    DESCRIPTION
        "Cisco Systems ASR 5xxx series of multimedia core platforms (ASR 5000,
        ASR 5500)

        Designed exclusively for mobile and fixed mobile converged applications,
        Cisco's ASR 5xxx series products provide a high-performance, highly intelligent
        platform ideally suited for development in mobile operator networks
        to fulfill key multimedia core networking functions. The platform features 2G/3G/4G
        and WiFi multi-service access independent capabilities coupled with a carrier class
        high-availability design. Harnessing subscriber awareness with an abundant supply
        of distributed processing resources, the ASR 5xxx series offers a variety of high touch
        Inline Services to enable service providers to monetize the value of the network
        while enriching the overall subscriber experience."

-- single subscriber info

-- This is used to perform a lookup on information on a single subscriber.  This is done in a
-- two-step process
--
-- 1. Use a SET pdu to provide the keys to lookup. Set one or more of the fields
--    starSessSub1Context, starSessSub1NAI, starSessSub1MSID, starSessSub1IpAddr
--
-- The SET pdu returns once the query is complete.  This query can takes some time
-- especially on large systems, so do not use small retry timers.
--
-- 2. Use a GET pdu to retrieve the data.
--
-- Note that in some cases, multiple subscribers might match the given search criteria.
-- The starSessSub1LastResult field identifies if zero, one or multiple matches were found.
-- If multiple matches are found, data is returned for one of them.

starCardTempOverheat NOTIFICATION-TYPE
 OBJECTS { starSlotNum, starCardTemperature }
 STATUS current
 DESCRIPTION
 "The card has reached a temperature beyond its safe operating range.

Probable Cause: External temperature is too high; One or more fan
failures; blockages the prevent fan air inflow/outflow.

Action to be Taken: Inspect chassis for any item that may be blocking chassis
air flow. Verify adjacent equipment is not obstructing air flow.
Verify that the fans are running via the CLI/EMS. Check air filters.
Check chassis maintenance schedule to see if chassis needs routine
air filter replacement. Verify room temperature is within acceptable
operating conditions.

Clear Condition: This condition is cleared when the card reaches its
operating temperature range or is removed from the system.

Condition Clear Alarm: This condition is cleared by a starCardTempOK notification.
This is not applicable to QVPC-SI and QVPC-DI"

starAlertsDisabled NOTIFICATION-TYPE
OBJECTS { starMaxAlertsPerTime, starWindowTime }
STATUS current
DESCRIPTION
"The sending of SNMP Traps has been disabled because too many alerts were generated within the defined window type"

Probable Cause: Either a large number of SNMP notifications are being generated, or the configured threshold which limits the number of notifications is set too aggressively.

Actions to be Taken: Examine the admin logs and the SNMP trap logs to determine the source of the large number of traps and take appropriate actions; verify that the configured limit for the rate at which traps will be sent is appropriate for your environment.

Clear Condition Alarm: When the rate of SNMP notifications goes down a starAlertsEnabled notification is generated"

starServiceLossSPIO NOTIFICATION-TYPE
STATUS current
DESCRIPTION
"A service loss condition has occurred due to SPIO failure or removal.

NOTE: Since the SPIO contains the ports used for SNMP access, this notification cannot normally be delivered as an SNMP trap. The notification will be logged and stored in the historical trap list, and if the system is configured to send INFORM PDUs the notification might be delivered at a later time.

Probable cause: Both SPIOS are no longer available, due to failure, removal, or operator action.

Action to be Taken: Bring at least one SPIO online.

Clear Condition: This condition is cleared when a SPIO is made active"

---SUMMARY "[System] Service Loss - No SPIO is available"
### IPSP trap

**starIPSPAllAddrFree NOTIFICATION-TYPE**

**OBJECTS**

- starContextName
- starInterfaceName

**STATUS**

obsolete

**DESCRIPTION**

"All IP addresses are now free on the IP Pool Sharing Protocol (IPSP) primary HA.

Probable Cause: IP Pool Sharing Protocol (IPSP) is running between two HAs
(a primary and a secondary). The primary HA has now released the last address
that was in use. This presumably is done in preparation for taking the
primary HA out of server.

User Action: Perform the desired maintenance on the primary HA that required
taking the device out of service."

**SUMMARY**

"[System] IPSP - all IP addresses are now free, context %s interface %s"

**ARGUMENTS**

0,1

---

### PCF trap

**starPCFUnreachable NOTIFICATION-TYPE**

**OBJECTS**

- starContextName
- starPCFAddress

**STATUS**

current

**DESCRIPTION**

"A PCF that the IMG communicates which is no longer reachable.

