    Cisco Systems, Inc.
    30 International Place
    Tewksbury, MA 01876
    (978) 851-1100"
  DESCRIPTION
    "Cisco Systems ASR 5xxx series of multimedia core platforms (ASR 5000,
    ASR 5500)

    Designed exclusively for mobile and fixed mobile converged applications,
    Cisco's ASR 5xxx series products provide a high-performance, highly intelligent
    platform ideally suited for development in mobile operator networks
    to fulfill key multimedia core networking functions. The platform features 2G/3G/4G
    and WiFi multi-service access independent capabilities coupled with a carrier class
    high-availability design. Harnessing subscriber awareness with an abundant supply
    of distributed processing resources, the ASR 5xxx series offers a variety of high touch
    Inline Services to enable service providers to monetize the value of the network
    while enriching the overall subscriber experience."
  REVISION      "201707210000Z"
DESCRIPTION
"Added trap 1363 and 1364 for total-volume and total-volume clear
   Added objects starRuleBaseName, starRuleDefName starGroupOfRuleDef"

REVISION  "201705110000Z"

DESCRIPTION
"Added trap no 1362, which informs about change in Logging Level of a facility
   (which is inferior to default Logging Level i.e., error) by an user
   LogLevelChanged"

REVISION  "201704260000Z"

DESCRIPTION
"Added trap no 1361, which informs about Logging Event IDs been disabled by an user
   DisabledEventIDs"

REVISION  "201704150000Z"

DESCRIPTION
"Adding Traps for critical events in smart licensing
   starSmartLicenseServiceOOC, starSmartLicenseServiceOOCClear,
   starSmartLicenseEvalMode, starSmartLicenseEvalModeClear, starSmartLicenseEvalModeExpire, starSmartLicenseEvalModeExpireClear, starSmartLicenseCSSMConnectionFail, starSmartLicenseCSSMConnectionFailClear"

REVISION  "201702150000Z"

DESCRIPTION
"Hat heartbeat loss on the card w.r.t peer cards for DI platform
   starThreshHatHb5MinsLoss, starThreshClearHatHb5MinsLoss, starThreshHatHb60MinsLoss, starThreshClearHatHb60MinsLoss"

REVISION  "201612220000Z"

DESCRIPTION
"Added additional argument starSlotSerialNumber to applicable threshold port traps"

REVISION  "201702270000Z"

DESCRIPTION
"Maximum Concurrent CLI Sessions enforcement on StarOS
   starGlobalCLISessionsLimit, starUserCLISessionsLimit"

REVISION  "201702150000Z"

DESCRIPTION
"Hat heartbeat loss on the card w.r.t peer cards for DI platform
   starThreshHatHb5MinsLoss, starThreshClearHatHb5MinsLoss, starThreshHatHb60MinsLoss, starThreshClearHatHb60MinsLoss"

REVISION  "201612220000Z"

DESCRIPTION
"Added trap nos. 1534, 1535 and 1536 with the following variables
   starDiameterVpnName, starDiameterRlfContext, starDiameterPeerName, starDiameterEndpointName,"
SNMP MIB Reference, StarOS™ Release 21.3

DESCRIPTION
"Added MME Related threshold traps from 440 to 445"

REVISION "2013022000000Z"
DESCRIPTION
"Removing SGSN substring from trap number 1219 and 1220"

REVISION "2013022000000Z"
DESCRIPTION
"Extended starChassisType to support KVM QvPC-SI chassis"

REVISION "2013120600000Z"
DESCRIPTION
"Corrected IPv6 from IPv4 to trap number 1200"

REVISION "2013120500000Z"
DESCRIPTION
"Fixed following issues
  1. Revision not in reverse chronological order
  2. not-accessible starent Index objects are modified to
     MAX-ACCESS accessible-for-notify for those sent in trap"

REVISION "2013112200000Z"
DESCRIPTION
"Added two MIBs (starMRMEServiceStart, starMRMEServiceStop) for MRME service
**SNMP MIB Reference, StarOS™ Release 21.3**

