DESCRIPTION
"Cisco Systems ASR 5xxx series of multimedia core platforms (ASR 5000, ASR 5500)

Designed exclusively for mobile and fixed mobile converged applications, Cisco's ASR 5xxx series products provide a high-performance, highly intelligent platform ideally suited for development in mobile operator networks to fulfill key multimedia core networking functions. The platform features 2G/3G/4G and WiFi multi-service access independent capabilities coupled with a carrier class high-availability design. Harnessing subscriber awareness with an abundant supply of distributed processing resources, the ASR 5xxx series offers a variety of high touch Inline Services to enable service providers to monetize the value of the network while enriching the overall subscriber experience."

DESCRIPTION "Added trap no. 1312 with the following variables
starStatFileSizeLimit,
starStatFilesizeMeasured

Added trap no. 1313 with the following variables
    starStatFilesizeLimit,
    starStatFilesizeMeasured

" REVISION "201509110000Z"
DESCRIPTION
" Removed trap number 1191(starSEAGWServiceStart) and 1192(starSEAGWServiceStop) definition added"

REVISION "201411040000Z"
DESCRIPTION
" Removed trap number 1533 and 1534 and replaced with 1290 and 1291 supporting code"
REVISION "201410300000Z"
DESCRIPTION
" Added trap number 1288 and 1289 supporting code"

REVISION "201410080000Z"
DESCRIPTION
" Added trap no. 1282 with the following variables
    starGTPCRLFSessMgrInst,
    starGTPCRLFVPNName,
    starGTPCRLFVPNId,
    starGTPCRLFContextName,
    starGTPCRLFCurrAppTPS

Added trap no. 1283 with the following variables
    starGTPCRLFSessMgrInst,
    starGTPCRLFVPNName,
    starGTPCRLFVPNId,
    starGTPCRLFContextName,
    starGTPCRLFCurrAppDelayTol

Added trap no. 1284 with the following variables
    starGTPCRLFSessMgrInst,
    starGTPCRLFVPNName,
    starGTPCRLFVPNId,
    starGTPCRLFContextName,

Added trap no. 1285 with the following variables
    starGTPCRLFSessMgrInst,
    starGTPCRLFVPNName,
    starGTPCRLFVPNId,
    starGTPCRLFContextName,

" REVISION "201408040000Z"
DESCRIPTION
" Added starNpudriverECCError trap supporting code"
REVISION "201407230000Z"
DESCRIPTION
" removing the extra 1533 and 1534 traps"
REVISION "201407160000Z"
DESCRIPTION
" Added starNpudriverECCError trap(reserving the trap id) at 1281"
REVISION "201406110000Z"
DESCRIPTION
" Added Severity in starChassisCrashListFull Traps"
REVISION "201405080000Z"
DESCRIPTION
" Added starBFDSSessUp, starBFDSSessDown and starSRPSwitchoverOccured Traps"
REVISION "201404250000Z"
DESCRIPTION
" Added MME Related threshold traps from 440 to 445"
REVISION "201312210000Z"
DESCRIPTION
" Removing SGSN substring from trap number 1219 and 1220"
STARENT-MIB DEFINITIONS ::= BEGIN

DESCRIPTION "Extended starChassisType to support KVM QvPC-SI chassis"
REVISION  "201312060000Z"

DESCRIPTION "Corrected IPv6 from IPv4 to trap number 1200"
REVISION  "201312050000Z"

"Fixed following issues
1. Revision not in reverse chronological order
2. not-accessible starent Index objects are modified to
   MAX-ACCESS accessible-for-notify for those sent in trap"
REVISION  "201311220000Z"

DESCRIPTION "Added two MIBs (starMRMEServiceStart, starMRMEServiceStop) for MRME service
starMRMEServiceStart = starentTraps 1264
starMRMEServiceStop = starentTraps 1265
Added two MIBs (starThresholdClearPerServiceSAMOGSessions,
starThresholdClearPerServiceSAMOGSessions) for per service samog-service
starThresholdClearPerServiceSAMOGSessions = starentTraps 519
starThresholdClearPerServiceSAMOGSessions = starentTraps 520"
REVISION  "201310040000Z"

DESCRIPTION "Changed following notification names
starThresholdAAAacctArchiveQueue1,
starThresholdClearAAAacctArchiveQueue1,
starThresholdAAAacctArchiveQueue2,
starThresholdClearAAAacctArchiveQueue2,
starThresholdAAAacctArchiveQueue3,
starThresholdClearAAAacctArchiveQueue3.

and changed StarUDPPortNum object to starUDPPortNum object in following notifications:
starECSreaddressServerDown,
starECSreaddressServerUp.

