LAST-UPDATED "201612220000Z" --Dec 22, 2016
ORGANIZATION "Cisco Systems, Inc."
CONTACT-INFO
" Email: support@starentnetworks.com
Web: www.cisco.com
Cisco Systems, Inc.
30 International Place
Tewksbury, MA 01876
(978) 851-1100"
DESCRIPTION
"Cisco Systems ASR 5xxx series of multimedia core platforms (ASR 5000, ASR 5500)

Designed exclusively for mobile and fixed mobile converged applications, Cisco's ASR 5xxx series products provide a high-performance, highly intelligent platform ideally suited for development in mobile operator networks to fulfill key multimedia core networking functions. The platform features 2G/3G/4G and WiFi multi-service access independent capabilities coupled with a carrier class high-availability design. Harnessing subscriber awareness with an abundant supply of distributed processing resources, the ASR 5xxx series offers a variety of high touch Inline Services to enable service providers to monetize the value of the network while enriching the overall subscriber experience."

REVISION "201702270000Z"
DESCRIPTION
"Maximum Concurrent CLI Sessions enforcement on StarOS
starGlobalCLISessionsLimit,
starUserCLISessionsLimit"

REVISION "201702150000Z"
DESCRIPTION
"Hat heartbeat loss on the card w.r.t peer cards for DI platform
starThreshHatHb5MinsLoss,
starThreshClearHatHb5MinsLoss,
starThreshHatHb60MinsLoss,
starThreshClearHatHb60MinsLoss"

REVISION "201612220000Z"
DESCRIPTION
"Added trap nos. 1534, 1535 and 1536 with the following variables
starDiameterVpnName,
starDiameterRlfContext,
starDiameterPeerName,
starDiameterEndpointName,
starDiameterRlfECode
starDiameterRlfTps,
starDiameterRlfDelayTolerance,
starDiameterRlfQueuePercent,
starDiameterDiamproxyInstance"

REVISION "201612200000Z"
DESCRIPTION
"DOS Attack & Decryption Fail Traps added."

REVISION "201609160000Z"
DESCRIPTION
"Log Source (LS) log volume threshold is added."

REVISION "201608230000Z"
DESCRIPTION
"Added Management Card switchover due to HD Raid unrecoverable failure trap"

REVISION "201607040000Z"
DESCRIPTION
"Mark the unsupported traps to obsolete"

REVISION "201606230000Z"
DESCRIPTION
"Corrected the names of the traps in StarOS and Starent.my file"

REVISION "201606220000Z"
DESCRIPTION
"Added SI and DI keywords in Traps"

REVISION "201605120000Z"
DESCRIPTION
"Added DDF Reload Trap"

REVISION "201604180000Z"
DESCRIPTION
"Removed starThreshDiscRsn, and added correct object to starThreshSNXDisconnectReason and
starThreshClearSNXDisconnectReason"

REVISION "201604120000Z"
DESCRIPTION
"Streamlined all the numbers from 21.x to 17.x"

REVISION "201604120000Z"
DESCRIPTION
"Corrected Traps and MIB old numbers"

REVISION "201604110000Z"
DESCRIPTION
"Corrected few trap numbers and errors in mib file"

REVISION "201509140000Z"
DESCRIPTION
" Added trap no. 1312 with the following variables
  starStatFileSizeLimit,
  starStatFileSizeMeasured

  Added trap no. 1313 with the following variables
  starStatFileSizeLimit,
  starStatFileSizeMeasured
"

REVISION "201509110000Z"
DESCRIPTION
" Removed trap number 1191 (starSEAGWServiceStart) and 1192 (starSEAGWServiceStop) definition added"

REVISION "201411040000Z"
DESCRIPTION
" Removed trap number 1533 and 1534 and replaced with 1290 and 1291 supporting code"

REVISION "201410300000Z"
DESCRIPTION
" Added trap number 1288 and 1289 supporting code"

REVISION "201410080000Z"
DESCRIPTION
" Added trap no. 1282 with the following variables
  starGTPCRLFSessMgrInst,
  starGTPCRLFVVPNName,
  starGTPCRLFVPNId,
  starGTPCRLFContextName,
  starGTPCRLFCurrAppTPS