**STARENT-MIB DEFINITIONS ::= BEGIN**

starMMEServiceStart - starentTraps 1264
starMMEServiceStop - starentTraps 1265

Added two MIBs (starThresholdPerServiceSAMOGSessions, starThresholdClearPerServiceSAMOGSessions) for per service samog-service
starThresholdPerServiceSAMOGSessions - starentTraps 519
starThresholdClearPerServiceSAMOGSessions - starentTraps 520

**REVISION "201310040000Z"**

**DESCRIPTION**

"Changed following notification names
starThresholdAAAAccountArchiveQueue-1,
starThresholdClearAAAAccountArchiveQueue-1,
starThresholdAAAAccountArchiveQueue-2,
starThresholdAAAAccountArchiveQueue-3,
starThresholdClearAAAAccountArchiveQueue-3

to
starThresholdAAAAccountQueue1,
starThresholdClearAAAAccountQueue1,
starThresholdAAAAccountQueue2,
starThresholdClearAAAAccountQueue2,
starThresholdAAAAccountQueue3,
starThresholdClearAAAAccountQueue3.

Added , in starLIRcvryErrType object.

Changed StarUDPPortNum object to starUDPPortNum object in following notifications:
starECSSecondAddressServerDown,
starECSSecondAddressServerUp.

Added definition for starMMEInitialDisallowReason object.

Added new number for QvPC-SI platform in starChassisType object."

**REVISION "201309270000Z"**

**DESCRIPTION**

"Added missing object starFractE1TribTimeslots to starSDHFractE1LMIUp notification , changed MAX-ACCESS to accessible-for-notify from not-accessible for the following objects
starFractE1TribSlot,
starFractE1TribPort,
starFractE1TribPath,
starFractE1TribTug2,
starFractE1TribTul2
and moved starFractE1TribBundNum object to obsolete state."

**REVISION "201309250000Z"**

**DESCRIPTION**

"Change starSlotPort to storSlotNum in ApsChannelMismatch trap 1150"

**REVISION "201307230000Z"**

**DESCRIPTION**

"Replaced underscore sign with hyphen from starServiceType enum "

**REVISION "201307150000Z"**

**DESCRIPTION**

"Modified SEVERITY from ERROR to MAJOR for following traps:
starPortDown,
starSRPConnDown,
starLAGGroupDown.

Changed starPortSlot, starPortNum, starContextName and starSRPIPAddress objects access to accessible-for-notify."

**REVISION "201307100000Z"**

**DESCRIPTION**

"Changed the name of trap starThresholdNAPTPortChunks to starThresholdNATPortChunks and starThresholdClearNAPTPortChunks to starThresholdClearNATPortChunks"

**REVISION "201306260000Z"**

**DESCRIPTION**
"Changed the APS related traps according to the implementation present in trap_api.c
following traps are modified:
starApsCommandSuccess,
starApsCommandFailure,
starApsSwitchSuccess,
starApsSwitchFailure,
starApsModeMismatch,
starApsChannelMismatch,
starApsByteMismatch,
starApsFeProtLineFailure,
starApsLossOfRedundancy,
starApsLossOfRedundancyClear."

REVISION      "201306110000Z"
DESCRIPTION  
"Changed object type from starContextName to starCLIContext for the
following traps:
starLocalUserAdded,
starLocalUserRemoved,
starOsShellAccessed,
starTestModeEntered,
starLicenseFeaturesModified,
starHiddenAccessEnabled,
starHiddenAccessDisabled."

REVISION      "201306040000Z"
DESCRIPTION  
"Added the missing objects and modified the summary field for
starTechSuppPasswdChanged trap"

REVISION      "201305240000Z"
DESCRIPTION  
"Corrected starChassisCrashListFull description section"

REVISION      "201305220000Z"
DESCRIPTION  
"changed starEGTPInterfaceType Enum in trap number 1112"

REVISION      "201305070000Z"
DESCRIPTION  
"changed starEGTPInterfaceType Enum
changed STATE and SEVERITY fields for All APS,
related notifications."

