

Release Notes for the Ultra Cloud Core Subscriber Management Infrastructure Version 2020.03.1

First Published: December 15, 2020

Last Updated: December 15, 2020

Introduction

This Release Notes identifies changes and issues related to this software release. This release is the next release after 2020.03.0.

Release Package Version Information

Software Packages	Version
base-vm.2020.03.1.qcow2.SPA.tgz	20191105
base-vm.2020.03.1.vmdk.SPA.tgz	20191105
cluster-deployer-airgap.2020.03.1.qcow2.SPA.tgz	2020.01.1-12
cluster-deployer-airgap.2020.03.1.vmdk.SPA.tgz	2020.01.1-12
NOTE: In the event bugs need to be opened against this product, please reference the Package Component Version information in this table.	

Descriptions for the various packages provided with this release are available in the [Release Package Descriptions](#) section.

Enhancements and Fixes

CSCvw80001- routes added in os netplan without a subnet mask are not getting updated during upgrade

This fix allows adding routes with and without netmasks providing more options for OS netplan additions and ensuring backward compatibility with current/existing route options.

config

```
clusters <cluster_name>
```

```
node-defaults os netplan-additions ethernets <device_id>
```

```

routes <destination_address>
    from <source_address> via <gateway_address> metric
<relative_priority_value>

    exit

exit

exit

exit
    
```

NOTES:

- **<destination_address>**: Specify the “to” destination address for the route in the x.x.x.x/x or x.x.x.x format.
- **from <source_address>**: Specify the source address for traffic going through the route in the x.x.x.x/x or x.x.x.x format.
- **via <gateway_address>**: Specify the gateway address to use for this route in the x.x.x.x/x or x.x.x.x format.
- **metric <relative_priority_value>**: Specify the relative priority of the route.

Installation and Upgrade Notes

This Release Note does not contain general installation and upgrade instructions. Refer to the existing installation documentation for specific installation and upgrade considerations.

Software Integrity Verification

To verify the integrity of the software image you have from Cisco, you can validate the SHA512 checksum information against the checksum identified by Cisco for the software.

Image checksum information is available through **Cisco.com Software Download Details**. To find the checksum, hover the mouse pointer over the software image you have downloaded.

The screenshot shows a 'Details' popup window over a table of software packages. The popup contains the following information:

- Description : SMI Application-level POD OpenStack VM image signature package
- Release : 3099.01.0
- Release Date : 29-Jan-2020
- FileName : base-vm.3099.1.0.qcow2.SPA.tgz
- Size : 438.66 MB (459968597 bytes)
- MD5 Checksum : d03d88259248a1a4aff72727ec4897dd

The table below lists several software packages with their release dates and sizes:

Software Package Name	Release Date	Size
SMI Application-level POD OpenStack VM image signature package base-vm.3099.1.0.qcow2.SPA.tgz	29-Jan-2020	438.66 MB
SMI Application-level POD VMware VM image signature package base-vm.3099.1.0.vmdk.SPA.tgz	29-Jan-2020	452.56 MB
SMI Common Execution Environment offline signature package cee.3099.1.0.SPA.tgz	29-Jan-2020	2143.11 MB
SMI Deployer OpenStack VM image signature package cluster-deployer-airgap.3099.1.0.qcow2.SPA.tgz	29-Jan-2020	3047.16 MB
SMI Deployer VMware VM image signature package cluster-deployer-airgap.3099.1.0.vmdk.SPA.tgz	29-Jan-2020	3082.87 MB

At the bottom you find the SHA512 checksum, if you do not see the whole checksum you can expand it by pressing the "..." at the end.

To validate the information, calculate a SHA512 checksum using the information in [Table 1](#) and verify that it matches either the one provided on the software download page.

To calculate a SHA512 checksum on your local desktop please see the table below.

Table 1 - Checksum Calculations per Operating System

Operating System	SHA512 checksum calculation command examples
Microsoft Windows	Open a command line window and type the following command <code>> certutil.exe -hashfile <filename>.<extension> SHA512</code>
Apple MAC	Open a terminal window and type the following command <code>\$ shasum -a 512 <filename>.<extension></code>
Linux	Open a terminal window and type the following command <code>\$ sha512sum <filename>.<extension></code> Or <code>\$ shasum -a 512 <filename>.<extension></code>
NOTES: <filename> is the name of the file. <extension> is the file extension (e.g. .zip or .tgz).	