  Added trap no. 1283 with the following variables
  starGTPCRLFSessMgrInst,
  starGTPCRLFVVPNName,
  starGTPCRLFVPNId,
  starGTPCRLFContextName,
  starGTPCRLFDelayTol

  Added trap no. 1284 with the following variables
  starGTPCRLFSessMgrInst,
  starGTPCRLFVVPNName,
  starGTPCRLFVPNId,
  starGTPCRLFContextName,

  Added trap no. 1285 with the following variables
  starGTPCRLFSessMgrInst,
  starGTPCRLFVVPNName,
  starGTPCRLFVPNId,
  starGTPCRLFContextName,
"

REVISION "201408040000Z"
DESCRIPTION
" Added starNpdriverECCError trap supporting code"

REVISION "201407230000Z"
DESCRIPTION
" Removing the extra 1533 and 1534 traps"

REVISION "201407160000Z"
DESCRIPTION
" Added starNpdriverECCError trap (reserving the trap id) at 1281"

REVISION "201406110000Z"
DESCRIPTION
" Added Severity in starChassisCrashListFull Traps"

REVISION "201405080000Z"
DESCRIPTION
" Added BFD Sessions Up, starBFDSessionDown and starSRPSwitchoverOccured Traps"

REVISION "201404250000Z"
DESCRIPTION
" Added MME Related threshold traps from 440 to 445"

REVISION "201302200000Z"
SNMP  MIB Reference, StarOS™ Release 21.2

STARENT - MIB DEFINITIONS ::= BEGIN

DESCRIPTION
" Removing SGSN substring from trap number 1219 and 1220"
REVISION  "2013022000000Z"

DESCRIPTION
" Extended starChassisType to support KVM QvPC-SI chassis"
REVISION  "2013120600000Z"

DESCRIPTION
" Corrected IPv6 from IPv4 to trap number 1200"
REVISION  "2013120500000Z"

DESCRIPTION
" Fixed following issues
1. Revision not in reverse chronological order
2. not-accessible starent Index objects are modified to MAX-ACCESS accessible-for-notify for those sent in trap"
REVISION  "2013112200000Z"

DESCRIPTION
" Added two MIBs (starMRMServiceStart, starMRMServiceStop) for MRME service
starMRMServiceStart- starentTraps 1264
starMRMServiceStop- starentTraps 1265
Added two MIBs (starThreshPerServiceSAMOGSessions, starThreshClearPerServiceSAMOGSessions) for per service samog-service
starThreshPerServiceSAMOGSessions- starentTraps 519
starThreshClearPerServiceSAMOGSessions - starentTraps 520"
REVISION  "2013100400000Z"

DESCRIPTION
" Changed following notification names
starThreshAAAAcctArchiveQueue-1,  
starThreshClearAAAAcctArchiveQueue-1,  
starThreshAAAAcctArchiveQueue-2,  
starThreshClearAAAAcctArchiveQueue-2,  
starThreshAAAAcctArchiveQueue-3,  
starThreshClearAAAAcctArchiveQueue-3  
to
starThreshAAAAcctArchiveQueue1,  
starThreshClearAAAAcctArchiveQueue1,  
starThreshAAAAcctArchiveQueue2,  
starThreshClearAAAAcctArchiveQueue2,  
starThreshAAAAcctArchiveQueue3,  
starThreshClearAAAAcctArchiveQueue3.

Added , in starLIRcvryErrType object.

Changed StarUDPPortNum object to starUDPPortNum object in following notifications:
  starECSreaddressServerDown,
  starECSreaddressServerUp.

Added definition for starMMEInitialDisallowReason object.

Added new number for QvPC-SI platform in starChassisType object."
REVISION  "2013092700000Z"

DESCRIPTION
" Added missing object starFractElTribTimeslots to starSDHFrcetElLMIUp notification, changed MAX-ACCESS to accessible-for-notify from not-accessible for the following objects
starFractElTribSlot,  
starFractElTribPort,  
starFractElTribPath,  
starFractElTribTug2,  
starFractElTribTul2  
and moved starFractElTribBundNum object to obsolete state."  
REVISION  "2013092500000Z"

DESCRIPTION
" Change starSlotPort to storSlotNum in ApsChannelMismatch trap 1150"
REVISION  "2013072300000Z"
SNMP
STARENT

STARENT- MIB DEFINITIONS ::= BEGIN

DESCRIPTION
"Replaced underscore sign with hyphen from startServiceType enum"

REVISION      "201307150000Z"
DESCRIPTION
"Modified SEVERITY from ERROR to MAJOR for following traps:
  starPortDown,
  starSRPConnDown,
  starLAGGroupDown.