REVISION      "201304250000Z"
DESCRIPTION  
"Deprecated following traps
starCardSPCSwitchoverStart,
starCardSPCSwitchoverComplete,
starCardSPCSwitchoverFailed
starCardPACMigrateStart,
starCardPACMigrateComplete,
starCardPACMigrateFailed,

Added following traps for above trap as respective replacement
starCardSwitchoverStart,
starCardSwitchoverComplete,
starCardSwitchoverFailed,
starCardMigrateStart,
starCardMigrateComplete,
starCardMigrateFailed"

REVISION      "201304250000Z"
DESCRIPTION  
"Added two MIBs (starSAMOGServiceStart, starSAMOGServiceStop) for SAMOG service.
starSAMOGServiceStart- starentTraps 1251
starSAMOGServiceStop- starentTraps 1252"

REVISION      "201304180000Z"
DESCRIPTION  
"Changed SUMMARY clause for starLongDurTimerExpiry notification."
changed MAX-ACCESS to accessible-for-notify for following objects:
starSubMSID,
starSubName,
starSubTimerDuration,
starSubLongDurTimeoutAction,
starSubSetupTime,
starSubHomeAddr,
starSubHomeAddrv6.

REVISION "201304160000Z"
DESCRIPTION
"changed STATE and SEVERITY fields for starSDHPathHopUp,
starSDHE1TribUp and starSDHFracE1LMIDown notifications."

REVISION "201304090000Z"
DESCRIPTION
"Added trap no. 1251 with the following variables
starPMIPv6Name,
starPMIPServName,
starPMIPSelfAddrType,
starPMIPSelfAddr,
starPMIPPeerAddrType,
starPMIPPeerAddr,
starPMIPPeerOldRstCnt,
starPMIPeerNewRstCnt,
starPMIFailureReason

Added trap no. 1252 with the following variables
starPMIPv6Name,
starPMIPServName,
starPMIPSelfAddrType,
starPMIPSelfAddr,
starPMIPPeerAddrType,
starPMIPeerAddr"

REVISION "201304050000Z"
DESCRIPTION
"Added the following flags in APS related traps"

REVISION "201304040000Z"
DESCRIPTION
"changed SEVERITY level from INFORMATIONAL to WARNING for
starSGSNRMMemWarn notification."

REVISION "201303260000Z"
DESCRIPTION
"Added trap no. 1177, with the following variables
starSlotNum,
starCardType,
starPortSlot"

REVISION "201303180000Z"
DESCRIPTION
"Modified starPCFUnreachable description section
Updated correct object name starEISServerVPNName in
starEISServerAlive starEISServerDead traps.
Added starPCFReachable trap support"

REVISION "201303110000Z"
DESCRIPTION
"Changed starFanNum range in SYNTAX and MAX-ACCESS.
Added starFanLocation ASR5500 fan location details.
Changed SUMMARY clause for following traps
starFanFailed,
starFanRemoved,
starFanInserted,"

REVISION "201303060000Z"
DESCRIPTION
"Changed SYNTAX clause from Integer32 to Gauge32 for following objects:
starCPUUser,
starCPUSystem,
starCPUIdle,
starCPUIO,
starCPUIRQ,
starCPUMemUsed,
starCPUMemCached

Changed SYNTAX clause from Integer32 to Gauge32 and also changed range for following objects:
starCPUload1Min,
starCPUload5Min,
starCPUload15Min,
starCPUload15Min,
starCPUload15Min.

REVISION "201302280000Z"
DESCRIPTION
"Added context name to the OBJECTS and updated ARGUMENTS field for the following traps:
starLocalUserAdded,
starLocalUserRemoved,
starOsShellAccessed,
starTestModeEntered,
starLicenseFeaturesModified,
starHiddenAccessEnabled,
starHiddenAccessDisabled"

REVISION "201302260000Z"
DESCRIPTION
"Changed starThreshMeasuredPct SYNTAX from Integer32 to Gauge32.

Changed starPortNum object range.