Probable Cause: The PCF has failed or is otherwise unavailable, or
a network connectivity problem makes it unreachable.

Action to be Taken: If the PCF outage was unplanned, restart/reset the
PCF; verify network connectivity

Clear Condition: The condition is cleared when the PCF address becomes
reachable, or if the configuration is changed to not use this server.

Condition Clear Alarm: A starPCFReachable notification is generated when
the pcf address becomes reachable."

**SUMMARY**

"[System] PCF Unreachable, VPN %s PCF address %s"

**ARGUMENTS**

0,1

---

### DHCP trap

**starDhcpAlive NOTIFICATION-TYPE**

**OBJECTS**

- starSessGGSNVpnName

---#SUMMARY "[System] SNMP Heartbeat"
---#STATE OPERATIONAL
starOverloadSystem NOTIFICATION-TYPE
OBJECTS { starCongestionResourceType }
STATUS current
DESCRIPTION
"A system-wide congestion overload condition has occurred.
Probable Cause: This is the result of an operator-configured congestion overload value reached. This notification indicated a chassis-wide overload condition, typically overall system usage reaching some fraction of capacity.

Once this limit is reached, the configured behavior is taken. This will cause certain older and/or dormant calls to be dropped in favor of newer calls.

Note that this is similar to, but different than, the starCongestion notification. Typically the 'overload' condition will be configured to trigger at an earlier point.

Actions to be Taken: Verify that the congestion overload thresholds are correct; if the congested state is seen repeatedly, or for sustained periods of time, additional system capacity may need to be brought online.

This system is cleared when the use of the specific resource falls below the configured limit.

Condition Clear Alarm: A starOverloadSystemClear notification is sent when the system overload condition is clear"

**starCGWServiceStop NOTIFICATION-TYPE**

**OBJECTS** { starServiceVpnName, starServiceServName }

**STATUS** current

**DESCRIPTION**

"A Serving Gateway (CGW) Service has stopped."

Probable Cause: This is typically caused by operator intervention. In rare cases it can be caused by the loss of resources (PSCs) to support the running configuration.

- **Action to be Taken:** If the CGW service shutdown was not planned, examine the admin logs for an indication of the failure. Verify that all configured PSCs are present and running in the system. Check the crash logs for an indication of a software failure.
- **Clear Condition:** Verify that the CGW service is operational.

**Condition Clear Alarm:** A starCGWServiceStart notification will be generated when the service is restarted

```--#SUMMARY "[Service CGW-%s-%s] CGW service has stopped"
--#ARGUMENTS {0,1}
--#STATE DEGRADED
--#SEVERITY MAJOR
::= { starentTraps 1248 }
```

**starMMENewConnectionsDisallowed NOTIFICATION-TYPE**

**OBJECTS** { starMMEInitialDisallowReason, starImsimgrInstId }  

**STATUS** current

**DESCRIPTION**

"The demultiplexer on the MME chassis has reached a condition where new connections are being dropped/rejected on MME services due to the specified reason. Please note that this is the initial trigger for this condition. More reasons/triggers may be activated later i.e. after the trap has been sent. These are not indicated via a new trap."

- **Action to be Taken:** If this is not intentional (i.e not driven by policy/configuration), cross-check IMSImgr counters using the reason provided.
Clear Condition: The condition is cleared when new connections at the MME are re-allowed.
Condition Clear Alarm: A starMMENewConnectionsAllowed notification will be generated when the condition is cleared.

starCardSwitchoverStart NOTIFICATION-TYPE
OBJECTS { starSlotNum, starSlotNum }
STATUS  current
DESCRIPTION
“A management card (SPC/MMIO) switchover operation has begun.
The first varbind identifies from which management card switchover started.
The second varbind identifies to which management card switchover is planned to switch.
Switchover can cause a momentary loss of communication through the management interface (SPIO incase of ASR5000), it is possible that this trap will not be successfully delivered.

Probable Cause: This is typically caused by an operator action; it can also represent the system recovering from a software or hardware fault.

Action to be Taken: If the management card switchover was unplanned, the admin logs should be examined for the cause of the switchover. If the cause was a software failure, the system crash logs should be examined.

Clear Condition: Verify the management card switchover completed successfully.

Clear Condition Alarm: A starCardSPCSwitchoverComplete is generated when the switchover operation has completed. This is not applicable to QVPC-SI.

starMMEEMBMSServiceStop NOTIFICATION-TYPE
OBJECTS { starServiceVpnName, starServiceServName }
STATUS current
DESCRIPTION
"An MME-EMBM Service has stopped.

Probable Cause: This is typically caused by operator intervention, when a
critical parameter associated with mme-embms-service is changed/removed. In unusual cases it can be caused by the loss of resources (PACs/PSCs) to support the running configuration.

