

Release Notes for StarOS™ Software Version 21.19.1

First Published: May 11, 2020

Last Updated: May 11, 2020

Introduction

This Release Note identifies changes and issues related to this software release. This emergency release is based on release 21.19.0. These release notes are applicable to the ASR5500, VPC-SI and VPC-DI platforms.

Release Package Version Information

Table 1 - Release Package Version Information

Software Packages	Version
StarOS packages	21.19.1, build 75704

Descriptions for the various packages provided with this release are located in [Release Package Descriptions](#).

Feature and Behavior Changes

The following features and/or behavior changes have been introduced in this emergency release.

Refer to the [Release Change Reference](#) for a complete list of feature and behavior changes associated with this software release.

Related Documentation

For a complete list of documentation available for this release, go to <http://www.cisco.com/c/en/us/support/wireless/asr-5000-series/products-installation-and-configuration-guides-list.html>.

Installation and Upgrade Notes

This Release Note does not contain installation and upgrade instructions. Refer to the existing installation documentation for specific installation and upgrade considerations.

Firmware Updates

There are no firmware upgrades required for this release.

Software Integrity Verification

To verify the integrity of the software image you have from Cisco, you can validate the SHA512 checksum information against the checksum identified by Cisco for the software.

Image checksum information is available through the following mechanisms:

- Cisco.com Software Download Details:** To find the checksum, hover the mouse pointer over the software image you have downloaded.

At the bottom you find the SHA512 checksum, if you do not see the whole checksum you can expand it by pressing the "..." at the end.

- .cksums file:** A file containing software image checksum information is distributed with the image files. The naming convention for this file is:

`<product>-<version>.cksums`

Example: `asr5500-21.4.0.cksums`

To validate the information, calculate a SHA512 checksum using the information in [Table 2](#) and verify that it matches either the one provided on the software download page.

To calculate a SHA512 checksum on your local desktop please see the table below.

Table 2 - Checksum Calculations per Operating System

Operating System	SHA512 checksum calculation command examples
Microsoft Windows	Open a command line window and type the following command <code>> certutil.exe -hashfile <filename>.<extension> SHA512</code>
Apple MAC	Open a terminal window and type the following command <code>\$ shasum -a 512 <filename>.<extension></code>

Open Bugs in this Release

Operating System	SHA512 checksum calculation command examples
Linux	<p>Open a terminal window and type the following command</p> <pre>\$ sha512sum <filename>.<extension></pre> <p>Or</p> <pre>\$ shasum -a 512 <filename>.<extension></pre>
<p>NOTES:</p> <p><filename> is the name of the file.</p> <p><extension> is the file extension (e.g. .zip or .tgz).</p>	

If the SHA512 checksum matches, you can be sure that no one has tampered with the software image or the image has not been corrupted during download.

If the SHA512 checksum does not match, we advise you to not attempt upgrading any systems with the corrupted software image. Download the software again and verify the SHA512 checksum again. If there is a constant mismatch, please open a case with the Cisco Technical Assistance Center.

Certificate Validation

In 21.12.0 and later releases, software images for StarOS, VPC-DI, and VPC-SI, and the companion software packages for StarOS and VPC are signed via x509 certificates. In pre-21.12.0 releases, image signing is not supported for VPC-DI and VPC-SI images, and for StarOS and VPC companion software packages.

USP ISO images are signed with a GPG key.

For more information and instructions on how to validate the certificates, refer to the README file available with the respective software packages.

Open Bugs in this Release

The following table lists the known bugs that were found in, and/or that remain open in this software release.

NOTE: This software release may contain open bugs first identified in other releases. Additional information for all open bugs for this release are available in the [Cisco Bug Search Tool](#).

Table 3 - Open Bugs in this Release

Bug ID	Headline	Product Found*
CSCvs67941	[BP CUPS] egtpc_handle_abort_proc_cmd_evt()	cups-cp
CSCvt26865	sessmgr task restart with fn: sessmgr_ggsn_cups_remove_sx_trans_node()	cups-cp
CSCvt34356	BP-CUPS- sessmgr_pgw_handle_pcc_intf_evt_modify_rsp()	cups-cp
CSCvt78639	[BP-CUPS]PC: [045071bc/X] sessmgr_sxu_handle_events_from_egtpu_app()	cups-cp
CSCvu14129	BP-CUPS- sessmgr_pgw_handle_del_sub_session()	cups-cp
CSCvu15322	[BP-CUPS]: Huge session disconnect due to "sx-no-response";	cups-cp
CSCvu15491	BP-CUPS- egtpc_handle_abort_proc_cmd_evt()	cups-cp