Added definition for starMMEInitialDisallowReason object.

Add new number for QvPC-SI platform in starChassisType object."
REVISION  "201309270000Z"

DESCRIPTION "Added missing object starFractE1TribTimeslots to starSDHFractE1LMIUp
   notification, changed MAX-ACCESS to accessible-for-notify from
   not-accessible for the following objects
   starFractE1TribSlot,
   starFractE1TribPort,
   starFractE1TribPath,
   starFractE1TribTug2,
   starFractE1TribTul12
   and moved starFractE1TribBundNum object to obsolete state."
REVISION  "201309250000Z"

DESCRIPTION "Change starSlotPort to storSlotNum in ApsChannelMismatch trap 1150"
REVISION  "201307230000Z"

DESCRIPTION "Replaced underscore sign with hyphen from starServiceType enum"
REVISION  "201307150000Z"
DESCRIPTION
"Modified SEVERITY from ERROR to MAJOR for following traps:
starPortDown,
starSRPConnDown,
starLAGGroupDown.

Changed starPortSlot, starPortNum, starContextName and starSRPIpAddress
objects access to accessible-for-notify."

DESCRIPTION
"Changed the name of trap starThreshNAPTPortChunks to starThreshNATPortChunks and
starThreshClearNAPTPortChunks to starThreshClearNATPortChunks"

DESCRIPTION
"Changed the APS related traps according to the implementation present in trap_api.c
following traps are modified:
starApsCommandSuccess,
starApsCommandFailure,
starApsSwitchSuccess,
starApsSwitchFailure,
starApsModeMismatch,
starApsChannelMismatch,
starApsByteMismatch,
starApsFeProtLineFailure,
starApsLossOfRedundancy,
starApsLossOfRedundancyClear."

DESCRIPTION
"Changed object type from starContextName to starCLIContext for the
following traps:
starLocalUserAdded,
starLocalUserRemoved,
starOsShellAccessed,
starTestModeEntered,
starLicenseFeaturesModified,
starHiddenAccessEnabled,
starHiddenAccessDisabled."

DESCRIPTION
"Added the missing objects and modified the summary field for
starTechSuppPasswdChanged trap"

DESCRIPTION
"Corrected starChassisCrashListFull description section"

DESCRIPTION
"changed starEGTPInterfaceType Enum in trap number 1112"

DESCRIPTION
"changed starEGTPInterfaceType Enum
changed STATE and SEVERITY fields for All APS,
related notifications."

DESCRIPTION
"Deprecated following traps
starCardSPCSwitchoverStart,
starCardSPCSwitchoverComplete,
starCardSPCSwitchoverFailed
starCardPACMigrateStart,
starCardPACMigrateComplete,
starCardPACMigrateFailed,

Added following traps for above trap as respective replacement
starCardSwitchoverStart,
STARENT-MIB DEFINITIONS ::= BEGIN

starCardSwitchoverComplete,
starCardSwitchoverFailed,
starCardMigrateStart,
starCardMigrateComplete,
starCardMigrateFailed"

REVISION "201304250000Z"

DESCRIPTION
"Added two MIBs (starSAMOGServiceStart, starSAMOGServiceStop) for SAMOG service.
starSAMOGServiceStart starentTraps 1251
starSAMOGServiceStop starentTraps 1252"

REVISION "201304180000Z"

DESCRIPTION
"Changed SUMMARY clause for starLongDurTimerExpiry notification.
Changed MAX-ACCESS to accessible-for-notify for following objects:
starSubMSID,
starSubName,
starSubTimerDuration,
starSubLongDurTimeoutAction,
starSubSetupTime,
starSubHomeAddr,
starSubHomeAddrv6."

REVISION "201304160000Z"

DESCRIPTION
"changed STATE and SEVERITY fields for starSDHPathHopUp,
starSDHE1TribUp and starSDHFracE1LMIDown notifications."

REVISION "201304090000Z"

DESCRIPTION
"Added trap no. 1251 with the following variables
starPMIPvPnName,
starPMIPvServName,
starPMIPvSelfAddrType,
starPMIPvSelfAddr,
starPMIPvPeerAddrType,
starPMIPvPeerAddr,
starPMIPvPeerOldRstCnt,
starPMIPvPeerNewRstCnt,
starPMIPvPeerSessCnt,
starPMIPvFailureReason

Added trap no. 1252 with the following variables
starPMIPvPnName,
starPMIPvServName,
starPMIPvSelfAddrType,
starPMIPvSelfAddr,
starPMIPvPeerAddrType,
starPMIPvPeerAddr"

REVISION "201304050000Z"

DESCRIPTION
" Added the following flags in APS related traps"

REVISION "201304040000Z"

DESCRIPTION
"changed SEVERITY level from INFORMTIONAL to WARNING for
starSGSNRMMemWarn notification."