Action to be Taken: If the MME-EMBMS service shutdown was not planned, examine the admin logs for any indication of the failure. Verify that all configured PACs/PSCs are present and running in the system. Check for any mme-embms-service related configuration errors by running show configuration errors section mme-embms-service. Also check the crash logs for any indication of a software failure.

--#SUMMARY "[Service MME-EMBMS-%s-%s] MME-EMBMS service has stopped"

IETF and Cisco MIBs

This section is for Administrators working with integrating the Starent MIB and the Cisco MIB so Cisco management applications can manage the ASR 5x00 chassis. It provides some new configuration options; there is also a list of supported Cisco MIBs.
New CLI Options

The following are new CLI options:

sysOld Options

The default Old string is 1.3.6.1.4.1.8164.

The new-style Cisco Old string is 1.3.6.1.4.1.9.

Using the following CLI, ASR 5000 users can choose which string they prefer:

```
[local]asr5000(config)# system sysoid-style new|default
```

**Important:** ASR 5500 users do not have this option as the Cisco Old String is the default.

**Important:** This command can be combined with sysdesc as follows: `system sysdesc=sysoid-style new|default` However, this combination affects BOTH sysDesc AND sysOld equally: that is, they can both be old-style or they can both be new-style. The System CLI offers an option to configure sysDesc independently, but SysOld is not a user-configurable parameter.

sysDesc Options

For ASR 5000 users, the default system description is:

```
Linux asr5000 2.6.18-staros-v2-private-deb #1 SMP (date/time) i686
```

The Cisco default system description is:

```
Cisco StarOS Software, ASR5000 Intelligent Mobile Gateway, Version 12.2. Copyright (c) 2011 by Cisco Systems, Inc.
```

Users can opt for either description using the following CLI command: `asr5000(config)# system sysdesc=sysoid-style new|default`

**Important:** This CLI will not be available to ASR 5500 users; it will default to the Cisco description only.

**Important:** This command can be combined with sysOld as follows: `system sysdesc=sysoid-style new|default`. However, this combination affects BOTH sysDesc AND sysOld equally: that is, they can both be old-style or they can both be new-style. The System CLI offers an option to configure sysDesc independently, but SysOld is not a user-configurable parameter.

Serial Number Configuration

ASR 5000 users can configure the chassis serial number with the following CLI:

```
[local]asr5000(config)# system chassisserialnumber <string>
```

**Important:** This CLI is not available for ASR 5500 users as the chassis serial number is hard-coded.
Standards-Based MIBs

The following are standards-based, read-only, and available from the Cisco MIB ftp site.

IF-MIB and ENTITY-MIB are disabled by default.

Configuration

MIBs can be configured using the following CLI:

```
[local]asr5000(config)# snmp mib <mib-name, auto complete> | no snmp mib <mib-name, auto complete>
```

Entity MIB

The Entity MIB is implemented as described in RFC4133. The following are not supported for this release:

- entPhysicalAlias
- entPhysicalAssetID
- entPhysicalMfgDate
- entPhysicalUris
- entLogicalTable
- entLPMappingTable
- entPhysicalContainsTable

IF MIB

The IF MIB is implemented per RFC1213, RFC1573, and RFC2863. The following are not supported for this release:

- ifStackTable
- ifStackLastChange
- ifRcvAddressTable
- ifTestTable
Cisco MIBs

The following is a list of supported Cisco MIBs for this release. These are available from the Cisco ftp site.

Configuration

MIBs can be configured using the following CLI:

```bash
[local]asr5000(config)# snmp mib <mib-name, auto complete> | no snmp mib <mib-name, auto complete>
```

Cisco MIBs

The following MIBs are supported in this release. They can be enabled/disabled as required.

- CISCO-ENHANCED-IPSEC-FLOW-MIB
- CISCO-ENTITY-DISPLAY-MIB
- CISCO-ENTITY-EXT-MIB
- CISCO-ENTITY-FRU-CONTROL-MIB
- CISCO-ENTITY-REDUNDANCY-MIB
- CISCO-ENTITY-SENSOR-MIB
- CISCO-ENTITY-STATE-MIB
- CISCO-FLASH-MIB
- CISCO-HOST-RESOURCE-MIB

**Important:** CISCO-HOST-RESOURCE-MIB is per the appropriate RFC, but limited to hrSystem and hrStorage tables.

- CISCO-IF-EXTENSION-MIB
- CISCO-IP-LOCAL-POOL-MIB
- CISCO-IPSEC-FLOW-MONITOR-MIB
- CISCO-MOBILE-WIRELESS-SERVICE-MIB
- CISCO-PROCESS_MIB