  Changed starPortSlot, starPortNum, starContextName and starSRPIpAddress
  objects access to accessible-for-notify."

REVISION      "201307100000Z"
DESCRIPTION
"Changed the name of trap starThreshNAPTPortChunks to starThreshNATPortChunks and
  starThreshClearNAPTPortChunks to starThreshClearNATPortChunks"

REVISION      "201306260000Z"
DESCRIPTION
"Changed the APS related traps according to the implementation present in trap_api.c
  following traps are modified:
  starApsCommandSuccess,
  starApsCommandFailure,
  starApsSwitchSuccess,
  starApsSwitchFailure,
  starApsModeMismatch,
  starApsChannelMismatch,
  starApsByteMismatch,
  starApsProtoLineFailure,
  starApsLossOfRedundancy,
  starApsLossOfRedundancyClear."

REVISION      "201306110000Z"
DESCRIPTION
"Changed object type from starContextName to starCLIContext for the
following traps:
  starLocalUserAdded,
  starLocalUserRemoved,
  starOsShellAccessed,
  starTestModeEntered,
  starLicenseFeaturesModified,
  starHiddenAccessEnabled,
  starHiddenAccessDisabled."

REVISION      "201306040000Z"
DESCRIPTION
"Added the missing objects and modified the summary field for
  starTechSuppPasswdChanged trap"

REVISION      "201305240000Z"
DESCRIPTION
"Corrected starChassisCrashListFull description section"

REVISION      "201305220000Z"
DESCRIPTION
"changed starEGTPInterfaceType Enum in trap number 1112"

REVISION      "201305070000Z"
DESCRIPTION
"changed starEGTPInterfaceType Enum
  changed STATE and SEVERITY fields for All APS,
  related notifications."

REVISION      "201304250000Z"
DESCRIPTION
"Deprecated following traps
  starCardSPCSwitchoverStart,
  starCardSPCSwitchoverComplete,
  starCardSPCSwitchoverFailed
  starCardPACMigrateStart,
  starCardPACMigrateComplete,
  starCardPACMigrateFailed,
SNMP MIB Reference, StarOS™ Release 21.2

STARENT- MIB DEFINITIONS ::= BEGIN

Added following traps for above trap as respective replacement
starCardSwitchoverStart,
starCardSwitchoverComplete,
starCardSwitchoverFailed,
starCardMigrateStart,
starCardMigrateComplete,
starCardMigrateFailed"

REVISION    "201304250000Z"
DESCRIPTION
"Added two MIBs (starSAMOGServiceStart, starSAMOGServiceStop) for SAMOG service.
starSAMOGServiceStart= starentTraps 1251
starSAMOGServiceStop= starentTraps 1252"

REVISION    "201304180000Z"
DESCRIPTION
"Changed SUMMARY clause for starLongDurTimerExpiry notification.
Changed MAX-ACCESS to accessible-for-notify for following objects:
starSubMSID,
starSubName,
starSubTimerDuration,
starSubLongDurTimeoutAction,
starSubSetupTime,
starSubHomeAddr,
starSubHomeAddrv6."

REVISION    "201304160000Z"
DESCRIPTION
"changed STATE and SEVERITY fields for starSDHPathHopUp,
starSDHE1TribUp and starSDHFractE1LMIDown notifications."

REVISION    "201304090000Z"
DESCRIPTION
"changed STATE and SEVERITY fields for starSDHPathHopUp,
starSDHE1TribUp and starSDHFractE1LMIDown notifications."

REVISION    "201304050000Z"
DESCRIPTION
"Added trap no. 1251 with the following variables
starPMIPvPnName,
starPMIPvServName,
starPMIPvSelfAddrType,
starPMIPvSelfAddr,
starPMIPvPeerAddrType,
starPMIPvPeerAddr,
starPMIPvPeerOldRstCnt,
starPMIPvPeerNewRstCnt,
starPMIPvPeerSessCnt,
starPMIPvFailureReason"

REVISION    "201304050000Z"
DESCRIPTION
"Added trap no. 1252 with the following variables
starPMIPvPnName,
starPMIPvServName,
starPMIPvSelfAddrType,
starPMIPvSelfAddr,
starPMIPvPeerAddrType,
starPMIPvPeerAddr"

REVISION    "201304050000Z"
DESCRIPTION
"Added the following flags in APS related traps"

REVISION    "201304040000Z"
DESCRIPTION
"changed SEVERITY level from INFORMATIONAL to WARNING for
starSSRNMMemWarn notification."