Resolved Bugs in this Release

Bug ID	Headline	Product Found*
CSCvu17532	[BP-CUPS]- sgwdrv_update_bearer_stat()	cups-cp
CSCvu17838	[BP-CUPS] just after reload this crash is seen and rulebase is not getting pushed.	cups-cp
CSCvu19926	"[BP-CUPS]srp checkpoint failures,resulting in call drops,in CP ICSR"	cups-cp
CSCvt15619	[BP-CUPS] : Packet filter list at Uplane is getting corrupted resulting in incorrect rule match	cups-up
CSCvu00150	[PLT-CUPS]: The p2p app-identifier tls-sni related CLIs failing at UP	cups-up
CSCvu19385	[BP-CUPS] Fatal Signal 11 uplane_sfw_nat_gr_handle_nat_realm_update	cups-up
CSCvu19428	[BP-CUPS]: Observed high number of session-disconnect on UP due to "sx-no-response";	cups-up
CSCvu19838	[BP-CUPS] Error Log SEID: Ê Non-zero Correlation id while sending Sx session report request	cups-up
CSCvu20299	[BP-CUPS]:[uplane 222401 error] :?J Non-zero Correlation id while sending Sx session report request.	cups-up
CSCvt97779	"[BP_CUPS] CF: sessmgr recovery when done in a particular sequence, call gets dropped"	cups-up
CSCvu14068	[BP_CUPS] : Incorrect i/p o/p data in "sh sub user-plan full all" after SR under specific condition	cups-up
CSCvu18163	Recovery mechanism is not working as expected for CIOT calls after session manager restart	mme
CSCvu19454	MME doesn't return the UE count in a geographical area when imsi-group is configured in hex-format	mme
CSCvu19517	Maximum-Response-Time AVP is not used as Active Time for PSM	mme
CSCvt79109	"[MONTE]: On PDN Connectivity Status, RIA are not incrementing for detach on scsf-service statistics"	mme
CSCvu20041	Delete counter not incremented proeprly for Monte	mme
CSCvu20206	Loss of connectivity report not triggered for PS to CS SRVCC scenario for Monte with IP PDN	mme
CSCvu20626	[MONTE] bulkstats counter issue for num-of-ues-in-geographical-area	mme
CSCvt47005	[BP-Legacy] Traffic allowed despite CCR failure with FHT continue discard traffic post recovery	pdn-gw
CSCvp05787	sessmgr restart seen with function egtpc_handle_del_bearer_cmd_req_evt()	sgsn
* Information in the "Product Found" column identifies the product in which the bug was initially identified.		

Resolved Bugs in this Release

The following table lists the known bugs that are resolved in this specific software release.

NOTE: This software release may contain bug fixes first introduced in other releases. Additional information for all resolved bugs for this release are available in the [Cisco Bug Search Tool](#).

Resolved Bugs in this Release

Table 4 - Resolved Bugs in this Release

Bug ID	Headline	Product Found*
CSCvt46557	"[BP-CUPS]: Assertion failure at egtpc_handle_delete_sess_rsp_evt, lost 50% subs in 2 hours"	cups-cp
CSCvs26391	[BP-CUPS]- sgwdrv_update_bearer_stat()	cups-cp
CSCvt33841	BP-CUPS- sgwdrv_egtpc_event_dispatch()	cups-cp
CSCvt33842	BP-CUPS- saegwdrv_ue_fsm_st_active_evt_snx_dropcall()	cups-cp
CSCvt56799	IPSEC: SX is in Non-Configured state when more than 14 apns are configured	cups-cp
CSCvt18818	CUPS - limit packet size gives full packet after changing size	cups-cp
CSCvt66503	LI configuration not pushed completely through Sx	cups-cp
CSCvt49488	In Monsub fastpath packets are captured twice in vpp pcap	cups-up
CSCvt94311	[BP-CUPS] sessmgr 12341 error FAR cannot be removed atleast one PDR still referencing FAR ID 0x8008	cups-up
CSCvt29929	CUPS CP - Monitor subscriber control via option 19/26	cups-up
CSCvq00006	MPLS FEC ILM mapping missing for many ip pools after vpnmgr crash	ggsn
CSCvu04613	Multiple sessmgr crashes - sessmgr_handle_mme_get_db_records_for_location_information	mme
CSCvt53996	MME returns DIAMETER_ERROR_USER_UNKNOWN for Mon even Number of UE's case	mme
CSCvu03192	Last Known Location not reported when ISDR is received in UE detached state	mme
CSCvu07888	with and without periodic timer is not working for TA (accuracy 2) change using ULA/ISDR	mme
CSCvu02977	MME reloads while performing SCEF initiated connection release procedure	mme
CSCvu03204	Current number of UEs being monitored stats not incremented	mme
CSCvt05076	PGW handling of multiple RARs	pdn-gw
CSCvt52190	Abnormally high "RTT for echo" value in show egtpc peer	pdn-gw
CSCvs47731	Assertion failure at sessmgr_pgw_check_back_to_back_update	pdn-gw
CSCvs76599	sessmgr restart at sgwdrv_epsb_fsm_st_connected_evt_s5_disconnected()	pdn-gw
CSCvs88144	[PGW] PCRF monitoring-key range must allow any 4 bytes range value	pdn-gw
CSCvs99961	ppp_l2tp_allow_auth_no_pco flag not set after fresh boot	pdn-gw
CSCvt17854	Cisco PGW sees data corruption warning messages during string operations	pdn-gw
CSCvs21832	Mission Critical QCI in qci-qos-mapping table gets removed after node reload	pdn-gw
CSCvt09828	Cisco SAEGw restart observed when Modify Bearer Req is received	sae-gw
CSCvs89155	CDRs have wrong NodeID for AAAMGR instances more than 998.	sgsn
CSCvt12972	Task restart while handling the context response message	sgsn