REVISION "201303260000Z"

DESCRIPTION
"Added trap no. 1177, with the following variables
starSlotNum,
starCardType,
starPortSlot"

REVISION "201303180000Z"

DESCRIPTION
"Modified starPCFUnreachable description section
Updated correct object name starEISServerVPName in
STAR-MIB DEFINITIONS ::= BEGIN

starEISServerAlive
starEISServerDead traps.
Added starPCFReachable trap support"

REVISION "201303110000Z"

DESCRIPTION
"Changed starFanNum range in SYNTAX and MAX-ACCESS.
Added starFanLocation ASR5500 fan location details.
Changed SUMMARY clause for following traps
starFanFailed, starFanRemoved, starFanInserted,"

REVISION "201303060000Z"

DESCRIPTION
"Changed SYNTAX clause from Integer32 to Gauge32 for
following objects:
starCPUUser, starCPUSystem, starCPUIdle, starCPUIO, starCPUIRQ, starCPUMemUsed, starCPUMemCached

Changed SYNTAX clause from Integer32 to Gauge32 and also
changed range for following objects:
starCPULoad1Min, starCPULoad5Min, starCPULoad15Min, starCPUNumProcesses."

REVISION "201302280000Z"

DESCRIPTION
"Added context name to the OBJECTS and updated ARGUMENTS field for the following traps:
starLocalUserAdded, starLocalUserRemoved, starOsShellAccessed, starTestModeEntered, starLicenseFeaturesModified, starHiddenAccessEnabled, starHiddenAccessDisabled"

REVISION "201302260000Z"

DESCRIPTION
"Changed starThreshMeasuredPct SYNTAX from Integer32 to Gauge32.

Changed starPortNum object range.

Changed SUMMARY clause in starM3UAPCUnAvailable and starM3UAPCAvailable traps.

Changed objects from starThreshInt and starThreshMeasuredInt to starThreshPct and starThreshMeasuredPct and also changed SUMMARY and ARGUMENTS clauses in following traps:

-- single subscriber info
-- This is used to perform a lookup on information on a single subscriber. This is done in a
-- two-step process
--
-- 1. Use a SET pdu to provide the keys to lookup. Set one or more of the fields
-- starSessSub1Context, starSessSub1NAI, starSessSub1MSID, starSessSub1IpAddr
--
-- The SET pdu returns once the query is complete. This query can takes some time
-- especially on large systems, so do not use small retry timers.
--
-- 2. Use a GET pdu to retrieve the data.
--
-- Note that in some cases, multiple subscribers might match the given search criteria.
-- The starSessSub1LastResult field identifies if zero, one or multiple matches were found.
-- If multiple matches are found, data is returned for one of them.

starCardTempOverheat NOTIFICATION-TYPE
OBJECTS { starSlotNum, starCardTemperature }
STATUS current
DESCRIPTION "The card has reached a temperature beyond its safe operating range."
    Probable Cause: External temperature is too high; One or more fan failures; blockages the prevent fan air inflow/outflow.
    Action to be Taken: Inspect chassis for any item that may be blocking chassis air flow. Verify adjacent equipment is not obstructing air flow. Verify that the fans are running via the CLI/EMS. Check air filters. Check chassis maintenance schedule to see if chassis needs routine air filter replacement. Verify room temperature is within acceptable operating conditions.
    Clear Condition: This condition is cleared when the card reaches its operating temperature range or is removed from the system.
Condition Clear Alarm: This condition is cleared by a starCardTempOK notification. This is not applicable to QVPC-SI and QVPC-DI.

starCardSPCSwitchoverStart NOTIFICATION-TYPE
OBJECTS { starSlotNum, starSlotNum }
STATUS deprecated
DESCRIPTION
"An SPC switchover operation has begun. The first varbind identifies the SPC being switched away from; the second varbind identifies the SPC being switched to. Note that since an SPC switchover can cause a momentary loss of communication through the management (SPIO) interface, it is possible that this trap will not be successfully delivered.

Probable Cause: This is typically caused by an operator action; it can also represent the system recovering from a software or hardware fault.

