Release Notes for the 5G Converged Core Session Management Function Version 2022.04.1

First Published: December 1, 2022
Last Updated: December 1, 2022

Introduction

This Release Notes identifies changes and issues related to this software release.

Release Lifecycle Milestones

Release Lifecycle Milestone	Milestone	Date
First Customer Ship	FCS	31-Oct-2022
End of Life	EoL	31-Oct-2022
End of Software Maintenance	EoSM	30-Mar-2024
End of Vulnerability and Security Support	EoVSS	30-Mar-2024
Last Date of Support	LDoS	30-Mar-2025

These milestones and the intervals between them are defined in the Cisco Ultra Cloud Core (UCC) Software Release Lifecycle Product Bulletin available on cisco.com.

Release Package Version Information

Software Packages	Version
ccg.2022.04.1.SPA.tgz	2022.04.1

NOTE: The *ccg.<version>.SPA.tgz* software package is common to both the cnSGW and SMF 5G Network Functions (NF). The deployment and configuration procedure determines the NF deployment.

Descriptions for the software packages provided with this release are available in the Release Package Descriptions section.

Release Notes for the 5G Converged Core Session Management Function
Version 2022.04.1
Behavior Changes for this Release

Verified Compatibility

Products	Version
Ultra Cloud Core SMI	2022.03.1.09
Ultra Cloud CDL	1.10.1
Ultra Cloud Core UPF	2022.04.0
Ultra Cloud cnSGWc	2022.04.0

Behavior Changes for this Release

The following behavior changes are visible in this ER release.

Inter RAT Handover Scenario without IDFT—CSCwd58407

Previous Behavior: If there is no direct path between source RAN and target RAN during the N2 handover (HO), SMF enables Indirect Data Forwarding Tunnel (IDFT) for data forwarding.

If the acknowledgement message for the handover request does not include the downlink forward UP tunnel information, then SMF used to reject the HO request.

New Behavior: If the downlink DL forward UP tunnel information is not available, the SMF continues with the HO without enabling IDFT.

The same behavior is applicable to the N26 handover scenario as well.

Related Documentation

For a complete list of documentation available for this release, go to:

https://www.cisco.com/c/en/us/support/wireless/ultra-cloud-core-session-management-function/tsd-products-support-series-home.html

Installation and Upgrade Notes

This Release Notes does not contain general installation and upgrade instructions. Refer to the existing installation documentation for specific installation and upgrade considerations.
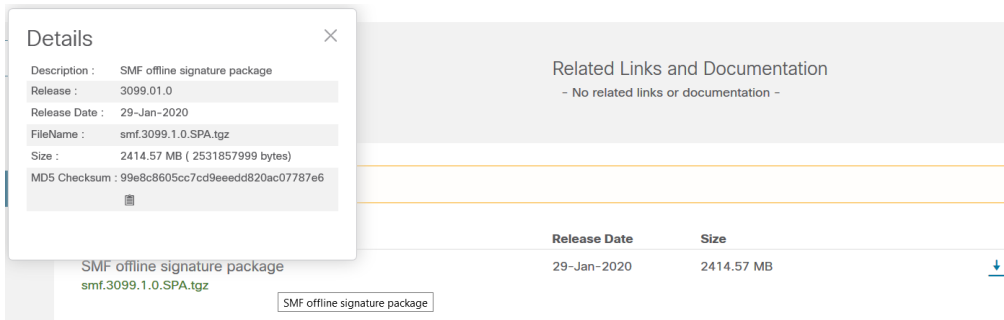

NOTE: In this software release, you must deploy SMF in merged mode only. For more information on this mode, see the *UCC SMF Configuration and Administration Guide* and *UCC cnSGWc Configuration and Administration Guide*.

Software Integrity Verification

To verify the integrity of the software image you have from Cisco, you can validate the SHA512 checksum information against the checksum identified by Cisco for the software.

Image checksum information is available through **Cisco.com Software Download Details.** To find the checksum, hover the mouse pointer over the software image you have downloaded.

Details ✕

Description :	SMF offline signature package
Release :	3099.01.0
Release Date :	29–Jan–2020
FileName :	smf.3099.1.0.SPA.tgz
Size :	2414.57 MB (2531857999 bytes)
MD5 Checksum :	99e8c8605cc7cd9eeedd820ac07787e6

Related Links and Documentation
– No related links or documentation –

	Release Date	Size	
SMF offline signature package
smf.3099.1.0.SPA.tgz	29–Jan–2020	2414.57 MB	↓

SMF offline signature package

At the bottom you find the SHA512 checksum, if you do not see the whole checksum you can expand it by pressing the "…" at the end.

To validate the information, calculate a SHA512 checksum using the information in Table 1 and verify that it matches the one provided on the software download page.

To calculate a SHA512 checksum on your local desktop please see the table below.

