service type

---#SUMMARY "[System] Congestion seen for %s service; resource %s, policy %s applied"

starServiceLossPTACs NOTIFICATION-TYPE
OBJECTS { starCardMode, starPTACConfig, starPTACActive }
STATUS current
DESCRIPTION
"A service loss condition has occurred due to PAC/PSC/TAC failure or removal.

Probable cause: Multiple PAC/PSC/TAC cards are no longer available, due to failure, removal, or operator action -- or configuration changes have been made which eliminated the availability of redundant cards.

Action to be Taken: Bring additional PAC/PSC/TAC cards online to match the number of configured cards, or update the configuration to require fewer active PAC/PSC/TAC cards.

Clear Condition: This condition is cleared when the number of active PAC/PSC/TAC cards reaches or exceeds the configured number."
---#SUMMARY "[System] Service Loss - Not enough PAC/PSC/TACs, %d configured, %d active"
---#ARGUMENTS {1,2}
---#STATE NONOPERATIONAL
---#SEVERITY CRITICAL
::= { starentTraps 83 }

starServiceLossLC NOTIFICATION-TYPE
OBJECTS { starCardType, starSlotNum, starSlotNum }
STATUS current
A service loss condition has occurred due to LC failure or removal.

Probable cause: The upper and lower Line Cards (LCs) are both no longer available, due to failure, removal, or operator action.

Action to be Taken: Fix or replace the line cards.

Clear Condition: This condition is cleared when one of the two card becomes active.

NOTE: Since the SPIO contains the ports used for SNMP access, this notification cannot normally be delivered as an SNMP trap. The notification will be logged and stored in the historical trap list, and if the system is configured to send INFORM PDUs the notification might be delivered at a later time.

Probable cause: Both SPIOs are no longer available, due to failure, removal, or operator action.

Action to be Taken: Bring at least one SPIO online.

Clear Condition: This condition is cleared when a SPIO is made active

Probable Cause: IP Pool Sharing Protocol (IPSP) is running between two HAs (a primary and a secondary). The primary HA has now released the last address that was in use. This presumably is done in preparation for taking the primary HA out of service.

User Action: Perform the desired maintenance on the primary HA that required taking the device out of service.

All IP addresses are now free on the IP Pool Sharing Protocol (IPSP) primary HA.

Probable Cause: IP Pool Sharing Protocol (IPSP) is running between two HAs (a primary and a secondary). The primary HA has now released the last address that was in use. This presumably is done in preparation for taking the primary HA out of service.

User Action: Perform the desired maintenance on the primary HA that required taking the device out of service.

starOverloadSystem NOTIFICATION-TYPE
OBJECTS { starCongestionResourceType }
STATUS current
DESCRIPTION "A system-wide congestion overload condition has occurred.

Probable Cause: This is the result of an operator-configured congestion overload value reached. This notification indicated a chassis-wide overload condition, typically overall system usage reaching some fraction of capacity.

Once this limit is reached, the configured behavior is taken. This will cause certain older and/or dormant calls to be dropped in favor of newer calls.

Note that this is similar to, but different than, the starCongestion notification. Typically the 'overload' condition will be configured to trigger at an earlier point.

Actions to be Taken: Verify that the congestion overload thresholds are correct; if the congested state is seem repeatedly, or for sustained periods of time, additional system capacity may need to be brought online.

This system is cleared when the use of the specific resource falls below the configured limit.

Condition Clear Alarm: A starOverloadSystemClear notification is sent when the system overload condition is clear"

A Home Node B Gateway (PGN) Service has stopped.

Probable Cause: This is typically caused by operator intervention. In rare cases it can be caused by the loss of resources (PSCs) to support the running configuration.

Action to be Taken: If the HNB GW service shutdown was not planned, examine the admin logs for an indication of the failure. Verify that all configured PSCs are present and running in the system. Check the crash logs for an indication of a software failure.

Clear Condition: Verify that the HNB GW service is operational.