Bug ID	Headline	Product Found*
CSCvp33054	Assertion failure function sn_gt_process_sgsn_dns_query	sgsn
CSCvt27660	Restart counter change from PGW causes path failure on co-located SGW leading to call drops for CSR	sgw
CSCvt65939	diameter-session-id for Gy lost on UDR when disconnected with sn-closure-reason=0	staros
CSCvp12739	show deployment-vnfrs:vnfr command does not work	usp-usf
* Information in the "Product Found" column identifies the product in which the bug was initially identified.		

Operator Notes

StarOS Version Numbering System

The output of the **show version** command displays detailed information about the version of StarOS currently running on the ASR 5x00 or Cisco Virtualized Packet Core platform.

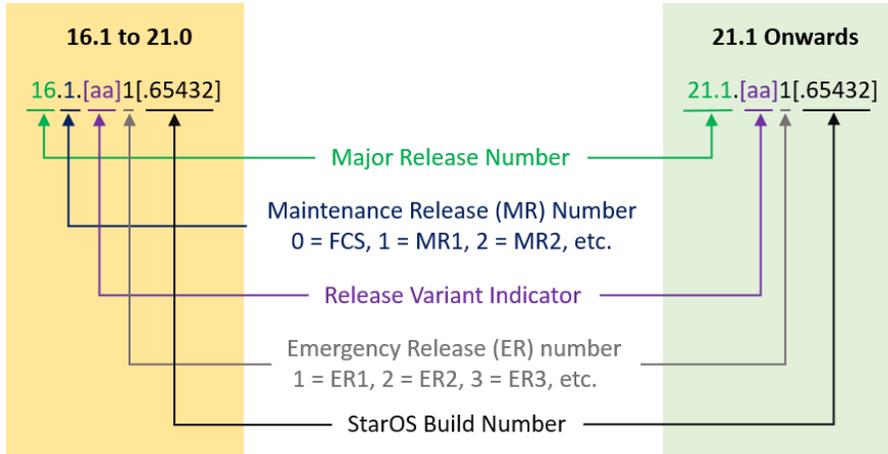

Prior to release 16.1, the *Image Version* field displayed a branch of software including the build number, for example "16.0 (55435)". Subsequent releases of software for the major release differed only in build number. Lab Quality/EFT releases versus deployment releases also differed only in build number.

From release 16.1 onwards, the output of the **show version** command, as well as the terminology used to describe the Build Version Number fields, has changed. Additionally, **show version** will display slightly different information depending on whether or not a build is suitable for deployment.

The Version Build Number for releases between 16.1 and 21.0 include a major, maintenance, and emergency release number, for example "16.1.2".

The Version Build Number for releases 21.1 and later include a major and emergency release number, for example, "21.1.1".

In either scenario, the appropriate version number field increments after a version has been released. The new version numbering format is a contiguous sequential number that represents incremental changes between releases. This format will facilitate identifying the changes between releases when using Bug Search Tool to research software releases.

Release Package Descriptions

[Table 5](#) provides descriptions for the packages that are available with this release.