Table 1 – Checksum Calculations per Operating System

Operating System	SHA512 checksum calculation command examples
Microsoft Windows	Open a command line window and type the following command > certutil.exe -hashfile *\<filename>*.*\<extension>* SHA512
Apple MAC	Open a terminal window and type the following command $ shasum -a 512 \<filename>.\<extension>

Linux	Open a terminal window and type the following command
	
	$ sha512sum \<filename>.\<extension>
	
	Or
	
	$ shasum -a 512 \<filename>.\<extension>

NOTES: *\<filename>* is the name of the file. *\<extension>* is the file extension (e.g. .zip or .tgz).	

If the SHA512 checksum matches, you can be sure that no one has tampered with the software image or the image has not been corrupted during download.

If the SHA512 checksum does not match, we advise you to not attempt upgrading any systems with the corrupted software image. Download the software again and verify the SHA512 checksum again. If there is a constant mismatch, please open a case with the Cisco Technical Assistance Center.

Certificate Validation

SMF software images are signed via x509 certificates. Please view the .README file packaged with the software for information and instructions on how to validate the certificates.

Open Bugs for this Release

There are no open bugs in this software release.

Resolved Bugs for this Release

The following table lists the known bugs that are resolved in this specific software release.

NOTE: This software release may contain bug fixes first introduced in other releases. Additional information for all resolved bugs for this release are available in the Cisco Bug Search Tool.

Bug ID	Headline	Behavior Change
CSCwd12926	Upf fallback from edge to central UPF **	No
CSCwd17834	N2HO-IDFT: DataForwardingNotPossible missing with N2 IDFT disabled	No
CSCwd24408	X2 IRI requires validation of encoded fields	No
CSCwd26552	Allow any value for Transaction EDR Persistent Volume storage limit while configuring EDR	No
CSCwd43842	Observing the encoding error for X2 messages	No
CSCwd50339	Incorrect uePlmId when MNC has a leading 0 in roaming scenario	No
CSCwd58407	N2HO-IDFT: Handover Failure when Tgt-gNB doesnt support IDFT	Yes
** For more details on this functionality, see the *IP Address Management* chapter in the *UCC 5G SMF Configuration and Administration Guide* applicable for this release.		

Operator Notes

Cloud Native Product Version Numbering System

The **show helm list** command displays detailed information about the version of the cloud native product currently deployed.

Versioning: Format & Field Description

YYYY.RN.MN[.TTN] [.dN] [.MR][.iBN]

Where,

YYYY → 4 Digit year.
- *Mandatory Field*
- *Starts with 2020.*
- *Incremented after the last planned release of year.*

RN → Major Release Number.
- *Mandatory Field*
- *Starts with 1.*
- *Support preceding 0.*
- *Reset to 1 after the last planned release of a year(YYYY)*

MN → Maintenance Number.
- *Mandatory Field*
- *Starts with 0.*
- *Does not support preceding 0.*
- *Reset to 0 at the beginning of every major release for that release.*
- *Incremented for every maintenance release.*
- *Preceded by 'm' for builds from main branch.*

TTN → Throttle of Throttle Number.
- *Optional Field, Starts with 1.*
- *Precedes with "t" which represents the word "throttle of throttle".*
- *Applicable only in "Throttle of Throttle" cases.*
- *Reset to 1 at the beginning of every major release for that release.*

DN → DEV branch Number.
- *Same as TTN, except Used for DEV branches*
- *Precedes with "d" which represents "dev branch".*

MR → Major Release for TOT and DEV branches
- *Only applicable for TOT and DEV Branches.*
- *Starts with 0 for every new TOT and DEV branch .*

BN → Build Number
- *Optional Field, Starts with 1.*
- *Precedes with "i" which represents the word "interim".*
- *Does not support preceding 0.*
- *Reset at the beginning of every major release for that release*
- *Reset for every throttle of throttle.*

4

The appropriate version number field increments after a version has been released. The new version numbering format is a contiguous sequential number that represents incremental changes between releases. This format facilitates identifying the changes between releases when using Bug Search Tool to research software releases.

Release Package Descriptions

Table 2 provides descriptions for the software packages that are available with this release.

Table 2 - Release Package Information

Software Packages	Description
ccg.<version>.SPA.tgz	The SMF offline release signature package. This package contains the SMF deployment software as well as the release signature, certificate, and verification information.

NOTE: The *ccg.<version>.SPA.tgz* software package is common to both the cnSGW and SMF 5G Network Functions (NF). The deployment and configuration procedure determines the NF deployment.

Obtaining Documentation and Submitting a Service Request

For information on obtaining documentation, using the Cisco Bug Search Tool (BST), submitting a service request, and gathering additional information, refer to https://www.cisco.com/c/en/us/support/index.html.