Condition Clear Alarm: A starHNBGWServiceStart notification will be generated when the service is restarted

--#SEVERITY INFORMATIONAL
::= { starentTraps 1272 }

starSBCServiceStop NOTIFICATION-TYPE
OBJECTS { starServiceVpnName, starServiceServName }
STATUS current
DESCRIPTION
"An Sbc Service has stopped.
Probable Cause: This is typically caused by operator intervention, when a critical parameter associated with sbc-service is changed/removed. In unusual cases it can be caused by the loss of resources (PACs/PSCs) to support the running configuration.

    Action to be Taken: If the Sbc service shutdown was not planned, examine the admin logs for any indication of the failure. Verify that all configured PACs/PSCs are present and running in the system. Check for any sbc-service related configuration errors by running show configuration errors section sbc-service. Note that sbc-service should be associated to an mme-service to be operationally up. In case the associated mme-service is down, sbc-service is also stopped. Also check the crash logs for any indication of a software failure."

--#SUMMARY "[Service Sbc-%s-%s] Sbc service has stopped"
A CBC Association is down.
Problem Cause: SCTP connection between MME and CBC has been brought down - could be for any of the following reasons:
   i) network connectivity between MME and CBC is broken.
   ii) CBC has gracefully terminated the SCTP association with MME.
   iii) MME has gracefully terminated the SCTP association with CBC, typically due to operation intervention that would have effected sbc-service.

Action to be taken - In case the SCTP association between MME and CBC is abnormally closed, check for network connectivity between MME and CBC.

Condition Clear Alarm: In case the association termination was abnormal, A starPeerAssocUp notification will be generated when the CBC association is up.

The BFD Session to the specified IP address is operational.
This may indicate the initial configuration of a new neighbor,
the initial connectivity after a system restart, or the restoration of connectivity after a starBFDSessDown event.

Action to be Taken: No action required.

MIB Textual Conventions

This section defines the objects, traps and conformances for the IPMS MIB.

enterprise.8164.102.starIPSMIBObjects(1)

Object
starIPMSTimeTicks

Object ID
enterprise.8164.102.1.1

Description
This object indicates the time when this notification was generated.

Syntax
TimeStamp

Access
Read-Only

Object
starIPMSComponentName

Object ID
enterprise.8164.102.1.2

Description
This object indicates the name of the IPMS application component.

Syntax
DisplayString

Access
Read-Only

Object
starIPMSTaskInfo

Object ID
enterprise.8164.102.1.3

Description
This object indicates the IPMS process facility name and instance id of the IPMS application.

Syntax
DisplayString
Object: starIPMSProcessMaxRestartCnt

Object ID: enterprise.8164.102.1.4

Description: This object indicates the maximum restart counts for IPMS processes.

Syntax: Unsigned32

Access: Read-only

Object: starIPMSProcessRestartWaitTime

Object ID: enterprise.8164.102.1.5

Description: This object indicates the waiting period in seconds to restart IPMS processes.

Syntax: Unsigned32

Access: Read-only

Object: starIPMSPacketLossCnt

Object ID: enterprise.8164.102.1.6

Description: This object indicates the number of packets detected as lost in the current IPMS process.

Syntax: Unsigned32

Access: Read-only

Object: starIPMSTotalPacketLossCnt
Object ID
enterprise.8164.102.1.7

Description
This object indicates the total number of packets detected as lost since IPMS process started.

Syntax
Unsigned32

Access
Read-only

Object
starIPMSDPIFailureReason

Object ID
enterprise.8164.102.1.8

Description
This object indicates the deep packet inspection (DPI) failure reasons with packet monitoring attributes.

Syntax
Integer

Access
Read-only

Enumeration
attributenotpresent(1)
valuenotidentical(2)
valuefunctionfailed(3)

Object
starIPMSDPIDetails

Object ID
enterprise.8164.102.1.9

Description
This object indicates the details of the deep packet inspection information of packets with packet monitoring attributes.

Syntax
DisplayString

Access
Read-only

Object
starIPMSEventSource
Object ID  
enterprise.8164.102.1.10

Description  
This object indicates the name of the event source of IPMS processes.