If the SHA512 checksum matches, you can be sure that no one has tampered with the software image or the image has not been corrupted during download.

If the SHA512 checksum does not match, we advise you to not attempt upgrading any systems with the corrupted software image. Download the software again and verify the SHA512 checksum again. If there is a constant mismatch, please open a case with the Cisco Technical Assistance Center.

Certificate Validation

SMI software images are signed via x509 certificates. Please view the .README file packaged with the software for information and instructions on how to validate the certificates.

Open Bugs for this Release

None for this release.

Resolved Bugs for this Release

The following table lists the known bugs that are resolved in this specific software release.

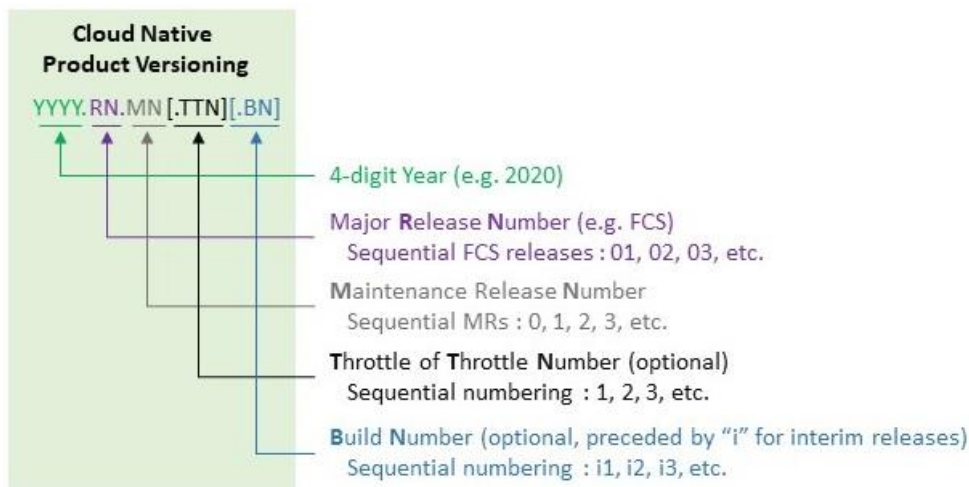

NOTE: This software release may contain bug fixes first introduced in other releases. Additional information for all resolved bugs for this release are available in the [Cisco Bug Search Tool](#).

Bug ID	Headline
CSCvw80001	routes added in os netplan without a subnet mask are not getting updated during upgrade

Operator Notes

Cloud Native Product Version Numbering System

The **show helm list** command displays detailed information about the version of the cloud native product currently deployed.

The appropriate version number field increments after a version has been released. The new version numbering format is a contiguous sequential number that represents incremental changes between releases. This format facilitates identifying the changes between releases when using Bug Search Tool to research software releases.

Release Package Descriptions

[Table 2](#) lists provides descriptions for the packages that are available with this release.

Table 2 - Release Package Information

Software Packages	Description
base-vm.<version>.qcow2.SPA.tgz	The application-level POD OpenStack VM image signature package. This package contains the base qcow2 VM image as well as the release signature, certificate, and verification information.
base-vm.<version>.vmdk.SPA.tgz	The application-level POD VMware VM image signature package. This package contains the base vmdk VM image as well as the release signature, certificate, and verification information.
cee.<version>SPA.tgz	The SMI Common Execution Environment (CEE) offline release signature package. This package contains the CEE deployment package as well as the release signature, certificate, and verification information.
cluster-deployer-airgap.<version>.qcow2.SPA.tgz	The SMI Deployer OpenStack VM image signature package. This package contains the Deployer qcow2 VM image as well as the release signature, certificate, and verification information.
cluster-deployer-airgap.<version>.vmdk.SPA.tgz	The SMI Deployer VMware VM image signature package. This package contains the Deployer vmdk VM image as well as the release signature, certificate, and verification information.

Obtaining Documentation and Submitting a Service Request

For information on obtaining documentation, using the Cisco Bug Search Tool (BST), submitting a service request, and gathering additional information, refer to <https://www.cisco.com/c/en/us/support/index.html>.