Table 5 - Release Package Information

In 21.12.0 and later Releases	In pre-21.12.0 Releases	Description
ASR 5500		
asr5500-<release>.zip	asr5500-<release>.bin	Contains the signed ASR 5500 software image, the signature file, a verification script, the x509 certificate, and a README file containing information on how to use the script to validate the certificate.
asr5500_T-<release>.zip	asr5500_T-<release>.bin	Contains the signed, trusted ASR 5500 software image, the signature file, a verification script, the x509 certificate, and a README file containing information on how to use the script to validate the certificate.
StarOS Companion Package		
companion-<release>.zip	companion-<release>.tgz	Contains numerous files pertaining to this version of the StarOS including SNMP MIBs, RADIUS dictionaries, ORBEM clients. These files pertain to both trusted and non-trusted build variants. In 21.12.0 and later releases, the StarOS companion package also includes the signature file, a verification script, the x509 certificate, and a README file containing information on how to use the script to validate the certificate.
VPC-DI		
qvpc-di-<release>.bin.zip	qvpc-di-<release>.bin	Contains the VPC-DI binary software image that is used to replace a previously deployed image on the flash disk in existing installations. In 21.12.0 and later releases, this package also includes the signature file, a verification script, the x509 certificate, and a README file containing information on how to use the script to validate the certificate.

In 21.12.0 and later Releases	In pre-21.12.0 Releases	Description
qvmc-di_T-<release>.bin.zip	qvmc-di_T-<release>.bin	<p>Contains the trusted VPC-DI binary software image that is used to replace a previously deployed image on the flash disk in existing installations.</p> <p>In 21.12.0 and later releases, this package also includes the signature file, a verification script, the x509 certificate, and a README file containing information on how to use the script to validate the certificate.</p>
qvmc-di-<release>.iso.zip	qvmc-di-<release>.iso	<p>Contains the VPC-DI ISO used for new deployments, a new virtual machine is manually created and configured to boot from a CD image.</p> <p>In 21.12.0 and later releases, this package also includes the signature file, a verification script, the x509 certificate, and a README file containing information on how to use the script to validate the certificate.</p>
qvmc-di_T-<release>.iso.zip	qvmc-di_T-<release>.iso	<p>Contains the trusted VPC-DI ISO used for new deployments, a new virtual machine is manually created and configured to boot from a CD image.</p> <p>In 21.12.0 and later releases, this package also includes the signature file, a verification script, the x509 certificate, and a README file containing information on how to use the script to validate the certificate.</p>
qvmc-di-template-vmware-<release>.zip	qvmc-di-template-vmware-<release>.tgz	<p>Contains the VPC-DI binary software image that is used to on-board the software directly into VMware.</p> <p>In 21.12.0 and later releases, this package also includes the signature file, a verification script, the x509 certificate, and a README file containing information on how to use the script to validate the certificate.</p>
qvmc-di-template-vmware_T-<release>.zip	qvmc-di-template-vmware_T-<release>.tgz	<p>Contains the trusted VPC-DI binary software image that is used to on-board the software directly into VMware.</p> <p>In 21.12.0 and later releases, this package also includes the signature file, a verification script, the x509 certificate, and a README file containing information on how to use the script to validate the certificate.</p>
qvmc-di-template-libvirt-kvm-<release>.zip	qvmc-di-template-libvirt-kvm-<release>.tgz	<p>Contains the same VPC-DI ISO identified above and additional installation files for using it on KVM.</p> <p>In 21.12.0 and later releases, this package also includes the signature file, a verification script, the x509 certificate, and a README file containing information on how to use the script to validate the certificate.</p>
qvmc-di-template-libvirt-kvm_T-<release>.zip	qvmc-di-template-libvirt-kvm_T-<release>.tgz	<p>Contains the same trusted VPC-DI ISO identified above and additional installation files for using it on KVM.</p> <p>In 21.12.0 and later releases, this package also includes the signature file, a verification script, the x509 certificate, and a README file containing information on how to use the script to validate the certificate.</p>
qvmc-di-<release>.qcow2.zip	qvmc-di-<release>.qcow2.tgz	<p>Contains the VPC-DI binary software image in a format that can be loaded directly with KVM using an XML definition file, or with OpenStack.</p> <p>In 21.12.0 and later releases, this package also includes the signature file, a verification script, the x509 certificate, and a README file containing information on how to use the script to validate the certificate.</p>