Syntax  
DisplayString

Access  
Read-only

Object  
starIPMSAttribute

Object ID  
enterprise.8164.102.1.11

Description  
This object indicates the name of the IPMS attributes.

Syntax  
DisplayString

Access  
Read-only

Object  
starIPMSResourceType

Object ID  
enterprise.8164.102.1.12

Description  
This object indicates the type of resource facilitate available/used for IPMS application processes.

Syntax  
Integer

Access  
Read-only

Enumeration  
serverhbd(1)  
servmgr(2)  
serverevtlog(3)  
qryproc(4)  
evtproc0(5)
Object

starIPMSResourceInfoState

Object ID

enterprise.8164.102.1.13

Description

This object indicates the information of resource status for IPMS application processes.

Syntax

Integer

Access

Read-only

Enumeration

available(1)
notavailable(2)
unknown(3)
invalid(4)

Object

starIPMSResourceCurrentValue
Object ID
enterprise.8164.102.1.14

Description
This object indicates the current value/status of IPMS process resources like CPU, memory, disk space etc.

Syntax
DisplayString

Access
Read-only

Object
starIPMSResourceConfThreshold

Object ID
enterprise.8164.102.1.15

Description
This object indicates the configured threshold values of IPMS process resources like CPU, memory, disk space etc. The value is in Float so mapped to string.

Syntax
DisplayString

Access
Read-only

Object
starIPMSPeerName

Object ID
enterprise.8164.102.1.16

Description
This object indicates the name of the IPMS peer server.

Syntax
DisplayString

Access
Read-only

Object
starIPMSPeerIP

Object ID
enterprise.8164.102.1.17
Description
This object indicates the IP address of the IPMS peer server.

Syntax
DisplayString

Access
Read-only

Object
starIPMSPeerPort

Object ID
enterprise.8164.102.1.18

Description
This object indicates the port number of the IPMS server peer.

Syntax
DisplayString

Access
Read-only

Object
starIPMSICMPState

Object ID
enterprise.8164.102.1.19

Description
This object indicates the status of the Internet Control Message Protocol (ICMP) link between IPMS components and AGW. Possible state is either Up (1) or Down (2).

Syntax
Integer

Access
Read-only

Enumeration
icmpstateup(1)
icmpstatedown(2)

Object
starIPMSCORBAState

Object ID
enterprise.8164.102.1.20
Description
This object indicates the status of the Common Object Request Broker Architecture (CORBA) link between IPMS components and AGW. Possible state is either Up (1) or Down (2).

Syntax
Integer

Access
Read-only

Enumeration
corbasateup(1)
corbasatedown(2)

enterprise.8164.102.starIPMSMIBTraps(2)

Object
starIPMSComponentStart

Object ID
enterprise.8164.102.2.1

Description
This notification generated when an IPMS component started successfully.

Objects
starIPMSComponentName

Object
starIPMSComponentStop

Object ID
enterprise.8164.102.2.2

Description
This notification generated when an IPMS component stopped or going for shutting down.

Objects
starIPMSComponentName

Object
starIPMSProcessStart

Object ID
enterprise.8164.102.2.3

Description
This notification generated when an IPMS process started/restarted successfully.
Objects

starIPMSTaskInfo

Object

starIPMSProcessStartFail

Object ID
enterprise.8164.102.2.4

Description
This notification generated when an IPMS process failed to start/restart.

Objects

starIPMSCOMPONENNAME
starIPMSProcessMaxRestartCnt
starIPMSTaskInfo
starIPMSProcessRestartWaitTime

starIPMSPacketLossThreshold

Object ID
enterprise.8164.102.2.5

Description
This notification generated when maximum packet loss count from event source reached the threshold limit.