REVISION    "201303260000Z"
DESCRIPTION
"Added trap no. 1177, with the following variables
starSlotNum,
starCardType,
starPortSlot"

REVISION    "201303180000Z"
SNMP MIB Reference, StarOS™ Release 21.2

STARENT- MIB DEFINITIONS ::= BEGIN

DESCRIPTION
"Modified starPCFUnreachable description section
Updated correct object name starEISServerVFPName in
starEISServerAlive
starEISServerDead traps.
Added starPCFReachable trap support"

REVISION      "201303110000Z"

DESCRIPTION
"Changed starFanNum range in SYNTAX and MAX-ACCESS.
Added starFanLocation ASR5500 fan location details.
Changed SUMMARY clause for following traps
starFanFailed,
starFanRemoved,
starFanInserted,"

REVISION      "201303060000Z"

DESCRIPTION
"Changed SYNTAX clause from Integer32 to Gauge32 for
following objects:
starCPUUser,
starCPUSystem,
starCPUIdle,
starCPUIO,
starCPUIRQ,
starCPUMemUsed,
starCPUMemCached
Changed SYNTAX clause from Integer32 to Gauge32 and also
changed range for following objects:
starCPULoad1Min,
starCPULoad5Min,
starCPULoad15Min,
starCPUNumProcesses."

REVISION      "201302280000Z"

DESCRIPTION
"Added context name to the OBJECTS and updated ARGUMENTS field for the following traps:
starLocalUserAdded,
starLocalUserRemoved,
starOsShellAccessed,
starTestModeEntered,
starLicenseFeaturesModified,
starHiddenAccessEnabled,
starHiddenAccessDisabled"

REVISION      "201302260000Z"

DESCRIPTION
"Changed starThreshMeasuredPct SYNTAX from Integer32 to Gauge32.
Changed starPortNum object range.
Changed SUMMARY clause in starM3UAPCUnavailable and
starM3UAPCAvailable traps.
Changed objects from starThreshInt and starThreshMeasuredInt to
starThreshPct and starThreshMeasuredPct and also changed SUMMARY
and ARGUMENTS clauses in following traps:
starThreshIPPoolAvail,
starThreshClearIPPoolAvail,
starThreshIPPoolHold,
starThreshClearIPPoolHold,
starThreshIPPoolUsed,
starThreshClearIPPoolUsed,
starThreshIPPoolRelease,
starThreshClearIPPoolRelease,"
SNMP MIB Reference, StarOS™ Release 21.2

STARENT-MIB DEFINITIONS ::= BEGIN

starThreshIPPoolFree,
starThreshClearIPPoolFree,
starThreshNATPortChunks,
starThreshClearNATPortChunks,
starThreshPortHighActivity,
starThreshClearPortHighActivity,
starThreshTpoDnsFailure,
starThreshClearTpoDnsFailure,
starThreshDnsLookupFailure,
starThreshClearDnsLookupFailure,
starThreshBGPRoutes,
starThreshClearBGPRoutes.

Changed SUMMARY and ARGUMENTS clauses in following traps:
starThreshCPUUtilization,
starThreshClearCPUUtilization,
starThreshCPUUtilization10Sec,
starThreshClearCPUUtilization10Sec,
starThreshCPUMemUsage,
starThreshClearCPUMemUsage,
starThreshCPUOrbsWarn,
starThreshClearCPUOrbsWarn,
starThreshCPUOrbsCritical,
starThreshClearCPUOrbsCritical,
starThreshCPUCryptoCoresUtilization,
starThreshClearCPUCryptoCoresUtilization,
starThreshLicense,
starThreshClearLicense,
starThreshPortRxUtil,
starThreshClearPortRxUtil,
starThreshPortTxUtil,
starThreshClearPortTxUtil,
starThreshAAAAuthFailRate,
starThreshClearAAAAuthFailRate,
starThreshAAACcctFailRate,
starThreshClearAAACcctFailRate,