Changed SUMMARY clause in starM3UAPCUnavable and starM3UAPCAvailable traps.

Changed objects from starThreshInt and starThreshMeasuredInt to starThreshPct and starThreshMeasuredPct and also changed SUMMARY and ARGUMENTS clauses in following traps:

starThreshIPPoolAvail,
starThreshClearIPPoolAvail,
starThreshIPPoolHold,
starThreshClearIPPoolHold,
starThreshIPPoolUsed,
starThreshClearIPPoolUsed,
starThreshIPPoolRelease,
starThreshClearIPPoolRelease,

DESCRIPTION
"Changed SYNTAX clause for starPortNum and starRedundantPortNum objects"

DESCRIPTION
"Changed starSlotMappingTable table DESCRIPTION."

DESCRIPTION
"Removed starSGSNAllocated and starSGSNUsed objects and added
starThreshInt and starThreshMeasuredInt objects for starSGSNRMCPUWarn,
starSGSNRMCPUWarnClear, starSGSNRMCPUMemWarn, starSGSNRMCPUMemWarnClear,
starRMCPUOver, starRMCPUOverClear, starSGSNRMCPUMemOver and
starSGSNRMCPUMemOverClear."

DESCRIPTION
"201207130000Z"
 Changed object from starServiceVpnID to starServiceVpnName and arguments macro in starSessionRejectNoResource Notification.

 Added commas(,) in ARGUMENTS field of starServiceLossLCClear Trap definition.

 Added additional object starCPUSlot and starCPUNumber in starThreshCPUOrbsWarn, starThreshClearCPUOrbsWarn, starThreshCPUOrbsCritical and starThreshClearCPUOrbsCritical traps.

 REVISION  "201207090000Z"
 DESCRIPTION
 "starSAEGWSessThreshold and starSAEGWSessThresholdClear Notification objects have been added. Fixed starServiceLossLCClear ARGUMENTS field information."

 REVISION  "201205150000Z"
 DESCRIPTION
 "ASR5500 slot types are added in StarentSlotType"

 REVISION  "201204130000Z"
 DESCRIPTION
 "The Notifications starThreshPortSpecRxUtil,starThreshClearPortSpecRxUtil, starThreshPortSpecTxUtil,starThreshClearPortSpecTxUtil has been moved to deprecated state."

-- single subscriber info

-- This is used to perform a lookup on information on a single subscriber. This is done in a
-- two-step process
--
1. Use a SET pdu to provide the keys to lookup. Set one or more of the fields:
   - starSessSub1Context, starSessSub1NAI, starSessSub1MSID, starSessSub1IpAddr
   - The SET pdu returns once the query is complete. This query can take some time, especially on large systems, so do not use small retry timers.

