SecureX is a cloud-based feature available through many of Cisco’s security products which consists of several functional elements. SecureX threat response, also known as Cisco Threat Response (CTR), acts as an aggregator of threat intelligence collected or generated by the applicable Cisco security products, as well as available third-party products selected by a customer. SecureX orchestration enables design and automation of workflows involving Cisco and third-party products. The SecureX dashboard makes it possible to visualize key security metrics and trends using data provided by platform products in a single location. SecureX ribbon provides users with access to important notifications, data, and product functionality while users navigate between supporting Cisco products.