starThreshClearAAARetryRate,
starThreshAAAMgrQueue,
starThreshClearAAAMgrQueue,
starThreshAAACcctArchiveQueue-1,
starThreshClearAAACcctArchiveQueue-1,
starThreshAAACcctArchiveQueue-2,
starThreshClearAAACcctArchiveQueue-2,
starThreshAAACcctArchiveQueue-3,
starThreshClearAAACcctArchiveQueue-3,
starThreshRFSetupFailRate,
starThreshClearRFSetupFailRate,
starThreshPPSetupFailRate,
starThreshClearPPSetupFailRate,
starThreshStorageUtilization,
starThreshClearStorageUtilization,
starThreshIFSECIKEFailRate,
starThreshClearIFSECIKEFailRate,
starThreshEPDGIKEV2SetupFailureRate,
starThreshClearEPDGIKEV2SetupFailureRate,
starThreshNPUtilization,
starThreshClearNPUtilization,
starThreshDiameterRetryRate,
starThreshClearDiameterRetryRate,
starThreshSystemCapacity,
starThreshClearSystemCapacity,
starThreshEDRFileSpace,
starThreshClearEDRFileSpace,
starThreshCDRFileSpace,
starThreshClearCDRFileSpace,
starThreshCardTemperatureNearPowerOffLimit,
starThreshClearCardTemperaturePowerOffLimit.

REVISION      "201212040000Z"
DESCRIPTION
"Changed SYNTAX clause for starPortNum and starRedundantPortNum objects"

REVISION      "201209250000Z"
DESCRIPTION
"Changed starSlotMappingTable table DESCRIPTION."

REVISION      "201207230000Z"
DESCRIPTION
"Removed starSGSNAllocated and starSGSNUsed objects and added
starThreshInt and starThreshMeasuredInt objects for starSGSNRMCPUWarn,
starSGSNRMCPUWarnClear, starSGSNRMMMemWarn, starSGSNRMMMemWarnClear,
starRMCPUOver, starRMCPUOverClear, starSGSNRMMMemOver and
starSGSNRMMMemOverClear."

REVISION      "201207130000Z"
DESCRIPTION
"Changed object from starServiceVpnID to starServiceVpnName and
arguments macro in starSessionRejectNoResource Notification.

Added commas(,) in ARGUMENTS field of starServiceLossLCClear
Trap definition.

Added additional object starCPUSlot and starCPUNumber in
starThreshCPUOrbsWarn, starThreshClearCPUOrbsWarn,
starThreshCPUOrbsCritical and starThreshClearCPUOrbsCritical traps."

REVISION      "201207090000Z"
DESCRIPTION
"starSAEGWSessThreshold and starSAEGWSessThresholdClear Notification
objects have been added.
Fixed starServiceLossLCClear ARGUMENTS field information."

REVISION      "201205150000Z"
DESCRIPTION
"ASR5500 slot types are added in StarentSlotType"

REVISION      "201204130000Z"
DESCRIPTION
"The Notifications starThreshPortSpecRxUtil,starThreshClearPortSpecRxUtil,
starThreshPortSpecTxUtil,starThreshClearPortSpecTxUtil has been moved to
deprecated state."

REVISION      "201204050000Z"
DESCRIPTION
"The object starPowerFilterUnitFailed has been moved to deprecated state"

REVISION      "201110140000Z"

-- single subscriber info

-- This is used to perform a lookup on information on a single subscriber. This is done in a
-- two-step process
--
-- 1. Use a SET pdu to provide the keys to lookup. Set one or more of the fields
   -- starSessSub1Context, starSessSub1NAI, starSessSub1MSID, starSessSub1IpAddr
   --
   -- The SET pdu returns once the query is complete. This query can take some time
   -- especially on large systems, so do not use small retry timers.
   --
   -- 2. Use a GET pdu to retrieve the data.
   --
   -- Note that in some cases, multiple subscribers might match the given search criteria.
   -- The starSessSub1LastResult field identifies if zero, one or multiple matches were found.
   -- If multiple matches are found, data is returned for one of them.

starCardSPCSwitchoverStart NOTIFICATION-TYPE
OBJECTS ( starSlotNum, starSlotNum )
STATUS deprecated
DESCRIPTION
"An SPC switchover operation has begun. The first varbind identifies the SPC being switched away from; the second varbind identifies the SPC being switched to. Note that since an SPC switchover can cause a momentary loss of communication through the management (SPIO) interface, it is possible that this trap will not be successfully delivered.