2. Use a GET pdu to retrieve the data.
   - Note that in some cases, multiple subscribers might match the given search criteria.
   - The starSessSub1LastResult field identifies if zero, one or multiple matches were found.
   - If multiple matches are found, data is returned for one of them.

```
starSessSub1 OBJECT IDENTIFIER ::= { starentMIBObjects 34 }

-- CPU Notifications

starCPUBusy NOTIFICATION-TYPE
OBJECTS { starCPUSlot, starCPUNumber }
STATUS  current
DESCRIPTION
   "The CPU is experiencing very high usage.
Probable Cause: For SPC/SMC CPUs this typically represents an abnormal amount
of management (CLI, SNMP, CORBA) requests. For PAC/PSC cards this indicates
that the system is reaching its capacity.
Action to be Taken: For SPC/SMC cards, this may be a transient condition because
of a burst of management activity. Monitor the CPU usage and if it is persistently
high, examine the CPU table to determine which management activity is causing the
excessive usage. For PAC/PSC cards, this indicates the system is nearing its overall
capacity. Monitor CPU usage and if it is persistently high, the system may need additional PACs/PSCs to keep up with the system load.

Clear Condition: Verify that CPU usage returned to a normal load. This can represent a transient condition; the trap will be periodically repeated if the condition persists.

---SUMMARY "[Card %d] CPU %d is experiencing very high usage"

DESCRIPTION
"The CPU is experiencing a low memory condition.

Probable Cause: For SPC CPUs this typically represents an abnormal number of management sessions, in particular CLI sessions. For PAC/PCS cards this indicates that the system is reaching its capacity.

Action to be Taken: For SPC cards, this may be a transient condition because of a burst of management activity. Monitor memory usage and if it is persistently high, examine the CPU table to determine which management activity is causing the excessive usage. Verify that large numbers of CLI sessions are not being generated and, if needed, terminate extra sessions. For PAC/PCS cards, this indicated the system is nearing its overall capacity. Monitor memory usage and if it is persistently high, the system may need additional PACs/PSCs or additional PAC/PCS memory to keep up with the system load.

Clear Condition: Verify that memory usage returned to a normal load. This can represent a transient condition; the trap will be periodically repeated if the condition persists."

starServiceLossSPIO NOTIFICATION-TYPE
STATUS current
DESCRIPTION
"A service loss condition has occurred due to SPIO failure or removal.

NOTE: Since the SPIO contains the ports used for SNMP access, this
notification cannot normally be delivered as an SNMP trap. The notification
will be logged and stored in the historical trap list, and if the system
is configured to send INFORM PDUs the notification might be delivered
at a later time.

Probable cause: Both SPIOs are no longer available, due to failure, removal, or operator action.

Action to be Taken: Bring at least one SPIO online.

Clear Condition: This condition is cleared when a SPIO is made active"

-- #SUMMARY "[System] Service Loss - No SPIO is available"
-- #STATE OPERATIONAL
-- #SEVERITY WARNING
-- NB: Lower severity than other 'service loss' traps as the SPIO does not carry
-- end-user traffic.

**starOverloadSystem**

NOTIFICATION-TYPE

OBJECTS { starCongestionResourceType }

STATUS current

DESCRIPTION

"A system-wide congestion overload condition has occurred.

Probable Cause: This is the result of an operator-configured congestion overload value reached. This notification indicated a chassis-wide overload condition, typically overall system usage reaching some fraction of capacity.

Once this limit is reached, the configured behavior is taken. This will cause certain older and/or dormant calls to be dropped in favor of newer calls.

Note that this is similar to, but different than, the starCongestion notification. Typically the 'overload' condition will be configured to trigger at an earlier point.

Actions to be Taken: Verify that the congestion overload thresholds are correct; if the congested state is seem repeatedly, or for sustained periods of time, additional system capacity may need to be brought online.

This system is cleared when the use of the specific resource falls below the configured limit.

Condition Clear Alarm: A starOverloadSystemClear notification is sent when the system overload condition is clear"

starCscfSessResourceCongestion NOTIFICATION-TYPE
OBJECTS { starSmgrId, starCongestionPolicy, starCscfSessCongestionResourceType }
STATUS current
DESCRIPTION
"A congestion condition has occurred at Session Manager for Cscf Service.
Probable Cause: This is the result of an operator-configured congestion
threshold being reached for Cscf Service at Session Manager. This can be due to high
usage of the resource being monitored which indicates that the
IMG is reaching its peak capacity, or could be caused by the
incorrect configuration of the congestion thresholds.

Actions to be Taken: Verify that the congestion thresholds are correct;
if the congested state is seen repeatedly, or for sustained periods of
time, additional system capacity may need to be brought online.

This system is cleared when the use of the specific resource falls below
the configured limit.

Condition Clear Alarm: A starCscfSessResourceCongestionClear notification is sent when there
are no congestion conditions for cscf service in that Session Manager Instance"