Objects

starIPMSTaskInfo
starIPMSEventSource
starIPMSPacketLossCnt
starIPMSTotalPacketLossCnt

starIPMSDPIFail

Object ID
enterprise.8164.102.2.6

Description
This notification generated when deep packet inspection (DPI) has been detected.

end
IETF and Cisco MIBs

This section is for Administrators working with integrating the Starent MIB and the Cisco MIB so Cisco management applications can manage the ASR 5x00 chassis. It provides some new configuration options; there is also a list of supported Cisco MIBs.
New CLI Options

The following are new CLI options:

sysOld Options

The default Old string is 1.3.6.1.4.1.8164.
The new-style Cisco Old string is 1.3.6.1.4.1.9.
Using the following CLI, ASR 5000 users can choose which string they prefer:

```
[local]asr5000(config)# system sysoid-style new|default
```

**Important:** ASR 5500 users do not have this option as the Cisco Old String is the default.

**Important:** This command can be combined with `sysdesc` as follows: `system sysdesc-sysoid-style new|default` However, this combination affects BOTH `sysDesc` AND `sysOld` equally: that is, they can both be old-style or they can both be new-style. The System CLI offers an option to configure `sysDesc` independently, but `SysOld` is not a user-configurable parameter.

sysDesc Options

For ASR 5000 users, the default system description is:

```
Linux asr5000 2.6.18-staros-v2-private-deb #1 SMP (date/time) i686
```

The Cisco default system description is:

```
Copyright (c) 2011 by Cisco Systems, Inc.
```

Users can opt for either description using the following CLI command:

```
[local]asr5000(config)# system sysdesc-style new|default
```

**Important:** This CLI will not be available to ASR 5500 users; it will default to the Cisco description only.

**Important:** This command can be combined with `sysOld` as follows: `system sysdesc-sysoid-style new|default` However, this combination affects BOTH `sysDesc` AND `sysOld` equally: that is, they can both be old-style or they can both be new-style. The System CLI offers an option to configure `sysDesc` independently, but `SysOld` is not a user-configurable parameter.

Serial Number Configuration

ASR 5000 users can configure the chassis serial number with the following CLI:
[local]asr5000(config)# system chassis-serial-number <string>

**Important:** This CLI is not available for ASR 5500 users as the chassis serial number is hard-coded.
Standards-Based MIBs

The following are standards-based, read-only, and available from the Cisco MIB ftp site. IF-MIB and ENTITY-MIB are disabled by default.

Configuration

MIBs can be configured using the following CLI:

[local]asr5000(config)# snmp mib <mib-name, auto complete> | no snmp mib <mib-name, auto complete>

Entity MIB

The Entity MIB is implemented as described in RFC4133. The following are not supported for this release:

- entPhysicalAlias
- entPhysicalAssetID
- entPhysicalMfgDate
- entPhysicalUris
- entLogicalTable
- entLPMappingTable
- entPhysicalContainsTable

IF MIB

The IF MIB is implemented per RFC1213, RFC1573, and RFC2863. The following are not supported for this release:

- ifStackTable
- ifStackLastChange
- ifRcvAddressTable
- ifTestTable
Cisco MIBs

The following is a list of supported Cisco MIBs for this release. These are available from the Cisco ftp site.

Configuration

MIBs can be configured using the following CLI:

```
[local]asr5000(config)# snmp mib <mib-name, auto complete> | no snmp mib <mib-name, auto complete>
```

Cisco MIBs

The following MIBs are supported in this release. They can be enabled/disabled as required.

- CISCO-ENHANCED-IPSEC-FLOW-MIB
- CISCO-ENTITY-DISPLAY-MIB
- CISCO-ENTITY-EXT-MIB
- CISCO-ENTITY-FRU-CONTROL-MIB
- CISCO-ENTITY-REDUNDANCY-MIB
- CISCO-ENTITY-SENSOR-MIB
- CISCO-ENTITY-STATE-MIB
- CISCO-FLASH-MIB
- CISCO-HOST-RESOURCE-MIB

| Important: | CISCO-HOST-RESOURCE-MIB is per the appropriate RFC, but limited to hrSystem and hrStorage tables. |

- CISCO-IF-EXTENSION-MIB
- CISCO-IP-LOCAL-POOL-MIB
- CISCO-IPSEC-FLOW-MONITOR-MIB
- CISCO-MOBILE-WIRELESS-SERVICE-MIB
- CISCO-PROCESS_MIB