Probable Cause: This is typically caused by an operator action; it can also represent the system recovering from a software or hardware fault.

Action to be Taken: If the SPC switchover was unplanned, the admin logs should be examined for the cause of the switchover. If the cause was a software failure, the system crash logs should be examined.

Clear Condition: Verify the SPC switchover completes successfully.

Clear Condition Alarm: A starCardSPCSwitchoverComplete is generated when the switchover operation has completed."
### StarCardSPCSwitchoverComplete

**NOTIFICATION-TYPE**

**OBJECTS** { starSlotNum }

**STATUS** deprecated

**DESCRIPTION**

"An SPC Switchover has completed successfully. The starSlotNum varbind identifies the new primary SPC.

**Action to be Taken:** If the SPC switchover was unplanned, the admin logs should be examined for the cause of the switchover. If the cause was a software failure, the system crash logs should be examined."

---

### StarCardSPCSwitchoverFailed

**NOTIFICATION-TYPE**

**OBJECTS** { starSlotNum, starSlotNum }

**STATUS** deprecated

**DESCRIPTION**

"An SPC switchover operation has failed. The first varbind identifies the SPC that was attempted to be switched away from; the second varbind identifies the SPC that was attempted to be switched to.

**Probable Cause:** The SPC being migrated to was removed or reset before the migration completed; the migration operation was terminated by an operator; or a software or hardware failure on either SPC.

**Action to be Taken:** Verify that both SPCs have the card locks in the locked position; examine the admin logs for the cause of the failure. If the cause was a software failure, the system crash logs should be examined.

**Clear Condition:** The SPC in question will be reset; a starCardUp notification will be generated when the card is operational again."

starGGSNServiceStop NOTIFICATION-TYPE
OBJECTS { starServiceVpnName, starServiceServName }
STATUS current
DESCRIPTION
"A GGSN Service has stopped"
Probable Cause: This is typically caused by operator invention. In unusual cases it can be caused by the loss of resources (PACs/PSCs) to support the running configuration.
Action to be Taken: If the GGSN service shutdown was not planned, examine the admin logs for an indication of the failure. Verify that all configured PACs/PSCs are present and running in the system. Check the crash logs for an indication of a software failure.
Clear Condition: Verify that the GGSN service is operational.
Condition Clear Alarm: A starGGSNServiceStart notification will be generated when the service is restarted"

starLicenseExceeded NOTIFICATION-TYPE
OBJECTS { starLicensedSessions, starCurrentSessions, starServiceType }
STATUS current
DESCRIPTION
"The licenses session limit has been exceeded; note that a small number of sessions are permitted beyond the licensed limit.
Probable Cause: The usage of the system has exceeded the capacity of the license installed; The license installed does not match the identification of the system; No license is installed
Action to be Taken: Verify that the proper license is installed on the system; verify that the SPCs present in the system match those identified in the software license. If required, install an additional higher-capacity license.
Clear Condition: This condition is cleared when usage goes under the licensed limit.
Condition Clear Alarm: This condition is cleared by a starLicenseUnderLimit notification."

starServiceLossSPIO NOTIFICATION-TYPE
STATUS current
DESCRIPTION
 "A service loss condition has occurred due to SPIO failure or removal.

NOTE: Since the SPIO contains the ports used for SNMP access, this
notification cannot normally be delivered as an SNMP trap. The notification will be logged and stored in the historical trap list, and if the system is configured to send INFORM PDUs the notification might be delivered at a later time.

Probable cause: Both SPIOs are no longer available, due to failure, removal, or operator action.

Action to be Taken: Bring at least one SPIO online.

Clear Condition: This condition is cleared when a SPIO is made active

---#SUMMARY "[System] Service Loss - No SPIO is available"
---#STATE OPERATIONAL
---#SEVERITY WARNING
---NB: Lower severity than other 'service loss' traps as the SPIO does not carry end-user traffic.

starBGPPeerSessionUp NOTIFICATION-TYPE
OBJECTS { starContextName, starBGPPeerIpAddress }
STATUS current
DESCRIPTION
"The BGP peer session to the specified IP address is operational. This may indicate the initial configuration of a new peer, the initial connectivity after a system restart, or the restoration of connectivity after a starBGPPeerSessionDown event.