starSAEGWServiceStop NOTIFICATION-TYPE
OBJECTS { starServiceVpnName, starServiceServName }
STATUS current
DESCRIPTION
"A SEAGW Service has stopped.

Probable Cause: This is typically caused by operator invention. In unusual cases it can be caused by the loss of resources (PACs/PSCs) to support the running configuration.

Action to be Taken: If the SAEGW service shutdown was not planned, examine the admin logs for an indication of the failure. Verify that all configured PACs/PSCs are present and running in the system. Check the crash logs for an indication of a software failure.

Clear Condition: Verify that the SEAGW service is operational.

Condition Clear Alarm: A starSAEGWServiceStart notification will be generated when the service is restarted"

STATUS current
DESCRIPTION
"A Serving Gateway (CGW) Service has stopped.
Probable Cause: This is typically caused by operator intervention. In
rare cases it can be caused by the loss of resources (PSCs) to support
the running configuration.
Action to be Taken: If the CGW service shutdown was not planned,
exchange the admin logs for an indication of the failure. Verify that
all configured PSCs are present and running in the system. Check the
crash logs for an indication of a software failure.

Clear Condition: Verify that the CGW service is operational.

Condition Clear Alarm: A starCGWServiceStart notification will be
generated when the service is restarted"

starCardSwitchoverStart NOTIFICATION-TYPE
OBJECTS { starSlotNum, starSlotNum }
STATUS current
DESCRIPTION
"A management card (SPC/MMIO) switchover operation has begun. The first varbind identifies from which management card switchover started. The second varbind identifies to which management card switchover is planned to switch. Switchover can cause a momentary loss of communication through the management interface (SPI0 incase of ASR5000), it is possible that this trap will not be successfully delivered.

Probable Cause: This is typically caused by an operator action; it can also represent the system recovering from a software or hardware fault.

Action to be Taken: If the management card switchover was unplanned, the admin logs should be examined for the cause of the switchover. If the cause was a software failure, the system crash logs should be examined.

Clear Condition: Verify the management card switchover completed successfully.

Clear Condition Alarm: A starCardSPCSwitchoverComplete is generated when the switchover operation has completed. This is not applicable to QVPC-SI.

starCardSwitchoverFailed NOTIFICATION-TYPE
A management card (SPC/MMIO) switchover operation has failed. The first varbind identifies from which management card switchover started. The second varbind identifies to which management card switchover is failed.

Probable Cause: The management card being switched to was removed or reset before the switchover completed; the switchover operation was terminated by an operator; or a software or hardware failure on another management card.

Action to be Taken: Verify that both management cards have the card locks in the locked position; examine the admin logs for the cause of the failure. If the cause was a software failure, the system crash logs should be examined.

Clear Condition: The management card in question will be reset; a starCardUp notification will be generated when the card is operational again. This is not applicable to QVPC-SI.

starMMEEMBMSServiceStop NOTIFICATION-TYPE
OBJECTS { starServiceVpnName, starServiceServName }
STATUS current
DESCRIPTION
"An MME-EMBMS Service has stopped.
Probable Cause: This is typically caused by operator intervention, when a
critical parameter associated with mme-embms-service is changed/removed. In
unusual cases it can be caused by the loss of resources (PACs/PSCs) to
support the running configuration.

Action to be Taken: If the MME-EMBMS service shutdown was not planned,
examine the admin logs for any indication of the failure. Verify that
all configured PACs/PSCs are present and running in the system. Check for
any mme-embms-service related configuration errors by running show configuration errors
section mme-embms-service. Also check the crash logs for any indication of a software failure."

STATUS current
DESCRIPTION
"An MCE Association is down.
Problem Cause: SCTP connection between MME and MCE has been brought down - could be for any of
the
following reasons -
  i) network connectivity between MME and MCE is broken.
  ii) MCE has gracefully terminated the SCTP association with MME.
  iii) MME has gracefully terminated the SCTP association with MCE, typically due to
operation intervention that would have effected mme-embms-service.

Action to be taken - In case the SCTP association between MME and MCE is abnormally
closed, check for network connectivity between MME and MCE.

Condition Clear Alarm: In case the association termination was abnormal, A
starPeerAssocUp notification will be generated when the MCE association is up"

IETF and Cisco MIBs

This section is for Administrators working with integrating the Starent MIB and the Cisco MIB so Cisco management applications can manage the ASR 5x00 chassis. It provides some new configuration options; there is also a list of supported Cisco MIBs.
New CLI Options

The following are new CLI options:

sysOld Options

The default Old string is 1.3.6.1.4.1.8164.
The new-style Cisco Old string is 1.3.6.1.4.1.9.

Using the following CLI, ASR 5000 users can choose which string they prefer:

```
[local]asr5000(config)# system sysoid-style new|default
```

**Important:** ASR 5500 users do not have this option as the Cisco Old String is the default.

**Important:** This command can be combined with sysdesc as follows: `system sysdesc-sysoid-style new|default` However, this combination affects BOTH sysDesc AND sysOld equally: that is, they can both be old-style or they can both be new-style. The System CLI offers an option to configure sysDesc independently, but SysOld is not a user-configurable parameter.

sysDesc Options

For ASR 5000 users, the default system description is:

```
Linux asr5000 2.6.18-staros-v2-private-deb #1 SMP (date/time) i686
```

The Cisco default system description is:

```
Cisco StarOS Software, ASR5000 Intelligent Mobile Gateway, Version 12.2. Copy-
right (c) 2011 by Cisco Systems, Inc.
```

Users can opt for either description using the following CLI command: `system sysdesc-style new|default`

**Important:** This CLI will not be available to ASR 5500 users; it will default to the Cisco description only.

**Important:** This command can be combined with sysOld as follows: `system sysdesc-sysoid-style new|default`. However, this combination affects BOTH sysDesc AND sysOld equally: that is, they can both be old-style or they can both be new-style. The System CLI offers an option to configure sysDesc independently, but SysOld is not a user-configurable parameter.

Serial Number Configuration

ASR 5000 users can configure the chassis serial number with the following CLI:

```
[local]asr5000(config)# system chassis-serial-number <string>
```
Important: This CLI is not available for ASR 5500 users as the chassis serial number is hard-coded.
Standards-Based MIBs

The following are standards-based, read-only, and available from the Cisco MIB ftp site.

IF-MIB and ENTITY-MIB are disabled by default.

Configuration

MIBs can be configured using the following CLI:

[local]asr5000(config)# snmp mib <mib-name, auto complete> | no snmp mib <mib-name, auto complete>

Entity MIB

The Entity MIB is implemented as described in RFC4133. The following are not supported for this release:

- entPhysicalAlias
- entPhysicalAssetID
- entPhysicalMfgDate
- entPhysicalUris
- entLogicalTable
- entLPMappingTable
- entPhysicalContainsTable

IF MIB

The IF MIB is implemented per RFC1213, RFC1573, and RFC2863. The following are not supported for this release:

- ifStackTable
- ifStackLastChange
- ifRcvAddressTable
- ifTestTable
Cisco MIBs

The following is a list of supported Cisco MIBs for this release. These are available from the Cisco ftp site.

Configuration

MIBs can be configured using the following CLI:

[local]asr5000(config)# snmp mib <mib-name, auto complete> | no snmp mib <mib-name, auto complete>

Cisco MIBs

The following MIBs are supported in this release. They can be enabled/disabled as required.

- CISCO-ENHANCED-IPSEC-FLOW-MIB
- CISCO-ENTITY-DISPLAY-MIB
- CISCO-ENTITY-EXT-MIB
- CISCO-ENTITY-FRU-CONTROL-MIB
- CISCO-ENTITY-REDUNDANCY-MIB
- CISCO-ENTITY-SENSOR-MIB
- CISCO-ENTITY-STATE-MIB
- CISCO-FLASH-MIB
- CISCO-HOST-RESOURCE-MIB

**Important:** CISCO-HOST-RESOURCE-MIB is per the appropriate RFC, but limited to hrSystem and hrStorage tables.

- CISCO-IF-EXTENSION-MIB
- CISCO-IP-LOCAL-POOL-MIB
- CISCO-IPSEC-FLOW-MONITOR-MIB
- CISCO-MOBILE-WIRELESS-SERVICE-MIB
- CISCO-PROCESS_MIB