Action to be Taken: If the SPC switchover was unplanned, the admin logs should be examined for the cause of the switchover. If the cause was a software failure, the system crash logs should be examined.

Clear Condition: Verify the SPC switchover completes successfully.

Clear Condition Alarm: A starCardSPCSwitchoverComplete is generated when the switchover operation has completed."

starCardSPCSwitchoverComplete NOTIFICATION-TYPE
OBJECTS { starSlotNum }
STATUS deprecated
DESCRIPTION
"An SPC Switchover has completed successfully. The starSlotNum varbind identifies the new primary SPC

Action to be Taken: If the SPC switchover was unplanned, the admin logs should be examined for the cause of the switchover. If the cause was a software failure, the system crash logs should be examined."

starCardSPCSwitchoverFailed NOTIFICATION-TYPE
OBJECTS { starSlotNum, starSlotNum }
STATUS deprecated
DESCRIPTION
"An SPC switchover operation has failed. The first varbind identifies the SPC that was attempted to be switched away from; the second varbind identifies the SPC that was attempted to be switched to.

Probable Cause: The SPC being migrated to was removed or reset before the migration completed; the migration operation was terminated by an operator; or a software or hardware failure on either SPC.

Action to be Taken: Verify that both SPCs have the card locks in the locked position; examine the admin logs for the cause of the failure. If the cause was a software failure, the system crash logs should be examined.

Clear Condition: The SPC in question will be reset; a starCardUp notification will be generated when the card is operational again."

-- CPU Notifications

starCPUBusy NOTIFICATION-TYPE
OBJECTS { starCPUSlot, starCPUNumber }
STATUS current
DESCRIPTION
"The CPU is experiencing very high usage.

Probable Cause: For SPC/SMC CPUs this typically represents an abnormal amount of management (CLI, SNMP, CORBA) requests. For PAC/PSC cards this indicates that the system is reaching its capacity.

Action to be Taken: For SPC/SMC cards, this may be a transient condition because of a burst of management activity. Monitor the CPU usage and if it is persistently high, examine the CPU table to determine which management activity is causing the excessive usage. For PAC/PSC cards, this indicates the system is nearing its overall capacity. Monitor CPU usage and if it is persistently high, the system may need additional PACs/PSCs to keep up with the system load.

Clear Condition: Verify that CPU usage returned to a normal load. This can represent a transient condition; the trap will be periodically repeated if the condition persists."

::: { starentTraps 166 }

starOverloadSystem NOTIFICATION-TYPE

OBJECTS { starCongestionResourceType }

STATUS current
DESCRIPTION
"A system-wide congestion overload condition has occurred.

Probable Cause: This is the result of an operator-configured congestion overload value reached. This notification indicated a chassis-wide overload condition, typically overall system usage reaching some fraction of capacity.

Once this limit is reached, the configured behavior is taken. This will cause certain older and/or dormant calls to be dropped in favor of newer calls.

Note that this is similar to, but different than, the starCongestion notification. Typically the 'overload' condition will be configured to trigger at an earlier point."
Actions to be Taken: Verify that the congestion overload thresholds are correct; if the congested state is seen repeatedly, or for sustained periods of time, additional system capacity may need to be brought online.

This system is cleared when the use of the specific resource falls below the configured limit.

Condition Clear Alarm: A starOverloadSystemClear notification is sent when the system overload condition is clear.

starCscfSessResourceCongestion NOTIFICATION-TYPE
OBJECTS { starSmgrId, starCongestionPolicy, starCscfSessCongestionResourceType }

::=

END
A congestion condition has occurred at Session Manager for Cscf Service.

Probable Cause: This is the result of an operator-configured congestion threshold being reached for Cscf Service at Session Manager. This can be due to high usage of the resource being monitored which indicates that the IMG is reaching its peak capacity, or could be caused by the incorrect configuration of the congestion thresholds.

Actions to be Taken: Verify that the congestion thresholds are correct; if the congested state is seen repeatedly, or for sustained periods of time, additional system capacity may need to be brought online.

This system is cleared when the use of the specific resource falls below the configured limit.

Condition Clear Alarm: A starCscfSessResourceCongestionClear notification is sent when there are no congestion conditions for cscf service in that Session Manager Instance.

DESCRIPTION
 "A CBC Association is down.
 Problem Cause: SCTP connection between MME and CBC has been brought down - could be for any of the"```
following reasons –
   i) network connectivity between MME and CBC is broken.
   ii) CBC has gracefully terminated the SCTP association with MME.
   iii) MME has gracefully terminated the SCTP association with CBC, typically due to operation intervention that would have effected sbc-service.