Action to be Taken: No action required."
--#SUMMARY "[System] BGP peer session, vpn %s, address %s, is operational"
--#STATE OPERATIONAL
--#SEVERITY INFORMATIONAL
::= { starentTraps 118 }

starBGPPeerSessionDown NOTIFICATION-TYPE
OBJECTS { starContextName, starBGPPeerIpAddress }
STATUS current
DESCRIPTION
"The BGP peer session to the specified IP address is no longer operational.

Probable Cause: The BGP peer is not-operational; the network between the ST16 and the BGP peer is experiencing an outage; LC failure(s) on the ST16.

241
Action to be Taken: Verify the BGP peer is operational; verify network connectivity to the BGP peer.

Clear Condition Alarm: A starBGPPeerSessionUp is generated when connectivity is reestablished
---SUMMARY "[System] BGP peer session, vpn %s, address %s, is non-operational"
---ARGUMENTS {0,1}
---STATE DEGRADED
---SEVERITY MAJOR

starOverloadSystem NOTIFICATION-TYPE
OBJECTS { starCongestionResourceType }
STATUS current
DESCRIPTION
"A system-wide congestion overload condition has occurred.
Probable Cause: This is the result of an operator-configured congestion overload value reached. This notification indicated a chassis-wide overload condition, typically overall system usage reaching some fraction of capacity.

Once this limit is reached, the configured behavior is taken. This will cause certain older and/or dormant calls to be dropped in favor of newer calls.

Note that this is similar to, but different than, the starCongestion notification. Typically the 'overload' condition will be configured to trigger at an earlier point.

Actions to be Taken: Verify that the congestion overload thresholds are correct; if the congested state is seem repeatedly, or for sustained periods of time, additional system capacity may need to be brought online.

This system is cleared when the use of the specific resource falls below the configured limit.

Condition Clear Alarm: A starOverloadSystemClear notification is sent when the system overload condition is clear"

STATUS current
DESCRIPTION
"A service-specific congestion overload condition has occurred.
Probable Cause: This is the result of an operator-configured congestion overload value reached. This notification indicated a service-specific overload condition, typically the use of the service reaching some fraction of capacity."
Once this limit is reached, the configured behavior is taken. This will cause certain older and/or dormant calls to be dropped in favor of newer calls.

Note that this is similar to, but different than, the starCongestion notification. Typically the 'overload' condition will be configured to trigger at an earlier point.

Since this is a service-specific notification, it is possible to receive multiple notifications for different services. Each

Actions to be Taken: Verify that the congestion overload thresholds are correct; if the congested state is seen repeatedly, or for sustained periods of time, additional system capacity may need to be brought online.

This system is cleared when the use of the specific resource falls below the configured limit.