In 21.12.0 and later Releases	In pre-21.12.0 Releases	Description
qvpc-di_T-<release>.qcow2.zip	qvpc-di_T-<release>.qcow2.tgz	<p>Contains the trusted VPC-DI binary software image in a format that can be loaded directly with KVM using an XML definition file, or with OpenStack.</p> <p>In 21.12.0 and later releases, this package also includes the signature file, a verification script, the x509 certificate, and a README file containing information on how to use the script to validate the certificate.</p>
VPC-SI		
qvpc-si-<release>.bin.zip	qvpc-si-<release>.bin	<p>Contains the VPC-SI binary software image that is used to replace a previously deployed image on the flash disk in existing installations.</p> <p>In 21.12.0 and later releases, this package also includes the signature file, a verification script, the x509 certificate, and a README file containing information on how to use the script to validate the certificate.</p>
qvpc-si_T-<release>.bin.zip	qvpc-si_T-<release>.bin	<p>Contains the trusted VPC-SI binary software image that is used to replace a previously deployed image on the flash disk in existing installations.</p> <p>In 21.12.0 and later releases, this package also includes the signature file, a verification script, the x509 certificate, and a README file containing information on how to use the script to validate the certificate.</p>
qvpc-si-<release>.iso.zip	qvpc-si-<release>.iso	<p>Contains the VPC-SI ISO used for new deployments, a new virtual machine is manually created and configured to boot from a CD image.</p> <p>In 21.12.0 and later releases, this package also includes the signature file, a verification script, the x509 certificate, and a README file containing information on how to use the script to validate the certificate.</p>
qvpc-si_T-<release>.iso.zip	qvpc-si_T-<release>.iso	<p>Contains the trusted VPC-SI ISO used for new deployments a new virtual machine is manually created and configured to boot from a CD image.</p> <p>In 21.12.0 and later releases, this package also includes the signature file, a verification script, the x509 certificate, and a README file containing information on how to use the script to validate the certificate.</p>
qvpc-si-template-vmware-<release>.zip	qvpc-si-template-vmware-<release>.ova	<p>Contains the VPC-SI binary software image that is used to on-board the software directly into VMware.</p> <p>In 21.12.0 and later releases, this package also includes the signature file, a verification script, the x509 certificate, and a README file containing information on how to use the script to validate the certificate.</p>
qvpc-si-template-vmware_T-<release>.zip	qvpc-si-template-vmware_T-<release>.ova	<p>Contains the trusted VPC-SI binary software image that is used to on-board the software directly into VMware.</p> <p>In 21.12.0 and later releases, this package also includes the signature file, a verification script, the x509 certificate, and a README file containing information on how to use the script to validate the certificate.</p>
qvpc-si-template-libvirt-kvm-<release>.zip	qvpc-si-template-libvirt-kvm-<release>.tgz	<p>Contains the same VPC-SI ISO identified above and additional installation files for using it on KVM.</p> <p>In 21.12.0 and later releases, this package also includes the signature file, a verification script, the x509 certificate, and a README file containing information on how to use the script to validate the certificate.</p>

In 21.12.0 and later Releases	In pre-21.12.0 Releases	Description
qvmc-si-template-libvirt-kvm_T-<release>.zip	qvmc-si-template-libvirt-kvm_T-<release>.tgz	Contains the same trusted VPC-SI ISO identified above and additional installation files for using it on KVM. In 21.12.0 and later releases, this package also includes the signature file, a verification script, the x509 certificate, and a README file containing information on how to use the script to validate the certificate.
qvmc-si-<release>.qcow2.zip	qvmc-si-<release>.qcow2.gz	Contains the VPC-SI binary software image in a format that can be loaded directly with KVM using an XML definition file, or with OpenStack. In 21.12.0 and later releases, this package also includes the signature file, a verification script, the x509 certificate, and a README file containing information on how to use the script to validate the certificate.
qvmc-si_T-<release>.qcow2.zip	qvmc-si_T-<release>.qcow2.gz	Contains the trusted VPC-SI binary software image in a format that can be loaded directly with KVM using an XML definition file, or with OpenStack. In 21.12.0 and later releases, this package also includes the signature file, a verification script, the x509 certificate, and a README file containing information on how to use the script to validate the certificate.
VPC Companion Package		
companion-vpc-<release>.zip	companion-vpc-<release>.tgz	Contains numerous files pertaining to this version of the VPC including SNMP MIBs, RADIUS dictionaries, ORBEM clients. These files pertain to both VPC-DI and VPC-SI, and for trusted and non-trusted build variants. In 21.12.0 and later releases, the VPC companion package also includes the signature file, a verification script, the x509 certificate, and a README file containing information on how to use the script to validate the certificate.

Obtaining Documentation and Submitting a Service Request

For information on obtaining documentation, using the Cisco Bug Search Tool (BST), submitting a service request, and gathering additional information, see *What's New in Cisco Product Documentation*, at:

<http://www.cisco.com/c/en/us/td/docs/general/whatsnew/whatsnew.html>.

Subscribe to *What's New in Cisco Product Documentation*, which lists all new and revised Cisco technical documentation, as an RSS feed and deliver content directly to your desktop using a reader application. The RSS feeds are a free service.