Action to be taken - In case the SCTP association between MME and CBC is abnormally closed, check for network connectivity between MME and CBC.

Condition Clear Alarm: In case the association termination was abnormal, A starPeerAssocUp notification will be generated when the CBC association is up.

IETF and Cisco MIBs

This section is for Administrators working with integrating the Starent MIB and the Cisco MIB so Cisco management applications can manage the ASR 5x00 chassis. It provides some new configuration options; there is also a list of supported Cisco MIBs.
New CLI Options

The following are new CLI options:

sysOld Options

The default Old string is 1.3.6.1.4.1.8164.

The new-style Cisco Old string is 1.3.6.1.4.1.9.

Using the following CLI, ASR 5000 users can choose which string they prefer:

[local]asr5000(config)# system sysoid-style new|default

**Important**: ASR 5500 users do not have this option as the Cisco Old String is the default.

**Important**: This command can be combined with sysdesc as follows: `system sysdesc=sysoid-style new|default` However, this combination affects BOTH sysDesc AND sysOld equally: that is, they can both be old-style or they can both be new-style. The System CLI offers an option to configure sysDesc independently, but SysOld is not a user-configurable parameter.

sysDesc Options

For ASR 5000 users, the default system description is:

Linux asr5000 2.6.18-staros-v2-private-deb #1 SMP (date/time) i686

The Cisco default system description is:

Cisco StarOS Software, ASR5000 Intelligent Mobile Gateway, Version 12.2. Copyright (c) 2011 by Cisco Systems, Inc.

Users can opt for either description using the following CLI command: `[local]asr5000(config)# system sysdesc-style new|default`

**Important**: This CLI will not be available to ASR 5500 users; it will default to the Cisco description only.

**Important**: This command can be combined with sysOld as follows: `system sysdesc=sysoid-style new|default`. However, this combination affects BOTH sysDesc AND sysOld equally: that is, they can both be old-style or they can both be new-style. The System CLI offers an option to configure sysDesc independently, but SysOld is not a user-configurable parameter.

Serial Number Configuration

ASR 5000 users can configure the chassis serial number with the following CLI:

[local]asr5000(config)# system chassis-serial-number <string>

**Important**: This CLI is not available for ASR 5500 users as the chassis serial number is hard-coded.
Standards-Based MIBs

The following are standards-based, read-only, and available from the Cisco MIB ftp site.

IF-MIB and ENTITY-MIB are disabled by default.

Configuration

MIBs can be configured using the following CLI:

[local]asr5000(config)# snmp mib <mib-name, auto complete> | no snmp mib <mib-name, auto complete>

Entity MIB

The Entity MIB is implemented as described in RFC4133. The following are not supported for this release:

- entPhysicalAlias
- entPhysicalAssetID
- entPhysicalMfgDate
- entPhysicalUris
- entLogicalTable
- entLPMappingTable
- entPhysicalContainsTable

IF MIB

The IF MIB is implemented per RFC1213, RFC1573, and RFC2863. The following are not supported for this release:

- ifStackTable
- ifStackLastChange
- ifRevAddressTable
- ifTestTable
Cisco MIBs

The following is a list of supported Cisco MIBs for this release. These are available from the Cisco ftp site.

Configuration

MIBs can be configured using the following CLI:

```
[local]asr5000(config)# snmp mib <mib-name, auto complete> | no snmp mib <mib-name, auto complete>
```

Cisco MIBs

The following MIBs are supported in this release. They can be enabled/disabled as required.

- CISCO-ENHANCED-IPSEC-FLOW-MIB
- CISCO-ENTITY-DISPLAY-MIB
- CISCO-ENTITY-EXT-MIB
- CISCO-ENTITY-FRU-CONTROL-MIB
- CISCO-ENTITY-REDUNDANCY-MIB
- CISCO-ENTITY-SENSOR-MIB
- CISCO-ENTITY-STATE-MIB
- CISCO-FLASH-MIB
- CISCO-HOST-RESOURCE-MIB

![Important:](image) **CISCO-HOST-RESOURCE-MIB** is per the appropriate RFC, but limited to hrSystem and hrStorage tables.

- CISCO-IF-EXTENSION-MIB
- CISCO-IP-LOCAL-POOL-MIB
- CISCO-IPSEC-FLOW-MONITOR-MIB
- CISCO-MOBILE-WIRELESS-SERVICE-MIB
- CISCO-PROCESS_MIB