Condition Clear Alarm: A starOverloadServiceClear notification is sent when the service-specific overload condition is clear.

```

---

This page contains definitions and notifications related to the CSCF (Call Session Control Function) service within the STARENT MIB (Management Information Base). The definitions include thresholds for total active calls and total call failures, indicating when these metrics exceed configured limits. Notifications are generated when these thresholds are exceeded, providing alerts for network monitoring and management. Each notification includes arguments for service VPN name, service service name, threshold integer, and measured integer, along with descriptions of the state (operational or informational), severity, and status of the notification.
starThreshCSCFSvcErrorNoResource NOTIFICATION-TYPE
OBJECTS { starServiceVpnName, starServiceServName, starThreshInt, starThreshMeasuredInt }

---#STATE OPERATIONAL
---#SEVERITY INFORMATIONAL
::= { starentTraps 1078 }

starRaidDegraded NOTIFICATION-TYPE
OBJECTS { starStorageName, starStorageSlot, starStorageName }
STATUS current
DESCRIPTION
"The specified raid array is running in a degraded state. This typically means one of the member devices has failed or become unavailable. The raid array continues to function and can read/store data, but may not be operating in a redundant manner.

Probable Cause: Hardware failure(s) on the devices within the raid array; Hardware failure(s) on the card(s) to which the devices are attached; the removal of the cards containing devices in the array; operator action which disabled the raid array.

The first variable binding, starStorageName is indicating the raid array name; The second variable binding, starStorageSlot is the disk card number, in which the fail happens; The third varbind, which is also the second starStorageName, is the name of the disk that the fail happens.

Condition Clear Alarm: a starRaidRecovered notification will be generated when the raid array is fully recovered.

IETF and Cisco MIBs

This section is for Administrators working with integrating the Starent MIB and the Cisco MIB so Cisco management applications can manage the ASR 5x00 chassis. It provides some new configuration options; there is also a list of supported Cisco MIBs.
New CLI Options

The following are new CLI options:

sysOld Options

The default Old string is 1.3.6.1.4.1.8164.
The new-style Cisco Old string is 1.3.6.1.4.1.9.

Using the following CLI, ASR 5000 users can choose which string they prefer:

[local]asr5000(config)# system sysoid-style new|default

**Important:** ASR 5500 users do not have this option as the Cisco Old String is the default.

**Important:** This command can be combined with sysdesc as follows: system sysdesc-sysoid-style new|default. However, this combination affects BOTH sysDesc AND sysOld equally: that is, they can both be old-style or they can both be new-style. The System CLI offers an option to configure sysDesc independently, but SysOld is not a user-configurable parameter.

sysDesc Options

For ASR 5000 users, the default system description is:

```
Linux asr5000 2.6.18-staros-v2-private-deb #1 SMP (date/time) i686
```

The Cisco default system description is:

```
Cisco StarOS Software, ASR5000 Intelligent Mobile Gateway, Version 12.2. Copyright (c) 2011 by Cisco Systems, Inc.
```

Users can opt for either description using the following CLI command: [local]asr5000(config)# system sysdesc-style new|default

**Important:** This CLI will not be available to ASR 5500 users; it will default to the Cisco description only.

**Important:** This command can be combined with sysOld as follows: system sysdesc-sysoid-style new|default. However, this combination affects BOTH sysDesc AND sysOld equally: that is, they can both be old-style or they can both be new-style. The System CLI offers an option to configure sysDesc independently, but SysOld is not a user-configurable parameter.

Serial Number Configuration

ASR 5000 users can configure the chassis serial number with the following CLI:

[local]asr5000(config)# system chassis-serial-number <string>
**Important:** This CLI is not available for ASR 5500 users as the chassis serial number is hard-coded.
Standards-Based MIBs

The following are standards-based, read-only, and available from the Cisco MIB ftp site.

IF-MIB and ENTITY-MIB are disabled by default.

Configuration

MIBs can be configured using the following CLI:

[local] asr5000(config)# snmp mib <mib-name, auto complete> | no snmp mib <mib-name, auto complete>

Entity MIB

The Entity MIB is implemented as described in RFC4133. The following are not supported for this release:

- entPhysicalAlias
- entPhysicalAssetID
- entPhysicalMfgDate
- entPhysicalUris
- entLogicalTable
- entLPMappingTable
- entPhysicalContainsTable

IF MIB

The IF MIB is implemented per RFC1213, RFC1573, and RFC2863. The following are not supported for this release:

- ifStackTable
- ifStackLastChange
- ifRcvAddressTable
- ifTestTable
Cisco MIBs

The following is a list of supported Cisco MIBs for this release. These are available from the Cisco ftp site.

Configuration

MIBs can be configured using the following CLI:

```
[local] asr5000(config)# snmp mib <mib-name, auto complete> | no snmp mib <mib-name, auto complete>
```

Cisco MIBs

The following MIBs are supported in this release. They can be enabled/disabled as required.

- CISCO-ENHANCED-IPSEC-FLOW-MIB
- CISCO-ENTITY-DISPLAY-MIB
- CISCO-ENTITY-EXT-MIB
- CISCO-ENTITY-FRU-CONTROL-MIB
- CISCO-ENTITY-REDUNDANCY-MIB
- CISCO-ENTITY-SENSOR-MIB
- CISCO-ENTITY-STATE-MIB
- CISCO-FLASH-MIB
- CISCO-HOST-RESOURCE-MIB

**Important:** CISCO-HOST-RESOURCE-MIB is per the appropriate RFC, but limited to hrSystem and hrStorage tables.
